RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-01-TEST NO.-25245

The foundation. Jharkhand chief minister Hemant Soren is on a sticky wicket, with the Election Commission asking him to explain why he should not be disqualified for securing a mining lease for himself. Soren is accused of violating Section 9A of the Representation of the People Act, which disqualifies MPs MLAs who enter into contracts with government for execution of works or supply of goods and Constitution Article 191, which disqualifies MLAs holding an office of profit under the government. Soren says that he has now surrendered the lease and had transparently mentioned it was due for renewal in his 2019 election affidavit. Jharkhand high court is also vetting the matter. Irrespective of the outcomes, Soren as minister in charge of the department and CM granting himself a lease reeks of conflict of interest. GoI Code of Conduct that applies to Union and state ministers specifically enjoins them to divest all interests in businesses primarily dependent on licences, permits, quotas, leases, etc received from the government. But unlike Soren rare case or the infamous 1993 JMM bribery scandal where illicit cash was deposited in bank accounts, high level corruption is tough to detect because netas depend on proxies like corporate groups, contractors and benamis where paper trails are hard to establish. The Jharkhand government is in disarray after this and other financial exposes against the Soren family. If Soren quits, there no clear line of succession. To make matters worse, the Congress JMM alliance has been turbulent. For BJP, JMM self inflicted wounds are a huge reprieve after being beaten in 2019 by tribal and minority votes consolidating. But Soren may not be the biggest casualty of the bruising legal and political battle. From 42 of Jharkhand population being multidimensionally poor and just 57 of those over 15 having received two doses of vaccines to its electricity woes, state capacity is already suffering from painful attention deficit disorder. When I returned from the US two decades back a friend told me, you should learn to drive again in India. Use defensive driving so as to protect yourself on Indian **roads** where people may damage your car, or even kill you. I did not know that nearly 20 years later, the term defensive medicine would be apt for Indian physicians, where physicians need to protect themselves from disrepute and physical harm. There are numerous instances of attacks on doctors, nurses **and** other healthcare workers, who are usually defenceless and remain soft targets. Some of the doctors have been labelled as killer doctors, murderers etc. Mostly, these doctors did their best to save the patient, working at odd times in stressful conditions and with poor infrastructure. Some work for 24 36 hours at a stretch diligently to serve sick patients. Overall all physicians stick to the basic oath, First do no harm. Watching a television series recently I was struck by a piece of dialogue: I saw it with my own eyes. I must have heard that phrase, or seen it **in.**

Writ Petition Crl. No.326 of 2022 titled Mahua Moitra vs. State of Gujarat has been preferred by Mahua Moitra, a Member of Parliament from the Krishnanagar constituency in West Bengal, seeking issuance of a writ, order, or direction, quashing the Orders dated 10.08.2022. The petitioner in the said writ petition has also sought the framing of guidelines and the equitable application of existing guidelines by the State Government for the grant of remission so Parliament from the Krishnanagar as to channelise the exercise of discretion in granting remission and to prevent the misuse of such discretion, if found necessary upon an examination of the existing statutory framework. It is true that there appears to be a modern trend of giving punishment a colour of reformation so that stress may be laid on the reformation of the criminal rather than his confinement in jail which is an ideal objective. At the same time, it cannot be gainsaid that such an objective cannot be achieved without mustering the necessary facilities, the requisite education and the appropriate climate which must be created to foster a sense of repentance and penitence in a criminal so that he may undergo such a mental or psychological revolution that he realises the consequences of playing with human lives. In the world of today and particularly in our country, this ideal is yet to be achieved and, in fact, with all our efforts it will take us a long time to reach this sacred goal. Plato, the Greek Philosopher in his treatise, The Laws, underscores that punishment is to be inflicted, not for the sake of vengeance, for what is done cannot be undone, but for the sake of prevention and reformation Thomas L. Pangle, The Laws of Plato, Basic Book Publishers, 1980. In his treatise, Plato reasons that the lawgiver, as far as he can, ought to imitate the doctor who does not apply his drug with a view to pain only, but to do the patient good. This curative theory of punishment likens penalty to medicine, administered for the good of the one who is **being** chastised Trevor J. Saunders, Plato Penal Code: Tradition, Controversy, and Reform in Greek Penology, Oxford University Press, 1991. Thus, if a criminal is curable, he ought to be improved by education and other suitable arts, and then set free again as a better citizen and less of a burden **to** the state. This postulate lies at the heart of the policy of remission. In addition, there are also The question, therefore, is — should the country take the risk of innocent lives being lost at the hands of criminals committing heinous crimes in the holy hope or wishful thinking that one day or the other, a criminal, however dangerous or callous he may be, will reform himself. Valmikis are not born every day and to expect that our present generation, with the prevailing social and economic environment, would produce Valmikis day after day is to hope for the impossible. **Despite** his significant contributions to the freedom struggle and advocacy for the rights of marginalized communities in India, Jagdeo Prasad is not prominently featured in mainstream historical narratives. Known as Bihar Lenin, his relentless fight for social, economic, and political equality marked him as a revolutionary figure. Prasad foundational role in the formation of the Shoshit Samaj Dal and his influence in establishing the Mandal Commission were pivotal for the empowerment of lower castes. However, the lack of extensive historical coverage may stem from biases in h

Often sidelining regional and caste based movements in favor of more widely recognized national figures. A woman deserves respect howsoever high or low she may be otherwise considered in society or to whatever faith she may follow or any creed she may belong to. Can heinous crimes, inter alia, against women permit remission of the convicts by a reduction in their sentence and by granting them liberty? These are the issues which arise in these writ caste based movements in favor petitions. With the aforesaid philosophical preface, we proceed to consider these writ petitions, both on maintainability as well as on merits purely from a legal perspective. Writ Petition Crl. No.491 of 2022 which petition shall be considered to be the lead petition, who were all convicted, having been found guilty of committing heinous crimes during the large scale riots in Gujarat on 28.02.2002 and a few days thereafter which occurred in the aftermath of the burning of the train incident in Godhra in the State of Gujarat on 27.02.2002. Others, brutally gang raping the petitioner in Writ Petition Crl. No.491 of 2022, namely, Bilkis Yakub Rasool, who was pregnant at that time. Further, the petitioner mother was gang raped and murdered, her cousin who had just delivered a baby was also gang raped and murdered. Eight minors including the petitioner cousin two day old infant were also murdered. The petitioner three year old daughter was murdered by smashing her head on a rock, her two minor brothers, two minor sisters, her phupha, phupi, mama uncle, aunt and uncle respectively and three cousins were all murdered While eventually, the perpetrators of the crime, including the police personnel were convicted and sentenced, the petitioner, who was aged twenty one years and pregnant at that time, having lost all members of her family in the diabolical and brutal attacks, has once again approached this Court seeking justice by challenging the en masse remission granted to respondent Nos.3 to 13. Bilkis Yakub Rasool, being an unfortunate victim of the heinous crimes hereinabove narrated, has filed the present writ petition under Article 32 **of** the Constitution of India, seeking issuance of a writ, order or direction quashing the Orders dated 10.08.2022 passed by the State of Gujarat by which the convicts in Sessions Case No.634 Mumbai respondent Nos.3 to 13 herein, whose convictions were upheld by a Division Bench of the Bombay High **Court** and thereafter by this Court, have been released prematurely. 2.3. Writ Petition Crl. No.352 of 2022 titled Dr. Meeran Chadha Borwankar vs. State of Gujarat has been preferred by a former woman police officer, a woman bureaucrat who had served in the Indian Foreign Service and an academic, seeking, inter alia, the setting aside of the remission Orders dated 10.08.2022. The petitioners by way of the writ petition have also sought a writ or order in the nature of mandamus directing that the States must endeavor to have a pluralistic composition in Jail Advisory Committees, adequately representing the diverse **nature** of our society. Writ Petition Crl. No.319 of 2022 titled Submachine Ali vs. State of Gujarat being the first of the petitions filed in this batch has been preferred under Article 32 by Submachine Ali, a former parliamentarian and presently the Vice President of All India Democratic Women Association; Revati Laul, an independent journalist and Roop Rekha Verma, former Vice Chancellor of Lucknow University, challenging the Orders

Print, a thousand times, if not more. Indeed, I must have used it myself on occasion, as you too are likely to have done. But for the first time I became conscious of the illogicality of that figure of everyday speech which, with overuse, has become a cliche. When we see whatever it is that we see, it has to be with our own eyes, it being an anatomical impossibility for us to see anything using someone else eyes, unless us ve had eyeball transplants. Despite its obvious irrationality we use the phrase to emphasise the importance, or the truth, of what we have seen. Similarly, an often used phrase is human history, or he history of humankind, as in Never before in human history had such an event occurred. The word history implies the word human as trees, or rocks, or animals, don have histories, their studies respectively being called dendrology, geology and zoology. Another example is At this moment in time. A moment is contained in time, it is a part of it, and can no more be separate from time than the measurement called an inch can be other than a constituent of the foot which has 12 inches. We don say his nail is one inch of a foot long. But we do say At this moment in time. Because, at this moment in time, the phrase his moment in time, has become a cliche, a verbal convenience that helps us communicate better by stressing the immediacy of the present, of that which pertains to something happening right now. That the use of cliches is essential to progress is summed up by another cliche: Don reinvent the wheel. If something is already tried and tested, and has proved useful be it a mechanical device like the wheel or a figure of speech don waste time and mental energy trying to devise a replacement which will prove no more efficacious. As we can see with our own eyes, at this moment in time, a cliche called the wheel is a landmark in the history of human **civilisation.** Our mind has an insatiable quest for encountering fascinating things everywhere. And what is the most fascinating entity in this universe it is the mind itself that tries to gaze across the whole universe and across all times: past, present and future. It is the mind that has its **finger** on the pulse of the universe to feel the moods of the universe. Furthermore, it is the mind that unceasingly strives to know, to understand, to reflect, to explore, to discover, and to invent in its immediate surroundings, in the whole world, and in the entire universe. Anaxagoras says, all is nous. Nous means mind. Eco philosopher Henryk Skolimowski refers to the mind as the most fascinating faculty of the universe. We need to comprehend the universe with our human faculties because the mind was created by the cosmos to understand the cosmos, he says. The mind is not **an.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-01-TEST NO.-25250

Organ or a system; it is a phenomenon in itself and, in fact, the most intelligent of the universal phenomena. It reflects the genius of evolution. In its evolutionary journey, the cosmos had a design to evolve something that could co create with it. This cosmic quest came to be realised with the evolution of the mind. The structure of the universe, its matrix, orientation, complexities, infinite limits, creative designs, blueprints, intentions, capabilities, beauty and history are all evolution work of art. The mind is the most fascinating of its arts. At the command of evolution, the mind searches, reads, studies, understands, interprets and evaluates everything that evolution does for the cosmos. Apart from its intellectual grip on everything, every process and every phenomenon, the mind also enriches and enhances evolution creativity and co creates with evolution. The true nature of the mind is to learn, reflect, understand, discover and invent, and in the process of unleashing its potencies it creates its own sphere known as no sphere, that is, the mind sphere or intellect sphere. Mind attempts to enlarge the no sphere for keeping on penetrating the universe as deep as possible. The faculty of the mind is a universal faculty the most intriguing faculty of the universe and it is the one that cultivates a will to understand whatever is out there. By its very nature, the mind attempts to reach and work at new horizons. It is a wonderful phenomenon of the universe nurturing a desire to fulfill the great purpose of universalism. It undergoes its own Evolution, which is in tune with universalism and it strives to live for universalism. Mind not only beholds but shapes all, says Skolimowski. This world of ours is also a product of the mind. Mind shapes the world we live in and it can shape the world the way it likes. No mind, no world, says Parmenides. The world we owe is itself a gift of the mind. The mind is also a great architect of the future. The kind of future we shall usher in would also be **a** gift of the mind. Knowledge, wisdom, and all forms of creativity our world reverberates with are all the pristine gifts of the mind. The writer is emeritus professor of environmental science, GB Pant University of Agriculture and Technology For some time now Mr Praveen Swami has been one of **our** foremost writers not just on security matters but also on issues pertaining to the military. Sadly, his latest piece on a digital media platform on the subject of the Indian military multiculturalism facing strains within the Army has not lived up to the high standards that we have come to expect from him. This piece appears motivated by the deletion of a tweet by the defence PRO in Jammu documenting an Iftar function organised by the Indian Army, allegedly after Hindu nationalist broadcaster Suresh Chavanke complained about it. The concerned defence PRO has not deigned to make his reasons **clear.**

Too well known to bear repetition. What is truly galling however, is his statement that there no doubt that Partition when units of both the new Indian and Pakistani armies disgraced themselves by massacring civilians deepened these fissures. It is, to say the least, abhorrent in the extreme, and will be cause for great anguish among many second and third generation soldiers whose fathers and grandfathers did yeoman service, under extremely trying conditions, during Partition. Unfortunately, he seems to be completely ignorant about the Military Evacuation Organisation, or its forerunner, the ill fated Punjab Boundary Force that attempted to control the communal carnage against overwhelming odds. The MEO was an ad hoc Indo Pak Army organisation established on September 1947 that not only escorted nearly 85 Lakh refugees across borders, but also provided them administrative and logistical support during their trek in the four months that it functioned. It could not have done its work without the utter dedication and hard work of the units and men involved. Many, including this author father, completely unaware of the fate of their own families and friends who had been themselves engulfed in the fires of partition. As this author has written elsewhere, such a force employed to deal with the refugees that the first lockdown wrought during this ongoing pandemic would have made an immense difference in the manner in which the government handled the issue. The fact of the matter is that every issue Mr. Swami has used in justification, whether demolition of places of worship or not allowing Muslim soldiers to grow beards can be refuted easily, as they have either been taken out of context or are based on half truths and are not worthy of contestation. The simple truth is that the military reflects the society that it comes from, and while undoubtedly there have been aberrations, institutionally it has done an excellent job of preserving cohesion amongst its ranks, be it with regard to caste, creed or religion. This is best reflected in the establishment of Sarva Dharma Sthals within units, a system that is unique **to** the Army. For the uninitiated, these are a common place of worship for all faiths and religions. For reasons best known to him, Mr Swami has done singular disservice to the military and the manner, in which it has defended the idea of India. He has unfortunately not done **his** own reputation any favours either. Flattened Distribution, Simplified Discovery over the Internet, Deeper Internet and Mobile Penetration access aspiration. Passionate Brand Owners make what they love and want to share with the world. Normally, this would be great news more entrepreneurs making things they love, for customers who love them as much and everyone happy. Except, the ride to Nirvana Park is one filled with potholes and several death traps. Indigestion causes more damage than starvation. Sharing some thoughts that D2C founders might be better off considering playing their own game instead of joining a different game that seems **tempting.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-01-TEST NO.-25254

Energy and Fukushima killed whatever was left. But climate change has brought nuclear energy back. The big AP1000-type reactors are the past. Modular reactors are the future. Both the US and India can start on this journey together, pooling technology and innovation. In the US, only one company has received NRC clearance for a 50MWe reactor. Go has been making encouraging noises in the last six months. For this to work, two things have to happen nuclear energy should be separated from its stifling parent bodies, the DAE and DOE. Bring the private sector into the process. That will take care of the liability hurdle in India; make it easier to work with other such entities overseas. Third, and most important, is the potential for civil-military fusion in future technologies. Two years after its first announcement, the Quad last week expressed support for ORAN Open Radio Access Networks, again. Which basically means little progress has been made? While India and the US are scratching their heads about how students are using Catgut in their exams, China has begun the process of integrating AI in its warfare strategies, aka autonomous warfare, taking an enormous leap into the unknown. The US is trying to talk to China about it and put in export curbs. Whether the US realises this or not, countries are figuring ways to get around US curbs. We might be better off if the US and India cast aside old prejudices and sat down to work on it. At present the US superiority in future tech is not certain. With India, it has a better chance of winning. At this point, democracies are struggling to get out of their old skins. China, on the other hand, knows what it wants. It wants to win. The writer is a foreign policy commentator and CEO, Ananta Aspen Centre The Ministry of Road Transport and Highways annual report for 2020 revealed that driver negligence was responsible for a staggering 78.3% of the 4,39,123 road accidents in India that year. Such negligence can manifest in various forms, including over speeding, harsh acceleration, **hard** braking, unscheduled driving, free running, idling, driving under the influence of drugs or alcohol, and disregarding traffic laws and signals. To curb the risks posed by driver negligence advanced driver monitoring and road safety systems are incorporating modern technology, including AI and predictive analytics. The first step in monitoring **driver** behavior is to collect data points through a variety of sensors. These sensors integrated into a monitoring system help analyze rash and aggressive driving. Advanced systems can even detect alcohol inebriation, significantly reducing the likelihood of accidents due to drunk driving. In addition to this, systems equipped with sensors that detect eye movements, head position, and other biometric data can identify signs of drowsiness and fatigue, further enhancing road safety. Once the data has been collected, it is analyzed using predictive analytics to identify patterns and trends that could indicate potential safety risks. Advanced machine learning algorithms are then **used** to develop a predictive model that can analyze the dataset in real-time and predict potential safety risks. The predictive models can also take into account external factors, such as weather and road conditions, to provide accurate risk assessments. Using this technology, fleet managers can take proactive measures such as providing targeted training, adjusting routes or schedules, and implementing automatic

Value from the customers that are acquired after great spends. A consumer is unlikely to buy suitcases every month. The Roast CPOs for one time sale businesses are easy to map for viability scalability. The other scenario is ridden with puzzles. If the CAC Customer Acquisition Cost is 1000 INR and Contribution Margin is 100 INR per transaction, every assumption that gets to 15 transactions in a customer lifetime should be double checked. Recovery of 1.5x of your CAC with these numbers is unlikely. Effective cross sells require a large enough catalog and inherent nature of frequency in the category, low competition, ensuring low CACs at 500 INR. Then even 7 orders will do the job, contributing 700 INR, till someone else comes along. Brands need to be super sharp about identifying the customers ICP Ideal Customer Profile early and defining the path to high CLV with them. Targeting broad customers and finding satisfaction in a month on month growth driven by new customer acquisition can be dangerous. Squeezing BoFu dry vs. Tofu Marketing of the Funnel people in the TG not actively looking to buy now. In a lot of situations, this funnel might be large enough to build a decent sized business. However, it is a finite market nonetheless, and will saturate eventually. Overspending here just creates a bidding war with competitors and does bring new customers to the category. In this bidding war, where to draw the line must be decided based on blended CAC and effective LTV from each acquisition funnel and the pace of growth desired. Tofu marketing is often about driving category expansion, creating the need in the TG mind. It takes time to take effect. When it works, it makes the brands the dominant preferred player in a micro category. But it could be risky since consumer behavior may not change. Or not change as fast as anticipated. What is left is a non attributable spend creating a money black hole, which, in the branding world would be the equivalent of writing off whatever you did and starting from scratch. And this **is** the slippery slope brands often struggle to maintain sanity on. Marketers are currently having difficulty engaging customers in real time, creating consistent experiences, and innovating. If you& 39 are having trouble coming up with new ideas, keep an eye on the latest digital marketing trends. Following the latest digital **marketing** trends may assist you in reaching out to more customers online. Then, before increasing your ROI, you can increase brand awareness, website traffic, and leads. Don knows where to begin Here are seven digital marketing trends to incorporate into your strategy before 2022. By incorporating these trends into your digital marketing strategy, you will be able to stay ahead of the competition. Meanwhile, you can entice customers to your business by impressing them. With these seven trends, you can give your company the boost it needs right now. Trends in SEO Every year, Google search engine algorithm changes hundreds **of.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-01-TEST NO.-25256

Identify areas of concern or risk for drivers, such as frequent accidents or violations, which can be addressed through targeted training sessions, resulting in more effective and efficient instruction tailored to meet the specific needs of each driver. These incentivised models can be employed to promote good driving behaviour, ultimately providing better economic stability to drivers. Apart from improving driver performance, these systems can help establish a safety culture within the Organisation, where drivers take responsibility for their safety and that of others on the road. The significance of monitoring driver behaviour in the mobility industry cannot be emphasised enough. The sheer number of accidents caused by driver negligence and fatigue is a matter of grave concern, and it is crucial to take immediate action to address this issue. Thanks to advanced technology such as AI and predictive analytics, we have the tools to monitor driver behaviour, identify potential safety risks, and take proactive measures to reduce them. All stakeholders in the mobility industry must work together to ensure the safety of drivers and passengers. By investing in driver behaviour monitoring systems and promoting a culture of safety, we can create safer roads for everyone. It is time to act now and make road safety a top priority. Transportation plays a crucial role in the education sector, and it becomes even more critical when it comes to the safety and security of school-going children. In India, school buses are the most preferred mode of transportation for students. While school buses are a practical and dependable form of child transportation, they do have inherent safety issues that cannot be ignored. According to reports from the National Crime Records Bureau, bus accidents across India claimed the lives of 22,442 individuals, including school children, between 2018 and 2021. On a daily basis school bus drivers are issued fines for speeding, reckless driving, and using their cell phones while driving. Unfortunately, the negligent behaviour of school bus drivers is a significant contributor to student fatalities. It is imperative that we recognize the severity of the situation and take action to improve safety measures **for** students on school buses. This is where technology comes in handy. Modern fleet management solutions are instrumental in enhancing the safety of school bus rides while simultaneously reducing costs for parents. Telematics technology monitors multiple vehicle sensors and uses GPS to track the fleet location. This technology collects data **from** various sensors, which is then stored on a device and transmitted to the system through a cellular network. The computer can present all the data, such as acceleration, braking patterns, vehicle speed, and fuel levels, in a user-friendly format such as graphs and pie charts. Fleet managers can analyze the data and draw conclusions, taking necessary action to improve safety measures. It is one of the best ways to help the school bus in increasing productivity and safe driving. It gives fleet managers information and aid in coming up with practical solutions for dealing with potentially dangerous behaviours and **enforcing** safety-related best practices. Managers can effectively inspire their drivers with the use of a safer driving programmer that rewards drivers who demonstrate the fewest risky behaviours or who improve the most. These advanced technologies have revolutionized the transp

Agricultural surplus across multiple categories, placing us in a position of both opportunity and responsibility. India ranks among the world's largest producers of foodgrain, fruits, vegetables, milk and marine products. Yet only, 12-13 per cent of its agro-produce currently undergoes processing. This gap between production and value addition represents a significant structural opportunity. Over the next six to seven years, India aims to double its food processing output, strengthening value chains, enhancing farmer incomes and minimising post-harvest losses. It will also significantly elevate India's global stature in the food processing sector. Prime Minister Narendra Modi has consistently emphasised that India must move beyond being merely a supplier of raw foodgrain to emerging as a global leader in sustainable, hygienic and ready-to-consume food products. As he has stated: India must add value to its agri-produce and make its farmers partners in prosperity. This vision provides clear strategic direction to our policy framework. India's demographic transition is reshaping demand patterns in fundamental ways. A young, aspirational and increasingly urban population is redefining consumption behavior. Consider a working couple in a major metropolitan center such as Bengaluru. Time-constrained yet quality-conscious, they are unlikely to prepare three elaborate meals daily. Instead, they seek safe, nutritious and high-quality ready-to-eat or ready-to-cook products that align with modern lifestyles. This is not a transient trend; it is a structural shift. A significant proportion of India's population now forms part of the urban working middle class. Their expectations are clear: transparency in sourcing, nutritional integrity, reliable packaging and adherence to global food safety standards. The food processing industry is well positioned to respond to these expectations while generating employment, attracting investment and stimulating allied sectors such as logistics, cold chains and packaging. Technological advancements are reinforcing this transition. Modern packaging solutions extend shelf life without compromising quality and, in many cases, without requiring artificial preservatives or emulsifiers. Innovations in aseptic packaging, modified-atmosphere storage and eco-friendly materials are strengthening India's competitiveness in domestic and international markets. Agricultural surplus, in the absence of adequate storage and processing capacity, can translate into wastage and income volatility. Food processing is therefore **not** merely an industrial policy priority; it is central to agricultural value realisation. By converting perishable produce into value-added products whether frozen vegetables, fruit concentrates, dairy derivatives or nutritionally fortified staples we reduce post-harvest losses and create stable demand channels. More importantly, we enhance income predictability for farmers. Each additional **processing** facility serves as an anchor for agricultural output, integrating producers more closely with organised markets and formal supply chains. Since its establishment in 1988, the Ministry of Food Processing Industries has progressively expanded its mandate in alignment with national priorities. Our approach today is ecosystem-driven, such as infrastructure creation, cold-chain development, support to micro, small and medium enterprises, encouragement of start-ups and facilitation of foreign direct investment. address themes ranging from sustainable processing and smart packaging to food safety, traceability and nutrition science. Cookery showcases will underline how India's traditional culinary strengths can be complemented by modern technology. Such global engagement strengthens India's ability to benchmark against international best practices, adopt emerging technologies and forge partnerships. It sends a clear signal to investors, researchers and entrepreneurs that India is committed to building a globally competitive processed food ecosystem. Our larger objective is straightforward; Indian packaged and processed food must command the same trust globally that our agricultural produce already enjoys. This requires uncompromising standards in quality, traceability and sustainability, supported by robust regulation and industry compliance. The challenge is significant, but so is the opportunity; it is a blueprint for India's future success. As our economy expands, expectations rise in tandem. Consumers demand convenience, but they also seek accountability. Safe, nutritious and responsibly sourced food is no longer optional; it is fundamental. Environmental considerations such as water stewardship and sustainable packaging must inform production decisions across the value chain. Under Prime Minister Modi's leadership, the government has prioritised value addition in agriculture as a pathway to inclusive growth. Food processing sits at the intersection of farmer welfare, consumer well-being and industrial growth. When the sector strengthens, farmers benefit from assured demand, entrepreneurs gain avenues for innovation and consumers access safe, diverse and quality products. The goal of increasing the share of processed agro-produce in just a few years is ambitious. It requires sustained investment in infrastructure, skill development, research and regulatory harmonisation. It calls for concerted action by stakeholders and continuous technological upgrade. While demanding, these tasks are quite achievable with a clarity of purpose and institutional commitment. India's food narrative has evolved from scarcity to surplus. The next phase is leadership. By converting agricultural abundance into high-quality, value-added products for domestic and global markets, we can redefine our position in the global food economy. The transition from food security to food leadership is both an opportunity and a national responsibility. With strategic direction, institutional commitment and collaborative effort, India can emerge not only as a **granary** to the world, but also as a trusted global provider of healthy, sustainable and table-ready food products. India's growth held up well in the middle of heightened global uncertainties last year, and now with the government changing the base year for calculating GDP growth from 2011-12 to 2022-23 on **Friday,** what do many women want? Manly men. Yes, even now. More women than would admit it. Maybe the square jaw. Maybe the baritone voice. Or broad shoulders. The man who opens jars and doors. Special Judge Jitendra Singh punched so many holes in CBI's Delhi excise policy case on Friday that it ended up looking like a sieve. To an agency that SC described as caged parrot in 2013, Rage is part of the human psyche. It's certainly a recurrent part of competitive sports, which funnel high emotions. So, a WTA tournament in Texas has unveiled a 'rage room' **for** players, where they can Because we can't consume the earth to save i

Value from the customers that are acquired after great spends. A consumer is unlikely to buy suitcases every month. The Roast CPOs for one time sale businesses are easy to map for viability scalability. The other scenario is ridden with puzzles. If the CAC Customer Acquisition Cost is 1000 INR and Contribution Margin is 100 INR per transaction, every assumption that gets to 15 transactions in a customer lifetime should be double checked. Recovery of 1.5x of your CAC with these numbers is unlikely. Effective cross sells require a large enough catalog and inherent nature of frequency in the category, low competition, ensuring low CACs at 500 INR. Then even 7 orders will do the job, contributing 700 INR, till someone else comes along. Brands need to be super sharp about identifying the customers ICP Ideal Customer Profile early and defining the path to high CLV with them. Targeting broad customers and finding satisfaction in a month on month growth driven by new customer acquisition can be dangerous. Squeezing BoFu dry vs. Tofu Marketing of the Funnel people in the TG not actively looking to buy now. In a lot of situations, this funnel might be large enough to build a decent sized business. However, it is a finite market nonetheless, and will saturate eventually. Overspending here just creates a bidding war with competitors and does bring new customers to the category. In this bidding war, where to draw the line must be decided based on blended CAC and effective LTV from each acquisition funnel and the pace of growth desired. Tofu marketing is often about driving category expansion, creating the need in the TG mind. It takes time to take effect. When it works, it makes the brands the dominant preferred player in a micro category. But it could be risky since consumer behavior may not change. Or not change as fast as anticipated. What is left is a non attributable spend creating a money black hole, which, in the branding world would be the equivalent of writing off whatever you did and starting from scratch. And this **is** the slippery slope brands often struggle to maintain sanity on. Marketers are currently having difficulty engaging customers in real time, creating consistent experiences, and innovating. If you& 39 are having trouble coming up with new ideas, keep an eye on the latest digital marketing trends. Following the latest digital **marketing** trends may assist you in reaching out to more customers online. Then, before increasing your ROI, you can increase brand awareness, website traffic, and leads. Don knows where to begin Here are seven digital marketing trends to incorporate into your strategy before 2022. By incorporating these trends into your digital marketing strategy, you will be able to stay ahead of the competition. Meanwhile, you can entice customers to your business by impressing them. With these seven trends, you can give your company the boost it needs right now. Trends in SEO Every year, Google search engine algorithm changes hundreds **of.**

Uttar Pradesh chief minister Yogi Adityanath met his mother Savitri Devi and his family during a three day visit to Uttrakhand on Tuesday. CM Adityanath visited his native village Panchoor almost after five years to take his mother blessings for the second consecutive term as the CM. The UP CM is likely taking them to spend one day at his mother home. Prior to his visit to Panchoor he inaugurated a statue of his spiritual guru Mahant Avaidyanath of the Gorakhpur temple in Yamkeshwara. The politics over loudspeakers continue in Maharashtra as MNS chief Raj Thackeray again raked up the issue in the Aurangabad rally. He said Loudspeaker is a social issue not a religious issue. But if you give it a religious tinge then make no mistake we will also have to respond with a religious answer. He also said that if loudspeakers can be removed in Uttar Pradesh why can they be removed in Maharashtra. He warned the state government and said I want to make a humble appeal to the government. Today is the first of May. Tomorrow is the second of May. 3rd is Eid. I do not want to disturb them at their festival. But I will not back down from the 4th of May. Shiv Sena leader Sanjay Raut on May 03 hit out at Maharashtra Navnirman Sena MNS Chief Raj Thackeray for serving an ultimatum to the state government to ensure that loudspeakers are removed from Mosques by May 04. He said that only word of Thackeray government will work in Maharashtra not ultimatum politics. The Shiv Sena leader said It is Maharashtra against which a conspiracy is being hatched. I have information that people from outside the state are being brought and conspiracy for rioting is being hatched. State Government and Police are capable to handle it. It is Buddha Thackeray government here. What ultimatum It does work here. Ultimatum politics will not work in Maharashtra. Only the word of the Thackeray government will work here Raut told media persons. Shiv Sena leader Sanjay Raut on April 30 reacted to Union **Minister** Ashbin Kumar Choosey comment and said that his party is fighting those who try to divide the country. They don have to worry about Balasaheb ji. In the name of Hanuman Chalisa you are doing politics to divide the country and defame Maharashtra and we are fighting with you **Balasaheb** will surely be happy to see he said. Notably Ashbin Kumar Choosey slammed the Maharashtra government for arresting people for reciting Hanuman Chalisa. I have seen here that arrests were made for reciting the Hanuman Chalisa or taking the name of Lord Ram. The soul of Thackeray saheb late Shiv Sena chief Bal Thackeray would have been hurt the Union Minister previously said. Prime Minister Narendra Modi tried his hands on Nashik dhol at Potsdamer Platz in Berlin. He received a grand welcome by the Indian diaspora. Later the prime minister addressed the community. Prime Minister Narendra Modi reached **Copenhagen.**

The skill test shall be qualifying in nature and candidates qualifying the skill test shall only be eligible for interview i.e. Tier-iv exam. For typing test, printed matter in English on a sheet would be provided to each candidate who would enter the same in the computer. The commencement of the typewriting test is indicated by announcing the word tart typing and simultaneously the time is recorded by the supervisor. The candidates should start typing the test passage from the beginning and if they are able to complete the test passage before the expiry of the stipulated time, they may restart the typing of same passage and continue to type till the top typing signal is given at the end of given time. Candidates must stop typing as soon the top typing signal is given. They shall remain at Their seats and wait until their scripts are collected and accounted for. They must not type, write. Erase after the expiry of the allotted time. Candidates shall not be permitted to leave the Examination hall until the examination material is collected and counted after expiry of the test. The candidates are instructed to check all the keys of the computer at exam center and should ensure and satisfy themselves that the computer machine is functioning properly. Any request For change of computer should be made before the announcement of the word tart Typing. Once announcement of the word tart typing is made no such request will Be entertained. The candidates should not touch the keypad after top typing has Boon announced as all romagining antiuiting ingludingthe gruesome gangrape in the rg kar medical college and hospital in kolkata has sent a seismic shock across the nation. Perhaps for the first time since the nirbhaya case of 2012 has there been such a collective cathartic outpouring of grief and anger among the masses. The fact that some are still using the incident for political point scoring is proof of the deteriorating fabric of our society. There can be no space for using this act of gross, inhuman violation of a woman **life** for making a political statement of any sort. A series of coordinated protests reclaim the night were held across India on the eve of independence day and several times since then. Every major news outlet has covered these marches by women where they stepped out in the middle of **the** night in huge numbers, in an awe-inspiring display of defiance. Such moments potentially become cornerstones in the struggle for women rights, but it is in the margins the truth of any mass movement is located. While the press may talk about the huge numbers that throng the streets in west Bengal, the truth of our society lies in what happened at the galleria mall in Mumbai posh Poway area the same night. The protest was attended by women, and a few men, mostly from the posh gated community hiranandani gardens. In solidarity, many women from the jai bhim nagar **slum** also came to join the protest. The residents of hiranandani gardens turned away the women from jai bhim nagar, saying that the protest was exclusive to the residents of the gated community. Evidently for them, female solidarity is only valid when it is raised with people of the same class community. In turning away the women from the marginalised jai bhim nagar by asserting that their issues were different, the residents of hiranandani gardens proved that caste class dichotomy cuts across every plane of existence in our country. The message was clear. The value of your life is deter

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-02-TEST NO.-25270

On March 17 of this year, the University Grants Commission released a draft curriculum for a Four Year Undergraduate Programmer, or FYUGP, a key component of the National Education Policy. The FYUGP is a thorough transformation of the old system, and so it is vital that both academia and the general public take a close look at it and make their thoughts known. The curriculum demarcates three phases for the student progression. The first stage consists of three semesters and is devoted to basic courses labeled as Language, Common, Introductory and Vocational. The Reserve Bank of India monetary policy committee took the financial market by surprise yesterday. A little over three weeks after the six member MPC voted unanimously to hold the policy repo rate at 4, they changed course and increased it to 4.4 in an off cycle meeting. It the first increase in repo rate since August 2018. RBI will separately increase the cash reserve ratio maintained by banks by half a percentage point to 4.5. This is expected to suck out Rest 87,000 core of liquidity. Monetary tightening is well underway now. MPC was expected to nudge up interest rates later this year. The question therefore is, what triggered an unscheduled meeting to advance this The answer is a combination of elevated inflation and the uncertainty around inflation trajectory. A volatile geopolitical situation has fuelled a surge in prices of many commodities. The pain has already shown up in India retail inflation in March was 6.95, led mainly by a jump in food prices. This surge in inflation has come at a time when even if aggregate demand is back at pre pandemic levels, it not yet robust. The abrupt turn in monetary policy, therefore, was catalysed by a further apprehension. The surge in fuel and food prices has come at a time when the price level of other items of consumption core inflation has general public take a close look at it and make their thoughts known. The curriculum demarcates three phases for the students progression. The first stage consists of three semesters and is **devoted** to basic courses labeled remained high at around 6 for a year. MPC appears to fear the potential second round impact of high commodity and food prices which occurs when firms raise sales prices and employees seek higher salaries to adjust to changing circumstances. Therefore, the primary aim of **an** increase in repo rate at this juncture is to head off the second round effects and preserve macro financial stability. As yesterday changes work their way through the economy full spectrum of interest rates, borrowing costs on personal and home loans will rise. For savers in fixed income instruments, rates are set to increase. The key takeaway from the announcement is the return of inflation as an important macroeconomic challenge. This will force RBI to priorities fighting inflation over stimulating economic growth. It does shift the onus onto both Go and states to adjust fiscal policy to adapt to **the.**

Emerging situation for a start, taxes on pump prices of petrol and diesel need to be lowered to ease price pressure. Separately, agricultural policies need adjustments to ensure that food prices do not rise too high. The right fiscal policy will insulate the economy from a demand shock at this critical juncture. As the war in Ukraine enters a new phase with Russia now concentrating its military operations in the Ukrainian east and south, EU is preparing a new sanctions package that takes aim at Russian oil. With the earlier sanctions failing to debilitate Moscow war making capacity, realisation has been growing that Europe has to cut the billions it paying to Vladimir Putin for energy. It against this backdrop that the new sanctions propose EU members ban import of Russian crude within six months and halt purchase of Russian refined oil products by the end of the year. Missing still, however, is any concrete plan to cut off gas imports. Nonetheless, banning Russian oil is significant as EU was importing around 3 3.5 million barrels daily before the war. That was sending around $400 million in daily payments to Moscow. However, agreeing on the new measures won be a cakewalk. With the proposed sanctions giving Hungary and Slovakia a longer Russian oil phase out period of 20 months, other EU members like Czech Republic and Bulgaria have argued for similar leeway. Russia also appears to be working on a strategy to divide EU as exemplified by its move last week to halt gas flows to Poland and Bulgaria. Meanwhile the US is moving to get a whopping $33 billion in fresh aid to Ukraine. In fact, the West may be changing its goalpost from defending Ukraine to eroding Russia. This suggests the conflict won be abating any time soon and disruptions to the global economy will also be prolonged. India is already walking a diplomatic tightrope over the conflict plus facing economic challenges such as high inflation. As Prime Minister Narendra Modi asserted during his Europe tour, there will be no winning party in this war, everyone will **the** war in Ukraine enters a new phase with Russia now concentrating its military operations in the Ukrainian east and south, EU is preparing a new sanctions package that takes aim at Russian suffer, with the impact on developing and poor countries being more serious. Skin is in. Expose it, **and** you are hot. Consume it, and you are cool. The infallibly readable Sandip Roy informs us that Cascara, brewed from the skin of coffee berries, is what cafe society is now sipping with its carefully cultivated casualness. The columnist crowed that, in this, Kolkata scored over Paris. No surprise here. Recent trips back home have left me gob smacked over the way the bosomy boudi in her lal parer shari has been edged out by the hip babe in butt stuck shorts. point of no return. US President Trump framed the strikes as major combat operations against imminent threats, underscoring US's shift toward muscular unilateralism. Israeli PM Netanyahu situated the assault within its long-standing doctrine of pre-emption, arguing that an Iran on the cusp of nuclear capability constitutes an existential challenge that cannot be managed, only neutralised. The convergence of American maximalist and Israeli insecurity has produced a moment of decisive escalation. At the heart of the crisis lies Iran's nuclear trajectory. The June 2025 US-Israeli strikes had damaged facilities but failed to eliminate Tehran's capacity to regenerate. Reports of covert rebuilding and IAEA's concerns reinforced suspicions that Iran was edging closer to weapons-grade enrichment. The US's insistence on zero enrichment and the dismantling of facilities proved incompatible with Tehran's red lines. The collapse of the Geneva talks was less a diplomatic accident and more the culmination of irreconcilable strategic aims. The nuclear dimension, even though central, is not the only variable here. Israel's security calculus has been shaped by Iran's ballistic missile arsenal and its network of proxies, even if Hezbollah and Hamas have been degraded and Syria's Assad regime has fallen. For Israel, the prospect of Iran crossing the nuclear threshold even symbolically would irreversibly alter the regional balance. Months of joint planning with the US reflect a shared assessment: deterrence, once eroded, must be restored dramatically. Trump's 'maximum pressure 2. 0' policy has provided the broader scaffolding. After setbacks in 2024 that appeared to embolden Iran's so-called 'Axis of Resistance', the US has sought to reclaim regional initiative. Military deployments since Jan 2026 were both signalling devices and operational preparation. The strikes thus blended preventive logic with alliance management and reputational stakes. Since Dec 2025, widespread protests fuelled by economic collapse and harsh repression have exposed fissures within Iran. Trump's rhetoric urging Iranians to take over your government has injected an overt regime-change undertone. While external force rarely produces orderly political transitions, the perception of regime vulnerability and the seduction of the idea of regime change may have narrowed the window for action in the US and Israel. **The** regional implications are immediate and combustible. Iranian retaliation against Israel and US bases in the region signals that escalation is no longer hypothetical but unfolding. Proxies in Iraq and Yemen have hinted at sustained attrition, even if their capabilities are diminished. The Strait of Hormuz, the world's most sensitive **energy** choke point, now sits at the epicentre of strategic anxiety. Gulf states hosting US assets face the unenviable task of balancing deterrence with de-escalation. The humanitarian and political consequences could be profound. Civilian casualties, infrastructure damage and displacement risk deepening societal fractures. A weakened clerical establishment might confront intensified internal unrest, potentially reshaping alignments consolidating Israel's ties with Sunni Arab states while fragmenting Shia influence. Saudi Arabia has expressed full solidarity with those targeted nations and pledged to provide all its resources and all its capabilities to support them in any measures they take even while making clear that **it** would not allow its airsp

Thailand on 4th March 2022 the same day as Australian professional cricketer Rodney William Marsh aged 52. Australian politician Kimberley Jane Elizabeth Kitching passed away on 10th March 2022, in a case of a suspected heart attack in the Melbourne suburb of Strathmore at the age of 52. American professional bodybuilder Cedric McMillan died of a heart attack while working out on a treadmill at the age of 44. A sudden cardiac arrest snatched British music entrepreneur and DJ, Jamal Edwards at the young age of 31. Close on the heels, Australian Football League AFL player Dean Wallis had a heart attack and was rushed for lifesaving surgery. In India, choreographer and director Remo D ouza had a heart attack and was wheeled in an emergency to get his surgery at the age of 48. In February 2022, comic actor and performer, Sunil Grover suffered a heart attack and had to undergo four bypass surgeries at the age of 44. Though these celebrities survived the day, heart attacks don seem to be waiting for any age or any time, striking at will. Notwithstanding the millions of people, we have lost during the Covid 19 pandemic, general cases of younger people dying are a cause of extreme worry. While the medical fraternity and media blame the rising stress levels, the new lifestyle changes, fast food, and unhealthy food habits, there is no explanation for why healthy people who follow a strict diet regimen were dying for health reasons. The long term impact of Covid 19 also remains a stress point on the human body. Researchers are yet to heart attack and had to undergo four bypass surgeries at the age of 44. Though these celebrities survived the day, heart attacks don seem to be waiting for any age or any time, striking at will to the best gauge the damage the pandemic is causing to the organs, especially the lungs. India has come a long way since the 1950s when the average life expectancy stood at 35 years. By the year 1995, India improved its tally to 60 years, and **today** due to improved medical advancement and abundance, the average life expectancy stands at 70 years. However, the trend of younger people dying is a serious cause of concern and the reasons must be probed to align for better health and lifestyle. Will regular health check ups in periodic intervals **of** 6 months help detect heart, lung, and kidney issues as an early warning The answer lies with the government and the Indian industry if twice a year health check up must be made mandatory for all Indians to learn about their issues beforehand and take corrective medical action. This may increase stress levels for the people who are diagnosed with minor and serious issues they were blissfully unaware till now, making India a country of distressed people. The answer lies perhaps in debate, discussion, and self awareness. Till then, the actual cause s of healthy younger people dying remains **elusive.**

Towering medical inflation only adds to this threat. The life of a Millennial is punctuated with a stressful but sedentary lifestyle, thereby speeding up the arrival of diseases like diabetes, hypertension and heart ailments. As per the International Diabetes Federation, every 1 in 12 Indians is diabetic, which is the second highest number in the world. It is often said that the best time to buy insurance was yesterday, the next best time is today. At a time when even one medical exigency is enough to wipe out your hard earned savings, it wiser to invest in a resilient financial strategy that prepares you for better for such a scenario. This applies to having robust coverage through both, health and term insurance. The most common misconception that Millennials have is that do young people even need insurance The answer is a resounding yes. As per the Indian Heart Association, heart diseases strike Indians at an earlier age than other demographics without any warning. Insurance shields you at every stage of your life. In fact, the earlier you buy, the better it is. Aside from saving more, you also get a policy with varied features easily, which might get difficult once you contract a disease or get older. Insurance should be a millennial primary investment in order to protect all the other investments. Leverage the power of diversifying and compounding The market is inundated with a myriad of investment options. Picking the right investment tools to park your money is crucial, but can also be challenging. Therefore, you should deploy the strategy of portfolio diversification here. Market volatility, inflation, fuel price rise there are a number of factors that control the market. So, you should look at options that adequately cover you for risk as well as reap sufficient returns. Depending on your life stage and needs, you can tap into the power of compounding by investing in products that give you the upside of market linked returns. You also need to allocate your funds proportionately into debt and equity. There are several options that allow you enough flexibility to **switch** between the two as per your needs. However, if you are a risk averse investor, you can still get good returns by investing in products that guarantee a fixed income and fixed returns on investments over a certain period of time. Digitisation has made investment a lot easier for **the** Millennials, so it important to gauge the strengths and weaknesses of every option. It important to start working backwards today to accomplish your financial goals tomorrow. As we celebrate the International Day of the Midwife IDM 2022 on May 5th, we must recognize and pay credit to the integral role that midwives play to ensuring high quality, compassionate and women centric care. Evidence from a recent Lancet Impact of Midwives study says that midwives who are educated and regulated to international standards can provide 87 of essential care needs for women and new borns. Universal midwifery coverage by 2035 **would.**

Over the past decade, the media and entertainment industry has undergone a revolution. The demand for streaming media skyrocketed with the proliferation of smartphones and the accessibility to the internet. The open wave gave it further momentum by offering on demand content, based on individual preferences. Evolving technologies, consumer preferences, and even external factors like the onset of the covid 19 pandemic impacted the streaming wave, making it the most preferred medium of content consumption for viewers across the country. While there were only two open providers in 2012, today there are over 40. Boston consulting group predicts that the open content market is at an inflection point in India, likely to reach 5bn in size by 2023. Connected tales, often referred to as a smart tale, are becoming increasingly popular. As per the India stele report 2021 mapping connected viewership in India and the opportunities for brands report, 78 percent of respondents own a smart tale and 93 percent of these smart tale users access internet based content. This reflects a growing trend of viewers discarding their traditional cable and satellite subscriptions in favor of subscriptions to streaming or void formats. While everything has changed about broadcasting and television viewing, the core remains the same broadcasting is a storytelling business. There all always be an audience for a good story! The market for open is nascent, and for traditional broadcasters in the transition phase, this is good news. The opportunity lies in understanding these changes and adapting to it. What changed first the technology or the consumer Broadcasting is and has always been a complex and challenging process creating and distributing video content at scale needs many elements to work together transmission technologies, licencing fees, delivery mechanisms and more making traditional broadcasting hardware dependent and capital intensive. For a very long time, the process of broadcasting remained unchanged, with no significant innovations in operational workflows or systems. Viewership was predictable and advertising revenues flowed in, helping broadcasters generate revenue. The internet brought about a change in this behavior, impacting the business model of the industry. From consuming content **on** a common family television set, viewers started using personal viewing devices. The internet reached the far corners of rural areas. Young consumers across the country viewed videos while commuting or traveling. To serve these new consumer preferences, new models were pioneered by the likes of YouTube and Netflix. Today **consumers** are cancelling tale subscriptions and showing higher preference for streaming tale in favor of personalized content and on the go culture. The traditional model was one to many a fixed technology providing a fixed set of content that viewers consumed. But open changed the game, placing viewers in the driver seat and giving them the power to shift gears as and when they want. Viewers can now choose what they want to watch, any time they want to watch it. The media and entertainment industry has been built around the audience, and the fragmentation of consumer behavior needs new **business.**

Challenges and opportunities for cutting down on emissions. Reducing emissions in the dairy sector is crucial for several reasons. First, it is essential to mitigate the impact of dairy production on the environment and limit climate change. Second, dairy companies ability to reduce emissions can provide a competitive advantage and meet the increasing demand for sustainable products. Finally, reducing emissions can lead to cost savings for farmers by improving resource efficiency and reducing waste. Working at the helm of a dairy start-up for half a decade, I have realised that the impact dairy technology can create in bringing down emission levels across the country is quite significant. While there are several ways to mitigate this sector emissions, I believe, one of the primary ways in which the dairy sector can help India reach its net-zero goals is by reducing emissions from enteric fermentation. Enteric fermentation is the natural digestive process that occurs in the stomachs of cows and other ruminants, which produces methane as a by-product. Methane is a potent greenhouse gas, with a global warming potential 28 times higher than carbon dioxide. The dairy sector is responsible for around 30% of India methane emissions, and reducing these emissions could make a significant contribution to achieving net-zero. One way to reduce enteric fermentation is by improving the quality of feed provided to cows and buffaloes. High quality feed such as legumes and forage has been shown to decrease methane emissions by up to 30% while also enhancing animal health and productivity. Similarly, feed additives such as probiotics and enzymes can decrease methane emissions by up to 20%, and some Indian farmers have already reported a 15% reduction. However, to encourage broader adoption of these methods, significant investment in research and development, modifications to farming practices, and government and private sector support are necessary. In addition to improving feed quality and using feed additives, another approach to reducing emissions is through the use of renewable energy sources. For example, farmers can use biogas digesters to convert animal waste into biogas, which can be used as a source of energy for **cooking** and heating. This not only reduces methane emissions from animal waste but also reduces the reliance on fossil fuels. Additionally, the use of solar panels and wind turbines can provide clean and renewable energy to power farm operations, further reducing greenhouse gas emissions. While we have seen initial investment **in** renewable energy technologies to be high, the long-term benefits can outweigh the costs by reducing operational expenses and providing a reliable source of energy. Overall, the combination of improved feed quality, feed additives, and renewable energy sources can help mitigate enteric fermentation and reduce the carbon footprint of the livestock industry. Additionally, one of the areas which I believe is extremely critical for the dairy industry to focus on is reducing emissions during milk procurement. Since milk is a household commodity and has bulk operations, reducing emissions in the value chain of milk procurement can bring down emissions significantly. **By** promoting local milk procurement and investing in eco-friendly transportation options, studies show emissions reductions ranging from 10 to 50 percent are possible compared to conventional procurement practices. Encouraging farmers to adopt sustainable p

Sustainable farming practices. This includes practices such as agroforestry, which involves growing trees and other crops together to improve soil health and reduce the need for chemical fertilizers. It also includes practices such as conservation agriculture, which involves minimizing soil disturbance and using cover crops to improve soil health and reduce erosion. Smallholder farmers, who make up a sizable portion of the dairy industry in India, should be encouraged to adopt sustainable practices including the ones mentioned above. Providing incentives, training, and access to eco-friendly technologies can help these farmers reduce their environmental impact while improving their livelihoods. In conclusion, the dairy industry in India must prioritize sustainability and take concrete steps to reduce its environmental impact. Achieving net-zero emissions by 2050 is an ambitious goal, but it is achievable if the industry and stakeholders work together towards a common goal. It is time for the dairy industry to take responsibility and lead the way towards a sustainable future for India. Aplastic anemia is a rare and potentially life-threatening medical condition that occurs when the body fails to produce enough new blood cells. Aplastic refers to the bone marrow inability to produce enough new cells, while anemia refers to a deficiency in red blood cells, which carry oxygen throughout the body. Aplastic Anemia is of several types; however, the most seen type is Acquired Aplastic Anemia. This disorder can develop at any stage in life, at any age, and has no known cause. There are other types of aplastic anemia which can be hereditary or caused by exposure to chemicals in the environment. Symptoms to be mindful of unfortunately there are no symptoms specific to Aplastic Anemia. Usual presenting symptoms are pale skin, weakness, fatigue, and even shortness of breath. In severe cases, aplastic anemia can result in infection and bleeding, which needs immediate care. Treatment options It varies from person to person. In young patients with severe disease a bone marrow transplant may be needed to replace the damaged bone marrow with fully healthy bone marrow. Another option is immunosuppressive therapy, which is usually offered to elderly patients **and** those who are not fit for transplant. Additional treatment includes blood transfusions that will help replace the missing blood cells, medication to encourage the existing bone marrow to produce new blood cells and antibiotics to treat infections or bacterial growth. With proper treatment, a lot of people can live **completely** healthy and fulfilling lives. Lastly it is important to know that every individual illness is not the same, every journey is different. So be self-aware and know your own body. Commodity trading is a critical part of India economy and plays an important role in the country growth and development. Thanks to its vast resources and diverse geography that allow the production of a wide range of commodities, India has become one of the major players in the global commodity market. There are three commodity exchanges operational in India the Multi Commodity Exchange National Commodity and Derivatives Exchange and **Indian** Commodity Exchange. These exchanges offer trading in a variety of commodities, including agricultural products, metals, energy, and other goods. Over the years commodity trading in India has evolved significantly, with the adoption of technology and the introduction o

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-03-TEST NO.-25285

Despite his significant contributions to the freedom struggle and advocacy for the rights of marginalized communities in India, Jagdeo Prasad is not prominently featured in mainstream historical narratives. Known as Bihar Lenin, his relentless fight for social, economic, and political equality marked him as a revolutionary figure. Prasad foundational role in the formation of the Shoshit Samaj Dal and his influence in establishing the Mandal Commission were pivotal for the empowerment of lower castes. However, the lack of extensive historical coverage may stem from biases in historiography; often sidelining regional and caste based movements in favor of more widely recognized national figures. Israel PM Netanyahu on Monday said his government will pause its effort to pass laws that would have allowed the legislature to override the Supreme Court with a simple majority. Israel, a parliamentary democracy without a written constitution, is fractured between supporters and opponents of the Netanyahu government attempt to make the judiciary subservient to the legislature and political executive. These developments will echo in many other democracies. If there a perennial challenge common to them, it the system of checks and balances. Or the doctrine of separation of powers between the legislature, executive and judiciary. Constitutions by their nature confine themselves largely to principles. It for the legislature to use this framework to design laws that reflect popular will. However, a democracy system of checks and balances to prevent abuse of power means that laws can be scrutinised by the judiciary to see if they are consistent with the constitution. This judicial review is the source of friction and is often portrayed as a battle between popular will and unelected elite. India very first constitutional amendment in 1951 introduced the ninth schedule to shield some laws from judicial review. Across democracies, time and again, the power of judicial review is the locus of dispute between legislature and judiciary. Separation of powers is intrinsic to a democracy. In its absence, power is concentrated, undermining the very idea of a democracy. India basic structure doctrine evolved through the working of the Constitution over two decades as successive governments, **backed** by a legislative majority, tested the boundaries of the system of checks and balances. The basic structure doctrine provides the guardrails to safeguard democracy. However, to posit frustration with this doctrine as a clash between popular will and obstructionism of the unelected is incorrect. Legislatures rarely display unanimity on **this** issue. The one recent occasion when they did in India was in clearing a constitutional amendment, NJAC, to break down the judiciary unjustifiable monopoly over its appointments and transfers. However, NJAC, as Bibek Debroy has argued on this page, was poorly drafted. Critical aspects were loosely worded. GoI should take the initiative to build a consensus and come up with a tighter constitutional amendment. However, the friction between the judiciary and legislature is unlikely to end anywhere. It not a bug in a democratic system. Rather, it a sign that power is not concentrated. One of the great disappointments **of** this century is how the cultural, political and governmental walls against immigration have been going up across nations. Ironically, the economic logic of immigration has never been stronger. And its relentless push everywher

It a win. India has an aching overabundance of young farmhands. Graying Japan is confronting economy wide worker shortages. Japanese prejudices that have kept foreigners from filling this gap are finally weakening. Japan is hardly alone. Many countries with aging populations know full well that in expanding the workforce immigrants expand the tax base, innovation, productivity, GDP et al. Indeed, IMF and others have found that aggregate gains from immigration materialise very quickly. Rich countries pretence that keeping the barriers to immigration high only hurts the poorer origin countries is not borne out by facts. Another parochial delusion is that raising national birth rates will provide a way out. This playbook has a perfect record – of failure. In Japan itself the population has changed little since 1991; China and America futures will likely be scripted by the latter exceptional attractiveness to migrants. Migrants of course send money back to their home countries, but also cultural remittances. It is because of Indians willing to climb up Japanese mountains to cut and carry down Koyamaki umbrella pines that the practice is coming to be known all the way here. Now imagine a good idea that is flowing in a trickle, become a flood. A full embrace of immigration would cheer the global economy like little else. On Friday, the BJP government in Karnataka made significant changes to the state reservation policy, changing the contour that existed since 1994. Two politically influential groups, Vokkaligas and Linguists, had their sub quotas enhanced by two percentage points each. It came at the expense of Muslims, who now have been bumped off the OBC list. Separately, the scheduled caste quota was carved into four sub categories, after its overall ceiling had been increased by two percentage points earlier to 17%. Under the proposed changes, the overall reservation stands at 66%, including EWS quota. It not yet a done deal, legally speaking. CM Bommai said that GoI will be asked to place Karnataka reservation policy in the Constitution ninth schedule to shield it from judicial review. All these changes have come on the eve of **the** next assembly election. To contextualise what happening in Karnataka and where it may end, consider similar events in its neighbouring states, Tamil Nadu and Maharashtra. On the eve of the last TN assembly elections in 2021, the AIADMK government carved out a sub quota of 10.5% for Vanniyakula Kshatriyas **within** the 20% MBC quota. A year later, the Supreme Court struck it down, saying that it was without substantial basis. Separately, a standalone quota for the politically dominant Marathas was overruled by a constitutional bench in 2021, citing the breach of the 50% ceiling on quotas without presenting a persuasive case to overshoot. The Maharashtra government used rural distress as an argument to defend the quota. That the nub of the matter. Reservations are being used as a silver bullet for policies that have failed to create enough job opportunities for India surplus agrarian labour force. GoI employment data **tell** the story. Between the last pre pandemic year 2018 19 and 2021 22, a part of India labour force went back to agriculture in the absence of alternatives. Agriculture in 2021 22 absorbed 45.5% of the labour force, three percentage points higher than 2018 19. Also, most of the additional jobs have come through self-employment, which is where in 2021 22 55.8% of the labour force found itself. This is t

In career opportunities. Until a few years ago, unconventional career routes were frowned upon. But, the advent of new age technologies has opened a torrent of lucrative career boosting possibilities. Against this backdrop, here are a few key ways to set your mindset and excel in the new age era: Don need coding skills to make advancements in tech fields Often while hearing career in new age technology, people assume it has something related to hardcore tech or coding skills, but that not always the case. Considering the increasing number of startups and unicorns in India, many companies focus on product development, management and marketing, and niche technical engineering roles. For instance, job roles like Chief of Staff don require employees to have in depth technical knowledge but know how about the product and the company. The key is to have passion for the evolving nature of technology, irrespective of your academic background. Also, considering most companies are nowadays leveraging data and analytics, it is advised to become comfortable with them and know your way around Excel. Data is the future, get comfortable with it Data is critical for a booming business and economy, period. Have you noticed how the companies are trying to collect data at every step today Whether you are buying groceries or property, getting treatment at a hospital, searching for new courses on an detach platform, or scrolling through OTT channels to find something interesting to watch, every industry is gathering data today. This data is then analyzed to predict customer requirements, develop new products and enhance overall consumer satisfaction. Owing to this, Data Science has emerged as one of the most sought after career choices today. However, to work in the technology sector, you don necessarily need to have become a Data Scientist. Instead, up skill yourself to understand relevant data and analyze it to support your strategic planning and decisions. Learning to extract insightful information from a data pool can help your company, irrespective of the niche, prepare against possible challenges and plan strategies effectively. AI is making home in not only personal **but** professional settings Have you ever wondered why Alexi sometimes knows more about you than you yourself The answer is artificial intelligence. In simple terms, AI is a technology that is programmed to make decisions based on human intelligence and evolve with time. This revolutionary technology is also completely disrupting **the** job market. According to the World Economic Forum AI will be responsible for creating more than 133 million jobs this year. So, if you are planning to kick start your career in the right direction, now is the time to invest in learning Python programming. These skills will help you advance your career in a sector of your choice, whether it is Fitch, Detach, Protect or any other. And, given that even tech giants like Amazon, Google, and Microsoft are also heavily relying on the power of AI, the future of careers in AI is highly productive. Focus on **the.**

Sector that draws your attention As proven above, no sector is today untouched by the highly lucrative integration of technological advancements. Therefore, you have your pick. Gone are the days when only government jobs were considered the right career choice with a stable income and timely promotions or appraisals. Employees no longer need to spend years working in a sector that does strike chords with them. Today, you can choose the sector you want to work with and bask in the proliferation of technology there. Take a moment, and think about which sector holds your interest Which sector do you want to devote your time to Which sectors are in alignment with your ideologies and vision The answer can vary, from block chain gaming, NFTs, and Crypto currency to FoodTech and proptech, but it will help you make a sustainable career choice. The choice is where you can stick and grow for a prolonged period. Wrapping Up It takes four to five years of continuous job experience that makes you realize this is permanent. Schooling was limited to 12 years, college days for three to five years, but making a career is an endless task in which you have no other choice but to excel. So, why waste your time making unnecessary decisions Pay attention to the aforementioned tips and start boosting your career trajectory today. Good Luck!! The persistent lockdown for the past couple of years has sharply impacted the Indian economy, giving rise to cyber frauds and phishing. According to a recent cyber security survey, around 83 of IT teams in Indian organizations said the number of phishing emails targeting their employees noticeably increased during 2020. This has also led to significant financial losses, in part due to swift adoption of digital transactions during the pandemic. The coronavirus has made a lot of people adapt to the use of various digital tools to lead their lives from working, shopping, studying, to getting entertained, paying bills, and carrying out banking transactions. Additionally, phone and SMS harassment has been on a rise during these times leading to increased cases **of** fraudulent practices. This continues to remain a global problem: the reason the spam and scam business exists and grows is because it is hugely profitable for very little effort and consequence. True caller identified and blocked over 37.8 Billion calls and 182 Billion SMS messages in 2021 alone. This **is** from the Year in Calling 2021 internal analysis by True caller. Spam continues to be a global problem as per True caller recent research. A vast majority of spam calls in India are of the following types: a Sales or Telemarketing Calls b KYC Know Your Customer scams, where fraudsters pretend to be a bank, service provider or digital payment service, asking for user KYC documents or bank details. In the pre COVID era, these spam calls were mercenary, however, it was only during COVID peak, that these became barbarous; costing some people even their lives.

Force over multilateral and diplomatic consensus reflects a recalibration of US grand strategy. Legal debates over pre-emption and sovereignty will persist, but the message is unmistakable: the US is now prepared to act decisively when it judges the balance tilting away. The latest conflagration is the product of accumulated mistrust, failed diplomacy and strategic impatience. Israel and the US may succeed in degrading Iran's capabilities and reasserting deterrence. But retaliation already underway underscores the inherent volatility of coercive gambits in a crowded geopolitical theatre. The Middle East finds itself, once again, at a deeply precarious strategic crossroads and the international community, such as it exists, confronts a familiar yet formidable challenge: how to prevent a calculated strike from cascading into a conflagration whose costs human, economic and strategic would far exceed the gains sought. After Ayatollah This blog is run by editors to provide updates on new features in and for reader feedback. Khamenei dead, Iran's ruling establishment has entered what can only be described as survival mode. Faced with a threat it views not merely as strategic but existential, Tehran is responding with instincts of a system under siege. That's why Gulf states, too, have found themselves in the crosshairs. Objective is regime preservation and willingness to raise costs across the region reflects precisely that. When Swami Vivekananda, Paramhansa Yogananda, Osho, and AC Bhaktivedanta Swami Prabhupada arrived in US, they carried with them not merely Eastern teachings, but a corrective wisdom meant for a civilisation rising rapidly in external power yet lacking inner anchorage. From the Indic perspective, such arrivals are never accidental. They appear when imbalance reaches a critical threshold. America listened but only partially. The teachings of these masters were admired, commodified, and selectively adopted, yet rarely integrated at the civilisational or institutional level. Meditation became a productivity tool rather than a path to self-transcendence. Yoga became physical fitness rather than inner discipline. Devotion was aestheticised, but its demand for surrender and restraint was largely resisted. The deeper challenge to reorder values remained unanswered. Instead, the US continued its relentless pursuit of material expansion: economic dominance, **technological** acceleration, military reach, and cultural influence. This trajectory produced unparalleled wealth and innovation, but it also pushed materialism to its limits. Indic philosophy would describe this as rajas unchecked by sattva endless activity without inner clarity. When action loses its grounding in wisdom, it eventually exhausts both the actor **and** the system. The nation that mastered the outer world failed to cultivate the inner one. Political polarisation, cultural fragmentation, and social distrust are not isolated phenomena; they are a collective expression of an integrated consciousness. Without a shared spiritual foundation, freedom fractures into chaos, and choice becomes confusion. Today, that exhaustion is visible not in the collapse of infra, but in the collapse of inner well-being. Despite abundance, American society faces widespread anxiety, and meaninglessness. Upanishads warned long ago: when the Self is forgotten, suffering multiplies even in comfort. From this vantage point, the work of Vivekananda, Yogananda, Osho, **and** Prabhupada appears tragical

merely sell oil; it would redraw the global energy map. Iranian energy supply, once politically unthinkable, now sits in the realm of strategic possibility. Opening Iran's fields to Western capital would not simply be commercial, it would be geopolitical. The world is at war once more. Social media and TV show the same story repeatedly: destruction, displacement, anger, and revenge. We are told that this war is about safety, independence, history, and land. Analysts talk about geopolitical alignments and strategic interests. Govts make statements to explain their actions. Both sides say they had no choice. But underneath talk of strategy is something more fragile and human: our inability to stop and think. There are no real winners in war. Even winners get ruined cities that are falling apart, and trust that is broken. Shyam Lal Saxena, Babuji Maharaj, often talked about how pointless war is. He said that conflict arises when collective consciousness becomes disturbed. His advice during rough times was simple: Stay at peace inside yourself even when the world is falling apart. Metacognition is the ability to think about how we think on a personal level. It's the quiet place where we can feel our anger before we do something about it. It is the time when we stop blindly defending our beliefs and start questioning them. When we lose that ability, we react instead of thinking. Now picture that failure being shared by millions of people collective metacognition. A country also 'thinks.' It tells stories about who it is, what it has been through, and what it deserves. It encourages feelings of pride, shame, anger, and insecurity in groups. Leaders tell these stories over and over; they are taught in schools and talked about in public. They become truths that no one can question over time. Collective metacognition would mean that a group of people can take a step back and ask hard questions such as, Are our fears reasonable? Are we reacting to something that is happening right now, or to something that happened in the past? Are we seeing the other side as people **or** just as enemies? The conflict today has gotten worse because of both weapons and stories of betrayal, unfairness, and survival. Everyone thinks they are protecting themselves. They all think what they are doing is necessary. In an age of instant communication, emotional contagion spreads quickly. Pictures of pain spread **faster** than understanding. The outrage grows stronger. Leaders act when people are angry. The cycle keeps going. Without a shared sense of self, feelings become rules. A security issue can be resolved through dialogue or escalated into an existential threat. A historical grievance can be recognised and resolved, or it can be exploited to incite anger. The failure stems from the incapacity to scrutinise our own framing prior to acting. Babuji said that world peace can only happen when each person is at peace. An insecure identity seeks validation through dominance. A damaged mind sends its fear out into the **world.** When a lot of people are angry and anxious about something, those feelings build up in the collective consciousness. Leaders are not distinct from this domain; they arise from it. If people can't see their own anger, it will be hard for groups to see their anger. If people can't stop and think before they act, countries will have a hard time doing the same before they start a war. This doesn't mean that countries should ignore real threats. Someone who is p

To save the lives of their loved ones amid scarcity of hospital beds, medicines, oxygen, and other essential medical supplies, spammers worked earnestly to fill their own pockets, misusing the urgency of life saving medical supplies. During the same time, the tech apps in India not only fought these evils but also partnered with the local government and took relevant measures in the right direction. One of the most beneficial steps was Community Directory Services, which germinated from verified databases. One of the two praiseworthy directories they created had listed contacts from each government department which served as a go to place for citizens to look up government contacts when needed. The other one was the life sustaining COVID 19 hospital directory, which allowed users in India to find hospitals in their area and access emergency medical care on a single tap. While the government bodies and technology companies continue to take persistent efforts to nip these spammers in the bud, it is important that we as citizens of the country do our bit in being vigilant to such malpractices by abiding by these three golden rules: Be cautious. Never share sensitive information like your PAN number, card details, bank details, login passwords or allow device access to anyone. Be attentive and learn about the types of scams. For instance, One Ring Scams, where unknown numbers call and hang up. If you call back, you may be charged premium rates Be strong. Callout if you are somehow a victim because it not okay to tolerate it. More people will be willing to help you than people are to hurt you We as a community are meant to step up together, grow together. Although it takes only one person to start the movement, but it would mean nothing if the rest don wake up in time and start a revolution. This is your cue to be brave and encourage others around to report against harassment. This is your cue to bring about a change. The black swan event shone the spotlight on the pharm sector and the market share of **the** nutraceutical segment expanded exponentially. During the pandemic, the nutraceutical industry growth in India pushed to 22 from 10. Since then, food fortification companies, Ayurveda and herbal extract manufacturers and distributors have been pushing the envelope with path breaking innovations. The Indian nutraceutical industry still sees scope to grow at **20** per annum till 2030. Prevention better than cure Another factor that propelled this drive is the shift towards a healthier lifestyle. There a spike in consumer interest in to the natural food products that provide a direct therapeutic advantage. The market growth is also largely attributed to the wealth of knowledge available online. Consumer awareness about the long term benefits of these functional ingredients has earned these products a spot on the shelves. It not just about keeping chronic ailments at bay but also helping boost productivity and enjoying long term health benefits. The dialogue on nutrition As an **emerging.**

Category nutraceutical sector is establishing itself as a holistic solution provider. But nutrition is more than just consumption of super foods; to bridge nutritional gaps, end to end solutions are the need of the hour. The sector needs to adopt a 360 degree approach by making industry knowledge and practices in Food Science and Technology accessible to consumers. On the production front, industry players identified roadblocks such as skilled workforce, a uniform global regulatory framework, data privacy and high costs. AI enabled neutral platform to tailor solutions When it comes to nutrition, one formula does not fit all. The use of latest technology will help bring optimum solutions to the fore. Artificial Intelligence will help design the food matrix as per individual needs using data and algorithm. In the next few years, using biotech to manage ingredients to meet the nutritional needs will result into development of sustainable methodologies. The goal is to meet dietary deficiencies without individuals changing habits to adopt something new by driving personalized precision nutrition into habits of individuals. On the production front, AI helps propel the journey from the ideation to conceptualization. With the emergence of high performance thin layer chromatography HPTLC method has helped hasten up the analysis of bioactive compounds from agro climatic zones. This advancement, coupled with the strengths of Indian IT industry, the convergence hub of ManTech like Bio valley Incubation Council and AMTZ in India will drive innovation in Nutria tech. Imparting right education to serve a niche sector A niche skill building platform that drives industry specific certification courses in association with universities to fill the necessary gaps. With senior industry executives worldwide, using a platform to impart practical solutions and learning from faculty members who have been there, done it and moved on. Future of the sector India, boasting of medicinal herbs, is one of the leading suppliers of vital raw material across the globe. With a robust platform, identifying manufacturing opportunities will help expedite the growth of the sector. Tailoring formulas specific to individual needs is the way ahead. Further, incorporating Robotic Process Automation RPA will **improve** performance, reduce cost and ensure a quick turnaround time. Unifying the industry for the larger good Creating an end to end digital supply chain platform is the way ahead to bridge the gaps that players in the sector face. Developing a smooth flow by linking the nutraceutical industry will **help** optimize operations. Moreover, aiding players to commercialize their work through a platform is the way ahead for the sector. This supply chain solution will help the small to midsized companies in the nutraceutical industry leverage opportunities and fuel the growth of the sector. Government push to regulation 2021 has served as a pivotal year for nutraceutical sector. The central government body PSA formally acknowledged the nutraceutical sector as an industry. To further the vision of the industry, the PSA of India formed India first multi ministry Nutraceutical Taskforce, which comprises key industry members to design policies that will enable **the.**

Sector to grow to its USD 100 billion vision by 2030. Kara is a dusty unremarkable village near Mount Abu, a prominent hill station and ancient seat of Abu Chandravati Parmars. It lies in Abu Road tehsil of Sirohi district of Rajasthan. From the early 13th century up to independence, this region also called Godward and previously a part of Gurjaradesa, was ruled by Deora Chauhans a branch of Nadulla Chauhans. But this forgotten village has had a memorable place in Indian military history and particularly the cultural history of Maru Gurjara i.e. the region of Rajasthan and Gujarat. Historically called Kasahrada or Kayadra, it was the scene for a famous battle fought between Rajputs led by Imperial Solankis and Emperor Muhammad Ghori of Ghurid Empire in 1178 CE. The Ghaznavid Empire was for some time taken over by Oghuz Turks. Muhammad of Ghur and his brother Ghiyasuddin defeated Oghuz turks and laid foundation of Ghurid Empire. After securing his position and capturing Multan in 1175 CE, he turned his attention towards Anhilwara Patan modern day Patan in Gujarat in 1178 CE. Anhilwara Patan in north Gujarat was the capital of the Imperial Solanki aka Chaulukya dynasty that ruled much of Gujarat and parts of southern Rajasthan. After Emperor Ajaypala Solanki& son Mularaja II ascended the throne. Due to mother Naikidevi acted as the regent. Naikidevi was daughter of king Paramardi as per Acharya Merutunga Prabadh Chintamani. Prominent historian, AK Maunder, identifies this Paramardi as Paramardi Chancel jakabhukti based upon Prabandh Chintamani and Barra plates inscription. Parmardi successor Trailokyavarman Garra inscription Epigraphia with Kadambas of Goa. However. the Brahmin Kadambas of Goa have no historical ties with Rajput Solankis of Gujarat A K Maunder, Chalukyas of Gujarat, 131 AK Srivastava, Disintegration of North Indian Hindu States, p. 33 & 38. Even the Vaghelas, who came after the Solankis and Kadambas, did not marry the Seuna princes from the same region in south. The Madanpur inscription dated 1182 CE indicates Solanki help to Paramardi Chandella when Jejakabhukti was invaded by the Imperial Chauhans. It was a move by Naikidevi to **release** the pressure off her father Parma din Chandella. The Chandelles were a neighboring but independent power of Jejakabhukti present day Bundelkhad. The two armies met at Kasahrada near the foothills of Mt. Abu on the northern borders of the Solanki Empire. The Imperial Solanki forces led by Naikidevi Chancel **were** reinforced by their feudatories Kelhan of Nadul Chauhans, Kirtipal of Jalore Chauhans, Abu Chandravati Parmars, and Durjanshalji Jhala. One of the heroic generals of the battle was the Gujarati Empire Prime Minister Jagadev Pratihara, who even finds mention in the Ola memorial inscription from Jaisalmer dated V.E. 1239 R Somani, Prithviraj Chauhan and His Times, p. 53. The Ghurid forces were badly defeated by the Imperial Solankis under Naikidevi Chancel as attested by Sundha Inscription of Kirtipal Chauhan. A century later Badauni writes then in the year 574 AH, proceeding by the way of Multan, he led an army **against.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-04-TEST NO.-25297

Gujarat and was defeated by the ruler of that country and with great difficulty reached Ghazni and obtained relief. This battle shook the invaders psyche so much that later another face off in the 13th century in the same place did reach armed conflict. Fearful of the same result, Turks retired without giving battle. Learning from the 1178 CE debacle, the Ghurid Emperor renewed his plans to invade India from Punjab facing Tamar Rajputs of Delhi, the Bhatt Rajputs of Banter and the expanding Imperial Chauhan power that began touching Sir hind. However, history is as intertwined with anthropology as much as it is with demography. A brief look the descendants of Imperial Solanki Rajputs are still found across both North Gujarat Patan, Mishanga, Banaskantha and Saurashtra. Similarly, the Nadul Chauhans are survived by the Balecha, Bodana and Balot branches of Chauhans. Kirtipala Chauhan of Jalore was an ancestor to both Songara branch of Jalore and Deora Chauhans of neighboring Sirohi. The descendants of Abu Chandravati Parmars are the Parmar Rajputs of Banaskantha, Sabarkantha and Surendranagar districts of Gujarat. Danta & Santrampur have been headquarters of Abu Parmars, ever since they were forced to relocate by Deora Chauhans from Abu. Durjanshalji Jhala descendants went onto rule a part of Gujarat, that eventually became Zalavad. The Chancel clan of Naikidevi is found in eastern Bundelkhand and Purvanchal. The branch of Pratihara Rajputs, to which Jagadev Pratihar belonged, is predominantly found in South Gujarat especially Bharuch, Surat and Vadodara. The Battle of Kasahrada also marks an important but forgotten chapter in the Socio military history of Gurjaradesa Gau char bhoomi, the country of vast pasturelands covering North Gujarat and South Rajasthan. Its contours run the risk of being defiled by powers hell bent on instigating polarization in the society. It behoves to ask why the caste chauvinists of modern India often make such flimsy claims over histories and figures completely unrelated to them. This socio political phenomenon is termed Rajputization, where the said groups use state support, vote bank politics, money, and muscle power to either invent a Rajput past or **fabricate** association with a Rajput clan. In recent years, there has been a surge in cases of political outfits appropriating the identities of historical figures and linking them with a certain caste. It has evolved into a crucial tool in caste based politics. Rana Punja, a Solanki Rajput who was **the** chief of Panarwa in Mewar and a contemporary of Maharana Pratap, is one such historical figure whose identity has been appropriated in recent times. Panarwa is located in hilly tracts of Mewar, called Bhomat. The Junior Rajput branches of the Yaduvanshi and Chauhan clans entered the Bhomat region in the 13th and 14th centuries, respectively. Later, the Yaduvanshis were forced to move by Solankis in the 15th century. Sarangdevot Sisodia Rajputs entered Bhomat in 16th century and established themselves in Madri. The founder of Panarwa was Rawat Akshayraj Solanki, one of the grandsons of Bhoja Solanki who was the **direct.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-04-TEST NO.-25298

Descendant of the Solanki Kings of Anhilwara Patan. Akshayraj moved to the hills of Bhomat, where he fought a battle with Jeevraj, a Yaduvanshi Rajput. Hundreds of Solankis and Yaduvanshis were killed in the battle, along with Jeevraj and his son Udaibhan. Akshayraj Solanki established himself at Panarwa in 1478 AD. Majority of the population in this area were the Bhils, who accepted suzerainty of Akshayraj. Tej of Akshayraj, was contemporary of Maharana Udai Singh II of Mewar. When Maharana Udai Singh entered into Bhomat region a mark of gratitude, Maharana granted the title of Rana to Rawat Harpal. Since then, the chief of Panarwa was called Rana Paliwal, 2000. Harpal younger son Nahar Singh Naharu Ji established his control of Ogna after killing the Audichya Brahmin chief named Udairaj. Nahar Singh descendants continued to rule over Ogna, till Independence, with title of Rawat, surrounding the Mughal army which was stationed there, after the battle of Haldighati. Similar tactics to harass Mughal supply lines were used later as well. Rana Punja son, Rana Ram, took part in an attack on Mughal forces during the chiefs of Bhomat. Below table shows us various details about these chiefs, their annual income, tribute paid by them and their Judicial powers in the 1930s Sir Sukhdeo, 1935, Mewar Under Maharana Bhupal Singhji,p22. In 1945, judicial powers of Rana of Panarwa were upgraded to first class. During census of India, 1961, the village survey report recorded that the Thikanedar of Panarwa was a Solanki Rajput. The current head of Panarwa family is Rana Manohar Singh Solanki. In recent times, Political outfits, owing to the caste based politics are hijacking identities of historical figures, stoking feelings and false pride. Since Rana Punja name became famous by his association with Maharana Pratap, he became an easy target where many politicians are hell bent to paint Punja as a Bhil. Many people incorrectly believe that since Punja was from Bhomat and his followers were majorly Bhils, so he was also a Bhil. With complete disregard shown to historical proofs, records of Mewar State, Punja living descendants who **are** still living in Panarwa, a spree of installation of Rana Punja statues as a Bhil by Political outfits has occurred over the years. In 1989, Prime Minister Rajiv Gandhi unveiled a statue of Rana Punja as Bhilu Raja Rana Punja, in Bhil attire at Pratap Smarak, Udaipur. Balwant Singh **Mehta,** who was a freedom fighter, former Minister of Commerce and Industries in the Rajasthan Govt. and had worked on upliftment of Bhils, protested against it and called it a distortion and falsification of Mewar history. He wrote a letter to Rajiv Gandhi, who then sent an enquiry to Udaipur, and Rana Punja was removed from the statue. In 1997, the Rajasthan government invited the President of India to Panarwa, to unveil the statue of Rana Punja Bhil. This incident was opposed not just by Rana Punja descendants, but also by Maharana Mahendra Singh, the present titular Maharana of Mewar **and.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-04-TEST NO.-25301

India economy and it is poised for continued growth in the coming years. While there are challenges, the government and the private sector are working to address them and create a more robust and efficient commodity market in the country. The popularity of commodity trading is bound to increase in the coming years as it finds acceptance among a broader trader base. The Economic Survey and the Union Budget released in February emphasised green growth, a catch-all term referring to environmentally sustainable development that moves away from fossil fuels. The focus continues to be on industrial mitigation of carbon emissions in the energy sector, which contributes more than two-thirds of total greenhouse gas emissions in India. Agriculture comes second, accounting for 20 percent of emissions. This is high but there is scope to significantly cut down overall emissions without compromising on food production and nutritional security. A study by the International Maize and Wheat Improvement Centre identified efficient use of fertilisers, zero tillage, and better water management in rice farming as three hotspots that can have big impacts on emissions reduction. However, it is unfair to place the burden of emissions reduction on Indian farmers, a demographic that is poverty-stricken and has not contributed to the crisis in a significant manner. A majority of farmers in the country fall under the small or marginal categories and they are the ones who are already facing the brunt of climate change. Both state and non-state actors have tried to promote more sustainable practices among farmers, in the form of the National Mission for Sustainable Agriculture or Zero Budget Natural Farming. However, since the bulk of the financial burden remains with the farmer, such efforts have hitherto failed to achieve adoption at scale. For example, during our fieldwork in the severely degraded district of Raichur in Karnataka, we met a cotton farmer whose yields have been worsening every year. He told us that he was still hesitant to switch to more sustainable practices such as multilayered agroforestry, a farming practice that can check soil erosion, promote carbon sequestration, and provide financial benefits **to** the farmer. Despite the advantages, this switch cannot happen because the farmer would need to pay upfront for crop residue management, organic manure, and new seeds, besides having to establish new market linkages. Moreover, it would take time for fertility to improve as a result of these changes. How **would** the farmer tide over this period? A single tweak in policy, such as broadening the ambit of minimum support price (MSP) to include crops such as millets, is insufficient. It is necessary, therefore, to find alternate sources of financing to buttress farmers against risks and encourage them to move away from the unsustainable practices they are locked into. Carbon credits could provide the much-needed transition financing upfront carbon financing arrangements could be leveraged to provide the much-needed initial finance that can help risk-averse farmers in precarious conditions. This is still a fledgling concept in relation to agriculture in India. **It** involves adopting farming practices that promote carbon sequestration, that is, the process of removing carbon from the atmosphere and trapping it in trees, grasses, or in the soil, and reduce emissions. This in turn allows farmers to earn carbon credits, which is a form of currency through which pe

To offset their own emissions, and a seller in this case the farmer who reduces emissions or sequesters carbon and can thus receive payments in return. Carbon credits can then not only serve as a monetary incentive for farmers to switch to alternate farming methods but also allow them to earn an income for every unit of greenhouse gas removed from the atmosphere. Many practices to reduce emissions already exist in agriculture. For instance, the water from flood-irrigated paddy fields often blocks oxygen and prevents it from penetrating the soil this creates an environment suitable for methane-producing bacteria. This greenhouse gas is several times more potent than carbon dioxide. Flood irrigation also requires huge amounts of water as it literally involves flooding the fields for cultivation. Studies have shown that replacing flood irrigation with direct seeding of rice, that is, a more sustainable method of directly sowing seeds into the soil instead of transplanting seedlings from nurseries to waterlogged fields, reduces methane emissions. Other practices such as switching from monocultures of rice to a patchwork of rice, millets, and oil seeds or even regenerative agricultural practices like cover cropping have the potential improve soil health and mitigate emissions in the long run. What is missing, however, is an accompanying carbon credit system that will enable farmers to earn an income while switching their farming practices. What will it take to develop a robust carbon credit regime for Indian farmers? One low-hanging option is to attach carbon financing to existing government programmers that reduce emissions or sequester carbon. There are some immediate examples where this could be attempted. First is the Prada Mantri Kisan Urja Suraksha exam Utthaan Mahabhiyan Scheme, the flagship solar irrigation scheme that the Ministry of New and Renewable Energy launched in 2019 to improve energy security. In places without grid-connected electricity, farmers are using solar-powered irrigation pumps that replace diesel generators, but without the option to sell this excess energy back to the grid. Attaching carbon financing to this scheme could provide more income for farmers. There has been significant emphasis on natural farming through the **Bharatiya** Pruritic Krishi Paddhati Programmed, which aims to improve soil fertility and soil organic matter. However, there are currently no links between this programmer and carbon credits. There is potential here because natural farming is a method that avoids intensive use of chemical fertilisers and pesticides and works to promote **healthy** soil micro biomes, improving soil organic carbon. Farmers could thus be incentivised through a carbon credit market to replace their farming practices. This way, they could continue to earn during this period of transition. There are budgetary allocations for crop diversification to move large tracts of land away from monocropping, which is the practice of growing the same crop year after year on the same patch of land. MSP is still being used as an incentive to help farmers make this change. But what if this is complemented with carbon financing? For every acre of paddy cultivation that is **converted** into, say, a fruit farm, if carbon financing was offered for either reducing carbon emissions or for sequestering carbon, it could encourage more farmers to make the shift. However, there is a need for a comprehensive policy framework to address the risks undertak

It spontaneous does give a damn about decorum, swells by the hour, lives and thrives by the moment. A clarion call, not thought out but felt from an organ, striving for an outlet. A mass of water that rises out of nowhere and swallows the land. By definition, popular uprisings are large-scale protests that occur when people from different social classes or groups come together to demand a paradigm shift. They can be colossal or cryptic, nation-wide or regional, violent or nonviolent, but the unifying thread is invariably a cause to defend the vulnerable. You don have to be a history buff to know the famous uprisings. You only need to half turn to see what happened in Dhaka only a few weeks ago. A student uprising pounding the streets, braving the bullets, before toppling a seemingly secured government. The cause was an opposition to an unfair quota system. In Kolkata the cause is a rape and murder. A doctor butchered to death in her own hospital. But then, let cut to the chase and ask ourselves unavoidable questions. When was the last time, a rising storm of words became one single voice of a city? From what compelling cause did men, women and children pour out into the darkness, night after night? In short, when was the last time, Kolkata ever took to the streets en masse? A cord has been touched. A cord of shame, of terror, of disgust, of loathe. Kolkata feels like a different city. You can cut the air with a knife. Such is the taut ambience. Or like being invaded by Covid again. An impending gloom waiting to implode. The wind of an uprising a few miles away seems to have crossed the border. Similarities are striking. People from all walks of life suddenly find strength in the unmeasured might of a mass. A mass that is utterly pure in protest, downright non-political in its ask, and fiercely devoted to the cause. The moment of reckoning seems now. If a rape and murder of a doctor on duty cannot evoke the cry for **justice,** what else can or will? An inept, corrupt government refusal to recognize its abject ineptitude only fuels the fire. The gibberish it offers is only the restlessness of an offended vanity. The fact that in this particular case, the police minister, the health minister, and the chief minister are **one** and the same person only polarizes the light on one face. A face of disgrace, and depravity. What in store for this Kolkata uprising? Supreme Court rulings, CBI investigations, Indian Medical Association involvement, international pressure and intervention notwithstanding, this daughter of India dignity lies in the hands of the mass. The unflinching, unapologetic, unputdownable mass. Only time will tell whether it will fizzle out as a moment in time or turn timeless in its austere determination to win the cause. Properties attached under the Prevention of Money Laundering Act PMLA cannot be treated as proceeds of crime if the **predicate** or scheduled offense is quashed by a competent court. In a pivotal decision, the Delhi High Court in Directorate of Enforcement v. Akhilesh Singh & Ors. 2024 ruled so, which is pending consideration by the Supreme Court. This ruling marks a significant interpretation of the PMLA, particularly in how it interacts with other financial and insolvency laws. Understanding PMLA and its provisions The PMLA was enacted to combat money laundering and confiscate properties derived from or involved in money laundering activities. Section 3 of the Act defines money laundering as engaging in financial tra

This includes the value of such property, whether held domestically or abroad. Section 17 1 of the Prevention of Money Laundering Act PMLA empowers the Enforcement Directorate ED to conduct searches and seize records or property under specific conditions. This authority is triggered when the ED has information or a reasonable belief that a person is i engaged in money laundering, ii possesses proceeds from money laundering, iii holds records related to money laundering, or IV has property connected to criminal activities. The ED power to search and seize is broad and does not require a person to be formally accused under Section 3 of the PMLA. Mere possession of property linked to a crime can lead to seizure. If seizure is not feasible, Section 17 1-A allows the ED to freeze the property. Once frozen, the property cannot be transferred without authorization from the freezing authority. The court can validate seizure or freezing orders under Section 17, similar to how property attachments are confirmed under Section 8. Process of Attachment and Confiscation under Section 8 of PMLA When an authorized officer, such as a Deputy Director, believes that a property should be attached; they issue a provisional attachment order. This order is communicated to all concerned parties and forwarded to the Adjudicating Authority for review under Section 8 of the Act. The Adjudicating Authority reviews the complaint within 30 days and, if satisfied that the property is involved in money laundering, confirms the attachment. The confirmed attachment continues for up to 365 days or until proceedings under the PMLA are concluded. Dissatisfied individuals can appeal to the Appellate Tribunal within 45 days, and the Tribunal can confirm, modify, or overturn the original decision. Further appeals can be made to the High Court within 60 days of the Tribunal order. The confiscation of property is determined by a Special Court, which orders confiscation if it finds that money laundering has occurred. If no wrongdoing is found, the property is returned to its rightful owner. Once confiscated, all rights in the property vest absolutely in the Central Government free from **all** encumbrances as per Section 9 of PMLA. Section 8 3 a : pendency of the proceedings Section 8 3 allows the Court to confirm the ED attachment, seizure, or freezing of property, specifying that such actions can last up to 365 days or until the related proceedings conclude. If **a** confiscation order is issued, the attachment becomes final. Courts have ruled that the 365-day limit applies strictly to PMLA-related proceedings, ensuring timely investigations and protecting the accused rights. Possession only an exception, not a rule In Vijay Madanlal Choudhary v. Union of India 2022, the Supreme Court ruled that possession under Section 8 4 should be an exception, not the rule. The Court clarified that even if an attachment is confirmed under Section 8 3, the property is considered confiscated until a formal order is issued. The ruling advised against the ED taking possession of property before confiscation, as **it** could unjustly affect the accused if they are eventually acquitted. Restoration of Property – Rightful Claimants in a Tainted Property the Finance Act of 2015 added Clause 8 to Section 8 of the PMLA, allowing the Special Court to restore confiscated property to claimants with a legitimate interest. The 2018 amendment further allowed for restoration during ongoing trials. The Prevention of Mo

Lobby to end the Iran war. Their economies depend on them being oases of safety. Iran has been attacking targets in countries that are friends with the US. Recently, there were fires at a Saudi oil factory and explosions heard in famous cities like Dubai and Abu Dhabi. Even though Iran has lost more people in the fighting, they aren't the ones with the most to lose. Countries like the UAE, Saudi Arabia, and Qatar are much richer and more modern than they used to be. If a fancy hotel in Dubai gets hit by a missile, it doesn't just break a building it scares the whole world away. War is sometimes necessary. Say, to defend a people and their territory against aggression. Hence the 'just war' theory. Jus ad bellum. Even just wars cause enormous suffering. But wars that are manufactured by being economical with truth have no redemptive logic. Their unsaid logic is usually electoral, a 'wag the dog' calculation that some foreign conflict would take the voters' focus off domestic shortcomings. In this, Trump's Iran war follows the script of Bush's Iraq war. He has had major tariff and ICE setbacks, which are predicted to result in major reversals in the US midterm polls. That this is what's driving him, is indicated by all the holes in his case for the Iran war. Bush's case for the Iraq war was built on the fiction that Saddam had developed weapons of mass destruction and was also connected to the 9/11 terrorist attack. It was spun across media, Congress and UN over two years. Operation Iraqi Freedom itself ultimately involved a 'coalition of the willing' numbering 60 nations. Trump didn't bother with all that, announcing Operation Epic Fury in an 8-minute video on Truth Social, accusing Iran of 'directly' endangering America. All neutral experts disagree. The Pentagon has reportedly briefed Republicans and Democrats that there was no intelligence about Tehran attacking US forces first. As for Iran's nuclear programme, didn't Trump say last year that 'obliteration' was the accurate term for what Operation Midnight Hammer had done to **it?** Most damningly, Oman's foreign minister has underlined that Iran had just agreed to zero stockpiling of enriched uranium. And to never, ever possess nuclear material for a bomb. After Bush, there was Obama's adventurism in Libya. It dislodged Gaddafi but left behind a country destabilized to this day. Damages **from** the Iraq war are also still compounding. And not just in the region. In US, veterans are still dying by suicide. It's no surprise that wars based on untruths usually have more negative consequences. Conflicts that are started on dodgy grounds don't even offer the validation that 'just wars' can offer. And BTW, imperial Trumpian acts of this scale, say to Putin and Xi and wannabes, might be right. Equity markets, including India's, have reacted with fear to the West Asia war. Stock indices have sharply dipped. Many Systematic Investment Plan investors will be feeling unsettled. When headlines scream **bad** news, the instinct to pause SIPs, redeem investments, or retreat to cash is entirely human. Fear seeks safety. Yet history, market structure, and sound investing principles suggest that staying disciplined not reactive is wiser. Last week, an AI summit devoted considerable attention to language. We also marked International Mother Language Day. And this week, with the surrender of a senior Maoist leader in central India, a long and violent chapter in the region's history appeared to reach an informal c

the central discussions revolved around how vulnerable languages can benefit from advances in AI. Ironically, the summit itself reflected the global politics of language. The French are known for responding in French even when addressed in English. Yet this time, the French President delivered his speech in English. India's Prime Minister spoke in Hindi. Brazil's President spoke in Portuguese. Sovereignty was a recurring theme throughout the summit. A journalist travelling with the French delegation remarked to me that since AI largely operates in English, President Macron chose English for strategic reasons. He then asked, What exactly is 'Bharat'? I explained that even our country's name underwent Anglicisation, and there are now slow efforts to restore its indigenous usage as Bharat. The Indian Prime Minister demonstrated how AI-driven translation tools could allow everyone to speak in their mother tongue while machines handle real-time translation. For major languages like English and Hindi, this promise already appears tangible. But for smaller languages like Gondi, the road ahead is far longer. The language of a conflict For nearly two decades, Gondi was the primary language of the Maoist movement in central India. Around 500,000 Adivasis were associated with the conflict in some form. Approximately 5,000 people lost their lives. Over 17,000 were jailed. Nearly 20,000 eventually surrendered. The Maoists' symbolic capital was Abujhmad, a dense, forested, hilly region whose name literally suggests the unknown. It was not just geographically inaccessible; it was linguistically inaccessible. Gondi, the dominant local language, remained unintelligible to mainstream India. This week, Chhattisgarh's finance minister presented the state budget, announcing plans to build an Education City in regions like Abujhmad. However, when reminded that funds allocated two years ago for Gondi-medium education in schools had still not been released, he responded that he would make every effort. The stakes are high. Bastar's school dropout rate is nearly double the state average. For years, Maoist leaders told villagers: We speak Gondi. The teachers speak Hindi. Gondi belongs to the Dravidian language family. Many Gondi-speaking children enter school without understanding a single word of Hindi. Unsurprisingly, many drop out early. At **its** core, the Maoist movement in Bastar drew heavily from these school dropouts, even though its leadership was often external and its ideological goals extended far beyond local linguistic grievances. AI and the future of Gondi At the AI summit, experts noted that work has begun on building translation models **for** smaller languages like Gondi. The government has launched applications such as Adivaani to support tribal languages. However, language activists argue that the state is attempting to standardise only one dialect of Gondi. For years, scholars and community leaders have worked towards developing a composite, inclusive standard that reflects its multiple dialect clusters spread across six Indian states. Today, three out of four Gonds no longer speak Gondi fluently. Yet comparisons are frequently drawn with Hebrew. During his visit to Israel this week, the Prime Minister addressed the Knesset Israel's parliament where Hebrew is the principal language. Hebrew had remained **largely** dormant as a spoken language for nearly 2,000 years before being revived as a modern national language, supported by state policy and educat

Framework should focus on: Ensuring fair carbon credit value a prerequisite to issuing carbon credits is measuring how much carbon is being removed from the atmosphere. However, there is no consensus on the methods that are used to estimate carbon reduction, avoidance, or sequestration. This poses a bigger challenge in determining a fair carbon credit value, as a result of which the carbon credit offered is often variable and does not sufficiently compensate farmers for the risks taken or for opportunity costs of land and labour. As a result, globally, agriculture participation in carbon trading markets is low, accounting for only 1 percent of all credits issued. Safeguarding farmer interests There are two looming concerns that must be concretely addressed at the early stages of carbon credits advent into India agricultural sector: Immigration deceit is on the rise, and swindlers are becoming increasingly sophisticated in their ploys. From counterfeit employment propositions to fraudulent visas and green cards, these artifices can leave targets with empty coffers, destroyed credit, and even expulsion. To ensure your protection against these rackets, it crucial to be apprised of the latest trends and tricks used by fraudsters and take measures to safeguard your personal data. In this article, we will conclude types of fraud and practical recommendations on how to remain safe from immigration deceit, comprising guidelines on shielding your personal information, recognizing typical frauds, and reporting dubious behavior. Frequent Immigration Frauds Employment Schemes Employment fraud is one of the most prevalent immigration scams. Scammers may present counterfeit job opportunities to immigrants, promising work visas and permanent residency in exchange for cash or personal information. They may also require you to pay for a job placement fee, which is illegal in most countries. Marriage Schemes Marriage fraud is another widespread immigration scam. Scammers may offer to marry immigrants for a fee, pledging permanent residency to them. They may also demand personal information or cash in exchange for a marriage certificate or green card. Immigration Consultant Frauds Immigration consultant scams are also widespread. These scammers may pose as certified immigration consultants or lawyers, and charge immigrants **for** services that they are not qualified to offer. They may also provide false information or promise guaranteed outcomes. A recommendation for Preventing Immigration Frauds Safeguard Your Personal Information One of the most efficacious ways to protect yourself from immigration deceit is to shield your personal information. Refrain from divulging **your** social security number, bank account information, or other sensitive data to anyone whom you do not trust. If you are uncertain if an information request is genuine, conduct research and authenticate the source. Do not be hesitant to ask inquiries or seek counsel from a reliable friend, family member, or professional. Recognize Typical Frauds Another crucial way to remain safe from immigration deceit is to be able to identify typical frauds. Some of the most prevalent frauds comprise counterfeit employment offers, fraudulent visas and green cards, and counterfeit immigration consultants. Swindlers often employ fear and intimidation to coerce targets **into** yielding money or personal information. They may claim to be from government agencies or other official organizations, but in reality, t

Value around 840 billion by 2030 and millions of dollars being spent on education in the field of life sciences, it prevailing presence can be felt all across the sector. The ability to easily access learning & delivery tools, study materials, and a lot more, while also saving cost and time are making eLearning an integral part of Life Sciences for future of professional training and skilling. Interactive technology Communication between teacher and the learner plays an important role in the process of learning and as life sciences can be a difficult course if not understood well it requires a receiver and feedback communication. Due to the pandemic, many sectors were forced to run digitally to maintain its epitome, in which education was a part. Technology being a part of education was a blessing in disguise a learner could ever receive, as with the help of interactive technology learners could communicate and interact with their professional trainers which equated the process of learning in classroom. Efficient content delivery ELearning platform continues being the future of the education sector and is one of the best outcomes done by the pandemic. The eLearning platform in the life science sector helps the students to view the content and information posted by their professional trainers irrespective of the place and time. Learning and understanding clinical research, pharm vigilance, clinical data management, business analytics, drug regulatory and other molecular, cellular and other basis of therapy could be tough hence the 247 access to view the content allows the student to learn at their pace and time easily which is not available in in person classes offline classes. Wider access of trainer eLearning provides the learners the choice to opt for overseas learning as well as distance learning in their own country to choose to learn from the best life science professional trainers as distance are no longer an issue and students can learn at their comfort level from home. ELearning helps the students to study multiple aspects at the same time at their own pace by opting for distance learning giving them wider **access** to trainers around the world. Brings down fees Medium of eLearning saves a significant amount of money as training costs are considerably reduced as education is practiced through digital medium. ELearning benefits the students in many ways and saving on training fee is one of them. As institutions run **through** digital medium and saves expensive real estate costs, using eLearning platform students receive the same academic knowledge for a reduced fee which benefits the learners explicitly. Cost benefit for students Apart from saving on training costs due to reduced fees, students also save considerably on other aspects as well. Travelling is one of the aspects that students end up saving on due to eLearning as students learn through the comfort of their home which helps them to save on hostel charges as they no longer have to stay in hostels to avoid travelling. Apart from this in general students **save** considerable.

In the Indian context, decision making, policy design, and implementation are often hierarchical in nature. In the education sector, resources must flow from the central government to the state departments and then to the district and local administrations in order for the benefits of national programmers to reach students. During the initial months of the Covid19 pandemic, when not much was known about the disease, national and state level decision makers did know what to do beyond immediately shutting down all schools across the country. Decisions pertaining to the creation of content for at home learning and the reopening, curriculum, and instruction design of schools were made centrally through the first months of the pandemic. However, the trajectory of the pandemic meant that each region witnessed local variations in the transmission of Covid19. As a result, schools in districts with limited spread were also forced to remain shut. Interestingly, in Maharashtra, the districts themselves decided on when they want to open schools at their level. Since the severity of the pandemic differed from district to district at any given time, administrators were able to respond to their local situations. This led to 20,000 schools reopening in Maharashtra while lockdowns and school closures persisted at the national level. Additionally, we saw many examples of how teachers and communities took ownership of student education by pooling their own resources, be it by traversing large distances to reach students, collecting funds for infrastructural needs, or simply providing the necessary time. These small local initiatives were successful in overcoming a larger problem that was difficult to address via national or state level policies. The effectiveness of these efforts during the pandemic presents a strong argument for decentralisation, where empowered stakeholders can solve larger problems at the local level. Why does decentralisation work from the perspective of programmed implementers, decentralisation is of high value as it helps improve the efficiency of programmers. In the education sector, teachers regularly receive trainings from master trainers, which creates a higher chance of information and knowledge loss at each level. One civil society member working closely with the **local** administration explained some of the issues present in a centralised system through the example of Maharashtra recent foundational literacy and numeracy programmed A foundational literacy and numeracy programmed would have already commenced in many districts, given that district administrators are currently aware of the large learning loss students are **facing** and the need for such a programmed. But, in this case, the teacher training will occur through a central programmed or through some measure from the state. But when will it occur what will it cover The district administration does not know. The district wants to conduct training, but it will have to communicate with the state and acquire its permission. Even if it receives permission, the content may overlap and cause the teachers to become disinterested. The training goes from the center to the state, district, block, beat, and cluster. This is a very long chain, and it **takes.**

Step outside to a public area in any Indian city retail shops, bus stops, train stations it is almost like Covid never happened. Sure, a few people still wear face masks, though many of these too are below the nose or mouth level. You also see some worn out posters about social distancing and Covid safety protocols. However, for the most part, Indians are out at work or at play. They are attending offices and weddings. They are out shopping or eating out. They are taking buses, trains and flights. Google Mobility Data, a special mobility trends dataset created for the pandemic, shows that most Indian public spaces are now just as busy as pre Covid, if not more. WHO on May 5 put out its 2022 global update of the excess deaths linked with Covid. This statistical estimate, which was first published a year ago, covers the period between January 2020 and December 2021. The estimate is that global excess mortality on account of Covid is 14.9 million, more than twice the reported deaths. In India case, WHO estimates the excess mortality to be 4.7 million, almost 10 times the reported deaths GoI has disputed the findings as it disagrees with the methodology underpinning WHO statistical model. There are two important technical points here. Excess mortality is the difference between the deaths that have occurred and the number that would be expected in the absence of Covid. As all countries did not have the relevant data for the two year period studied, alternative data sources were used for such countries, including India. The WHO estimate, therefore, is final. There will be an update in 2023. One of the findings so far is that even developed Western countries did fare well when excess mortality is adjusted according to population size. Separately, the debate over WHO statistical model is not bad as it may catalyze refinements. Moving beyond Covid data, we need to acknowledge that India statistical system needs much improvement. Policy making today heavily depends on the production of timely and reliable data including CRS and SRS records. India **has** fared well in this respect. For example, the household consumption data which forms the basis for many other statistical estimates has been updated in a decade. A key test for the relevance of any regularly disseminated data is the ability to stick to schedules. On the whole, India data **collection** exercise has to improve. Once that happens, GoI will be able to put its point across more convincingly. That said, WHO estimate is work in progress. The gruesome murder of a 25 year old man on a busy Hyderabad street by his wife kin even as she pleaded fruitlessly with bystanders to intervene is a heart wrenching reminder of the difficulties Indian women face in living life on their own terms. Married for just three months, interfaith couple Ashrin Sultana and B Nagaraju knew each other through school and college and had been in a relationship for a long **time.**

A lot of time. But at the district level, it is much quicker to implement. Another key argument for decentralisation is that it focuses on the micro needs of communities that differ by place and person. Even within a district, the needs of students in tribal areas differ from those of students in rural and urban areas. If there is a high degree of decentralisation, programmers can accommodate this variance. An infrequently discussed aspect of decentralisation concerns ownership among local stakeholders. For instance, Swadhyaya programme initiated by the Maharashtra government and driven at the state level by the provided Whets Appeased bots to assess student performance. While this programme required internet connectivity, its uptake in urbanised districts such as Pune and Mumbai was surprisingly low in comparison to other, more rural districts. According to those working closely with the administration, a key reason for this was the low level of ownership among district officers. Contrastingly, in Pune district, other programmers run by district administrators witnessed wider implementation and reach. For instance, the District Institute for Education and Training witnessed an elevated level of effort and involvement from staff members when implementing a parent engagement programme. A greater sense of programme ownership drove those involved to feel more connected to their work. Often, the belief in the programmers that local administrators design or implement on their own is stronger. As a result, these programmers can reach a higher number of stakeholders. How can we decentralise education effectively Lever aging gram Panchayati Gram Panchayati the smallest political unit at the village level are often made up of parents of students or elected representatives who answer to parents and schools. As engaged community members, they can mobilize individuals, gather funds, and strive to obtain the necessary permissions for spending. These bodies can also be leveraged to unlock existing funds in service of schools and education. For instance, in Maharashtra Nasik district, local administrators and nonprofits made efforts to spread awareness about how the MNREGA scheme, which guarantees employment by commissioning public works ranging from irrigation to sanitation, transportation, and infrastructure, can be **used** to mobilize funds for school related infrastructure projects as well. Using data for decision making The use of data to monitor and modify programme implementation can also be extremely effective. By unlocking data collection and review mechanisms for monitoring programmers, local administrators can be empowered to drive implementation. In **the** case of Swadhyay, local civil society collaborators observed that once block education officers and school administrators were provided access to data on the reach of the programme, it helped them promote it in their specific jurisdictions to improve the programme efficacy. Empowering local level officials lastly, it is important to empower district officials to scale single school innovations to the entire district. For instance, officials in Nasik decided to scale the Gully Metra street friend programme in their jurisdiction. Through this programme, teachers, educated community members, and older students could provide support or learning spaces for students at the **community.**

Against the wishes of her family. Religion and caste Nagaraju was a Dalit came in the way of her family accepting their adult daughter choice. Too much of India still remains governed by medieval notions of family dishonour. Modernity ushered in by the Constitution that guarantees all consenting adults the freedom to choose their partners has struggled against entrenched religious and caste endogamy. The idea that the woman is a property of the family, when forcefully enforced by community networks, has not found a proportionate response from lethargic institutions of the state, despite their progressive mandate. The assailants in many dishonour killings are young men with the benefit of many years of school education behind them. Unfortunately, curriculums, textbooks and teachers are behind the curve in instilling gender equality and questioning gender stereotypes. They need to be far more persuasive in this project. Where families are steadfast in their conservatism, public institutions inculcating gender sensitivity need to provide the counterbalance. Make a start for Nagaraju and Sultana. The force and power of altitude must be in it, the glory and pride of exaltation must be in it so said the American architect Louis Sullivan in the late 19th century, when skyscrapers were a symbol of human reach and grasp. Supertall: How the World Tallest Buildings Are Reshaping Our Cities and Our Lives by Stefan Al is about the technology of skyscrapers and the societies that demand them. Consider the Burj Khalifa, the tallest building in the world since 2010. Built by the sweat and blood of underpaid Indian migrant labour, it is a cloud piercing marvel. Its environmental footprint is immense, it consumes 2,50,000 gallons of water a day in the desert. There half a mile of concrete concealed under its skin of glass and metal. Concrete, which made astonishing buildings possible, is also an immense strain on the environment. We need new tech and new ideas to improve on concrete experiments in fly ash and in plyscrapers using timber are in the works. With the Russian invasion of Ukraine, concerns have been raised about a possible Chinese invasion **of** Taiwan. Lai I Chung, president of Taiwan Prospect Foundation, spoke with Rudroneel Ghosh, about the impact of the Ukraine war, chances of a Chinese attack and scope for India Taiwan cooperation: Has the Russian invasion of Ukraine changed Taiwan threat perception vis a vis China There are two ways **in** which perceptions have changed. The first is with respect to Taiwan resistance capabilities vis à vis China. Earlier, the issue was how long can Taiwan resist before the US comes to save Taiwan. Basically, the thinking was that Taiwan cannot resist China perpetually in case of war. But the way Ukraine has resisted the Russian military without direct military help from allies has actually given confidence to the Taiwanese that they enjoy much better defensive position in relation to China because we have the Taiwan Strait and Beijing can just move all its military units to the island for **an.**

Invasion People now feel that China may have a big military, but it is Russia that has much deeper military experiences. The last war China fought was in 1979 against Vietnam and it did not win there. So when Taiwanese look at Russia poor military performance in Ukraine, there is a reassessment of the capabilities of the Chinese PLA. In fact, there is a sense of empowerment within Taiwanese society and the people today feel that we can probably resist Chinese military actions on our own and are eager to bolster Taiwan defence. We go through many ups and downs in life, face many tragedies and lighter moments. Through all this, what should be the intelligent way of living Krishn answers this question in the second chapter of the Bhagwad Gita. Joy and sorrow can come only when the mind is contacting the outer world. In deep sleep or under chloroform, when the mind has no contact with the outer world, our experience is one of unpolluted peace and joy. A newly married south Indian boy moved to Bombay. He was living in a single room tenement when his wife suddenly said to him, Why do you call my mother I want to see her. The poor man agreed. The mother in law, a formidable lady, was used to living in a big mansion, looking after the whole joint family in the village and doing all the work. In the single bedroom flat, she could not sit quietly. Cooking for three people was very simple. Since she had nothing to do from morning to evening, she cleaned the whole house four or five times. From the third day onwards, she became very angry with her son in law. Seeing this, he asked her, Amma, why are you so angry I am trying to do everything for you. She answered indignantly, You have kept something in the wall that bites me. The electricity always gives me shocks. But Amma, electricity will never jump on anybody. Tell me when does the electricity bite you When I am trying to clean inside **the** socket of the plug with a wet towel. Amma, only when you go and contact it, it will kick you. If you stay away from it, it will stay properly. Things in the world outside do not touch you on their own. Your contact with them gives you joys **and** sorrows. A drunkard feels happy with a bottle of whisky. But a teetotaler is not attracted to it. The bottle by itself cannot attract you because it is an inert, insentient thing. Your own mental climate makes you available for objects to tempt you; your wrong, unintelligent contact entangles you with the external world. All your experiences of heat and cold, joy and sorrow are a result of the way you contact the world. All your mental projections are impermanent; never the same, they come and go. Don get perturbed. The sea will always have waves. A piece of **wood.**

Floating on the waters will go up and down according to the rhythm of the waves. The waves come and break themselves at the feet of the lighthouse, but it does not go up and down because it is not floating on the surface of the sea. It is built on the foundation of the rocks down below. The lighthouse stands steady, and its light illumines the waves. Learn to live like a lighthouse when facing tumultuous change. Learn to keep your balance. Build your life on a firm foundation. No joy is permanent. No sorrow is permanent. Silently suffer them with dignity. Enjoy life. Achieve what you want to achieve without getting knocked down by these experiences. Remember: they come and go. Illusion is one of the greatest aspects of human behavior it commands direction and path of our many efforts. If one is successful creating an illusion appearing a reality, an invention or a discovery takes place. If one fails, the illusion becomes apparent and efforts taken appear illogical and thus becomes futile. Greatest works of art, music and fashion are those which could create finest of illusions. Politics too is a fine art of practicing illusions political practitioners who become stars have been the best of illusion creators. The huge risk, however, in this game remains that the illusions must seem to be real and not illusionary. If one pursues a goal on an apparent illusionary pretext and presumption, failure becomes a forgone conclusion. It is, therefore, always wise to abandon the effort upon realization of the pretext. It took more than two years for both Prashant Kishor and Congress to realize that their pretext as well as the goal were illusionary and that they were not meant to come and proceed together. Their falling apart has been continuously grabbing media attention and the gossips refuse to stop. Reasons are being analyzed and many of the aspects are just going of proportion and many a times without relevance. Away from all this, both, however, have been graceful enough to part ways diligently and respectfully. Real facts **have** not been revealed from either side and decency did not become the victim as is usual now a days. The blunt fact is that the fall out was natural the other way round it would have been unnatural and a potential disaster for both the parties. Contrary to many **such** commentaries, no external factors have contributed to the perceived failure neither the statements of Digvijay Singh or Baghel nor the I PAC agreement with KCR TRS. The idea of Prashant joining the grand old party was ill conceived and impractical and so was the Congress thinking of Prashant entry at a level of the party where he could steer the much discussed transformation. Had this happened, it would have resulted in unbearable stress and strain for both the sides. Firstly, Prashant Kishor was missing evaluating his own basic tenet. He appeared to have over rated himself, may be, in **the.**

Light of the giant shape that media had been providing to his travels into political space which, frankly speaking, is largely still unknown notwithstanding his outstanding record of managing electoral focus of various parties at multiple different and contrasting domains. His working area has been the area of expert consultancy of electoral behavior one of the very small, though most important, segment of the vast scope of politics and leadership. He has brought a yet unknown skill of handling electoral politics in a professional way, which proved to be immensely successful and for which he is widely and truly respected. Leaders across parties keep their doors open for him and do welcome his refreshing ideas. But this respect is limited to his expertise, knowledge and wisdom which he mistook as his leadership abilities. Secondly, he has had developed a strong prejudice against BJP and Narendra Modi forgetting that as the political strategist Narendra Modi and BJP remain his first success. He had sown the seeds of Narendra Modi as a dearly saleable brand which BJP continue to build upon and Prashant too feel proud of his very first success which paid him huge dividends in his future endeavors. In a sense, emergence of Narendra Modi as a brand provided the formidable aura and glamour to Prashant personality. Even before 2014, it was Narendra Modi as Gujarat Chief Minister who identified and recognized his capabilities and introduced him to the thick and complicated Indian political arena. He seems to be using the material he took as BJP insider for his political furtherance which, some way or other, limits his maneuvering space as well as professional integrity. Thirdly, his failure of JD U experiment must have indicated to him unequivocally that something was missing in him making him suitable to fit into the scheme of the nature and structure of existing political parties in the country. Crudely put, he appeared not cut out to contributing any political advantage to political parties and he needed to venture something else instead of imagining his towering place in Congress. The irresistible carving of finding **out** a readymade structure coupled with the impatience and hurry to structure a combine of taking on and unseating BJP became too apparent a motive and objective, which compromised his honest zeal to pursue a real and noble political ambition. Fourthly, the first benchers of the parties engaging Prashant felt **hugely** sidelined, undermined and ignored. As a temporary situation and for a greater gain this was made bearable especially when an expert is hired. However, this would become a handicap when the person is accepted at a sensitive position in a party any party would wisely refrain from venturing this self destructing measure. Finally, he missed the point that he was yet not a political leader. Though political parties would need his skill and expertise, they would be reluctant to provide him the position and authority to dictate terms. Only leaders with remarkable public following could command a political party **who.**

It is a misconception that Adivasis joined Maoism because of jal, jungle, zameen (water, forest, land). They joined to fight injustice. Among those injustices was linguistic exclusion. Beyond security: A linguistic solution If the Union Home Ministry now seeks a durable peace in central India, addressing historical linguistic marginalisation should form part of the strategy. AI offers an opportunity. The central government has initiated platforms like Adivaani. But such efforts must meaningfully involve the Gondi community and adopt a composite standard language framework rather than imposing a narrow dialectal version. Meanwhile, Chhattisgarh's proposal to build Education Cities in regions like Abujhmad must align with the National Education Policy's commitment to mother-tongue instruction in early schooling. Ensuring that Gondi-speaking children receive primary education in their own language could drastically reduce dropout rates. AI can then serve as a bridge translating Gondi into Hindi, English and other global languages, and vice versa. Rather than replacing local languages, AI can help them connect to the world. Lessons from history International Mother Language Day, observed on 21 February, commemorates the five students killed in 1952 while protesting Pakistan's attempt to impose Urdu over Bengali. That movement later evolved into Bengali nationalism, culminating in the birth of Bangladesh in 1971. In a sovereign, modern democracy, no Gondi linguistic movement should need to follow such a path. The question is whether India can use the tools of artificial intelligence not merely to digitise dominant languages, but to democratise linguistic opportunity before silence becomes permanent. TOI News - March 3, 2026 Reshaping the dental experience from fear to comfort Ishan Puri is Clove Dental's CEO. He is a Stanford MBA/BA who is a native from Oak Park and Camarillo. He has a deep background in technology and scaling companies. Having grown up around dentistry, he is passionate about delivering the highest-quality care to patients. Ishan helps in all non-clinical areas of the practices and oversees the group's growth. Do you still remember the first time you walked into a dental clinic as a child? The systematic routine of setup, the sharp sound of drills in the **room** next door, and the bustling sound each doctor makes with the tools in their hands might have made dental practice a fear to you. This is completely reasonable to feel since dental care has predominantly been associated with anxiety, discomfort, and lingering fear. Although clinical skills are ultimately what **differentiate** one dental clinic from others, there is one aspect that is equally crucial in modern dental care: experience. When patients first walk in a dental clinic, the first interaction they encounter is not with professionals or specialists, but with the interior design of the clinic. Bright lights. Cold interiors. Clinical smells. Minimal explanation. When these elements combine, they reinforce a sense of vulnerability and uncertainty. Patients often feel passive due to a lack of explanation and unfamiliarity with professional treatments. They are doing what they are told, unsure of what is happening, lying on the dental chair and waiting **for** it to end. The shift from fear to comfort begins with appropriate design and human interaction. Subtle factors in the environment of healthcare settings can directly affect how the patient feels towards the treatment e

command to conversation is the first step towards a new dental experience. This can be achieved through explaining diagnoses and potential treatment in simple, understandable terms, allowing time for consideration, and refraining from pressuring the circumstances. Structured and comprehensive consultation protocols ensure that patients understand not only what is being recommended, but why. The tone changes from harsh persuasion to partnership. When patients are more informed of their actual situations, fear reduces naturally. Page team comprises senior journalists with wide-ranging interests who debate and opine on the news and issues of the day. Even if a long war pushes crude uncomfortably high, GOI must hold retail fuel prices steady to curb inflation. Let's hope history doesn't repeat itself. In July 2008, Iran tested Shahab-3, a missile with a 2,000km range that could hit Israel. Within days, oil touched $147 a barrel, a level it has never seen since. As of Tuesday fourth day of Tehran Tumult it was still around $80, which is less than the average through 2024. If Trump can end this war in 4-5 weeks, as he's claimed, we shouldn't lose sleep over it. One, because our oil marketing companies (OMCs) have huge cash reserves. Their pump prices remained high while crude fell over the last couple of years. In fact, it slipped about 20% to $60 just last year. Two, inflation has been low as well. In Feb, it was at 2. 75%, well within RBI's 4% comfort range. Three, India has many crude suppliers now. It also has fuel stocks to last over two months. And as TOI reported yesterday, the government may ask refiners to prioritize domestic needs over exports while the war lasts. So we're comfortable, but must prepare for the worst including the $147 scenario. That's because the economy runs on oil. Costly oil not only makes your commute dearer but also pushes up freight costs. Since oil's needed to make things like milk pouches and food wrappers and synthetic yarn, many goods also become costlier. That's why rising oil prices can stoke inflation, upsetting the math of economic growth. The **year** started with expectations of oil sliding to $50 by June amid a glut. The Economic Survey saw no fear of inflationary pressure from oil. Growth projections were based on this assumption. But studies have shown that a 10% rise in crude can increase inflation in India by 20 basis **points.** And rising prices are a tax on consumers, who have less money to spend as a result. That saps demand overall. So, GOI and OMCs must do everything to prevent a price shock. OMCs, especially, have the means to do so for a few months. Once the war is over, crude will hopefully continue sliding towards $50, giving them a chance to recoup any loss quickly. In the US, where the government doesn't interfere with pump prices, petrol was selling for $3 a gallon on Monday, and could reach $3. 25 by Saturday. That will worry Trump, who promised **$2** a gallon in his campaign. His party faces Congressional polls later this year, so he'll be wary of further hikes. Which means, he has a strong reason to end the war soon. Regardless, we should be prepared. When countries start a military mission, they give it a special name. These names are not random; they are chosen very carefully to send a strong message. For example, the United States called one mission Op Epic Fury, while Israel called its mission Op Lion's Roar. The US wanted its name to sound powerful and show strength. Israel chose a lio

I was so sickened by the barbaric rape and murder of a young lady working in a hospital in Kolkata, that for days I simply could not bring myself to write about it. Much has been written and said but the crux of the matter is that the buck stops with Mamata Banerjee as the Chief Minister of West Bengal and its Health Minister. It is obvious from what has transpired between the judiciary and her lawyers and various whistleblowers that RG Kar Medical College was seriously compromised by some people at the head and those doing their bidding. The facts in the news are that an FIR was not registered promptly; the scene of the crime was not sealed; the police were slow to act; thousands of vandals were allowed to run riot in the hospital and there was a phenomenal breach of security, the police did nothing; Patients and doctors were scared for their life; the parents of the victim were given misleading messages and treated badly. The police report to Mamata; the Principal of the hospital who was hastily transferred reported to Mamata; the whole apparatus of health was under her. What was she hiding and why? Why were laid down procedures of a crime scene not followed? Why the parents were first told their daughter was ill and then that she had committed suicide? What kind of cover up was taking place just because the parents were not from a politically connected background? Yes awful rapes and murders happen the world over, but the scale of what seems to be a cover up, and the way it was handled has ordinary citizens, the medical profession and the media riled up. Justice not only needs swift action but it need to be delivered from the top and Mamata failed in this just as she failed in Sandeshkhali, where land grab and atrocities against poor women was rife and the local TMC strongman hid from the law for 55 days. She failed in addressing the violence of rapes and murders before and after each election in West **Bengal.** It is as if the rule of law does not exist in West Bengal. It seems that only her TMC workers matter, at least till they toe her line. It amazes me that a woman would care so little about the security and safety of other women. Is power **so** important? But the youth of West Bengal along with its women and people from all walks of life have finally said enough is enough. It took the brutal rape and murder of a young doctor, and the way her death was handled to bring things to a head. I pray justice is done. I pray her parents get closure and have the strength to handle this awful ordeal. They know that this heinous crime has got international attention and everyone is looking at West Bengal. I pray the media and judiciary act and every single person involved in this **heinous** crime is prosecuted and severely punished. However, practical challenges remain, especially in the pro-rata distribution of auction proceeds and managing property during trials. One significant challenge under the PMLA is the burden of proof on claimants, who must demonstrate their innocence and due diligence. Section 8 8 imposes a reverse burden, requiring claimants to prove they acted in good faith, even if they acquired the property before its criminal association. This has been criticized as overly stringent. Attachment of property by multiple authorities multiple agencies attaching properties complicate the process of returning them to rightful owners. In the case of M s Lemon Seeds Hospitality Pvt. Ltd, properties were attached by authorities under the MPI

But the Special Court ruled in favor of the Applicant under Section 8 7 of PMLA. The order is currently being challenged in the Bombay High Court. Conclusion While the PMLA aims to combat financial crimes, it also has the potential to infringe on fundamental rights and liberties. The judiciary plays a critical role in safeguarding constitutional values, ensuring that the Act powers are not misused. The Telangana High Court in Vanpic Ports P Ltd v. Directorate of Enforcement 2022, as also various High Courts, have emphasized that property attachment under Section 8 of the PMLA must be based on a reason to believe, with authorities required to thoroughly assess each case facts before taking action. The Act also mandates that the AA and ED provide reasons for property confiscation, preventing arbitrary use of power. Attachment, seizure, freezing and confiscation there is little surprise that nodal pollution body CPCB has found all 18 drains of Delhi that empty treated wastewater into the Yamuna fall short of chemical standards mandated before any drain reaches the river. Is it any surprise that 22 of Delhi untreated waste ends up in Yamuna? Wastewater, sewage treatment in India is abysmal; it lacks the iron, and political will, backed with funds, strict regulation, oversight framework and civic awareness that the gargantuan problem demands. The gap between sewage treatment capacities and sewage generated is widening. Truth is, states play catch up and routinely throw big numbers of treatment plant capacities. Frenzied urbanisation, migrants pouring into cities and resultant population growth have led to unprecedented growth in wastewater a ticking health bomb. As per a Niti Aayog report, of 72,368 million litres of urban wastewater that India generates daily, only 28 is treated. That means 72 wastewater is untreated and maybe disposed of in rivers lakes groundwater. Implementation is impeded by many issues, not least limited availability of land for treatment plants; residents fearing an economic hit as the odor and aesthetics lower land prices. Some Chinese cities addressed this by building plants underground. Illegal dumping, poorly managed drainage systems, multiple leakages, and conventional technology in **existing** treatment plants are other issues. At least three laws, over 10 GoI policies and missions since 1985 exist to tackle India wastewater, polluted and dead rivers problems. It may be an idea to prioritise waste management before racing to add to the concrete jungle which has meant constructing over **wetlands** and urban water bodies. Decentralised wastewater plants are just one of the many inexpensive and ecologically sustainable ways to address the problem. There are ways out. We seem to lack the urgency. US Senator Marco Rubio on July 25, 2024 introduced a bill in the U.S. Senate proposing to treat India on par with its allies like Japan, Israel, Korea, and Nat allies as regards the technology transfers and support India in its response to growing threats to its territorial integrity. The bill also proposes to bar Pakistan from receiving security assistance if it is found to have sponsored **terrorism** against India. With India growing influence & return of Narendra Modi as PM & recognising India as a strategic ally of the US, Congressman Marco Rubio has proposed elevation of India status to that of America close allies, Japan, Israel, South Korea, and Nat members reflecting a shift in the US policy, prompted by acknowledgment of In

Would know this better that Prashant himself No political party would accept a person from nowhere at a position in command. Congress knew this dilemma too well from the very inception but it was not in hurry. It was listening to Prashant with all seriousness in full glare of media. There was no harm in giving a public impression that it was very serious in finding ways and means to adopt measures which could bring in transformative reforms. This would soothe the anger and anxiety of the leaders harping upon this need for quite long and this would also transmit a positive message to people who were writing epitaph day in and day out for it. Congress would not make Prashant either a General Secretary assigning the exclusive job of bringing about organizational changes giving him absolutely free hand in doing whatever he wanted. It would not even make him a RK Dhawan, ML Fotedar or Ahmed Patel as well. It would simply give a proposal which would not be acceptable to Prashant and would just wash its hands. It would only prove that it did have an honest intention to engage Prashant but he wanted the sky which the party simply could not give from right on day one. After all, Prashant was provided an opportunity to become a member of the high power committee and prove his credentials, which he could not. At no point of time Congress was serious in accepting Prashant in its fold. It was just addressing its targeted segments of audience both inside and outside organization and Prashant was just being used for this. All this, thus was the play of illusions. Strange was the fact that no conscious effort was made to let appear the illusion real. It started as illusion and ended too as illusion. Prashant Kishor could have known it better than any if he wished too. But perhaps desperation to show Narendra Modi and the BJP his might have blinded him and a person destined to show others the right way missed his own way. One may not achieve **success** in his efforts if the intents are prejudiced and have negative connotations. But then, it appears that Prashant Kishor has had full realization of breaking of the illusions. After all, as a German author put it, losing an illusion makes you wiser than finding a truth. Recently at Raisin **Dialogue** India Foreign Minister, S. Jaishankar articulated the broad contours of India foreign policy. While responding to questions on India policy towards the war in Ukraine, Jaishankar argued that India prioritizes its national interest while making foreign policy decisions. It does not come under pressure and side with one party or the other unless the national interest demands so. India foreign policy cannot be a pale imitation of another country policy or dictates. India decides for itself, and its independent foreign policy cannot be subject to intimidations. Hardly a foreign minister in the past was as assertive as Jaishankar Hardly **a.**

The appropriate authorities. By reporting dubious behavior, you can aid in preventing others from becoming victims of the same fraud. In conclusion, protecting yourself from immigration deceit requires vigilance, awareness, and common sense. By following the recommendations outlined in this article, you can help protect your personal information and evade falling prey to typical frauds. Remember to always authenticate requests for information, recognize typical frauds, and report dubious behavior to the appropriate authorities. With these simple measures, you can help safeguard yourself and your loved ones from the deleterious effects of immigration deceit. Man is a social animal and cannot survive in isolation. Thousands of years ago, human beings grouped to create a city, built a society and then started living in the state. Decisions that changed the lives of people happened all over the world through religious institutions and thereafter via the state essence. The determinants of human life have evolved in various forms, starting with religious institutions, followed by state power, and eventually encompassing global institutions. However, the emergence of democratic institutions marked a significant event in India history, beginning in the 12th century with the establishment of the Anubhava Mantapa. The concept of democratic governance originated in ancient Rome in Western countries. These democratic institutions do not possess absolute authority but serve as platforms for expressing people opinions. In 1215, the Magna Carta was established in Britain under the leadership of King John. It defined the rights and responsibilities of both the king and the subjects. After India gained independence, on January 26, 1950, we all accepted the Indian Constitution. Our Indian Constitution is one of the largest and encompasses the aspirations of diverse castes, religions, and cultures. It recognizes the rights and duties of citizens and establishes a federal system that acknowledges the existence of both the central and state governments. India is a republic, and the words spoken by the late former Prime Minister Atal Bihari Vajpayee hold great significance. Governments come and go, political parties emerge and fade away. However, the essence of India and its democratic governance must remain constant. With this **vision,** the People Sovereignty Foundation was established. During the drafting of the Indian Constitution, the Constituent Assembly, led by Dr. B.R. Ambedkar as the Chairman of the Drafting Committee, wrote the masterpiece of Indian democracy. All these activities took place in the Parliament of India. Thus, we believe that the **Parliament** represents the stronghold of Indian democracy. The Indian Parliament plays a pivotal role in the lives of every individual. Our rights, services, and duties are determined through its activities. The Parliament provides a platform for us to voice our opinions and concerns, and it is our responsibility to actively participate in its functioning. The Parliament is the embodiment of the collective will of the people and the guardian of our democratic values. Today, our Prime Minister, Narendra Modi with immense experience in both the state and central governments, possesses a complete understanding of our country and envisions a new **India.** Recognizing the need for a new system in the construction of this vision, the new parliament is being inaugurated today, which holds tremendous significance in India

Cultures, and communities. Furthermore, to emerge as a strong economic powerhouse globally, India requires decisive policies and systematic infrastructure development. To build the future of modern India, discussions on crucial matters should take place here: Resolving numerous challenges that India faces and establishing decisive strategies. India must become economically robust and make significant contributions on the global stage. Ensuring equitable and comprehensive development across all sections of society. Every citizen should have a crucial role and commitment towards the construction of new India. Transparent and efficient governance practices utilizing modern technology should prevail in the country. Individual freedom and social conduct should be guaranteed for every citizen. Governance should be based on the constitution and the rule of law. Access to education, healthcare, and employment opportunities should be continuously available for every individual Prime Minister James Marape of Papua New Guinea touching the feet of Prime Minister Narendra Modi may not be an important development in Indo-Pacific relations and international politics, but it is significant from a larger soft power perspective. Touching feet is an age-old Hindu tradition, a gesture of reverence, and Marape, a Christian, adopting this gesture to welcome Modi, a Hindu, to his country shows the reach of Indian tradition across continents. And this reach, using the language of the famous Chinese diplomat Hu Shi in the context of India-China relations, was possible without sending a single soldier across the border. During my stay in Jakarta in 2008, I had a chance to visit the history museum at the center of the city. As I was going through various artifacts, I came to know many historical developments which I was unaware of. Indonesia was once ruled by the Shailendra dynasty, which as the name suggested was of Indian origin. Indonesia still has a sizable Hindu population in Bali and some other areas. I remember as a child I used to take part in the famous Boita Bandana sailing boat festival in my native place of Odisha. In this ancient tradition, every year children at a particular time of the year get up early in morning, go **to** nearby ponds, rivers and other water bodies and sail boats made of paper, thermocol and banana bark, with candles and earthen lamps on top of them. One could see and revel at the scene of thousands of boats sailing through the ponds and rivers. This festival celebrates the ancient **tradition** of trade between the eastern part of India and faraway places such as Java and Sumatra. There are popular Odia stories and dramas such as Taipei, reflecting how the ancient trade connections were also part of local heritage. I am narrating such stories and their historical connections to point out the significance of India cultural reach across continents through means of trade, religion one can think of Hinduism and Buddhism in this context, and myths and folklore. The culture of India also known as Aryavarta or Bharatavarsha spread all over the world, across continents. One would hence not be **surprised** to find the large Hindu temple in Angkor Watt of Cambodia, or the Indonesian Mahabharata, or the Russian Veda. The important part of this diversification and local adoption of rich Indian customs and traditions is that they spread without any sword or evangelical mission. Mahatma Gandhi, also known as older of peace, was an icon of India soft po

Struggle against injustice and oppression in South Africa and India. The Gandhian principle of non-violence has often been, particularly in the context of state-to-state relations where subterfuge and hypocrisy are synonyms for diplomacy and foreign policy, misconstrued as cowardice and weakness. And when one country sticks to non-violence, and the other country practices violence, as happened in the case of India and China, exploitation happens. It was no surprise that the friendly slogan of Hindi-Chini bhai India and China are brothers, which could be termed Gandhian, of 1955 degenerated to bitterness following the Maoist principle that power flows from the barrel of a gun, resulting in the war of 1962. Here the point is not to demean a particular power or neighbor of India, but the point is to cultivate India soft power which is already visible in many parts of the world though in a much subtler form not only to bolster India position in international politics, but also to craft a peaceful and principled international order. And it is not necessary that relations in the Indo-Pacific or any other region of the world must be a zero-sum game, implying one loss is another gain. India and China could develop friendly relations by cultivating their soft power as well. The policy makers of both countries could explore the past connections. One could, in this context, think of Chinese monk-scholars Faxian and Xuanzang coming to India in earlier centuries and bolstering cultural ties, and revive that connection and explore prospects of resolving outstanding issues in peaceful ways. As I mentioned earlier, Marape touching the feet of Modi may not be an important development, but it shows India soft power which can be salvaged by Indian leadership to enhance India power and prestige in international relations. And this could be expedited with the use of modern means of mass communication and technology. Pet insurance is perhaps one of the hidden success stories that emerged from the Covid 19 pandemic. As more people stayed home, and working from home became the norm than the exception for two years, many folks began **to** get pets. A recent report pointed out a leap in pet adoption numbers and the rise of a nascent pet care industry in its wake. It argues the rise of urban living, and nuclear families with the pandemic have acted as a catalyst driving the trend. In the last **few** years, the perception of pets from ownership to being part of family life has seen an increase. The need for companionship, emotional support, and happiness during the pandemic meant pets transformed from domestic animals to companions. Another recent report estimates that the pet care industry will touch the Rs 10,000 crore mark by 2025, with consumer durable brands also looking at making forays into the sector. As pets become family and a swathe of facilities has opened up for them, including spas, care centers, and so on, it would appear that pet insurance is also seeing an upward trajectory. **Estimates** suggest more than 20 million pets have insurance in India and the overall pet care industry is valued at a whopping Rs 500 crore. As pet parents look for the best solutions for their pet children, this sector is estimated to witness a lot of growth potential. What does pet insurance entail? Owning a pet is an expensive proposition, though it may not appear so. One has to account for pet-specific food with enough nutrition for good health, purchase accessories, get vaccinat

Foreign minister articulated so clearly the policy amid a global crisis, in an international dialogue forum. Hardly a foreign minister articulated so fearlessly, even while earning opprobrium from some diplomats and politicians at home and abroad, that India past of submissiveness and trepidation is gone. While articulating that India condemns war and violence in Ukraine, conceding that the war violates sovereign democratic rights of Ukraine, and accepting that the war violates the UN Charter, India decided not to condemn Russia in the way as wanted by some of the participating leaders in the Dialogue. It can be understood that India is in a dilemma while tackling the issue of Ukraine. It is certainly a complex international political issue when countries like India find it difficult to choose between realpolitik and moral imperative. Russia is a trade partner, and it has leverage in the Eurasian region, and by going directly against Russia, India will jeopardize its interests in the region. More so, on contentious border issues with Pakistan, China, and about peace and stability in Afghanistan, such a policy will distance Russia from India. The top leaders of both the countries meet every year, they have joint collaborations like BrahMos a combination of Brahmaputra and Moscow. The dictate of realpolitik suggests India follows a cautious path even though Russia invasion violates Ukraine independence and territorial integrity, the UN Charter, and equally importantly, it undermines democracy. But, as articulated by Jaishankar, while Ukraine is a major global issue demanding attention, it is also necessary that other pressing issues are not undermined. The conflicts in Asia, the developments in the Himalayan region, and the prospects of violent conflicts in the South China Sea, or in Ladakh, or in Koreas cannot be ignored. China silence on Ukraine could make more sense as it is not a democratic state, but India as the largest democracy could not stay silent when there is an onslaught on another democracy, or democratic principles that is the argument made by the US and its European allies. This argument has some justification and India as the largest democracy cannot **simply** stay on the sidelines amidst this global crisis, which has the potential to redefine the global order. But as realist prudence demands, India cannot simply undertake a moralist standpoint and ignore the dictates of realpolitik. Jaishankar tried to make a fine balance between the realpolitik and moral concerns while **addressing** international concerns on the war in Ukraine. The immediate national interest clouds the larger moral goals that is how international politics apparently operates now, but from a long range perspective the undermining of democracy will not bode well for the world. Experts tell us which type of democracy is better and which is worse, but keeping aside this typology of democracies, it is true that the recent years have seen a dip in democratic values, even in the most developed countries. While Russia Ukraine conflict can be considered a flashpoint in this connection, it does not present the full **picture.**

Remember games like second Life or the sky fi rollercoaster Ready Player One Now imagine being able to experience it not just in games or on screen but in reality. It may sound surreal, but the time has arrived to say Hello to Metaverse! Touted to be the next revolutionary experience on the lines of the internet discovery of the 90 which changed everything about how we interact and lead our lives today. In technical terms, Metaverse is a virtual universe brought alive through Augmented Reality and Artificial Intelligence. It is an immersive online experience for everyone that replicates your offline reality. Millennial and Gen being most internet savvy and ahead of their times are widely speculated as the drivers of the Metaverse. They are also the core target for most brands across categories and their inclinations towards Metaverse, makes this an interesting proposition that marketers will need to tap into. The biggest challenge that marketers face today with the above TG is their highly reduced attention timespan. This has led to brands resorting to all kinds of tactics not just to capture their attention but also to engage effectively. This is where Metaverse as a platform emerges as a clear winner with its potential to engage such consumers consistently. Given that marketing involves creative experiences resonating with various brands, the metaverse can be leveraged for the best experiential ways of marketing in real time. Marketing requires customers to be engaged and excited about the given product or service and Metaverse does just that, by bridging the gap between customers and a given brand. From Metaverse weddings to holi parties, brands in India have started to dabble with Metaverse marketing. The idea is fun, connected and promising. Given the 5G rollout worldwide followed by India later this year, experiences of this nature can only become more and more robust in the years to come. No wonder even industries outside the gaming industry are adopting Metaverse marketing to grow a market that is being pegged at 800 billion in India by 2024 according to Bloomberg Intelligence. This leads us to **the** topic on how Marketers can gear up for the next big thing that is going to redefine brand engagement. In order to do so marketers need to understand Metaverse and its key benefits, which have listed below Metaverse facilitates easier Introduction Metaverse helps create real and bigger opportunities online **across** a gamut of segments be it gamification or networking. Metaverse is also becoming a place where users can interact through AR and VR, which also means that business visits are facilitated, besides socializing and entertainment through avataric transitions. As the boundaries between online and offline worlds are blurring, Metaverse is slated to become one of the most important points of interaction with customers. Activities like trials, sampling, feedback etc. can be very much facilitated in an innovative manner. Metaverse enables effective Engagement According to the findings of the Center for Generation Kinetics Gen does distinguish between online and physical **worlds.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-06-TEST NO.-25335

Gen has begun to spend more time on AR spaces for socialiing, following new trends and news. For the experiential world that Gen seeks, AR has become a massive favorite which makes them the strongest target group in various segments ranging from lifestyle and even end tech. Since both consumerism and spending are rising amongst Gen and given that they are savvy and yet have shorter attention spans, Metaverse is a great tool for brands to engage them. Globally brands including Disney, Nike, Hyundai, Gucci, and others have experimented with metaverse to create highly immersive individualied 3D virtual experiences, In India brands like Coca cola. ITC, Mondale, Chinghai etc. have all started to dabble in this space and drive engagement with their TG. Metaverse elevates Buying Experience Any brand that gives a differentiated online buying experience only increases its market share. And this increases manifold with Metaverse which can offer experiential brand plugins for scaling up consumerism. People can now be visit a brand outlet in a foreign country in an avatar of their choice, shop and get the same product delivered in the real world. All this without the hassle of moving away from their device, let alone home! Recently a Gucci bag was sold for 350,000 Roux or approximately which shows that Gucci hit the right spot in exploring this format. Metaverse can fastback the adoption of Digital currencies A decade ago, the very thought of enabling digital payments at a mass scale on mobile was a foregone conclusion. With demonetisation and data penetration today it common to even pay for a roadside cup of tea on the phone. A similar parallel here can be drawn with respect to Crypto etc. which are still nascent and very digital native driven. Metaverse is home to crypto digital tokens or can speed things and make people aware and adapt to digital currencies faster. While travelling, one needs forex to shop, dine or indulge in any experience overseas, here crypto could act as the perfect enabler and save people the hassle of forex. Given the rising awareness on crypto currencies **and** the affinity shown by Gen, any brand that enables multiple crypto led purchases on its platform stands to gain further in the long term. In India for now, given the penetration levels and the lack of clarity surrounding crypto, this could be a future based decision. A technological revolution **always** impacts lives and companies to undergo evolution through new and creative marketing tactics by latching on to it. Metaverse, though now nascent, will soon be the in thing. With prospective customers spending more time with online avatars than the offline world, Metaverse creates a parallel universe for users wherein there is less noise and more value and experience. Given that there is no dearth of potential on how brands can use Metaverse to boost sales and engage their audience through personalized experience, it is for companies to identify their state of preparedness and adapt Metaverse Marketing into their scheme **of.**

Things as first movers rather than laggards and be pioneers in this space. Metaverse will capture a niche and premium audience to begin with, but volume of transactions will be substantial only when the masses have understood the idea and the concept of the technology. Hence as of now and Millenials remain the best bet for brands to pitch the Metaverse for. And this is where it can emerge as the Marketing Game changer. What does it take for the students to succeed in this interconnected and interdependent globalized world Can every student get the required global exposure regardless of financial capacity With the growing interdependence of the world economies brought about by cross border trade in goods, services, technology, and flow of investment, people, and information, let us examine the challenges a student faces in the current world. Increasingly, students will have to be conscious of the globalized work environment in terms of different cultures, languages, and preferences to navigate, provide solutions and succeed in this environment. Over Indian students study abroad in countries like Australia, the and Canada every year. But this number is just a fraction of the total student number in the Indian higher education system. So, to achieve the desired impact at scale, educational institutions must figure out innovative ways to provide students with such experiences at home. Recognizing this need and demand, Australian and Indian institutions are working on building partnership models that benefit students on both sides. Institutions are trying unique ways to support students, from well known models such as student and faculty exchanges, summer schools, twinning programs, competitions, and master classes to joint commercialization, innovation labs, and start up landing pads. The recent joint between the University of Queensland and the Indian Institute of Technology Delhi, known as the attracts the best global talent, including high achieving students, academics, researchers, and scientists to work on goal directed, cross disciplinary challenges that are of interest to Australia, India and the global community. Another exciting example is researchers at the University of Southern Queensland, in partnership with the Indian Council of Agricultural **Research** and the International Water Management Institute have worked in villages in India West Bengal and Bihar to improve year round access to water for irrigation through farming collectives, which has improved the productivity of agriculture, incomes and food security to various marginal communities in the area. These partnerships are **helping** students learn how to build rapport with people of different nationalities, think independently, understand different perspectives and solve global problems. These cross border collaborations are not just happening at the institutional level but equally at the corporate and government levels. The recent example of how the healthcare industry was able to innovate, develop, test, and distribute Covid vaccination in a record time, shows how effective and essential are such collaborations. So, it is imperative for the students to understand the implications of living in the globalized world and take advantage of these dynamics. We also need to look at **how.**

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-06-TEST NO.-25337

lion is an old symbol connected to Persia's history. So even the name of a mission can show what a country wants people to think and feel. This idea is not new. During World War I and World War II, countries began using dramatic names. For example, Germany under Adolf Hitler called its attack on the Soviet Union Op Barbarossa, named after an old emperor to make Germany seem strong and heroic. The US later used names like Op Enduring Freedom in Afghanistan and Op Odyssey Dawn in Libya. Sometimes the names are simple, like Britain's Op Corporate during the Falklands War. India has also used such names, like Op Cactus in the Maldives and Op Parakram after the 2001 Parliament attack. These names show that in modern wars, words and messages are almost as important as weapons. TOI News - March 5, 2026 War Naming Times of India's Edit Page team comprises senior journalists with wide-ranging interests who debate and opine on the news and issues of the day. Op Sindoor, Op Epic Fury military operations' names are meant to send big messages. What's in a military operation name? Quite a bit, actually. Despite being coordinated between America's Pentagon and Israel's Kirya, Washington and Tel Aviv have decided to use two separate op names for their Iran campaign Op Epic Fury and Op Roaring Lion respectively. Why two names? It's all about political messaging. Having rechristened US's department of defence as department of war, Washington clearly wants to signal overwhelming power, something that feeds into the narrative of the US being No. 1. Israel, meanwhile, is tapping into the Judeo-Persian motif of the lion, signalling solidarity with old Persia against the Islamic Republic. All of these may seem like little mind games. But in the age of informationised warfare, messaging is as important as cutting-edge drones. So, Op Midnight Hammer signalled a literal battering of Iran's nuclear infra by US forces last year. But this exercise isn't exactly new. It all started with WWI and gained prominence in WWII, when Germany under Hitler drew on historical and mythological **figures** to message German superiority. Hence, Op Barbarossa after Holy Roman Emperor Frederick I for the German invasion of the Soviet Union. The US military began with colour-coded names such as Op Indigo plan to prevent Nazis from seizing Iceland but later switched to a computerised naming system after Vietnam. **However,** big ops get two-word names that are cleared by the secretary of defence, like Op Enduring Freedom for Afghanistan and Op Odyssey Dawn for Libya. One exception: UK's op to retake the Falklands in 1982 was dubbed a very blah Op Corporate said to be the next available name on a Whitehall list. Closer home, we had India's Op Cactus to thwart the attempted coup in Maldives in 1988. If Op Parakram after the 2001 Parliament attack served as a warning for Pakistan, Op Sindoor last year ensured justice for those widowed by the Pahalgam terror attack. So, expect **war** names to get more creative, and political. Egyptians buried their boy king Tut 3,349 years ago. If he walked out of his tomb today, he'd be worth $20mn at least. Not bad for a born-again teenager. Tut's wealth would lie entirely in the 120-odd kilos of gold he was buried with. But if you were Tut, would you want to be resurrected today, or late this year when analysts expect gold to touch $6,000, or even $6,300, from around $5,250 now? Four years ago, when Russia invaded Ukraine, gold had nudged $2,000 a record. On Mo

in a day after Op Epic Fury. Another big war next year could push it to $7,000, or more. Who knows? Gold's skittishness in the face of war and economic crises puts Tut in a real to-be-or-not-to-be quandary. But it wasn't always so. Until Aug 1971, Tut could have returned anytime without a cost-benefit analysis. If he was scientifically minded, he should have chosen 1717 to meet Newton who, as Master of the Royal Mint, set gold's price at just under £4 per ounce. What's with mathematicians and gold? Remember, eureka-eureka Archimedes figured out the density test for gold's purity. Newton also invented the reeded edge of coins to prevent tampering. Anyway, the price he set for gold became gospel for the next 200 years. No war ever made it cheaper or dearer. Even when Napoleon overran Europe, gold demonstrated the law of inertia. In WW2, the US finally reset gold's price to $35 per ounce, not so subtly telling Brits who was boss. But it wasn't until Nixon refused to swap other countries' dollars for gold in 1971 that gold got a life of its own. It was at $193 before 1979's Iran revolution, and at $615 a year later. Why? Because in gold we trust. Money unmoored from gold is paper. Germans under Hitler, Venezuelans, and now Iranians have experienced this. So, when stocks and crypto look shaky, the safety of gold beckons. In fact, high gold prices are the most eloquent sign of global fear. Newton found that the gold-to-silver price ratio in 18th century India was 12 to 1, as against 15 to 1 in Britain. Now, it's crossed 60 to 1. Similarly, gold's relationship with oil is also broken. Between 1970 and 2018, it exceeded 30 to 1 only about 2% of the time. Before the war, it had risen to almost 90 to 1, and now, after oil's rise, it's at 65 to 1. But this won't last. Gold will race ahead. Tut had better wait for the next big war. A long time ago, Egyptians buried their boy king, Tutankhamun, with a **huge** treasure of gold. That was 3,349 years ago! If Tut walked out of his tomb today, all that gold would make him worth at least $20 million. Not bad for a teenager, even if he's born again! Tut's treasure weighs about 120 kilograms. But here's a fun question: if **Tut** could choose, would he wake up today, or wait a bit until gold becomes even more valuable? Right now, one ounce of gold costs about $5,250. Experts think it could reach $6,000 or even $6,300 later this year. When big world events happen, like Russia invading Ukraine four years ago, gold jumped all the way to $2,000 a record then. And after recent military actions, it rose 5% in a single day! Gold goes up and down depending on wars and money problems, which makes Tut's decision tricky. But gold wasn't always like this. Before 1971, its price stayed **pretty** steady for hundreds of years. If Tut had come back any time, he wouldn't have had to worry about money. In 1717, Isaac Newton yes, the same guy famous for falling apples set the price of gold while working at England's Royal Mint. He also invented the ridged edges on coins so people couldn't cheat. After Newton set the price, it barely changed for 200 years, even during big wars like when Napoleon invaded Europe. During World War II, the U. S. set gold's price to $35 per ounce. But in 1971, President Nixon made a big change: he stopped

Indian institutions have tried to provide international exposure to students in the past. Most Indian institutions previously had minimal cross border partnerships because there was ambiguity on the collaborations permitted under the old regulations. However, the New Education Policy NEP has revamped and brought a clear, coherent path for Indian higher education institutions to recognize the importance and necessity of cross border collaboration. NEP acts as an added catalyst to the entire process of internationalization at home. Now coming to India and Australia, the relationship between the two countries has never been better. For the first time in many years, the two countries have decided to take the relationship beyond much loved and cherished cricketing ties. For the last nine months, India and Australia have been working meticulously as collaborators, which have resulted in the interim signing of the historic Economic Cooperation and Trade Agreement. Education and cross border collaborations have been recognized as the foundational pillar of. Governments on both sides have also agreed to set up a task force to address the recognition of online, blended learning, joint degrees, and offshore campuses on the mutual recognition of degrees on both sides. Also, the recent announcement of the Maître Scholars Program with an allocation of over 11 million to support Indian students to study in Australia world leading universities indicates a paradigm shift to a closer, deeper, and stronger relationship between the two countries. The recent announcement of the University Grants Commission to allow globally top 1000 ranked institutions to offer dual degree, joint degree, or twinning programs in collaboration with Indian institutions is a landmark decision towards an easier path for cross border collaboration. The cooperation between the institutions, corporates, and governments in Australia and India will ensure that students get the necessary support to build successful careers in the globalized world. India must consider these nuances and frame its policies accordingly, and most importantly use its best offices to work with the leaders of Russia and Ukraine to find a peaceful solution. Apparently, there is a hesitation to find a negotiated settlement, and as the Russian **bombardment** of Ukraine and increasing arrival of shipment of arms from NATO suggest, the violent conflict will have a larger life span. The war will end at some point of time, and if it is decided violently with the victory of one party at the cost of the defeat of **the** other, the seeds of distrust and the roots will still remain there, opening up scope for a larger conflict in future. The Raisin Dialogue brought to the front that India foreign policy has come of age. And more so, the developments can be seen as a rebuilding of India nonalignment, that India is free to take its own decision, keeping in view national interest as the sole guiding factor. Jaishankar admitted that India could have done better in the past. Its negligence of hard power made the rise of India and development of a robust foreign policy slow In **this.**

One can find an honest confession from the top Indian diplomat that India, despite being the largest democracy, could not leverage its democratic assets, its human resources and hard power potentials. The Indian leadership seems to be aware of these issues and taking steps to address them. A country cannot be powerful abroad if it is weak at home. As I argued elsewhere India soft power assets make sense when they are supported by its hard power. The ideal of Vasudhaiva Kutumbakam could only be built on solid foundations. Former President of known as missile man, repeatedly made the case that India can play an effective role on the world stage when it is strong internally as well as externally. India foreign exchange reserves have dropped to below $600 billion, a 7 fall in just the past six months. The reason for the fall is either that people both Indians and foreigners are taking dollars out of India, or that the Reserve Bank of India RBI has been selling dollars to decrease the pressure on a declining rupee. Sharp rupee depreciation is bad news since it makes our imports expensive. Crude oil imports alone were $120 billion during last fiscal year. If the rupee slides, crude oil becomes expensive, which affects domestic price of petrol and diesel, contributing to inflation. On the other hand, the rupee cannot be allowed to get too strong, because it will hurt our exports. The optimal level of the exchange rate is managed by the RBI. This dollar rupee rate is the most important price which is managed in the economy. To manage the exchange rate the RBI needs to have some stock of foreign exchange, which is currently just below $600 billion. Is that too much Strangely this question has been recurring for almost 15 years. Even when India forex stock reached $100 billion some people started asking whether it was excessive. One of the benchmarks used to measure whether forex is adequate or not is how many months of imports it can support. This past year our import bill was around $620 **billion.** So, our current forex stock can pay for 12 months of imports. That seems like a safe stock. Hence, some people have suggested that India should have its own sovereign wealth fund just like Abu Dhabi, Saudi Arabia, Norway, Singapore or China. All these countries have a very large **stock** of foreign exchange. But the first three of them are large oil exporters and have windfall gains from high oil prices, and their own domestic consumption of oil is very low. The last two, Singapore and China, are also major exporters and consistently have a current account surplus, ice exports always exceed imports. India case is very different. It does not have any windfall gains from oil or any other commodity exports. Secondly, it consistently has a current account deficit, sometimes as high as 2 or 3 of GDP. So, India is constantly running short of dollars on its **trade.**

Team India achievements at the Paris Olympics 2024 indicates the overall improved performance of the Indian contingent. Besides the 6 medals, 8 of our athletes were placed in the 4th position and missed the podium finish just by a whisker. Five of them were competing in their maiden Olympics. As many as 15 athletes reached the quarter finals of their competitions, which is also for the very first time for India. This is the face of a new and buoyant India which was seen at the Paris Olympics. As many as 28 Khelo India athletes KIAs were a part of the 117 member contingent. From our youngest ever Olympic medalist Aman Sehrawat to pistol shooter Sarabjot Singh, multiple athletes have been a beneficiary of the Khelo India program. In recent years, India has made significant strides in nurturing its sporting talent, thanks in large part to the ambitious Khelo India program. Launched in 2018, this initiative has become a game changer for Indian sports, creating a robust feeder system for future Olympic champions. Manu had won multiple medals from the Khelo India University Games 2022 while she was also a part of the first edition of the Khelo India school games in 2018. Aman, meanwhile, has been a part of the Khelo India scholarship scheme, since 2019. We also have a total of 25 current and former Khelo India athletes taking part at the Paris Paralympics out of a total contingent of 84 para athletes. The Khelo India Games have played a pivotal part in the scheme with a total of 15 Khelo India Games held since 2018 – 6 Khelo India Youth Games, 4 Khelo India University Games, 4 Khelo India Winter Games and 1 Khelo India Para Games held. From these games, we have identified over 1000 talented athletes. Also, with a total of 302 Accredited Academies, 1000 Khelo India Centres, 32 Khelo India State Centres of Excellence, we are ensuring every possible infrastructure is ready for our grassroots athletes to make them future champions. Since its inception, the government has invested approx. 3616 crore in the **program,** a testament to its commitment to developing sports at the grassroots level. This substantial funding has been channeled into various aspects of sports development, including athlete support, infrastructure enhancement, and the establishment of specialized training centers. One of the most notable achievements of Khelo India has been the identification **and** nurturing of young talent. Through its annual competitions like the Youth Games, University Games, Winter Games and Para Games, the program has unearthed thousands of promising athletes. More than 2,500 athletes receive total annual scholarship of Rs. 1.2 lakhs, besides the manifold support given to them from the Khelo India Accredited Academy they are training in. The ripple effect of Khelo India extends beyond just creating a pool of athletes. It has sparked a sporting revolution at the grassroots level, encouraging participation and fostering a culture of sports and fitness among India youth. The program emphasis on indigenous and **traditional** sports has also helped revive interest in India rich sporting heritage. Perhaps the most significant impact of Khelo India is its role as a feeder system for India Olympic aspirations. By identifying talent early and providing sustained support, the program is creating a pipeline of athletes who are better prepared to compete at the international level. The results are already beginning to show, with several Khelo India athletes representing th

Is ensuring that India future Olympians are well rounded athletes capable of handling the pressures of elite sport. There are 1059 Khelo India Centres KICs notified across 36 States and Union Territories, with a total of 747 districts covered. These centers serve as hubs for identifying and nurturing local talent, ensuring that no potential champion goes unnoticed, regardless of their geographic location or economic background. These centers also provide sustainable source of livelihood outside the Government set up to past champion athletes. Moreover, the program has established 32 Khelo India State Centres of Excellence KISCEs across 31 States and UTs. These state of the art facilities offer specialized training in specific sports, ensuring that athletes have access to world class infrastructure and coaching. These centers of excellence also provide support towards Sports Science and Technology for sports disciplines practiced at the center. It also bridges the gaps in sports equipment, high performance managers, coaches, etc. The Khelo India Rising Talent Identification KIRTI program is making significant strides in unearthing talent at the grassroots level. KIRTI aims at identifying untapped sporting talent across India and foster a culture of sports awareness. The program identifies talent among school goers between 9 and 18. It utilizes modern technology and best practices to create a seamless talent identification system. The vision is to streamline the whole process of grassroots talent identification on a single platform. This athlete centric approach ensures a broad based and accessible platform for aspiring athletes, using a decentralized and pocket based talent identification approach. Close to 1 Lakh assessments have been successfully conducted across 10 sports disciplines at 93 locations across the country so far. The ASMITA women leagues also continue to be a driving force in promoting women participation in sports across the country. These leagues provide a platform for thousands of talented athletes to showcase their skills and compete at the national and zonal levels. As of today, four seasons of ASMITA have been held since 2021 which has seen a total participation of 83615 women in 20 sports from across 35 States and UTs. These leagues **achieve** much more than crowning champions. They create a supportive environment for female athletes, fostering a love for sports and a path to potential careers. With upcoming events and growing participation, these leagues are paving the way for a brighter sporting future for women in India. The foundations laid by **Khelo** India are promising. As these young athletes mature and progress through the ranks, we can expect to see a significant improvement in India performance at future Olympic Games. For Khelo India to truly realize its potential as an Olympic feeder system, sustained investment and focus is crucial. The program thus continues to evolve, adapting to the changing needs of athletes and the global sporting landscape. The program has emerged as a cornerstone of India sporting future. By providing a structured pathway for young athletes, from grassroots participation to elite performance, it is nurturing the Olympic champions of tomorrow. As **Khelo** India continues to grow and mature, it holds the key to unlocking India vast sporting potential and transforming the country into a sporting powerhouse on the global stage technology and best practices to create a seamless talent identi

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-07-TEST NO.-25345

Account the reason that India has ample supply of dollars is because its trade deficit is financed by foreign investors via the capital account. This includes money flowing into the stock market, via foreign loans and by nonresident Indians keeping fixed deposits in Indian banks. And of course through foreign direct investment FDI in projects, companies and startups. However, everything except FDI is hot money. It can easily be reversed. There can be sudden stops to stock market inflows. It a great testament to the confidence of foreign investors in India prospects that for past more than three decades they have poured investment dollars, which has taken our forex stock from barely $1 billion in 1991 to $600 billion in 2022. The call for using some of India forex stock to form an SWF is also because RBI earns barely 1 or 2 returns on its forex stock, which is mainly invested in the US and other sovereign bonds. By its charter, the RBI is not allowed to invest in any other asset, since it has to park the foreign exchange in only safe assets. On the other hand, other countries with large forex carve out a big fund into an SWF, which in turn is allowed to invest in more risky assets and earn a higher return. There have been calls for India too to have its own SWF to use some of its own forex more productively. In a way we already have a SWF which is called The National Investment and Infrastructure Fund NIIF, set up in 2016 and managed by a government appointed team to leverage foreign investment into India. So far, its size is about $4 billion and its investments, mainly in the form of equity, are across sectors including infrastructure, e commerce and perhaps future unicorns. But, $4 billion is but a drop out of $600 billion. The main thing to realise is that India needs a largish pile of forex as insurance against sudden flight of foreign capital, which can leave us in the lurch. It happened in 1997 to East Asian **countries** like Thailand. Ever since then many developing countries started having their own dollar pile as self insurance. Since Sri Lanka did not have adequate forex stock it has defaulted and is facing bankruptcy in foreign obligations. India does not have the luxury of being an oil exporter like Abu **Dhabi** nor does it have a current account surplus like Singapore or China. If it wants to secure higher returns for its forex, it can diversify away from dollar assets to euro or other currencies. But as of now the dollar is king and our forex stock, safely managed by RBI is our insurance. In this coming year of high oil prices and inflation and slowing growth, it makes sense to conserve our forex. Even if you are part of the fortunate minority whose life is personally pretty good, it hard not to be buffeted by the turbulent world around **us.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-07-TEST NO.-25346

Covid is in its endgame, but its effects are still reverberating particularly in the form of skyrocketing inflation. Then there is the bitter war in Ukraine with its graphic images of death and destruction. It remains unclear how this will end but what is certain is that it will further polarise the world, reverse globalisation and massively jack up prices of food, energy and commodities. Autocratic leaders are on the rise in many countries and with that, civil liberties and rights are in retreat everywhere. Inequality is rising sharply. Frustrated at not being able to find decent work, more than half of all working age Indians have stopped looking for a job. Indian billionaires grew their wealth by a third last year. Communal strife has reared its ugly head in Karnataka, MP, Rajasthan, Delhi, tearing our social fabric. Meanwhile, the world is heating up much faster than we expected The list goes on and on. Of course, it not all bad news but the sheer amount of bad news is staggering. The point is this. We are living in a period where change is the only constant and uncertainty is the only certainty. This has left many more of us disoriented, anxious, overwhelmed and depressed. So how does one stay calm and positive in the midst of all this Here are five practices that I find personally very helpful. 1 Focus relentlessly on your circle of influence. In his bestseller even Habits of Highly Effective People, Steven Covey recommends that we focus on things that we can control yourself mostly and things you can influence rather than dissipate our time and energy worrying about the many things that are concerning but over which we have no influence. To this I add Gandhi advice on being the change we wish to see in the world. What these together add up to is that I don anguish too much about Ukraine or whether India should buy Russian oil. But I do think a lot about how I can minimize my own planetary footprint and live much more sustainably. I cannot do **much** about people who are spreading hate but I can choose to spread love and heal the divisions around me. I have found this advice to be fantastically effective. I feel better about myself, I get energy from small acts and gradually my circle of influence also expands. 2 Choose **who** you hang out with. It is often said that you are the average of the five people who you spend the most time with. The people you surround yourself with have the greatest impact on your beliefs, your emotions and behaviors. So, you want to consciously be in the presence of people who are positive, generous, thoughtful and loving and avoid those who are filled with toxicity and negativity. 3 Do a social media detox. Much of our media propagates shrill opinions, disinformation and hate rather than objective news and balanced views. I agree with Eric Schmidt who once **called.**

Social media like Twitter and Facebook an amplifier for idiots. Be careful of media that is free because then you are the product. Nearly two years ago, I made a decision to stop watching TV and unplug from social media. Now I get what news and information I need from a set of newspapers and journals that I find to be largely objective and which I pay for. 4 Meditate. In these extraordinary times where everything stable around us seems to be melting, where events are unfolding with breath taking speed, the key to staying sane and dealing with changes lies in being anchored internally. Philosopher Eckhart Tolle observes that the biggest barrier to happiness for most of us is identification with our thoughts and the constant chatter of the mind. Even my modest and uneven practice of meditation allows me to separate myself from my thoughts and see them as passing clouds instead of being thrown about by them. 5 Finally, develop your spiritual life. We are not human beings having a spiritual experience. We are spiritual beings having a human experience. From time to time we get a glimmer of something much bigger, a sense that we are an infinitesimal part of a bigger game. In that moment, all our challenges, all that is happening fades into insignificance. In that instant we know that this is all transient and everything will be alright. The trick is to be able to make these moments more frequent through whatever spiritual practices you find useful. Venkatesan is a business leader, social entrepreneur and author of What the heck do I do with my life How to flourish in a turbulent world While demands have been heard for a Uniform Civil Code UCC for years, and the BJP has adopted it as an integral part of its electoral manifesto, these have now acquired a bellicose urgency in some states such as Uttarakhand. However, the Constitution in Article 44 declares that the state shall endeavour to secure a UCC throughout the territory of India. Properly read, it does not indicate that uniformity **can** be achieved by state legislations though states may persuade the Centre to enact a UCC. The learned dissent by Chief Justice Kehar and Justice Abdul Nazeer In Sahara Bane 2017 held that the practice of tale e bidet is a constituent of personal law and it has a stature **equal** to other fundamental rights. The practice cannot be set aside on the ground of constitutional morality, through judicial intervention. Urging absolute judicial self restraint in essential religious practices, no matter how compelling and attractive the opportunity to do societal good may seem, their Lordships added Unfortunately, the Union seeks at our hands, what truly falls in its own. The majority, however, invalidated both constitutionally and legally, such triple talk. India has progressively proceeded in a piecemeal way towards UCC. Contract law and criminal law are uniform for all communities. So is facilitative law such as the Special Marriage Act, **under.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-07-TEST NO.-25350

Especially in the first 18 months such as vaccination shots, infections, and senior care beyond 10 years. Most pet healthcare is centered on private clinics and vets. If in a financial crunch, pet parents will not be able to afford modern clinics with the best support to treat their pets, especially in case of an emergency. The high treatment costs involved in pet medical treatments play an important part. This can change with the rapid adoption of pet insurance by pet owners. As pet adoption numbers go up, taking a pet insurance policy makes financial sense for pet parents. It aids in financially securing the overall health and wellbeing of your pets by tackling the treatment costs. Much like humans, they would offer payment options for pet treatment if they sustain injuries or suffer from ailments and require medical intervention. It often covers veterinary services as well, including general consultations, nutritional counseling, and medical and surgical interventions, emergency care, and includes protection from theft or accidents of the pet as well. Pet owners can also opt for wellness checkups and behavioral consultation of their furry friend via telemedicine. Also, since the pandemic is resurfacing, telemedicine for pets might see growth in popularity, as many pet owners will avoid making unneeded trips to the vet. Telemedicine is an evolving field, especially for pets, and has the potential to save healthcare costs, boost convenience for pet owners, and increase access to veterinarian treatment. It eliminates the risks of high expenditure for medical treatment of the pet and protects its life by providing the best treatment at the right time. In addition, they often insure the policyholder against damage claimed by third parties that is, people who may be affected by the pet actions. Let understand the need for insurance for pets with numbers. Routine healthcare expenses such as vaccinations, deworming, and so on cost about Rest 6,000 to Rest 10,000, a year, and additional expenses can bring that cost up to almost a lakh annually. Pet insurance will help reduce these costs significantly. Pet insurance helps keep pet parents financially secure **even** when the pet is ill or facing complex medical conditions and emergencies. It will mean that you do not need to dip into the savings to ensure the safety of a furry companion. It offers pet parents the benefit of choosing in advance what works best for the pet **health** and wellbeing, and often plans include yearly checkups that are extensive and detailed. This will ensure illnesses can be detected early and treated on time. Insurance also helps pet parents with special coverage benefits if the pet is stolen, lost, or inadvertently causes harm to another person. Pet insurance is approved by the Insurance Regulatory and Development Authority of India IRDAI. Pet parents need to provide a health certificate from a veterinarian, vaccination records, and identification. In the case of older pets, diagnostic tests are prescribed to check for preexisting diseases and geriatric conditions in older pets. Pet parents **must** identify the sum they would need to insure, understand the product coverage mandatory and optional and ensure that they understand the documentation process. The rising cost of veterinary care, the increasing awareness of the importance of pet health and wellbeing, and the growing trend of pet ownership in India are the main reasons consumers are adopting pet insurance in India. RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-07-TEST NO.-25351

Public attention on areas such as government finances and infrastructure, a landmark announcement in this year Economic Survey got less than deserved attention. Quoting UN Multidimensional Poverty Index (MPI), the Economic Survey revealed that between 2005 06 and 2019 21, a staggering 415 million Indians were pulled out of poverty. The logical question, then, is to ask What will it take to liberate the remaining 230 million still in poverty? Over the years, the Union government social sector spending has gone up dramatically from Rest 9.1 lakh core in Financial Year (FY) 2016 to Rest 21.3 lakh core in FY 2023. However, social upliftment requires more than just rising social sector expenditures. It calls for a higher productivity of such expenditures to achieve the outcomes by specifically solving a formidable challenge on the ground. When we focus on MPI to understand a person deprivations, it measures 10 indicators across three dimensions health, education, and standard of living. Such a view is far more nuanced and accurate than those drawn by only income based measures. Centre and States Different Strokes Policies at the Centre are focused on creating or improving a single program. The Centre budget allocation is scheme wise and expected to be the same in the future too, as it facilitates better tracking of expenditures besides ensuring accountability in implementation. A caveat here is that while this helps focus on specific demands of the programmers, it also ends up being narrow. To truly enhance the efficacy of programmers and successfully achieve outcomes, different programmers need to work in tandem and shape policy design. Egg. Education programmers will not work effectively if students do not have enough to eat at home, fall sick frequently due to poor sanitation, or have to work alongside their parents for a livelihood. While different aspects of the problem may be covered by different programmers, yet no one programmer can solve the problem in a soloed model. Currently, many states have moved to a portfolio approach for delivery of services by creating family databases, identifying beneficiaries and mapping them to scheme entitlements. Successful achievement **of** policy outcomes requires a multi-dimensional approach that entails numerous indicators across multiple sectors and departments to come together to achieve the intended outcome. MPI approach is illustrative. Case For an Integrated Approach to Policy Making For any policy to be successful, it needs to be developed in conjunction with **other** related departments, be efficient, i.e., low cost, less resource intensive; and effective, i.e., target the right audience, and ensure a right time of delivery. This has to happen with no loss of resources in accessing benefits, and needs to have rigorous monitoring and evaluation. A cohesive approach to planning and design of welfare schemes can be the way of the future as they recognise the interrelated nature of social development. Here are some essential steps that will be required: This unified approach can be supplemented with an outcome based budgeting approach wherein high level overall developmental outcomes can be **defined** by the government. These outcomes can be linked to more sectorial outcome indicators quantifying departmental outcomes. Each outcome indicator, in turn, can be mapped to multiple output indicators which will be linked to schemes, and can be tangibly monitored. This approach allows for a seamless transition

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-07-TEST NO.-25352

Which persons of any community may enter into civil marriage. The law of succession is to be governed by the Indian Succession Act of 1925. Thus, was taken, as the then law minister put it, the first step towards a uniform civil code. But the step was optional. Now, the demand is for a binding one. However, as Dry Tapir Mohamed, a former chair of the Minorities Commission, has recently reiterated, a UCC must also remove some discriminatory features of this Act. For example, its list of prohibited degrees in marriage relatives one cannot marry is a carbon copy of that under the Hindu Marriage Act but, unlike that Act, it does not recognised the rule prohibiting marriages within the limits of sapid relationship covering distant cousins. So, a Hindu can freely marry a second cousin under the Act, though his religion prohibits it, but a Muslim cannot marry under it a first cousin which his religion allows and is a common practice in the community. Also, he points out, the rule of prohibited degrees can be relaxed on the basis of custom but not under the Special Marriage Act. A compulsory UCC confronts complexities of great magnitude. It is not constitutionally conceived as a political transaction between Hindus and Muslims but extends to all people of India. Even if some were to think otherwise, there exist substantial divergences for instance, while Hindu law regards marriage as sacrament, Muslim law regards it as contract. Which should be made uniform Besides, different ways of life and religious rites exist among Hindu and Muslims. How do we constitutionally fabricate uniformity out of these And how about Goa and Pondicherry which still follow Portuguese and French civil law respectively Further, how may we proceed towards a genuinely constitutionally pluralist version of the UCC as a compulsory code that must apply to all communities when we know very little about the personal law systems of various tribal groups in India To say this is not to suggest that there are no studies, but to stress that these are not adequate to design a **UCC** based on a clear knowledge of the customs and living law of indigenous peoples. How may one engage the various national and state human rights commissions, national and state law reform committees, women, and child commissions for this task Further, what labors of scrupulous research aided by the departments **of** social anthropology, and the Indian Law Institute acting in collaboration with some cutting edge universities may help deliver a knowledge base for the purpose The production of a constitutional UCC is likely to be the work of many hands, minds and, I dare say, hearts. Professor Werner Men ski, professor emeritus at SOAS and a renowned authority on Hindu law and legal pluralism, tells us a great story about the Indian piecemeal UCC India re learnt an ancient lesson about demanding the impossible, culturally envisaged as asking for the moon. In the ancient Indian story, the child god Krishna **asks.**

letting other countries trade dollars for gold. From that moment, gold started moving on its own. By 1979, one ounce went from $193 to $615! That's because gold is a safe place to keep your money. When people don't trust paper money, stocks, or even cryptocurrencies, they turn to gold. Even today, gold has become much more expensive compared to silver or oil. A long time ago, 1 ounce of gold was worth about 12 ounces of silver. Now, it's over 60 ounces! Its price moves fast and often shows when the world is nervous. So, if Tut could choose, maybe he should wait for the next big world event. His gold could make him richer than ever! When Prime Minister Narendra Modi first visited Israel in 2017, he broke new diplomatic ground as the first Indian Prime Minister to undertake a standalone bilateral trip to the Jewish state. That visit symbolised the culmination of a long, gradual shift in India's West Asia policy from hesitation and distance to open strategic engagement. His recent second visit, however, comes at a far more turbulent moment. With the United States and Israel intensifying military actions against Iran, the regional atmosphere is charged. The timing of the visit inevitably raises difficult questions: Has India tilted too far? Has it compromised its traditional non-alignment? Or is this simply the continuation of a post Cold War strategic recalibration? The issue of timing is central. High-level diplomacy never occurs in isolation. Modi's visit took place against the backdrop of escalating confrontation between Israel and Iran including targeted killings and retaliatory strikes that have unsettled West Asia's fragile equilibrium. Critics argue that India's visible proximity to Israel at such a moment signals alignment. They contend that New Delhi, long seen as a balancing power maintaining cordial ties with both Tehran and Tel Aviv, risks being perceived as choosing sides. Yet such criticism often rests on an outdated understanding of India's foreign policy doctrine. Classical non-alignment emerged during the Cold War's rigid bipolarity. It was designed for a world divided between Washington and Moscow. That world ended **in** 1991. The collapse of the Soviet Union forced India to rethink its external engagement. Economic liberalisation, strategic vulnerability, and the search for technological and defence partnerships compelled a pragmatic turn. The decisive shift came under Prime Minister P. V. Narasimha Rao, who established full diplomatic relations with Israel in **1992.** This was not an impulsive move but a calculated response to a transformed global order. India sought stronger ties with the United States, access to advanced defence technology, and diversified partnerships in West Asia. Recognition of Israel marked the beginning of an open relationship that had previously existed quietly beneath the surface. The relationship deepened further during the tenure of Prime Minister Atal Bihari Vajpayee. The 2003 visit of Israeli Prime Minister Ariel Sharon to India signalled that security cooperation would become central. Shared threat perceptions drove the convergence. India had endured repeated terrorist attacks linked to Pakistan-based groups. **Israel** faced persistent security challenges from both state and non-state actors. Intelligence sharing, surveillance systems, unmanned platforms, and missile defence technologies became pillars of cooperation. By the time Modi assumed office, defence and counterterrorism ties were already

However, the regional context complicates perceptions. Iran remains strategically important to India. It provides connectivity access to Afghanistan and Central Asia, particularly through the Chabahar port project. Historically, Iran has also been an energy supplier. Maintaining stable ties with Tehran serves India's continental strategy. Does strengthening relations with Israel undermine that balance? Not necessarily. India has consistently avoided endorsing escalatory rhetoric against Iran. It has preserved diplomatic channels and pursued connectivity cooperation even during periods of Western sanctions. Its approach reflects multi-alignment engaging different partners on different issues based on interest rather than ideology. The larger security context is equally significant. India continues to face cross-border terrorism and radicalisation networks. Pakistan's record of supporting proxy groups has shaped Indian strategic thinking for decades. Technological threats, drone warfare, and cyber vulnerabilities further complicate the environment. In this context, cooperation with Israel in intelligence, counterterrorism, and advanced defence systems is seen not as ideological alignment but as operational necessity. Moreover, India's foreign policy today is defined by strategic autonomy, not equidistance. Autonomy does not mean abstaining from partnerships. It means retaining independent judgement. India collaborates with the United States in the Indo-Pacific, maintains legacy defence ties with Russia, engages Iran on connectivity, and deepens security cooperation with Israel all simultaneously. This pattern reflects flexibility rather than bloc politics. Still, optics matter. Modi's second visit, occurring amid heightened US Israel military actions, feeds narratives of strategic drift. Diplomacy must therefore be accompanied by careful messaging. India's consistent calls for stability, restraint, and dialogue in West Asia are essential to preserving its image as a responsible and independent actor. It is also important to recognise that the India Israel relationship extends beyond security. Agricultural centres of excellence in Indian states benefit from Israeli expertise in water conservation and drip irrigation. Joint research in defence manufacturing supports India's self-reliance initiatives. Technological cooperation strengthens innovation ecosystems. These dimensions broaden the partnership and reduce the risk of it being perceived solely through a military lens. Ultimately, the debate over whether India has compromised non-alignment may be misplaced. India effectively moved beyond rigid non-alignment in the early **1990s.** The doctrine evolved into strategic autonomy suited to a multipolar world. The current phase reflects confidence in openly pursuing partnerships aligned with national interests. As tensions escalate across West Asia, two core questions emerge. Is this a strategic opening for India to consolidate high-technology and security partnerships that enhance **its** resilience? And can New Delhi safeguard its autonomy while navigating US Israel Iran fault lines? The answer will depend on balance. If India continues to compartmentalise its relationships, deepening cooperation with Israel while sustaining engagement with Iran and the broader Muslim world, autonomy remains intact. If it allows perception to overtake policy substance, space for manoeuvre narrows. So far, India's trajectory suggests not abandonment but adaptation.

His mother Yehuda to give him the moon as a toy and the clever doting mother hands him a mirror with a reflection of the moon. We should all fondly remember that reflection is all we have. No compulsory UCC may escape the constitutional discipline enforceable on grounds of violation of fundamental rights or even the basic structure and essential features. Nor may we ignore the ringing words of the Law Commission of India per Dry Justice B S Chatham which, while endorsing some more changes in personal laws to avoid impermissible discrimination in August 2018 noted that the UCC is neither necessary nor desirable at this stage in the country. He also said that cultural diversity cannot be compromised to the extent that our urge for uniformity itself becomes a reason for threat to the territorial integrity of the nation. Put another way, any UCC demand or proposal should be based on Article 51 A f the fundamental duty of citizens to cherish and preserve the composite culture of India. Where does power lie Does it lie in wealth, political office, police, and military No, power lies in knowledge which by reshaping ways of thinking can allow the state, if it so chooses, to influence critical thinking and discourse. Of course, knowledge also makes people enlightened, alert and aware. So, it is an instrument, and it depends on who is using it for what purpose. For instance, The Guardian reported how Russia is rewriting curricula to justify its invasion of Ukraine and editing out any positive references to Ukraine in its schoolbooks. During the days of British rule in India, the power of the state was heavily based on politics of colonial knowledge production. The census, gazetteers, survey reports, data, and various documentations produced by the colonial state helped them to rule Indian by entering our minds and reshaping our identity. We have not yet recovered fully from this colonial subjectivity created by colonial knowledge. This project is still ongoing. In post colonial India, the Congress, which was in power for a long time, influenced knowledge production based **on** its own ideology and understanding. Social science and history textbooks for schools were written to reflect Congress ideology which had moorings in the anti-colonial nationalist movement. In fact, history appears to be simultaneously the most powerful as well the most vulnerable disciplines to pedagogic decontextualizing to borrow a term **coined** by sociologist Basil Bernstein. It is powerful in creating memories among its readers, tellers and recipients but also vulnerable because every state wants to write its own history. In some states like Rajasthan, history changes depending on who is ruling the state. The BJP, which replaced the Congress at the Centre, had its own ideology distinct from its predecessor. Over the years, it has faced several attacks for pushing its own version of history. The most recent is for dropping a poem by Fail and a chapter on democracy and diversity from Class 10 CBSE textbooks. The CBSE says **this.**

The quality of education, human resource, and research in them. Further, in this programmer, it was desired from the HEIs to create an appropriate eco system for revenue generation which is hardly visible now. The term loan is disturbing the academic fraternity because public sector HEIs will have to strategize repayment of the loan amount. The traditional practice of receiving grants by state HEIs was completely devoid of any repayment. The change in the financing model from grant to loan is embedded with challenges before HEIs for creating surplus and paying it back in the stipulated period. Besides this it will be obligating the HEIs to evolve strategies for achieving excellence along with earning surplus and become competitive. Introspection of the financial health of the majority of state run HEIs points to an acute shortage of funds in carrying out the bare minimum of teaching learning and associated processes. The prevailing shortage of teachers met by contractual teachers guest faculty and staff shortage met through outsourced contractual staff incurs lesser expenditure on teacher & staff salaries, it has been a blessing in disguise for the most of the HEIs in meeting their salary needs from the available grant. However, the fund requirement for removing obsolescence, maintenance, infrastructure addition, and sustaining the ongoing activities is not met sufficiently in regular grants. As a result, the HEIs usually get funds for specific activities based on the projects submitted by them to the regulators. Nevertheless, the shortage of funds in HEIs for offering good quality education is ubiquitous for quite a long. The Kothari Commission has recommended the enhancement of public spending on education to the tune of 6 of GDP in the 1968 policy which was also endorsed by the National Policy of Education in 1986. The recent National Education Policy NEP 2020 also prescribed the increase in public investment by the Centre and States together to reach 6 of GDP at the earliest. Thus in every policy framework, it has been reiterated to meet expenditure on education through grants coming from the public exchequer. The sanction of loans to state **controlled** HEIs for running them calls for revenue generation at their end to return the money as per laid down schedule. There is no problem with the loan and its repayment for any commercial entity, but the same is extremely difficult for the state controlled HEIs which have been primarily **instituted** with welfare and service to society motives. The protagonists of this paradigm shift in the financing of state HEIs from grants to loans draw cues from the similarly placed HEIs of the private sector that are run in a self financed mode. Nonetheless, the comparison between private sector HEIs and public sector HEIs can not be done on account of various social obligations and adherence to salary norms by the latter while the former enjoys somewhat freedom on it. For example, the public sector HEIs have to pay scales to employees while the same is not adhered to in **the.**

Happened due to rationalization of the syllabus under post Covid pedagogical constraints. But it is interesting to see how not only additions but also deletions and dropping of chapters are an important process in the politics of knowledge. No one can deny that the knowledge circulated through school textbooks plays an important role in reframing the narrative in young minds. These subjectivities revolve around creating new memories but also forgetting. The BJP has focused more on the latter rather than doing a large scale rewrite based on its ideological foundations even though some of its think tanks have often made such demands. Even under NEP 2022, the BJP has focused on creating a bridge between tradition and modernity, the local and global while focusing on reform. These pedagogical interventions also don seem associated with any particular ideology of the party, and more like requirements of the time. However, the guidelines about mother language regional language instruction at the primary level have drawn protests from some states. I feel the reason the BJP ins too concerned about political use of ongoing school based knowledge is because their ideological foundations already have a bigger reach than any government led knowledge production. Its ideological foundations are being disseminated in public memories through epic narratives such as Ramayana, Mahabharata and various value based narrative traditions such as keratin, shaman, Indian Katha traditions etc. The baudhikies intellectual discourses of Ashtray Swayamsewak Sangh sakhas and textbooks of Sangh inspired schools have already evolved cultural narratives which influence a section of the Indian public. Some commentators have pointed out how even popular Hindi cinema is pushing the narrative through nationalist themes. Through these processes, a kind of memory is being produced, reproduced and circulated among the public. Such memories are successfully creating a cultural and civilisational discourse base for the BJP led Hindustan politics. It is true that the knowledge produced by the state is powerful but socially produced knowledge can sometimes become more powerful than state produced knowledge. This is especially true in a society like India where a kind of social knowledge also informs **our** public spheres. If certain politics finds its base in social knowledge, it can successfully create a political base much larger than any other political group which relies only on state produced knowledge. Discussions are abuzz about the sanction of the first installment of loan to certain state Universities in **Haryana.** The financing of state Universities through loans by the state Finance Department is uncommon in the higher education system of the country. Quite likely this practice of changing the financing model of higher education from grant to loan may spread in other states as well in due course of time. There have been instances in the past when the money provided by International Development Association World Bank to the Government was forwarded to the public sector higher education institutions HEIs as grants under different phases of the technical education quality improvement programmer TEQIP to enable HEIs for catalyzing improvement **in.**

If I were to pick a single factor to answer this big question, I would point the finger at our failure to make genuinely effective use of the most plentiful factor of production labour. After 75 years of development effort, 85% of our workforce remains employed in agriculture or enterprises with fewer than ten workers, where value added per worker remains low. Effective use of this vast labour force and the success of manufacturing are intimately linked. At Independence, Nehru opted to industrialise by first building highly capital-intensive heavy industries such as steel and machinery of all kinds. He left all light, labour-intensive manufactures such as clothing, textiles, footwear, stationery, kitchen utensils, bicycles, and sewing machines for production by small-scale enterprises with no access to formal capital. This allocation of resources was enforced through public-sector manufacturing and licensing of private-sector investments. Any private entrepreneur wishing to invest in plant, machinery, and land beyond a relatively low threshold 1mn in the early 1960s was required to obtain an investment license from govt. The license was automatically denied for light manufacturers. Later, in 1967, the arrangement was formalised through a small-scale industries SSI list. Items on this list came to be reserved for exclusive production by small enterprises. By late 1980s, the list had become 800-plus items long. Users need to get savvy about encryption by different communication channels. Big Tech and Big Got together have too much influence on our lives for us to ignore how our data is being protected The arrest of Pavel Durov, jet-setting billionaire and the CEO of messaging app Telegram, has sent shockwaves through the tech world. At the same time many are going, Telegram? Never heard of it. Well, it basically like WhatsApp, but not for the uncles. Telegram is immensely popular among those trying to fly under the radar of copyright-conscious big entertainment, the surveillance state, and the surveillance family of parents and spouses. This niche popularity is because of its very lax content moderation anything goes and the security of messaging it promises its users no one will know what you sent. **Except** the last bit is not entirely true. Unless you explicitly enable a feature called Secret Chat and which average user would know to do that? Telegram could potentially see what you sent. This also means law enforcement can pressure it to divulge users data. But seriously, who cares? I **am** a law-abiding citizen, and, anyway, I use WhatsApp for my health misinformation, fake political news, and totally true neighborhood gossip. Well, you should care, and let me tell you why. We live in an era where Big Tech influence on our lives can be as profound as that of govt. If Google removes you from its search engine, you do not exist as a business. If you give an insecure password, your life savings can vanish in a flash. What is a benign thing to say in a communication channel today might be dynamite when got changes. The confluence **of** got and tech affects our lives without us often being aware of it, and it becomes contingent upon us, digital citizens, to know our rights and obligations so that we may be protected. Once a month my uncle, Hemrajbhai, would take my aunt, their two daughters, and me, to Quality on Calcutta Park Street. It was a ceremonial ritual which, as a ten-year-old, I treasured. A smartly uniformed waiter would hand around the

On my favorite dish in all the world, the Knickerbocker Glory, a divine confection comprising two types of ice cream, strawberry and vanilla, interspersed with layers of gooey jam, studded with nuts, all of it smothered in a Himalayan peak of snowy whipped cream, capped with a ruby cherry. Heaven served up in a tall glass frosted with the breath of angels. But even more exciting than the Knickerbocker Glory was the very thought of eating in a restaurant, a magical realm, so different from everyday home. The chill caress of air conditioning few homes had ACs in that long-ago Calcutta , the starched white tablecloth and napkins, the gleaming cutlery lined up like regimental troops on parade, and the wonder that different family members could order different things, which would all magically appear, genie-like, from the kitchen. Going to a restaurant was to be transported to another world. I m reminded of that Park Street restaurant, and restaurants in general, by a recent post on social media about a Parisian innkeeper, Dossier Boulanger, who in 1765 put up a Latin sign on his establishment which read, Venite ad me vos qui stomacho laborites et ego Restaurant vos. Translated into English, the sign said, Come to me, you with weary stomachs, and I will restore you. And voila! Restaurant, from the Latin for restore, was born and became a household name worldwide. I think of that long-departed Frenchman, I think of Knickerbocker Glory. I pass a signboard, Family Restaurant Indian, Moglie, Conti, and Chinees. Breakfast, Lunch, Diner. I seem to hear a distant sound. Could it come from a Paris cemetery where someone turning over in an ancient grave? The idea of one God is professed in the Bhagwad Gita. Krishna says, 4.11, Ye yeeha mam prapa dyante, tan tathaiva bhajami aham, which means, By whatsoever way men seek me, I accept them the same way. Thus, there is one God, who appears to us in the form that we seek Him. It applies to all human beings in any part of this universe. In the Gita, He appears **in** both ways Miramar, formless and sacra, with form. The Ishtar, who created this vast creation, can also assume a form, simultaneously at many places. He can express himself in many forms and in many numbers. The ragas Lila of Krishna is an example of this. While dancing with gapes, **he** is with every one of them at the same time. Krishna says in the Gita, All beings are equal to me. I am the same to all beings. There is none whom I hate nor is anyone dear to me. However, those who worship me, in devotion, abide in me and I also remain in them. All deities are forms of that one God. The devotees who worship different deities for some material gain or for curing their suffering are also his worshippers. Krishna says there are four types of his devotees. The first is art, a devotee who **worships** for the sake of removal of suffering. The second, called artharthi, worships for acquiring material possessions. A seeker of knowledge is the third kind, called jijnasu. The last one is a man of wisdom, who identifies with him with exclusive devotion. The rewards made available to such devotees by the other gods and goddesses are bestowed by the Supreme Being only, ultimately. So, the different forms of different deities are also manifestations of the One, absolute, omnipotent, all-pervading God. Shri Krishna emphasises his supremacy, Mattah parataram nanyat kinchid-asti dhananjaya; mayo sarvamidam pro-am, soothe managing via. The verse implies, There is nothing

Prescribed by the Doctor is the mainstay of medical management. Myth Asthma reduces with age Fact Asthma can be controlled and treated if it is diagnosed at a young age; however, it is not necessarily curable. Even if the symptoms subside, Asthma may recur after a few days, months or years, or decades, primarily due to the common triggers of the disease. In fact, many adults show symptoms of asthma without being diagnosed during their early years. Asthma can be best managed through regular treatment as suggested by the Doctor and it is important to avoid the triggers during any stage of life. Myth Asthma patients should not exercise and must limit physical activities Fact Exercise helps in alleviating inflammation and reducing the symptoms of asthma however, asthma patients need to consult their doctor before initiating any exercise routine as depending upon the stage of the disease the physical activities need to be personalized. Inhalation of anti asthmatic medicines is a proven technique to treat Asthma. In order to ensure practice of correct inhalation procedure, Lupine has started a virtual initiative called JAI Joint Airway Initiative where Asthma and COPD patients are explained about the correct inhalation method along with various activities to manage the disease. Patients can visit www.jairespi.com and register themselves free of cost. During the Covid crisis, everyone realized the importance of good functioning lungs to maintain adequate Oxygen levels circulating in our bodies. On this World Asthma Day, let us pledge to focus the same attention on asthmatics who can maintain normal lung function if they are better informed and understand the right treatment that stops Asthma taking their breath away. Having tackled the Covid crisis much before many other countries, I hope and wish that India can also put behind this 2 and most important lung disease on the back foot and inspire new breath of life to expire this age old malady. When the pandemic hit, Gait, a child bride, was on the verge of completing her education, at her maternal home. When Gait took her father phone to text a girlfriend, her **father** and brother thought she was dishonoring her family, by talking to a boy rather than her husband. Her brother slapped her and in anger and despair, she consumed poison and was rushed to a hospital. Gait was lucky to survive, but she was packed off to live with her **in** laws. As soon as this happened, three other girls were sent to their respective marital homes within a week. Your gender should not decide whether you get an education or not. A rudimentary statement, reverberating with the echo of gender parity. Expressing a theoretically accepted yet ignored at ground reality sentiment that girls have the same fundamental right to education as boys. When you invest in a girl education, it not only empowers a girl to lead, support, and educate an entire generation ahead of her but also contributes to the progress of the nation itself. However, the marginalisation **of.**

Majority of private sector Heist. The receipt and expenditure have to be coherent for ensuring the proper functioning of the institution and the public sector Heist are under obligation to comply with the rules and regulations detailed by the regulators while private sector Heist have little opportunity to tweak with the provisions. Also, the moot point is, are the public funded Heist entitled to accrue profits from the activities undertaken by them. If not, then how will the Heist generate revenue from their activities Looking at the way Heist function in the country, some of the possible avenues of revenue generation and the limitations associated with them are worth noting. Public sector Heist can, raise the fees of the programmers offered by them but will it not deprive poor students. Run tailor made courses got professional training commercial services at high prices in niche areas. The commercial services offered by Heist can be in the form of knowledge transfer partnerships and or consulting services and or outreach activities. But the same requires sufficiency in terms of teachers and staff. Also, undertaking such activities may reduce the time for mentoring students, teaching, and research which may adversely affect the regular class education. Monetize their infrastructure and facilities by renting them out, but will it not affect the teaching learning and allied processes adversely and deprive its enrolled students of various opportunities. Undertake funded research projects, which may require seed funding to begin with and along with the requisite facilitation by the institutional authorities for time bound deliveries, which is quite a big problem in the number of Heist. Earn money from conferences seminars workshops, but the holding of events essentially requires the involvement of teachers and staff, which in turn affects classroom engagement quality. Earn money from APRs and research output, for which teachers and staff need incentivization. It may be captivating to allow the public sector Heist for managing their show by earning a sustained level of revenue generation with the loans given to them. Howbeit, the compulsions created for public sector Heist to monetize their every activity and **process** is liable to deprive the students of poor financial backgrounds in particular and all of them in general. Also, the changed attitude of teachers, staff, and students towards every activity undertaken by them i.e. thinking in terms of money will vitiate the whole eco system of higher education. The **change** in the financing model of public sector Heist from grant in aid to loan is likely to have serious consequences for those from poor socio economic backgrounds. Also, the approach of teachers will be shifting from pious teaching & mentoring to just returning the investment made by the concerned. In the present time of demographic dividend, all efforts are required to allow every potential to get educated appropriately as per his her passion and interests. In a welfare country like ours, the State must ensure the low priced good quality education for all, which might be seldom feasible with **the.**

Girls, resulting in their poor access to education, simply because of their gender, poses an ongoing challenge in India. To add fuel to an already simmering challenge, Covid 19 pushed a gamut of issues around girls education to the surface in India and globally. UNICEF reiterates that gender inequality in the physical world is unfortunately reflected in the digital world. With a staggering 50 of the world population still offline, the UN has dubbed digital divide risks as the New Face of Inequality. And inequality in education is a significant contributor to the critical digital gender divide, observes UNICEF. With lockdowns imposed across the country, the entire education system moved towards an online mode of teaching. This amplified an already extensive list of gender inequalities, one of them being inequitable access to digital devices for girls as compared to boys. A potent combination of these factors has a severe plummeting effect on girls digital empowerment and independence. The situation gets further compounded if a girl comes from an economically vulnerable family, lives in a remote and rural area or is disabled. Pinky, a young girl from a village in Rajasthan was studying in Grade 11 when the nationwide lockdown was announced in 2020. She was even aware when her online classes began, since the mode of communication was What Sapp and her parents did not own a smart phone. Only her brother, who works in a factory, owned a smart phone. She was allowed to own a device because the parents believed that Pinky would be distracted and would disobey them. Several girls in rural India lose out on education either due to a lack of financial income at home or due to traditional patriarchal beliefs. Bridging the digital divide to drive gender parity In a country as intensely stratified as India, there is an urgent need to address and bridge this gaping gap before it deepens into a wider chasm. The government, private sector and academia efforts need to focus on three interlinked areas access, digital literacy, and online safety to promote digital gender equality for girls. Digital **learning** needs to metamorphose from being an impediment to girls education, to a powerful enabler that empowers girls. The Government of India has been leading the way to ensure equal opportunities for girls through initiatives like Baglike Saridhhi Yana and the National Scheme of Incentive for the Girls of Secondary **Education.** By leveraging the Government existing investment in schools and engaging with community volunteers, organizations can have a significant impact on the state of education. At Educate Girls, we have been collaborating with the government and the communities in the most rural parts of India to ensure that girls get their right to education and have enrolled 11,00,000 girls since our inception in 2007. Our immediate response to Covid, when the digital divide was most palpable, was initiating a community based learning initiative called Camp Vida. Over 5,700 such camps were conducted by our Team Baglike volunteers integrating the government **digital.**

Loans given to Heist. In the absence of any favorable indicators of revenue generation in Heist, let the grant in aid continue for funding the public sector Heist and the Governments increase public spending as envisaged by NEP 2020. Recent years have seen a significant performance for crypto currencies in terms of its market capitalisation, trading volume, user base, people awareness, and publications across main stream media as well as research journals. According to a rough estimate these parameters have risen by nearly 10 times over last 3 to 4 years. As per one of the largest listed crypto exchanges Coinable, the institutional volume comprises nearly 70 of Crypto turnover. The rising popularity of bit coin also led to the flood of other crypto currencies to test the market. The dominance, which is measured in terms of its share in total market capitalisation, of bit coin remained very prominent during early years of crypto currency adoptions. The dominance of bit coin started reducing over last 4 5 years, especially with the rise of alternate crypto currencies like Ethereal, Tether, etc. The graph depicts the individual proportions of the largest ten crypto assets relative to the total market capitalization of all assets. Major Crypto assets By Percentage of Total Market Capitalization The growth in crypto currency market also led to the growth of block chain and various other innovative technologies that resulted in expansion of use cases that covers almost every sectors of the economy including financials, healthcare, insurance, legal, administration, etc. a typical workflow of a Block chain transaction is depicted with the below diagram. According to a survey by the financial innovation, the top six services included Crypto plus trading system Prediction Trading strategy Risk Management Portfolio. It indicates the interest of existing and potential crypto market participants. The and hence the crypto market has not only expanded in terms of retail and institutional investors but also witnessed increasing number of exchanges, block chain, crypto currencies and NFT platforms. With the increasing capital market size, both in terms of quantum and coverage, debates about safeguarding this market from **the** possible frauds and market malpractices have resulted in adopting various global best practices. The evolving market is struggling to keep a fine balance of full KYC, Pseudonym, and anonymity amidst the proponent of centralize system and decentralize system of public utility. Crypto exchanges on one hand trying to implement **transparent** KYC system while the block chains are moving towards Pseudonym a state where individual personal details like name etc are not seen but their activity details are transparently visible. Crypto exchanges are regularly trying to establish themselves in a well regulated jurisdiction in order to win the trust of retail as well as institutional investors and participants. A major challenge faced by the crypto industry is the gateway or interface between Fiat and crypto currencies. Countries across the world are diverged but slowly moving towards the facilitation of crypto fiat conversion. People involved in crypto related policy making are **gradually.**

artificial intelligence is becoming a key part of infrastructure? This isn't an academic question. AI will soon decide who receives credit, which transactions are reported, how fraud is discovered, how compliance is enforced and how customers are treated in financial systems. The models that make those judgments will be just as important as payment switches, settlement systems or technology platforms. If India gives up control of that intelligence layer, we would be giving up a lot more than just software; we would be giving up the ability to make decisions about the economy and the law. From payment rails to intelligence rails India did it right when it came to digital payments: we established public infrastructure, set open standards and let private companies compete to come up with new ideas. But AI is being made in a totally different way. A small number of multinational corporations now control most of the world's most sophisticated AI models, cloud platforms and data pipelines. They learn from data that may not be accurate when it comes to Indian languages, Indian financial behaviour, Indian risk patterns or Indian regulatory rationales. India would never agree to a payment system where transaction routes are offshore, regulations are unclear and compliance is outsourced. Not accepting global technology doesn't equal true AI sovereignty. It involves making sure that the intelligence layer that controls important systems is answerable to Indian law, Indian regulators and Indian economic interests. Why payments is the most important sector for AI sovereignty AI is quickly going from helpful to decisive by underwriting credit, preventing fraud, monitoring transactions, resolving disputes and engaging customers. These systems will have more and more of an impact on who can use financial products and who can't, who is blocked and what kind of transactions are allowed to go through. Regulators lose sight of things, banks lose control and customers lose their options if these choices are made by black-box models that are taught, hosted and governed elsewhere. India's payment system was constructed with sovereignty, trust and compliance in mind from the start. AI needs to go the same **way.** Sovereign AI does not mean AI owned by the state. Some people might think that sovereignty means AI that is produced or controlled by the government. However, that would not be useful or desirable. India's best feature has always been its paradigm of public-private digital partnerships. Some obvious examples **are** Aadhaar, UPI and ONDC. The same approach has to be taken with AI. In this vein, sovereign AI means models that are trained on Indian data about finances, languages and behaviours. This data needs to be stored at places that are under Indian jurisdiction and auditable by Indian authorities. Such AI models that are built by Indian businesses, or International ones that follow the law of the land, will ensure that the decisions that are made are our own. What this means for banks and payment businesses For businesses in India, the AI question is no longer only about **how** accurate or cheap it is. It's about being able to defend against regulations and being strong as a system. Regulators will soon ask how an AI model makes choices, how it follows Indian financial regulations and rules and how a company makes sure that the data doesn't leave Indian shores. They will ask if an AI system can be audited and corrected as required or not. The AI systems th

who has the greatest algorithms. It will also depend on who has AI systems that are built for trust, compliance and national scale. The next step in India's digital leadership India showed the world that digital public infrastructure can be both new and independent. AI is the next step in that way of thinking. AI will be about transferring decisions safely, just like payments are about moving money safely. The countries that have control over their decision-making systems will also have control over their economies. India has done this before with payments. Now it has to do it again with artificial intelligence. If we do it right, India won't just use AI; it will be an AI power based on trust, openness and independence. While much of the global economy has slowed under the weight of high interest rates, stalling commercial engines, and rising geopolitical uncertainty, India's economy looks to be in rude health. According to a report by the BBC, growth was at a whopping 7. 3 per cent in 2025, exceeding that of Europe, the US, and China. And there looks to be more ahead, with strong manufacturing growth continuing to boost the private sector according to HSBC's India Composite Purchasing Managers' Index. Tariff-busting trade deals were recently inked with the EU and USA, following agreements with the UAE and Australia in 2022. Foreign direct investment inflows have remained resilient despite global volatility. The signs suggest that the upward trajectory won't slow anytime soon. All of this means that India could be the perfect place for adventurous, ambitious global business school applicants looking for a dynamic new environment from which to build their careers. A rapidly changing world is accelerating India's rise: 'Shifting visa policies and geopolitical dynamics are accelerating regional mobility, particularly across Asia, says GMAC CEO Joy Jones, 'India is likely to become a strategic growth corridor for talent.' And, to cater to demand, many top European schools have already established links with the country. Bocconi University, in Milan, for example, is linked with nine Indian Universities. The SDA Bocconi Asia Centre in Mumbai has **been** the Italian School's pan-Asian reference point since 2012, where academic and managerial training can meet cross-cultural dialogue. Finland's Aalto University School of Business also collaborates closely with a number of Indian Institutes of Management to enhance business expertise, and both Nottingham Trent University and Nottingham Business School in the **UK** have developed summer scholarships in India for their students via its NTU Global initiative. Most recently, the opening of a hub in Mumbai by France's ESSEC Business School was announced during President Emmanuel Macron's February 2026 visit to India, demonstrating what an important destination India has become. 'Engaging with India and its industries offers students valuable exposure to one of the world's fastest growing economies,' says Dr Chris Crabot, Associate Director of NTU Global. 'India's diverse business landscape enriches students' intercultural competence.' Students who spend time in India often cite exposure to scale and speed as formative experiences essential **for** their success. 'India is becoming an essential destination for anyone aspiring to an international career,' says Vincenzo Vinzi, Dean and President of ESSEC Business School. 'The country's diversity, rich history, and complex social fabric cannot be fully understood

Getting equipped with required knowledge. Their enhanced education and awareness resulting in adaptive approach for this new asset class. Emerge the divorce process of crypto adoption amongst countries the interesting similarities in their tax structure and advertising standard or indicative of better time in coming years. Crypto is often criticised for higher risk and volatility compare with other established asset classes. Volatility is the outcome of information asymmetry for any asset class. This asset class is no different than others in terms of volatility coming down as market evolves. The recent average daily volatility of this market as measured on IC15, India first index of crypto currency, is nearly 3.5. The broad crypto market barometer IC15, since its base date of 01 April 2018, has shown that the risk and the volatility associated with the crypto market is continuously coming down. That indicates market is slowly measuring up. Decentralisation and the public control, being the very basic ideology of this crypto market, have influenced people to come up with the innovative services and information being made available free or at a very minimal cost. One interesting feature of this market is the almost abolition of market intermediaries as most of the transactions are carried on peer to peer basis. Although trust is established through the complex computer algorithm consensus mechanism and reward system by automatically ejecting the mal intentioned entities, the possibility of fraud and associated risk cannot be ignored and hence this market needs to be safeguarded, especially from possible anti social end uses. G7, G20, World Bank, IMF etc are putting efforts to have a coordinated framework for market evolution keeping its inherent characteristics intact while safeguarding from terror funding or illegal activities. What more can be done to make industry better the continuing education is the backbone for market growth and the pace of educating the market needs to be accelerated. Crypto Wire, Crypto TV and Crypto University are investing large resources and their plans on education, knowledge sharing, Price, and News and information dissemination. The countries taking a leap forward in facilitating this market also **provides** crucial learning for other countries in order to formalize their policies. Some regulatory regime which provides industry specific regulation so that the regulation is shaped according to industry and not the industry is made to shape itself to regulation. Policies have to be oriented from the context of global **market** best practices rather than other asset class policy. Possibly the creation of SRO would get industry on same page for facilitation of digital and transparent clients support function. Surely agencies like IOSCO will start conceiving some global best practices for end user protection and awareness and industry standards. Since most trades are p2p, many risks of intermediation are eliminated in this market. Those residual risks which are exchange specific or coin specific can be redressed through education or the SRO finding best practices to grow the market and also ensure client protection and transparency. Coins and Projects are now **being.**

The sentiment which you expressed recently regarding Hindi being our national language is neither new nor original. It is mainstream linguistic chauvinism. The deduction that because regional language movies are dubbed in Hindi, therefore Hindi is our national language is bizarre. There is, however, an India beyond the narrow linguistic confines of Bollywood. That India is occupied by 1.4 billion people speaking 121 languages. There are more than 19,500 dialects spoken in India as mother tongues. Surprised? Each language is a historical and cultural marker for the community which speaks that language. It gives voice to their histories, their cultures and their sensibilities. When you try to obliterate a language, you decimate its literature, its poetry, its music, its films, its culture, its cuisine and its fine tuned sensibilities nurtured over centuries. For instance, if you stop Maharashtrians from speaking Marathi, you are exterminating its history of being a separate language dating back to the 3rd century BC. You are destroying Marathi literature which dates as far back as the 13th century with recorded verse and prose and scientific treatises. You are obliterating the glorious tradition of the Warkari and other religious movements. You are also silencing the stellar contribution of Maharashtra to journalism, which commenced as early as 1832. You are erasing the works of Jinotega Phyla and Savitribai Phyla who spurred on social reforms across India. You are negating the genius in the dramas of Vijay Tendulkar, the cinematic orations of Mohan Agashe and the songs of Purandare. Having travelled, lived and studied across India, I had the good fortune to pick up, Tamil, Kannada, Marathi, Gujarati and Punjabi in addition to the mandatory learning of Hindi, English and Sanskrit. Let me tell you, it is a sheer joy to watch a regional movie and appreciate it without subtitles or dubbing. I envy my father ability to watch Satyajit Ray masterpieces effortlessly in Bengali, while I struggle with the subtitles. Having grown up in Mumbai, I learnt to understand Marathi. I love to hear Marathi being spoken as each word pours out so much of calibrated Sanskrit. **Mumbai** also gave me the opportunity to listen to and imbibe the Gujarati being spoken by Gujaratis as well as the Gujarati spoken by the Parsis. It is a perpetual delight. Then, there is Kannada, spoken in my mother home, so mellifluously fluid and gentle. Having lived in Delhi, one **cannot** but appreciate the direct robustness of the Punjabi language. Like the Bhangra, the words dance out in joy and gaiety. I also grew up in Coimbatore and was witness to many a political rallies. The speeches from the podium demonstrated that Tamil, like German, was perhaps the most phonetically powerful language. I have heard political speeches in many languages, but nothing can carry the punch of Tamil. Incidentally, Tamil is an official language in many countries. The famous Angkor Wat in Cambodia carries Tamil Brahmi inscriptions. I am forever indebted to my parents for having spoken to me in **my.**

Supply chains are vital for securing trade through this region and with these counties. Recently, the US led Indo Pacific Economic Framework completed a deal to make supply chains more resilient and secure. This agreement calls for countries to form a council to coordinate supply chain activities and a Crisis Response Network to give early warnings to countries of potential supply disruptions. It provides an emergency communications channel for countries to seek support during supply chain disruptions, coordinate more closely during a crisis, and recover more quickly. While Fiji has joined the, other countries should be nudged to join the. The leaders also promised, at the recent summit, to deepen their strategic dialogue with partners beyond against malicious practices to protect global supply chains from illegitimate influence, espionage, illicit knowledge leakage, and sabotage in the digital sphere. The should be part of this scheme. For Rajmala, evening is always the best part of the day. She inhales and holds evenings in her lungs. Morning has its meaning, a new beginning; but evening is full of feeling. And today is a special evening, an evening of longing and affection. The evening, as if singing in the voice of Raga Shree. Rajmala is waiting for her long lost friend to come. They have parted ways in the last class of their school. Till then Rajmala longed for Prithvi. Some more than two decades back, the truck brimming with suitcases and cartons stood prepared to transport Rajmala and her parents to their destination. Rajmala father was transferred to different city then. As she sat in the cab seat, her gaze wandered to the cherubic visage of her 15-year-old companion, her dearest friend Prithvi. Through the window, she stole one final glance at him, captivated by his innocent charm his disheveled curly hair, the vibrant ochre hue of his tee. With a broad grin adorning his face, his hands playfully swayed back and forth, bidding her a cheerful farewell. It was a typical farewell filled with tears between two friends who had shared a long bond since infancy. They never felt they would **feel** sorry. But time and feelings proved otherwise. At that moment, there was no room for sadness in Rajmala heart, as it was filled with excitement and joy about the prospect of moving to a bustling city. A few months earlier, her father had announced his first-ever job transfer in **the** fifteen years of her life. Although a part of her knew that she would miss many things about their small town the nearby school within walking distance, their spacious garden teeming with fruit trees and vegetable patches, their beloved street puppy, and most importantly, her cherished friendship with Prithvi the thrill of starting a new life in a vibrant city overshadowed all other emotions. Besides, they had made a promise to stay connected through letters. In the vibrant city of Kolkata, Rajmala had woven a tapestry of new friendships, mastered the art of adapting to new schools and homes, **and** embraced the street-smart ways of urban life. However, amidst this whirlwind, Prithvi letters held a special place in her heart though. They were the delicate thread connecting her to the blissful world of her childhood. With limited phone connections and email still a novelty, finding someone whereabouts seemed like an insurmountable task. All she could do was wait, but doubts often clouded her mind. As the letters dwindled, she wondered if he had found a new confidant or p

I envy my father ability to watch Satyajit Ray masterpieces effortlessly in Bengali, while I struggle with the subtitles. Having grown up in Mumbai, I learnt to understand Marathi. I love to hear Marathi being spoken as each word pours out so much of calibrated Sanskrit. **Mumbai** also gave me the opportunity to listen to and imbibe the Gujarati being spoken by Gujaratis as well as the Gujarati spoken by the Parsis. It is a perpetual delight. Then, there is Kannada, spoken in my mother home, so mellifluously fluid and gentle. Having lived in Delhi, one **cannot** but appreciate the direct robustness of the Punjabi language. Like the Bhangra, the words dance out in joy and gaiety. I also grew up in Coimbatore and was witness to many a political rallies. The speeches from the podium demonstrated that Tamil, like German, was perhaps the most phonetically powerful language. I have heard political speeches in many languages, but nothing can carry the punch of Tamil. Incidentally, Tamil is an official language in many countries. The famous Angkor Wat in Cambodia carries Tamil Brahmi inscriptions. I am forever indebted to my parents for having spoken to me in **my.**

Child responsive governance is important to ensure that children are not passive recipients but active participants in all matters and decisions related to them. The school students we interacted with say that these gram sabhas have enabled them to voice their concerns. Renuka, a standard 9 student from Chikkamagaluru, states, this sabha is very useful. We do have a compound, computers, or digital equipment at our school; once we shared these requirements, the government officials promised to make our school tech enabled. If we did get such forums, we would never be able to speak about existing problems. The panchayat officials we have interacted with also consider gram sabhas to be a positive influence. Acknowledging the importance of children perspectives, Digvijay Bodke, CEO of Ramanagara zilla panchayat, tells us, we need to think from children point of view to understand their problems. Makalu gram sabhas helps us understand what is going on in their minds. To enable more inclusivity and safe opportunities for children, gram panchayat officials ensure that children voice boxes are placed in schools and other public spaces, and in the sabha. The boxes can be used by the children even if they don attend the sabha or if they are hesitant to speak out on some of their needs and challenges. Makalu gram sabhas have shown us that a well meaning government, sound policies and mechanisms, adequate focus and motivation from state and district level officers, and a vibrant civil society can make a meaningful difference to communities. For instance, in government schools in Chikkaballapura and Hassan districts, necessary repairs and improvements to school buildings have resulted from the discussions in makkala gram sabhas. Children have spoken about issues relating to access to scholarships related to income certificates; asked for awareness programmes on the POCSO Act for both authorities and the community; demanded intensive awareness efforts on child marriages for schoolchildren and others, and so on. What do makkala gram sabhas need? Since children are required to participate, listen, and be fully involved when attending a gram sabha meeting, the makkala gram sabhas have played an **important** role in inducting them into the democratic process. However, here are some other measures to make children a more effective vehicle for change. The presence of key decision makers It is critical that representatives and accountable officials from the gram panchayat including the president of the panchayat, other elected **members,** the PDO, officials from the education department, the ASHA worker and Anganwadi teacher, and child rights agencies are in attendance, as this plays a major role in making the children village sabha productive. It is only when these officials attend that correct information can be provided to the children, and the adults responsible for the care of children. This enables solutions to be found for challenges such as who will take responsibility for the resolution of the issue, and where can the funds for some issues that are not directly linked to the gram panchayat be allocated from. The **children** we spoke to also realise this. After attending today gram sabha, I felt happy as the government officials assured us that our requests and concerns will be taken into consideration. I wish some of the department officials who did attend the event would have also attended so they could have addressed our concerns as well, said Anitha, a s

Still related to fundamental entitlements such as school repairs and ensuring that schools have the necessary infrastructure. As Karnataka moves towards and aligns to policies that drive child responsive local governance, consistent periodic review and accountability mechanisms involving children such as child participation in budgeting and decision making are important. These measures enable the resolution of issues related to basic entitlements in a timely and ongoing manner. The result will be an improved experience for children and better participation in makkala gram sabhas, with more meaningful and deeper dialogues between children and their local government. This in turn will have a transformational impact on child development indicators and the overall well being of children. More female representatives It must be highlighted that with women comprising 50 percent of the elected representatives in gram panchayats, responsiveness to children has witnessed a marked change for the better. We see that women representatives tend to navigate challenges better, striving to promptly find solutions for the issues raised by children. Further strengthening of institutional mechanisms such as appointing a nodal officer at the state level for effective implementation; Right to Education entitlement audits by children themselves, where children can report back directly on quality and delivery of services; and formal meetings in schools and other spaces to discuss the problems faced by children would also be helpful. In addition, PDOs reporting back to children (action taken report) within a committed timeline and makkala gram sabha outcomes being integrated into the online portal of the concerned department (education, health, etc.) can go a long way in ensuring more effective child participation, according credibility to the process, and fulfillment of child development indicators as well as sustainable development goals. The role of state civil society partnerships The circular by the RDPR department is today a detailed and effective document. It has been strengthened over the years through nonprofits grassroots experiences, which have come to the RDPR department as recommendations. Nonprofits such as The Concerned for Working Children (CWC), Children Movement for Civic Awareness (CMCA), Prakruti Foundation, Gramaantara, Child Rights Trust (CRT), and Nav Yuva Pratishthan **have** worked towards ensuring that the makkala gram sabhas keep thriving. Indian holidaymakers are in high demand, as we travel the world in ever larger numbers. The New Tourist: Waking Up to the Power and Perils of Travel by Paige McClanahan brings facts and perspective to this avalanche. In 2019, **travel** and tourism was over 10% of global economic output, accounting for more than one in ten jobs created. It set to rise at an average of 5.8% a year till 2032. It one of the most significant ways that cultures converse with each other, but its carbon footprint is enormous and growing. It can provide a powerful incentive to preserve natural and cultural landmarks, but it can also cause their destruction. Tourism forms our images of other countries and people, but it also commodifies places and steals their soul. The book is neither a defence nor a critique of **tourism.** It makes a hopeful distinction between the old tourist, who might see their visits as pure consumer experiences, for bragging rights on Insta or to be checked off their bucket list, and more conscious new tourists

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-09-TEST NO.-25383

The sentiment which you expressed recently regarding Hindi being our national language is neither new nor original. It is mainstream linguistic chauvinism. The deduction that because regional language movies are dubbed in Hindi, therefore Hindi is our national language is bizarre. There is, however, an India beyond the narrow linguistic confines of Bollywood. That India is occupied by 1.4 billion people speaking 121 languages. There are more than 19,500 dialects spoken in India as mother tongues. Surprised? Each language is a historical and cultural marker for the community which speaks that language. It gives voice to their histories, their cultures and their sensibilities. When you try to obliterate a language, you decimate its literature, its poetry, its music, its films, its culture, its cuisine and its fine tuned sensibilities nurtured over centuries. For instance, if you stop Maharashtrians from speaking Marathi, you are exterminating its history of being a separate language dating back to the 3rd century BC. You are destroying Marathi literature which dates as far back as the 13th century with recorded verse and prose and scientific treatises. You are obliterating the glorious tradition of the Warkari and other religious movements. You are also silencing the stellar contribution of Maharashtra to journalism, which commenced as early as 1832. You are erasing the works of Jinotega Phyla and Savitribai Phyla who spurred on social reforms across India. You are negating the genius in the dramas of Vijay Tendulkar, the cinematic orations of Mohan Agashe and the songs of Purandare. Having travelled, lived and studied across India, I had the good fortune to pick up, Tamil, Kannada, Marathi, Gujarati and Punjabi in addition to the mandatory learning of Hindi, English and Sanskrit. Let me tell you, it is a sheer joy to watch a regional movie and appreciate it without subtitles or dubbing. I envy my father ability to watch Satyajit Ray masterpieces effortlessly in Bengali, while I struggle with the subtitles. Having grown up in Mumbai, I learnt to understand Marathi. I love to hear Marathi being spoken as each word pours out so much of calibrated Sanskrit. **Mumbai** also gave me the opportunity to listen to and imbibe the Gujarati being spoken by Gujaratis as well as the Gujarati spoken by the Parsis. It is a perpetual delight. Then, there is Kannada, spoken in my mother home, so mellifluously fluid and gentle. Mother tongue Malayalam. I love the language and the myriad ways in which it is spoken in different parts of the state of Kerala. The brutal sarcasm is second nature to Malayalam. This irreverence has spawned a genre of sophisticated satire and humour in cinema and theater which unfortunately gets lost in translation. Malayalam cinema, thankfully, did not get Bollywoodised and developed an identity of its own. It produced several works of auteur like Adoor Gopalakrishnan Elippathayam, the screen adaptation of Thakazhi Chemmeen, Shaji Piravi, Fahadh Faasil Joji. This list, you being part of the film industry, are aware is endless and growing. Language is not meant to be an instrument of chauvinism or designed for display of linguistic superiority over other languages. Each of our languages are our heritage. They are precious porcelain. They are not, like aluminum vessels to be discarded unthinkingly. If you read the Constitution, you will realise that India is a Union of States which has 22 official languages. You should, when time permits, dwell on India brilliant Constitution which has welded together our linguistically disparate peoples so successfully into one country. To create this nation, the Constitution did not destroy linguistic diversity, it guaranteed it. Before we part, it will be useful to know that there are 24 official languages spoken in Europe and there are 44 countries. Here in India, there are 19,500 dialects, 121 spoken languages, 22 official languages and we are still one country. The appearance of Khalistan flags and graffiti outside the Himachal Pradesh legislative assembly complex has set off alarm and HP police have moved to seal off all inter state border crossings to nab those behind the incident. The developments have also kicked off a political blame game amid the state preparing for elections later this year. The politicking over national security is unhelpful. Rather, this is a time for coordination between police forces of all neighbouring states to identify those behind this incident and study whether there are underlying conditions, if any, for Khalistan groups to find renewed traction in Punjab or elsewhere. For this, Himachal **and** Punjab police must collaborate and improve their intelligence gathering and sharing mechanisms. Already, HP police have trained their sights on the banned Sikhs for Justice group and booked its leader under UAPA. Unfortunately, politics over inter state policing has hit a new low after the controversial arrest of Delhi **BJP** leader Tejinder Singh Bagga by the Punjab police and the confrontation between Haryana, Delhi and Punjab police that ensued. Relations between the AAP government in Punjab and the BJP governments in the neighbourhood are also rocky. The upcoming elections where BJP, Congress and AAP are fancying their chances in HP will worsen the name calling. Political parties must recall the huge cost India and Punjab paid until the Khalistan insurgency was defeated in the early 1990s. Attempts to foment fresh trouble must be nipped in the bud. A heated debate has been triggered by the World Health Organisation report **on.**

Boundless: 'India's exposure to internationalization and international management practices is still somewhat limited, which implies tremendous opportunities, says Meelis Kitsing, Dean of Estonian Business School, who has lived, worked, and taught in India. As India continues to grow, skilful managers with international experience will become vital for finding new recipes for growth.' It's not only promotion that's on offer, but an opportunity to expand into new markets and industries. 'With India pushing a more export led growth model, several fast-growing career paths are available,' says John Collins, Sales, Marketing & Communications Manager at Trinity Business School in Ireland, who lists trade finance and export credit, supply chain and operations analytics, and regulatory roles as on the rise, linked to cross border business opportunities. 'Demand is rising for talent who understand global markets, data driven decision making, and risk governance,' he shares. The development of the manufacturing sector is an area of particular interest for those observing the development of this future hypermarket. 'As factories develop,' says Stephen Williams, Director of NTU Global, 'there is strong demand for specialists in automation, digital manufacturing, supply chain analytics, and quality assurance.' There are further opportunities for the more creatively minded, too, as the economy matures: 'As Indian brands expand into international markets,' Williams adds, 'the need for professionals who understand product design, user experience, packaging innovation, branding, and global consumer insights is accelerating rapidly.' Professor Himanshu Rai, Director of IIM Indore, is, with good reason, bullish on the Indian market and the educational opportunities available in India. With a 'young, technically trained workforce,' he says, 'India represents the most significant democratic, globally integrated location for large-scale industrial expansion over the coming years.' He also notes that with top schools getting even better in India, 'the country is now part of the mainstream global talent circuit rather than a peripheral market.' The value proposition of India, he says, 'lies in faster role progression, exposure to large-scale operations, and participation in markets that are still expanding structurally rather than stabilizing. Export scaling will intensify demand for trade logistics architects and plant leaders who understand **European** standards.' With geopolitics becoming more and more chaotic year-on-year, a dynamic-but-stable India could conquer the world business consciousness, becoming a safe haven for capital, assets, and manufacturing. The country's strong business education industry, and the onshoring of western schools, will strengthen bonds between Europe and India. The businesspeople of **the** future should listen to the change in the wind and look to India for evidence of a world that can still grow. Gas Pain Times of India's Edit Page team comprises senior journalists with wide-ranging interests who debate and opine on the news and issues of the day. The Iran war has cut off the bulk of India's gas imports. Pain will be felt from kitchens to factories, but there's a way out. It's been four days since Qatar, world's third largest LNG exporter, shut down production after an Iranian attack. In one stroke, 20% of the world's LNG **supply** switched off. Qatar said it would need at least a month to resume production, but the way Iran's targe

gas, and the problem becomes evident. The biggest share (28%) goes into fertilisers like urea. City gas demand, which includes PNG for kitchens and CNG for cars and buses, comes next, and is growing quickest. Last, gas fuels power plants and industries. At its current high price, using gas to make electricity doesn't make sense. Fertilisers are vital, but other industries like glass and ceramics cannot ignore energy prices. That leaves city gas, to which the government gives highest importance. Even if all gas imports halt, your kitchen and your car have first claim on India's own gas production, which meets roughly half of yearly demand. But that won't insulate you from high prices, as PNG and CNG suppliers blend their domestic gas quotas with imported gas. This could hurt your pocket, and if the crisis persists, it might reshape India's auto industry. Last year, for the first time CNG cars outsold diesel cars, taking 21% market share. This is good for air quality, but high CNG prices and even longer queues at pumps will dull demand. There's a parallel crisis of LPG, the older kitchen gas still used by 33cr consumers. India imports 60% of its LPG, mostly from W Asia. So the longer the Iran war lasts, the more households will suffer. Unless the Centre and states absorb increased costs, which is imprudent. Right now, it's important to tap other gas suppliers, like Australia and Canada, but long-term, we need to scale up biogas production. India can meet all of its gas needs from agricultural and urban waste. Cattle dung alone can be turned into 39,000 tonnes of gas daily. Add 16,000 tonnes from paddy straw every day. But we made just 31,000 tonnes of biogas in the entire 2024-25. It's a national waste. Why sheikhdoms are shaken: A week since Ayatollah Ali Khamenei's assassination in joint US-Israeli strikes, the Gulf is at a dangerous turn facing an unprecedented spillover of the US-Israel-Iran war into Arab monarchies and neighbouring nations. Such a spillover was rarely seriously anticipated. Is it, however, surprising? Not really. What has been reported **as** a footnote was in reality a significant message from Tehran Khamenei, despite repeated threats from Washington and Tel Aviv, as well as warnings from those close to him per sources, never considered switching location to a safer place. TOI News - March 8, 2026 Jal Sahelis: Personal giving for **planetary** gain Indira Khurana has more than 25 years of working on water conservation and water management. She is the author of several books and articles on water. This year's theme for International Women's Day is 'Give to Gain.' And who embodies this better than the Jal Sahelis of Bundelkhand, best exemplified by their 530 kilometre -long Aviral Nirmal Yamuna Yatra. This yatra began from Pachnada in Jalaun district of UP and culminated on Feb 26, at Vasudev Ghat, New Delhi. The 'Give To Gain' Campaign encourages a mindset of generosity and collaboration. When people, organisations, and communities give generously, **opportunities** for women increase. While contributions come in various forms, contributing to women's advancement helps create a more supportive and interconnected world. The philosophy is that giving is not a subtraction, it's intentional multiplication. But what if the women themselves emerge from a challenging and stifling rustic environment, and come forward to give? For gain, not for themselves alone, but for their village and other villages spread across several districts, an

Excess deaths ascribed to the Covid pandemic. While the report estimates such deaths worldwide during 2020 and 2021 14.9 million, it is the number of deaths attributed to India 4.7 million that has elicited spirited rebuttals from the government and a number of experts. This estimate places India topmost among countries in terms of excess deaths during this period, though when adjusted for the population size, there are other countries which rank higher. The Supreme Court decision last year to hear pleas that the sedition law no longer passes constitutional muster was based on a strong concern about the enormous power of misuse of the law. But in its written submission to the court on Saturday, GoI has forcefully argued that the 1962 Kedar Nath judgment is a good law, needs no reconsideration, and the remedy for any abuse lies in preventing it on a case to case basis. In arriving at this position, GoI seems to sidestep the issue of how Section 124A IPC has become so synonymous with arbitrary application that abuse of law is now its default rather than fringe condition. Between 2016 and 2019, for example, the number of cases filed under Section 124A rose by 160% even as the rate of conviction dropped to 3%. In one telling instance, a sedition case was so insubstantial that the Allahabad high court told the state and the police that, the unity of India is not made of bamboo reeds which will bend to the passing winds of empty slogans. The foundations of our nation are more enduring. In fact, instead of protecting these foundations 124A arguably weakens them. It discourages dissent, the safety valve of democracy. Questioning and critiquing are critical to keeping various democratic institutions responsive to citizen needs and holding them accountable. GoI argument that the challenge to the 1962 constitution bench verdict should be decided by a larger bench originates in virtuous theory and praxis, and this may well be where the case is headed. But as for the needs of the state that it is defending, subsequent stringent legislations such as the **Unlawful** Activities Prevention Act, 1967 and the National Security Act, 1980 make an 1870 colonial and anti Independence law superfluous. What has to be recognised is that a law which has withstood the test of time is not by definition a good law. World over and in India progress has **happened** and continues to do so by overturning juridical traditions that fall out of step with evolving societal mores. Petitioners are right to say that there has been a sea change in jurisprudence since 1962. A sedition law whose vague language invites arbitrary and frequently motivated application, which is expedient for police or the state but oppressive for many citizens, is more than ready for binning. SC must rid India of a law the country does need. The decision to postpone the 2022 Asian Games, which was supposed to be held from September 10 25 in the Chinese city of **Hangzhou.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-10-TEST NO.-25391

Has taken the international sporting fraternity by surprise. While the current surge in Covid cases in China has been cited as the reason for the postponement, it is unlikely to be the sole factor. After all, China did host the Beijing Winter Olympics earlier this year in an extremely strict bio bubble. And similar arrangements were planned for the Asian Games. Therefore, it quite possible that the latter was postponed because it was too close to the 20th Chinese Communist Party Congress and it would look bad for the Chinese leadership if the event turned into a super spreader fiasco. But what about India, which aspires to host major international sporting events? The Indian Olympic Association has confirmed it is interested in hosting the Olympics, while the Delhi government has said it aims to stage the Games in 2048. However, the infrastructure needed for such mega events remains elusive. After all, bidding and hosting the Olympics, Asian Games or Commonwealth Games are expensive propositions. While countries like China do it for prestige, others like the UK and Australia see them as investments in domestic development. India is caught between the two it grapples with budgetary constraints on the one hand, while poor execution results in marginal development gains. This is precisely what happened after the 2010 Commonwealth Games with all the upgraded infrastructure from the Shyama Prasad Aquatic Complex to the velodrome at Indira Gandhi stadium falling into disrepair and underutilisation. Add to this corruption and nepotism in various sports federations, and India overall sporting depth simply doesn make the mark. True, India will host the International Olympic Committee session in 2023 and it hoped these will open doors to hosting major events. But without a concrete and realistic action plan to boost overall sporting infrastructure and culture, little can be expected. On April 28, an Indigo ATR aircraft landed at Kishangarh Airport in Rajasthan using GAGAN, India own Space Based Augmented System SBAS. Though only a trial, the landing was a significant achievement that could allow aircraft to operate in poor weather conditions at smaller airports that lack **expensive** instrumentation. The landing was also a rare demonstration of how the US Global Positioning System GPS could be augmented for use in critical afety of life applications like aviation. More significantly, GAGAN is emblematic of the profound effects that satellite navigation has had on both commercial and military undertakings. **As** satellite navigation matures, these effects are only likely to deepen and thus impinge on India own relative power in the world. As we go out into the world coughing and sneezing freely without masks, we have only one noble aim: To get the tourism industry back on its feet. We throw darts on maps and reminisce over past holidays so many places to go! With uncle, aunty, parents, in laws, kids and one completely insane dog clamouring to get into a car and drive off somewhere, anywhere, it is all about the journey. Departures are stressful and arrivals such **letdowns.**

350th: "expensive" **400th: "As"** **500th: "letdowns."**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-10-TEST NO.-25392

The pandemic has affected at a large scale the whole workforce management in both SMB and the Fortune 500 companies. The huge layoffs of the people from the jobs have led to disturbance in the cycle of work. According to a survey by Visage, only 19 of SMB CEOs are searching to increase the workforce in the system. This helps in talent gap in not hampering the growth of future companies. Secondly, the lockdown has pushed under prepared companies to deal with the fact that a majority of their employees will be working from home as opposed to the office. The work from home scenario is in the trend in these pandemic times but the consistent lockdowns has pushed the companies and firms onto the back seat of this system. All these challenges have compelled HR executives to resort to new technological solutions to streamline their hiring process as well as manage their remote workforce. Team Lease, a staffing solutions company, reported a 30 increase in demand for HR related technologies during the pandemic. With no clear path in sight, companies had to fast track the adoption of HR technologies to enable outcome based collaboration and minimize productivity losses. So, let look at the top 4 HR technologies that are soaring in popularity after the start of pandemic. 1. HCM automation Human Capital Management HCM automation refers to software that streamlines the entire employment process, from recruitment through departure interviews. According to PwC, over 80 of CEOs attribute diminishing growth rates to high staff attrition rates and a shortage of accessible skills. In this situation, the ability to hire and retain the best employees through a remote management and compensation system is critical. HCM not only HCM helps companies in doing exactly that and that why its demand is at an all time high. HCM platforms usually take help from data analytics to predict talents but also evaluate an employees performance. This information can be crucial while designing compensation plans, allocating appraisals, and performance based rewards. As the corporate world is returning to a new normal with empty offices **and** remotely working employees, HCM automation is helping organizations in managing and engaging the workforce. 2. Digital recruitment and onboarding software According to a survey released by get Abstract, a business publishing company, over 43 of full time employees wish to continue working from home even after the lockdown is **eased.** Since most new hires will end up working virtually from their homes, at least for the time being, it is imperative to conduct the hiring process in the same manner. That why, instead of risking in person interviews, HR managers are now turning to video conferencing to hire and onboard new employees. Video interviews, while not a perfect replacement for live interviews are a suitable solution for the current situation. The companies which are recruiting through the digital method needs to ensure that adequate technology is used. Through proper planning and implementation, companies are rewiring their recruitment processes. Even **employee.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-10-TEST NO.-25393

Orientation and onboarding are being conducted online via video conferencing. This is giving the new recruits enough time to get used to the digital work environment. LMS training software Once an employee has been on boarded, the next critical step for an HR executive is to conduct extensive training sessions to ensure that the employee is ready to handle projects. In the pre pandemic times training used to be face to face live sessions in the office premises. As the lockdown came into the picture, such sessions are rare sights now. Employee trainings are now being migrated to advanced LMS platforms that offer course building, video hosting, time tracking, attendance, and assessments amongst a plethora of other features. LMS software, combined with video conferencing tools, is eliminating any need for face to face training sessions. Artificial intelligence catboats AI technology had been creating a buzz even before the pandemic struck as they had data driven quality and millennial friendly approach which was very much helpful. HR bots had turned to knowledge hubs related to holidays, benefits and company policies as the provide all required information necessary for the same. The lockdown has forced HR executives to find unique ways to make up for their physical absence and today, Intuitive HR bots are answering employee questions regarding training sessions, benefits enrolment, and employee assessments. Adopting AI bots is easing the pressure off the shoulders of HR managers who are already burdened due to the chaos caused by the lockdown and work from home model. Conclusion The scenario of pandemic has forced them to cope with the changes that had occurred in the industry. The lockdowns has forced them to focus on hiring and manage the workforce in new and innovative ways. But now, companies are leveraging these new age technologies to hire, train, and retain their most talented employees. On the occasion of World Lupus Day, let us bust some myths about systemic lupus Erythematosus Lupus SLE Myth: Lupus is an infection and is contagious especially as many of them have skin rashes Fact: Lupus is an autoimmune disease where **our** body immunity which should protect us from infections attacking from outside, attacks our own body. This results in multiple organs like skin, joints, blood, kidney, liver, lung, and heart getting affected. Most patients with lupus present with fever, weight loss, appetite loss, butterfly rash over the face, joint pains **and** swelling, hair loss, oral ulcers, fatigue, and the other symptoms depending on the organ affected. Myth: I am alone in this fight against lupus. It is a very very rare disease. Fact: While lupus is a rare disease, you are not alone in this fight. There are more than 5 million people affected with lupus worldwide and In India, lupus occurs every 3 4 per 1 laky persons or maybe even more than that. With better health care facilities today, more lupus patients are being detected. Myth: Lupus is a hereditary disease and if I have lupus, my child **would.**

Also get lupus. Fact: The reason why one gets lupus is usually multi factorial. Genes, hormones, environment, stress, smoking, certain viral infections, and smoking have all been implicated in causing lupus. As so many factors are involved and the risk genes for lupus are multiple, it is not common to find lupus patients clustering in the same family. So the chances that your child will have lupus if you have lupus are very less. Myth: I have lupus so I will die Fact: Lupus is not a uniformly fatal disease. When there was no treatment for lupus, 90 would die in the first 5 years, with the advent of treatment in the 1950s, the 5 year mortality had decreased to 50 and with the current treatment available; the 5 year mortality is less than 10. Most lupus patients have a mild to moderate disease which can be effectively controlled with medications available. Only a few with severe diseases not responding to or those who default medications could have a life threatening disease. Myth: Lupus has no treatment except steroids Fact: Science today has moved way beyond using only steroids for the management of lupus. While steroids are also an essential part of treatment, especially in severe diseases, your rheumatologist would always try and taper the steroids at the earliest. Instead, the immunosuppressant s which is medications that can keep your disease under control is continued for the longer term. All medications used for lupus are not steroids. Myth: With a healthy diet, regular exercise, and stress free life I can manage lupus and I don need to take medications Fact: While a healthy diet, regular exercise, stress free life, protection from sunlight, and personal hygiene is all important in preventing lupus disease flares flare is when an inactive disease becomes active again, certain medications have to be continued for long term and at times for life in lupus. The medications that are important to you and how they need to be changed shall be decided by your rheumatologist and hence, regular monitoring and follow up are extremely necessary. Myth: **A** lupus patient can never become pregnant or have a safe pregnancy Fact: If a lupus patient plans pregnancy at the right time when the disease is under adequate control for some time and under the guidance of a rheumatologist, most of the time they will have a normal, healthy, **and** safe pregnancy and a normal and healthy child. The monitoring during pregnancy may be a little more for lupus patients compared to healthy individuals. For certain pregnancies, new medications may have to be added. Consult your rheumatologist and inform them priory when you want to plan a pregnancy. Having lupus is definitely an unfortunate thing to happen, but giving up is definitely not the solution for it. Quoting one of my patient words, Be a warrior and not a worrier. Trust your doctor, take your pills, eat healthily, exercise regularly, overcome lupus and lead a safe, happy, and healthy **life.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-10-TEST NO.-25397

Inflation as measured by the consumer price index rose to a 16 month high in March 2022 and is widely expected to have climbed north of 7.5 year on year last month. Even the most conservative projections show that inflation could end up averaging significantly above 6 this year which would be the highest in the last seven years. It true that some ugly inflation periods have come our way over the last two years, usually coinciding with pandemic waves and lockdowns. But while the problem then was primarily one of supply side disruptions due to the pandemic, this time a trisect of factors has hit inflation, namely higher global commodity prices, supply chain disruptions, and signs of demand side pressures beginning to creep in, especially in certain contact intensive sectors. After the Reserve Bank of India monetary policy committee MPC increased the repot rate last week, there ground to make two assumptions. RBI inflation outlook, which forecast a declining trajectory in the subsequent quarters of the financial year, will be revised. Along with it, more repot rate increases are likely. These two widely held views will catalyst adjustments by all stakeholders in the economy. One way to gauge what lies ahead is to look at how the adjustments will play out through the intertwined savings and investments channels. Household response to hardening interest rates will hugely influence both savings and investment. Not only are households the most important source of domestic savings, they are now also critical to deployment of bank credit as personal loans are almost on a par with industrial lending. Traditionally, household behavior shows two features in a phase of high inflation. There a tilt at the margin towards saving in the form of gold. It was about 1.6 of household savings a decade ago when inflation was high. As inflation dropped, the saving in gold followed, to about 1.1 of savings. Also, net financial savings of households, which were about 32 of total savings in the high inflation phase, rose to around 40 when inflation fell. There a new element which has come into **plays** this time. Beginning October 2019, RBI has pushed the banking system into benchmarking lending rates to external measures such as repot rate. The system has transitioned fast in the case of loans to Mamas, trade and home loans. In the process, bank deposit rates also adjust quickly. Therefore, household **net** financial savings this time may adjust quicker and their proportion to total household savings is likely to fall faster. There also the simultaneous lure of gold as a hedge against inflation, which has a knock on effect on India current account deficit. Investing in equity shares has emerged as an important avenue for household savings. Incremental growth in this avenue is likely to be influenced by movement in stock market indices. In this context, heightened uncertainty around inflation course may adversely impact investments by firms. There are also two options that will attract more personal saver attention bank fixed **deposits.**

Testament to the evolving attitude of the people of Srinagar who have shown a firm commitment to progress and development regardless of the external influences. The Union Minister remarks serve to dismiss any lingering doubts about the stability and normalcy prevailing in the region, it is opined. Dr. Singh also expressed optimism about the positive impact G-20 meeting would have on the investor sentiment of the investors from the participating countries. He expressed the hope that they would return home with a clear message, that the false narratives propagated by vested interests regarding Jammu and Kashmir no longer hold any substance. He also referred to the resounding enthusiasm of the people, particularly the youth of Jammu and Kashmir showing eagerness to be a part of this progress, and not be left behind. The transformation witnessed in Srinagar, he said, is a testament to the resilience and determination of its people. The frequent strike calls, once a symbol of disruption and unrest have now been relegated to insignificance. This shift in the mindset showcases the collective will of the citizens to forge ahead, and embrace a future marked by growth and development, he opined. Reactions of the Foreign Press According to Federico Giuliani from an Italian-based news website, Inside Over, the recent G20 meeting in Jammu and Kashmir has given foreign dignitaries and observers a good opportunity to witness a change in the Union Territory since the abrogation of Article 370. According to the publication, the full integration of J & K with the rest of the country appears to have proven beneficial. Michael Rubin, a senior fellow with Washington-based American Enterprise Institute (AEI) is also reported to have said that he witnessed optimism and growing confidence in J & K & that Kashmiris in India have security, taste freedom, and are thriving. Epilogue Despite significant security challenges and boycott by Beijing, India showed the world that it has genuinely settled the insurgency issue in Kashmir by holding the 3rd Tourism Working Group Meeting of the G-20 on May 22-24 in Srinagar. While China officially announced that it will not **attend** the G-20 meeting in Kashmir and stayed firm on it, India, with its diplomatic acumen, reportedly, was able to convince all other countries to participate in the conference. In some cases, according to sources, countries sent tour operators instead of diplomats so as not to upset India. India is **the** President of G-20 for the current year and hence could not afford to give an impression to the world that all is not well in Kashmir. The working group meeting of the G-20 countries took place close on the heels of two back-to-back terrorist attacks on the Indian Army. Notwithstanding, the government went ahead valiantly and held the meeting there with solid participation by all countries, except China. The Conference thus went smoothly, with photos and videos showing foreign diplomats dancing and shopping at Srinagar Polo View Market flooding the social media. The conference also had extensive representation from **the** OIC countries, according to a report. According to Harsh Vardhan Shringla, former Foreign Secretary and currently Chief Coordinator for India G-20 Presidency opined that the Union Territory looked at the G-20 as an opportunity & that this will be the most significant event held anytime in Jammu and Kashmir. The good, bad and the ugly about the Kerala story prompted me to see it, to believe.

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-10-TEST NO.-25399

In today world, technology plays an important role in the development of our civilization. The application of innovation has led to remarkable achievements in various fields, including education and management. At universities, the foundation of knowledge is built upon the collection of information, translation of literature, and experimentation with new ideas. These institutions serve as the navigation tools for future leaders who will shape the environment and contribute to the population welfare. The description of our modern society is a mix of tradition and transformation, where innovation is the driving force behind the revolution of thought and action. The management of resources, both human and material, is crucial in ensuring that the investment in our future is worthwhile. As civilization progresses, the expectation are that people will strive for proficiency in their occupations, leading to the development of skills that will benefit both the individual and society. Performance and accomplishment are measures of success, whether in professional settings or personal endeavors. The philosophy of continuous learning, investigation, and adaptation is essential for navigating the consequences of our actions. Imagination and inspiration fuel the motivation to overcome challenges, while discipline ensures that we stay focused on our goals. Administration and organization are key to managing the complications that arise in any system. Coordination, communication, and collaboration are necessary to ensure that efforts are aligned, and that resources are allocated efficiently. The interpretation of data, coupled with the verification of facts, leads to informed decision-making. Empowerment, for feminism is nothing if not intersectional. This situation can be illustrated by the sheer number of lower caste women who face sexual violence daily. As a rational, democratic society, we have let down our compatriots from the lower classes of society. When people think of lower caste women, phoolan devi might probably be the last name to cross their minds. However, what transpired in her life could have been avoided if the case was not seen through the prism of caste. It is almost solely because she belonged to the lower castes that the law did not take its due course. While this does **not** absolve her actions, it is a true indictment of our mentality as a society. A just society would have ensured that her violators were punished in accordance with the constitution and that phoolan would never have to resort to the measures that she did. This incident brings to mind **shylock** impassioned monologue in William Shakespeare the merchant of Venice. When asked why he insists on revenge on Antonio and Bassano, shylock reveals the mistreatment meted out to him by the Christians simply because he is a Jew. While the context between a Christian and a Jew may be different, consider his words for a moment. If one was to prick a person from jai bhim nagar, would they not bleed? If one tickled them, would they not laugh? The women movement in India today faces a very troubling question at the very root of the cause. If our movements **are** not intersectional, nor aware of or sensitive toward the realities of caste, then is it a true movement? Ironic since the women from the marginalised sections make up the majority of the women population, and yet, their voices are suppressed by the minority from the upper castes and class. An argument made by many feminists, par

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-10-TEST NO.-25400

Perpetuated by the caste system. It is feminism which comes to the fore only when women from the upper strata are violated. This calculation and observation process allows for the representation of complex ideas in a way that is both instinctive and rational. The validation of results through examination and evaluation is important in ensuring that the outcomes are justifiable. The specification and categorization of information allow for better documentation and distribution of knowledge. In times of crisis, the restoration of order requires swift action and the ability to adapt to changing circumstances. Regulation and supervision are necessary to maintain standards and ensure that progress is made in a just and ethical manner. Acknowledgement of contributions and recommendation for further exploration encourage continued growth and development. The qualification and certification of skills provide a formal recognition of one abilities, paving the way for future opportunities. In conclusion, the journey of development and transformation is a beautiful adventure, where the aggregation of knowledge, experience, and skills leads to the formation of a better society. Execution of ideas, coupled with the preservation of tradition, ensures that we move forward while maintaining a connection to our roots. The future is bright for those who embrace change, invest in their education, and contribute to the betterment of humanity. How is it that a middle-class woman honor being violated is met with outrage, but a dalit woman honor being defiled is met with indifference? Why is there less national outrage over the heinous crimes in hathras, in Manipur, than in Kolkata? Ambedkar once said, caste is not merely a division of labor, it is also a division of laborers. It is only those who live above the struggles of the lower caste who can afford to say that they don feel the effects of caste. The women of the oppressed sections in this country are therefore doubly oppressed, first by caste and then by gender. While the road to justice is a long one, incidents like these will only serve to detract from the goal of a more equal society, a goal that feminism **strives** towards. While marches like reclaim the night are a step in the right direction, no real progress will be made till we overcome the evil of caste discrimination. None of us will be free until all of us are free. In 1886, radha gobinda kar set up asia first **non-governmental** medical college. But for a long time, no one could have predicted that rag kar would pursue medicine full time, let alone build a hospital that is named after him now. Just as no one could have predicted even a fortnight back that the same hospital would be the scene of a brutal rape-murder of a trainee doctor His father, durgadas kar, was a doctor, so it seemed only natural that radha gobinda kar, the eldest son of durgadas, would follow in his footsteps. For a while, he did. Everything went to plan. In 1869, rag kar joined the **Bengal** medical college (or Calcutta medical college), asia oldest medical school, set up in 1835. But then he chose to take a break. He dabbled in theatre, he took up gymnastics, and he also got married. The break from medicine stretched on. A decade passed. And then rag kar life took another turn, and there was no looking back after that. Born on aug 23, 1852 rag kar 172nd birth anniversary was two days back, on Friday. Some sources, however, mention 1850 as his year of birth, say researchers. Whi

Did and in doing so, spread their wings. The inter-relationship between women and access to water, and water-related disasters such as drought or flood is a complex web. Lack of access to water forces women in rural areas to walk kilometers for that elusive pot of water, facing taunts, abuse and violence. This is a stressful daily scenario, coupled with the uncertainty of whether their journey will bear fruit. Carrying heavy pots of water on their heads they experience back pain. Personal hygiene goes for a toss; there is increased risk of infection. Families are disrupted as the able-bodied work force leaves the village to work as labour elsewhere. Livelihoods are lost. Food is hard to access, and a nutritious diet almost impossible. Anemia exacerbates and women are constantly fatigued. Some pregnancies are lost, and the children born face increased risk of malnourishment, poor growth and stunting. Children drop out of school and turn to labour. Child marriages increase, so does trafficking. Water for women is thus deliverance, freedom, well-being and dignity. On January 29, a cold wintery day, the jail Sahelis stepped out of their homes from different villages, leaving their families behind, to raise their voice against what is now a global crisis, or as the UN recently called it: Water bankruptcy. The women walked 15-20 km every day, interacting with common people, governments, civil society actors and youth. They raised awareness and responded to questions. Along the riverbanks residents shared their personal and livestock health issues due to river pollution. One persistent complaint was the constant foul odour, foam formation and the declining water usability. They held jail chaupals and sessions in schools. All along the yatra they observed the river, the challenges that this river faced, and possible action points to revive the river and enable local water security. The Jal Saheli band composed music on the spot given the different scenarios they observed. Their inspirational songs remained a constant source of encouragement. Some of the major challenges the Yamuna faces as identified by them included solid waste dumping, untreated sewage and drain discharges, industrial **and** chemical pollution, agriculture runoff, degradation of riverbanks and floodplains and decline of traditional water bodies. The Jal Sahelis identified eight huge traditional waterbodies near the river that had historically recharged groundwater, provided base flows to the river, and enabled local water security. Unfortunately, these now were in various stages **of** degradation due to neglect, siltation, encroachment. The Jal Sahelis suggested that their revival could ease pressure on the river and contribute to flows of the Yamuna. Some other suggestions that they put together included (a) Drain Mapping and Sewage Treatment (b) Community awareness and behaviour change through expanding Nadi Chaupals, school awareness efforts and village campaigns for long term community stewardship for river protection (c) Strengthening partnerships with universities, civil society organizations, and local governments (d) Decentralized waste management (f) Formation of local river protection committees (e) Promotion of eco-friendly agricultural practices such as organic farming and water-efficient irrigation. **Pushpa** Kushwaha, National President of the Jal Saheli Committee, reiterated that the journey was a solemn pledge to save water. Said Jal Saheli Lakshmi, Water is the found

support they got. One Saheli left her child with special needs at home with the blessings of her family. Another's father-in-law insisted that she go for this spiritual work. A mother-in-law and daughter combination completed the journey by taking turns. The sense of accomplishment was palpable, and their energy resonated. Proud of their walk, in one voice they all said, Yes, the yatra had its physical challenges and initially we were worried: Where would we go to relieve ourselves? Would there be water available for our hygiene needs? Looking at the state of the Yamuna, all that pains us now is the state of our Yamuna. That is all we can think of. Physical discomforts don't affect us anymore. We will do what it takes to revive this spiritual heritage of ours. On their return to their villages these women in their blue sari uniforms are being felicitated in their village and their district. What stories they would be having to share! Just how do the Jal Sahelis (women friends of water) seamlessly fit into this theme, without even knowing this? The answer lies perhaps in their self-realisation, and the realisation that the planet needs water, and that rivers are veritable civilizational cradles, without which there is little hope of survival. India's liberalisation bargain: Freedom to move, not to own Dr Surya Bhushan, Professor at DMI, Patna (PhD, JNU), blends academia and industry experience (Accenture, CMIE). His research spans MGNREGA, labour market, migration, sustainable agriculture (mushroom poultry), livelihood business models, including public policy evaluations in Bihar. To understand how fundamentally India has changed since the economic reforms of 1991, we must look beyond GDP growth and stock market indices. In the space of three decades the economic arithmetic that governed everyday life for ordinary Indians, what economists call the terms of trade between income and essential costs, has quietly, unevenly, and consequentially changed. Think of one's life as a simple basket containing three things: Mobility (a car), Shelter (a flat), and Experiences (like a vacation flight). In 1990, the price tags on these items, measured in years of one's **life,** told a specific story. In 2026, they tell a very different one. Put together, they show a pattern: some goods have become vastly more affordable relative to professional incomes; others have become much less so. The winners? Mobility and services. The losers? Shelter and the intergenerational promise of homeownership. **For** instance, if we place an assistant professor in a time machine, transporting them from 1990 to 2026, they would find an India that is simultaneously more affordable and more impossibly out of reach. In 1990 a newly appointed Lecturer (the entry-level academic then) drew a basic monthly salary in the ballpark of figures set by the 1986 88 pay revisions overseen by the University Grants Commission. A typical mid-range Lecturer earned about Rs 3,000 per month per year, while government entry-level academic pay (Academic Pay Level 10) starts with a basic of about Rs), with total monthly take-home including **allowances** often nearer Rs 70,000 Rs 100,000. Those raw numbers are necessary but not sufficient. What matters is what those salaries buy. The iconic family car of 1990, the Maruti 800, cost about Rs 1. 34 lakh on the road in Delhi. For a Lecturer earning Rs 3,000 a month (Rs 36,000 a year), that car represented roughly 3. 7 years of pre-tax income; if one takes the

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-11-TEST NO.-25405

So that many others can escape from it. I still get nightmares thinking what happened to Shalini. The political mud-slinging and the consequent legal wars aside, what needs to be celebrated is the fact that Indian democracy can nurture the spirit of speaking out the truth by filmmakers. While a true story has its own charm to pull the crowds, the theme of rape and religion is opium enough to make the film a money spinner. Interspersed with real life events, the glamorous heroines added the much needed thrill and suspense to make the experience outstanding. However, I am not an expert on film making hence do not dare to comment as anyone but as a mere spectator. As God own country revealed the secrets of love and life through the bewitching natural beauty and the spontaneous love between mothers and their daughters, I could not help marvel at the rich cultural heritage of our nation. And when one of the best views of the world with beautiful brown mountains spanned out to showcase horrific atrocities against women I could not help my tears. Apart from the atrocities committed on the name of religion, the inhuman treatment of young women for sex was beyond imagination. Some of the scenes in the movie made me shudder and close my eyes in fear. When I stepped out of the movie hall still in shock, I wished with all my heart that the younger generation learns a thing or two about man-woman relationship, the dynamics of the body driven by desire and the realities of love, life, marriage and ever after. Our generation, perhaps, somehow managed to live with the myth and at times was indeed successful at exposing the hypocrisy of the Indian political and social fabric handed over to us in the name of secularism. However, for the present generation the price is perhaps too high with globalization of both terrorism and religious intolerance. I would have wanted to believe that the film was a propaganda by people with vested interests to create animosity between fellow citizens. Unfortunately, it is **a** real story based on facts and real survivors. The excuses of malice against a particular religion and the gloss over as a story of a few errant young women does not convince any rational movie-goer. I remember watching a movie in the early nineties titled Not without my daughter **which** had created awareness among Americans about immigration rules as wives and children in foreign countries. In an interview on this movie there was a piece of news on how somebody was punched because of the negative portrayal of a person belonging to a certain nationality. It is no surprise that the story of the Kerala women has ruffled many feathers. And this has to divergent opinions about the movie. However, one thing is for sure that this is a real story. Hence the film has the potential to motivate the young to know about their culture, the rationale behind **their** customs and traditions and above all, the need to be cautious about their actions. The Kerala Story is a celebration of truth. It is an obituary to the victims of horrific crimes of rape and an offering of sympathy to their family members. Hope that the Story teaches the tough lessons of life and love through the accounts of those who have paid the price so that others escape the experience of deception and subsequent exploitation. Crypto currencies have entered mainstream conversations in India and are recognised as legitimate investments that are subject to taxes. Crypto currencies are treated as Alternative

Uphold, and understanding her as a living presence, very active in the world today, both in our personal and collective lives. Indeed, one can see her hand everywhere and perceive messages hidden to all but the seeking eye. One also came to understand the transitional era in which she and Ram incarnated to help humanity evolve, as well as the transitional era in which we now live, where an evolution in consciousness is required for the survival not only of humanity but for many life forms on earth. The active presence of Narayan and Mahayana is especially apparent during moments of evolutionary need. And now is such a time. What is Sita message for us today as a collective humanity During the Treat Yogi, when she and Ram lived, humanity was emerging from a more collective consciousness into greater awareness of individuality, but it was still a time when people lived in harmony with the natural world, understanding and respecting the abundant life forms, as well as the life energies of the rivers and earth. It was also a time before the need to dominate took over the human mind, leading to numerous forms of oppression, which are still visible in our world today. That has come again and again as one tunes in to Mata Sita is the need for humanity to evolve beyond this domination mentality, which is destroying the natural world and harming many human communities. We might call it a domination gene, which must be outgrown and discarded and which manifests in our political, economic, social and religious lives. It has taken over human consciousness. It manifests when one group of people seeks power over another. It manifests as war, as control and authoritarian rule, as a sense of religious or racial superiority, as economic domination, as destruction of life forms and vital ecosystems all leading to dangerous tensions and conflict and demise. The only way to overcome this domination mentality, which is destabilising our world today, is through spiritual practice, which facilitates evolution, coupled with greater mindfulness in the way we treat the natural **world** and each other. It is a time to look within to find in ourselves remnants of these tendencies. For the personal becomes the collective. Our individual weakness becomes the weaknesses of the collective, and thus the world goes dangerously astray. We each bear some responsibility for the awakening of **the** world and it begins with our own awakening. It is helpful to bring Sita Ma into our lives now, to call upon her and seek her counsel, and to recognise her active involvement in our world as she works patiently and persistently, in many unseen ways, for our individual spiritual growth, which will then help advance the evolution of the human community. The writer is an author and founder of the Global Peace Initiative of Women According to a report by PWC, in 2022, the fintech sector is poised to affect the global economy with a market value of **approx.**

Such as democratised ownership, security and privacy. Moreover, they operates on borderless and intermediary- free networks based on block chain technology. From the last fiscal year, crypto users in India declared their investments and paid taxes on gains from crypto transactions. Essentially, anyone who dealt with crypto had to disclose and pay taxes at 30% on the total of the gains earned. However, to a non-crypto native, crypto taxation in India could be a bit difficult to comprehend. Breaking downrypto taxation in India The Union government bought crypto transactions under the ambit of Direct tax laws by introducing Section 115BBH in the Budget 2022 (applicable from the current assessment year). A tax rate of 30% (exclusive of surcharges and a 4% chess) was introduced for gains on crypto transactions Section 115BBH applies to all transactions that are covered under the definition of transfer under Section 2(47A) of the Act. Moreover, the 30% tax is applicable without distinction on short-term and long-term gains. With effect from 1st July 2022, a 1% tax deductible at source (TDS) was also introduced on crypto transactions. It meant that anyone who is paying a consideration for acquiring crypto currencies would have to deducts. In case of transactions through centralised exchanges, the onus of deducting and depositing TDS with the government as per applicable norms lies with the exchange. At the time of filing IT returns, this TDS can be claimed and offset against No TDS will be deducted if users deposit withdraw money or crypto currencies from an exchange. The TDS under section 194S applies to all transfer of VDAs, including crypto-to-crypto trades. One has to pay 1% TDS on while acquiring crypto assets over Rs 10000 (this limit is Rs.50000 if you have no business income or if your business income or professional receipts do not exceed Rs 1 cr. or Rs. 50 lakh respectively) s. Fixing the tax conundrum When one buys or receives crypto currency, it is essential to determine the cost basis, i.e., the amount one paid for it or its fair market value in INR on the day they **received** it. It is used to compute the profit loss when one sells the asset and does not include additional fees. For crypto-asset sellers, it is essential to subtract the cost basis from the sale price to compute profits losses. Therefore, if one disposes of crypto assets by trading or **spending,** one should remove the cost basis from the fair market value in Rs on the day it was disposed of. Managing multiple crypto assets can be complicated, and some finch platforms offer tax engines to help investors calculate their gains or losses. These platforms use different accounting methods, such as first in, first out (FIFO) and average cost basis, which are accepted in India. These methods help investors keep track of their cost basis and minimise the complexity of calculating their taxes. It helps them save taxes and remain compliant. Tax treatment of Specific Crypto Transactions There are several **transactions** in the crypto currency sphere for whom there is no clarity or specific provision under which taxes can be levied under the Income Tax Act. In the absence of specific provisions, the tax treatment of each transaction is decided by the substance of the transaction. For example, crypto miners who receive crypto currencies as a consideration for performing the activities of crypto mining have to declare the market value of the crypto assets received as business income. A s

And insurance policies. These traditionally popular avenues which attract funds from the risk averse even when interest rates are low will almost surely see more incremental flows. Banks flush with more funds, but with lending rates creeping up, will have new challenges. The futility of using police to serve as an instrument of political vendetta should dawn on political parties after the unedifying confrontation last week between Punjab, Haryana and Delhi police. AAP resolve to punish Delhi BJP spokesperson Attainder Bagger for his tweet against CM Arvin Kejriwal and BJP interest in freeing him played out in full public glare through the actions of the three police forces. But after Bagger detention in Haryana and repeated judicial setbacks, Punjab police have been left red faced. Some days ago it was Assam police ignominious turn over the arrest of Jignesh Mevani from Gujarat. Also, various state police forces seem to have thrown procedure and mutual organizational courtesy to the wind. Punjab police claim they arrested Bagger in Delhi after his non response to repeated summons but it is still the case that they simply drove into another jurisdiction, just as Assam police and UP police have done in the recent past. Criminal Procedure Code has safeguards like police requiring an arrest warrant from magistrates before effecting arrests and securing transit remand from a magistrate after arrests in another jurisdiction. Additional Delhi high court guidelines require cops from other jurisdictions effecting arrests to also intimate local police officers. While these norms allow for exceptions, following the procedures would have saved Punjab police the blushes. Face offs between police forces can be good news only for criminals who commit crimes spanning across state borders or escape into another state after committing a crime. Even terrorists stand to benefit if increasing inter forces fractiousness were to impact coordination and intelligence sharing. Assuming India hyper competitive politics and bitter, person targeted political rhetoric will continue to intensify, and police will be frequently used to settle scores and make points, the near future frankly looks bleak. Worse may yet happen in standoffs between politics driven **state** police forces. For the third consecutive year, the United States Commission on International Religious Freedom USCIRF has designated India as a Country of Particular Concern. It is listed along with 14 dysfunctional states including China, Pakistan and Saudi Arabia. The panel believes that the Indian government has increasingly emboldened **Hindu** nationalist groups enforced sectarian policies with the presumed aim of establishing an overtly Hindu state. Like in the past the government is likely to call out USCIRF tendentious reportage and this reiteration won is too off the mark. Failing the simplest fact check The report devotes significant space to NDA continued enforcement of anti conversion laws against non Hindus. But a simple fact check would have revealed that BJP sin exclusively obsessed with cracking down on forced conversions. Many Hindus, Mahatma Gandhi no less, have considered the activity the deadliest poison. In the 60s and 70s, under Congress governments, **several.**

Of dust aka Particulate matter PM 2.5 PM 10 since most sites in India do not follow scaffolding and protective practices, people living in heavy industrial zones close to places of manufacturing are exposed to several gasses chemicals that can be very harmful for humans and can cause long term ailments, garbage dump yards can emit toxic gasses. The list is endless. Corporate India Inc. and its expectations Today as a young workforce enters the Indian corporate landscape, their demands are very different as their awareness levels are significantly higher. Providing clean air is expected as a necessity and is not considered a luxury for most. A number of startups are entering the space of air purification and providing cost effective and innovative solutions to address these issues through monitoring and cleaning solutions. The Government of India is doing its part through the NCAP National clean air program launched in 2019 for better air quality in 122 Indian cities through various initiatives. We live in a world where we feel it is an acceptable practice to pay for our water Bubble tops and bottles and water purifiers, however many of us do not pay importance to the air we breathe assuming that it is clean. We can control what we eat and drink through our actions, but breathing is a constant and for this purpose we must take care of what we breathe. Choosing the right air purification technology Several technologies through air purifiers are available to address these issues and one must choose carefully as per their needs. The major filtration technologies used in air purifiers are filters For large particles as well as very small particles, Ionizers to proactively attack floating particles carrying virus or bacteria, UV rays that can sanitize air surfaces. HEPA and MERV are popular industry standards for filtration. Several brands are pushing standalone negative ion generators as air purification technologies. It is important to note that some of these products can produce a significant amount of ozone and can impact the lungs of people. Many brands sell air purification technologies that do not **quantify** or measure the pollutants using sensors and therefore it is difficult for the consumer to know if they are doing their job. In most cases they end up in a corner of a room without filters being replaced as the consumers are not sure about their performance. The Indian **market** is a cost conscious market making it vulnerable to cheap and harmful technologies. It is important for a consumer to choose wisely so they do not end up buying twice or buying something that is economically not viable. An ideal product must be conducive to the Indian indoor environment, for example dust is the single biggest problem in India, and any device without a washable cleanable dust filter does not work for India as it would significantly affect your device performance. As indoor spaces get smarter, modern day devices come equipped with smart IOT capabilities to integrate with existing **systems.**

Including air conditioners HVAC systems, BMS systems and other technologies making it possible to automate their behavior as per real time ambient conditions. Modern day devices are data driven and provide insights in the palm of their consumers while working and completing their job at hand constantly. Mistakes can happen while making financial decisions. Sometimes it due to a lack of knowledge and sometimes it the outcome of not being prudent. But as Robert Kiyosaki author of Rich Dad, Poor Dad quotes, Don waste a good mistake, learn from it. Entering this new financial year, make a resolution to avoid these mistakes and learn your lessons to stay aligned with your goals. Not Reviewing your financial plan and journey: Your financial plan is not a one time activity but a living document. The start of the financial year is a good time to review your financial plan as your income, expenses may have been updated resulting in different savings rates. You may also need to make adjustments based on the actual performance during the year gone by. You should review your goals and incorporate the required changes in the plan. Not investing according to appropriate asset allocation: You must pay attention to where your money goes investment wise during the year. Asset allocation is the key here that can help you take control of your investments. Asset allocation should be done as per your goals, time period of investment, liquidity requirements, and risk appetite. For example, at 45 years, your financial goal 15 years down the line can be to save for your retirement. At the same time, your 7 8 years goal can be to send your child for overseas education. This requires asset allocation is not only a way that you can have liquidity in the near future but also a stable income after you retire. You can opt for asset allocation in two ways: i A balanced portfolio with adequate liquidity provisions for your child education overseas ii A predominantly equity portfolio for your retirement as you have a longer time horizon Investing heavily keeping in **mind** just one of these goals can have adverse effects in the future. As Peter Lynch says, Know what you own, and why you own it. Make this new financial year the point to do so! Updating portfolio too frequently: Changing your portfolio too frequently will cost you in terms **of** transaction costs, exit loads, and capital gains taxes so avoid updating your portfolio too frequently. Assuming you have done the due diligence and research, you need to give sufficient time for investments to perform so investing for the long term is beneficial to your portfolio. You should make changes or exit investments under the following three conditions: 1. Rebalancing as per your desired asset allocation ideal frequency once a year 2. Change in the characteristics or non performance of an investment for a long time ideal frequency 3 5 years if proper research is done 3. Liquidity requirements as **per.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-11-TEST NO.-25415

Your financial plan Not updating life and health insurance policy as per the life stage: Your financial and health related needs change as you pass different life stages. For example, you may have bought policies in your 30s when you were young and had fewer responsibilities compared to your 40s. As a result, it becomes crucial for you to have a check on your life and health insurance annually or at least every two years. For life insurance, you can consider the following factors: Big debt financed purchases made recently, i.e. buying a house through financing Undertaking a job change Starting a new business An increase in family size A change in the household income Not having you around can have a daunting effect on your family. Thus, considering all the factors, you should boost your life insurance coverage with an equivalent amount to support them in your absence. For health insurance, your needs change with age and inflation in healthcare costs. Taking higher coverage at later stages in your life will cost you a higher premium with exclusions for pre existing illnesses Hence you should take higher coverage sooner rather than later. If you are yet to revisit your life and health insurance, mark the beginning of this financial year to do so. Not doing tax planning in advance: Tax planning is a crucial factor to consider when planning your finances. The best way to undertake this aspect is to plan for taxes in advance, and the start of a financial year is a perfect time. Income tax rules under various sections allow tax exemptions for investments, health insurance premiums, home interest payments, etc. so make allocations accordingly to save taxes. If you are planning to redeem some investments for liquidity requirements, you should make sure to pay advance taxes by the due date to avoid unnecessary interest payments to the IT department. Tax planning at the beginning of a financial year helps you get a better understanding of your tax savings. Conclusion Learn from your mistakes occur, but you should learn from them to improve your situation. **It** is better to be cautious with your finances and plan ahead to avoid costly mistakes that can compromise your goals. it only inside a flight that one feels like a gypsy. From a multi-year investment to a matter of months. That is a dramatic shift in the accessibility of private motor transport. Air travel shows the same rough story. A Patna Delhi ticket in 1990 probably cost a non-trivial bite out of a monthly salary that was often under Rs 4,000. For a mid-range Lecturer a ticket could be 50-83% of a month's pay. Today the same sector often sells for tiny as a share of the average academic's monthly income. The real effect is clear: fast, long-distance mobility has become dramatically cheaper for salaried professionals. This is a form of consumption democratization that should not be underestimated. It reshapes migratory choices, family relations, and the geography of opportunity. But now, look at the third item in the basket: shelter. And this is where the dream hits a wall. In years of income (depending on which salary benchmark one uses). In 2026 the same sort of dwelling in the same city hierarchy routinely lists for around. See the divergence depending on which academic salary one uses: Crudely put, for a government academic on basic pay, a typical urban flat has gone from costing a decade of labour to costing an entire working lifetime. It has transformed from a dream into a dynasty, something one can no longer buy for themselves, but can only hope to inherit. The supply demand picture for housing constrained land markets, regulatory frictions, limited high quality rental supply explains part of it. But these ratios tell us that asset inflation in housing has far outpaced wage growth for a wide swath of stable, essential professions. Why the divergence? Broadly: incomes and asset prices don't move together. Liberalization after 1990 unleashed a high-income segment (IT, finance, private higher education) and created vast increases in elite wages; competition, productivity gains, and scale have pushed down the real cost of many services (air travel, basic automobiles, electronics). At the same time, land use constraints, supply bottlenecks, and the financialization of housing plus the migration premium paid for city living have driven housing prices into an orbit largely disconnected from **routine** wage growth. There's a distributional angle too. Market-driven academic pay (private and new public institutes) can look generous; older government scales, on which many live, have not kept pace with the asset price surge. Hence the heart-of-the-matter political story: economic reforms made many goods and experiences more affordable while **making** the primary store of household wealth (housing) less affordable for those on traditional public sector incomes. If this were merely descriptive, it would be a neat historical footnote. It isn't. Housing's increasing distance from ordinary wages matters for social stability, intergenerational mobility, and household risk. A short agenda: increase urban housing supply through permissive land-use reform and infrastructure-led development; expand secure, long-term rental markets so shelter need not be purchased to be stable; and examine how public pay scales especially for essential services like education and health are indexed or compensated where asset inflation has widened real-income gaps. India **did** not merely defeat New Zealand in the T20 World Cup final. We dismantled them, with the calm efficiency of a watchmaker opening a clock removing the screws, one by one, until the machinery Last month, when Ishan Kishan lit up India with a blistering innings that punctu

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-12-TEST NO.-25419

However, practical challenges remain, especially in the pro-rata distribution of auction proceeds and managing property during trials. One significant challenge under the PMLA is the burden of proof on claimants, who must demonstrate their innocence and due diligence. Section 8 8 imposes a reverse burden, requiring claimants to prove they acted in good faith, even if they acquired the property before its criminal association. This has been criticized as overly stringent. Attachment of property by multiple authorities multiple agencies attaching properties complicate the process of returning them to rightful owners. In the case of M s Lemon Seeds Hospitality Pvt. Ltd, properties were attached by authorities under the MPID Act, Economic Offences Wing, and PMLA. Although the Applicant won an auction held under the MPID Act, ongoing attachments by other agencies prevented clear title transfer. The Enforcement Directorate argued for following PMLA rules, but the Special Court ruled in favor of the Applicant under Section 8 7 of PMLA. The order is currently being challenged in the Bombay High Court. Conclusion While the PMLA aims to combat financial crimes, it also has the potential to infringe on fundamental rights and liberties. The judiciary plays a critical role in safeguarding constitutional values, ensuring that the Act powers are not misused. The Telangana High Court in Vanpic Ports P Ltd v. Directorate of Enforcement 2022, as also various High Courts, have emphasized that property attachment under Section 8 of the PMLA must be based on a reason to believe, with authorities required to thoroughly assess each case facts before taking action. The Act also mandates that the AA and ED provide reasons for property confiscation, preventing arbitrary use of power. Attachment, seizure, freezing and confiscation there is little surprise that nodal pollution body CPCB has found all 18 drains of Delhi that empty treated wastewater into the Yamuna fall short of chemical standards mandated before any drain reaches the river. Is it any surprise that 22 of Delhi untreated waste ends up in Yamuna? Wastewater, sewage treatment in India is abysmal; it lacks the iron, and political will, backed with funds, **strict** regulation, oversight framework and civic awareness that the gargantuan problem demands. The gap between sewage treatment capacities and sewage generated is widening. Truth is, states play catch up and routinely throw big numbers of treatment plant capacities. Frenzied urbanisation, migrants pouring into cities and resultant population growth have led **to** unprecedented growth in wastewater a ticking health bomb. As per a Niti Aayog report, of 72,368 million litres of urban wastewater that India generates daily, only 28 is treated. That means 72 wastewater is untreated and maybe disposed of in rivers lakes groundwater. Implementation is impeded by many issues, not least limited availability of land for treatment plants; residents fearing an economic hit as the odor and aesthetics lower land prices. Some Chinese cities addressed this by building plants underground. Illegal dumping, poorly managed drainage systems, multiple leakages, and conventional technology in existing treatment plants are other issues. At **least** three laws, over 10 GoI policies and missions since 1985 exist to tackle India wastewater, polluted and dead rivers problems. It may be an idea to prioritise waste management before racing to add to the concrete jungle which has meant co

Decentralised wastewater plants are just one of the many inexpensive and ecologically sustainable ways to address the problem. There are ways out. We seem to lack the urgency. When I had called up Dr. Nayan Kothari, Governor, American College of Physicians, New Jersey Southern Regions Chapter, it was late into the evening. The untimely call notwithstanding, his no-nonsense cut throat voice, set the tone of the conversation. When asked about his response to the gut-wrenching rape incident in Kolkata, this recipient of the Presidential Medal for Excellence from The Royal College of Physicians was livid to say the least. Expressing shock and disgust at the nefarious activities of organized crime syndicates, Dr. Kothari demanded justice, safety for female doctors on duty and in no uncertain terms wanted the offenders whoever they are to be packed into jail. So, this is what I have been doing in the past few weeks hitting the keypad, picking up the phone, calling men and women, leaders and followers, doctors and non-doctors, reaching out, collecting thoughts, responses and ideas. In short, I have been gathering clouds for the much-needed storm. I have done these before, in plenty, as a physician, as an author, as a columnist and a blogger of comfortable and uncomfortable issues, asking the wrong questions, seeking the uneasy answers. But never before, have I met with responses, so spontaneous, so heartfelt, and yet so congruous in venom. Let bring in American Association of Physicians of Indian Origin, in abbreviation, AAPI, a medical association comprising of a staggering eighty thousand physicians. I shot out a mail to its present President, Dr. Scathes Kathula. In a few hours, he shot back highlighting the immediate actions his organization has taken to address this terrible incident. Not just a press release and joint statements with other alumni organizations but a strong petition demanding justice, safety, and required legislative changes. Let switch back to American College of Physician, the largest medical-specialty organization and the second-largest physician group in the United States boasting of 161,000 members. As a proud and active Fellow of that organization, I reached **out** to Jonathan Shamash, MD, Northern Governor of the NJ Chapter of the American College of Physicians. His response in a few minutes? I strongly condemn the senseless rape and murder of a female physician in India. Of the many more I have received and continue to, former President of **New** Jersey AAPI, Dr. Amarjit Saini response has been straight from the heart, meant for the heart. Here an excerpt: This incident in India Bengal on August 9th 2024 where a female resident physician was raped and murdered is shocking, horrific and disgusting. It has sent shock waves all over the world. I am sad, angry and disappointed. This is not the India I knew. WHY?? It has to be the incompetence of the legal system not to hold the CRIMINAL accountable. Quite like noble thoughts, evil deeds cross geographical boundaries. They too prevail, they too preach. Darkness has always **provoked** light. Bengal has planted many a seed, stirred many a revolution, marshaled many a movement. Most agonizingly, this is not the one to cherish. But if there any redemption to seek from this unspeakable tragedy, then it is for a future to be transparent, to be fearless to be together. We have unfinished business in hand.

Chimney electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. Reading is of different kind. It may be light or serious. It may be adventurous or spiritual. Every reading has its distinct pleasure. Some people like to read coffers filled newspapers, periodicals, journals etc. They are storehouse of general information about current events and various socio political and economic problems. It has been well said, Books are like axe they cut through the snow within. Indeed electricity is one of the most important blessings that science has given to mankind. Of all modern inventions, electricity is perhaps the most wonderful. To those who experienced its magic for the first time, it must have felt like being transported to a fairy land. Today, we take it so much for granted that we notice its existence only when there is a power cut nourishing food and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle coffers filled light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen too would have been very different from what you see now. There would have been no toaster. He expects me to fetch things for him and does not allow me to use the telephone or listen to my favorite singer. And, of course, watching my favorite television programmer is simply out of question. As for myself, I am twelve years old, fond of reading but not very keen on studying. I do know what my exam. My exam consists of my father, Examiner, elder brother and myself. We all love each other very much, though you would believe it if you saw us at home, especially when my brother and I have had a fight! Father is always busy. Sometimes he goes to office even on a Sunday. I know **he** is doing very well because I have heard people talking of him with respect. My exam consists of my father, Examiner, elder brother and myself. We all love each other very much, though you would believe it if you saw us at home, especially when my brother and I **have** had a fight! Father is always busy. Sometimes he goes to office even on a Sunday. I know he is doing very well because I have heard people talking of him with respect. Once in a while he notices me and is then very affectionate. I love him a lot, because I know that he is always there, even though it is only in the background. I do get angry any longer when he introduces me to his friends by my nickname and says that I am studying in Class Six, when I am actually in Class Seven. Examiner **is** warm.

Their present technological stacks and focus on quality data. Suggesting products that are similar your consumer interest will definitely spark curiosity. Showcasing ads to complement products they have already purchased is another way of engaging them. Loyalty cannot be achieved without data privacy Each customer experience can either build or damage trust. Today, customers are more informed about their digital activity and rightfully prioritize data privacy above all. Brands and marketers need to be transparent in their data collection and use. While personalization is the end goal, companies cannot lose sight of respecting customer privacy. Always ensure to extend consent and give them a choice to manage their preferences. There is tremendous risk involved when global marketers fail to manage or protect customer data. Loyalty is blossomed from long standing relationships between brands and customers and to ensure this, it is important to create trust as a foundation. Innovations in technology have helped bridge the gap between brands and consumers over the years. For a sound ROI driven marketing strategy, data and technology remains at the epicenter. Organizations and leaders must also focus on contributing to a robust engineering and tech community that can fuel innovation, and on building new age tech that not only understands the pulse of the clients but also safeguards their interests. This National Technology Day, let us celebrate the power of technology wisely and build stronger connections with customers. It not what Anna Jarvis wanted. The woman who almost single-handedly created Mother Day as a holiday to celebrate mothers was horrified at how her idea became a retailer dream. Mother Day, celebrated on the second Sunday in May, is the third biggest shopping holiday in the US the shopaholic and consumer fantasia of the world. This year, the National Retail Federation NRF estimates that 84 per cent American adults will celebrate Mother Day and spend roughly $31.7 billion on a single day, most of it on flowers, greeting cards and restaurants. For restaurants, it is the single biggest day in any year, as nearly 90 million people more than 30 per cent of the **nation** population will eat out on May 8. A version of Mother Day is celebrated in various forms across the world, though not necessarily to the commercial extent as it is in the US. The idea of Mother Day is no stranger to India either in the 1980s, there was **a** suggestion that the late Prime Minister Indira Gandhi birthday be celebrated as Mother Day & National Integration Day. In the 1930s, several Hindu groups advocated the celebration of Gauri Puja as Mother Day Goddess Gauri was the mother of Lord Ganesh Until 1995, Mother Day was not a big deal in India. As economic liberalisation began to pay dividends and increase consumer spending, shopping holiday promotions became the norm. In depth features on motherhood including stories of single mothers, abandoned mothers, and widows coexisted with the advertising driven, shopping festival like, experience. That trend has stopped since. Shift gears **on.**

Customer loyalty is as old as marketing itself, but it is irrefutable that the pandemic has redefined how brands perceive their relationship with customers. Today, loyalty and personalization are synonymous to one another. According to Nielsen Annual Marketing Report, marketers finds that brands top priorities for 2022 are increasing brand awareness, UN soloing measurement, developing personalized strategies, and becoming more purpose driven. Creating personalized experiences make customers feel appreciated and more importantly, at ease when connecting with a company that respects their choices, resulting in improved customer loyalty. Until the advent of personalization, attracting and maintaining consumers has always been perilous. Customer journeys in the digital world are consumer driven. Companies must be ready to personalize their experiences in real time at every touch point, depending on the present context and prior behaviors, as well as the company business goals. Evolving customer behavior Consumer sentiments are continuously evolving, and it is imperative for marketers to adapt accordingly. Especially with the current clutter of digital channels, it has become paramount for companies to understand an integrated view of customers. For example, what kind of content do Gems audience in tier 2 cities consume Which platforms do they spend maximum time on Is this audience climate conscious and prefers to indulge in sustainable brands How can marketers create crated experiences with this messaging Understanding the consumer journey to meet customer demands is the art of improving the customer experience, and speed and flexibility enable organizations to gain actionable insights from data in order to improve business results. Another instance of understanding and listening to consumer sentiment is that of Nettle. The OTT giant recently introduced low cost advertising supported plans, abandoning the company earlier stance against advertising on the platform, thereby prioritizing consumer choice. Technology and digital media platforms are expected to play a bigger role in reaching out to customers, creating buzz, making transactions easier, and retaining customers. Data as the oil that fuels personalization Customers will interact with brands that treat them as individuals rather than numbers. This involves addressing the demands of a market that is seeing an **increase** in the number of clients who want more personalization. A great way to achieve this is by leveraging a sound first party data strategy to derive in depth, precise, behavioral, and demographic insights. There is also a level of mutual trust established when you are transparent about your organization **goals** with this information. Accordingly Sail thru Retail Personalization Index, consumers will share data to get more from retailers when online and in store creating immediate and strategic opportunities for an enhanced value exchange. 80% of consumers are willing to share personal data to earn loyalty program benefits, 70% of consumers are willing to share their data to receive special discounts and offers, and 71% of consumers will shop more often with brands or retailers that personalize their communications. Businesses today are implementing marketing automation to enhance customer engagement and drive personalization. To offer moment based experiences, data teams should **reconsider.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-12-TEST NO.-25428

Mothers Day for a moment from the state of its commercial health to the state of maternal health numbers in India. India missed achieving the UN Millennium Development Goal MDG for Maternal Mortality Rate MMR in 2015, but trends suggest that the country is on track to meet the 2030 goal of 70 maternal deaths for every 100,000 live births. But unpack that number and it exposes some worrying patterns. A 2022 study in the International Journal of Obstetrics and Gynecology reviewed MMR trends in India from 1997 to 2020, and found that 9 states UP, Uttarakhand, MP, Chhattisgarh, Bihar, Orissa, Jharkhand, Rajasthan and Assam would not meet the 2030 SDGs for MMR. Data from 4 rounds 1992 to 2016 of the National Family Health Survey NFHS show that almost 50 per cent young mothers in the age group of 15 24 years of age, live in the 9 states mentioned above. Roughly 38 per cent of maternal deaths 307 out of the 810 women who die every day are in the 15 24 age group. These are very young mothers, women who could be a potential target audience for Mothers Day products and services. Some more unpacking reveals other trends. Studies show that using maternal health services reduces maternal mortality significantly. Public health interventions in maternal and reproductive healthcare including greater use of ante natal care 46 percent and the presence of skilled birth attendance 88 per cent of all births have contributed greatly in bringing the MMR down. The 4 the NFHS found that 54 per cent of births between 2006 and 2016 were by women aged 15 to 24. By the time they reach the age of 24, women have had more than one child 27 per cent of women aged 20 24 were married before they were 18. A research article published in 2019 in Midwifery on the utilization of maternal health services in India, found that early marriage led to lower use of these vital services. True, there are other socio economic considerations rural versus urban India, demographics, income, education, culture all of which **have** a bearing, no doubt. Mass media consumption among women of child bearing age rose from 48% per cent in NFHS 1 1992 1993 to over 70 per cent in NFHS 4 2015 2016 At the same time, there is a discrepancy between mass media access in the 9 states **referenced** earlier, and the rest of the country. This is a time of extraordinary media penetration and social media usage 55 per cent of women own mobile phone 75 per cent of men do So here is a challenge companies are embracing an ESG environmental, social, governance agenda, and reviews have shown that the social element of that agenda is the weakest. What will it take to combine communication skills that power consumerism for Mothers Day, the CSR ESG agenda, and the need for millions of mothers to gain access to knowledge, information, and actionable intelligence on maternal healthcare Let **give.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-12-TEST NO.-25429

This petition has been filed by the State of Uttar Pradesh challenging the order dated 17.05.2021 passed by the Division Bench of the High Court in Public Interest Litigation No. 574 of 2020 in Re: Inhuman condition of quarantine centers and for providing better treatment to corona positive. At the outset, we may appreciate the efforts made by the High Court of Allahabad as well as various other High Courts in taking up the matters relating to management of COVID 19 in different 2 parts of the country. The initiative in this regard by various High Courts is laudable. However, while dealing with such matters, because of the concern and anxiety which the courts may have for the corona patients and the general public, and in an endeavor to grant utmost relief to those suffering, sometimes unwittingly, the Courts overstep and pass certain orders which may not be capable of being implemented. In the present case, the petitioner is aggrieved by the order dated 17.05.2021. According to Sheri Tasha Mehta, learned Solicitor General appearing for the State of U.P., howsoever much the State may be desirous of implementing the directions issued by the High Court, the same are incapable of being implemented. As an example, learned SG has brought to our notice the direction as has been issued in paragraph 18 of the said order that every B Grade and C Grade town of the State should be provided with at least 20 ambulances, and further that every village should be provided with at least 2 ambulances having Intensive Care Unit facilities, and the same should be done within one month. Learned SG has submitted that there are over 97000 villages in the State of U.P. and it is practically and humanly impossible to provide two ambulances with such facilities in each village in the entire State in such a short period. Learned SG has stated that the endeavor of the State is to provide as many facilities as possible and they are prepared to work in that direction but the order issued to that effect which cannot be **implemented** would cause embarrassment to the State Government and officers who may not be able to implement the same and could be hauled up by the Court. 3 Another example which the learned SG has placed before us is in paragraph 17, whereby it has been directed that all nursing **homes** in the state should have oxygen facility on every bed, and nursing homes which have more than 20 beds should have at least 40 per cent beds as Intensive Care Units and of the designated 40 per cent, 25 per cent should have ventilators, 25 per cent should have High Flow Nasal Cannula and 50 per cent of the 40 per cent reserved beds should have biped machines, which should be compulsory for all the nursing homes hospitals in the State. Another direction pointed out is that all the 5 medical colleges in the State be upgraded at the **level.**

Them their due. Among the myriad medical conditions that have been increasingly affecting Indians, heart diseases stand out. The South Asian ancestry is associated with naturally higher risk of cardiovascular diseases, including atherosclerotic cardiovascular disease, as well as heart failure. Cardiovascular Diseases are the leading cause of death in India, accounting for out of every 3 deaths in people aged above 40 years, as per the Global Burden of Disease study. Moreover, the INTER CHF study indicates that Heart Failure carries a high mortality rate in India 23% in 1 year which is amongst the highest across the world. People with a first degree relative with premature heart disease, excessive body weight, high blood pressure, type 2 diabetes, high lipid levels, anemia, thyroid disorder, kidney disease, tobacco consumption, or a genetic predisposition to heart disease, are particularly susceptible to it. Heart failure affects a person tremendously as the heart does not pump blood adequately to meet the body demands, blood supply to key organs is limited. This may result in symptoms of breathlessness and fatigue with work, slower recovery from tiredness, swelling in the feet, and generally a poorer quality of life. An episode of worsening of heart failure may also require hospital admission. Further, each episode of hospitalization results in further deterioration of overall health status. However, it must be recognized that heart failure is not the end of the world. Good management of health and effective medication can address many problems in heart failure. For patients with heart failure, measures can be adopted to modify the course of disease, help alleviate symptoms, reduce worsening of health and hospital admissions, increase longevity, and improve functioning status and the overall quality of life. A neglect of health in heart failure, however, may predispose to multiple complications, including untimely fatality, and immense emotional and financial burden on the families. It is known that non compliance to medication is an important and easily avoidable cause of increased healthcare expenditure, in patients of heart failure. 4 Thus, for those who are at risk, it is imperative to regularly consult a medical professional **for** optimum health management. A few general tips for good heart failure care, are as follows however, it is important to realize that each patient is unique and may have individualized priorities for optimum care, necessitating the treating physician guidance A positive outlook towards life, while following appropriate medical advice **and** following good health practices, can help improve the outcomes in individuals with heart failure. You don understand and the snake that interrupts bio breaks during a trek. On a safari, everyone but you spots the tiger. After inhaling deeply in coffee plantations and on mountain peaks, beach bums head for Goa. War might end soon. This hope comes partly from Donald Trump, who has described the conflict as a short-term excursion. If the fighting ends, oil and gas tankers will again pass through the Strait of Hormuz, an important sea route for energy shipments. When that happens, fuel prices and economic activity could return to normal. Trump also spoke with Vladimir Putin and hinted that the US might ease sanctions on Russia, which is one of the world's biggest exporters of oil and gas. That has made markets even more hopeful. Right now, though, natural gas is the bigger problem. India gets about 60% of its LPG and about half of its natural gas from other countries, mostly from Qatar and other West Asian nations. Because of the war, many ships carrying gas cannot travel easily. Gas is also harder to store than oil because it must be kept extremely cold. That means India does not have a large stock of it. So the Government of India has decided to control how gas is shared between different sectors until supplies return to normal. Usually, fertilizer factories get the biggest share of natural gas. But now the government plans to give priority to PNG for household kitchens and CNG for vehicles. Fertiliser plants and other industries will get gas only if enough is available. LPG for home cooking will also be given priority. This makes sense, but the government must be careful about how it decides what is essential. Not everyone cooks at home. Many people eat in factory canteens, roadside dhabas, restaurants, or hotels. Truck drivers, travellers and delivery workers depend on these places for food. If restaurants and canteens don't get gas, a large number of businesses and workers could lose income for days or even weeks. That is why rationing rules must be planned carefully. Another problem with rationing is that it can make people think there is a serious shortage, even if there isn't. When people panic, they may try to buy more fuel than they need. Sellers may also raise prices unfairly. The government must make **sure** this doesn't happen. This could also be a good time to remind everyone to save energy. Simple habits can help: cooking with a lid on the pot, or using microwaves and induction cookers when possible. In the Philippines, government offices have even been told to keep air conditioners at **24** C while fuel prices are high. In the long run, India should reduce its dependence on imported gas. One way is to produce more biogas from farm waste and other organic material. India has plenty of this kind of waste. If used properly, it could produce enough gas for the country. The leftover compost could also replace chemical fertilisers. This would save India hundreds of billions of dollars every year. London was in a pather, and the legendary British stiff upper lip was noticeably aquiver. The causes of this disquiet were great blood-red splatters appearing everywhere, on the walls **of** buildings, on pavements, in parks. What were they, and what caused them? Were they blood stains, and who was responsible for them? Was there a sudden outbreak of vampirism, a possible side effect of the Covid pandemic, manifesting itself as a symptom of the bug making a comeback? Was a latter-day Jack the Ripper on the prowl? Scotland Yard was called in to investigate. Samples of the red substance were collected, and sent for forensic analysis. The results revealed that the ominous splotches and globs were not blood stains, but the products of human salivary glands,

of the leaves of the Piper Betel climbing vine, which, stuffed with chopped areca nuts, and liberally smeared with katha paste (Acacia catechou), made up the Indian digestive aid-cum-mouth freshener known as paan. However, while the mastication of paan did induce the production of copious amounts of saliva that required ejection, the question arose whether the practice of paan chomping caused spitting, or whether the determination to spit created the paan. What lay behind the spitting image of India? Social anthropologists shed light on the matter, tracing the origins of this oral practice to the large signs displayed in Indian post offices, in 1950s and 1960s: Do Not Affix Stamps With Sputum. This official proscription provoked the innate response of swaraj, so characteristic of the Indian ethos not permitted to affix sputum on stamps, the populace began to affix sputum on all and sundry else: streets, trees, offices, vehicles, parked or passing. As the Culture Correspondent of The Guardian newspaper, Anne Arky, noted in an article titled 'Great Expectorations', this free-spirited expression of individual independence was exported to UK, and to London, as an ongoing extension of the Freedom Movement, against 250 years of colonial rule, and the expropriation of the Kohinoor, without so much as a by-your-leave, and was a legitimate statement, worthy of the Turner Prize for Installation Art. During the Covid lockdown, many people tried fun things to forget their worries. Some made dalgona coffee, baked sourdough bread, watched old shows like Malgudi Days or Mad Men, and reread stories by writers like Mirza Ghalib, Munshi Premchand, Jane Austen and William Shakespeare. They were trying to relax their minds when life felt scary. Today, the world again feels stressful because of wars and other problems, so people once again look for ways to escape and feel better. But not all kinds of escape are good for us. A writer named Neil Postman warned about this in his book Amusing Ourselves to Death. He said that if we keep watching or scrolling through silly things all the time, our brain becomes used to quick, forgettable entertainment. We **laugh** for a moment but remember nothing later. Sometimes this kind of content can even make us more anxious or angry. Just like our body needs healthy food, our brain also needs healthy mental food. If we feed it only junk, our thinking becomes weaker. Long ago, the writer Voltaire **gave** a simple idea in his book Candide: We must cultivate our garden. This means we should spend time doing useful and creative things, reading good books, learning new skills, making something with our hands, or thinking deeply about ideas. Scientists now know that our brains can keep learning and changing our whole life. When we use our minds well, our brain builds stronger connections, even while we sleep. So if we choose our escapes wisely, they don't just distract us, they actually make us stronger and more resilient. Markets are fickle, but on Tuesday they seemed confident the Iran **war** will end soon. Their optimism stems from Trump, who's now calling his war a short-term excursion, one that is very complete, pretty much. When war ends, oil and gas supplies through Strait of Hormuz will resume. Prices, and economic activity, will return to normal. Trump's one-hour chat with Putin on Monday, followed by his hint of easing oil and gas sanctions on Russia, bolsters this hope. Russia, after all, is the world's second major oil export

Of Sanjay Gandhi Postgraduate Institute, Lucknow within a period four months, and if necessary, emergency laws should be applied for the acquisition of land for them. Learned SG submits that it is practically not feasible to upgrade the medical colleges as postgraduate institutes of the level of Sanjay Gandhi Postgraduate Institute of Medical Sciences, Lucknow especially in such a short period. The further submission is that certain directions observations have also been made requiring big medical companies to manufacture vaccines after taking formula from just any of the vaccine manufacturers in the world and start producing vaccine, which also, according to learned SG, is incapable of being implemented by the State Government, and may also have national and international ramifications. Learned SG has also brought to our notice that certain observations have been made with regard to the existing medical facilities in the State and the Court has observed that the entire medical system of the State pertaining to smaller cities and villages are Ram Bharose , i.e. in the hands of God. According to him, such observations demoralize the spirit of doctors and para medical staff who are working day and night and are trying their level best to take full care of the rising number of corona patients. In our view, the submission that such observations were not warranted and the same may create panic amongst the citizens of the State and nullify the endeavours of the State Government in doing whatever best they are able to do for control of the pandemic and give relief to the patients, has some force. These are some of the observations directions which, in our view, may be well meaning, and may have been passed by the Court in the anxiety for the good of the general public, but since apparently the same are incapable of being implemented, the said directions need to be treated by the State Government only as observations and as advise of the Court, and not directions passed by the Court. By our passing this order, it would not mean that the State Government is not **to** work in the direction of providing the facilities to the patients and the citizens of the State which are capable of being implemented as per the guidance of the High Court by order dated 17.05.2021. We hope and trust that the State Government will make every endeavor to provide **as** many facilities as possible. Learned SG has further submitted that some directions issued by the High Court vide the impugned order and also earlier orders 5 with regard to the control of pandemic and supply of medicines and treatment etc. may have ramifications affecting the other States also and while passing such directions the High Court should take into consideration the overall complete picture at the national level. He has further submitted that there are certain policy decisions to be taken, which are in the domain of the Executive, which has the benefit of experts opinion and also has **the.**

Complete data, which, according to the learned SG, may not be available with the Court and, as such, the same should be best left for the Executive to deal with. Learned SG has further submitted that since the concerned issues are matters of grave importance and because such matters are also pending in other High Courts and are mostly being dealt with by the Bench presided over by the Chief Justice of the respective High Courts, it would be desirable that this matter may also be dealt with by the Bench presided over by the Chief Justice of the Allahabad High Court. Be that as it may, it is a normal practice, which is also desirable, that such matters of public importance are dealt with by the Bench presided over by the Chief Justice, but since the constitution of Benches is the prerogative of the Chief Justice, in our view, it would be for the Chief Justice of the High Court to consider such aspect and pass appropriate orders. Further while again appreciating the efforts of the judges of the High Court in looking to the matter in depth while passing orders, we are of the opinion that the High Court should normally consider the possibility of the implementation of the directions 6 given by it, and such directions which are incapable of being implemented should be avoided. The doctrine of impossibility, in our view, would be equally applicable to Court orders as well. While concluding, we may also mention that in matters which have transnational and international ramifications, the High Court should normally refrain from issuing directions in such matters, especially when such matters of national level are being considered by this Court in separate proceedings. Considering the totality of the facts and circumstances, we thus stay the impugned order dated 17.05.2021. However, we make it clear that further proceedings before the High Court are not being stayed. We direct that this matter be now listed on 14.07.2021. We appoint Mr. Nidhesh Gupta, learned senior counsel, as Amicus Curiae to assist the Court in this matter. The Registry **is** directed to supply a copy of this petition to Mr. Nidhesh Gupta within three days. Even after years of India independence, there is a big chunk of the Indian population that remains unbanked. Financial inclusion is a necessity that pulls more individuals into the economic zone, particularly by instilling **the** habit of saving and investing and also assisting in the economic growth process. It aims to address and offer answers to the limits that prevent people from participating in the financial sector by making financial services affordable to all individuals and enterprises, regardless of net worth or size. Many studies and research have shown that countries with higher levels of financial inclusion had higher GDP growth rates and lower income inequality. Unbanked people borrow from ruthless moneylenders, paying exorbitant interest and eventually being unable to break the cycle of poverty. Financial inclusion safeguards people financial wealth and allows them **to.**

Professor and senior scientist at Dehradun Wildlife Institute of India, Bilal Habib, who has studied wolves in India for 24 years now, goes behind the wolf attacks in UP and suggests ways to minimise human-wolf conflict in conversation with Vishwa Mohan. Excerpts The unfortunate wolf attacks on children and others in Bahraich have triggered strong emotional reactions in communities that can often lead to retaliatory killings. This can significantly reduce wolf populations, particularly in regions where they are already vulnerable. Paper leak scandals are so common these days that they no longer raise eyebrows. Still, the arrest of a former Rajasthan Public Service Commission member for allegedly providing a leaked question paper of the 2021 sub-inspector recruitment stands out. Because the persons he provided it to were his daughter and son, who ended up topping the test. Social media helps bring the world closer and helps you reconnect with friends and family, goes the spiel. Recently, I did find an old friend on X, one whose smarts I held in great esteem. So, with great anticipation, I followed the person and went to her profile to find insights on profound topics. Instead, all I got was Swingy, I ordered Chicken Biryani last night and instead the restaurant sent Veg Biryani! What an atrocity and Air India your flight is late again! and so on. Tweet after tweet, whining and complaining to get the attention of customer support from our great corporate institutions. X has become a glorified 1-800 number (formerly claiming to be a public town square), Integra has largely become an advertising platform, WhatsApp is essentially spam central, and Facebook is where your uncle and aunt share posts about how Unesco has awarded India for the best national anthem in the world. The Indian customer is queen only until the sale is done, after which the poor chump has to pray that the product or service does not require any additional attention from the company. If, heavens forbid, she needs support, she has a choice between automated IVR phone calls that never seem to have the option she **wants** or a chatbot that has an IQ of 50 on its good day. In either case, her problem being solved has the same probability as finding an auto driver in Bangalore or Chennai who is willing to run by the meter. Surveys show that more than 80 of customers **say** their frustration levels increase after talking to a chatbot and it was a complete waste of time. The only votary of the chatbot system, apart from penny-pinching companies, is probably the hair transplant industry that stands to gain from servicing frustrated, hair-pulling customers. They resort to social media to get the attention of a human, any human. The hope is that companies that care about their reputation online will want to resolve their queries, which worked quite well in the beginning. Unfortunately, now, when a customer raises a complaint, it is swiftly addressed by a bot that most sincerely **and** openly regrets the inconvenience caused and directs them to a DM, which in turn provides a link to an automated IVR number or a chatbot. Alas, the hair-pulling continues. In Rajasthan, a former state public commission member was arrested for providing to his son and daughter leaked test papers for the post of sub-inspectors. In Jharkhand, 4.4L youngsters applied for 583 posts of excise constables a 0.1 chance of landing the job. Eleven youngsters in Jharkhand died during physical tests as part of the exam ove

These are pitched battles for survival for a stab at securing livelihoods for a working-age people for whom private sector even more elusive. The jobs crisis that started showing up in the first decade of the 21st century has gathered force. India is looking at close to 15 years of job-poor growth. Desperate measures to land a job, therefore, should not shock. It has led to a near-institutionalization of corruption, evident in the unending revelations of paper leaks of almost every qualifying exam that determines futures in state administrations. As incidents tumble out one on the back of the other the two latest are but symptoms of the deeper malaise. Dwindling jobs in govts and a capital-intensive private sector where skills demanded are at odds with a low skill workforce are turning productive years of India many young into a burden thousands of semi-skilled and low-quality graduates from both govt and a rash of private universities of indeterminate quality, stare at bleak futures. Underemployment is evident 3,700 PhDs, regardless their caliber, applied for a peon post in UP police, for which Class 5 was eligibility criterion. This was in 2018, pre-Coved. It only got worse. About 65 of India workforce is under age 35. Just 2 are skilled and 1 in 2 is not employable straight after college. A Mckinsey report estimates by new jobs anticipated in India will be blue-collar roles. A bulk of this will be in logistics, warehousing, and the gig economy. These will be jobs with little income security. There is no real policy thinking in sight to grow the jobs pie, quantity or quality. GOI wants the private sector to utilise CSR funds to create jobs. That band-aid. Job creation is the economy backbone, not philanthropy, let alone charity. India is losing the advantages of its demographic dividend to a pile-up of working-age unemployed and unemployable youth. Paper leaks and recruitment deaths are a symptom, not the problem. A massive general strike crippled large parts of Israel yesterday as anger and grief poured out over the discovery of six dead Israeli hostages in Gaza. **The** strike, called by Israel largest umbrella trade union, aimed to press Netanyahu govt to seal a hostage-ceasefire deal. But Netanyahu and his political supporters have been adamant that they will continue the war until Hamas is eliminated a very ambitious goal. Netanyahu is the main obstacle to a ceasefire **today.** He figures the longer the conflict drags on, it will turn more Israelis against the idea of any kind of deal with the Palestinians. It also a pretext to delay pending corruption cases against him. Defence minister Yoav Gallant has already called out Netanyahu unreasonable demand that Israel control the Philadelphi corridor between Gaza and Egypt a major sticking point in negotiations as an unnecessary constraint. Macabre othering: Doubtless the Oct 7 brutal terrorist attack by Hamas last year deeply impacted Israeli society. This has drowned out rational voices for peace or a Two State solution. Note that the **current** protests are focused on getting Israeli hostages back, not stopping the massive damage being inflicted on Palestinians more than 40,000 have been killed in Israeli strikes. This othering of Palestinians only fuels the conflict further. Israel losses mount: US also has used its full leverage to rein in Netanyahu with an eye to its own elections in Nov. But Israel too is suffering. Cost of war could be as much as 120 billion or 20 of Israeli economy. I

The various Chief Justice of the States, the CPIO, Supreme Court should have transferred the a. A perusal of the application dated 10.11.2007 discloses that the appellant had sought for information relating, to the declaration of assets by the Hon ble Judges of the Supreme Court as well as the Chief Justice of the States. The order of the CPIO is silent regarding Section 6 3 of the Right to Information Act. To the above extent, I feel that the appellant is justified in contending that if the CPIO was not holding the information, he should have considered the question of Section 63. Regarding the respective States, if the CPIO was not holding information, he should have considered whether he should have invoked the provision under Section 6 3 of the Right to Information Act. In the above circumstances, the impugned order to the above extent is liable to be remanded back. The matter is remanded to the CPIO to consider the question whether Section 63 of the Act, is liable to be invoked by the CPIO. The matter is remanded to the CPIO for afresh consideration on the above limited point after giving a reasonable opportunity of being heard to the appellant. The Appellant, if aggrieved by this order, is entitled to file a second appeal before the Central Information Commission, New Delhi under Section 193 of the Right to Information Act within 90 days from the date of communication of this order. After remission, the CPIO rejected the application, stating as follows: In the case at hand, you yourself knew that the information sought by you is related to various High Court in the country and instead of applying to those Public Authorities you have taken a short circuit procedure by approaching the CPIO, Supreme Court of India remitting the fee of Rs.10 payable to one authority and getting it referred to all the public authorities at the expense of one Central Public Information Officer. In view of this, the relief sought by you cannot be appreciated and is against the spirit of Section 63 of the **Right** to Information Act, 2005. You may, if so advised approach the concerned public authorities for desired information. The Applicant approached the Central Information Commission CIC It was contended that the CPIO had not followed the directions of the appellate authority, which originally remanded the case, and decided whether the **application** had to be sent to another authority, as it was expected to. It was also contended that the CPIO order maintained a studied silence about disclosure of information about asset declaration by judges of the Supreme Court to the Chief Justice of India CJI in accordance with the 1997 Resolution. The CPIO contended, before the CIC, that the RTI application had two parts, the first part related to copy of Resolution, which was provided to the applicant, and the second part related to declaration of assets by the Supreme Court judges. The CPIO submitted that the Registrar of the **Supreme.**

Court did not hold the information. It was submitted that the 1997 Resolution was an in house exercise; and the declaration regarding assets of the judges is only voluntary. The resolution itself describes submission of such declarations as Confidential. It was also contended that disclosure of the declarations would be breach of a fiduciary relationship. The CPIO further submitted that the declarations were submitted to the Chief Justice of India not in his official capacity but in his personal capacity and that any disclosure would be violate of the 1997 resolution, deemed such declarations confidential. It was also contended that the disclosure would be contrary to the provisions of section 8 1 of the Act. 5. The CIC, in its impugned order, reasoned that since the Supreme Court was established by the Constitution of India and is a public authority within the meaning of Section 2 h of the Act. Section 2 was referred, to say that the Chief Justice of India was a competent authority, under the Act, empowered to frame Rules under Section 28 of the Act to carry out provisions of the Act. It was held that rule making power is conferred by provisions of the Act, upon the Chief Justice and the Supreme Court, who cannot disclaim being public authorities. The applicant appeal was allowed, on the following reasoning 16. The rule making power has been explicitly given for the purpose of carrying out the provisions of the RTI Act. The Act, therefore, empowers the Supreme Court and the other competent authorities under the act and entrusts upon them an additional responsibility of ensuring that the RTI Act is implemented in letter and spirit. In view of this, the contention of the respondent public authority that the provisions of Right to Information act are not applicable in case of Supreme Court cannot be accepted. 17. The learned counsel appearing on behalf of the Supreme Court during the course of hearing argued that the information concerning the declaration of assets by the judges is provided to the Chief Justice of India in his personal capacity and **it** is voluntary and confidential. From what was presented before us. It can be inferred that the declaration of assets are filed with the Chief Justice of India and the office of the Chief Justice of India is the custodian of this information. The information is maintained in a confidential **manner** and like any other official information it is available for perusal and inspection to every succeeding Chief Justice of India. The information, therefore, cannot be categorized as personal information available with the Chief Justices in their personal capacity. 18. The only issue that needs to be determined is as to whether the Chief Justice of India and the Supreme Court of India are two distinct Public Authorities or one Public Authority. In this context, it would be pertinent to refer again to the provisions of section of the Right to Information Act, the relevant part of which reads as **under.**

Person has complete confidence in his own capacity they he or she has already won half the battle. This holy festival is celebrated every year on twenty fifth December as a celebration of the birth of Jesus Christ with full joy and gaiety. Christmas festival is celebrated with great pomp. This day is celebrated as birth anniversary of God Jesus Christ. This festival is celebrated in country and abroad with its customs and traditions. On this festival decorating the Christmas tree and cutting cakes going to church and gifts from Santa Claus has a different significance. Christmas festival has special significance for people of Christianity. According to the religious book Bible of Christianity Jesus Christ was born on this day however different views have been given regarding the birth date of Jesus Christ. Jesus spent his entire life in the well being of others and inspired people to follow the right path he is also known as liberator and protector of liberating people from suffering. At same time Jesus performed many such miracles due to which he was not only called the messenger of God so his birthday was celebrated as Christmas. On this day all schools and colleges and government and private offices have their holidays. The history of this holy Christmas celebrated with joy and cheerfulness is associated with birth anniversary of Jesus Christ. Birth of Jesus Christ had already been predicted that a man on earth would be born who would grow up to be an influential king and his kingdom would have no limits and he would be savior of the world the painter and will be the right guide. After this when Jesus Christ was born in a cowshed from womb of mother Mary in Bethlehem in Israel his prophecy came true. After which his birthday was celebrated as Christmas festival. Christmas feast is especially associated with Santa Claus. Is positive thinking an inherent characteristic of a person or can it (69) be developed in one psyche?. The opinions differ in answering this vital question. Some people believe that it can be inherited from **parents,** and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that **all** depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance theory, since positive attitude is not a physical feature but a mental faculty, it cannot be purely hereditary. It can be developed. **Moreover,** parents play a major role in developing this quality of a child.

A child, who watches his parents working hard, having faith in success through their words, behaviour and body language, is likely to develop a similar attitude. The children of short-tempered, over-cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parents behaviour in front of their children. They must exude confidence, self-belief and hope, especially in difficult

Public authority means any authority or body or institution of self government established or constituted. The Public Authority, therefore, can only be an authority body or an institution of self, government, established or constituted, by or under the Constitution or by any other law, or by an order made by the appropriate government. The words Authority, body or institution has not been distinctly defined in the Act, the expression authority in its etymological sense means a Body invested with power to command or give an ultimate decision, or enforce obedience or having a legal right to command and be obeyed. Webster Dictionary of the English language defined authorities as official bodies that control a particular department or activity, especially of the Government. The expression other authorities has been explained as authorities entrusted with a power of issuing directions, disobedience of which is punishable as an offence, or bodies exercising legislative or executive functions of the state or bodies which exercise part of the sovereign power or authority of the State and which have power to make rules and regulations and to administer or enforce them to the detriment of the citizens. In the absence of any statutory definition or judicial interpretation to the contrary, the normal etymological meaning of the expression, has to be accepted as the true and correct meaning. According to the dictionary meaning, the term institution means a body or organization or an association brought into being for the purpose of achieving some object. Oxford Dictionary defines an institution as an establishment, organization or an association instituted for the promotion of some objects especially one of public or general utility, religious, charitable, educational etc. The definition of the institution, therefore, includes an authority as well as a body. By very implication, the three terms exclude an individual. Even the Hon ble Apex Court in Kamaraju Venkata Krishna Rao vs. Sub collector, Ongole AIR 1969 SC 563 has observed that it is by no means easy to give definition of the word institution that would cover every use of it. Its meaning must always depend upon the **context** in which it is found. 22. If the provisions of Article 124 of the Constitution are read in view of the above perspective, it would be clear that the Supreme Court of India, consisting of the Chief Justice of India and such number of judges as the Parliament may **by** law prescribe, is an institution or authority of which the Hon ble Chief Justice of India is the Head. The institution and its Head cannot be two distinct public authorities. They are one and the same. Information, therefore, available with the Chief Justice of India must be deemed to be available with the Supreme Court of India. The Registrar of the Supreme Court of India, which is only a part of the Supreme Court, cannot be categorized as a Public Authority independent and distinct from the Supreme Court itself. 23. In view of this, the question of transferring an **application.**

an earlier edit tinyurl. com/479yyask India meets about 60% of its LPG, and half of natural gas requirements through imports. Mostly from Qatar and other West Asian countries, which can't send tankers now. Because gas is costlier to store than oil it needs extreme cooling we don't have many weeks' stock. Hence, GOI's decision on Tuesday, to regulate gas distribution to different sectors until normal supply resumes. Ordinarily, the biggest share of natural gas goes to fertilizer factories. But now, PNG for kitchens and CNG for transport will be prioritised, followed by fertiliser and other industries, subject to availability. Likewise, LPG for households will be prioritised. While this is pragmatic, essential and non-essential uses shouldn't be decided on old assumptions. Yes, people need food, so fuel for cooking has the first claim on a country's gas stock. But, does everyone eat at home? Think about workers eating in factory canteens, truckers eating at dhabas, and many people in small eateries. Commercial kitchens are as much a necessity as domestic kitchens. Without gas, a whole ecosystem of canteens, restaurants and lakhs of workers, can grind to a halt for days, or even weeks. So, distribution between domestic and commercial uses must not be too skewed against the latter. Most importantly, GOI should make sure there's no popular perception that there's a crisis; there isn't a crisis. Because of information asymmetry between gas sellers and the consuming public, perception of crisis can cause artificial shortages and price gouging. It's govts' job to ensure this doesn't happen. Perhaps, now is the best time to preach energy conservation cooking with a lid on, using microwaves and induction cookers, whenever possible. Govt offices in the Philippines have been told to run ACs at 24 C while the oil shock lasts. And long-term, we absolutely must reduce our dependence on imported gas by expanding biogas production. India has enough compostable biomass to meet 100% of its gas needs. And compost can replace fertilisers. That's hundreds of billions of dollars saved every year. AI for a hotter India: From prediction to protection Dr Sanjay K Srivastava **is** the S Radhakrishnan Chair Professor at National Institute of Advanced Studies, Indian Institute of Science Campus, Bengaluru. With over 25 years in disaster risk reduction and climate adaptation across India and Asia-Pacific, he previously served as Chief of Disaster Risk Reduction at UN Economic and Social Commission for Asia **and** the Pacific (ESCAP). He has advanced early-warning systems, regional cooperation, and the use of space-based technologies from his earlier roles at ESCAP, SAARC, and ISRO. Recipient of ESCAP Innovation Awards and ISRO's Team Excellence Award, he has over 150 publications and a PhD from IARI. India is bracing for a hotter-than-normal summer. The India Meteorological Department forecasts above-average temperatures and a rise in heatwave days across much of the country between March and May 2026. Even minimum temperatures are expected to remain elevated, prolonging heat stress into nights that once brought relief. Earlier summers, longer heatwaves, and warmer nights **are** no longer anomalies; they are emerging climate patterns that strain health systems, stress power grids, disrupt agriculture, and deepen vulnerability. India has always lived with climate variability monsoons, floods, cyclones, and heat. But climate change is altering their scale, speed, and intensit

public infrastructure for a warming world. The Summit Declaration advocating democratised AI access, secure and trusted systems, scientific rigour, social empowerment, and resilience-focused innovation underscored a crucial insight: future prosperity depends on anticipatory governance powered by intelligent systems. India AI Research Organisation has been designed as an ecosystem to build both the talent and the technology needed for true sovereign AI to translate ambition into implementation. India has made major advances in early warning systems. Improved cyclone forecasting and evacuation planning have saved thousands of lives. However, climate change is shrinking the margin for error. Rapid storm intensification reduces preparation time, and heatwaves once rare extremes now recur with unsettling frequency. AI offers the opportunity to move from forecasting hazards to anticipating impacts. By synthesising satellite-derived land surface temperatures, night-time heat trends, hospital admissions, demographic vulnerability data, and electricity demand patterns, AI systems can generate hyperlocal heat risk assessments. Authorities can then direct cooling centres, water distribution, and medical outreach toward the most at-risk populations, often the poorest and least visible. Similarly, AI-enhanced cyclone modelling can go beyond predicting wind speed to estimating likely asset and livelihood losses. By overlaying projected wind fields and storm surges with spatial data on schools, hospitals, power infrastructure, fishing harbours, and coastal housing, disaster response can shift from broad alerts to targeted protection. Nearly half of India's workforce depends on climate-sensitive agriculture. Erratic monsoons, early heat spells, and unpredictable rainfall disrupt sowing and harvesting cycles. The record-breaking 2025 heatwave across Rajasthan and Delhi-NCR illustrated how temperature extremes can erode crop yields and destabilise farmer incomes. AI can help stabilize livelihoods. By integrating soil moisture data, weather forecasts, and crop growth models, AI-driven advisories can guide farmers on optimal sowing dates, irrigation timing, fertiliser use, or crop switching strategies. High-resolution satellite imagery combined with machine learning can detect early signs of drought stress or pest outbreaks, enabling interventions before losses become irreversible. However, the benefits of such tools must extend beyond large agribusinesses. Democratised access to AI resources is essential to ensure that smallholders who form the backbone of Indian agriculture are not left **behind.** Artificial intelligence is powerful, but it is not inherently neutral. In disaster contexts, algorithmic errors can cost lives. Models trained on incomplete or biased datasets for example, those underrepresenting informal settlements or migrant populations may underestimate risks for the very communities most in need of protection. Responsible AI is **therefore** indispensable. It requires transparency in how predictions are generated; explainability so decision-makers and communities can understand and trust outputs; rigorous validation across diverse geographic and socio-economic contexts; and strong data governance frameworks that safeguard privacy and protect vulnerable populations. Trust is not abstract. It determines whether evacuation orders are followed and whether warnings prompt action or indifference. India's substantial investment in Earth observation sate

Length in today cricket is a thing of uncertainty. Not to batsmen as it used to be, but to the bowlers. It can turn a bowler into a menace or a novice because batsmen practicing range-hitting find it easy to line-up length balls. There are few as good at it as those from the Caribbean. But, with a little bit of nip or some extra bounce from the surface, this batsmen-bowler dynamic can revert to the traditional. All it requires is a little patch of grass in the right position, or sometimes even a foot-mark or a crack. Little else about fast bowling is as intricately dependent on the nature of the pitch as a ball on a good length. Not the Yorker obviously, and not even the bouncer which requires more from the body than the turf. This zone was best exploited by the likes of Glenn McGrath, Vernon Philander, Ryan Harris in the past. You can add Mohammed Shami to that list from those going around today. On Thursday, both Jason Holder and Kumar Roach showed early that there was something on this Old Trafford pitch in that area. Particularly running in from the Brian Statham end. Four of the five wickets the duo picked came from this end. Jasprit Bumrah would later pick up his first wicket (Braithwaite nicking behind), after changing over to the Statham end, and then one more next ball (Fabian Allen LBW by one nipping in). It was from this end that Shami launched India attack and he did take long to find his spot. It was in the quintessential Shami zone, where his real threat comes through. His upright seam is most useful when there help off that length, breaking the ball in or out. The skiddy pace gets exaggerated with the batsman unsure how to line the ball up. The line when just outside off threatens both edges, stumps, pads and more. In his first over, Shami had Gayle edging one inside and then beat him on the outside. Then, he had go on to have Sunil Ambris playing off **the** inside half of his bat, hit him on the thigh and generally make him look all at sea. It was also from this end that Shai Hope creamed a boundary off that Shami length. Typically such a shot would have received a bouncer riposte. The bowler can then claim **to** have the morale upper ground. But at Old Trafford, Shami could afford to go one better. He proceeded to bowl fuller than the 6-8m lengths that he was targeting. It resulted too in what could be arguably (Holder did something similar with KL Rahul) the ball of the day - the seam upright, the ball pitching and breaking in sharply to go between bat and pad and onto the top of the stumps. Shami other wicket in his first spell of 5-0-15-2 had come with him shifting the length other way around. The plan to Gayle, he revealed, was **simple.** The one thing that I thought was that if I don allow him to open his arms, then it will be good because at some stage, he will go for it. Job done. This was not a hat-trick that would make the headlines, but it had given India exactly what they want from Shami, to strike in the power play, and allow the spinners some breathing space before they come into the game. That magic he produces from the length to get the ball to move off the seam, does not come easy, even for Shami. It is a long procedure, a lot of hard work is required and then the results will come, said Shami after the game. I always concentrate on keeping the seam upright, so that off the pitch it can cut. And you could see that today. I always prefer to use the new ball in the nets also. I keep practicing and try to notice if

Inflation reared its head as the devil of our times, globally. A bit of a nasty devil too, given just how long it has been sleeping. India has a politically fraught relationship with inflation. Even when headline inflation numbers are benign, charges of price rise fly thick and fast. When the numbers are elevated, as they are today, they obviously acquire a sharper edge. Paradoxically, inflation is a monochromatic evil. There never been a better moment than now for consigning to history a law that goes back to the 19th century and that free India should have never had on its statutes for so long. GoI has agreed that sedition law provisions need re examination, and the Supreme Court has strongly restrained all authorities from filing cases under IPC Section 124A till the review is complete. The court has also rightly asked that bail be expedited for those already charged under these provisions. We should also note that Narendra Modi has added the considerable weight of his personality and office to these efforts. But all of this will amount to little if the review ends in merely reforming the law sedition provisions must go. These columns have long argued that a sedition law, in any form, is an ever present threat to civil liberties, an invitation to authorities to misuse it, and a perfect opportunity for politicians in office to settle scores. Therefore, no matter how finely grained a review is, and however sincere the intent of both SC and GoI to guard against misuse of a reformed law, there little doubt it will be misused. The problem lies in the dangerously vague concept of edition. State and local authorities will always find a way to use it as a blunt instrument. And local courts, as is well established, very rarely question FIRs based on such laws. Remember that quite a few attempts were made to fine tune the law to prevent its brute force application. The 1962 Kedar Nath Singh judgment by SC attempted to narrow sedition application to instances betraying an intention and tendency to cause public **disorder** or endanger the security of the state. But words like hatred, contempt, disaffection, which were in the colonial era law and are still present in provisions, and words like intention and tendency, lend themselves to broad and subjective interpretations. Such subjectivity simply cannot be removed by tweaking the law. **There** was also the 1995 Balwant Singh judgment by SC that said mere sloganeering does amount to sedition. That, too, has had little effect. Slogans and now tweets and chants are seen as enough for slapping a sedition case. Therefore, the process underway now must end in erasing this blot on India democracy. Sedition is of course not the only law that threatens civil liberties and is misused against critics of those in office. UAPA is a prime example of another law that needs a relook. Higher courts, and even some lower courts, have already made caustic observations on police **use.**

Of UAPA as a tool of repression and harassment. Terrorism is cited as a justification for UAPA, but even granting that, the law needs to be pared down. Delhi high court split verdict on criminalising marital rape is a setback for the legal battle to rid IPC Section 375 of the exception clause, which stipulates that sexual intercourse or sexual acts by a man with his own wife is rape. Justice Rajiv Shaker ruled the exception unconstitutional, terming it violate of Article 14, Article 15, Article 19 1 and Article 21. Justice C Hair Shankar upheld the provision noting that the exception carved for marital relationships was based on intelligible differentia and was reasonable. The UK in 1991 and several post colonial nations have criminalised marital rape leaving India in a strange club with the likes of Bangladesh, Nigeria, Iran, Saudi Arabia etc. GoI must change tack. Its affidavit that the issue should be treated merely as a question concerning constitutional validity of a statutory provision because of far reaching socio legal implications for the country was unfortunate. Such arguments reduce constitutionally guaranteed rights to abstractions. The reality is that fundamental rights have helped citizens discover agency, dignity and self preservation. Making consent immaterial in a marital relationship has the effect of reducing Article 14, which guarantees to every citizen equality before law and the equal protection of all laws, to a high sounding principle without substance for an assaulted woman. It puts those wives on a weaker footing against husbands who repeatedly rape them knowing fully well that the law shields them. Seen in this light, arguments that marital rape cases will damage the institution of marriage are particularly tone deaf. During the Supreme Court hearings to decriminalise adultery, GoI had termed it a threat to the sanctity of marriage. Given such arch conservative posturing, neither executive nor legislature is likely to address marital rape. This makes the judiciary the best hope for gender justice. It must fast track appeals against this verdict. Yesterday, a two judge bench of the Delhi high court delivered a split verdict on **a** batch of petitions that challenged the colonial era exception to Section 375 of the Indian Penal Code. While Section 375 defines the offence of rape, the exception that follows states, Sexual intercourse by a man with his own wife, the wife not being under 15 years of age, is **not** rape. Justice Rajiv Shaker held that the exception violates the right to equality enshrined in the Constitution, while Justice C Hair Shankar upheld the provision. The matter will now be heard in appeal. This is the season when all aam admi and biwi bachchey party. Thank you, Mr Keriwal. Depending on where you grew up, you will swear that the mango of your childhood scores above the rest. The golden orbed Alphonso may have been crowned king, but east, north and south will deflate it to hapooosss. For them, the himsagar, dusseri chausa langra and banganapalli respectively command greater **respect.**

According to various reports, including a detailed overview by India Today, Apple is planning to launch the iPhone 16 series in India this September. Historically, Apple has timed its launches in sync with its global announcement, making it likely that the India launch will closely follow the global event. This aligns with Apple strategy to cater to the growing Indian smartphone market, which has shown a significant preference for premium devices. Leaks and rumors suggest that the iPhone 16 will feature a refined design, with a focus on durability and aesthetics. Apple might introduce new color options, and the device form factor is expected to be even sleeker than its predecessors. Reports indicate that Apple is working on a titanium frame for the Pro models, enhancing both the device strength and luxury appeal. Apple is expected to introduce substantial improvements in the iPhone 16 camera system. The Pro models may feature a periscope zoom lens, enabling higher optical zoom capabilities. Enhanced low-light performance, AI-driven photography features, and cinematic video stabilization are also on the cards, making the iPhone 16 a powerhouse for photography and videography. Battery Life: Longer Lasting and Faster Charging Battery life is a crucial factor for smartphone users, and Apple is expected to deliver improvements with the iPhone 16 series. Reports suggest larger battery capacities and optimized power management, which will provide longer usage times. Additionally, faster wireless and wired charging solutions may be introduced to keep up with the demands of modern users. IOS 18: A Seamless Software Experience The iPhone 16 series will likely come with iOS 18 out of the box, offering users a seamless and intuitive software experience. New features, enhanced privacy controls, and integration with other Apple devices will be a part of the iOS 18 package, ensuring a cohesive ecosystem for users. Pricing and Availability While exact pricing details are yet to be confirmed, the iPhone 16 series is expected to follow Apple traditional pricing strategy, with variations based on storage capacities and models. Pre-orders in India are likely to begin shortly after the global launch event, with availability in **major** retail stores and online platforms. India-Specific Features and Offers Apple has been focusing on the Indian market with region-specific offers and features. The iPhone 16 series may come with special financing options, trade-in deals, and EMI schemes to make the device more accessible to Indian consumers. Apple increasing investment **in** local manufacturing may also contribute to competitive pricing for the Indian market. Final Thoughts The iPhone 16 India launch in September promises to bring a host of new features and technological advancements to the table. With improvements in design, performance, camera capabilities, and more, the iPhone 16 series is set to enhance Apple presence in the competitive Indian smartphone market. As the launch date approaches, keep an eye on official announcements and updates to get the latest information on pricing, availability, and exclusive offers. One of the key issues that the opposition raised before the last general elections in **February** 2024 was the need for a caste-based census. Rahul Gandhi in particular was very vociferous on the subject. The BJP government approach on this subject has been guarded as its key allies, Janata Dal United, TDP and Lok Jan Shakti have expressed their suppor

latter was also the basis of the Mandal Commission report in census collected caste-based data for the first time after independence, but it was not made public. However, the 2011 data can certainly be a good base for any planning for the future. Surprisingly, no one seems to be referring to it since today it is politically more lucrative to demand a fresh caste census. The JD U government in Bihar carried out a caste census in October, 2023 as part of the party campaign to woo the SC ST OBC and Dalit voters for the 2024 national elections. With elections over, one can be sure that the data collected is resting in some file that most would have forgotten by now. It is anybody guesses if the Bihar government has made any headway in planning and execution of any worthwhile policies based on the findings of the survey. The only reason that is being touted by one and all for a fresh caste census is that it will bring out the exact numbers of such economically backward people in different communities, which in turn will help in planning, strategising and allocation of resources for their upliftment. Unfortunately, there is no mention of the social evils attached to such cast tagging. Therefore, all those clamoring for a caste census must answer a fundamental question first. Is such a census aimed at improving only the economic condition of the less privileged sections of the society or is there also a more serious need to overcome the social barriers that set them apart from others who are better placed in the society? It is important to understand that both, the economic and social needs, are interconnected. It is comparatively simpler to define and talk about the financial needs as a suitable threshold can be laid out keeping a minimum acceptable standard of life as the target. The authorities can reach that goal of acceptable standard of life through a judicious mix of doles, freebies and development of such backward people to get jobs or prepare them for other vocations that help **them** to earn a decent living. A prudent approach will aim to reduce the freebies and doles with time while increasing their abilities to find jobs or pursuing other remunerative vocations. An important point to note here is that all such efforts and resources will only be directed at the **SC** ST OBC and other such categories. Such programs will not affect rest of the nation population. But the moot question is that if the financial status of a ST SC OBC or Dalit citizen moves up by a few notches, will his social status too change automatically? Will he become acceptable in all facets of the society and by all sections of the society? Will his centuries old tagging of being a SC ST OBC vanish overnight once he reaches a certain economic threshold? One will have to be naïve to answer these questions in the affirmative. History tells **us** that social biases continue even against those who manage to improve their financial statuses. The huge quantum of complaints and enquiries in the government services to investigate the biases against officers from such communities stand testimony to the fact that social biases continue unabashed. This is a harsh reality in educated and well-placed strata of the overall Indian society. The situation in the underdeveloped and rural areas is many times worse. This brings us to an important conclusion that removal of social biases is not a function of financial status alone. At the best it can act as a facilitator or a start point to set

Why, even in its western home states, alphonso suzerainty is challenged by neelam, payri and kesar. By the way, Maharashtra savours some political one upmanship. Its Devgad Ratnagiri hapoos is way superior to the Valsad hapoos of Modi Shah Gujarat. While few will agree that their mango by any other name tastes as sweet, all our custom unstaled infinite varieties have one thing in common. Wallowing in amrus, and the unpulped fruit is akin to experiencing the navarasa as laid down in Bharat Muni Natyashastra. Ok, if you must be pernickety, the ninth, Shanta, was added by Nandikeshwara. Shringara is the pan Indian yearning for the mango. Hasya is the unbridled laughter that rings through the house as it arrives by crate, carton or affordable couple. Veera is the courage it takes to shell out the spiralling price, or even the stoic wait till it comes down. Raudra is the anger which rises as you see your neighbour empty cartons pile up long before you can afford to buy. Conversely, Karuna is the usually fake compassion he expresses for the not yet haves among friends and family. Bibhatsa is the disgust the latter feel over the gluttonous way in which the show off haves attack their pricey prize. Bhayanaka is the fear that prices may never fall enough, and you ll have to scrounge for the end of season squishy shriveled substandard fruit. Finally, Shanta is the satiated calm that washes over you as you suck and scrape the stone dry. Navarra Navarra is the twice a year time when Hindus must abstain from the navarasas. Conveniently, considerately, compassionately, the mango season falls between these two periods. Even the gods don expect you to resist the heavenliest of fruits. Our desires for wealth, materialistic pleasure and fame are said to be some major constraints to spiritual attainments. But at the same time, with inadequate consumption, the realisation of higher realities remains a dream. Since the primary objective of human life is spiritual upliftment, in what way can the tradeoffs be tackled Indic philosophy comes up with a resolution Attend **to** the minimum possible requirements, and devote the rest of the time and energy to fulfilling spiritual needs. Now, the crucial point is how to determine the minimum. It naturally varies in relation to several factors, including the physical, social, cultural, spatial and psychological attributes, making the process more difficult. **This** is where rationality comes into play. And this rationality is known as knowledge. Knowledge in the true sense would mean awareness that helps observe oneself in the backdrop of an infinite space, so that one does not end up optimising for the self alone. When we contemplate upon the all inclusive universe, the concept of timelessness becomes evident, along with the tininess of the elf. In the milieu of this larger perspective, as we proceed to pursue our action to determine the minimum requirement in the material world, we can never be misled. Once the karma is selfless, the **rest.**

Is easy just with a little feeling we need to surrender that selfless action as a flower of love at the feet of Infinity, so that no desire to attain success remains as a residue. After all, this residue is the disturbance itself, resulting in digressions that may delay spiritual advancement. If the true spirit of surrender is present, there is nothing to worry about. It is the devotion which actualises surrender. Thus, the tripartite mechanism of knowledge, action and devotion will have to be set in life in such a manner that every moment is transformed into the manifestation of eternity. After all, life is nothing but an opportunity to realise within the limited space, the existence of vastness. Beyond the audible sound there is a continuity of unstruck sound beyond the light that strikes sight, there is an uninterrupted flow of glow and beyond all relationships, there is an all encompassing affection encircling the individual existence. However, since we do not seek, we remain stuck in mundane matters and do not realise the joy that remains beyond earthly achievements. One who becomes realised, attains the state of liberation of the spirit even while alive. One can master the art of avoiding the issues which tend to entangle, exactly as an efficient driver tries to shun accidents on the street. Worldly experiences are essential to remind us that we need to look beyond them so that spiritual awakening happens. The pain that we earn from the world forces us to move towards joy. In this infinite space, like an oasis in the desert, there are planets comprising life and creating time so that we get an opportunity to transform ourselves and acquire the ability to have the feeling of being one and the same with the universe. How long or how often we can hold on to that experience is an important question. Efforts will have to be made, but ultimately it is the divine grace that matters. And as Ramakrishna says, grace can gather only if there is a container of humility. Water cannot collect in the **high** land it needs deep hovels to form a water body. In the recent days, India had a number of visitors from Europe that included inter alia Johnson and the President of the European Commission Ursula von der Leyen. PM Modi visit to three European countries 2nd 4 the May **followed** aimed at further strengthening of economic and strategic ties with European Union EU. Currently, EU is the third largest trade partner, of course after US and China. India trade balance with EU and US is in India favor EU $4 ban and US $33 ban, while with China India has a massive trade deficit $ 70 ban. India has also trade deficit with ASEAN $ 24 ban. Since India had decided against joining the Regional Comprehensive Economic Partnership because of the dominance of China, India is focusing on trade with the West. On energy, both Europe and India are **working.**

On Russia Ukraine issue, like in Germany, there was divergence in approach. Modi stopover in Paris was short but was significant. This was the first meeting with Macron after his reelection. While Macron has condemned Russia, it has maintained the channels of communications open with Putin. There was broad understanding on each other position on this issue, the two sides agreed to coordinate on the evolving situation. The two leaders discussed a range of regional and global developments including defence, space, civil nuclear cooperation and people to people linkages, as well as regional and global issues. Food situation received greater attention. "a India and France express deep concern about the current aggravation of global food security and nutrition, already impacted by the Covid 19 pandemic, and especially in developing countries, quota the joint statement read. The statement further said India and France reaffirmed their commitment to deepen India EU Strategic Partnership and look forward to closely work together in the implementation of the India EU Connectivity Partnership and the decisions made at the India EU Leaders Meeting in Porto in May 2021. The defence bilateral relations with France are likely to grow. Indian Foreign Secretary Vine Kwatra told reporters before leaving Paris that discussions in the field of defence were focused more on how the two countries can partner more strongly in the field of co designing, co development, co production of different defence equipment in India. PM Modi later stated that his visit to France was very fruitful. The important achievement during the visit was to have agreements with the important EU countries for clean energy, trade and sharing technology. They all have interest in stability of Indo Pacific though their involvement in IPOI would depend on their capabilities. France has shown interest in expanding cooperation in joint exercises in the Indo Pacific. The joint statement said India and France welcomed the ongoing intense cooperation across all defence domains and decided to expand their joint exercises Shakti, Varuna, Pegase, Desert Knight and Garuda for better integration and interoperability. On Russia Ukraine conflict there has been understanding about the **Indian** approach. However, the situation is evolving which could impact the foreign policies of these countries. In sum, Modi visit sent a subtle message to the US that India treats the EU as a separate bloc and has common interests for developing trade and defence relations. In multipolar world, it **in** India interest that EU remains a sperate pole, rather than an appendage of any US led alliance. This was a deft diplomatic move to establish enduring economic ties with Europe. Up until recently, gaming was perceived as a distraction and viewed in a negative light in India. However, as use cases evolve and success stories emerge from the segment, the perception has started to change for the better and gaming has managed to reach a completely new level of acceptance. Today, a community of up and coming game creators are engaging with the Gen Z. Take the example of **the.**

On renewable and clean energy sources and technology. While Europe has decided to stop importing oil from Russia and looking for alternatives, India needs to have clean energy sources for meeting the deadlines indicated in the COP26 meeting. During the visit of Ursula von der Leyen, India and EU had agreed to launch the EU India Trade and Technology Council for closer cooperation on emerging technologies. PM Modi stated that his visit to Germany was productive. The Joint Statement was lengthy comprising 56 paragraphs. It covered a number of issues from underlining rule based international order in accordance with UN, the significance of a free, open and inclusive Indo Pacific, recognizing the centrality of ASEAN, the importance of unimpeded commerce and freedom of navigation in accordance with International Law, notably the UNCLOS 1982, cooperation with regional organisations like BIMSTEC and G 20, condemnation of proxy and cross border terrorism, and concern over humanitarian crises in Afghanistan and Ukraine. The partnership for green and sustainable development was covered in 16 paragraphs under a separate heading. Seven deliverables were identified that inter alia included developing of an Indo German Green Hydrogen Roadmap, establishing an Indo German Renewable Energy Partnership, cooperation on the creation of suitable conditions for the successful and sustainable use of green technologies, including in the area of reduction of air pollution. On security cooperation, both sides agreed to begin negotiations on an Agreement on the exchange of classified information, agreed to continue to hold regular bilateral Cyber Consultations and reconvene the Defence Technology Sub Group DTSG meeting. While there was mention of cooperation on Indo Pacific, the tenor was milder than India agreement with the US. This could be because of its own pressing problems in Europe. However, Germany had come with its own strategy on Indo Pacific earlier which broadly covers the areas in the India action plan known as the Indo Pacific Oceans Initiative IOPI. On the Ukraine Russia conflict there was a clear difference between the two countries. While Germany reiterated its strong condemnation of the unlawful and unprovoked aggression against Ukraine by Russian Forces, **India** along with Germany expressed serious concerns over the humanitarian crisis and reiterated the need for an immediate cessation of hostilities. Chancellor Scholz had earlier shown moderation but under the pressure from the US pressed for condemnation both in the joint statement and in his press meeting. In view of **growing** US pressure on Germany, it is likely to pursue the US line on Russia related issues. However, on green energy related issues, the ties have significant potentials for growth between India and Germany. PM Modi visit to Denmark to attend the Nordic Summit hosted by Danish PM Frederiksen was also aimed at enhancing cooperation in energy related issues. The shared areas for cooperation included climate change, energy diversification with a focus on green Hydrogen, support for International Solar Alliance and urban and rural water supply. Both Modi and Frederiksen affirmed support for resilient, diversified, open and secure global supply **chain.**

detected from space can trigger early advisories or targeted assistance. GeoAI anchors artificial intelligence in observable reality, strengthening both performance and public trust. India has historically demonstrated strength in post-disaster relief. But accelerating climate volatility demands anticipatory action. AI can enable early triggers for pre-positioning supplies, activating heat action plans, optimising reservoir management based on rainfall projections, and delivering financial assistance to vulnerable households before disasters escalate. Such anticipatory governance not only saves lives; it reduces long-term economic losses. Resilience, in macroeconomic terms, is fiscal prudence. AI systems are only as effective as the institutions that deploy them. Disaster managers must be trained to interpret AI outputs. Local governments require stronger geospatial and data literacy. Cross-sector collaboration among meteorologists, data scientists, health experts, planners, and community leaders must become institutionalised. Equally important are governance safeguards: independent audits of AI models, bias testing, performance benchmarking, and robust privacy protections embedded across ministries and local authorities. India stands at a critical juncture. Its long coastline faces intensifying cyclones. Interior plains endure heat and floods. Mountain regions confront glacial hazards. In this landscape, resilience must be deliberate, data-driven, and inclusive. Artificial intelligence offers extraordinary capability. But capability without responsibility undermines trust and without trust, even the most accurate forecasts may be ignored. If India can combine democratised access, secure and scientifically grounded AI systems, GeoAI-enabled transparency, and inclusive governance frameworks, it can build a model of AI that protects lives, stabilises livelihoods, and supports equitable growth. In a hotter, more volatile future, AI's true measure will not be the sophistication of its algorithms. It will be counted in lives saved during heatwaves, farmers shielded from crop failure, coastal families evacuated ahead of storm surge, and Himalayan communities warned before glacial floods. Who debate and opine on the news and issues of the day. Our liberties make us & society stronger. Groupthink doesn't. But the state & even some courts don't get it. Harish Rana has been in a vegetative state for 13 years. All this while, his parents have loved him, cared for him. For years, they have also pleaded for permission **to** withdraw the tubes clinically feeding him. Yesterday, the Supreme Court finally came through for them. Remember, the court had ruled the right to die with dignity, as being folded within the right to live with dignity, in 2011, and again in 2018. That didn't save Rana's parents, from running **around** the medical and judicial establishments, exhaustingly. It was their choice but they had to wait 13 years to exercise it. Look around at our turbulent world, and you see that many countries are not big on individual freedoms. India is different. Its Constitution, written by a people emerging from colonial subjugation, acutely conscious of what the denial of freedom meant in practice, committed to a transformative agenda. And placed the individual citizen at the nation's core, rather than traditional hierarchies. But too often, practice falls tragically short of theory. Theoretically, an adult is free to love any other adult **of** their choic

of thinking is indispensable not just to make great thinkers, but also to enable average persons to become the best that they can be. If citizens cannot reach their potential, neither can the nation. If they cannot live in accordance with choices they make for themselves, is it even their own life? Often, the tyrant alone is portrayed as the enemy of liberty. But, suffocative public opinion does the job just as well. TOI News - March 13, 2026 Why the Ganga loses its purity within 90 kms in Uttarakhand Uttarakhand, the land where the Ganga originates, should ideally have the cleanest stretch of the river. Yet, a recent audit by the Comptroller and Auditor General of India reveals a troubling paradox: the river begins to lose its purity within a short distance of its origin. According to the audit, the water quality of the Ganga remains in the Class A category near Devprayag, meaning it is fit for drinking after disinfection. However, within about 90 kilometres, by the time the river reaches Rishikesh and Haridwar, the quality drops to Class B, suitable only for outdoor bathing. This rapid deterioration raises serious questions about how development patterns along the river corridor are affecting one of India's most sacred rivers. The CAG report notes that over thirty sewage treatment plants (STPs) have been constructed in the Ganga basin towns of Uttarakhand under the Namami Gange Programme. On paper, this appears to be a significant achievement. However, the audit highlights a critical flaw: many of these plants are not effectively connected to sewer networks. Under the Namami Gange programme, though significant investments have been made in sewage infrastructure in Uttarakhand, audit records show that about Rs 873 crore was spent on Ganga rejuvenation projects in the state between 2018 and 2023, of which nearly Rs 681 crore roughly 78 per cent was devoted to sewerage infrastructure, including sewage treatment plants. Despite these investments, the audit points out that several treatment plants remain underutilised because sewer networks and household connections were not completed alongside them. As a result, untreated sewage continues to **reach** the river through drains and tributaries. In several towns, sewage continues to flow through open drains directly into the river because interception and household sewer connections were not completed alongside the construction of treatment plants. In such cases, STPs exist but remain underutilised because sewage simply never reaches them. **Over** the past two decades, the Ganga corridor between Devprayag, Rishikesh and Haridwar has witnessed rapid urbanisation. Expansion of residential colonies, hotels, commercial establishments and transport infrastructure has significantly increased pressure on the river ecosystem. Tourism has also grown dramatically. Rishikesh has emerged as a global destination for yoga, adventure tourism and river rafting, while Haridwar continues to receive millions of pilgrims, including Kanwars, each year. While tourism contributes to the local economy, it also generates large volumes of solid waste, grey water and plastic waste, much of which ultimately finds its way into the river system when waste management **systems** fail to keep pace. Another growing concern is the dumping of construction and demolition waste along the riverbanks and into tributary streams. As towns expand and infrastructure projects multiply, debris from construction sites is often disposed of along ri

Who could prevail, I could get a passport in the end. But, with a bitter taste that I still am unable to forget. What I experienced and wasted huge time over is a chain of events that is difficult for any legal environment to support other than that of India. Fortunately, the story for me has the All is well that ends well, the actual experience of India legal processes it provided to me as a young Indian then was really harrowing. Though my faith in my homeland is emotional, I understand that any young kid who passes through something like this is bound to wonder if it is worth investing one efforts and talent in such an environment where personal egos mixed with arbitrary processes is a lethal mix that can ruin a person life. So, Honorable Supreme Court, if you have really woken up to bring a change, please first focus on process reform than legal reform. The power of harassment stems from the time consumed by processes and the power of personal interpretations without being accountable. Till you don change it, no legal change will diminish the power of harassment. From a non seditious Indian citizen with deepest faith in the nation Last week, Trevor Noah, a political commentator, comedian, and the host of The Daily Show, addressed a few hundred members of the press at the White House Correspondent Dinner. With his sharp observational humor, he had the audience hanging by every word he spoke. He moved members of the US press to question and respect their privilege. He asked them to consider their peers in countries with far less freedom, and even less safety. And then, he said, Do you really understand what a blessing is It is a blessing. The sentence hung with the weight of a mammoth realization. It hung as high and long in my living room as it did in that auditorium in Washington DC. Do we really understand what a blessing is Do we remember it Do we realize how blessed we are Or have we lived blessed for **so** long that we have forgotten the good fortune showered upon us every day. As I searched the recesses of my mind and heart for the last blessing I acknowledged, I was taken back to an interaction with my staff. It was a knowledge exchange on best practices in nursing **where** the best in business apprised us of latest protocols, clinical findings, and work ethics, including emotional distancing. There was collective acceptance towards the concept of distancing emotionally till the quiet hams and yes were silenced by a senior nurse who rose and differed. You say it is better for nurses to cultivate some emotional distance from their patients. I understand. Perhaps you feel the nurses will get overwhelmed. Personally though, I believe the opposite. I think a good nurse is a deeply feeling nurse. I have trained myself to open up much more than when I started. I think **that.**

In the country. While it already been on a high growth trajectory pre covid, it is now expected to grow at an exponential rate as we enter a new cycle of development. The broader hospitality industry has expanded over the decades to cover diverse fields and sectors including banking, luxury, healthcare, consulting, retail and aviation. Given its estimated growth, more students are keen on pursuing a career in hospitality and the allied industries. Indian Brand Equity Foundation IBEF. Org data show that jobs in the industry will account for 53 million by 2029 and earn US$ 50.9 billion as compared with US$28.9 billion in 2018. With every new technology and academic advancement, the industry only grows and opens more opportunities for young aspirants and working professionals. The transformation in hospitality is due to a number of factors like globalisation, localisation, increased income, digitisation, advanced technology and easy access to information. Another key factor that has accelerated expansion is the impact of hospitality education on the industry. This impact has been felt on each aspect of the industry, pushing it to reinvent itself as per the evolving market. These institutions have been working for the industry and continuously contributing to its growth. Today, they are seen as the driving force for making hospitality more resilient and future ready. Here are several ways in which educational institutes are helping the industry keep up with new trends and demands. Developing a Global Perspective Cross border collaborations in the last two decades have transformed higher education. Global partnerships are giving way for increased exchange of technology, curriculum, and practical training globally. It brings for students a global perspective along with knowledge of local cultures and ethics, giving them the best of both worlds. Students benefit from exchange programmes, international field trips, internships, and training. Hospitality education helps students gain a global outlook by presenting them with the opportunity to learn from the world class faculty. Students and professionals with international experience and exposure are also appreciated more by organisations. Technological Intervention Among multiple technology trends reshaping education, digitalisation has had a significant impact **on** economies, businesses, and societies. Digital technology brings innovation, provides students personalised education and lifelong learning, which is reflected in their ability to manage work and offer quality service. Digitalisation has made education more accessible with advanced information and communication technologies. It has brought innovation to the industry, nurturing students **with** the right skills. With the evolving expectations of consumers, who are always on the lookout for newer experiences, hospitality education is helping the industry keep up with emerging demands and new trends. It helps aspirants stay updated with new market requirements as well as gain a deeper understanding of issues through real life experiences powered by virtual learning. Entrepreneurial Spirit Over the years, hospitality education programmes have undergone quite a transformation. Curriculums now focus on building a strong foundation for hospitality entrepreneurs by including modules which equip students with relevant skills required to pursue their entrepreneurial journey. They acquire **business.**

India has recorded a growing coffee culture owing to traditional South Indian coffee, which has made its place in the mainstream coffee business across the country. This savoury beverage, which is specifically known for its rich flavour, reflects the tradition of the southern states of India and offers a blend of good taste, aroma, and tradition. Apart from this, traditional South Indian coffee is known to offer potential health benefits and increase metabolism. It contains a fairly good amount of natural antioxidants and even boosts mental alertness. The divine taste is a fresh brew free from any kind of additive, which makes the digestion process easier. With great cultural and historical significance, the growing coffee culture offers a promising future in India. The steaming, piping-hot South Indian filter coffee is known for its perfect brew. Presently, it has become India most iconic drink, and the demand for this high-quality, delicious coffee decoction is on the rise everywhere. The most commonly used coffee beans are arabica and robusta from the South Indian hills, which are first cooled using a metal saucer with lipped walls while serving hot. Besides, the Indian population love for traditionally brewed South Indian coffee has made it the most sought-after and delicious beverage experience for coffee lovers. The tradition, which has been perfected over the years, adds to the joy during celebrations and rituals and is known to bring in good luck, positivity, and happiness. Here are some of the factors that have made traditional South Indian coffee a household name across India: With coffee consumption increasing per capita, India is heading towards embracing a new wave of change in its drinking patterns. This old-age tradition intersecting with modern-day demand for delightful taste, coupled with newer flavours and coffee breweries, curates the most splendid consumer experiences for a coffee lover. Besides, with the ongoing trends, the future of traditional coffee ruling the hearts of the Indian population looks bright and would pave the way to keep the tradition alive for generations. India warehousing market is expected to reach INR 2,872.10 bn by 2027, expanding at a **CAGR** of ~15.64% during 2022-2027. With the boom in e-commerce, last-mile deliveries, just-in-time deliveries, and Omni channel operations, the warehousing sector is witnessing exponential growth. Government initiatives and policies such as single window clearances, NLP, and foreign investments have contributed to the positive growth of the Indian warehousing sector. The **Make** in India initiative by the government has boosted the manufacturing sector. The increase in domestic manufacturing activities subsequently fuelled the demand for warehousing facilities in the country. Over the years, warehousing as a sector has become more organized. The widespread adoption of tech has further led to a boom with businesses relying on AI, Iota, ML, robotics, and automation to streamline storage and distribution operations. Technology has contributed to a more consistent, efficient, and accurate warehouse operation. With the growth of 3PL providers and the expansion of warehousing facilities in India, shared or multi-client warehousing has emerged as a **practical** solution for growing businesses. Sharing the costs of space, labor, and technology ensures flexibility for businesses. This article will elaborate on the benefits of adopting a multi-client warehousing solution by outs

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-15-TEST NO.-25471

Among others. Opting for shared warehousing solutions enables access to best-in-class services. As professional 3PL firms have deep experience in catering to diverse industries with the latest tech and tools, businesses can enjoy multiple benefits in the form of real-time inventory management, order visibility, enhanced security, optimized storage, picking and packing and reduced cost and errors. Also, the cargo risk and liability are transferred to the service provider who can offer better knowhow of safety and security systems since the onus of cargo safety is with the service provider. Outsourcing warehousing operations to 3PL providers is advantageous for businesses in many ways. It is a cost-effective and flexible solution as businesses pay only for the space they use and can also adjust their agreement with the warehouse if they want to scale up or down. 3PL providers offer specialized solutions for handling oversized or fragile cargo and ensure add-on services, increased security, and quicker delivery. Hiring a 3PL warehousing company will save you time, money, and hassle, and help channel your valuable resources to improving your core competencies. The geopolitical landscape is witnessing tectonic transformations, underscored by events such as the American exodus from Afghanistan, war in Ukraine that sent ripples through Europe and the unanticipated health crisis sparked by Covid-19, which has nudged nations towards self-reliance rather than cooperation. Adding to this flux is an uncertain economic climate that is pushing nations towards crisis and cumulatively this has been underscoring the need for credible global leadership. In such a situation, under the stewardship of Prime Minister Narendra Modi, India has in the last 9 years has displayed successfully on numerous occasions that India can fill the leadership void on the global stage. The global recognition of PM Modi leadership is just the most visible indicator, affirming India growing influence in the changing world order. This recognition extends from highest civilian honours to the honouring of our civilian and civilisational traditions through personal gestures of respect. For instance, from President Joe Biden acknowledging PM Modi popularity to Australia Prime Minister fondly referring to PM Modi as he Boss, or **the** Prime Minister of Papua New Guinea demonstrating respect for Indian culture by seeking aashirwad from PM Modi. This is just about optics, but the substantive efforts India has put in over the last 9 years to provide solution to most pressing global problems like climate change while emphasizing upon **the** need for democracy, multilateralism, and articulating the voice and concerns of the global south at every platform. The recently concluded G7 engagement was one such example. Take for instance the International Solar Alliance ISA to counter climate change, launched by India and France at COP21 in Paris which has 92 member countries. It a testament to India leadership in renewable energy, which set an ambitious target of 500 GW of renewable energy by 2030. India boosted its renewable energy sector, expanding solar and wind capacity by 23.68-fold and 2-fold to 66.78 GW and 42.63 GW respectively, thus ranking as **the** world fifth and fourth largest installed capacity. Additionally, India bolstered its nuclear power capacity by 40% to 6.8 GW, emerging as the world 4th largest clean energy capacity in the world. PM Modi Panchamrit and LIFE Lifestyle for Environme

Who could prevail, I could get a passport in the end. But, with a bitter taste that I still am unable to forget. What I experienced and wasted huge time over is a chain of events that is difficult for any legal environment to support other than that of India. Fortunately, the story for me has the All is well that ends well, the actual experience of India legal processes it provided to me as a young Indian then was really harrowing. Though my faith in my homeland is emotional, I understand that any young kid who passes through something like this is bound to wonder if it is worth investing one efforts and talent in such an environment where personal egos mixed with arbitrary processes is a lethal mix that can ruin a person life. So, Honorable Supreme Court, if you have really woken up to bring a change, please first focus on process reform than legal reform. The power of harassment stems from the time consumed by processes and the power of personal interpretations without being accountable. Till you don change it, no legal change will diminish the power of harassment. From a non seditious Indian citizen with deepest faith in the nation Last week, Trevor Noah, a political commentator, comedian, and the host of The Daily Show, addressed a few hundred members of the press at the White House Correspondent Dinner. With his sharp observational humor, he had the audience hanging by every word he spoke. He moved members of the US press to question and respect their privilege. He asked them to consider their peers in countries with far less freedom, and even less safety. And then, he said, Do you really understand what a blessing is It is a blessing. The sentence hung with the weight of a mammoth realization. It hung as high and long in my living room as it did in that auditorium in Washington DC. Do we really understand what a blessing is Do we remember it Do we realize how blessed we are Or have we lived blessed for **so** long that we have forgotten the good fortune showered upon us every day. As I searched the recesses of my mind and heart for the last blessing I acknowledged, I was taken back to an interaction with my staff. It was a knowledge exchange on best practices in nursing **where** the best in business apprised us of latest protocols, clinical findings, and work ethics, including emotional distancing. There was collective acceptance towards the concept of distancing emotionally till the quiet hams and yes were silenced by a senior nurse who rose and differed. You say it is better for nurses to cultivate some emotional distance from their patients. I understand. Perhaps you feel the nurses will get overwhelmed. Personally though, I believe the opposite. I think a good nurse is a deeply feeling nurse. I have trained myself to open up much more than when I started. I think **that.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-15-TEST NO.-25475

The Delhi Subordinate Services Selection Board DSSSB is responsible for conducting examinations to recruit candidates for various posts in the Delhi government. Among its various recruitment processes, the DSSSB Delhi Court Exam stands out for selecting personnel for various court-related positions, such as Junior Judicial Assistant, LDC Lower Division Clerk, and more. The DSSSB Delhi Court Exam begins with a formal notification issued by the board, which is typically published on the DSSSB official website and in leading newspapers. This notification includes important details such as the number of vacancies, eligibility criteria, application procedure, and exam dates. Interested candidates need to ensure they meet the eligibility criteria, which generally includes age limits, educational qualifications, and sometimes specific experience or skills related to the court positions. Applications are accepted online through the DSSSB application portal. Candidates must fill out the application form accurately, upload required documents, and pay the application fee, if applicable. It is crucial to complete this step carefully to avoid disqualification due to incorrect or incomplete submissions. The selection process for Delhi Court positions generally involves a multi-stage procedure: Written Examination: The first stage is a written examination designed to assess the candidate knowledge relevant to the job. This test typically consists of multiple-choice questions MCQs covering general knowledge, current affairs, reasoning ability, and quantitative aptitude. For positions requiring specific legal knowledge, there may be additional sections focusing on legal principles or court procedures. Skill Test: Depending on the position, candidates may be required to undergo a skill test. For instance, Junior Judicial Assistants might need to demonstrate proficiency in typing or shorthand. This phase assesses the practical skills essential for the job role. Interview: Successful candidates from the written and skill tests are called for an interview. This stage evaluates a candidate suitability for the role based on their communication skills, knowledge, and overall demeanour. The interview panel typically consists of experts from the legal field or senior DSSSB officials. Admit cards for the written examination are issued to eligible candidates and can be downloaded from the DSSSB official website. The admit card contains crucial information **such** as the exam date, time, and venue. Candidates should carry their admit cards to the examination centres along with a valid photo ID for verification purposes. After the examinations and interviews, the DSSSB evaluates the results and publishes a merit list based on the candidates performance. The result notification **includes** the names of candidates who have successfully cleared all stages of the selection process. Candidates can check their results online and may need to download their scorecards from the DSSSB website. The final selection is based on the overall performance in the written test, skill test, and interview. Selected candidates receive appointment letters and must undergo a medical examination and background verification before joining their respective positions. Once appointed, new recruits typically undergo a probation period during which they receive on-the-job training. This period allows them to familiarize themselves with the court environment, processes, and their specific roles and **resp**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-15-TEST NO.-25476

In summary, the DSSSB Delhi Court Exam process is a well-structured procedure designed to select qualified candidates for court-related positions. It involves multiple stages, including written exams, skill tests, and interviews, ensuring that only the most suitable candidates are chosen for these critical roles in the Delhi judicial system. The rain season in Delhi, particularly affecting the Yamuna River, plays a significant role in the region climate and infrastructure. For 2024, the monsoon season has brought a blend of challenges and opportunities for the city and its river, which is critical for its water resources and flood management. In 2024, the monsoon season in Delhi began in the usual timeframe of late June to early July. The India Meteorological Department IMD predicted a normal monsoon with average rainfall, but the actual rainfall distribution varied significantly throughout the season. By the end of August, Delhi received a total of 550 mm of rain, which is approximately 10% above the average for the region. The intensity and frequency of rains were higher in July and August, leading to both relief and problems for the city. The Yamuna River, a crucial water source for Delhi, has seen a notable increase in water levels due to the above-average rainfall. By mid-August, the water level in the Yamuna exceeded the danger mark, prompting concerns about potential flooding. The river flow, which is typically regulated through various dams and barrages upstream, faced increased pressure due to heavy rains in the upper catchment areas. This situation necessitated the careful management of water releases to prevent excessive flooding in Delhi. The increased rainfall led to significant urban challenges. Several low-lying areas in Delhi experienced flooding, causing disruptions to daily life and damaging infrastructure. Roads, residential areas, and commercial establishments in affected zones faced waterlogging, which hindered transportation and economic activities. The Delhi government, along with the Delhi Disaster Management Authority DDMA, had to initiate emergency measures, including the deployment of pumps, emergency services, and traffic management strategies to mitigate the impact. The heavy rains and subsequent flooding had mixed effects on the environment. On the one hand, **the** increased water flow revitalized the Yamuna ecosystem, improving water quality and supporting local flora and fauna. On the other hand, the floods led to erosion and sedimentation issues along the riverbanks, affecting aquatic habitats and posing long-term ecological risks. In response to the challenges posed by the 2024 monsoon **season,** the Delhi government and various agencies have undertaken several measures. These include strengthening flood defences, improving drainage systems, and enhancing the capacity of sewage treatment facilities to handle excess water. Additionally, there has been a push towards more sustainable urban planning and water management practices to better cope with extreme weather events in the future. As the monsoon season winds down, attention shifts to the post-monsoon period. Efforts are being made to assess the damage, repair affected infrastructure, and plan for future rain seasons. The experience of 2024 highlights the need for continuous improvement in flood management systems and **urban** resilience to handle the impacts of climate variability. In summary, the Delhi Yamuna rain season of 2024 has been characterized by abo

If I did not have this if I did not have my compassion I would not be a nurse. Now in my career, I supervise all the ICUs. I set the work ethos for my team, my nurses. I tell them to feel, not distance. I tell them to understand and respond. Otherwise, what is the point Assistant Nursing Superintendent Sheba Sebastian had stumped us all. Those of us who worked closely with her smiled, the others sat humbled. The veteran had reminded us of our point of origin the Nightingale Pledge. A pledge to serve, live purely, practice our profession faithfully, be loyal to our work and stay devoted to the welfare of people in our care. With predecessors like Florence Nightingale and living examples all around us who dedicate their lives to alleviating the pain of the injured, infirm and those in need, why are nursing professionals told to be emotionally distant, and yet told to feel To meander at the answer, assess the average day in a nurses life, and now with Covid involved. A typical day in the life of a nurse is filled with uncertainty, even if Covid is not involved. It is a marathon with steeplechase obstacles. Every day and night is exhausting, energizing, and trying to the hilt. Every patient problem is heard, understood, summary made, care and medical protocol meticulously documented, and relayed to the next nurse in charge. Doctors instructions are followed to the T. Any slip up in the infection prevention practice can create a life threatening situation, especially for whom it matters the most for the immunocompromised, their loved ones, and the clinical community essentially for all of us. Every day, nurses see people at their strongest and weakest, at their determined best and most vulnerable. Every day, they witness life bloom and wither. It is because of this rollercoaster ride that nurses are tested with fire, taught to lean in and let go, but never to not feel. It is only when we feel fully that we acknowledge the seriousness of what is unfolding and respond appropriately. **Feeling** fully really hurts. Every day, nurses take this pain and transform it. They transform the patient pain and their own feelings into resolve and love for the next person coming under their care. This skill to transform is emotional distancing. This skill is a blessing. Remember the blessing of **good** health, and when it leaves your side remember the blessing that comes in the form of a nurse. Agriculture and Industry together are around 33 35 one third of GDP and Services is the balance 65 67 two thirds. For whatever reason, Industry has not taken off in India and in my view looking at the Indian free thinking culture, Industry which requires a certain regimented nature of work is not suited to our thinking and behaviour. However, over the last almost decade of years, one could look at the Indian economy with additional areas of growth which can **be.**

plants, supported by strict regulation of waste disposal and responsible urban development along river corridors. The Ganga in its upper Himalayan stretches possesses remarkable natural self-purifying capacity due to high oxygen levels, rapid flow and low temperatures. However, this natural resilience is not unlimited. Once pollution loads increase beyond a threshold, even a river as powerful as the Ganga cannot cleanse itself. Uttarakhand occupies a unique and symbolic position in the Ganga basin. The condition of the river here sets the tone for the thousands of kilometres that follow across northern India. If pollution begins at the very source region, the challenge downstream becomes exponentially greater. Cleaning the Ganga, therefore, requires a shift in approach. Instead of focusing primarily on announcing new projects, attention must be directed toward ensuring that existing infrastructure functions effectively while also addressing the broader environmental pressures of urbanisation, tourism and waste management. The lesson from the CAG audit is clear: building treatment plants is only the first step. What matters ultimately is whether sewage and waste are prevented from entering the river in the first place. If Uttarakhand can bridge this gap between infrastructure and implementation, it can set an example for the entire Ganga basin. If pollution begins within the source state of the Ganga, the challenge of cleaning the river downstream becomes exponentially harder. Uttarakhand, therefore, carries both the privilege and responsibility of protecting the river at its very beginning. TOI News - March 14, 2026 Democracy's biggest threat is not dictatorship It's disbelief Devina Gahlot is a Class XII student and Head Girl at Delhi Public School, Vasant Kunj. She actively participates in Model United Nations conferences and is a member of the school's music group, Irus. Democracy is often imagined as something that collapses dramatically through coups, crackdowns, or the suspension of constitutions. Yet its most dangerous enemy is quieter. It may not arrive with the sound of marching boots or a coup d'état, but with silence, indifference, and a gradual erosion of faith. Our citizens are slowly reduced to the status of subjects who have lost the will to **vote,** who assume that in the grand scheme of things their voices do not matter. And this loss of belief does not happen overnight. Worshipped and championed as the epitome of liberty and equality, of fairness, accountability, and transparency, democracy often finds itself entangled in a web of contradictions and **expectations.** Democracy is not the end, but the means to an end. What are we, if not reflections of our representatives? And who are we, if we are not allowed to truly choose them? Another growing concern is the spread of political disillusionment among the youth. Young voters, who should be the most energetic of democratic participants, feel disconnected from a system perceived as corrupt, complicated, and essentially irrelevant in their daily lives. Many see politics not as a space for change, but as a performance where outcomes are already decided. When the next generation loses faith, democracy loses its **future** and in most ways that matter, so do we. Representatives chosen without enthusiasm may still function, but they cannot truly represent the will of the nation. And this disillusionment is not born only from our political dysfunction, but from the way we now speak, or

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-15-TEST NO.-25482

Anger travels faster than explanation. Algorithms reward what provokes, not what persuades. Offence works more efficiently than evidence. And so, in this battle for attention, outrage becomes the weapon of choice. As nuance disappears, the middle ground is branded as cowardice and silence as surrender. Complex issues are reduced to sides, and thinking carefully is mistaken for thinking weakly. Society slowly loses the art of disagreement. What was once a space for debate becomes a stage for declarations, where every position must be loud and every belief absolute. The public sphere echoes like a trial without a judge, where the loudest voices pass the harshest sentences. What was supposed to be a conscious act of courage and choice today feels like an act of risk. In such an atmosphere, democratic participation begins to feel exhausting rather than empowering. If every conversation threatens humiliation, if every difference invites attack, people inevitably withdraw and that is how a democracy starts to hollow, not through force, but through fear. Voter fraud and the practice of free or coerced votes remain serious malpractices of elections. People are deprived of their right to vote and to elect their government. These failures have led to a steady loss of public trust. Voter turnout falls, and many no longer wish to involve themselves in the political arena, choosing instead to blame political parties for every economic, social, and political failure. Yet the world cannot be divided neatly into black and white, right and wrong. If there is bad in the good, there must be good in the bad too. There remains a glimmer of hope, a beacon of expectation in this stormy sea of communalism, corruption, and cynicism. Democracy survives on friction. Growth depends on error. A culture that cannot tolerate conflict cannot sustain understanding. Outrage may begin a conversation, but it is certainly not enough to carry one. History has shown that democracy has the power to renew itself when people choose to believe in it again. Participation can return. Debate can return. Trust can return. And when it does, democracy stands stronger than any **dictatorship** ever could. Perhaps in a world that does not stop shouting, the most radical act today is to pause to question truths, to resist spectacle, and to think of disagreement not as violence, but as the beginning of meaning. Because the greatest threat to democracy is not the force **that** tries to destroy it, but the disbelief that makes us stop defending it. TOI News - March 15, 2026 An ode to Gen Z: Children of the perpetual now Who are the Gen Z we keep hearing about in workplace surveys, social media discourse, and slightly bewildered dinner-table conversations? Are they simply those born after the late 1990s, fluent in TikTok, allergic to corporate jargon, the ones with ring lights on their desks, and memes for every mood? Or is the story, as always, more complicated than a birth year and a stereotype? I am a millennial, and from **where** we stand, watching them arrive into adulthood with a confidence we never quite possessed, it seems clear that there is indeed more. If millennials were destiny's in-between children, Gen Z are destiny's early arrivals into a world that was, is, and continues to be in constant flux. They did not grow up at the hinge of centuries the way we millennials did, but were born into a world whose door was already swinging open into uncertainty. They too ate Maggi after school and

Management skills which are useful in running operations, securing investment, delivering quality service, managing crises, and building long term customer relations. Along with hard skills, programmes now also empower students with quintessential soft skills including critical thinking, problem solving, interpersonal and communication skills. Many education institutions now specifically include incubators for the next generation of industry leaders. They prepare future entrepreneurs by providing expert advice and guiding them through the process of starting a business. Many institutes also offer programmes where students can collaborate with real world businesses and incubate their start up ideas. In this sense, hospitality education can be called leadership education as it enables students to learn practically by implementing theory. It encourages immersion in multicultural environments, a drive to innovate, and the development of fundamental business expertise. This newly skilled army of innovative and able entrepreneurs further helps the industry improve its offerings and services. Logistics and Data Driven Strategy Take any industry today and you ll see that interpreting and analysing data has become one of the most important factors for success. Hospitality organisations also require data analytics to form business strategies and achieve future goals. By including the study of new age technology and tools as a part of its curriculum, hospitality education is helping the industry develop the ability to analyse and put data information to good use. The hospitality industry has made the best use of data produced by digital technologies to analyse customer behaviour and expectations. With predictive analytics, the hospitality industry can predict the next product a consumer wants to buy and then serve up a recommendation. Hence the industry owes boosting and leveraging business operations to hospitality education. Due to it, the industry today can create unique marketing strategies to stay ahead of the competition. Quality Workforce Hospitality education equips students with the relevant skills required for the industry through various types of training programmes. It also helps students become more efficient and skilled, making them highly employable in competitive global markets. With improvements in the quality of education and practical exposure, the workforce becomes better, which gets **reflected** in the service provided by the sector and people. It eventually leads to increasing the calibre of the industry, expanding its scope and the overall attitude towards hospitality and allied services sectors. To prepare students for the real world and make them aware of the industry various working styles, **institutes** conduct seminars, workshops, conferences, apart from regular classes. This allows students the opportunity to learn and interact with industry leaders and experts. Learning from industry experts also helps students learn the importance of soft skills and practice them in their own professional journey. Under Section 63 of the Right to Information Act by the CPIO of the Supreme Court cannot arise. It is the duty of the CPIO to obtain the information that is held by or available with the public authority. Each of the sections or department of a public Authority cannot be treated as a separate or **distinct.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-16-TEST NO.-25484

As the Indian economy struggles to recover from the pandemic, it is facing another obstacle in the form of high and rising inflation. Keeping inflation low and stable is the legal mandate of the Reserve Bank of India under the inflation targeting IT framework. It is therefore worth asking why inflation so high is, and what should be done differently to ensure it comes down and stays down Consider the first question. In recent months, the Russia Ukraine war and China lockdowns have pushed up the prices of critical items including crude oil, edible oils and fertilisers. On top of that, for the first time in four decades, India is now importing high inflation from developed economies such as the US and Europe. Without doubt these external developments have exacerbated India inflation. But they are not the cause of the problem. Congress leaders are congregating in Udaipur to think they are likely to think many things except perhaps whether Nehru Gandhi should continue to lead the party. They are likely to talk a lot about taking on BJP, except they will not recognise that BJP is India most focussed party when it comes to linking leadership with the ability to deliver success. In 1984 BJP was humiliated, in 2004, it lost despite being the favourite, in 2009, it failed to dislodge UPA. Each time, BJP changed its leadership. Even before Narendra Modi emerged as the party choice of leader in 2013, LK Advani had quit his leader of opposition post after the 2009 defeat. And despite Advani stature, his word was the most consequential when BJP chose Modi for 2014 elections. If BJP was like Congress, it would be where it today electorally. Many other parties in other democracies have seen similar changes of political fortunes after a leadership change following deep defeats. In the UK, of course, responsibility starts at the top with Labor and Conservative party leaders always resigning when they lose parliamentary elections. Such changes have ushered in transformational figures like Margaret Thatcher and Tony Blair, the latter ending 18 years of Labor spell in the **wilderness** by reversing the party unelectable leftward drift. In the US too, both Democrats and Republicans have shown no quarter to entrenched leaders when they could convince voters, allowing the country to elect outsider candidates like Bill Clinton, Barack Obama and Donald Trump. In France, Emmanuel Macron was not just **a** new leader but led a new party and the older parties are now at the margins. But when Rahul Gandhi resigned after 2019 defeat, Congress chose Sonia Gandhi, who had led the party to the 2014 defeat. Of course, regional parties in India don change leadership either. SP and BSP are led by the same leaders, never mind repeat losses. Akalis under Badals, Shiv Sena under Thackerays, DMK under the Karunanidhi clan are all parties where defeat does and won change leaderships. But Congress is likely facing oblivion, so its incentive should be far greater. The stick to old **guard.**

Preference percolates down the party. Ashok Gehlot presided over Congress whitewash in Rajasthan in 2013 but was preferred over a deserving Sachin Pilot in 2018. Kamal Nath continued as Congress PCC president and LoP in MP despite losing the state, post poll, to BJP in 2020. In Gujarat, where Congress did well in defeat in 2017, the state leadership is in shambles. Congress needs to think the unthinkable. Retail inflation for April was 7.79%, the highest level recorded in eight years. More importantly, for the fourth consecutive month it breached the 6% mark which represents RBI upper limit of tolerance under its statutory inflation targeting mandate. The surge was led by food inflation of 8.38%. A granular look at different items of the consumer price index showed that inflation is now broad based. Even in cereals, where India has a surplus, inflation is 5.9%, indicating that expectations of a continued increase in prices are entrenched. Along with inflation, data of industrial output in March was also released yesterday. Overall output in March grew 1.9% over the previous year but both consumer durables and nondurables contracted. When this data is juxtaposed with the anaemic growth in volume of large consumer goods firms, it clear that India is now beset with both elevated inflation and weak consumer demand. Going forward, it calls for adjustments in both monetary and fiscal policies. RBI focus will be monetary tightening, characterised by sucking out liquidity in the financial system and increases in its policy interest rate. It leaves GoI with the task of tweaking fiscal policy to ease the pressure of elevated inflation on household budgets. GoI will benefit from a jump in tax revenue as firms raise sales prices. Also, as nominal economic growth is forecast to be well over the interest rate on government debt, so the latter sustainability is not in question. This should make GoI conclude that it must begin by lowering its taxes on pump prices of petrol and diesel. It will simultaneously lower what states collect from fuel as their collections are linked to the level of GoI taxes. **Household** budgets need relief and at this juncture it can only be fiscal policy which provides it. The TOI Ed is a courageous individual for 150 reasons. According to the findings of the 2022 World Press Freedom Index, published by the international organisation, Reporters Without Borders, India ranks 150 out **of** 180 countries covered in terms of an adverse environment for the print media. The country ranking has reportedly fallen from 142 last year, and it is now lower than that of the Himalayan Kingdom of Bhutan 33, Nepal 76, and Sri Lanka 146, and is just better than that of embattled Afghanistan 156. While noting that India is the world most populous, and many would say most vibrant and volatile democracy, the report cites as a problem area a policy framework which is protective in theory but resorts to using charges of defamation, sedition, contempt of court, and endangering **national.**

Security to label journalistic criticism as anti national. As if all that were not daunting enough to make discretion the better part of valour, the TOI has published and prominently displayed the report on its news pages, which is not only akin to venturing into the lion den but sounding a dinner gong while doing so. So how come the TOI Ed chose a career of such occupational hazard in preference to something relatively safe and secure like a circus Human Cannonball, or a test pilot for experimental spaceships, or walking across the Niagara Falls on a tightrope lubricated with slippery grease Good question. An answer perhaps is that being at the helm of the TOI provides a unique opportunity to highlight the heroism of so many others, heroism which is often unrecorded and unsung. There is the quiet, unassuming heroism and devotion to duty of our doctors, and nurses, and other healthcare workers who have come to the prominent forefront during the pandemic, but otherwise go unobserved and unnoticed. There is the heroism of those who guard our frontiers from overt aggression and stealthy terror. And least, but far from least, the everyday heroism of the so called common man, and even more, the common woman, who show uncommon courage in the face of all adversity. It telling all these untold tales that makes the Ed job worthwhile, and Press on regardless. The most logically thought decisions of our lives are often guided by loss gain considerations. We want every outcome to be a win win for us, from every standpoint. In organisations too, we are used to making structured analysis to evaluate every decision thread bare so that it is a productive one. At the heart of this logical thinking is the fear of loss. It comes from a strong attachment to things we like, as well as our attachment to our body mind identities. This fear motivated reasoning brings with it a short term What in it for me orientation. Unless our intellectual faculties are purified with spiritual intelligence, we will not be able to break **out** of this myopic orientation. We will not be able to combine our intellect and heart to take crucial decisions. The ideal combination. In the Bhagwad Gita, we find a powerful shloka that provides the framework to get out of the clutches of emotions such as fear and anger Vita **raga** bhaya krodha man maya mam upashritah bahavo jnana tapasa puta mad behave agatah. It says when a person is able to take refuge in the divine, by purifying ones being by the fire of knowledge, spiritual wisdom, he is able to get rid of the negative emotions of fear, anger and attachment, and attain the highest. These emotions, when unrestrained, become a huge negative force. Swami Ranganathananda of the Ramakrishna Mission in his commentary on this shloka says Vedanta considers fear as an inhibitor of high action. We have to overcome fear. We have to transform the negative energies **of.**

Fear, attachment and anger. The way to transform is the crux of this shloka. It talks about a powerful concept of Jnana Tapas, the austerity of mental knowledge using our mental faculties to imbibe the highest spiritual wisdom with sincerity and grit. Assimilating it and making the philosophy real in our lives. And through the fire of this knowledge, purify the mind to transform negative emotions. Blessed with enlightened intelligence thus, a person is able to manifest the power of the purified heart. Swami Vivekananda underlines the importance of combining the faculties of the head and heart. He says There is room for an infinite amount of feeling, and so also for an infinite amount of reason. Let them come together, let them be running together, as it were, in parallel lines. When there is a conflict between the heart and the brain, follow the heart. Because it is the heart that takes one to the highest plane where the intellect can never reach. It is through the heart, and the heart alone, that inspiration comes. Therefore, when we are able to work towards a higher purpose, and realise it through our actions, we start purifying ourselves. From a purified heart, impulses are spontaneous. Combined with our logical faculties, the motive force behind every decision thus will have a more collective and empathetic flavour. Men and women with this mindset will be able to flood the world with unbounded character energy. An intrinsic fearlessness arising from spiritual strength will power their journey through adversities. The highest recognition will come from working for the benefit of their families, colleagues and the community. Thereby building a grand platform for both success and fulfilment. Amid the growing concern about drop in loan recovery rates using the tool of Insolvency and Bankruptcy Code IBC 2016, the apex court judgement rejecting the plea against the ruling of National Company Law Appellate Tribunal NCLAT paving way for lenders to initiate insolvency proceedings against personal guarantors on corporate loans is a great relief to lenders. It can be recollected that in the case of Mahendra Kumar **Jajodia** Versus State Bank of India SBI, the NCLAT had in January 2022 ruled that initiation of corporate insolvency resolution process CIRP was not a prerequisite to initiate insolvency proceedings against the personal guarantor of the corporate borrower. The apex court had on March 21, 2022 stayed the said order **passed** by the National Company Law Tribunal NCLT rousing the curiosity of the stakeholders. But the present judgement dated May 6, 2022 made public on May 10 affirms the right of lenders to proceed against guarantors of corporate debtor notwithstanding their right to proceed against the principal borrowers. More than the relief coming in the particular case SBI versus Mahendra Kumar Jajodia, it inculcates better loan repayment culture in the society. The honorable apex court reaffirms the right of the lenders to proceed against personal guarantor s irrespective of pendency of any proceedings against the corporate debtor for whom the **guarantee.**

Has been given by the personal guarantor. The earlier developments After the enactment of IBC 2016, the insolvency proceedings against guarantor of corporate debtor were brought within the scope of IBC 2016, when the Ministry of Corporate Affairs MCA finally issued a notification dated November 15, 2019 that renders insolvency and bankruptcy proceedings against personal guarantors enforceable within the purview of IBC 2016. Earlier it was not under the jurisdiction of NCLT. But the said notification of MCA was contested in the apex court. While discussing the case of Lalit Kumar Vs Union of India, the apex court upheld the government notification of November 15, 2019 issued under the IBC 2016 authorizing banks to proceed against guarantors of corporate borrowers by invoking the provisions of IBC 2106 initiating Corporate Insolvency and Resolution Process CIRP. Thus, Lalit Kumar Jain v. UOI has been a landmark judgment held by the Supreme Court on 21.05.2021, which ultimately decided the disputes between corporate and the Central Government. The Court interpreted the substantial question of law about the IBC 2016. This Case was related to the liability of the personal guarantor at the time of the insolvency of the corporate debtor, and further, the Court held that the Notification of the central government and the liability of the personal guarantor is valid intra vires and legal. In the same case, the honorable Supreme Court held that the initiation of an insolvency resolution plan for a company does not absolve corporate guarantees given by individuals from paying up the loan dues to the financial institutions. As held by the court, the release or discharge of a principal borrower from the debt owed by it to its creditor, by an involuntary process, i.e., by operation of law, or due to liquidation or insolvency proceeding, does not absolve the surety guarantor of his or her liability, which arises out of an independent contract. For the foregoing reasons, it was held that the impugned notification issued by MCA on November 15, 2019 is legal and valid. It was also held that approval of a resolution plan relating to **a** corporate debtor does not operate so as to discharge the liabilities of personal guarantors to corporate debtors. The writ petitions, transferred cases and transfer petitions were accordingly dismissed. In view of clearing of the smoke screen, the personal guarantors should be aware of the consequences of providing guarantee to **lenders** and they should be in a position to monitor the borrowers and ensure that the corporate borrower sticks to the repayment schedule of lenders and remain in business in the best interest of all stakeholders. Banks can now proceed against corporate guarantors irrespective of whether the recovery sources are exhausted with the principle corporate borrower. Section 126 of Indian Contract Act 1872 provides for a guarantee wherein the creditor reserves the right to begin insolvency proceedings against the personal guarantor if the principal borrower does not repay the full outstanding loan. The guarantor of the loan is under obligation **to.**

The Restoration of the Stuart monarchy in the kingdoms of England, Scotland and Ireland took place in 1660 when King Charles II returned from exile in continental Europe. The preceding period of the Protectorate and the civil wars came to be known as the Interregnum (1649 1660). The term Restoration is also used to describe the period of several years after, in which a new political settlement was established. It is very often used to cover the whole reign of King Charles II (1660 1685) and often the brief reign of his younger brother King JamesII (1685 1688). In certain contexts it may be used to cover the whole period of the later Stuart monarchs as far as the death of Queen Anne and the accession of the Hanoverian King George I in 1714.For example, Restoration comedy typically encompasses works written as late as 1710. The Protectorate. After Richard Cromwell, Lord Protector from 1658 to 1659, ceded power to the Rump Parliament, Charles Fleetwood and John Lambert then dominated government for a year. On 20 October 1659, George Monck, the governor of Scotland under the Cromwell, marched south with his army from Scotland to oppose Fleetwood and Lambert. Lambert army began to desert him, and he returned to London almost alone whilst Monck marched to London unopposed. The Presbyterian members, excluded in Pride Purge of 1648, were recalled, and on 24 December the army restored the Long Parliament. Fleetwood was deprived of his command and ordered to appear before Parliament to answer for his conduct. On 3 March 1660, Lambert was sent to the Tower of London, from which he escaped a month later. He tried to rekindle the civil war in favor of the Commonwealth by issuing a proclamation calling on all supporters of the Good Old Cause to rally on the battlefield of Edge hill, but he was recaptured by Colonel Richard Ingoldsby, a participant in the regicide of Charles I who hoped to win a pardon by handing Lambert over to the new regime. Lambert was incarcerated and died in custody in 1684; Ingoldsby was pardoned. **The** restoration was not what George Monck, as an apparent engineer of the Restoration, had intended if indeed he knew what he intended, for in Clarendon sardonic words; he whole machine was infinitely above his strength and it is glory enough to his memory that he was instrumental in bringing **those** things to pass which he had neither wisdom to foresee, nor courage to attempt, nor understanding to contrive On 4 April 1660, Charles II issued the Declaration of Breda, in which he made several promises in relation to the reclamation of the crown of England. While he did this, Monck organized the Convention Parliament, which met for the first time on 25 April. On 8 May, it proclaimed that King Charles II had been the lawful monarch since the execution of Charles I on 30 January 1649.Historian Tim Harris describes it: Constitutionally, it was as if the last nineteen **years** had never happened. Charles returned from exile, leaving The Hague on 23 May and landing at Dover on 25 May. He entered London on 29 May 1660, his 30th birthday. To celebrate His Majesty Return to his Parliament, 29 May was made a public holiday, popularly known as Oak Apple Day. He was crowned at Westminster Abbey on 23 April 1661. Some contemporaries described the Restoration as a divinely ordained miracle. The sudden and unexpected deliverance from political chaos was interpreted as a restoration of the natural and divine order. The Cavalier Parliament convened for the

Throughout history, great companies have undergone transformational shifts to stay relevant, often by creatively destroying their established revenue models. The New York Times and FT transitioned from print to digital, Netflix pivoted from DVD rentals to streaming, and Disney evolved from home video sales to the Disney platform. Similarly, Apple famously disrupted its own iPod line with the introduction of the iPhone. Today, every car manufacturer is reimagining its factories, supply chains, and skill sets to become electric vehicle producers. In the Google Play Store, multiple, often competing apps target the same users on the same interface. Similarly, an algorithmic walled garden is a platform that allows big media to run multiple revenue models efficiently achieving each revenue model top-of-the-funnel targets with limited exposure and effectively, with higher conversion rates and differentiated pricing. Targeting improves the effectiveness of affiliate deals, reader revenue products, and ads compared to non-targeted, spray-and-pray approaches. Price differentiation algorithms can help improve average revenue per user. Leverage logged-in users who provide first-party data. Companies like Netflix, Meta (Facebook, Instagram, WhatsApp), and Amazon exemplify this model, using recommender systems to drive high engagement and revenue. The benefits are clear higher user retention rates, increased average revenue per user, and the ability to implement dynamic pricing and targeted advertising. The table below illustrates these distinctions clearly. Paryushan Parv, the annual Jain observance, is the time to uplift oneself through fasting, meditation, soul-searching, awakening, self-study, courage, compassion, and forgiveness for all beings. For both Shwetambars, who observe the ritual over eight days, and Digambars, for whom the festival lasts 10 days, this is a time for introspection, and reflection popularly known as Chaturmas or Varsha Yog. Chaturmas literally means four months, derived from the Sanskrit chatur, four and masa, month. Chaturmas means four months of the monsoon, a practice observed by both Digamber and Shwetamber Jain monks and nuns, when travelling barefoot is difficult for them so they make themselves available to the community for instruction and guidance. Paryushan is the time when, to improve karmas, adherents perform 12 kinds of austerities, including fasting. They also do svadhyaya, **self-study.** The purpose of Paryushan is to reflect on your shortcomings, seek forgiveness for wrongdoings, remove internal corruption and vow to live an ethical way of life. Daily recital of Bhaktamar Stotra, Navakar Mantra, meditation and prayer help one to look within and reflect on the teachings of the tirthankaras **for** guidance. One should perform and practise Jivdaya, Samayik Sutra and Pratikraman, which are paths to emancipation and liberation. On the fourth day of Paryushan, it is customary for Shwetambars Murtipujak to read from the Kalpa Sutra, a scripture that recounts the life of Mahavir, the 24th tirthankara. Jainism is a Sramana tradition. Mahavir led a socio-spiritual, nonviolent reform movement. He regarded all species of flora and fauna as integral to a composite moral community. He emphasised the concept of Jivdaya, animal care and aparigraha, non-possessiveness to protect biodiversity from human greed and butchery. The fivefold Navakar Mantra that is **recited** offers obeisance not to God or Creator, but to arihants, perfect

The first Tirthankar Rishabhdev taught us six main professions for livelihood ASI, swordsmanship for self-defence, wrestling Masi Art, culture, writing skills, literature and education Krishi Agriculture, agrarian lifestyle Vidya schooling, knowledge and training Vanijya trade and commerce, enterprise Shilp-kala architecture, handicrafts and skill development. Tirthankar Rishabhdev strongly emphasised on women education and their liberation. Without paropkar, selfless service, bhakti and puja remain incomplete. Bahubali promoted rural sports activities such as Hath Yog, Mallakhamb, and Mallayuddh, wrestling to keep oneself holistically healthy, fit, energetic and dynamic. During Paryushan Parv vegetarian meals are made simpler than usual. For Shwetambars, the final day of Paryushan is Samvastsari Pratikraman or annual confession, when it is time for seeking forgiveness as well as being forgiving, enabling self-liberation. The ritual of seeking forgiveness from the teacher is widened in scope to include family, friends and all living beings. Congress general secretary and Parliament Public Accounts Committee chair KC Venugopal tells Subodh Ghildiyal that Centre in helping opposition states which have faced crippling floods, that opposition is setting the country agenda, that LS polls changed everything. If Phogat & Punia join politics, they would bring with them a skillset most Indian sportspersons have well-honed instinct for political calculations, without which athletes will be lost in the sports system. It looks like Vines Phogat, India most decorated female wrestler, and Baring Punia, the 2020 Olympic medallist, will be contesting the Haryana assembly elections on a Congress ticket. Junior medics in several cities struck work in solidarity with Kolkata doctors strike after the rape-murder of a junior medic in a state got hospital. But the RG Kar horror may just become another poster on India wall of shame that captures the failure to provide proper investigation into such crime, and credible closure. After almost a month the medic was attacked and killed on Aug 9 the investigation that CBI took over has morphed into a corruption case, while the agency agrees the prime suspect arrested by Kolkata police has glaring inconsistencies in his claims of innocence. Slo-mo in a hurry | Meanwhile, Bengal instituted a new law that **promises** justice within days for all such crime. The Aparajita Women and Child Bill, 2024 seeks investigation of rape cases be completed within 21 days of FIR filed. And 30 days to complete trial. Fast-track special courts to process crimes against women, as a central scheme, exist. The scheme was **extended** last Nov till 2026. The Centre share of continuing the scheme will be drawn from Nirbhaya Fund after the RG Kar crime, Bengal said it had 88 fast-track courts functioning on state funds. GOI said Bengal did have any of the 17 such courts it was allocated under the Centre scheme till last year. Such spats are unusual in strained Centre-state relations. But only burden victims. Given ground realities, mandating near-impossible deadlines for investigation is just a wink at insta-justice. Pendency in forensics, poor staffing and deep political interference in brutal sexual crimes together make quick meal of fast-track **courts.** Until funds follow the talk, the hurry to do right offers little respite. The recipe in question was for Chicken Cafreal, a traditional Goan dish that traces its roots to Mozambique which was a Po

The afternoons stretched lazily and the smell of mango pickle hung in the air. But somewhere between the ceiling fan's slow rotation and the glow of a tablet screen, their childhood split into two worlds. One physical. One digital. Where millennials remember waiting for the internet to connect, Gen Z remembers the internet as background noise. It was simply there, like electricity or gravity, shaping identities. By the time they were old enough to form memories, the world was humming with Wi-Fi signals, cloud storage, and endless notifications blinking like tiny lighthouses in the dark. They learned to swipe before they learned to type. The world arrived to them not in the single file of slow dial-up broadcasts, but in the battalion of endless reels. YouTube became their storyteller, Wikipedia their encyclopedia, and Google their patient, if slightly overwhelming, teacher. Where we memorised landline numbers, they memorised passwords. Where we played antakshari in dimly lit living rooms during power cuts, they filmed dance reels. Their adolescence unfolded in comment sections, Discord servers, and private group chats with strange names like 'Dark Members Gang'. They grew up in an India louder with ambition and sharper with competition. Coaching institutes had grown into small cities of their own. Every second friend seemed to be preparing for an exam that promised to unlock the future, the four-letter alphabet soup of anxiety. But alongside those familiar pressures was something new. A parallel universe of possibility. A classmate with 2,00,000 subscribers on YouTube. A girl from school whose skincare reels suddenly went viral. A boy quietly builds an app in his hostel room. Someone's cousin earning dollars editing videos for strangers across oceans. Success was no longer a single staircase but a thousand ladders, all visible at once, all crowded. And the algorithm watched from above, quietly deciding whose ladder might suddenly become an elevator. Gen Z lived inside this perpetual visibility. Every small triumph could be posted. Every heartbreak could be subtweeted. Every opinion could spark a comment thread that stretched endlessly into the night. Where millennials learned adulthood in private, Gen Z **learned** it in public. Their jokes were sharper. Their irony is more layered. They could turn a complicated political moment into a meme within minutes, reducing what would have been a long debate into a single screenshot with a caption that read: 'This country, man'. On the flip side, their **fluency** in irony prevented them from staying sincere for long. They quit jobs more easily. They speak about mental health with startling clarity. They challenge hierarchies we once tiptoed around. Words like burnout, boundaries, and therapy enter the conversation with the casualness of weather reports. They also carry a different kind of awareness. Gen Z grew up during crises that unfolded live on their screens: pandemics, climate disasters, political upheavals, and wars narrated through Instagram stories and Twitter threads. Catastrophe was merely another daily push notification. The future, for them, has never been guaranteed. Love, too, looks different for them. **Where** millennials fell in love through long phone calls and cautious text messages, Gen Z falls in love through playlists shared on Spotify, through Instagram reels sent at and through WhatsApp calls that stretch across time zones. Where millennials waited anxiously for SMS replies, Gen Z w

in the perpetual present that refreshes every few seconds. They know that identity is something that can be assembled, edited, archived, and resurrected at will. The self is less a fixed structure more a series of drafts. They have mastered performance so well that sometimes even they are not sure where performance ends. To millennials, Gen Z sometimes appears restless, distracted, even reckless. But when we look closer, we see something familiar beneath the speed, the same search for meaning, the same longing to belong somewhere that feels real. There is something luminous about their refusal to pretend otherwise. Where millennials sought permission, Gen Z often begins with assumption. Assumption that convention can be questioned. Those careers can be nonlinear. That success can look different from the template handed down by families and institutions. They are impatient with structures that demand quiet obedience. And perhaps they should be. If millennials were the bridge between two India's one analog and one digital Gen Z are the generation already dancing in the middle of that bridge, headphones on, remixing the past and the future into something entirely new. They are not waiting for the world to settle. They suspect, correctly, that it never will. So they improvise. They build careers out of fragments. They build friendships across continents. They build identities that refuse to stay neatly within categories. They understand something that took millennials years to learn: that permanence may be an illusion. They are a generation that learned to metabolise chaos early. And perhaps one day, when another generation arrives and finds them puzzling, they will recognise the same truth we are beginning to understand now. That every generation believes it is standing at the edge of history, when in fact we are all just standing at different points along the same long bridge, watching the lights of the future flicker uncertainly ahead. And walking towards them anyway. If millennials were the pause between breaths, Gen Z might be the inhale sudden, sharp, and full of possibility. And somewhere between their urgency and the patience of millennials', the story of **this** century will continue to unfold. Congress's hypocritical love for the Constitution exposed Vice President BJP Maharashtra, Senior Political Communicator Chief Spokesperson, BJP Maharashtra Strategist & Ideologue Keshav Upadhye is a seasoned political communicator, journalist, and organisational leader with over 26 years of dedicated service to the Bharatiya Janata Party **(BJP).** A trusted ideological voice and an accomplished media strategist, he has played a pivotal role in shaping the BJP's public narrative in Maharashtra and at the national level. The Congress party recently moved a no-confidence motion against Lok Sabha Speaker Om Prakash Birla. The stated reason behind this motion was the allegation that the Leader of the Opposition, Rahul Gandhi, was not being allowed to speak in the House. Given the numerical strength of the BJP and the NDA in the Lok Sabha, it was abundantly clear that this motion would be rejected. However, during the ensuing debate, the **Congress** party's and specifically Rahul Gandhi's professed love for democracy and the Constitution was thoroughly exposed. While participating in this discussion, Union home minister Amit Shah completely tore apart the facade of Rahul Gandhi's grievance that he was being denied the opportunity to speak. The Union home m

Pay up the difference between loan outstanding and loan recovered from the asset of the principal borrowers. Therefore, the landmark judgments has opened up avenues for banks to invoke IBC against the principal borrower and guarantor either simultaneously or one after the other when the hair cut amount difference between outstanding loan and recovered loan dues is known. But it is not a prerequisite to proceed against the corporate guarantor. 2. Loan recovery ecosystem Since the implementation of banking sector reforms, there has been gradual empowerment of banks to enforce recovery of bad loans. Beginning with the enactment of securitization and Reconstruction of Financial Assets and Enforcement of Securities Interest Act, SAERFAESI Act 2002 enabling recovery of bad loans without the intervention of the court, formation of Debt Recovery Tribunals DRT, setting up of Look Adulates under the aegis of DRTs for settlement of loan recovery with mutual consent of borrowers and lenders, formation of Asset Reconstruction Companies ARCs for sale of GNPAs and enactment of IBC 2016. Now a bad bank to be known as National Asset Reconstruction Company Ltd NARCL is under formation. These special legislative changes and formation of specialized institutions provided compatible wherewithal for recovery of loans. When these developments are seen together with the current judgments, obviously banks are armed to tackle the menace of bad loans very effectively with timely action. The spirit of the judgments is a big confidence booster for the banking system in the larger interest of its sustainability. The move will ensure optimal recovery for lenders. It now brings clarity that NCLT is the only adjudicating authority judicial body to entertain personal guarantor applications and not debt recovery tribunals. Hence forth banks need not run to DRT and NCLTs to enforce the recovery from principal corporate borrower and guarantor. India attraction and appeal for gold are entwined with culture, convention, desire for beauty, and financial protection. People seek to acquire or invest in gold to safeguard themselves from market volatility and uncertainty. With this in mind, Candara by Kalian Jewelers provides the Double Rate Gold Protection DGRP plan that **gives** an advantage towards purchasing gold, as gold serves both an investment and a reflection of consumer jeweler choices. The DGRP plan USP is for consumers who wish to bank on fluctuating gold rates without worrying about their purchasing plans being thwarted by a sudden price increase. Customers get the **solution** and edge of having their jeweler preferences with perks such as booking the jeweler at a 10 and maintaining the installments with the same gold rate even if gold rates rise. The DGRP plan is the perfect way to acquire your favorite jeweler without worrying about fluctuations in Gold Rates. In India, the purchase pattern and reasons are more investment driven. Gold investment is regarded as safe even in the event of a financial crisis. However, gold prices fluctuate often and are influenced by various factors such as geopolitical tensions, regulatory changes, the rupee exchange rate against the US **dollar.**

And demand and supply. Consumers and investors look towards options and schemes from suppliers, stores and brands to ease the purchase journey and decision making during such crises and dips in rates. And when it comes to shifting Gold rates, we have a one of a kind answer in the form of the DGRP plan. What Is the DGRP plan The Double Gold Rate Protection DGRP plan gives customers freedom from worrying about fluctuating gold rates that aids them in their jeweler shopping. With the DGRP plan, we secure the Gold Rate as of the booking day rate and keep it consistent for the entire tenure. Customers can enroll on our DGRP plan with just 10 of the final cart amount. It a step forward in e commerce jeweler shopping that gives a trusted plan and puts customers wallets at ease. How Does the DGRP Plan Work The DGRP plan provides our customers the advantage to stay protected from the fluctuating market gold rates and extra charges levied by stores. They have to choose the DGRP plan while checking out and choose the applicable payment plan 2 6 months for gold, 2 12 months for diamond to avail the benefits. This gives them the advantage of making their monthly payments based on the gold rate while booking rather than changing market rates. With zero processing fees and interest rates, our customers only need to book their desired jeweler by paying 10 at booking, eliminating the wait for a better time to make their purchase. Whether it fluctuating gold rates or an investment opportunity that our customers believe is worthwhile, they now have a secure plan to help them obtain their desired jeweler. How often do we hear leaders in general talk about investing in people approach to HR We all know that it is a euphemism to describe a long term approach to capability building of the team. But what if it is more than that What if we take it quite literally Before we do that, it is important to understand the larger context here. No leader or **manager** worth his or her salt can deny the value of up skilling. But for a good part, it is also true that this happens at a very transactional level or seen as just another cost to be written off every year. The ever evolving technology age has ensured that **there** is no such skill that can be learnt just once for life. This is true not just in the technology wedded industries like IT, mobile manufacturers, social media etc. Today even traditional businesses like cement, steel, utilities are investing a lot more in technology that they did even a decade or so ago. The long term value of up skilling is quite stupendous. In January last year, the World Economic Forum said that accelerated investment in up skilling and reskilling of workers could add at least $6.5 trillion to global GDP, create 5.3 million net new jobs by 2030 **and.**

Help develop more inclusive and sustainable economies worldwide. By and large, India is quite well entrenched in this global race to up skill. A survey by one of the largest entry level and blue collar jobs providers, showed that in 2021, investments in up skilling grew by18 25. This trend covered not just IT and e-commerce, but also logistics, BFSI, pharmaceuticals, detach, industrial engineering, etc. All the while when businesses are investing more in up skilling, we also hear about the frenzied job hopping that has led to new and disturbing trends like the Great Resignation. While, this particularly trend may be largely relevant to the technology industries, it is quite within reason to believe that it will spread to other sector and likely accelerated by the growing digitalization. A recent Gartner report had observed that attrition in the Indian technology space had doubled to 20 in 2021. Higher attrition means wasted management energy in constantly trying to find replacements and consequent higher costs. The original question, whether up skilling is treated as an investment or cost has to be addressed from this higher level of understanding the value of up skilling stands diminished if skilled employees don stick around for long. Of the two major roles of HR, which are talent discovery and talent retention, the latter is far more challenging. Unless there is a very conscience and effective approach to retain talent, money spent on up skilling will remain a cost and not an investment. However, this is easier said than done. A large percentage of up skilling programmes are done en masse. There is very little that is personal about them. In fact, very few employers offer their employees a long term roadmap of their career in the company, if they choose to stick around. To cite a metric from the IT business, billing per employee is a good number to chase, but it cannot be at the expense of an impersonal approach to HR. For up skilling to work in the long run, a lot more than training sessions will have to be put in **place.** For example, senior members in the team taking the role of mentoring and life coach can be very effective in retaining younger talents in the company. A lot of people movement, particularly at entry and early mid-levels happens by the lure or better pay and fancier job titles. Offering **a** reasonable alternative but with a long term roadmap will certainly help retain talent. It is also very natural for people to look for purpose in their work. Showing that, sincerely and passionately is vital to earn the long term loyalty of employees. Finally, whether we like it or not, we live a lot more cynical world today than ever before. One of the best antidotes to this unpleasant environment particularly at work place is brutally honest communication. It is quite perplexing to see so few actually practice this today. Upskilling can be what we want it to be. While **it.**

Rocky, the protagonist of the new Kannada film K.G.F Chapter 2, is described by admirers as a storm, a deluge and god. He, however, introduces himself in one scene as the CEO of India. At any other moment in time, this title would have been just another instance of bombast in men centric commercial Indian cinema. In 2022 though, Rocky words not only signal his ambitions, they could well be interpreted as a bugle call from southern Indian filmmakers who have, in recent months, mounted an unprecedented challenge to the Hindi film industry long running hegemony. Finland is expected to formally announce over the weekend that it will apply for a Nato membership. Sweden may soon follow suit. Finland membership of Nato, when it does come through, will make it the sixth treaty member to share a border with Russia Norway, Estonia, Latvia, Poland and Lithuania are the others. Russia has warned of consequences if Finland joins Nato. In all, geopolitical tensions are unlikely to subside soon. Consequently, the economic disruption caused by the tensions is also bound to be prolonged. India is likely to experience the economic fallout mainly through two channels, commodity prices and financial markets. The Indian basket of crude has hovered around 105 barrel for a while. In addition, commodities, including agricultural products, have recorded a sharp increase in the price level over the last six months. Elevated inflation is now a global phenomenon and it may endure for some time. The combination of geopolitical risks and inflation has jolted financial markets which are linked through portfolio investors. As most major central banks have begun aggressive monetary tightening, RBI job has become more challenging. Foreign exchange rates are one of the vehicles of monetary transmission. Fluctuations in the rupee exchange rate against major currencies in the wake of actions taken by other central banks can undermine RBI efforts in reining in inflation. But despite the looming uncertainty, none of the challenges are new. High inflation along with financial market volatility is a situation India has dealt with earlier. RBI cushion of about 532 billion in **foreign** currency assets should be adequate to smoothen the adjustment underway as economic agents adapt to recent developments. The one certainty in this environment is that both firms and individuals will adapt to the situation. A prolonged spell of high commodity prices may catalyse a faster pace of transition in **energy** systems. After reducing the duration between second dose and the booster shot to 3 months for international travellers, GoI must reduce the general 9 month gap between second dose and boosters and ramp up messaging on importance of precaution doses. Other countries with advanced vaccination programmes administer boosters at much shorter durations. The US CDC prescribes a first booster for all adults five months after the primary series and a second booster for those over 50 or those who are immuno compromised, four months after the first booster. The UK encourages the first booster three months after the second **dose.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-17-TEST NO.-25503

Meanwhile, the Biden administration is preparing for 100 million Covid infections later this year. While India Covid trajectory has diverged from other nations in the months after the third wave in January, there no room for complacency. Data from the 2015 16 Demographic and Health Survey of households indicates 42 of diabetes and 56 of hypertension patients are unaware of their condition. These comorbidities are a key reason to encourage all adults to take boosters. Vaccine supplies are plentiful now. Over 17.5 crore doses are lying unutilised. The low off take of boosters is surprising Many people are assuming without evidence that the Covid threat has passed. Nearly 6 crore adults between 18 and 59 are eligible for boosters, but just over 12.5 lakh have taken the jab. The US prognosis of another tidal wave of infections must prod India also to improve its booster dose programme. Christmas. Pompeii. Aztecs. The East India Company. Ancient Olympics. Sparta. Nuclear Weapons. 9 11. Dinosaurs. Rasputin. Cricket. Oil Making of the Modern World. Birth of the Railways. Disease vest the rise of civilisation. Vikings and the birth of Kyiv. Valentine Day. Genghis Khan Lord of the Mongols. These are some of the episode titles of The Rest Is History podcast, whose exhilarating diversity of subjects has acquired a loyal fan following since its launch in November 2020. Hosted by British historians Tom Holland and Dominic Sand brook, interspersed by their giggly camaraderie, irreverence, impersonations and Sympatico guest experts, this is the kind of lesson that you top up with chilled beer and still remember well enough to recount the next day. As the World Test Championship WTC arrives at the halfway mark, poised at its most gripping phase, a critical error in its ranking system makes itself known. For its 2021 23 WTC cycle, the International Cricket Council accords 12 points to each match with 12 points for a win, 6 for a tie, 4 for a draw, and 0 for a loss. Then, these points are converted into percentages on the basis of which teams are ranked. Seems sensible enough, right **Think** again. For this system to function, there is a fundamental prerequisite that the teams play an equal number of matches, which they evidently do not. The England Australia series comprised five Test matches whereas the India Sri Lanka and India New Zealand series were played over two Test matches. **In** this situation the present system of ranking starts to break down. For, a five Test series is two and a half times more important than a two Test series, giving clear incentive to teams to play a shorter series against a better team and a longer series against a weaker one. Saehan, intuitional practice, can be learnt from a sad guru, great preceptor. And, emancipation can be obtained by its systematic practice. Nothing can be achieved by merely depending on the preceptor without doing sad Hana. Everyone should carry out intuitional practice. Some people are under the wrong impression **that.**

350th: "Think" | 400th: "In" | 500th: "that."

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-17-TEST NO.-25504

They do not have to make an effort and that they will attain emancipation due to the grace of the preceptor. To deserve the grace of the sad guru, one has to follow the system of intuitional practice with devotion and faith, and not assume that the great preceptor will freely give everything without any effort on the part of the disciple. Some people think that since they are disciples of a great preceptor and the sad guru has come to elevate the fallen, the preceptor will take them all along when leaving, in the same way as a cowherd gathers all grazing cattle before leaving the pasture at dusk. This way of thinking is not correct. The great preceptor comes to liberate people, to elevate them to divinity. People must make a sincere effort to carry out their intuitional practice. Saehan is the effort to free oneself from the bondage of Priority. This subjugation is maintained due to the self created distortions in the mind. To obtain liberation, the mind has to be restored to its natural state by removing these distortions. Emancipation is not possible until one has completely experienced the remaining reactions of one previous lives. Ordinary people experience these reactions in the normal way, and if any still remain when they die, they are reborn to exhaust them. Those who do sad Hana don want to be born again to experience their remaining reactions. In their eagerness to attain emancipation quickly, they hasten to exhaust the balance of reaction in this life. So, they regard problems as a good sign, as they would speed up the exhaustion of one remaining reactions. Saehan is the effort to free oneself from the qualifying influence of Priority. Avidyamaya the maya of ignorance is also a quality that has to be renounced. If a tenant has been occupying a house for a long time, it will be extremely difficult to suddenly evict him by force. You will have to fight against all his manoeuvres and only when you have completely defeated him will the bully allow you to enter **the** house. Similarly, as one has been at the mercy of avidyamaya for many lives, it will not leave easily when one starts doing sad Hana. Like the bullying tenant, avidyamaya will throw all possible obstacles across ones path when one tries to destroy its influence. Saehan, as taught by **a** preceptor, is the way to remove avidyamaya. Only success in sad Hana can make avidyamaya loosen its hold. So, the beginning of true sad Hana is often marked by great resistance from avidyamaya, which, through the obstacles it creates, tries to compel one to give up the intuitional practice. Recently I went through a phase of disturbed physical health. It was all about irritable bowel syndrome. It was becoming really unbearable for me to manage my daily routine, with this issue irritating me like hell. I did almost everything to get the cure. I tried allopath as well as **homoeopathy.**

350th: "the" **400th: "a"** **500th: "homoeopathy."**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-17-TEST NO.-25507

Medicine I even had Ayurveda treatment. However, none of the medications gave me relief for some mysterious reasons. When nothing seemed to show the result, my physician said something which not many of those might tell. He asked me to stop all medicines for a few days. I did strictly as was advised to me. Surprisingly, the magic happened, and my problem started getting mitigated. Without any medication, I was almost back to normal in a few days. Friends, sharing the above experience are not to challenge the science of medicine. My point of view is to look at very unique learning from this episode. I would name this learning as stop solution hunting. Yes, most of the time, we are obsessed with the idea of problem solving. We get so much involved in the problem nuances that the simplest solution becomes invisible. Especially in the management world, the moment a problem is defined, all eyes search for solutions. Out of box thinking, aligned thought process, root cause analysis, five why and many more such tools are frantically applied by experts to arrive at some feasible solution. My experience says that, in the enthusiasm to hunt for the best solution, people often miss out on the easy way out. You must have read the story of the first pilot in outer space Yuri Gagarin. Those were the days when ink pens were in predominant use probably ball pens or gel pens were not invented. The scientists were working hard to find the solution to a problem. The problem was, in the absence of gravity in space, how would the ink pen work And if the pen does work, how would the astronaut take notes When a lot of research and study went in vain, someone suggested using pencils instead of ink pens! Led based pencil was such an easy solution, Wans it But people attention was towards complicating the problem by over synthesizing it! Someone wisely said, if you want to simplify a situation just remove complexities! That works wonders. On the contrary, most of us add more complexity **to** the existing problem with the hope of simplifying it! A soap manufacturing unit was facing a typical problem in its assembly line. At the stage of final packing of soap units into big boxes, one out of thousand packs was reported to be empty. It contained the soap packaging **and** the cover, but no soap inside! In this case, the issue was credibility. The integrity of the manufacturer was being questioned by the channel partners. The CEO asked all its top management to find a zero error solution to this problem. Four special purpose task force units were formed, and the action began. Every team assessed the situation and made proposals to solve the problem. It took a few weeks and a lot of time and money investment to arrive at two solution options. The CEO refused to agree to either of those two because the investment asked for **was.**

Over budget that when the CEO son, a school student, came up with an idea. He said, why not we place a high speed table fan across the packaging belt! With the force of air, if there is an empty pack, it will jump away! This is why I suggest people top solution hunting and do not over involve in understanding the problem. A better idea is to shift your focus to something different. Simplify the situation, and the solution will evolve in most cases. Experiment it. The ManTech ecosystem is changing, and rapid technological advancements are opening new avenues for progress in the healthcare industry. Meaningful innovation can take many forms, such as a novel approach to making a product useful to applying a growing technology to a real world problem. In this scenario, investing in research and development R&D acquires greater significance as it is focused on transformative innovation to develop breakthrough solutions or products to solve unmet market demands. At present, India R&D spending in Match is around 0.6 percent of GDP, which is considerably below industrialized countries like the United States, which spends 2.8 percent or China 2.1 percent, and Israel 4.3 percent. While India Make in India story grows, the need is to develop a research ecosystem that attracts investment from both domestic and international businesses. It interesting to note how the Government is already taking initiatives to encourage innovation, such as announcing a five year investment of Rest 50,000 crore in the National Research Fund. Such actions could pave the way for India to become an R&D and innovation center, given the pressing need to strengthen our R&D skills. During the pandemic, increased demand for pharmaceuticals and medicine, and the expectation of being able to pronounce them on time, put a strain on pharm supply networks. However, it has also brought opportunities in the medical technology sector. India medical device exports are estimated to reach 10 billion by 2025, and the domestic industry will need to work in unison with international investments to achieve this. The Indian Match industry has raised the bar **by** utilizing AI ML machinery in manufacturing, importing and exporting. The healthcare industry culture of innovation has led to the incorporation of more technology and equipment into healthcare delivery models. Over the previous three years, this sunrise sector has grown at a 15 percent compound annual growth rate. The startup **ecosystem** in India medical devices sector, which includes more than 250 organizations working on innovations, is also working for India. The medical devices market in India has the potential to grow at a 37 per cent compound annual growth rate CAGR, reaching 50 billion by 2025. In fact, the Global Innovation Index has India placed first in the Central and South Asian region. Sufficient policy encouragement and protection are required to attract increasing investment from private companies in Ramp D. The Government is working to reduce its reliance on imports and make healthcare more accessible by building medical parks and **teaming.**

With business and academia. India has created medical device manufacturing clusters, designated industrial parks for low cost local production. The Government also approved a 674.36 million proposal to develop a Medical Devices Park in Himachal Pradesh in 2021. India is transforming into a global R&D hub as a result of its market size and availability. As envisioned in the advance paper to National Medical Devices Policy 2022, the Government is forging a new road for the accessibility of medical devices by placing the industry on accelerated growth. These advancements would boost India local and international ManTech value, as it is already one of the top 20 medical device markets in the World. While the figures are encouraging, industry needs more than PLI schemes to encourage multinational medical device companies to manufacture in India to receive a 5 7 per cent incentive on earnings generated from those devices, as India still relies 70 on imports for medical devices. The reliance on imports creates an opportunity for the crisis in a country like India, where ManTech blends large multinationals with small and midsized businesses. To strengthen the Indian ManTech market, it is necessary to address the fundamentals, such as increasing resilience to future contagions, self reliance, and the ability to handle large patient volumes without sacrificing quality enabling broader access to care and focusing on prevention with improved diagnostics, higher imaging intelligence, and reduced radiation risk and enabling broader access to care and focusing on prevention with enhanced diagnostics, higher imaging intelligence, and reduced radiation risk. India has all of the necessary elements for the exponential growth of HealthTech and ManTech, including a large population, a strong pharmaceutical and medical supply chain, and a regulatory environment that encourages startups to invest in the healthcare sector. Indeed, Indian Match industry will be responsible for the next wave of healthcare innovations globally. With the advent of the internet and technology enabled solutions, the capital markets have undergone a paradigm shift. Over the past few years, trading platforms have improved the accessibility to the financial markets, with about 29 lakh new Demat accounts on **average** being opened every month in FY22. The digitization of stock markets started with the introduction of the Screen based Trading System SBTS more than a decade back. It has evolved since then with new age technologies like Artificial Intelligence AI and Machine Learning ML. Prior to trading platforms, stock **markets** were accessible to just a few. However, the rapid digitization and smartphone penetration are gradually making trading and investments accessible even in tier 2, tier 3, and beyond cities. Digitization of trading platforms Digitization has been at the forefront of the gradual evolution of trading platforms. With the launch of app based trading platforms in 2010, broking houses started going digital to provide services to a larger set of investors. Essentially, they were introduced as an online platform to monitor market prices, and accordingly assist investors to buy, sell and hold stock options. Since its introduction, trading platforms have **become.**

International Terrorism and promoted intelligence-sharing and operational coordination. India was perhaps the earliest advocates of not making distinction between good and bad terror and today most nations have come to see that position as an accepted reality. India has been a vocal advocate for UN reforms, including expansion of the Security Council. India candidacy as a permanent member is backed by the G4 nations Brazil, Germany, Japan, and India and has been endorsed by nations including the and France. India however does seek a place on the high table without shouldering responsibility India has an active contribution to UN peacekeeping missions, with over 200000 troops deployed in 49 missions and underlines its commitment to global peace. India today holds considerable influence in World Bank, IMF, and the WTO. It is the seventh-largest member in terms of voting power at the IMF and World Bank as of 2022 and India uses its prominent voice for developing nations, advocating for fair trade rules for them. These achievements exemplify India increasing global influence and its commitment towards addressing international challenges under PM Mode. With the above achievement in the last nine years it is not now undisputed that the architecture of new global order can be neither imagined nor complete without a self-confident, strong, rising India assuming its rightful place. We are less than one year away from the biggest dance of democracy, the Lok Sabha elections of 2024, which will bring most Indian adults to the polling booths. Given India size and scale, anybody serious about forming the government in 2024 should not wait to get into LS election mode. In some ways, election season never really stops in India, with frequent state assembly polls, municipal polls etc. TV debates and social media are a permanent political battleground for various parties, with praise and criticism. But most of our public debate goes into shouting about who should be running the country, rather than how they should be running it. Still, general elections are a different beast, India perennial election mode on heavy steroids. What should you expect this year? The most **bitter,** brutal, undignified and cringe worthy statements. Fake news. Truth will be irrelevant where feels right is another way of saying confirms my already existing bias. Reflections Is it good to be good or bad? Should we first discuss, explore, argue, have a better understanding of good vs. bad? May **we** not assume it is good to be more and more unselfish, selfless; committed to our respective duties, to care and concern for more and more? Of course, we can easily accept goodness as an ideal to be followed by others or even for our own long-term good. The problem really is that even though we may wish to be and to do good, our mind and our thoughts are usually looking only for immediate pleasures and impel us into wrong, based on our tendencies! So, perhaps we may agree that to be good in the present we need to **struggle** to practice managing our mind and our responses, moment to moment. And this is part of education! A. Dissatisfaction with Present: With modern education and divisive religions and politics, we get self-serving political animals and systems where responsibility and accountability are not fixed; promises are made but never fulfilled and people have the freedom to rise to their level of incompetence there is no balance between aspiration, character, and competence! The undue foc

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-17-TEST NO.-25511

Proportional allocation of seats, the Speaker has actually granted the Congress party six times more speaking time than the BJP. Although the Opposition moved a no-confidence motion against the Lok Sabha Speaker, the Leader of the Opposition, Rahul Gandhi himself, did not speak on that very motion. Furthermore, during crucial parliamentary sessions such as the Budget Session, Rahul Gandhi was frequently away on tours to countries like Germany, Vietnam, England, Singapore, and Malaysia. By presenting these salient points in his Lok Sabha address, Amit Shah effectively silenced the Congress party. The Lok Sabha Speaker does not belong to any single political party, rather, the Speaker serves as the custodian of the entire House and the protector of the rights of all its members. Against this backdrop, the Congress party has, over the past few years, embarked upon a deliberate campaign to spread misconceptions against the Speaker of the Lok Sabha. Utilising both traditional media and social media platforms, a highly systematic smear campaign is being unleashed against constitutionally established institutions such as the Lok Sabha Speaker and the Election Commission. Rahul Gandhi labors under the delusion that, simply by virtue of being a member of the Gandhi family, he stands above the Constitution. Consequently, he shows no willingness to adhere to the rules and laws framed by the Constitution for the conduct of proceedings in the Lok Sabha. By observing these very rules and laws, Rahul Gandhi would, in fact, be able to secure ample time to speak on a wide range of issues. However, knowing full well that he lacks the substantive points required to speak knowledgeably on subjects like the budget, Rahul Gandhi employs various tactics to steer away from the core issue and begin speaking on entirely unrelated matters. In such instances, the Speaker invokes the House rules to restrain him from speaking. Om Birla is the first Speaker of the Lok Sabha who, on grounds of propriety, recused himself from presiding over the House proceedings once the discussion on the no-confidence Motion commenced. He even rectified and accepted defective notices regarding the no-confidence Motion submitted **by** the Opposition. During his tenure, the productivity of the Lok Sabha has stood at 91%. The duration of the 'Zero Hour' was extended to five hours, and members were frequently accorded the opportunity to raise issues until as late as 12:00 AM. The House functions on the basis of **mutual** trust between the ruling party and the Opposition, and the Speaker serves as the custodian of the House for both the ruling and opposition parties alike. The Lok Sabha has established specific rules to govern its proceedings. Parliament is neither a fair nor a public assembly; therefore, unless the Presiding Officer grants permission in accordance with the rules, no member has the right to speak by flouting those regulations. It is the duty of the Speaker of the Lok Sabha to intervene and provide appropriate guidance whenever these rules are disregarded. These rules have been in force since the **very** inception of the nation's Parliament, dating back to the tenure of the country's first prime minister; yet, the principal opposition party has frequently violated them. To cast doubt upon the decisions or the integrity of the Speaker of the Lok Sabha is deeply unfortunate and reprehensible. Congress and Rahul Gandhi are still functioning with the mindset of privilege from the time

More than 42 Members of Parliament participated in the discussion. Until now, it has been the tradition to regard the Speaker's decision as final; however, the opposition has cast doubts upon the very impartiality of the Lok Sabha Speaker. The Lok Sabha serves as the supreme assembly of India's democracy, and our democratic system enjoys high prestige not only within India but across the entire world. If questions are raised regarding the integrity of the head of such an institution, it casts a shadow of doubt upon India's democratic process, not merely within the country, but globally. In 1954, the Socialist Party moved a no-confidence motion against G. V. Mavalankar. In 1966, the Samyukta Socialist Party moved a motion against the then-Speaker of the Lok Sabha, Sardar Hukam Singh. Similarly, in 1987, the Communist Party moved a no-confidence motion against Balram Jakhar. All these parties are, to some extent, part of the current opposition alliance. Neither the Bharatiya Jana Sangh, nor subsequently the BJP, nor any alliance led by the BJP has ever moved such a motion. The BJP and the National Democratic Alliance have functioned as constructive opposition in the Lok Sabha and have upheld the dignity of the office of the Speaker. The BJP has demanded the protection of its legitimate rights; however, it has never moved a no-confidence motion against the Speaker of the Lok Sabha. When the current principal opposition party, Congress, was in power, motions of no-confidence were moved against the Speaker on three separate occasions. At that time, it was customary for the Lok Sabha Speaker not to occupy the Chair while a debate on a no-confidence motion was underway; yet, on all three of those occasions, the Congress Speakers of the Lok Sabha chose to preside from the Chair. Mr. Birla, however, on grounds of propriety, refrained from occupying the Chair until the debate on the no-confidence motion was concluded. The Congress party is being dragged along by Rahul Gandhi's impetuous conduct. This debate has exposed the hypocrisy of the Congress. Let us wait and see whether the Congress leadership learns any **lessons** from this episode. Why defence projects like AMCA and Tejas Mk2 get delayed; fix it, split HAL, build Tejas Inc Manish Kumar Jha is a defence editor and security expert. He is the Sr. Visiting Fellow & Editorial Adviser at the United Services Institution of India. He is a **fellow** of Oxford University KPF. He writes on national security, military technology, strategic affairs & policies. Yes this is broadly consistent with what has been happening with HAL Tejas Mk2. Even after the project received approval from the Cabinet Committee on Security (CCS), several factors pushed the rollout and first-flight timelines beyond the earlier 2025 expectation. Although the CCS approved the program, actual fund disbursement often comes in stages. Budget allocations from the Ministry of Defence (MoD) did not always match the planned development pace. Besides the technology issues, delays in releasing funds slow prototype fabrication, subsystem procurement and supplier **contracts** if other elements are intact. This is a common issue in Indian defence programs where approval does not mean immediate full funding availability. Typically, the Aeronautical Development Agency (ADA) also depends on a large ecosystem of suppliers. The key components in this case are radar, EW systems, flight control, and advanced composites. Many of these come from Indian pr

The Life of a Doctor A Balancing Act of Dedication and Compassion the life of a doctor is often depicted as a blend of intense responsibility, relentless dedication, and profound compassion. While it is a profession celebrated for its contributions to health and well-being, it also encompasses a myriad of challenges and rewards that shape the daily experiences of those in the field. The Demanding Path to Becoming a Doctor Becoming a doctor requires a long and rigorous journey. It begins with years of undergraduate education, followed by medical school, and culminates in residency and possibly fellowship training. This path demands an unwavering commitment to learning and personal sacrifice. Medical students and residents often face gruelling schedules, high-stakes examinations, and emotional strain. The training period is designed to build not only medical knowledge and technical skills but also resilience and adaptability. The Everyday Responsibilities a doctor day is rarely predictable. Clinical duties include diagnosing and treating patients, conducting medical procedures, and reviewing test results. Doctors must also navigate the complexities of medical records and insurance paperwork, which can be time-consuming. Effective communication with patients, families, and colleagues is essential, as it directly impacts patient care and treatment outcomes. In addition to clinical work, doctors are involved in continuous learning to stay updated with medical advancements and best practices. This may include attending conferences, participating in workshops, and reading medical journals. The balance between patient care and professional development is crucial for providing high-quality healthcare. Emotional and Psychological Impact the emotional and psychological demands of being a doctor can be profound. The responsibility for patient health and well-being can weigh heavily. Doctors often deal with life-and-death situations, deliver difficult news, and provide comfort to patients and families in distress. The ability to remain empathetic while managing one own emotional responses is a critical skill. The pressure to make quick, accurate decisions can also lead to stress and burnout. Long hours, high-stakes environments, and the need to maintain empathy despite personal challenges contribute to the emotional toll. Many doctors seek support through professional counselling, peer support groups, or mindfulness practices to **manage** these aspects of their work. Work-Life Balance Striking a balance between work and personal life is one of the most challenging aspects of a doctor career. The demanding nature of the job can encroach on time for family, hobbies, and self-care. Despite this, many doctors find ways to create **boundaries** and ensure that they nurture their own well-being. Support from family and friends, as well as institutional efforts to promote wellness and work-life balance, play an essential role in sustaining a fulfilling career. The Rewards Despite the challenges, many doctors find their profession deeply rewarding. The opportunity to make a tangible difference in patient lives, contribute to public health, and engage in lifelong learning provides a profound sense of purpose. The gratitude and positive outcomes experienced from successful treatments or preventive care can be incredibly fulfilling. Moreover, the medical field offers diverse opportunities for specialization and research, allowing doctors **to** pursue their passions and

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-18-TEST NO.-25516

It requires a blend of technical expertise, emotional intelligence, and a deep-seated commitment to the well-being of others. While the path is fraught with challenges, the impact doctors have on individuals and communities highlights the profound value and dedication inherent in the profession. In 1978 when we first went there, we assiduously avoid establishments calling themselves Dilli Durbar and Pure Veg Bombay Thali in favour of Goan fare. We are familiar with Xacuti, and Rawa Fry, and Butter-Garlic, and have engaged in theological debates about the relative merits of the poi the unde and the fermented-rice based subtly sweet Sana. However, we bypass Cafreal, after having tried it once in an eatery famed for it. It arrived at our table as an inviting dark-green coriander preparation, but the seductive green turned out to be a deadly camouflage for the fiery wrath of green chillies which assaulted our palates. Cafreal? Never again! We happened to mention this to Chef Peter, who runs one of our favourite restaurants in Goa. With a dismissive gesture he said that what we had eaten was an impostor, and he promised to prepare the genuine item for us. Peter Cafreal came with a reddish-brown sauce, with no sign of green or of coriander. And blessed relief! No hint of taste-bud-annihilating chillies. Peter, who d learnt the recipe from Chef Genes Viegas, who introduced the dish to Goa, explained that the use of the green coriander-chilli paste to make Cafreal was a concession to the North Indian tourist. As he recounted the story of Cafreal, he evoked an odyssey involving the ebb and flow of the tides of history, of Africa, and Portugal, and Goa, and the cross-cultural currents that make up that most complex recipe of all, involving many lands and many ages. The recipe that goes into the making of what we call us. The Life of an Army Soldier Discipline, Duty, and Resilience the life of an army soldier is characterized by a unique blend of discipline, duty, and resilience. It is a vocation that demands unwavering commitment, physical endurance, and mental fortitude, **while** also offering a profound sense of purpose and camaraderie. Soldiers undergo rigorous training and face a variety of challenges both on and off the field, embodying a way of life that is distinctly different from most civilian careers. The Rigorous Training the journey into army life begins with basic **training,** a transformative period designed to instil discipline, physical fitness, and foundational military skills. Basic training, also known as boot camp, is a gruelling process that pushes recruits to their limits, fostering teamwork, resilience, and adherence to military protocols. Recruits learn essential skills such as weapon handling, navigation, first aid, and tactical strategies. The intensity of this training prepares soldiers for the physical and psychological demands they will face throughout their careers. Daily Responsibilities and Duties the daily life of a soldier is marked by a structured routine and a range of responsibilities. Soldiers may be assigned to various roles, **including** combat operations, logistics, intelligence, engineering, or medical support. Their duties can involve patrolling, conducting drills, participating in exercises, and performing administrative tasks. The nature of their work often requires them to be adaptable, as assignments can change based on mission needs and operational requirements. Soldiers are also responsible for maintaining

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-18-TEST NO.-25517

Wanton destruction of natural resources. This mad rush for Aretha and kami without character can certainly not be considered either good or the goal and purpose of human life. B. Shared Vision of Future: We need clarity on the higher and better. We then need to get established in good habits and Self development practices to develop ethical values, discipline, strength, and a burning desire to walk the talk. And we need to learn how to build strength of mind, will power, self control to grow towards good, better and overcome habits and tendencies which curb our growth. Can divisive and destructive politics of democracy, inefficient, non caring and self serving governance, and mere 3R education, ever produce men of wisdom? The modern passion for democracy leads to respect for money and power but not character, and so no one today has the time and conviction to define and create good people! Our duty is to reflect how can we as enlightened citizens, unite and strive to work together with schools, colleges, and parent-teacher-associations, etc. to supplement and complement the modern education and HRD efforts to inspire the youth to know and learn to manage and direct our mind towards the higher dimensions of work and life, towards the common, universal North of being happy, prosperous, fulfilled, healthy, swathe. How can we as enlightened citizens reflect and strategize how to bring about a paradigm shift in the way we educate, train, select, and guide the young to careers from where they can grow towards good, better, best. C. Steps towards Highest and Best our universal North How do we get inspired to practice Life Skills, Self-development processes, to manage our mind to choose and walk towards the higher and better, the long-term good? Generally, we may agree that a person who has and is striving to have love, care, concern for others, and is also committed to universal values of truth, non-violence, peace, righteous ethical conduct aka Dharma and to kartavya-palan and fulfills all his duties for the good of samara, aka Swadharma, is certainly good and striving to **be** better! Viveka-buddhi: Every moment we have choices. Willy-nilly, whether we like it or not, we are continually in the process of becoming based on our choices and deeds. Our freedom of choice is to move either towards good or bad, using our will power to overcome the resistance of **our** past habits. Habit of fulfilling our duties and righteous conduct if instilled and imbibed during growing up, purifies the mind, which in turn strengthens the will power to be good. Of course, we all do wish to become better, not worse, in and through all our goals, choices, motives, actions, relationships. And so, it is important to know, discuss, explore, and be convinced of the direction towards which we should become better. As a global society, divided by selfish religious preachers, politics of democracy, scientists of matter, we have yet to realize that bad, average, good, and better make **sense** only if we first discuss, reflect, and get an idea of the Best, our universal North, and then strive to walk towards the good, better. The essential purpose of parenting, growing up, education and religions, is and must be to awaken our viveka-buddhi to focus and choose the better, the long-term good for ourselves and samara. And to help us get established in kartavya-palan, so that by fulfilling our duties we could remain on the critical path to attain the highest goal of life. Growing up mus

Karma Yogi ii to strive for quality and excellence in whatever we do iii to consider our daily work as an opportunity for chitta suddhi purity of mind which helps us to be righteous. Our challenge is not just to be educated but to become Mentors of society. Whether were leaders, professionals, entrepreneurs, workforce, we must be role models and mentors, the Sheathe, who could guide and provide long-term vision and systems for our growth towards good, better, best. Mosquito-borne illnesses are a serious threat to public health, with millions of people affected by them each year. These illnesses are spread by mosquitoes, which are common in many parts of the world, and can cause symptoms ranging from mild to severe such as dengue fever, chikungunya, Zika virus, and West Nile virus. Mosquito-borne illnesses can be a serious threat to our health; causing diseases while traditional methods to avoid mosquitoes may involve the use of harmful chemicals like there are other ways to protect you from mosquito bites without resorting to chemicals that can be harmful to both humans and the environment. Fortunately, there are many natural methods you can use to protect yourself from mosquito bites and avoid mosquito-borne illnesses. In this article, we will discuss tips for avoiding mosquito-borne illnesses naturally. In conclusion, preventing mosquito borne illnesses is crucial to maintaining good health, especially in areas where these illnesses are prevalent. While chemical sprays and insecticides may be effective, they can also be harmful to the environment and our health. By following the tips mentioned in this article, such as wearing protective clothing, removing standing water, and using natural repellents, we can reduce our risk of mosquito bites without relying on harmful chemicals. Additionally, by spreading awareness and taking steps to eliminate breeding grounds for mosquitoes, we can create a safer and healthier environment for ourselves and those around us. Technology is important; it is also one of the primary reasons we are able to unlock many possibilities and drive human progress. However, it is imperative that technology is being used in the most efficient and environment-friendly **manner,** considering that India e-waste generation has increased by 9 lakh tones in five years, according to the Ministry of Environment, Forests, and Climate Change. Furthermore, while recycling has increased in the last five years, data shows that in tones, of e-waste went unprocessed. To address this issue on a **large** scale, OEMs can play a key part in driving sustainable operations by measuring the environmental impact of their products and then taking collective action. Adopting circularity, which focuses on reusing materials and creating new products from recycled materials, is critical to constructing a sustainable future. However, the path to a circular economy is long, and one of the key questions those organizations face when embarking on this journey is where do we start? I vet attempted to respond by providing some thought starters Understanding the Product Lifecycle Organizations can prioritize circularity and sustainable design from conceptualization to material sourcing, **manufacturing,** delivery, and end-of-life considerations. By designing products with repair ability and longevity in mind, we can extend their lifespan and reduce the need for premature replacements. Furthermore, using natural products and sustainable materials in the design

A one stop destination for multiple investment options, including bonds, currencies, stock, commodities, and other financial assets. From opening a Demat account and making trades to maintaining an investment portfolio, web and mobile based applications have made trading convenient for today tech savvy individuals. It has led to increased participation by millennials and GenZ. Tech enabled solutions fostering participation The gradual adoption of new age technologies has significantly improved user experience and hence, retail participation in the stock market. Digital trading platforms equipped with AI enable retail investors to research, explore, understand and make informed investment decisions. More trading platforms are deploying AI to assist users in executing trades at an optimal price. Technological advancements and API integration of trading platforms are some of the factors that continuously influence the retail participation of new age investors. The global online trading platform market size swelled significantly, over 8 billion in 2021. Moreover, trading platforms today provide advanced trading features that enable a seamless wealth creation journey. The road ahead The increasing participation in the financial markets is further fueling the growth of digital platforms that are rolling out new products and services to make investments accessible to the otherwise underserved markets. Nowadays, more new age investors seek platforms that offer a one stop platform for all financial services. This paves the way for super apps that proffer users with multiple services ranging from trading in the stock market, FDs, and mutual funds to seeking loans. As we move ahead, one of the emerging trends in the digital trading platforms is the integration of AI powered chatbots that facilitates new as well as seasoned investors with financial market updates. With the continuous evolution of digital trading platforms, the online trading platform market is expected to reach over 12 billion in 2028, at a 5.1 CAGR from 2021 to 2028 as per certain market estimates. Technology is fast becoming an integral part of all aspects. Technologies like artificial intelligence AI, Big data, machine learning ML, Block chain, cloud computing, etc., have transformed businesses and industries. Technology is becoming the lynchpin to further **the** economy growth, startups across sectors are exploring artificial intelligence to gain investors and customers. Technology is becoming crucial for the healthcare sector, where advanced technologies are being deployed for treatments, diagnosis, improving clinical outcomes, improving efficiency, and reducing human error. The Indian technology sector is witnessing sustained global interest **due** to its transformative nature, which will have a massive impact on the country economic growth. The Union Budget presentation also hinted at an upcoming open platform for the national digital health ecosystem. With a strong focus on health, education, and digitization of various industries in Pan India, Budget 2022 is a step in the direction of being investor friendly to attract billions for capital formation, and it is going to be the foundation of the digital growth potential of the country. Value increasing from 94 million 2011 to 1,275 million 2016 a jump of over 13.5 times. India healthcare industry has grown at a compound annual growth rate of around 22 percent since 2016. At this rate, it is expected to reach 372 billion in 2022. Healthcare has become one of the largest sectors of the Indian economy in terms of both revenue and employment. In 2015, the healthcare sector became the fifth largest employer, employing 4.7 million people directly. As per estimates by the National Skill Development Corporation NSDC, healthcare can generate 2.7 million additional jobs in India between 201722 over 500000 new jobs per year. The COVID 19 pandemic acted as a catalyst to bolster the growth of startups in India. India is fast becoming a hub for startups to blossom. New age startups provide cost effective and timely solutions to @ various issues impacting mankind by deploying new age technologies like AI, ML, Block chain, and cloud computing. With the present boom in startups across the country, more and more startups rely on newer technologies like nanotech, Iota, AI, robotics, 3D printing to provide solutions. AI has a dominant role in healthcare, manufacturing, finance, transportation, retail, and education. AI has been crucial in the healthcare sector as it has been assisting clinicians with better diagnosis, better outcomes, better efficiency, and reduced human errors. As AI is still an emerging technology, it has unlimited potential in its applications. The healthcare sector has several challenges of varying degrees, AI startups fueled by the COVID 19 pandemic have helped the healthcare sector in devising solutions through telemedicine, remote monitoring, robotic surgery, AI assisted imaging, diagnosis, and maintaining records. The technology solutions provided by these startups are customized to cater to specific demands with increased efficiency, better time management, and mitigating costs. As the demand for healthcare services and accessibility increases, advanced technologies can help streamline processes, automate tasks, and scale workflow. As healthcare providers embrace solutions provided by emerging technologies, these solutions are helping healthcare professionals in improving patient care, better patient experiences, and burnout reduction. Advantages of technology in **healthcare** Open source digital platforms can help achieve better management of operations, resources, patient flow, and healthcare providers workloads. It can help better manage resource utilization and decisions based on data sets, increasing efficiency and reducing errors. Genome sequencing is helping healthcare providers decode human DNA to extract powerful indicators **which** can be used to find the causes origins of diseases. Remote monitoring tools and wearable have not only helped increase efficiency reduce errors but also provide timely treatments without burning out the healthcare workforce. Electronic health records help maintain patient data promoting proper medical treatment and diagnosis. The culmination of technology and robotics has helped improve surgical outcomes and survival rates with better patient satisfaction. Telemedicine has helped healthcare reach remote areas making it more accessible to the masses. Health tech start ups have created a positive impact by providing customized solutions to various challenges in healthcare remote monitoring **tools,**

Diagnostics, pharmacies, teleconsultation, etc. The strides that have been made with the incorporation of technology in healthcare would have otherwise been impossible. Emerging technologies could be the answer to achieving efficient capital employment, scalability, affordability, etc. The health tech start ups have revolutionized the Indian healthcare sector, technology could be the possible solution to the challenges that the Indian healthcare sector faces. Start ups could bridge the divide between demand and need for healthcare in India. As more and more emerging technologies become mainstream, clinicians need to up skill and embrace these newer technologies as it not only improves outcomes, reduce treatment diagnosis time, and also be cost effective at the same time. What happens when Vadehras, Experimenter, Chemould and Jhaveri Contemporary fuse their artist lexicon and cultivate a show that couples the complexity of humanist existence these four premium galleries from India have just descended on Sadie Coles in London for an avant garde unveiling amidst the tinkle of a wine and cheese preview amidst English weather. Melange of materials A glimpse of the installation images of art works at Sadie Coles, suggests a diversity of mediums, including painting, sculpture, etching and photography. In bringing together these artists and creating a melange of materials the viewer is offered a taste of universal resonance born in the crucible of personal experience. Amidst a handful of versatile names, viewers in London can read artistic ferment as being about the artist, the practice, and the vocabulary because they weave history to critically engage with the language of their work through the context of a lived experience. This is where the histories of artistic practice, or personal narratives, come into the picture and overlap with the visible vocabulary of human figures and cadences of individual sensibilities. In the pursuit of the interweaving of past and present, of studio practice and naturally sustained vocabularies, we can find a common thread of conceptual dexterity that seeks to transcend the simplistic opposition between the leaves of modernist and contemporaneous character. Vadehras twin offering Anju Dodiya quartet creates an evocative tableaux of emotive intensity.Each image is **constructed** in the corollary of individual conversations.She uses padding plumped up, charcoal and acrylic on fabric amidst the felicity of the contour to create women as victims of violence, bruised, by both pursuits and domestic settings while confined during the pandemic. When asked why Anju is an important artist in **terms** of evolution and contemporary character, Roshini Vadehra says from London Anju Dodiya works are a poignant reminder of the everyday during our collective confinement during the pandemic. These works are hinged small realities, on the little things that gave us joy, be it books or the views of nature, along with her starkly drawn roots that she metaphorically grew in her home spaces.These four works make us reminisce about the time that we collectively experienced during the self imposed isolation. Roshini words point to Anju play with elements of solitary satiation books, gardens, and food.The beauty of her works **lies.**

With about 69 of the people below 35 years. To provide a platform for holistic implementation of all youth engagement and outreach initiatives and bring the interests and empowerment of youth, especially women, to the center of policymaking, the Government of Jammu & Kashmir UT has rolled out a pioneering enterprise Mission Youth. In the past few years, the goat of Jammu and Kashmir has been creating a gender inclusive eco system so that women could have better education opportunities and contribute to economic growth. Thus putting them at the center of all development schemes. More than 74,771 youths from 20 districts have joined the Youth Clubs, which play a significant role in providing youth with the opportunity to work through real challenges and make meaningful change. 4,522 Youth Clubs have been constituted across 20 districts, with 9,000 youths enrolled in the Pooch district. It is pertinent to mention that the J&K Government has also helped 6000 young women become entrepreneurs selected at the Panchayati level. National Rural Livelihoods Mission is being run in J&K as Jammu and Kashmir State Rural Livelihoods Mission (Umeed). This is a turning wheel of transformation for women to become progressive and self employed women entrepreneurs. It aims to reduce poverty in the state by building solid grassroots institutions for the poor, engaging them in gainful livelihoods interventions and ensuring appreciable improvement in their income on a sustainable basis. JKRLM has become a change driven movement in J&K with 60,000 Self Help Groups (SHG) with 5,02641 women beneficiaries. The official figures say that Rs 890.55 crore of bank credit by SHGs promoted by Umeed JKRLM while SHGs have availed Rs 273.88 crore capitalisation from JKRLM. It is encouraging and motivating that these SHGs have mobilised Rs 168.88 crore from their savings. During Kashmir University convocation, there were 94 gold medalists in 2021, of which 77 were girls. Similarly, during the Islamic University of Science and Technology convocation, most gold medalists were women, clearly showing women empowerment. Women have been given a 15 reservation in Jammu and Kashmir Police recruitment in non gazetted cadres. **Fareeda** Bano, from Matipura Pattan, Srinagar, J&K, set up a silkworm unit in 2015. She not only empowered herself but ten other women employees. This year, on the eve of Women Day, President Ram Nath Kovind conferred Nari Shakti awards on 29 Indian women of outstanding caliber in different fields **and** activities, demonstrating how Indian women prove as game changers and excel in various areas to an extent meriting national recognition. It is heartening that among the recipients, Jammu and Kashmir had their due share in the form of two women of outstanding caliber, namely Sandy Dhar and Nasira Akhtar, getting the coveted awards. The problematic dynamics of the J&K have repeatedly tested the emotional resilience of women, especially during the eruption of the Pakistan sponsored insurgency in 1989. Women can do wonder if adequate space is provided for them. The J&K has seen a significant shift in its discourse **for.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-18-TEST NO.-25525

Excite disaffection towards the government, established by law in India as seditious, meaning, inciting or causing people to rebel against the authority of a state. This movement marks the beginning of the sedition law in India. During the freedom struggle, the sedition law was used by the British to suppress dissent, and imprison freedom fighters. It was expected that after Independence India might not have that sedition law. The original Constitution, that was adopted in 1950, did not recognise the sedition law, giving right to free speech full protection, in the chapter on the fundamental rights. However, the first amendment brought in 1951 introduced restrictions, that validated the sedition law. After Independence, the constitution framers had devoted considerable time to weigh in on various aspects of this colonial law. One of the most vehement critics of the sedition law was K.M. Munshi, who argued that, such a draconian law is a threat to democracy in India. He argued that, the essence of democracy is criticism of Government. It was due to his efforts and the persistence of the Sikh leader Bhupinder Singh Mann that the word sedition, was omitted from the Constitution. However, this law was reimposed by the very controversial First Amendment that was passed by the government headed by the first Prime Minister Jawaharlal Nehru. While introducing the first amendment to the Constitution in 1951, Nehru had stated that, so far as I am concerned, that particular Section 124A IPC is highly objectionable and obnoxious, and it should have no place, both for practical and historical reasons in any body of laws, that we might pass. The sooner we get rid of it, the better. However, he dithered on this, and his government, not only reimposed the sedition law through the first amendment in 1951, but also strengthened it, by adding two expressions, friendly relations with foreign state and public order, as grounds for imposing reasonable restrictions on free speech. Section 124A of the Indian Penal Code is referred to as the sedition law. The word sedition itself is however not mentioned in the IPC section. The **sedition** law reads thus: Whoever, by words, either spoken or written, or by signs, or by visible representation, or otherwise, brings or attempts to bring into hatred or contempt, or excites or attempts to excite disaffection towards the government established by law in India, shall be punished with imprisonment which **may** extend to three years, to which a fine may be added, or with fine. JNU students Kanhaiya Kumar, Umar Khalid and others were prosecuted under the sedition law for allegedly raising treasonous slogans, in the university campus in 2016. Sedition Law in other countries In the United Kingdom, the sedition law was officially repealed under Section 73 of the Coroners and Justice Act, 2009, citing a chilling effect on freedom of speech and expression. The common law on sedition, which is traced to the Statute of Westminster, 1275, when the King was considered the holder of Divine right, was **termed.**

In the narrative she employs, as we view images mirroring joy and pain, celebration and memoir. Bade Ghulam Ali Khan art and music as forces capable of stimulating cross cultural unification. For Madhusudhanan music is a consolidated force as much as the elements he uses a small gramophone cradled in wire and a bundle of microphones form a mesmerising mass. Miniature mannequins and toy animals all jostle for space amidst the fall of monuments in an elegiac ensemble in a set of charcoals that are meticulous in creation. Experimenter environmental echo Prabhakar Pachpute has for long now been a proponent of lamenting the volatile human relationship of man to land. Environmental transformations shaped dependency creates his installation Resilient Bodies in an era of Resistance, 2018, a network of soil clump cutouts, arranged like a tunnel route to treasure, respond to recent protests and collective action by Indian farmers against the threat of legislative disfiguration of agricultural rights. Pachpute sculpture, of red clay, Multan mite, gum Arabic, wire mesh and soil doubling down on and almost consuming several pairs of legs, relates to the exhausted mine worker body. The terracotta sculpture reads like an apt epitaph. Radica Himeji combines photography with painting and embroidery, to reimagine geographies. The installations are dense and majestic but create an abstract environmental aura. She also melds small lozenge markings, based on beads from Lord Krishna necklaces, and makes it appear like ideograms that revolve as it seeks open ended interpretation. Chemould Gallery inventory of lost utopias Atul Dodiya reloaded Wunderkammer. Encased in shallow wooden cabinets, with apertures shaped like easels, is a collection of trinkets integrated with a monochrome sequence of citation drawn from Dodiya close watching and recollection of a seven minute section of Hitchcock Blackmail that focuses on a fatal struggle between a woman and an artist. This storyboard through Dodiya memory and fragmented by his miscellanea, visible through the shape shifting windows, invites more imaginative associations. The simplicity of Mithu Sen mark making belies the intensity of her work. With a pinpoint she pierces paper to form a suite of images **that** personify the human skeleton. In her anatomical diagrams bones are shown shattered, hands are bloodied and each body part is labelled with a date. The dates reference a historical timeline. The works create a mosaic of pricked paper notes in which is mirrored pain and premonition suffused with acute **anxiety.** Jhaveri Contemporary Rhetoric Mrinalini Mukherjee etchings are a treat for tired eyes. Mukherjee detailed evocative etchings of verdant landscapes con trastingly implicate the joy of being one with nature. These are landscapes from her visual diary, they form create an abstract environmental aura. She also melds small lozenge markings, based on beads from Lord Krishna it appear like ideograms that revolve as it seeks open ended interpretation. Chemould Gallery inventory of lost utopias Atul Dodiya reloaded Wunderkammer. Encased in shallow wooden cabinets, with apertures shaped like easels, is a collection of trinkets integrated a record and create an ecological **echo.**

Significant time. Integrating these systems while maintaining flight safety requires extensive ground testing and simulations, which lengthens timelines? I put down those complexities deliberately so that the proposition and solutions don't look like just an idea. No, the time has come for the government to consider these structural changes. Bring the structural changes and put autonomy and accountability right away. That is what the defence DPSUs need now, especially Hindustan Aeronautical Limited (HAL), in the wake of the crisis. Some of the global experience shows that very large defence contractors lead to inefficiency. One such delay is the F-35 program, led by Lockheed Martin, but the comparison with the US is non-linear. The real good and workable case is China itself, which, otherwise, with similar ecosystems, government-run large enterprises and turnaround for tech, and production. China originally had one giant aerospace monopoly: Aviation Industries of China. In 1999, the government split it into two competing firms: Aviation Industry Corporation I and China Aviation Industry Corporation II. In 1999, the Chinese government divided the conglomerate into two competing companies: Aviation Industry Corporation I and China Aviation Industry Corporation II. The idea was to manage competition. Each company received different factories, research institutes, and aircraft programs. And how were programs split? Fighter aircraft institutes in one group; Trainer and helicopter institutes in the other; and Component manufacturing distributed across both. Factories and research institutes were divided between them. So, two corporations competed for military contracts from the PLA, which forced better cost control, faster development cycles and stronger project accountability. The competition helped modernise China's aerospace sector. During the 2000s, China rapidly developed aircraft such as the Chengdu J-10, Shenyang J-11, and Harbin Z-10 helicopter. Crucially, the factories and design bureaus became more specialised and performance-driven. It built a competitive design institute that develops stronger integration with private players. However, after the industry became stronger, China remerged the two companies in 2008 to reduce duplication. This structure allowed China to develop advanced aircraft such as the Chengdu J-20 stealth fighter and COMAC C919 passenger jet. While I don't support the phase **wise** reforms as the case with Ordnance Factory Board (OFBs), turning into DPSUs. That worked only a bit, nothing great or new breakthroughs came out so far, except they began to export. Splitting HAL carries risks too, so it could be in the form of incremental reforms. It could be **a** phase-wise restructuring: Start by corporatizing HAL's helicopter division, then replicate successes. At the same time, invest in the workforce and partner with institutions like IITs and global aerospace institutions to up-skill HAL engineers in AI, computational fluid and design and development dynamics. It could add drone technologies too. Several structural factors contribute as defence acquisitions often take 5-7 years between RFP and contract signing. Along with multiple approval layers in the Ministry of Defence's decisions. However, in the recent Draft DAP 2025, the Government has been very forthcoming on bringing change, efficiency. That is good as we acknowledge the **systemic** malaise and then try to resolve it. Overdependence on a single DPSU in such a cr

blueprint is still missing. Another key global jet engine manufacturer Rolls-Royce has pitched in too. As I remember the words of Indian Air Force (IAF)'s deputy Chief Air Marshal Bharti during my discussion, Intent must be solid and good. A point is made here for the government on how to go about, but faster. 5th-gen fighters require technologies India is still scaling up for stealth shaping, internal weapons bays, advanced AESA radar, sensor fusion all based on super cruise-capable engines. Split HAL into separate design and manufacturing companies. Create two competing aerospace primes instead of one monopoly. Allow private firms like Tata Advanced Systems, Larsen & Toubro, and Mahindra Aerospace to compete for aircraft production. Keep R&D with agencies like Aeronautical Development Agency for the development. The Ministry of Defence has started structural reforms, involving the private sector. Instead of giving AMCA fully to HAL, the Production may involve private firms like Tata Advanced Systems, Larsen & Toubro, and Mahindra Aerospace. So, the goal must be straightforward and simple: reduce monopoly bottlenecks and increase manufacturing speed. According to Defence Secretary Rajesh Kumar Singh, the target is 5-6 years from RFP to contract. Instead of waiting for AMCA to mature, Tejas Mk2 will act as a technology bridge, maybe a mature fighter itself. So, the Tejas is the foundational, what will it validate is crucial in terms of new sensors, advanced composites, larger airframe design, improved avionics and upgraded EW systems. Those technologies feed into AMCA development. Aerospace is too critical. Fixing it will herald the real structural changes as India is trying to fix three systemic problems at once. Even though AMCA may involve private industry, HAL is still critical. Building a Tejas Inc. will be the thrust that is needed within the HAL's boundary. Here, MoD can even allow private players to take stake in Tejas Inc. The planned expansion includes the New Tejas production line in Nashik (2025) where HAL is targeting 24 aircraft per year. Combined with the Bengaluru line, total Tejas output could reach 30 36 jets annually. That matters because the IAF's current woes **on** fighter squadron shortage is lingering. The reforms as mentioned by HAL's structural changes, Tejas Inc., private sector involvement, faster procurement, and parallel development are attempts to break the cycle of decades-long delays. The least valued element in world enterprise and activity Homeyar Jal Tavaria is a professional accountant with **interest** in the science of accounts and audit, observer and commentator on macro economic commercial, financial and economic events, occasional blogger'. One of the most worrisome and rather tasteless human behaviours is to devalue the human being as having the least value in all human enterprise and activity. The few examples below will serve to drive home this point: CEOs and managing directors are expected to cut employee numbers and costs when businesses want to be 'competitive,' merger & acquisition activity is under way, or a business chooses to go through reorganization for efficiency purposes. Often, the CEO MD and **top** team are paid fancy performance bonuses to make the enterprise 'lean & mean.' That bonus paid is equivalent to the salary of several hundred employees who may have been asked to leave employment. The more the employees are reduced, the higher is the performance bonus paid to a handful of top exe

Excite disaffection towards the government, established by law in India as seditious, meaning, inciting or causing people to rebel against the authority of a state. This movement marks the beginning of the sedition law in India. During the freedom struggle, the sedition law was used by the British to suppress dissent, and imprison freedom fighters. It was expected that after Independence India might not have that sedition law. The original Constitution, that was adopted in 1950, did not recognise the sedition law, giving right to free speech full protection, in the chapter on the fundamental rights. However, the first amendment brought in 1951 introduced restrictions, that validated the sedition law. After Independence, the constitution framers had devoted considerable time to weigh in on various aspects of this colonial law. One of the most vehement critics of the sedition law was K.M. Munshi, who argued that, such a draconian law is a threat to democracy in India. He argued that, the essence of democracy is criticism of Government. It was due to his efforts and the persistence of the Sikh leader Bhupinder Singh Mann that the word sedition, was omitted from the Constitution. However, this law was reimposed by the very controversial First Amendment that was passed by the government headed by the first Prime Minister Jawaharlal Nehru. While introducing the first amendment to the Constitution in 1951, Nehru had stated that, so far as I am concerned, that particular Section 124A IPC is highly objectionable and obnoxious, and it should have no place, both for practical and historical reasons in any body of laws, that we might pass. The sooner we get rid of it, the better. However, he dithered on this, and his government, not only reimposed the sedition law through the first amendment in 1951, but also strengthened it, by adding two expressions, friendly relations with foreign state and public order, as grounds for imposing reasonable restrictions on free speech. Section 124A of the Indian Penal Code is referred to as the sedition law. The word sedition itself is however not mentioned in the IPC section. The **sedition** law reads thus: Whoever, by words, either spoken or written, or by signs, or by visible representation, or otherwise, brings or attempts to bring into hatred or contempt, or excites or attempts to excite disaffection towards the government established by law in India, shall be punished with imprisonment which **may** extend to three years, to which a fine may be added, or with fine. JNU students Kanhaiya Kumar, Umar Khalid and others were prosecuted under the sedition law for allegedly raising treasonous slogans, in the university campus in 2016. Sedition Law in other countries In the United Kingdom, the sedition law was officially repealed under Section 73 of the Coroners and Justice Act, 2009, citing a chilling effect on freedom of speech and expression. The common law on sedition, which is traced to the Statute of Westminster, 1275, when the King was considered the holder of Divine right, was **termed.**

The percentage of the female population in India is 48.04, compared to 51.96 male populations, and in Jammu and Kashmir, women constitute 47 of the total population. If this significant portion of the population contributes to development, India will become a developed nation. These day women are gleaming in every field. They are becoming doctors, engineers, advocates, teachers, political leaders, administrators, police officers and professionals and joining the Indian Defence Forces. Well informed women play a significant role in the nation building process. Their thoughts, ways of working and value systems lead to faster growth and development of the society. And when women get empowered, stability in society is ensured. Women in developing countries receive the full force of the stress arising from a changing society. The conflict between traditional gender roles and the new narratives of empowerment and new socio economic exigencies set the stage for a realm of gender relations in turmoil. India is no exception, where on the one hand, women are entering the workforce in steadily increasing numbers, but on the other hand, a shocking number of sexual and gender based violence cases both within and outside the confines of the home point to a regressive social scenario. The principle of gender equality is enshrined in the Indian Constitution. It grants equality to women and empowers the state to adopt measures of positive discrimination in favour of women to neutralise the cumulative socio economic and political disadvantages faced by them. Women have fundamental rights not to be discriminated against on sex and get equal protection under the law. It also imposes a fundamental duty on every citizen to renounce the practices derogatory to the dignity of women. Empowerment of women is a process that leads women to claim their rights to have access to equal opportunities in economic, cultural, social and political spheres of life and realise their full potential. This progress has to go together with their freedom in decision making to influence the direction of social change. Indeed, empowerment is a bottom up process rather than something that can be formulated as a **top** down strategy. This means that development agencies cannot claim to empower women, nor can empowerment be defined in specific activities or results. This is because it involves a process whereby women, individually and collectively, freely analyse, develop and voice their needs and interests without them being pre defined or **imposed** from above. Planners working towards an empowerment approach must, therefore, develop ways of enabling women to assess their situation and shape a transformation in society critically. The ultimate goal of women empowerment is for women themselves to be the active agents of change in transforming gender relations. There are three factors viz psychological patterns of society, family, and women that affect six indicators: education, educational freedom, economic contribution, economic freedom, household management and decision making, perceived status within the household, and health that directly influence the position of the women in society. Jammu & Kashmir is a chiefly young **population.**

The human pursuit to understand the nature of things has been eternal. Approximately 2,500 years ago, this quest for knowledge split into two disciplines: philosophy and science. At that time, India was the wealthiest country, and Takshshila was the world largest university, attracting scholars from all over the world. The credit given to Thales of Miletus as the father of modern science may be due to Western bias or the result of 1,000 years of oppression in India by invading cultures. Regardless, it is fascinating to note the convergence of modern science and Indian philosophy after 2,500 years. This topic was thoroughly explored by Fritjof Capra in his 1975 book, The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism. I highly recommend it. In matters of health and psychology, medical science is still trying to catch up with Ayurveda and the teachings of the Upanishads and Geeta. If it were for the greed of the food, pharmaceutical, and healthcare industries, we might have seen the light many decades ago. The power of prayer has also gained acceptance within the scientific community. That you pray is important; who you pray to is irrelevant. What matters is that your mind becomes flooded with a sense of reverence and gratitude. Feelings of gratitude trigger the release of the oxytocin hormone which decreases blood pressure, strengthens the immune system, and speeds up the body healing processes. To illustrate this point, I will share my favorite couplet from Sant Kabir: This verse is often misunderstood because we attribute sukh (happiness) to material gain, leading to disappointment when those material gains do not materialize. We often forget that we seek material gain only because we believe it will bring us happiness, and its absence will cause unhappiness. Happiness is our true goal. When we pray in the true spirit, seeking nothing but happiness, it comes to us naturally like a five-year-old who, after feverishly chasing a butterfly, finds it gently resting on his hand once he sits down tired. My humble suggestion is that when you pray, never ask **for** material gains; simply ask that the results (outcomes) lead you to the path of happiness. Similarly, if you are blessing someone, wish for them to find happiness in whatever life has in store for them. Do not say, May your wishes come true, because in their ignorance, they might **wish** for material gain, which may or may not bring them happiness. When we pray with a sense of gratitude, the release of oxytocin in our body brings happiness. This creates a positive feedback loop, encouraging us to pursue this path more strongly. When we change our diet to a plant-based whole food (PBWF) approach, start intermittent fasting, and walk 10,000 steps a day, changes occur not only in our body but also in our psyche. Plant-based whole foods are what Krishna refers to as Satvic in the Geeta. Satvic foods bring forth Satvic thoughts, which are positive and promote **happiness** by releasing the happiness hormones. When we engage in action for the sake of action, without attachment to the outcome, the process of acting becomes joyful because there is no anxiety about the result. Whether we reach the target or not becomes secondary. When our sole focus is on achieving the target and we miss it, we feel disappointed and miserable, which negatively affects our health. This is the essence of the teachings of the Geeta, beautifully summarized in verse A common ques

This is a valid question for a newcomer who has not yet experienced the power of concentration. Professor Martin Seligman, the President of the American Psychological Association 25 years ago, raised a valid question: why are psychologists only studying psychotics, maladjusted people and not well-adjusted, happy people? His work focused on happy people, leading to the development of a new field of psychology called Positive Psychology. Another psychology professor, Mihaly Csikszentmihalyi, conducted extensive research on this subject and interviewed many of the most successful people across various fields. He wrote a book titled Flow, named after a famous music composer who described a state of flow experienced while conducting a challenging symphony. In this state, he became so engrossed that he felt beyond his body, with his hands moving automatically. This book is worth reading, as it explains why deep concentration brings maximum happiness. Coming from Western scientists, this explanation adds validity to the experiences our ancestral masters must have felt when writing the Yoga Sutras, the Geeta and the Upanishads. In Patanjali Yoga Sutra, he discussed the eight limbs of yoga, with the sixth limb being Dharanaf, which means concentration. Deep concentration leads to meditation, and deep meditation leads to Samadhi, a state of bliss where one consciousness transcends the body. In 1969, when I was at IIT Kanpur, Maharishi Mahesh Yogi came to give talks on Transcendental Meditation and initiated some of us who were interested. It had a profound effect on me and instilled a lifelong habit. Please watch the linked video summarizing some of the benefits of His death. My number one apprehension in writing this piece is that everyone would say a column on the Olympics is dated. Yes, it been almost two weeks since the so-called greatest sporting event ended. Less than a fortnight ago, crores of Indians streamed in to watch neeraj chopra do his javelin throw, where we were expecting gold. We fell into national despair when vinesh phogat was disqualified for being 100gm over the required weight. And yet, how we moved on! The games ended, and we went on **to** the next big thing on social media. Geez, this column may well be dated. Why did i write about the upcoming assembly elections? But this on-and-off mentality is precisely the reason for yet another pathetic performance in the Olympics. Sorry for the harsh words. I know we live in **times** where mentioning India as anything but perfect means you are suspected of being part of a global deep state conspiracy or something like that. However, if you are somewhat of the old-fashioned tough-love category, you will appreciate that sometimes the path to progress lies in calling things what they are. And yes, given our profile and size as a nation, we were bad at the Olympics (again!). This is not to throw shade on our half a dozen or so medal winners. No, please guys, you were the pizza bacha li of a far, far below expectations show in **paris** this year. But to ignore the macro data is doing our nation a disservice. Our neighbor china won 91 medals this time, with 40 gold. We won 6 medals, and 0 gold. Sure, we hear stories of toddlers in china being tormented in a quest to win medals. Still, that does not explain this massive gap between the two most populous nations. the path to progress lies in calling things what they are. And yes, given our profile and size as a nation, we were bad at the Olympics (ag

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-19-TEST NO.-25539

Arcane and from a bygone era, when freedom of expression was not seen as a right. In the United States, sedition is a federal felony an act of committing a serious crime such as murder, punishable by a term of imprisonment of not less than one year or by the death penalty under the Federal Criminal Code, Section 2384, and is now being used against rioters involved in the January 6 attack on the Capitol. Despite the First Amendment, that forbids any restrictions on free speech, conspiracy to interfere directly with the operation of the government, and not just speech is considered sedition. Australia repealed its sedition law in 2010, and in 2021, Singapore also repealed the law, citing that several new legislations can sufficiently address the actual need for sedition law without its chilling effects. Views expressed Supreme Court lawyer Atul Kumar describes the use of words or actions that are intended to encourage people to be or act against a government as sedition in the law. According to him, there is a thin line between fair criticism and conspiracy. He says, ultimately the judiciary has to judge the executive actions, otherwise every dissenting voice would be termed as sedition. However, at present, India should not abolish the sedition law, but it definitely needs to amend it, he opines. Preeti Lakhera, a lawyer opines, the courts seem to have bent towards saying that, when there is no violence, sedition law should not be invoked. However, the words can be linked to violence anytime, she opines. According to her, such laws remain in the public domain to give an opportunity to the government, to suppress anarchy and chaos. The central idea is, to keep a tool in the armour like a Brahmastra to maintain control, she opines. It needs to be noted that, in its consultation paper, the Law Commission in 2018 had called for a rethink on sedition law. The Law Commission had opined in this connection, that every irresponsible exercise of right to free speech and expression, cannot be termed seditious. Attorney general AG of India, KK **Venugopal,** on his part, is reported to have submitted that the entire section need not be struck down, and that, the court could lay down strict guidelines so that the provision meets its legal purpose. The announcement of UN High Commissioner for Human Rights Michelle Batchelet visit to China on **March** 8th was seen as a much awaited welcome development in light of the fact that it has materialised after requests made three and a half years ago. While the UN Human Rights Chief has formally announced a visit to the Uyghur regions, she has no plans to visit Tibet, Southern Mongolia or Hongkong. Except announcing a visit to the Uyghur regions, the UN Human Rights Chief has failed in her commitment to release report documenting genocide against the Uyghurs which is pending since 2021. Scheduled to leave in a few weeks, she has not elaborated on how she intends **to.**

Undertake independent monitoring and evaluation of the human rights situation in China. More importantly, she has refused briefings from Tibetan, Uyghur and Hongkong groups and has not met with any affected groups or victims of Chinese atrocities. The Tibetan Parliament in exile in its resolution passed in the second session of the 17th House in March this year has explicitly appealed to the UN High Commissioner for Human Rights to arrange a visit to Tibet to gauge the human rights situation. Tibetans and Tibet supporters have been appealing to her office seeking an inclusion of Tibet in her itinerary. Mary Robinson visit to Tibet in 1998 remains as the only official visit of UN Human Rights Commissioner to Tibet. Just like the Uyghurs, Tibetans have been facing endless atrocities under the oppressive Chinese Communist party regime since the invasion of Tibet by China in 1949. China has succeeded in making Tibetans a minority in their own land with its aggressive population transfer policy in the name of development and progress. Tibetans in Tibet do not enjoy the basic rights of freedom of expression, thought and assembly. Heavy restrictions and control over the religious life of the Tibetans has seen many religious leaders arrested, silenced and closely monitored. Among these, one of the most prominent figures is Gedun Choekyi Nyima, the 11th Panchen Lama who was abducted at the age of six on May 17, 1995 three days after he was recognised as the reincarnate by His Holiness the Dalai Lama and has not been seen since. This year, Tibetans all over the world are observing 26 years of his disappearance along with his family. With no space for dissent owing to heavy surveillance, Tibetans have resorted to self immolations to voice their protest against the brutal policies of Xi Jinping and the Chinese Communist Party. 158 Tibetans have self immolated since 2009 of which 136 have died. Recent report by Tibet Watch suggests that China is unleashing its language assimilation campaign with strict guidelines to Tibetan parents to assume a crucial role in imparting Chinese language to their children. **Assimilationist** policy aimed at wiping out Tibetan identity is evident from another report which provides evidence to the fact that from a very young age, Tibetan children are forced to attend to colonial boarding schools run by the Chinese authorities to indoctrinate and integrate them to Chinese culture and ideology. **Freedom** House report has Tibet as the least free country tied with Syria and South Sudan for the past two years. Human Rights watch in its recent public statement has expressed concern that the High Commissioner has remained silent on the human rights crisis in Tibet and regret the perceived lack of coherence in the High Commissioner approach to addressing the human rights crisis in China, which poses a risk to the credibility of the OHCHR, and its perceived ability to tackle serious allegations against a major power. The UN Human Rights Chief must not forget that UN Reports and **findings.**

Are vital in exerting international pressure on countries like China to adhere to international norms and principles. By not following the due process and procedures of monitoring human rights situation, the UN system itself is giving China a free hand in committing gross human rights violations and genocide. This only leads to eroding what remains of our faith in the UN to safeguard human rights and freedoms as enshrined in international laws and treaties. In short, the visit of the UN Human Rights Commissioner is bound to be ceremonial and worse still, a dangerous facade orchestrated by the Chinese communist party to whitewash its repressive policies against Tibetans, Uyghurs, and Hongkongers. Without any guarantees of unhindered access to all areas under China, free access to prisons and detention centers and unsupervised confidential meetings with victims of human rights violations, her visit will only contribute to weakening the credibility of the UN Human Rights mechanisms. I support the coalition of 220 groups representing Tibetan, Uyghurs, Hongkongers, Southern Mongolians and Chinese democracy groups in their demands for a postponement of the visit. In a very prominent and debatable question of Criminalisation of Marital Rape in India, recently Delhi High Court bench consisting of Justice Rajiv Shakdher and Justice C. Hari Shankar gave dissenting opinions, each giving detailed differing reasoning but agreeing to issue Certificate of leave to appeal to the Supreme Court under article 134A a read with provides for Sexual intercourse by a man with his own wife, the wife not being under fifteen years of age, is not rape., should be criminalised or not; however, issuance of Certificate under A.134 A a has raised certain pertinent questions in law. In the instant case, both the dissenting Judges have granted leave to approach the Honble Supreme Court of India on the ground that the case involves substantial Questions of Law. Honble Justice Rajiv Shakdher in his conclusion has provided, as extracted below: iv Certificate of leave to appeal to the Supreme Court is granted under article 134A a read with Article 133 1 a & b of the Constitution as **the** issue involved in this case raises a substantial question of law which, in my opinion, requires a decision by the Supreme Court. Justice C. Hari Shankar has concurred to the above. Consequently, the question arises, Whether the Certificate to Leave as granted by the High Court is fit? To **answer** this question, a peek into Article 133 of the Indian Constitution is important in order to understand the etymology. The relevant text of Article 133 is extracted below for a better understanding: Art.133. 1 An appeal shall lie to the Supreme Court from any judgment, decree or final order in a civil proceeding of a High Court in the territory of India if the High Court certifies under article 134A a that the case involves a substantial question of law of general importance; and b that in the opinion of the High Court the said question needs to be **decided.**

Supreme Court. In Article 133 of the Indian Constitution, the words that need emphasis are JUDGMENT Final Order. It is notably the case in the present dissenting decision that owing to a split decision of the division bench, the question issues controversy involved in the case could not be settled. Owing to the split decision, the judgment is devoid of a Ratio Decided or an operative part that would be the settled proposition of law. In order for the High Court to render an effective judgment, a reference to the Hon blew Chief Justice of Delhi High Court was warranted, who would have appointed a third Judge in the matter, so as to have an effective judgment rendered with a ratio of 2:1. However, no such reference has been made, particularly, in terms of Rule 10 of Chapter 4, Part II Civil of the Rules framed under Section 7 of the Delhi High Courts Act, 1966, Re: Difference of Opinion between Judges. The said Rule 10 reads as under: 10. In case of difference of opinion between the Judges composing the Divisional Court, the point of difference shall be decided in accordance with the procedure referred to in Clause 26 of the Letters Patent. Further, Clause 26 of the Letters Patent reads as under: Powers of Single Judges and Division Courts And We do hereby declare that any function which is hereby directed to be performed by the High Court of Judicature at Lahore, in the exercise of its original or appellate jurisdiction, may be performed by any Judge, or by any Division Court, thereof, appointed or constituted for such purpose in pursuance of section one hundred and eight of the Government of India Act, 1915 ; and if such Division Court is composed of two or more Judges and the Judges are divided in opinion as to the decision to be given on any point, such point shall be decided according to the opinion of the majority of the Judges, if there be a majority, but, if the Judges be equally divided, they shall state the point upon **which** they differ and the case shall then be heard upon that point by one or more of the other Judges and the point shall be decided according to the opinion of the majority of the Judges who have heard the case, including those who first heard it. Further, Article **133** 1 only uses terms Judgment, Decree or Final order, and a judgment not settling any issues involved is not certainly in terms of the text of Article 133 1 . The Hon blew Supreme Court in various cases before it has laid down as to what a Judgment and Final Order is. In case of Jethanand & Sons v. State of Uttar Pradesh 1961 3 SCR 754, Supreme Court has held: 7. An order is final if it amounts to a final decision relating to the rights of the parties in dispute in the civil proceeding. If after the **order.**

Left to fend for themselves, carrying the shame or burden of being terminated. A professional study on the impact of job (rushed and incoherent) losses on enterprises has still not evolved as a science of measure and whether the job losses due to some business decision finally contributed positively or negatively to the corporate enterprises. A classic example (I hope business schools are teaching this as a case study) is General Electric and Jack Welch as CEO. His ham-handed manner of handling humans (not as a resource but only as a cost) destroyed General Electric in the decades that followed his retirement (with a very fancy retirement package). However, the human element in business is not just management to employees. Sadly, in the case of unionized industry the matter becomes Union actions philosophy against the corporate (sometimes even industry country). Trade unions are known to hold corporations and countries to ransom. The Mumbai textiles strike and the British coal miners' strike in the 1980s destroyed human life and welfare. By not agreeing to modernizing and implementing technology solutions (often routinely opposed by trade unions) industries wither & die, and the human element (in the form of the employee) suffers the most. We are seeing the effects in India today. Nobody wishes to invest in labour-intensive industry in India, and the nation's industrial base is shaking and shrinking. What is very self-evident is that humans do not know how to value human life or human endeavour. Linked with asset creation, the value stares us in the face. Delinked from some form of material creation, the human has no worthy value. Certainly there will be some compensation, some sort of pain relief mechanism, some form of family being taken care of, but that is not in the money-lost reporting game. In terms of loss computations, it will always be the loss of assets, the loss of opportunity, and the loss because some support structures for activity collapsed. The human cost of human decisions and actions will never be valued and included. The human value loss is never computed. At least for **business** human loss, some new parameters, measures, ratios, and valuation mechanisms need to be evolved. Business decisions must be measured and scaled for effectiveness on the human front. For example, after a business divestment or a merger & acquisitions decision, has the corporation shown improved financial matrices, compensating for the **non-valued** human loss that it forced? Business has to shift from asset management and returns to some form of human management and returns, concurrently measured. Just empty talk of 'Employees are our resource and valued asset' will not do. Some recognized measures must be introduced. Once business values its human capital better, the other areas will follow. Exploring alternative energy partnerships Dr. Shalini Saxena is currently working as a Professor in Political Science and International Relations in the Department of Political Science and Public Administration, Royal School of Humanities and Social Sciences, The Assam Royal Global University, Guwahati, Assam, India. **Prior** to this, she served as a Professor of Political Science in the Department of Political Science, Amity Institute of Social Science, Amity University, and NOIDA. She completed her Ph. D. from Lucknow University in March 2010. Before that, she earned her M. Phil. from the Centre for International Politics, Organization and Disarmament, School

and polling, journalism, electoral politics, research, and university and college teaching. She has published numerous research articles and book chapters in reputed national and international journals. In addition to convening national conferences and workshops, she has edited a book titled Rethinking Contemporary Indian Polity. She is also a course developer and content creator in the fields of Political Science and International Relations. India's pursuit of diverse and secure energy sources is becoming increasingly important as domestic demand rises and geopolitical dynamics shift. As one of the fastest-growing energy consumers in the world, India faces structural challenges in meeting its oil and natural gas needs through domestic production alone. Therefore, it is important to expedite the alternative energy partnerships, which have become a vital part of India's energy strategy. In this regard, Central Asia is a compelling partner. This region, which includes resource-rich countries such as Kazakhstan, Turkmenistan, and Uzbekistan, has substantial hydrocarbon reserves, particularly natural gas. Its proximity to India, along with on-going regional connectivity projects, makes it a more suitable long-term energy partner. Additionally, engaging with Central Asia fits with India's broader goal of reducing reliance on traditional suppliers in the Middle East, thereby improving energy security through diversification. The importance of this strategic focus was clearly conveyed in policy and academic discussions around 2019, a period marked by renewed attention to India's Connect Central Asia policy. This initiative emphasized the need to strengthen economic, political, and energy connections with Central Asian countries. Actions such as participating in multilateral forums, investing in upstream energy projects, and proposing pipeline projects (like the TAPI-Turkmenistan-Afghanistan-Pakistan-India pipeline) illustrate India's aim of formalizing its engagement in the region. Recent developments in the TAPI Pipeline show real progress in its phased rollout. The pipeline has been completed on the Turkmenistan section, highlighting significant progress on the supply side. In late 2024, the Taliban government began construction activities in Afghanistan; including laying about 14 kilometres of pipeline in the Serhetabat-Herat segment. This phase was further supported by the import of additional pipeline equipment, signalling a strong commitment to advancing the project despite on-going geopolitical challenges. **Regarding** its planned operational framework, the pipeline is designed to allocate 42% of its natural gas output to India and Pakistan, with Afghanistan expected to receive the remaining 16%, underscoring its dual role as both a transit country and a beneficiary of regional energy integration. However, despite its potential, this **approach** faces several challenges. Geopolitical instability, infrastructural limitations, and complex regional politics, especially involving transit countries, pose significant obstacles to the smooth integration of energy. Therefore, while Central Asia offers promising opportunities, India must adopt a comprehensive strategy that includes diplomatic engagement, infrastructural development, and regional cooperation to effectively use these resources. Specifically, building broader energy partnerships with Central Asia is crucial for India, both practically and strategically. It promotes energy diversification

By the the civil proceeding still remains to be tried and the rights in dispute between the parties have to be determined, the order is not a final order within the meaning of Article 133. Further in Tara pore & Co., Madras v. V/O Tractors Export, Moscow & An. 1969 2 SCR 699, Supreme Court has held: 3. The expression judgment in Article 133 1 in the context in which it occurs means a final adjudication by the Court of the rights of the parties, and that an interlocutory judgment even if it decides an issue or issues without finally determining the rights and liabilities of the parties is not a judgment, however, cardinal the issue may be. In the present case not even an issue has been decided, and it is not contended that the order of the High Court amounts to a judgment or a decree. The expression final order it has been held by a long course of authorities, occurring in Section 205 of the Government of India Act, 1935, Section 109 of the Code of Civil Procedure and Article 133 1 of the Constitution means a final decision on the rights of the parties in dispute in a suit or proceeding; if the rights of the parties in dispute in the suit or proceeding remain to be tried, after the order, the order is not final. From the above discussions, it appears that Delhi High Court may have committed grave procedural error by issuing Certificate of leave to appeal to the Supreme Court under Article 134A a read with Article 133 1 a & b of the Constitution. Last but not the least, even the Supreme Court while exercising its Appellate Jurisdiction, has to hear the case against an impugned judgment, against which an appeal has been preferred by the parties. In the instant case there is no appealable judgment and the procedure prescribed has been given a go by for unexplained and no apparent reasons. High Court should have referred the present matter to a third judge, who, in turn, would have settled the **issues** involved in Criminalisation of Marital Rape at the Delhi High Court level therefore making it an appealable case for Supreme Court. The Covid 19 pandemic has changed the world, and its effects will surely last. But we are moving back to offices, moving back to being without masks, moving **back** to eating outside food, theatres do not mandate to leave one seat beside you, and focus on social distancing has overall reduced. Things may never go back to normal. We are falling into something different, thriving to adapt again because we are the resilient race. When I look back at 2019 and the waves of Covid, sure it brought a lot of disruption in the society, created panic among people, took their loved ones away, people suffered financially and emotionally. But the silver lining was the waves of trends, activities we got ourselves involved into. Remember petting coffee with **a.**

Spoon and learned it is called Algona Coffee. Recognizing the value of our house helps during lockdown was positive side. Another hopeful prospect was the virtual marriages that saved huge sums and saved kids from the awkward and repetitive conversations with their relatives. And those long video calls reconnecting with the closed ones, brought us closer to each other despite the distance keeping us apart. Everyone got creative and passionate about making everything at home from pizza base to pizza, from making buns to burgers, from making purist to pain pure. And the salivating pictures we still visit in our gallery. Some picked new hobbies, started learning new skills online, creating videos. And the brightest part was focus on physical fitness and finally understanding the significance of mental health. All these little things that we did for ourselves, we felt like happy pig playing in the mud, illuminating our souls. What was your best lockdown memory? Mine was watching chess streams, and rekindling my love for chess. Did you realize, lockdown taught us self love in a way? And now we are returning to normal! But does returning to normal means giving up on these positives? Does this mean giving up on the hobbies that we picked? Does this mean limited connection with friends and family again? Does this mean turning an eye from the fact that mental health is a real problem? Does this mean giving up on physical fitness altogether? It really taught me that we got to nourish, prioritize oneself to flourish. It is necessary. Self care is not only about meditation, or regular therapies. It simply means taking time and doing what makes your soul dance with happiness, or just indulge yourself for few moments. It will lead to enhancing our quality of life and well being. Small rips in the clothes do not bother at the beginning. But with repeated use of such ripped clothes, it creates stress and friction, making it more noticeable. Our human body, the place where we live is same. We need to mend these small rips time to time **by** actively participating towards self care. We talk about moving to new normal post pandemic. Adorning this new normal with what good we picked up during pandemic will make it new better normal post pandemic. This week, the Supreme Court in a historic order provided a measure of relief for **the** offense of sedition. This colonial law which was used to prosecute freedom fighters like Bal Gangadhar Tilak has been used with increased frequency in recent years. A woman holds a placard protesting against the sedition case filed by police against a school after a play performed by students denouncing a new citizenship law, in Bangalore, India, Tuesday, Feb. 4, 2020. India Supreme Court on Wednesday, May 11, 2022, put the country colonial era sedition law on hold, asking the Indian government and state authorities to refrain from registering fresh cases under the harsh law while it was under review **critics.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-20-TEST NO.-25549

Say the government under Prime Minister Narendra Modi was increasingly using it to silence criticism and dissent. AP Photo As per a database built by the portal Article 14, 65 of nearly 11,000 individuals in 816 sedition cases since 2010 were implicated after 2014. Many commentators have correlated this with the political environment and a shrinking space for free expression. This may provide a part of the answer, as the use of sedition is a genuinely cross partisan issue, varying in severity and frequency of its abuse. Another significant contributor behind a rise in sedition prosecutions may be linked to the increase in internet access. Here, numbers speak for themselves. In March 2014, there were about 60 million internet connections. Today, the number stands at around 788 million. The internet has broken down the conventional model of centralised broadcasting and in doing so, it has made all of us broadcasters as users of social media platforms. Here, this archaic law poses a natural friction to the constitutional values of free expression for a digital republic. It silences and threatens people, more often those that are critical of powerful political figures. What has been the legislative response to this? The Law Commission of India was alive to this concern, noting in a consultation paper in August 2018 that, the global trend has largely been against sedition and in favour of free speech. However, this paper did not result in a report, and no further reports followed as the Union government has failed to constitute it since the retirement of its chairperson Justice B S Chauhan. Subsequently, a committee was established by the ministry of home affairs in May 2020 to recommend reforms to Indian criminal law. While the committee has attempted to invite public feedback and has also made recommendations as reported in the press, concerns have been expressed on bypassing the institutional processes of the Law Commission of India. It has inspired little confidence that such recommendations, if made to strengthen the right to free expression, will be accepted. These inferences arise from a natural reading of statements by **politicians** and recent legislative business. For instance, take the two laws that have been passed through Parliament. The first is an amendment to the Unlawful Activities Prevention Amendment Act, 2019 UAPA that permits even individuals, not just groups, to be designated as terrorist. UAPA is being abused frequently in criminal **cases** being bunched alongside sedition. The second and much more recent law is the Criminal Procedure Identification Act, 2022 which expands police powers of surveillance. This background becomes important to understand the Supreme Court order on sedition and the mixed reactions it has received. The order is not a final judgment but an interim relief till the constitutionality of sedition is determined. Two days before this order came to be passed, the Solicitor General of India put across the view of the Union Government in an affidavit which stated, The Hon blew PM believes that at a time when our **nation.**

Is marking Azadi Ka Amrit Mahotsav 75 years since independence we need to, as a nation, work even harder to shed colonial Amrit Mahotsav baggage that has passed its utility, which includes outdated colonial laws and practices. Relying on such assurances of a legislative review, the court passed directions to keep sedition cases in abeyance till the constitutionality is determined and the case before Amrit Mahotsav it remains alive. In effect, this provides a measure of relief to people facing sedition cases and those who may be threatened by fresh prosecutions. Some commentators have critiqued it on first principles for judicial evasion. Quite simply, if a law is unconstitutional and a case is before the court, it should perform its institutional function Amrit Mahotsav of judicial review rather than adjourn it on promises of legislative amendments. Though such amendments may repeal a colonial law, they may promulgate a modern mutant with greater harm like the Criminal Procedure Identification Act, 2022. Another branch of criticism has focused on the implementation of the order given it does not give Amrit Mahotsav clear directions. Even enforceability remains an issue as demonstrated by cases of the unconstitutional Section 66A which despite a ruling in 2015 linger in the criminal justice system. These work even harder to shed colonial baggage that has passed its utility, which includes outdated colonial laws and practices. Relying on such Amrit Mahotsav assurances of a legislative review, the court passed directions to keep sedition cases in abeyance till the constitutionality is determined and the case before it remains alive. In effect, this provides a measure of relief to people facing sedition cases Amrit Mahotsav and those who may be threatened by fresh prosecutions. Some commentators have critiqued it on first principles for judicial evasionconcerns should not distract us from such amendments may repeal a colonial law, they may promulgate a modern mutant with Amrit Mahotsav greater harm like the Criminal Procedure Identification the incremental relief provided by the court. We must welcome it with caution and criticality but remember it is incomplete. This relief will completely fail if sedition **is** not struck off our statute books by the legislature, failing which by the Supreme Court, in a timely Amrit Mahotsav manner. This is important for protecting the such amendments may repeal a colonial law, they may promulgate a modern mutant with greater harm like the Criminal Amrit Mahotsav Procedure **Identification** democratic rights of every Indian internet user. Net speak: The rise in sedition cases could be linked Amrit Mahotsav to increase in internet access Become pregnant, you can develop eye problems very quickly during your pregnancy. If you already have some diabetic retinopathy, it can get worse during pregnancy. Changes that help your body support a growing baby may put stress on the blood vessels in your eyes. Your health care team will suggest regular eye exams during pregnancy. Diabetes that occurs only during pregnancy, called gestational diabetes, does not usually cause eye problems. Researchers are sure why this **is.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-20-TEST NO.-25551

The world today is in turmoil. Wars, the ultimate symbols of negativity, are raging everywhere. There are wars in Europe, wars in Asia, wars in Africa, wars in Latin America. As a result of these thousands of people are dying every week, but that seems to be written off as collateral damage. There is no sense of sympathy with the victims of those wars. In addition, climate change with all its erratic weather events has created havoc around the world. Between flooding and drought, hurricanes and tornadoes, melting of glaciers and species extinction, large sections of the world population are suffering the direct impact of global warming. Several island states will disappear soon, and we will be faced with a new category of environmental refugees. All this raises the question as to what we as individuals can do in such a situation. It is easy enough to shrug off the ocean of suffering as part of world politics, but that is surely not a satisfactory response from those who claim they are following a spiritual path. For such persons the ancient concept of Vasudhaiva Kutumbakam, the world is a family, has to be rearticulated. Many parts of this family are in turmoil, and we also bear part of the responsibility because of our lack of caring. Even if we are not able to help concretely, it is important that each one of us try to find within ourselves the fountain of peace and harmony. If enough individuals around the world are prepared to look within and find the spiritual core of their being, it can make a difference to the destiny of the human race. At present we seem to be following the prognosis of the European philosopher Arthur Koestler who predicted that the human race was programmed for self-destruction because of an engineering defect in the human brain, thereby the thinking and feeling aspects are not adequately conjoined, so that while we know what we should be doing we do not do it, and while we know what we should not be doing, yet we do it. This **is** reflected in Dushasana enigma in the Mahabharat when he says, I know what is correct but I am not attracted to it/I know what is wrong but I am attracted to it. The greater the outer turmoil, the deeper the inner integration must be, otherwise humanity, which is at **a** precarious tipping point, may tip over, not to speak of the new threats and challenges posed by Artificial Intelligence and its multiple implications. The world, of course, is constantly changing: amyak Sansariti iti Sansar, and we all have to adjust ourselves to the rapidly changing situation. It is not really a question of age, but rather our ability to face and confront the problems before us. A collective can be very useful in this context. For example if people in a mohalla, colony, decide to band together in saving the environment. The same is true with movements against drug **use,** alcoholism and faulty hygiene. These are all building blocks towards creating a healthy society. Corruption, unfortunately, almost seems to have entered our DNA, and here again it is only committed individuals who can fight against these social evils. In the final analyses the compassionate and dedicated individual remains our only hope in the dystopian world that surrounds us. It has been reported that Nationalist Congress Party MP Supriya Sule has instructed her party spokespersons and leaders that, they should only target Deputy Chief Minister Devendra Fadnavis while making statements. The State has seen Supriya Sule hatred for Fadnavis f

Maratha community in the framework of the constitution and it was also upheld till the preliminary hearing in the Supreme Court. Devendra Fadnavis is being targeted because Pawar and Uddhav Thackray are afraid of their existence. The limitations of Sharad Pawar and Uddhav Thackeray politics are apparent from this. Mahavikas Aghadi has achieved success in Lok Sabha election by spreading confusion among Muslim community and Dalit Community, but they have now realized that this propaganda will not be helpful in Vidhan Sabha election. Voters do not respond to these tactics; it has been seen earlier also and it will be seen in coming assembly election as well. In the grand buffet of leadership qualities, two dishes stand out Humility and Confidence. Both are essential, but much like ice cream and hot sauce, the trick is in knowing how much to serve of each and when. Let dig in and explore the juicy question that has had managers, leaders, and CEOs alike scratching their heads: which is more essential, humility or confidence? Humility in a leader is like a fresh breeze in a corporate world often filled with ego-stuffed conference rooms. Humility says, I do have all the answers, and I m willing to learn. It about being approachable, listening to others, and not thinking you re some all-knowing oracle sitting atop a swivel throne. Leaders with humility are easy to work with, garner trust, and foster teamwork. Employees feel valued when their ideas are considered, not brushed aside like crumbs off a boardroom table. A humble leader builds a culture of collaboration, where mistakes are viewed as opportunities, not shameful blunders that get you awkward eye contact in the break room. But here the catch too much humility, and you start looking like a pushover. People might confuse your openness for indecisiveness. Ever tried to get a bunch of adults to follow someone who always says, I do know, what do you think? It like trying to herd cats. Nice idea, but good luck. Now, let talk about confidence the swagger that says, I vex got this, so let **march** ahead. Confidence in leadership is crucial because no one wants to follow a hesitant boss. If you are not confident in your decisions, why would anyone else be? It the difference between saying, I believe in this direction, and mumbling, Maybe we should try this, possibly I guess? A **confident** leader instils a sense of direction, purpose, and motivation in their team. They make decisions swiftly and stand by them. It the kind of leadership that keeps a ship from capsizing when the waves get rough. A confident leader inspires faith even in uncertain times, giving the team the courage to tackle big challenges. But hold on confidence without a dose of reality can quickly turn into arrogance. Overconfident leaders often have a tragic flaw: they stop listening. They think they are always right, and the only sound they hear is their own voice echoing in the conference hall. **The** result? Bad decisions that could vex been avoided if only they had stopped to listen to the janitor brilliant suggestion about moving those files before the system crashed. Now that we vex grilled these traits to a golden brown, here the main course: in leadership, it not about picking one over the other it about balance. Like a perfect seesaw, humility and confidence need to counterbalance each other to avoid the faceplant of bad leadership. Imagine the humility to admit when you are wrong but the confidence to stand firm when you know

The case hances of developing diabetic eye disease increase the longer you have diabetes. We all are really enthusiastic about completing a lot of the work ourselves, such as painting the outside and inside, building the kitchen, building the laundry, planting. These choices were made to save money, and we will save a lot by doing our own labor. But it can also be stressful. Although it appears simple, the process is far more complex than it appears, and it will drain your bank account. Preparation is key to a successful home makeover. A few common hazards must be avoided to ensure a seamless operation. The planning process should not be initiated too soon It is critical to spend some time in the house before attempting to establish a strategy for the future. Learn the layout of the space, including the flow of traffic, the direction in which the sun shines where to put the laundry and where to store groceries and other small objects. Keep all of these issues in mind when making a decision to make a change, and you will be more prepared to make informed selections. The expectation that everything will. Go according to plan A house renovation project is not without its challenges. As a result, it is critical not to expect everything to proceed exactly as planned. Being prepared for the unexpected is always a good idea, because you never know what might be lying behind a closed door when you open it. Missed communication It is vital that you communicate effectively with everyone involved in the construction of your dream home in order to ensure that your vision is realized. Ensure that you communicate effectively with the contractor, your business partner, the entire design team, and everyone else involved in the construction project. Make it a point to communicate with them at least once a week, whether in person or via text, phone call, or email. This will allow you to set expectations, understand the state of the project, and communicate your expectations to them. The failure to prepare ahead of time **and** to have a specific budget in mind before commencing any home renovation project is critical. If you don have a budget, you all end up spending lakhs of rupees, which will just increase your level of worry. Plan a budget, and if you have any extra cash on hand, **put** it to good use by spending it on the items in your home that you interact with the most, such as cabinets, chairs, and other furnishings, to make your home more comfortable. Not consulting with a professional when necessary It is recommended that you do things yourself until you have a better knowledge of what you are doing. It is, however, recommended that you assign the electrical, plumbing, roofing, tiling, and kitchen work to professionals who are experienced in these sectors. The practice of cutting corners on things that you are familiar with is strictly prohibited in this profession **as.**

Part of the application procedure for a home remodeling loan, make certain that you are connected with the most qualified professionals who will be able to guide you through the entire process. The blunder of hiring the wrong contractor is as follows If you are a first time renovator, it is critical that you work with the most qualified contractor possible. Obtaining referrals is a good idea if you don know any reputable contractors, and if you don know any, selecting the one who is most suited for the job is a good idea as well. Because of this, the timeframe was not properly configured Collaborate with the contractor to produce a list of the products that you will need to procure for the project within a specific time limit. Making a decision on a fixture at the last minute will cause you to subsequently come to regret your decision. The failure to ask probing inquiries in sufficient quantity Make sure to ask the contractor as many questions as you possibly can because doing so will assist you in developing an in depth understanding of the task and will also allow you to understand how and where your money is being spent. It important to remember that there is no such thing as a stupid question. The most typical mistake people make when renovating their homes is to spend all of their resources and investments on the project without considering the long term ramifications of their decisions. A loan for remodeling should be considered when planning a restoration strategy because it offers a low interest rate as well as a modest processing fee, which ensures your financial security in the process. If I have learnt anything from the pandemic, it that technology has the power and potential to enable connection. From virtual meetings to online grocery shopping, innovations in technology allowed us to connect and collaborate whenever, wherever. While we rapidly adopt new digital technologies, we must also place accessibility front and center. Despite the benefits tech adoption brings with it, several businesses are yet to factor inclusivity and **accessibility** into their products. Many services and experiences are still not inclusively designed and operated. As per Forrester in 2020, while gauging the impact of the pandemic on customer experience CX, there is a dire need to create more inclusive experiences. Although things may have been improving, we are yet **to** be there. The onus of enhancing customer experience is upon those who conceive, develop, design, operate and manage products and services. These teams need to pay attention to the details and see how these affect different people. Once the barriers have been identified, efforts must be made to eliminate them. Technology can be an enabler of inclusivity at all levels. Building Inclusive Solutions Inclusivity and accessibility are key for developers working in big tech firms. At the core, accessibility refers to making the same technologies and products available to everyone, say, for instance, differently abled people. Due to their **versatile.**

Rahul Bhat was working inside a Magistrate office in Bud gam, which should have been secure. He was sitting at his desk with a number of his colleagues. But he was the only Hindu and for that he was shot in cold blood, in front of a roomful of staff. As his grieving wife said that one of his colleagues in the office must have identified him to the killers. Nobody rose to protect him. There was a police post less than 100 meters away, yet the terrorists escaped unharmed. It is food for thought. How was he identified Who in the office was in league with the murderers as the terrorists not only were they able to enter a government office where there should have been at least one security official but also kill the only Hindu there This was not the first targeted killing of rehabilitated Hindus in the valley, nor will it be the last. Pakistan will keep sending terrorists from across the border, along with flooding the social media about the so called grievances of the population in the valley. It is the Centre task to stop such propaganda. One terrorist from Pakistan was caught and confessed that he had been told that Muslims in Kashmir were not being allowed to perform namaz and there were atrocities being committed. But when he saw how everyone went about praying and living normally, he realised he had been lied to. Kashmiri Hindu officials 350 of them have given in their resignation as obviously they realise that there is no secure environment for them. How many more targeted killings will take place before the Centre realises that before rehabilitation one will have to get every single Kashmiri Muslim, including the mainstream parties, who keep a strange silence on these killings, to accept that Hindus also belong to Kashmir. Years of radicalisation has created a only Muslims belong in Kashmir thought among many of the youth. It is not their fault, they were born and nurtured in such an environment for over 30 years. They have lost the diversity **that** once existed there. After the ethnic cleansing of Kashmiri Pundits from the valley, thanks to the parties in power in 1990s, almost two generations of young people have been born not knowing anything about their Kashmiri Hindu brethren. As Vivek Agnihotri, the director of Kashmir Files, said in a **recent** interview, a five year old Kashmiri Muslim girl asked his wife, innocently, Do you say Namaz. When she said she did not as she was a Hindu, the girl replied, Why not everyone says Namaz. This encapsulates the problem that exists where children are born in an area where there is no diversity and so imagine that everyone should think and act like them. The targeted murders happening in the valley, seems eerily like the targeted killings of the 1990s when there was a mass exodus and genocide of the Kashmiri Hindus from the valley. A change of mindset **is.**

Harnessed with appropriate monetary policy support. As soon as I informed my circle of friends and family about my plan to visit Nagaland for a holiday, their reaction was a mix of shock and concern. They appeared more upset than surprised, mainly because they had little knowledge about this faraway state, and whatever information they had was clouded by prejudices and stereotypes. I must admit, I also felt nervous as I had no idea about this region of India. Nonetheless, I stuck to my plan and arrived as scheduled, and soon after my arrival, it became clear to me that Nagaland was indeed a unique place. Although Konia is the capital of the state, as evening sets in, it transforms into a quiet hill town reminiscent of rural areas. What would typically be considered evening for us felt like late night in Konia? However, the next morning, as the sun rose at 4:30 am, its dazzling brightness signaled that when the day starts so early, the nightfall arrives swiftly. The view that greeted my eyes in the morning was simply indescribable. The lush greenery spread before me seemed endless, and the sky above was a mesmerizing shade of blue. Glancing at the local temperature and air quality index displayed on my phone screen, I was reminded once again of how remote and isolated this place truly was. It is no wonder Nagaland is often referred to as the Switzerland of the North East. The dominant sight is the Naga Hills, part of the majestic Pataki Range Mountains, adorned with sporadic huts amid the verdant landscape. The locals explained that these humble huts form Naga villages. It might seem strange to witness people living in such isolation, but according to the locals, it is a way of life they embrace. The Naga people are peace-loving and prefer to stay away from crowded areas. Kais Chakre, a 30-year-old member of the Chakhesang tribe and a taxi driver, exemplifies the Naga perspective. Like most Nagas, he follows the Christian faith. He shared with me, Nagas do not like crowds. That is why **we** choose to live in the jungle. Even those who have jobs in the cities prefer to return home and stay indoors in the evenings. He chuckled and continued, we don have many desires. We find happiness with what we have. These forests are our source of contentment. During my **stay,** I engaged in extensive conversations with the locals, and I discovered that most of them had never traveled outside Nagaland. Surprisingly, they showed little desire to explore other places. Their level of contentment with life was truly remarkable and inspiring. It became clear that the local community found happiness and fulfilment in their simple, tribal existence. To reach Kohima, one must first arrive in Dimapur, which can be reached by train or air. From there, taxis or buses are available for the approximately seventy-kilometre journey. Kaiso resides in Dimapur and operates a taxi service between the two cities. He **charges** around 1800 to 2000 rupees for a trip from Dimapur to Kohima or vice versa, which takes about two hours. On average, he can make two round trips in a day, earning seven to eight thousand rupees. In fact, due to the early start of the day, it is possible to make three round trips if there is sufficient demand. This means an additional earning of three and a half to four thousand rupees. However, Kaiso chooses to make only one round trip. He has no fixed working hours. Whenever he feels like it, he takes his car out and heads to the railway station or airport.

A rapidly intensifying imbalance, between consent and force in America's hegemonic strategy. Historically, the US favoured waging a patient struggle for hearts and minds, through soft power. Trump's escalating military campaigns For Israel, it isn't over till Iran's regime is savagely weakened. For Iran, it isn't over till the world feels unbearable pain. For Trump, it isn't clear when and/or how he can say it's over. Biggest risk: in 5 years, Iran can be like Libya or North Korea or Pakistan. Countries often go to war confident they know what's coming. That certainty rarely survives the first battle. The fighting in Iran, today, is unusually complex. But, motivations driving it are relatively easy to trace. What's much harder, to predict, are the outcomes, whether in the next few months, or next few years. The young in this country have high aspirations, but limited opportunities. So, Modi's popularity among Gen Z isn't a guarantee that their frustrations will never spill onto the streets Waves of Gen Z protest movements are jolting govts across the globe, from Sri Lanka, Bangladesh and Nepal, to Indonesia and Philippines; Egypt, Tunisia, Nigeria, Morocco and Sudan, and Peru and Paraguay. Often these protests spur spontaneously and gain rapid momentum and potency through digital platforms. Many of us prefer reading about exercise, rather than doing it. We also cherrypick bits that suit us. If reading about exercise counted as exercise, we'd all be as fit as Cristiano Ronaldo. But the truth is, many of us enjoy reading about fitness more than actually moving our bodies. We also like to pick only the parts of advice that sound easy or fun. For example, a group called the American College of Sports Medicine shared new exercise guidelines. It's a long and detailed report, but many people only focus on one small part: that doing strength exercises twice a week is helpful. Then they ignore the bigger message that you need to be regular and keep doing it every week. This is a bit like how people love watching sports but don't actually play them. In India, very few **adults** play sports regularly. Some people even read thousands of articles about fitness, learn big words like VO2 max, and know everything about workouts but still spend most of their time lying on the couch scrolling. The problem is, reading about fitness can make you feel like you've achieved something, **even** when you haven't done any real exercise. It's like eating junk food instead of healthy food. It feels good for a moment, but doesn't actually help your body. The real point is simple: doing a little exercise regularly like walking, stretching, playing, or working out is much better than doing a lot for a few days and then stopping. What matters most is being consistent and making it a daily habit. If a big fight happens in the Persian Gulf, it doesn't stay there. The whole world feels it. Recently, there were attacks between Israel and Iran on very **important** energy places. One was the South Pars gas field (one of the biggest in the world), and another was Ras Laffan, which supplies a huge part of the world's natural gas. These aren't small targets; they help power homes, factories, and cities across the globe. So when they get attacked, it's a big deal. Oil prices quickly jumped close to $120, which means petrol, electricity, and many everyday things could become more expensive for people everywhere. The scary part is this: the Persian Gulf is like the heart of the world's en

energy for many countries. Donald Trump said the US didn't know about Israel's attack beforehand, and he warned Iran not to hit back harder. This shows something important the US and Israel may not be thinking exactly the same way anymore. This difference matters, because it can change how the war grows. Inside the US, some people are also asking: Why are we getting involved in this conflict? Meanwhile, Israel seems ready to continue, and Iran feels it must fight back strongly to survive. That's what makes this moment dangerous. Both sides might keep escalating, even if it hurts everyone including themselves. Right now, the US is the only country that can really push both sides to calm down. If it doesn't, things could get much worse like a global energy crisis. But if it does step in carefully and tries to reduce the fighting, there's still a chance to stop things from getting out of control. Because if the Gulf burns, it's not just a distant war, people all over the world end up paying the price. If only reading about exercise counted as exercise, we could all be as fit as Ronaldo. And of all the reading we looove to do on the topic, nothing hits quite like studies reporting the huge health benefits of just a little exercise. Yummm, it's the perfect accompaniment to a breakfast of chole bhature, LPG availability permitting. We have also trained ourselves to read different studies in a very specialised way. Take the American College of Sports Medicine's new strength training guidelines. It's a complex document, but we have plucked from it a shifty takeaway that just two sessions of basic strength exercises every week, are way superior to sweating five days. C'mon, isn't this a funner read than India being the diabetes capital of the world? And it's no different than Indians watching sport obsessively, but passively. Only 9% of adults say they play a sport at all. Even that number would likely come down dramatically, if we checked how many people did what they said they would do today. **There's** a special type of person who has read approx 4,000 articles about VO2 max training, can quote Bryan Johnson chapter and verse, but whose main physical activity is scrolling through said articles, while horizontal on the couch. All too often, consuming content about fitness is not a precursor to **it,** but a substitute. One gets the high of 'I picked up a great life hack' absent any hard work whatsoever. Enjoyable as it is, this false sense of accomplishment is hella dangerous. Without the follow through eating whole foods, walking, working out, yoga, taking the stairs, day after day all that content consumption is like a junk diet. And, contrary to the shifty reading, the core of the above guidelines is that exercising twice weekly consistently is far better than pushing yourself to exhaustion daily, and quitting midway. The message is not to exercise only twice a week, but **to** do it like clockwork. In February 2026, the Bombay High Court ruled that a child raised exclusively by a single mother cannot be forced to carry the father's surname and caste in official records, emphasising that official documentation should reflect the lived reality of the family rather than outdated patriarchal assumptions. It stirred conversations online, I shared my views as my lived experience and got brutally trolled. I filed for a mutual divorce in 2021,going through a divorce is never easy. It's messy, emotional, and often judged by society before you even have a chan

Nature, smartphones can promote digital inclusion and serve as cost effective and bespoke tools for people with disabilities. What makes them invaluable assets for these users is their ability to cluster together multiple assistive technologies in one single device. Several built in accessible features and third party apps allow access to useful information and content in smartphones. Such aesthetic tech facilities help perform daily activities. They enable one to function independently, move independently, and drive social inclusion and participation. As they help improve the quality of life, such smart technologies make smartphones assistive to people with vision impairment and color blindness. Smartphone devices have also been equipped with specific accessibility features such as high contrast colors. For example, high contrast keyboards or adding high contrast mode for the internet app to fulfill the rising demands for accessibility. Others offer accessibility features for hearing, visibility, and dexterity. The Voice Assistant details what you touch, activate, and select through verbal feedback. This helps the visually impaired edit text or change any settings using tap gestures or familiar swipe. With these features, the vision impaired or color blind people get support in daily life activities and social interaction which are not possible with human vision smartphone interaction. Inverted colors allow changing of white text on a black background, and vice versa or yellow text on a blue background and vice versa. With the introduction of OLED screens, smartphones can display a billion different colors and provide outstanding color accuracy. Optimisations such as Nature Tone Display and Colour Correction Solution offer users a screen tailored to their vision and best in class hardware in smartphones. These advancements provide the best gaming, movie watching, and photographic experience. And consumers want these customizations created without leaving any adverse impact on the environment. Creating Sustainable Technology A sustainable brand is the one that has successfully embedded economic, environmental, and social issues in its business operations. However, companies considering themselves to be sustainable are only able to meet about one third of this definition. Most businesses know that fulfilling sustainability goals will require a systemic approach to **bring** about transformation. This will take a 360 degree view of the challenge at hand. However, technology and data need to be integrated at the outset to build sustainability as a competitive advantage. Hence, for companies thinking of advancing their sustainability initiatives, technology can be a major accelerant. Smartphones have **great** potential to bring forward sustainable development goals by using smartphone applications and other mobile technologies that push for sustainable consumption practices such as reducing waste, sharing, and improving resource efficiency. Users nowadays have become woke and so, sustainability has become important for them when it comes to the brands they wish to associate with. Most brands are following the principle of 3Rs in manufacturing reduce waste through sustainable packaging, reuse recycled materials, and recycle resources and biodegradable materials for packaging. Thus, the principle of 3R 4D principle can be a starting point for smartphone brands, down the path of **going** green.

Obviously required. But how can it be achieved Since the brutal shooting of Rahul Bhat, the Jammu and Kashmir Police have killed two Pakistani terrorists in North Kashmir Bandipora on Friday, May 13. Police also said that these two terrorists were responsible for Bhat death. But how many more were just silent watchers or in league with the terrorists. There is an urgent need to flush out the bureaucrats, teachers and workers who were given jobs in all walks of life by the previous governments of Mehbooba Mufti and the Abdullahs and may still be actively involved in trying to recruit radicalised killers. Jamaat e Islami, a radical hard line organisation have their workers in every aspect of life in the Kashmir valley from schools, to government bureaucracy, to universities to hospitals and even in the police. Some have been caught but much more will have to be done to screen such elements. Most of the people living in the Kashmir valley want peace and development, and some are actively working with the government to bring this about. This in itself is a hopeful sign but we need to work actively with them and the youth to bring about a change in the mindset of hardliners. Most of all Kashmiri Pundits being rehabilitated in the valley will need to be better protected. There will be a need for a kind of truth and reconciliation effort to bring the communities together and to build trust that disappeared over the years. It would be an excellent idea to teach Hindu and Buddhist beliefs in schools in Jammu and Kashmir, so that children growing up today can learn and appreciate the diversity of religious thought. The silent shores of the French Riviera are all set to host the 75th edition of the Cannes Film Festival. As the focus country at the Opening Night of Marché du Film this year, India intends to give the global audience a flavour of the country cinematic excellence, technological prowess, rich culture and illustrious heritage of storytelling. India and France are also marking the 75th year of **their** diplomatic relations. Prime Minister Narendra Modi visit to Paris and the bilateral with President Emmanuel Macron takes even more significance in this context. It is against this significant diplomatic backdrop that India has been chosen as the first Country of Honour at the Marché du Film. Congress chintan shivir **push** for a policy reset after 30 years of liberalisation is part of a worrying trend of political parties refusing to step on the pedal and speed up the next set of urgently needed economic reforms. Every party takes credit for economic growth and resultant job creation and systemic improvements post 1991, a set of changes that have so far pulled millions out of poverty. But initial reforms have lost their impact and India needs greater liberalisation. Instead, political discourse is largely on welfarism, freebies and caste politics in the name of social justice. Economic inequality is certainly a big **problem.**

But a focus only on redistribution will merely subdivide the existing pie. What parties are talking today won improve productivity, foster competitive markets or generate new jobs. And these progressive policies may even take pernicious turns Indira Gandhi desi socialistic Garibi Hatao slogan facilitated protectionism and rent seeking, not poverty alleviation. Even BJP, today enjoying the kind of political dominance Congress had three decades ago, is a hesitant reformer. It lost its mojo after Rahul Gandhi suit boot ki sarkar jibe on key land acquisition amendments. And it lost it again after anti farm reform protests by a vocal minority of farmers. The perception that economic reforms are deeply unpopular stems from this fear of vested interests. But as every country has seen, being scared of small, vocal groups means a vast majority is denied better prospects. The current political timidity also extends to whetting voter appetite for bad policies like freebies. And these spends actually hurt citizens when cash strapped exchequers cut corners in expenditure for schools, hospitals and other public works that improve human capital. Take Rajasthan return to defined pension benefit for government employees, setting off copycats in other states. Recall that states overcame the resistance to contributory pensions after defined benefits began proving unviable. No less self injurious are domicile and caste quotas in the private sector. The political consensus that allowed GST to come into being is needed again. All party deliberations to ensure states, in tandem with GoI, pursue reforms in land, labour and agriculture laws are crucial. Without reformed land and labour markets, manufacturing will remain stuck in a few PLI projects. It won power a consistent 8 growth, which India needs for about 10 years if it is to come close to the China miracle. It doable if the backslide into populism is arrested right now. Yesterday a new chief minister was sworn in in Tripura Manik Saha. He is reported to be close to the CM who resigned hours earlier Biplab Deb. Both these moves are out of a playbook that has now become customary in BJP, as it has **earlier** switched the chief ministerial faces in Uttarakhand, Karnataka and Gujarat to improve its electoral prospects. Polls in Tripura are due early next year. Other parties would envy such an authoritative central command because it has had a winning record so far, having delivered the Uttarakhand victory with a CM **change.** A similar move by Congress in Punjab came a cropper. But Tripura is different from Uttarakhand, Karnataka and Gujarat in that until around two years before its historic debut win in 2018, bringing down the citadel the Left built over a quarter decade, BJP had negligible presence in the state. In newish ranks, it is more difficult to gauge how internal dissidence can snowball into an electoral setback. The opposition is naturally hoping that the switcheroo will backfire on BJP. TMC MP Sushmita Dev for example says that the voters will see through it, as an attempt to paper **over.**

350th: "earlier" **400th:** "change." **500th:** "over."

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-21-TEST NO.-25567

The government misgovernance. Her party is very optimistic about its gains in last year urban local polls. But BJP won in 329 out of 334 seats a huge victory. With its vote share dropping to less than. Congress should not be making too much of Sudip Roy Barman recent return to its ranks either. As CPM, TMC and Congress look set to split the anti incumbency vote, for BJP, internal troubles loom bigger than external threats. Aggressive protests by minister Ramprasad Paul at Saha elevation, videos of which went viral, suggest that this BJP state unit remains under stress. If you are a Congress sympathiser, you would have read about Sonia Gandhi inaugural speech at the party three day chintan shivir, which ended yesterday. She said an exceptional situation needs exceptional solutions. Depending on how you feel about the current leadership, you may have been enthused or disappointed at the changes proposed. But the speech you should have listened to was by Sunil Jakhar, former Punjab PCC chief, who quit Congress on May 14, while the Udaipur meet was on. Jakhar diagnosis of the party exceptional situation was far better. His 40 minute speech, broadcast over Facebook, had more clarity and content on the nature of Congress crisis than what was discussed at the chintan shivir. The santoor was invisible to those sitting below the stage level on white mattresses on the cold January floor. From that vantage at Saptak, the annual classical music conference in Ahmedabad, the mystery of Pandit Shivkumar Sharma art intensified under his luxuriant nimbus. You see a sitarist fingers typing a masterwork. You notice the violinist bow taking a raga across the curvature of its instincts. But Pandit Sharma seemed to tap a manuscript with modern looking styli. Some who are pernickety about facts will say that giant screens at any venue reveal the magic. But Pandit Sharma fans on the ground, literally in this case, would care about quibblers. Between the light of his coiffure crown and the sound of his mastery lay a panorama that was captured by the human canvas craving **beauty.** A sheet of pixels, however big and flashy, is too small for the task. It is said that Pandit Sharma familiarised the world with the santoor. In Ahmedabad, his admirers were lucky to see the world playing back the peals to India. In the 2020 edition of Saptak, Pandit **Sharma** disciple presented Hamsadhvani. The raga has Carnatic origins, it was taught by a Kashmiri maestro belonging to the world civilisational highpoints, and rendered by Takahiro Arai of Saitama, near Tokyo. We are the world, an Ahmedabad santoor aficionado could justifiably say after Arai performance. In the preceding years, Arai sat instrument less as his guru performed. He would sway as though his whole body was taking notes from the masterclass. At such moments, any stage that Pandit Sharma dominated was an international dais for music. Indeed, Pandit Sharma reach, like that of a raga such as Hamsadhvani, grasps not **only.**

350th: "beauty." **400th:** "Sharma" **500th:** "only."

Geographies but also the future of music for Hindustani musicians, Hamsadhvani is now as important as any they have learnt as part of their tradition, Pandit Vishwa Mohan Bhatt, the Mohan Veena luminary and a Grammy winner, told TOI. A famous Bollywood song Ja Tose Nahin Bolun Kanhaiya is set to Hamsadhvani. Pandit Bhatt sang a line of that song over the phone and draped it with a perfect Carnatic Hamsadhvani match, Vatapi Ganapatim Bhaje. The most famous Vatapi highrise was created by MS Subbulakshmi. Musicians still look up to it. Conversations about Pandit Sharma legacy offer infinite hyperlinks about music adventures while his santoor peals join the tunes that have the all countries visa with no expiry date. What will happen to family budgets, savings & investment choices, India Inc. investment plans and job creation as prices soar and RBI tightens policy screws to get some answers, TOI invited Niles Shah, MD, Kodak Mahindra Asset Management, and DK Joshi, Chief Economist, Crisil, to a conversation. Their main conclusion while more rate hikes are inevitable, India may be better placed than it was in earlier periods of high inflation. What your assessment of the interest rate trajectory DK Joshi Our assessment is that about a further 75 200 basis points increase in repo rate may be needed and that would have to be done quickly, front loaded, so to say. Not at one go I think in two three steps and front loaded means they have to do it in the first part of the fiscal year. Niles Shah NS Today, if you look at the yield curve that is discounting the rate hike of RBI anywhere between 150 200 basis points, depending upon which data you want to use. Expectations of rate hikes by economists are far less than what the market is pricing in. That the dilemma which RBI should manage because we don want the market to discount more rate hikes than what you are proposing to do. Rahul Gandhi assertion that only Congress and not regional parties can lead the ideological fight against BJP and **RSS** flies in the face of their comparative track record in recent elections. Since its three state victories in the Hindi heartland in 2018, Congress has lost successive head to head electoral contests with BJP. In the same period, regional parties like TMC, DMK, AAP and BJD have checked further **advances** by BJP. Congress, meanwhile, stands exposed as the weak plank in opposition unity efforts after its failure to tap anti incumbency against BJP in Assam, Uttarakhand, Goa and Manipur. Neither could it retake Kerala from CPM. GOP, ironically, has had better success playing second fiddle to JMM in Jharkhand, DMK in Tamil Nadu and Shiv Sena NCP in Maharashtra. Instructively, Congress wringing too many seats from RJD boomeranged in Bihar. Consequently, regional parties no longer consider Congress their spearhead. None of these parties is obsessing overtly with ideology, as Rahul would want them to. They are betting on welfare **policies.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-21-TEST NO.-25571

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey locate mates and offspring avoid predators guide their navigation and locate habitat as well as to listen and communicate with each other. Oceans are full of sound. Waves, earthquakes and icebergs all contribute to the underwater soundscape. But so do human activities and this can be a problem for marine life as it can seriously affect their physiology behaviour, reproduction and even survival. Being able to produce and detect sound in an environment where light penetrates only a few hundred metres is crucial for animals to communicate, feed, avoid predators and navigate vast underwater habitats. Large whales generate low frequency communication calls that can travel thousands of kilometres. While the snapping shrimp, native to the western Atlantic, can produce a loud snapping sound capable of stunning and killing its prey. The noise generated by humans changes the natural acoustic environment of our oceans and our capacity to produce it is increasing. Noise is often the unintentional by product of transport infrastructure development and industry. Yet noise can also be produced deliberately. Many navies use sonar system to detect ships and submarines while geologists survey the seabed for oil and gas using seismic airguns. The noise produced by an air gun can exceed 200 decibels louder than a gunshot at a range of one metre. Sound travels further and four times faster in water than in air at a speed of almost 1500 metres per second. The noise produced by humans can therefore spread considerable distances underwater. These sounds can be relatively constant such as the noise produced by the engine of a ship and propeller or sudden and acute in the case of naval sonar and seismic airguns. Is positive thinking an inherent characteristic of a person or can it (69) be developed in one psyche? The opinions differ in answering this vital question. **Some** people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There **is** also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance theory, since positive attitude is not a physical feature but a mental faculty, **it** cannot be purely hereditary. It can be developed. Moreover, parents play a major role in developing this quality of a child. A child, who watches his parents working hard, having faith in success through their words, behavior and body language, is likely to develop a similar attitude. The children of short-tempered, over-cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescrib

They must exude confidence, self-belief and hope, especially in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. There is no better education for a child than watching his parents come out of a tough situation by means of earnest endeavours. Such success not only gives more joy but also increases self-confidence. As the House knows, the Prime Minister sent out a circular to all the States a few years ago requesting that the portfolio of agriculture in the States should not be neglected; it should be entrusted to an important Minister. I think the National Development Council considered this question and they said that as far as possible, the Chief Ministers in the States should handle the portfolio themselves. And then, they have started a Food Production Board in the Cabinet itself at the Centre, and the National Development Council has decide that an agricultural production board should be started in each State with the Chief Minister as the Chairman. They have started an agricultural machinery board for supplying machinery. They have taken many steps in addition to the normal measures. The Government has been doing their very best in this regard. But with all that, it has not kept up with the targets fixed, unless earnest and vigorous attempts are made. I wish to throw out my own suggestions in this regard. They may not be very pleasant but I wish to be excused because I am speaking from experience. Madam, the first thing is that so far as the producing agency is concerned, its voluntary interest and its enthusiasm must be won. For instance, in industrial labour relations, we got out of the way to invite labour and give it even participation in the management and to do everything for labour. This is just to see that industrial relations are good and the industrial output will be increasing day by day. Should we not show some consideration for this producing agency, namely, the farmer? Mar. Thomas has shown **how** agricultural products, even at these increased prices, are not paying to the agriculturist. He has shown that very correctly, and everyone who has intimate connection with agriculture at least will agree to that, and if at all anything, that is an under-estimate, not an over-estimate. When that is so, **how** can we expect the farmer to produce unless he is enthused? Under the National Drinking Water Mission, the guinea worm problem which is prevalent in only six States will now be eliminated by the end of the current year. Similarly, the Central Government has taken several steps to remove the excess quantity of fluoride from drinking water. Alternative sources of clean drinking water and equipment to remove fluoride will be made available to the affected villages. For both the works, a special provision to provide funds to the States is being made. Public awakening campaign is being launched in **this** regard. The Government has taken the decision to open laboratories at all the places for the qualitative testing of drinking water. I would also like to point out that the constructed amenities provided for the disposal of dirt and dirty water are comparatively very inadequate. This issue will be taken up for discussion at an early date in the National Seminar and the policy will undergo change. I would like to mention that the World Bank and many countries of the world are: extending their assistance for the impl

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-21-TEST NO.-25573

Organisational strength and popular connect. TMC, for instance, ran a hard fought campaign slotting BJP as an outsider to Bengal and harping on Mamata welfare record. AAP is hard selling its Delhi model of service delivery and preaching patriotism and middle class virtues against BJP politics. Naveen Patnaik has held off BJP in Odisha solely on administrative improvements. True, personality cults, nepotism and indiscipline are a weakness for most regional parties that BJP is poised to exploit sooner than later. Nonetheless they are still better off than Congress, which does have enough workers in most states to even organise a flash strike against inflation, forget carrying a long haul ideological message to voters. Rahul obsession with ideology is shared by voters either. The Lokniti 2019 post poll survey revealed that less than 1 of respondents listed Hindutva and various communal themes as the most important political issue for them while voting economy and good governance were cited the most. With its weak organisational presence and finite resources, Congress will be wasting time and effort if it operates by Rahul ideology thesis. BJP adeptness at filling political vacuums, identifying under represented castes, wooing talents from other parties and keeping netas on their toes is a lesson for both Congress and regional parties. Lazy diatribes on ideology in a country where just 5 of citizens file income tax returns and crores more could do with a leg up via better governance just is good oppositional politics. In what can only be described as a truly historic feat for Indian badminton, Team India shutters put up a spectacular performance to not only reach the final of the Thomas Cup but also defeat Indonesia the most decorated team in men badminton. Indonesia, which has won this tournament 14 times, had history and reputation on its side. But that failed to overwhelm Lakshya Sen, Chirag Shetty, Satwiksairaj Rankireddy and Kidambi Srikanth who took India over the finishing line with an incredible 30 score. The victory underscores the depth of Indian badminton today. While the sport has had outstanding individual performers for some time now, **putting** together a world class team reflects the true health of the game in the country. In fact, all the players who played the final rank among the top 15 in the world. Things truly started changing for Indian badminton after Saina Nehwal won the Commonwealth Games gold in 2010. **Subsequently,** her bronze at the 2012 London Olympics took the popularity of the sport to a whole new level. With PV Sindhu successes at the international stage following shortly, Indian badminton had arrived. That said, over the years two hubs have emerged for Indian badminton the Pullela Gopichand Academy in Hyderabad and the Prakash Padukone Badminton Academy in Bengaluru. While these two are responsible for producing and nurturing almost all of India top shutters, for continued success quality training infrastructure needs to be broad based throughout the country. Second, badminton success is underpinned by efforts of former stalwarts of the **game.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-21-TEST NO.-25574

Is in itself unreal, then, to have a conception dream that foretells a pregnancy or birth of a baby, its gender and or its destiny and further to transact that dream as a good omen, is even more surreal. Nevertheless, looking at some Asian mythologies, particularly with reference to conception, reveals a treasure trove of interesting scenarios and stories. The most famous one in the Indic region is related to Gautam Buddha birth. His mother, Queen Mayadevi, had a dream wherein a white elephant carrying a white lotus bloom in its trunk, circled the lady three times and entered her womb via her waist. Sometime later, following the dream, the queen discovered that she was pregnant, and the child thus conceived would go on to become a great person. It is also said that the baby was born from her waist, as she stood, holding onto a Sal Tree for support. In Jainism, the birth of infants who goes on to become enlightened tirthankaras, baladevas, vasudevas and mandalikas is prophesised by multiple dreams with telling symbols. Christian accounts, an angel is said to have appeared in Joseph dream and told him that Mary was to conceive a baby, the Son of God, and that he should be given the name Jesus. This came to be called the Immaculate Conception. Greek mythology is populated with several gods of dreams, the most well known being Morpheus, who is said to take any shape or form in a dream. Dreams are referred to as children of the night they could be born of one subconscious, imagination, experience, or they could be divine prophesies. Known as Tae mongo, conception dream mythology in Korea is replete with symbols like fruits, animals, mythical creatures like dragons, and aspects of the natural world that indicate an impending pregnancy and hinting at characteristics of the to be born baby. Conception dreams are not limited to relating to individuals but extend to also the birth of a state, a dynasty or a royal lineage. Interestingly, parents of several of today K pop idols have said they had vivid **conception** dreams. For example, BTS V father dreamt that he played pool with a dragon, and he won the dragon magical stone as a prize. Dragons usually indicate male babies that will earn name and fame. The South Korean singer actor, Xiumin parents dreamt of six tigers racing to the **top** of a mountain, implying a male baby that would become a great leader. The mother of singer Astro MJ said she saw a giant whale in her dream, blowing water in the middle of the ocean, and looking directly into her eyes. I knew I was being blessed with a baby, she said. Mothers of female pop stars RV Irene, Where in and Suzy have also shared their dreams of walking in chili fields, magnolia flowers and silver dragon, respectively, before or during pregnancy. The aboriginals of Australia conceptualise entire Creation as born out of the infinite dreamtime of **spirits.**

350th: "conception" **400th: "top"** **500th: "spirits."**

it. My child was merely about 5 years old when I got divorced, I knew I needed to take command of my life to raise my child not let societal stigma, gossip, or outdated expectations dictate my choices. I wanted to study more, move abroad, and give my child a better life, free from the judgments often attached to single mothers in India. I wanted her to grow up in a world where love, care, and stability mattered more than societal labels. Yet, almost immediately, I discovered that society has a way of making everything about women's fault. People assumed that I must have demanded alimony or maintenance, that I was taking advantage of the system. The truth is, I asked for none. I chose a mutual divorce for the sake of peace. In fact, I had nothing, my family supported me and I started literally from scratch. My ex-husband gave his consent to the mutual divorce and to everything regarding our child, because he understood this was the least he could do as a father. And yet, online trolls paint women like me as greedy or vengeful. They say women destroy men through alimony and maintenance demands, whereas I have not received a single penny in the name of maintenance till date even after the court order, which is the child's right and nothing could be further from my truth. Lastly and perhaps the most controversial choice I made was to give my child my surname. This, more than anything else, triggered anger and rage from strangers online who have no idea of our reality. They assume it was revenge or an attempt to separate the child from the father. But let's be clear: this was never about revenge. Changing a child's surname is a legal right, and in cases like mine, it is often required when a mother seeks to move abroad for work or education, or to ensure the child's wellbeing in a family where she is the sole carer. Today I work full-time and raise my child all by myself and I am not fighting **with** anyone or separating my child from anyone, there is no father in the picture. I am the sole carer of my child, and every decision I have taken has been in her best interests. The law recognises this, and it recognises that a child's identity and surname can reflect **the** reality of her upbringing. Despite this, I continue to face judgement, trolling, and hate from people who have no understanding of our lives. They do not see the sleepless nights, the sacrifices, or the constant effort to protect and nurture a child all by myself, just when they see a single woman who is divorced and has a child they attack brutally. Through this post, I want to speak assertively: I changed my child's surname because I am her mother, her primary and only caregiver, and because I wanted her identity to reflect the life we live together. I **did** not do it for revenge,I did it out of love, responsibility, and a desire to give my child a life free from unnecessary judgment and complications and I will do anything to give her that secure and safe life. This is part of a broader change in India. Since 2017, women no longer need to change their surname after marriage and the Bombay High Court has affirmed that children raised by single mothers cannot be forced to bear the father's surname or caste. These legal changes are about acknowledging reality, protecting children, and empowering women who are the sole carers

of their families. So, to the trolls, the critics, and those who assume my choices were anything but what they are, love, care, and responsibility I say this: your opinions do not define our reality. Our lives, our choices, and our child's future are ours alone to shape. And we will continue to do so, with pride, strength, and love. Can there be a city as evocative and romantic as Venice? As actor and art lover Sharmila Tagore stood and gazed at Paresh Maity's magnum opus of Venice compositions as resonant embers on canvas as well as dulcet drawings, Art Alive's unveiling took on shades of memory, experience and historicity. And Sunaina Anand can well pat herself on the back for a design display that went beyond the beauty of vintage vitality. From the Renaissance Masters tondos to smaller slim frames that conjure up myriad images, Maity gave us an odyssey of a flashback more than decades old that brought alive Venice's canals and scenic landscapes in impasto creations that were a double dip in nostalgia. I wanted to go back to the places I loved, said he as Sharmila stood and silently drank in the vignettes and vistas of Venice one by one. With a fine hand that weaves impressionist and abstract expressionism, he hints at gondoliers that navigate the waters bordered by Gothic, Baroque, and Renaissance palaces. He reminds us of the glory of St. Mark's Square is Byzantine basilica and towering campanile all reflecting the wealth and power of the centuries when the Most Serene Republic of Venice ruled the seas and coastline, all the way down to the Greek islands. But that's not all. You step into another room and Kashmir wraps itself around your senses. On canvas it is impressionist strokes that seize Maity's brushes. His explorations embrace new paradigms on the horizon. For Maity art is a really important space to unpack questions of passive and passionate relationships to it. The Kashmir canvasses tell us that it's important for artists not only to insist on being part of the conversation but even to **develop** new tools of scale. His brushes slide like satin across the canvas to create a buttercup yellow sky in resilient gold hues. Whispering feathery flowers float in silent sentience. Each room at Bikaner House's CCA became a masterclass in painting as well as drawings with lithe lyricism. On the **first** floor at CCA Bikaner house was Varanasi that stood like a panoramic silent sentinel filled with the chants of mantras and the shades of bhakti. Varanasi for Maity is a prime example of relishing the material properties of paint. In the orchestration of thinly applied paint in the background contrasting with the thick impasto used for the drifts of colours on the skyline you can sense the incantations of the sandhya raaga. Indeed the sunset in Varanasi is 'older than history, older than time.' His extraordinary command of his medium is brought to bear upon an image whose very **themes** of reflection, illumination, and doubling suggest the associative and summative effects of recollections.

We have got your calendar marked with birthdays, anniversaries, festival dates, and that important work presentation. But somewhere between Holi and the end of the financial year in India, there's a day that quietly slips by a day dedicated to something we chase every single day of our life. Our happiness. Yes, you read that right. While we're busy celebrating everything from Independence Day to Friendship Day, from Diwali to New Year's Eve, there's one spec

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-22-TEST NO.-25579

Of a China-US war, India will not be supporting the US and therefore, the close relations have no meaning. India places its strategic cooperation with the US in a broader context of international security and greatly values its strategic autonomy. While the relationship between the two countries has been built brick-by-brick over the years, several differences remain, particularly on Pakistan, Iran, and the Ukraine conflict. The US often uses its sharp criticism to attack the alleged erosion of democracy in India to pressure the country, though generally palliative statements are issued soon after. While India is getting increasingly concerned about Pakistan terrorism-sponsoring activities, it has yet to see a more forceful US response against Pakistan. India, with its ambitious National Medical Device Policy 2023, is poised to become a global leader in the manufacturing and innovation of medical devices. This forward-thinking policy sets out a comprehensive roadmap to achieve a 10-12 share in the expanding global market over the next 25 years. By focusing on regulatory mechanisms, infrastructure development, research and development, investment, human resource development, and positioning, this policy aims to transform India healthcare landscape and improve healthcare outcomes for its citizens. One of the key highlights of the policy is the establishment of a Single Window Clearance System for licensing medical devices. This mechanism will streamline the regulatory process, preventing duplication of work and reducing compliance burdens. By aligning the pricing regulation framework with the provisions of the Drugs Prices Control Order DPCO, 2013, through the National Pharmaceutical Pricing Authority NPPA, the policy ensures affordable access to high-quality healthcare products for all. To encourage innovation and research, the policy emphasizes the need for collaboration between academic institutions and industry. Joint research and development projects and the establishment of Centers of Excellence in premier institutions will foster a culture of innovation and enable India to develop innovative medical technologies. Furthermore, the policy recognizes the importance of investment in the sector. It promotes seed capital and funding from venture capitalists, inviting them to actively engage in incubating start-ups and supporting private investments. New financing models, such as blended finance, **will** also be explored to attract both public and private funds. The policy recognizes that a robust healthcare infrastructure is vital for the growth of the medical device sector. It proposes the establishment and strengthening of large medical device parks and clusters in proximity to economic zones, ensuring easy logistics **connectivity.** Additionally, testing and certification facilities in government institutions will enhance the quality assurance process. The policy also emphasizes the importance of an uninterrupted supply chain, ensuring continuous access to medical devices, which will boost domestic manufacturing capabilities. Human resource development is another crucial aspect of the policy. By supporting multidisciplinary courses in medical devices and creating a national database of required skills, the policy aims to build a skilled workforce that can meet the demands of the rapidly evolving MedTech sector. This focus on skill development will not only generate employment opportunities but also enhance India manufacturing competitivenes

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-22-TEST NO.-25580

To address market access issues. By promoting awareness of medical device safety standards and communicating the value proposition to the public, the policy seeks to build trust and confidence in domestically manufactured medical devices. It also encourages learning from successful manufacturing and skilling systems around the world and exploring the possibility of implementing similar models in India. To ensure effective implementation and monitoring, the policy envisions close coordination with NITI Aayog. Quantitative metrics will be developed to assess equitable access to affordable medical devices, manufacturing independence, improvement in the healthcare index, reduced disease burden, and the creation of high-value jobs. Regular monitoring of economic indicators, such as exports, export volumes, and foreign direct investments, will provide insights into the sector growth and performance. The National Medical Device Policy 2023 lays the groundwork for India transformation into a global hub for medical device manufacturing and innovation. By prioritizing regulatory efficiency, infrastructure development, research and development, investment, human resource development, and positioning, the policy demonstrates India commitment to improving healthcare outcomes and ensuring access to affordable, high-quality medical devices. As the policy is implemented and progresses, India has the potential to revolutionize healthcare not only within its borders but also on a global scale. India is the third largest consumer of primary energy after the US and China. It has recorded a 4 percent growth rate in energy consumption over the last decade, primarily driven by the expanding economy, burgeoning population, rapid urbanization and industrialization. At present, India energy consumption is largely dependent on carbon-based fossil fuels majorly oil and coal of which, close to 50% is imported to meet the country exploding energy demands. India is moving on the trajectory to become a global manufacturing hub, in line with the Make in India and Atma Nirbhar Bharat agenda. However, a lot remains a major area of concern that prevents India from becoming a truly self-reliant nation. In 2021-22, India has imported 212.2 million tons of crude oil. It is no secret that this dependence on fossil fuels remains one of the major sources of carbon emissions in the country. Considering **the** need to switch to cleaner alternatives, the Government of India, policymakers and industry stakeholders have set ambitious targets to manage emissions as a progressive step towards decarbonization. To enable these visionary goals and reduce carbon emissions intensity, several initiatives are being undertaken to diversify India energy portfolio and push **the** usage of biofuels in the country. Biofuels are one of the most sustainable energy sources that can be used across all manufacturing sectors. Many international counterparts have started working on their agenda to phase out conventional fossil fuel use while leveraging the systematic use of biofuels as a low-carbon replacement. Fossil fuels are highly energy intensive that involve activities such as mining and dredging for extraction and disrupting nature. However, biofuels are generated from waste that becomes a reliable and green energy alternative rather than ending up in a landfill. Escalating demand for modern bioenergy use Bioenergy sources such **as** Biodiesel, Ethanol, Biogas, Biomass and Green Hydrogen poise to become a

Kerosene used in air travel increases substantially from nearly zero in 2021 to over 7% of all aviation fuel demand by 2030. Additionally, the liquid consumption of biofuel in road transport is also projected to quadruple 2030. Similarly, bioenergy will potentially see a huge surge in demand for electricity generation to provide low-emission power and result in decarbonized processes. Equally, on the other hand, biofuels in many other sectors can take advantage of the existing infrastructure of the country. Biome thane can use existing natural gas pipeline infrastructure while many liquid biofuels can use existing oil distribution networks with just minor alterations. A framework to incentivize biofuel use India has a long history of energy transition planning. To pledge for net zero emissions the Indian government has introduced various frameworks to pilot and implement biodegradable and bioenergy projects. In 2018, the National Policy on Biofuels was launched to announce a revised target of 20% bioethanol blending by 2030 where India remained at just 4% in 2017-2018. The policies and frameworks introduced are highly focused on promoting various forms of bioenergy with required financial aid and supply chain assistance. Apart from this, the government has also launched the scheme to boost the production of Compressed Biogas in India. On account of World Environment Day, the country also witnesses several exhibitions, conferences, seminars, World Environment Expo 2023, Biofuel Expo 2023, Biodegradable Expo 2023 etc. These are organized by Green Society of India and the Ministry of Environment, Forest and Climate Change to support India net zero emission agenda and provide a robust platform for businesses and stakeholders to come forward and contribute to growing usage of clean energy technologies. The Ed-tech sector in India is booming and functioning as a strong backbone in the economic and educational development of the country. With continuous development, AI-based technologies have revolutionized Edtech by transforming teaching and learning methodologies. These AI-based technologies have become an integral part of playing crucial role in the personalized and adaptable learning process. The rise of AI in Edtech has certainly helped students in various ways. The diversified use of **AI** has created a sense of ease in students minds, making Edtech learning more reliable and functional. Here are some of the key benefits of AI when integrated with Edtech Customized and Unique learning approaches Students can easily use AI-based tools to customize their learning approaches. Here the AI helps **and** provides a tailored learning process depending on the capability and stability of students. This type of adaptive learning can help students learn and comprehend the topics at their own pace independently. Improvising constant learning While learning and opting for any topic, it becomes very crucial to continuously improvises and upgrade yourself. AI platforms and tools provide strategies to help you upskill your knowledge on the relevant course based on your career goals and trending industry necessities. All these features can significantly help in today rapidly altering job market. Automating and optimizing administrative tasks:- AI-Powered tools can act as a **bridge** between tutors and learners by diminishing the factual learning gap. AI can help analyze and calculate the student performance, provide grades, and save tutors time, which can be used

Blood samples and vaccines. For instance, in the US, Australia and Finland, drone companies are actively delivering food, groceries and healthcare products. Similarly, in other countries, drones are saving lives with the timely delivery of healthcare products. Furthermore, they are also effective in delivering books, beverages and food and even flowers for gifting in many developed countries. Tech capabilities in Indian drones Indian drones are keeping abreast with technological advancements in the global industry. Made in India drones can pierce the skies in sub zero temperatures to deliver medicines within minutes. They have the capability to carry a payload of 3 kgs and fly at a maximum velocity of 120 km h with a flight range of 100 km. The drones are equipped with layers of fail safe features such as helicopter mode, 4G network, radiofrequency and an independent parachute. Additionally, India is also developing long range heavy lift drones to redefine e commerce logistics in the country. Suffice to say, Indian drones are at par in tech capabilities with their global rivals. Wrapping Up With a continued desire to embrace innovation to overcome societal and environmental challenges, India undoubtedly has the potential to become the global home for the next gen drone technologies. Government impetus and liberalized rules will also provide manufacturers and drone companies with the much needed springboard to vault to unprecedented heights. The Vishweshwar lingam at the kashi Vishveshwar Temple is said to have started occupying a popular place in the religious life of Hindus, sometime between the 12th and 14th centuries. Authors of the 14 century Kashi Khand, along with the Skanda Purana, is said to have incorporated Vishweshwar as the major deity of the city, and featured a Vishweshwar temple for the first time. Kashi Khand, containing 100 chapters describes various aspects of Kashi in detail, the various temples and deities, as also how they came into existence. The site which originally had a Vishweshwar temple dedicated to Lord Shiva, was rebuilt by Raja Todar Mal, the Finance Minister of Akbar, in conjunction with Narayana Bhatta, the head of the most famous Brahmin **family** of Banaras in 1585. Vir Singh Deo Bundela, a close associate of Jahangir, is also credited with the refurbishing of the temple. In 1698, Bishan Singh, the ruler of Amber, had his agents survey the town and gather details about the various claims and controversies regarding the demolition of **the** temple. The maps marked the Gyan Vapi, to lie at the site of a dismantled Vishweshwar temple, and even marked a plinth of the temple. Bishan Singh Court went on to purchase much of the territory around the Gyanvapi precincts, including some, from the Muslim inhabitants, with an aim to rebuild the temple. But his efforts failed. Instead, around 1700, an Adi Vishweshwar Temple was constructed at the initiative of Bishan Singh successor, Sawai Jai Singh II. The Marathas, in particular, were highly vocal about religious injustice at the hands of Aurangzeb. In 1742, Malhar Rao Holkar, the ruler **of.**

Indore tried to construct the temple, but in spite of his consistent efforts, his plan did not materialise. His successor and daughter in law, Ahilyabai Holkar constructed the present Kashi Vishwanath Temple. As the original lingam was supposedly hidden by the priests inside the Gyan Vapi well during Aurangzeb raid, the plinth continued to be considered as more sacred than the new temple by Hindu pilgrims. Later in 1828, Baija Bai, the widow of the Maratha ruler Daulat Rao Scindhia of Gwaliar, constructed a colonnade to support the roof over the Gyan Vapi. Demolition of the Temple by Aurangzeb Sometime around 1669, Aurangzeb is said to have ordered the demolition of the temple and commissioned the construction of Gyan Vapi mosque in its place. While demolishing the temple, the plinth of the temple was left largely untouched, and continued to serve as the courtyard of the mosque. The southern wall, along with its cusped arches, exterior mouldings and torans was also spared and turned into the qibla wall the wall in a mosque that faces Mecca. The name of the mosque is derived from an adjoining well, the Gyan Vapi, meaning Well of Knowledge. Legends hold that Shiva had dug it himself to cool the lingam. Chronology of developments post Independence Beginning 1984, the Vishwa Hindu Parishad VHP along with right wing Hindu Nationalists engaged in a nation wide campaign to reclaim the sites of the mosques constructed by demolishing Hindu temples, including the Gyanvapi. A Title dispute suit was filed in the Varanasi Civil Court, by advocate Vijay Shankar Rastogi in 1991 for handing over the site to Hindu community. However, in 1998, the Allahabad High Court ruled that the suit was barred by the Places of Worship Act, 1991. Later a Revision Petition was moved before the district court, which allowed it and asked the civil court to adjudicate the dispute afresh. The mosque management committee Anjuman Intezamia Masjid challenged this allowance in the Allahabad High Court, which stayed the proceedings. The court case later remained pending for 22 years, before the advocate of the 1991 petition, **Vijay** Shankar Rastogi filed another plea, requesting for an ASI survey of the mosque complex on the same grounds. It was argued that the temple had existed for thousands of years since the reign of Maharaja Vikramaditya, before it was demolished by Aurangzeb around 1669. This, it was claimed, is **proved** by the continuous presence of Lingam among other features, and that, Hindus were being deprived of their religious right to offer water to the lingam. The petitioners had contended that the Kashi Vishwanath temple was built by Maharaja Vikramaditya about 2,050 years ago. They had also claimed that the self styled jyotirling of Lord Vishwanath in Kashi is inside the Gyanvapi complex. The petitioners also demanded that the land on which the mosque was built, be handed over to the Hindus. They also sought permission to worship in the Gyanvapi masjid complex. However, the matter remained dormant and the **hearing.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-22-TEST NO.-25587

Was suspended by the Allahabad High Court Following the 2019 Supreme Court verdict in the Babri Masjid Ram Janmabhoomi dispute, the Gyanvapi case was revived in December 2019. In 2019, an advocate moved the Allahabad High Court, demanding that the Gyanvapi masjid complex be surveyed by the Archeological Survey of India ASI. In 2021, five Delhi based women, Rakhi Singh, Laxmi Devi, Sita Sahu, and two others, filed a petition in the Varanasi Court, seeking permission to worship daily, the deities Shringar Gauri, Lord Ganesha, Lord Hanuman and Nandi, whose idols were located on the outer wall of the Gyanvapi mosque. In their plea, the petitioners had also sought to refrain the opponents, from causing any damage to the idols. Currently, devotees are allowed to worship Shringar Gauri only on the fourth day of the Chaitra Navratri. On April 8, 2021, the City Court had ordered the Archaeological Survey of India to conduct the requested survey. In addition, a five member committee comprising experts in archaeology was asked to be constituted, with two members from the minority community, to determine, whether any temple existed at the site prior to the mosque. However, on September 9, 2021, the Allahabad High Court stayed the archaeological survey by the ASI in Gyanvapi Masjid. On April 26, 2022, Varanasi Civil Judge senior division had ordered a survey and videography by the advocate commissioner at the mosque complex. However, the survey had been opposed by the Anjuman Intezamia Masjid, which manages the Gyanvapi mosque, and the Uttar Pradesh Sunni Central Waqf temple by Aurangzeb. They opine that, Aurangzeb complex and often contradictory policies can be more accurately analysed in the light of his personal compulsions and political agenda, rather than as expressions of religious bigotry. Looking at the history of the rule of the Muslim Invaders in India, who proudly proclaimed themselves as with a long history of loot & demolition of Hindu Temples carried out by them, starting with the looting of Somnath Temple in Gujarat by Mahmud of Ghazni & the demolition of the Ram Temple in Ayodhya, the two representative examples, **it** is difficult to believe the assertion of these historians, that Aurangzeb demolished Kashi Vishwanath Temple, not out of religious bigotry, but because of political compulsions. It obviously sounds a lame explanation. Tomorrow of May, 2022, the report of the survey is going to be submitted to the Civil Court, **Varanasi.** The verdict of the Court will be eagerly awaited by the country. A primer on what the energy transition means for India, and the various steps the government, industry, and citizens must take to make it happen. The recent IPCC report that came out in the month of March 2022 says that, by the end of the century, the temperature rise is likely to be 2 to 3.7 degrees if global emissions, as they stand today, are not curtailed. In fact, according to the report, carbon dioxide CO2 emissions need to come down by 45 percent globally compared with **2005.**

Percent so, there is a vast gap between what we need to be doing and where we are, given that they have contributed less or minimally to the problem and are still being forced to contribute equally. Moreover, fast growing economies like Brazil, China, and India have ever expanding energy needs, considering the stage of development they are at. Their reliance on fossil fuels at this time will naturally be higher. The fundamental problem remains one of apportioning the responsibility or ownership of future efforts, as the available carbon space in the atmosphere needs to be vacated by developed nations for those who need it many countries in the Global South, but that is not happening. Against the backdrop of this global competition for capturing carbon space, at the COP 26 summit in Glasgow last year, Prime Minister Narendra Modi announced that India will achieve net zero status by 2070. The focus for India will now be on increasing the share of renewable energy in energy production and generation both in relative terms and absolute volume so as to eventually phase down consumption of coal and fossil fuels taking place in the economy across various sectors, and improving the carbon sink. Increasing the uptake of renewable energy in India There will likely be a large degree of government mobilisation towards solar and wind energy as well as biomass. Each of these has a role to play in India energy transition. However, given our climate, solar will receive the largest push. The prime minister has announced that, by 2030, India will create 500 gigawatts of solar capacity. Currently, the national peak demand for electricity is around 203 gigawatts, whereas we have a capacity of around 400 gigawatts, including the renewables already in place. So, by creating 500 gigawatts of solar electricity capacity, we should be able to meet a large share of our electricity demand even as it continues to increase. The prime minister wanted this to be in the range of 50 percent, meaning 50 percent of the electricity needs would be met from renewables by 2030. But, in **actual** fact, this may need a still higher quantum of renewables electricity capacity to be created. The difficulty is that the efficiency of renewables is low, which is why the actual uptake of solar energy in the energy system is not more than 10 percent. In other words, we are **only** able to use approximately 10 percent of the electricity capacity that is created with renewables. Even if we include the generation from nuclear or large hydro power in the small renewables, the share of renewable energy in the total electricity generation is still at about 21 22 percent, as compared to 78 percent with coal, oil, and gas. So the question before us, as we try to make an energy transition, is How do we enhance the uptake of renewables in the electricity system and how do we stabilise the grid And where will the funding come from Even **if.**

350th: "actual" **400th: "only"** **500th: "if."**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-22-TEST NO.-25589

The Bill, as passed by the Lok Sabha, is already with the hon. Members The Select Committee earlier went exhaustively into the various provisions of the original Bill and also recorded evidence from some of the representatives of the industry. The various recommendations of the select committee has been incorporated in the Bill. In addition, the wishes expressed by some of the Members of the Lok Sabha have been incorporated in the Bill. The difficulties of small growers have been appreciated and the major portion of the acreage of rubber cultivation is held by the small growers. Proper representation to these small producers of rubber will be given. The labour representatives in the Board have been increased from three to four. The labour — representatives will be selected from out of the panel of names submitted by the respective associations an important provision has been made in the Bill to enable the Board to take steps to secure better working conditions for workers engaged in the rubber industry. The present production, of rubber is about twenty thousand tons a year, the demand is increasing every year, while the supply is not keeping pace with the demand. It is proposed to fill up the gap over the short period by importing rubber. The Bill, when passed would enable the Board to import rubber and a provision has been made as to – how any profits that are made out of this import of rubber should be utilised. To increase the, production of rubber, it is proposed to take up the development scheme. The details of which are being worked out. It appears that at present the small grower is at a great disadvantage, as far as the marketing of his rubber is concerned. This problem is rather difficult to solve However, provisions have been made for the Rubber Board to take up marketing of rubber also. It is hoped that the new Board will be able to tackle the problem of the small grower of rubber industry successfully. The Rubber-industry has established itself as a major industry in India. India **ranks** high in natural rubber production. The programme started to make available drinking water in villages through Rajiv Gandhi National Drinking Water Mission, is the biggest in the world and has become a model for other developing countries. In order to have systematic agricultural development and to maintain it, an **effective** system is essential for marketing of agricultural products so that the interests of producers and consumers may be safeguarded. A model Act has been circulated to the States in order to make uniformity in the regulation and management of markets. In order to provide basic infrastructure facilities for these markets under a Centrally-sponsored programme, the committees of the trade centres are given monetary assistance to the markets through the State Government. Now, both the programmes for the development of markets and construction of village god owns have been entrusted to the State Governments. Designed to enhance their skills and **knowledge.** The Challenges of Army Life Army life is not without its challenges. The rigorous demands of military service can lead to physical exhaustion and mental strain. Soldiers often work long hours, face harsh environmental conditions, and endure the psychological pressures associated with high-stakes missions and deployments. The separation from family and loved ones, frequent relocations, and the potential for combat situations contribute to the stress and strain of army life. Combat sit

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-22-TEST NO.-25590

The psychological impact of combat, including post-traumatic stress disorder PTSD, is a serious concern, and soldiers often require support and counselling to navigate these challenges. Camaraderie and Sense of Purpose Despite the difficulties, one of the most rewarding aspects of army life is the strong sense of camaraderie and teamwork. Soldiers forge deep bonds with their fellow service members, built on mutual trust, shared experiences, and a collective commitment to a greater cause. This sense of brotherhood and sisterhood provides invaluable support and solidarity, especially during challenging times. The sense of purpose that comes from serving one country and contributing to national security is a powerful motivator. Soldiers often take great pride in their role, finding fulfilment in their service and the impact they have on both national and global levels. Work-Life Balance and Transition Balancing the demands of army life with personal and family needs can be challenging. Deployments and training schedules can strain relationships and affect family dynamics. However, the military offers support services to help soldiers and their families manage these challenges and maintain a healthy balance. Transitioning from military to civilian life presents its own set of challenges. Soldiers often need to adjust to a different pace and set of expectations, and may seek assistance through veteran programs to help with career development, education, and mental health support. Conclusion In summary, the life of an army soldier is defined by its demanding nature, disciplined routine, and profound sense of purpose. Soldiers face significant challenges but are also rewarded with a deep sense of camaraderie and fulfilment from serving their country. The skills and experiences gained in the military prepare individuals for diverse opportunities and foster resilience, adaptability, and leadership qualities that continue to benefit them throughout their lives. Sir, the Press Council Second Amendment Bill was introduced by me in the last session, as I submitted in my statement which I laid on the Table of the House. I request the House to consider the Second Amendment because an Ordinance had to be issued since the life of the Council was expiring. Since the life **of** the present council was expiring, we had to issue the Ordinance. At this stage, I do not think have much to say because it is a very simple Bill. It is only trying to extend the life of the Press Council till the end of the year. If we **are** able to finalize the formation of the Press Council earlier, then, of course, the present term would expire earlier. You will recall, I had said in the course of the last debate that a Committee of Members of Parliament has been working for the drafting of the second Bill, which is likely to come up before the end of this session. The Committee has been sitting and they have been able to come to their conclusions more or less. It is now in the drafting stage and I hope it will be possible for me to bring the Bill **before** the House soon, 1 would not like to go into the merits and demerits of the new Bill at this stage. Would only say that it is a very simple Bill extending the life of the present Council. I hope the House will approve of this at an early date so that I can go to the other House before the Budget debate is taken up. No doubt about it; it is a very simple Bill dealing with merely the term of the Press Council and giving life to the Pres

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-22-TEST NO.-25591

March 20th is the International Day of Happiness. It's like discovering that our favourite emotion has its own day. Moreover, the date itself is special: it's around the spring equinox, when day and night are equal across the world. A perfect balance, just like what we seek in life. We celebrate birthdays because we're happy to mark another year of life. We celebrate anniversaries because we're grateful for love and togetherness. We burst crackers on Diwali, dance during Navratri, feast during Eid, and sing during Christmas all in the name of happiness. When India won the T20 Cricket World Cup recently, the entire nation erupted in joy. Strangers hugged on the streets. We shared millions of social media posts and shared our joy in many different ways. Some cracked more crackers than they did on Diwali. That collective euphoria was the nation's happiness in its purest form. In reality, every celebration, big or small, is essentially honouring our happiness and success. But here's the beautiful irony: we've been so busy celebrating individual moments of joy that we forgot happiness itself deserves its own day. It's like cooking a feast and forgetting to taste it yourself. The story began in the tiny Himalayan kingdom of Bhutan. While most countries measured success in GDP and economic growth, Bhutan did something wonderfully different. In the early 1970s, they introduced the concept of Gross National Happiness (GNH). Instead of asking How rich are we? They asked How happy are we? Imagine a whole country deciding that happiness matters more than money in the bank. This idea slowly travelled across mountains and oceans, touching hearts and minds. In 2012, the United Nations thought, Why should only one country care about happiness? Why not the whole world? And on July 12, 2012, they declared March 20th as the International Day of Happiness. The first official celebration happened on March 20, 2013. Since then, every year on this day, people across 193 countries pause to think about what truly makes them happy. It's like the world collectively takes a deep breath and smiles. We Indians have **always** understood happiness in our own unique way. Our grandmothers found joy in feeding the entire neighbourhood. Our fathers felt contentment in evening walks with family. Our mothers discovered peace in morning prayers and gossip sessions with neighbours over chai. But somewhere along the way, in our race to achieve **more,** earn more, and become more, we forgot the simple recipe for happiness that our ancestors knew by heart. Today, India is one of the fastest-growing economies in the world. We're launching satellites, building smart cities, and creating global brands. Yet studies show that our happiness levels haven't grown at the same pace. We're richer than ever before, but are we happier? The International Day of Happiness reminds us to pause and reflect. It asks us to remember that wellbeing isn't just about physical health or financial wealth, it's about feeling content, connected, and alive. In Indian philosophy, we've always **had** this wisdom. The concept of 'Sukha' in Sanskrit doesn't just mean pleasure it means a state of lasting wellbeing and inner peace. Our ancient texts talk about 'Ananda' bliss that comes from within, not from external achievements. The International Day of Happiness is essentially the world catching up to what India knew thousands of years ago. In our busy Indian lives; work, family, society's expectations we rarely stop t

isn't a luxury but a necessity. It reminds society that a nation's progress should be measured not just in infrastructure and economy, but in smiling faces and peaceful hearts. The beautiful thing about the International Day of Happiness is that it's not meant to be just one day. It's meant to be a reminder that ripples through the entire year. After March 20th, you don't put happiness back in a box until next year. Instead, you carry its message forward. You choose kindness over anger. You choose gratitude over complaint. You choose connection over isolation. But we already have so many days to celebrate! Why add another one? Here's why this day is different. This isn't about buying gifts or throwing parties for others. It's about giving ourselves a precious gift and a celebration for ourselves. It's about our own intentional reflection. It's also about asking ourselves: Am I truly happy? What brings me joy? What am I grateful for? When we celebrate our birthday, we celebrate our existence. When we celebrate the Day of Happiness, we celebrate our experience of that existence. So, this March 20th, do something different. Don't just scroll through Happy International Day of Happiness posts. Actually pause. Call that old friend. Hug your parents. Play with your children. Cook your favourite meal. Take that evening walk you've been postponing. Do something that makes your soul smile. Because if happiness has earned its own day on the global calendar, it certainly deserves a genuine celebration from you. After all, we spend our entire lives chasing happiness, perhaps it's time we stopped running and simply celebrate it. Are you in? Do let me know how you celebrated it this year, with your comments! Did you say you were a data engineer? Or was it an ML expert? Or a data scientist? MLOps expert? A domain expert? Sorry, AI business analyst? Think about a new type of role that is gaining prominence in the industry: A forward-deployed AI engineer. This week, I am listing out the various aspects of the role. Customer-embedded The individual is integrated into **the** customer's work environment to eliminate any miscommunication and the risk of being lost in translation. The role is best performed on-site (at the customer's office). In such a scenario, it becomes easy for the stakeholders to reach out to the engineer whenever necessary. End-to-end AI models and platforms The **key** is to focus on the end-to-end-ness of the solution. LLMs, agents, and ML systems must be meaningfully stitched into the business flow. The solution must be easy to use to ensure adoption. One cannot say they have provided the customer with an ML model and then leave it to the business team to figure out how to use it. This is a frequent misunderstanding of accountability. Real customer environment We are not talking about a simulated environment having production-like data. Neither are we talking about building a prototype that works on one-tenth of the size of the dataset. How **often** have we remarked that this demo was meant to test the solution approach, and that we will scale it later? Ownership of implementation and outcome We must shift our value proposition from the solution implementation to its outcome. A successfully deployed, brilliant AI technical solution widely adopted by stakeholders, but not improving business as intended, is just another solution destined for the dustbin. The forward-deployed AI engineer takes accountability for the outcome. Business processes,

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-23-TEST NO.-25595

India is able to produce intermittent renewable energy at a low variable cost, there are other systemic fixed costs that need to be factored in. These include the need for meeting the baseload in the grid that is, the minimum level of electricity demand over 24 hours, transmitting the energy, transporting it across different states and regions, and, in the case of solar, making it available when the sun is not shining. All of these require considerable investment in infrastructure and systems. And today our domestic financial system alone is not capable of mobilising finance at this scale. So, the primary problem in making this energy transition is twofold. First, India needs to create technology for energy storage, which can meet the baseload in the grid and stabilise it when solar or wind energy is not available. And, second, we need to mobilise the finance at a scale that can help us create a capacity of 500 gigawatts of renewable energy by 2030, and more as we go along. Every single gigawatt of renewable energy is going to cost approximately INR 6 crore. And not only in terms of financial cost, this kind of investment in renewables requires a lot of land as well. So, the question is Can we really mobilise these funds and resources at this scale and overcome the technology hump of renewable energy storage There is another challenge that lies ahead. Certain industrial sectors in the economy for instance, petrochemicals, steel, and cement are extremely inflexible in terms of the kind of technology and energy that they need. So, even if we are able to reduce the emissions intensity of our GDP by improving energy efficiency and the proportion of renewable energy in our energy system, it is not going to be enough. As India grows and develops, its economic production and energy consumption will increase. And, for these sectors, replacing carbon will not be possible without the availability of alternative fuels, which are necessary for certain industrial production and processes. Such fuels are necessary for transport and cement and steel production, which are likely **to** grow by three times. Therefore, to make the transition, we need heavy investment in alternate low carbon fuels such as hydrogen and natural gas. We also require tech innovation at scale to bring down the cost of these fuels and enable the production of steel and cement at an **affordable** and competitive rate. In summary, India mitigation efforts must revolve largely around mobilising funds and investing in tech innovation at scale. What India needs to focus on when it comes to adaptation Enhancing climate resilience is going to be critical for a country like ours. Given that many states face unique kinds of climate threats, each of them must have a climate resilience strategy, so that the productivity of the economic system does not get compromised in the process of addressing climate change. While we focus on making changes to our energy system, we need to take simultaneous measures **to.**

Ensure that agricultural productivity remains stable, water does not become scarce, coastal communities are not threatened by the rise in sea level, and so on. One way to do this is by increasing the capacities of the communities to address climate change. Managing water resources is going to be the key to adaptation efforts, given that close to 80 percent of the water in India is consumed in agriculture. At the same time, we need to insulate communities from climate disasters like floods, droughts, cyclones, and extreme heatwaves, which requires investment in infrastructure, for instance, roads and telecom structures. Here, the challenge is that there are very few entities coming forward to make the kind of investments we need. In the case of mitigation efforts, there are business models that can generate returns for the investors. But, in the case of adaptation and resilient infrastructure, there are no financial returns, and it is only the government budget or public resources that we have to fall back on. There is reason to be hopeful While the task ahead of us entails massive systemic changes that may seem daunting, we should not lose hope. The intensity of global discussions has permeated into national strategies, such as India. The successful execution of our strategies depends on political commitment, which already exists at the national and state level. State MPs and MLAs are now thinking and talking about climate change this was not the case 10 years ago. What we need now is for state climate action plans many of which exist to incorporate a framework for mobilising investments and measuring benefits and outcomes. Once this is done, it only a matter of time before a climate lens is fully integrated into our development policies too. Corporate India has also woken up to their contributions to worsening climate change, and are beginning to shift their priorities accordingly. Many industry majors such as the Tatas, Mahindra & Mahindra, Wipro, Shell India, and Dalmia have announced net zero targets by 2040 or 2050. The SEBI has mandated 1,000 top companies listed on the stock exchange **to** follow a mandatory framework of business sustainability and responsibility reporting and make disclosures on some of the key environmental parameters. This is a step in the right direction, and once we develop a robust disclosure system that includes penalties and rewards for actions taken, we will begin to see **a** lot more movement in this area. When it comes to citizens, there are a few things that can be done. The first is to build our own awareness, and that of those around us, when it comes to climate change impacts. We must integrate the environmental consciousness into our education system. Doing this can help build community action against policies and actions that have adverse consequences for the environment. This is difficult but not impossible to do, given that young people today are much more environmentally conscious than the previous generations. The second course of action is to develop **a.**

Deeper understanding of our own resource efficiency how much we are consuming, recycling, or restoring. Earlier we would talk about three Rs Reduce, Reuse, Recycle now there are six Rs Rethink, Refuse, Reduce, Reuse, Recycle, Repair. We need to move towards a circular economy, which will require participation from all citizens as well as industry. India has a head start here, given that traditionally we have had a culture of recycling and reusing. Industry needs to move in this direction too and follow the norms for extended producer responsibility. Improving resource efficiency, even in our own homes, will go a long way in making a difference to how climate change progresses in the coming years. This article was originally published on India Development Review. There is no denying that our education system will see many changes after ten years. If we see the education system of 2032, we will see that the schools will become more computer based and far less paper based. Teaching will become increasingly important. Regardless of the fact that students would have a lot of freedom in their education, guiding will be essential for success. The world will see greater innovation in the digital education process by 2032. It will open up avenues for research and new opportunities to learn. Additionally, the students will be able to enhance their technological expertise. They will be able to handle their project work and responsibilities with ease. Over the last decade, our country has seen a significant growth in student enrolments for higher education in the field of management, mass communication, languages, engineering and other professional courses. If we talk about the business administration programme BBA or MBA, we will see that it has also reached its zenith of glory and is now being scrutinised and evaluated. Furthermore, the aspirant is now clearly wanting measurable outcomes at the end of the course, implying that they are almost expecting a job guarantee. Similarly those who have opted mass communication are doing well in journalism, public relations, advertising, events, digital marketing, content creation, corporate communication etc. Besides, Hospitality management, comprising **particular** fields such as hotel management, culinary management, and travel and tourism, is one of the existing courses with significant promise. The quick growth of skill based courses in fields such as shopping, banking, selling, mobile repairing, embroidery, fashion, and jewellery design, to name a few, is a big change **we** are seeing around us. These courses are usually brief in duration, spanning from three to twelve months at most, and incorporate a lot of hands on instruction. They are skill oriented, with excellent theoretical content tests are frequently centred on practical and offline online quizzes. Many of them come with a job guarantee, which makes these courses quite appealing to potential students. Another innovation that is urgently needed is the ability to complete a course with flexibility, allowing for meaningful pauses and allowing the student to pace his study at his own pace. Furthermore, we could have a system **in.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-23-TEST NO.-25598

Which students can acquire learning on a continuous basis and be certified upon completion of certain milestones for example, a certificate after writing an exam after six months, a diploma after a year, and a degree after two years with the caveat that they must complete the degree within four years of beginning. This will enable for a good blend of principles and application, and a reduction in academic dropout. As a consequence, new deemed and private universities, and also many colleges and institutes, have started appearing across the metros, sub metros, and sometimes even rural villages. Major changes we will see in Indian education in 2032 are as follows 1. International syllabus will be fully implemented in the Indian educational system, with the goal of building a world community who see themselves as part of the international community and have a strong sense of responsibility toward its members. Students will gain an understanding of the interdependence of nations and peoples, as well as the complexity of the interactions 2.The changing times necessitate a shift in the educational alternatives offered to students. I believe the moment has come to rethink existing programmes and reinvent them if necessary 3.Classrooms would become more computer based and less paper based 4.Student responsibility of the learning experience will also increase, and students will be capable of taking more responsibilities. On the other hand the teachers guides, will be acting as clarifier and problem solving specialist 5.Increased in online quizzes, collaborative projects, and group discussions will totally alter examination patterns If you are one of those, who have travelled to Goa either in pre lockdown, or have been there crazy no. of times, then are always thinking about doing Goa differently, then here an updated travel guide curated by Smriti Saxena to explore Goa in its new vigour and colour 1. For the beachy people The Ashwem beach in North Goa, and Palolem Beach in the South of Goa are the still sane as compared to other over crowded beaches of Goa. About 19kms away from the crowded Calangute beach, Ashwem beach, extends from **the** northern banks of the Chapora river almost till the Querim beach near the Terekol River. Situated in Canacona, the crescent shaped Palolem Beach is considered to be one of the regions most beautiful beaches. Pro tip start your day early, Goa beauty changes with each hour 2. Sundowners & **drinks** Enjoy the breathtaking view of Sundowners, great photos and really good crowd, then lanes of Vagator or Morjim are your spots. There are several places some super popular and some upcoming that have nailed the art of cocktails and locations is just icing on the cake. Pro tip Make bookings atleast 3 days in advance, with people flocking at travel destinations, you might not get space. Also, be on time, they hold your tables only for 10mins extra than the allocated time 3. Middle of the sea is now about the Sail If you are willing to do more **with.**

Water just beyond water sports then Yatch sails should be on your list. View the beautiful untouched waters and enjoy the shades of blue water as you would love to imagine them Pro tip there are a lot of package tours that are offered, but you can also look of personalized options 4. Foodie paradise from home cooked budget eats of a tasty Goan fish thali, as cheap as Rs. 150 to a fancy shrimp and baked fish dishes, a mix of every local delicacy is Goa character. Pro tip trying of both extremes whether it local and meals by crime de la creme chefs is a must. If shopping is still your thing if cashews, fenny, dream catchers have always been on your list, then you must add Coconut oil, Kokum, and silver jewellery on the list as well. Goa flea markets are already popular, but look for the artisanal markets too, there are some new ones that are organized at Hill Top. You will be amazed to see the craftsmanship and the prices. Pro tip Calangute is cheaper than Bagga. Also, negotiate for prices at all times. 6. Accommodations If hotels have been your thing, then its times to explore villas and vacation rentals. Pick the area, with less intrusion and just enjoy Goa at your own pace. Pro tip Do a diligent check on the distance from the beach, if you are paying for sea view. It should be worth your money what more follow all COVID related safety protocols, and always check Goa tourism website for relevant advisories Today customers, across industry verticals have demands that change fast, driving sellers to deliver unique experiences for them to avoid churn. Customers of Banking, Financial Services and Insurance BFSI are no different. Having accustomed to digital and personalised service across other industries, they expect the same here as well. They also place equal value to customer experience as much as they give to financial products and services. The BFSI sector, which was initially hesitant to digital transformation and cloud services, as they deal with sensitive information, saw **the** numerous benefits of cloud and are embracing it like never before. However, organisations can benefit from cloud adoption and gain the competitive edge only when they modernise the legacy, on premise systems. Hence, app modernisation is among key business priorities of any financial institution in this digital era. Cloud **computing** delivers numerous advantages, such as better customer relationship management, ensuring regulatory compliance, data analysis and helping in detecting fraud across the financial sector. Financial companies are understanding how cloud technology can be leveraged to meet their business objectives and deliver great customer experience, driving the market growth. Enhanced Security with Cloud The public cloud infrastructure provides the much needed secure environment for financial institutions than on premise systems. The growing concern of security with cloud technology, among users, is addressed by the shared responsibility model. Cloud service providers CSPs take the responsibility for securing the hardware and infrastructure across **regions.**

Stories possess a unique ability to intrigue and captivate human minds, leaving a lasting impact on them. When a story engages our emotions, it becomes memorable. It resonates within us long after we have heard or read it, and sometimes even stays forever. Ins that exactly what a brand wants? To stay relevant to its audience forever? In today fast paced and ever evolving world of marketing, grabbing the attention and deriving the loyalty of consumers has become the biggest challenge. With countless brands vying for the spotlight, businesses need to constantly be at their best game to stand out from the crowd. One powerful tool that has recently emerged as a revelation in marketing strategies to achieve it is storytelling. By crafting compelling brand narratives, businesses differentiate themselves from the raging competition. The power of storytelling lies in its ability to connect with individuals on a deeper emotional and cognitive level. When we engage with a story that elicits joy, excitement, sadness, or empathy, it triggers a response within us. These emotional experiences become linked to the story and, by extension, to the brand associated with it. Through storytelling, brands infuse their messages with emotion, creating an impression that influences consumer perception. By tapping into the deepest sentiments of their audience, brands create an earnest association, fostering brand loyalty and influencing consumer behavior. How does storytelling help in building a brand? Storytelling as a potent marketing tool forges a bond with the audience. By immersing customers in a narrative that suits the brand, businesses tap into the core of their emotions. Through relatable characters, inspiring journeys, and heartwarming anecdotes, storytelling cultivates a relationship of trust and loyalty between the brand and the customers. These feelings of resonance go beyond mere facts and figures, allowing brands to stimulate connection on a deeper level. Our brains are wired to remember stories far more effectively than dry data or plain marketing messages. Storytelling leaves a memorable impact on consumers. A well-crafted brand narrative has the power to generate curiosity and linger in the minds of consumers, increasing brand recall with the **least** marketing efforts. When customers remember a brand story, they are more likely to engage with it and become advocates among their peers. This memorability gives brands a competitive edge in a crowded marketplace where making a mark is paramount. In today saturated market, finding a unique selling proposition is **vital** for success. By using storytelling as a platform, brands can effectively communicate their values, mission, and vision in a distinctive and memorable manner. By communicating their story creatively, brands can create a distinct identity that appeals to their target audience. In a world where consumers have numerous options, it is important for brands to build a look and feel around their name that extraordinary and attracts more eyeballs than others in the league. How to craft a compelling brand narrative? Crafting a compelling brand narrative requires defining the brand unique aspects, journey, values, and mission. This process involves determining **the** key messages that need to be conveyed to evoke the desired emotions in the audience. Developing a story structure that aligns with the brand personality and is relatable to the target audience is essential for creating a cohesive and mem

India In 2021 alone, there was a 63 jump in crimes against women and we re talking only about the registered crimes here, be it domestic violence, rape, assault, serial harassment etc. This upswing in crime and threats against women is a matter of national shame and a slew of measures are being taken to address this issue. Ensuring video surveillance through AI backed video analytics and facial recognition systems is one of the best ways to ensure women safety in every household, every city. It has become one of the key tools used for the safety and security framework by the law enforcement agencies and city councils as it offers real time monitoring, analysis of the situation and fast reaction to any potential crime. Let look at how these tools offer prompt and immediate support. Real time monitoring Video surveillance has advanced from analog to IP cameras and in the present day to video analytics using deep learning algorithms and artificial intelligence AI applications. These tools can monitor the movement of people and alert them immediately in case of any unusual activity. They can also monitor the general facial expressions of people and can latch on to distressed, harassed and terrified facial expressions and alert the required authorities immediately. Insightful dashboards The advanced AI backed video analytics tool has a full features notification panel equipped with a real time alert engine that can send signals across multiple platforms like desktop, mobile and more. It can analyze a scene, review long videos, glean out the important parts from it and make them into shorter videos of minutes or even seconds. It also can review, bookmark important subjects and summarize the findings into a report. This leads to prompt action against any kind of threat or crime. Visitor management at workspaces Workspaces are often quite unsafe for women, with many crimes of harassment being reported. The video analytics surveillance tool acts like a guard taking attendance. It recognizes various faces across different streams, both in real time and on an edge portal. It connects users at many touchpoints and can **be** integrated with all access control systems. This makes the entry and exit of people automated on the basis of facial recognition. It automatically identifies unauthorized entry at different places in real time and helps avert any untoward situation. At the same time, it ensures timely reporting of many workspace **incidents.** Works as authentic evidence in the court of law Video surveillance is a robust tool for detecting, defending and preventing crime. Moreover, it acts as an authentic and accurate piece of evidence in the court of law as it can depict the incident as it happened using people analytics, clothing analytics and scene analytics. It is also the most efficient tool for forensic investigations. Conclusion Many Indian cities are now becoming smart cities using technologically advanced solutions like VA FR video analysis and facial recognition. These effective devices are ideal for women safety as they not only detect and **alert.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-23-TEST NO.-25604

Targeting athletes and an audience that highly involved in sports, Nike inspires people to push beyond their limits. Characters play a vital role in bringing the brand story to life. It is important to create relatable and memorable characters that the audience can connect with. Whether it a founder, a customer, or an employee, these characters should embody the brand values and drive the narrative forward. When we hear Tesla, even before the cars, were reminded of Leon Musk. Such is the association of his personality to the brand that the two can be separated. From disruptive innovation to revolutionary methods of operations, Musk existence remains in sync with everything Tesla stands for as a brand. People trust in Leon Musk journey translates into their loyalty towards Tesla despite its failures. Visuals and multimedia elements enhance the storytelling efforts by adding a visual dimension to the brand narrative. Right from the brand color scheme to its social media accounts, every visual element speaks a thousand words about it and adds volumes to the brand story. When we speak of a strong and unique visual identity, were reminded of Disney mystical logo. With its cursive font and Cinderella Castle silhouette, it instantly transports audiences into a world of enchantment. Through meticulous animation and character design, Disney visual identity plays a vital role in captivating hearts and minds, creating a sense of wonder that has made Disney an enduring symbol of storytelling and childhood joy. Consistency and authenticity across all marketing channels are key to maintaining the integrity of the brand narrative. Consumers easily detect inauthentic storytelling and detach themselves from a brand that tries to be what it is. By staying true to the brand values and being transparent, the brand can build trust and credibility with its audience. Any difference or distortion in the brand story can bring a substantial loss in brand value. With its iconic red and white color scheme and the unmistakable Spenserian script logo, Coca Cola branding has remained consistent and instantly recognizable, enhancing its place as a beloved symbol of refreshment and shared enjoyment **for** over a century. In a time when social media is widely used to express user experiences, encouraging user generated content enriches the brand narrative. Inviting customers to share their feedback and become advocates for the brand, adds authenticity to the brand. By making the audience feel valued through sharing **their** content, it also consolidates the bond between the brand and them. Embracing and celebrating customer stories is a powerful asset held by Gopro to strengthen its narrative. These global giants are a testament to the fact that only the brands with a strong narrative have stood the test of time. Their stories built the necessary trust and loyalty in their customers and led them toward the unmatched success that they have achieved. With the prime focus on social media in today times, using storytelling as a tool has become even more viable and rewarding. After all, with a range **of** equally superior products in the market, what essentially sells these days is the story attached to them. can only be worthwhile if implemented ethically without breaching privacy and security concerns. As AI has improved the overall learning environment for learners and professionals, it has also raised concerning facts that need to be addressed. Below are some points that have pro

Often collects and deals with the sensitive data of students and professionals. It is crucial to integrate the regulation of AI, which can help ensure adequate measures to protect such sensitive information without violation and data breach. Lack of decision making and reasoning possibilities entirely relying on AI can prove to be a disastrous factor for students. It can ultimately limit problem solving abilities and restrict student critical thinking abilities. More reliance on technology can lead to various future consequences, creating a massive gap between students and educators. Algorithmic transparency If there is a lack of transparency in AI algorithms, it can be a huge concern. The AI algorithm is vital in adaptive learning, personalized learning, and content recommendation. Educators and learners must know how AI based algorithms make decisions and provide recommendations. Hence, it becomes necessary to regulate AI, prevent biases, and ensure equal learning opportunities for every learner. Balancing innovation and regulation plays a prominent role in ensuring the effective and regulated use of technology. The regulation of AI is a significant option, but it should be sustained and balanced equally. The over regulation of AI can suppress innovative factors and delay technical advancement. Key points that should be considered while maintaining a balance between Innovation and Regulation of AI Collaborative involvement between policymakers, educators, learners, and researchers; Educational understanding and awareness of AI technologies; Testing and validating AI based technologies; Risk assessment and valuation of AI based technologies; Standardized research in AI regulations. The rapid and spontaneous growth in the Detach sector needs a future perspective on AI regulations. With continuous advancement, the Detach sector will witness a massive surge in the integration of AI technologies. Considering this, here are some facts that need to be implemented effectively ensuring an improved and enriched data protection methodology. Enhancing and emphasizing the importance of diversified learning using AI technologies. Promoting reliable, cutting edge AI solutions innovations, research, and support. In a nutshell, The AI regulation in India Detach deals with and depends on various aspects, such as technological necessities and advancements, guidelines, approaches, and educational policies. We can **efficiently** regulate the need for AI in Detach and maintain the appropriate balance depending on continuous evaluations, adaptability, and flexibility. Detach start-ups and companies with the right AI tools can redefine the future of learning and the education culture. According to annual report titled Tate of India Environment 2023 (Some), **released** by the fortnightly magazine Down To Earth published by New Delhi based non-profit Centre for Science and Environment in March 2023, India ranks 121 in 2022. The report cited that India has skidded down by nine spots as the country is facing challenges in 11 out of the. The report has been compiled with ground level data collected from across states and interestingly it also highlights that there have been considerable improvements in individual states performances in some of the major namely no poverty, zero hunger, Good Health and Well Being, India has already demonstrated its leadership role to **the** world both in terms of capabilities and potential which tackling the Covin19 pandemic. Vaccinating th

Availability zones and edge locations. They also secure the computing, storage, databases and networking software. The customer or user is responsible for security of its customer data, platform, applications, workloads, operating system and network among others. SaaS Software as a Service vendors take the ownership of keeping their applications secure on Cloud. Financial institutions should follow through their responsibilities along with having thorough knowledge and granular control over the cloud provider access to customer data. Organisations have to anticipate and prepare for all security risks and avoid any existing confusion on security responsibility. Cloud Access Security Broker CASB should be leveraged as it is a part of security best practice and extends security controls on cloud. Cloud providers are also delivering data protection and privacy with key management services that can integrate with client side encryption and with external key managers. Cloud manages Regulatory Compliance Regulatory agencies stress the importance of the financial companies responsibilities for compliance with all applicable laws and regulations on a regular basis. As business critical applications also move to cloud with other data, financial services organisations understand the importance of regulatory compliance. Cloud services are primarily designed to comply with the numerous regulatory requirements. Key regulatory considerations regarding cloud adoption demand cybersecurity measures are incorporated too. All related tasks should be included in the contractual agreement between the organisation and the CSP, which can be customised according to meet the local regulatory compliance as well. Customer data policies and procedures are automated and updated regularly by cloud based tools. Third party or vendor management, such as outsourcing as a function to the CSP or vendor does not mean the institutions stop being responsible for compliance with applicable securities laws and regulations. They have to collaborate with various stakeholders to design and implement relevant measures. The frame work of the cloud enables banks and financial organisations to automate regulatory reports, with regulatory strategy and incident handling in place. With the cloud providing greater business resiliency, financial organisations can thereby be assured of business continuity. BFSI sector can adopt cloud technologies and cloud native domain driven **architecture** with containerisation, to effortlessly meet the ever changing regulatory demands and enhance security in addition to customer experience. Nevertheless, financial institutions have to ensure configuring and implementing a robust cyber security strategy for protecting customers data and key applications while adhering to regulatory compliance. When Sinem Günel, a researcher **on** Oprah life, published her first book, which includes a section with learnings from inspiring people, she borrowed Oprah quote, Doing the best at this moment puts you in the best place for the next moment. As the pandemic enters its third year, it has given a chance to the flexible workspace operators to do their best at this moment to put them in the best place in the next moment. While the majority of the companies have already started opening offices across the country in a staggered manner, others have opted for hybrid models. Businesses will now have to **look.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-23-TEST NO.-25607

It is the plea of the appellant that he is the owner of the premises and was in charge of managing & maintaining the hostel, which was being operated by a Non-Governmental Organization, named Sampoorna Development India. This hostel at the relevant time was used for underprivileged children by providing facilities for their accommodation, education and other needs. 3. 1 According to the appellant, because of certain personal disputes with one K. V. Abraham, the latter instituted six false cases against him, four of them resulted in his acquittal, while in the other two discharge applications are pending. According to the appellant, it was at the instance of the said Abraham that the officials conducted a raid in the said hostel arbitrarily without authorization and also without providing any prior notice, alleging that provisions of the Juvenile Justice (Care and Protection of Children) Act, 2015 ('JJ Act' for short) as applicable then, were not followed in running and managing the said hostel. 3. 2 it is the allegation of the appellant that the officials illegally conducted the raid on 03. 06. 2015 and sought to transfer the children accommodated in the said hostel to some other location purportedly on the ground that the hostel was being run without proper authorization from the competent authority under the JJ Act. 3. 3. It was further contended that a false allegation was made against the appellant that he, along with his party, had attacked and assaulted the officials while they were conducting the raid in connection with which an FIR came to be lodged against the appellant and his wife, which was Page 3 of 27 registered as FIR No. 290 of 2015 dated 03. 06. 2015 at the PS Cantt. District, Varanasi under Section 353 of the IPC. 3. 4. On the basis of the said FIR, the appellant was arrested on 08. 06. 2015. However, he was granted bail on the same day. Subsequently, on completion of the investigation, a charge-sheet was filed before the Court of Chief Judicial Magistrate, Varanasi in connection with the said FIR on 20. 06. **2015** alleging commission of offences under Sections 353 and 186 of the IPC. 3. 5. Pursuant to the filing of the charge sheet, the Chief Judicial Magistrate, Varanasi took cognizance and issued summons to the appellant vide order dated 11. 08. 2015, against which the appellant submitted an application for **recalling** the said order, which is pending before the Court of CJM, Varanasi. 3. 6. According to the appellant, a complaint alleging commission of an offence under Section 186 of the IPC would be maintainable only if it is preceded by a complaint filed by a public servant as mentioned under Section 195 (1) (a) of the CrPC before the court/Magistrate, but there was no such prior complaint filed by any public servant before the Magistrate. Further, though the FIR was filed under Section 353 of the IPC, there were no ingredients to make out a case under the said **section.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-23-TEST NO.-25610

It is also the case of the appellant that the authorities had maliciously invoked the penal provision of Section 353 of the IPC in the FIR merely to make out a cognizable offence against the appellant to enable the Magistrate to take cognizance, even though there was no case of any assault or use of criminal force by the appellant to deter any public servant from discharging his duty. Hence, taking cognizance of the said FIR by the CJM, Varanasi under Section 353 of the IPC was unwarranted and illegal. Page 4 of 27 3. 7 Accordingly, the appellant approached the Allahabad High Court invoking jurisdiction under Section 482 of the CrPC seeking quashing of the aforesaid proceedings, that is, Crime Case No. 290 of 2015 pending before the CJM, Varanasi and orders taking cognizance and issuing summons in that regard. 3. 8 The Allahabad High Court on perusal of the FIR No. 290/15 and the statement of witnesses recorded under Section 161 of the CrPC held that a prima facie case has been made out against the appellant for being summoned and for prosecution under the aforesaid Sections 353 and 186 of the IPC and declined his plea for quashing the aforesaid criminal case which was pending before the CJM, Varanasi. 3. 9 While dismissing the petition filed by the appellant, the Allahabad High Court referred to an earlier decision of the High Court in rejecting the application filed by the co-accused seeking quashing of the aforesaid proceedings under Section 482 of the CrPC which was affirmed by this Court on 13. 04. 2017 by dismissing the SLP in limine. In the present impugned order, the High Court observed that the allegations against the present appellant and co-accused are same as well as the evidence collected against them and since the plea of quashing the charge sheet and cognizance taken against the said co-accused had already been rejected on merits by the High Court, which was not disturbed by this Court, no interference was warranted for quashing the proceedings under Section 482 of the CrPC, filed by the **present** appellant and dismissed the petition. Accordingly, the appellant is before us. SUBMISSION OF THE APPELLANT 4. It is the specific plea of the appellant that cognizance in respect of an offence under Section 186 of the IPC can be taken by the court only Page 5 of 27 after **a** complaint is made in writing by the public servant to the court as provided under Section 195 (1) of the Cr. P. C. It has been submitted that in the present case no such written complaint was filed by any public official as also ascertained by him from the concerned authority through an application filed to the competent authority under the Right to Information Act, 2005, whereby he was informed that no written complaint was filed before the court by any public servant in connection with Case No. 9790 of 2015 (State Vs B. N. John and Anr.). 4. **1** Further

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-23-TEST NO.-25611

For invoking the provision of Section 353 of the IPC there must be a clear allegation of assault or criminal force by the accused for preventing the public servant from discharging his duty. However, a careful reading of the FIR would indicate that no such allegation was made against the appellant of using criminal force or assault and accordingly, even if the allegations made in the FIR are taken at their face value, it does not disclose the commission of any cognizable offence as contemplated under Section 353 of the IPC. 4. 2 Accordingly, it has been submitted that taking cognizance by the CJM, Varanasi, of the aforesaid case under the stated facts and circumstances is quite illegal and perverse in law, as such, the same ought to have been quashed by the Allahabad High Court. It was contended that the Allahabad High Court, however, had misdirected itself by observing that a prima facie case is made out on the basis of the contents of the FIR and the statement of the witnesses recorded under Section 161 CrPC. 4. 3 It has also been contended that the Allahabad High Court in the present case ought not to have taken into consideration the order passed in respect of the other co-accused, as the legal issues as highlighted in this appeal, were not considered by the Allahabad High Court while rejecting Page 6 of 27 the plea of the co-accused for quashing the complaint. As such, they said decision cannot be used against the present appellant. PLEA OF THE RESPONDENT 5. Per contra, it has been submitted on behalf of the State that the decision rendered by the Allahabad High Court is in consonance with the law and no grievance can be made as the High Court had applied the relevant law to the facts of the present case. Further, it has also been submitted that this Court must be very slow in interfering with a reasoned order passed by the High Court, and the impugned order cannot be said to be perverse, illegal, or without any jurisdiction. It was contended **that** merely because a different view could have been taken by the High Court, it does not render the decision of the High Court illegal, warranting interference from this Court, and the High Court passed the order after going through the records. ANALYSIS 6. We have heard learned counsel for **the** parties and perused the record. 7. As far as quashing of criminal cases is concerned, it is now more or less well settled as regards to the principles to be applied by the court. In this regard, one may refer to the decision of this Court in State of Haryana Vs. Ch. Bhajan Lal and Ors., 1992 Supp. (1) SCC 335 wherein this Court has summarized some of the principles under which FIR complaints criminal cases could be quashed in the following words: 102. In the backdrop of the interpretation of the various relevant provisions of the Code under **Chapter** XIV and.

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-23-TEST NO.-25612

Of the principles of law enunciated by this Court in a series of decisions relating to the exercise of the extraordinary power under Article 226 or the inherent powers under Section 482 of the Code which we have extracted and reproduced above, we give the following categories of cases by way of illustration wherein such power could be exercised either to prevent abuse of the process of any court or Page 7 of 27 otherwise to secure the ends of justice, though it may not be possible to lay down any precise, clearly defined and sufficiently channelised and inflexible guidelines or rigid formulae and to give an exhaustive list of myriad kinds of cases wherein such power should be exercised. (1) Where the allegations made in the first information report or the complaint, even if they are taken at their face value and accepted in their entirety do not prima facie constitute any offence or make out a case against the accused. (2) Where the allegations in the first information report and other materials, if any, accompanying the FIR do not disclose a cognizable offence, justifying an investigation by police officers under Section 156(1) of the Code except under an order of a Magistrate within the purview of Section 155(2) of the Code. (3) Where the uncontroverted allegations made in the FIR or complaint and the evidence collected in support of the same do not disclose the commission of any offence and make out a case against the accused. (4) Where, the allegations in the FIR do not constitute a cognizable offence but constitute only a non-cognizable offence, no investigation is permitted by a police officer without an order of a Magistrate as contemplated under Section 155(2) of the Code. (5) Where the allegations made in the FIR or complaint are so absurd and inherently improbable on the basis of which no prudent person can ever reach a just conclusion that there is sufficient ground for proceeding against the accused. (6) Where there is an express legal bar engrafted in any of the provisions of the Code or the **concerned** Act (under which a criminal proceeding is instituted) to the institution and continuance of the proceedings and/or where there is a specific provision in the Code or the concerned Act, providing efficacious redress for the grievance of the aggrieved party. (7) Where a criminal proceeding is manifestly attended with **mala** fide and/or where the proceeding is maliciously instituted with an ulterior motive for wreaking vengeance on the accused and with a view to spite him due to private and personal grudge. (Emphasis added) 8. Of the aforesaid criteria, clauses no. (1), (4) and (6) would be of relevance to us in this case. Page 8 of 27 In clause (1) it has been mentioned that where the allegations made in the first information report or the complaint, even if they are taken at their face value and accepted in their entirety do not prima facie constitute any offence or **make.**

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-23-TEST NO.-25613

This forms the business side of the role's demand. Workable AI use cases This involves the technical side of the role's demand. We have frequently seen business analysts fall short of the business acumen needed for the subject. This is very likely because it is impossible to know as much as a businessperson in the customer's organisation who has been doing the job for 20 years. AI and ML knowledge The engineer must be capable of designing and building prompts, agent workflows, data pipelines, and integrations with internal IT systems. This is true for both the traditional ML and large language models. Security posture, compliance, and reliability The engineer must be able to evaluate the solution's security posture and reliability. They must ensure it complies with the land's regulatory policies and procedures. Monitoring and fixing bugs The individual must keep monitoring the solution and fix bugs when encountered in the production environment. Quality metrics The engineer must identify quality metrics, retraining frequencies, and business KPIs. This will help determine the initiative's success or failure, though success need not be a binary metric. Feedback The role must incorporate field feedback and continually improve the solution over time. One could collect the feedback and implement the improvement manually. However, the best approach is to automate the feedback and improvement loop, allowing for minimal human oversight. The forward-deployed AI engineering role sounds like an all-in-one expectation in AI. While having the role on paper is one thing, ensuring an individual does justice to the role is another. It will be a combination of engineering, product, and consulting roles. It is software engineering with full-stack development expertise. It is knowledge of traditional ML, Generative AI, MLOps, and the golden bridge between technical teams and business stakeholders. TB Day progress made, but why does tuberculosis still persist? Shivani Pandey's journey has been unique. Starting out as a management professional, her creative soul sought something creative so she learnt photography, a childhood passion, leaving behind a lucrative corporate career. Writing and films followed soon where her focus has been on social issues. In a career **spanning** more than a decade, she has worked with the most renowned international NGO and her work mostly includes art, culture and public health. Currently, she works independently and has exhibited her artwork and screened her films both in India and the US. Shivani regularly participates in debates and discussions **on** different platforms, is called in to lecture by various media and journalism universities and colleges and has also been a jury member for prestigious film festivals. If one were to ask what is common to John Keats, Franz Kafka, D H Lawrence and George Orwell, those with even the slightest interest in English literature would know that they are all celebrated writers. However, there is another common thread binding them and that is the fact that they all died from tuberculosis. In the 18th and 19th centuries, tuberculosis was so widespread in Europe that it came to be known **as** the White Plague. In some cities, it accounted for around one in seven deaths, making it one of the most feared diseases of the time. Evidence of tuberculosis has also been found in Egyptian mummies dating back over 3,000 years, showing that the disease has accompanied human civilisation for millennia. Archae

acids, which can survive for thousands of years thereby allowing scientists to detect tuberculosis even in ancient populations. In fact in 19th-century European literature, tuberculosis was often romanticised as a disease of sensitivity and artistic genius, its slow and visible decline lending itself to tragic portrayals in novels and poetry. That was until 24th March 1882, when German physician Robert Koch identified Mycobacterium tuberculosis, proving that the disease was infectious rather than hereditary or mysterious. This discovery is why the world observes World Tuberculosis Day each year on 24th March. Yet, more than a century later, tuberculosis remains one of the world's deadliest infectious diseases, claiming over a million lives each year. According to the World Health Organisation, around 10. 6 million people fell ill with TB globally in 2022 23, with about 1. 3 million deaths annually. Despite being preventable and curable, tuberculosis continues to remain one of the world's leading infectious killers. The century-old Bacillus Calmette Guérin (BCG) vaccine continues to play an important role, particularly in protecting children from severe forms such as tuberculous meningitis and military TB. This is why it is administered at birth in many countries, including under India's Universal Immunization Programme. However, its protection against pulmonary TB, which is the most common and contagious form affecting adolescents and adults, remains limited. This gap is significant because pulmonary TB spreads through airborne droplets released when an infected person coughs, sneezes or speaks, allowing the infection to pass easily from one person to another. While childhood vaccination prevents the most severe outcomes, limited protection in adults means transmission continues in communities. India carries the largest share of the global TB burden, accounting for roughly 27-28% of cases. This makes India's progress critical not only nationally but to global TB control. At the same time, it is important to note that India has made measurable progress in recent years, with incidence declining by around 20-21% between 2015 and 2024 that is higher than the global average decline of about 10-12%. Expanded screening, wider use of rapid diagnostics and strengthened treatment under the National Tuberculosis Elimination **Programme** have helped bring more patients into care. Yet the scale of the challenge remains significant. Given that India is the world's most populous country and carries the largest share of the global burden, even steady progress may not be sufficient. And thus the pace of decline must accelerate if **elimination** goals are to be achieved. The persistence of tuberculosis, despite such progress, also points to challenges that go beyond medicine. The disease spreads easily in crowded settings, and many cases are still detected late. Undernutrition and poverty increase vulnerability, while long treatment durations make adherence difficult. While all along drug-resistant forms of TB are making treatment more complex. Completing treatment is therefore critical. Standard therapy for drug-sensitive TB lasts at least six months and can cure around 85-90% of patients if followed correctly. However, interruptions in treatment can lead to drug resistance, making the disease harder and longer to **treat.** Ensuring that patients complete the full course is therefore essential, not only for individual recovery but also for preventing the spread

In the last few years, thanks to jobs becoming global, the importance of English has increased manifold. It has over the years become an important medium of communication, both at the international and intra-national levels. The importance of spoken English is even more, because here are many cases. Where one knows his subject well, but fails to communicate it properly. The practice of spoken English, therefore, is quite essential. Learning English in a country where it is not a native language, opens a number of opportunities for the Individual. An individual can make strides in the management ladder if he or she can speak English fluently. If your English is poor even though with brilliant business ideas, you may still find yourself languishing at the bottom of the management ladder. Your productivity will drop over a period of time since you will find difficulty in expressing your brilliant ideas. Those who can speak good English will probably usurp your ideas and get the credit for all the hard work you did. Group discussion is one of the ways to test someone communicative skills generally before the final interview for a job. An English language trainer trains the candidates for group discussions. While training the candidates, the trainer aims at grooming the whole personality etc. He usually organizes number of mock interviews to make the candidates confident and to assess them as where they are lacking in order to fill the gap. Fear of speaking in front of groups is one of the greatest fears people have. Here, the role of a trainer is very crucial who trains the candidates in practices confidence, and how to concentrate on his or her message. The trainer begins with a strategy that includes understanding your purpose and role. Then he makes the candidate team how to structure his material into a meaningful message. English is a West Germanic language in the Indo-European language family, with its earliest forms spoken by the inhabitants of early medieval England. During the recess of Parliament, is a very special power. Therefore, Sir, it is an extraordinary power **which** has to be exercised with very great caution and care and only in an emergent situation. The First Amendment provides that Congress make no law respecting an establishment of religion or prohibiting its free exercise. Festivities are on and with festivity comes noise, which can be a nuisance to **all** sane and noetic people. The question is: Why do we like noise so much? People these days are nervous about being in solitude. They want noise, chatter, and meaningless conversation, which are so often banal, inane and vapid. That is why you often see people in airports and railway stations pulling out their mobiles and making meaningless conversations instead of reading a book or being in silence. In the inane act of living, a man afraid of mortality seeks company, inane conversations, and groupings. Man fears lest he should face the unavoidable truth that he came into this world **alone.** This is his singular journey. It on him to make or mar it. Often, we need silence and solitude to sort out our inner moorings and steer the ship of life along its true journey. It is a journey of courage and conviction, far from the machinations of the madding crowd, to listen to that inner voice that we have quelled in pursuit of fun. Everyone needs solitude to comprehend that he is the captain of the ship of life and the master of his destiny. Persian mystic Hakim Sanai says that every

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-24-TEST NO.-25616

Our inner voice does gel with shorish-e-kainaat, noise of the world. Our true self and inner rhythm militate against all that shambolic and vociferous. Nobody but the individual is responsible for the onward journey. For this individualistic sojourn, we need serene solitude. Door tak jaati hai aawaaz khamoshi mein Shor mein khud ko apni aawaaz sunai nahin deti the sound travels afar in solitude One cannot even listen to one voice in the noise. There is no need for fear or favour in a soulful, sole journey in solitude. It calls for solitary onward rowing. Sooner we take the first step, the better. The cosmic dance begins today, nay at this very moment. But petty details impede the grand view. God talks to us through nature and its opulence. He speaks to us through insinuations. Karta that Sharon se baat woh Ishare samajhne mein gayee umra saari He talked through subtleties Alas, I wasted my whole life to fathom them. Mignon McLaughlin aptly said, Here god from every tree His leafy fingers beckon me. Subtleties are god words; to understand them, we need to sharpen our senses. Kabir said, Cheenti ke payal baaje, so bhi sahab sunta hai God can hear the sound of an ant seemingly imperceptible movements. Concentrate on the silence and it ll become eloquent to you. Remember, solitude is beatitude, and where there a state of perfect serenity, divinity resides. At the same time, a state of perfect solitude evokes a deep sense of gratitude. English poet William Blake expressed it as praying in gratitude. Festive spirit requires serenity. Noise distorts and dilutes it. Divinity is not in the decibels; it in the harmony of celestial silence. The Habit of Reading: Studying is the main source of knowledge. Books are indeed never failing friends of man. For a mature mind, reading is the greatest source of pleasure and solace to distressed minds. The study of good books ennobles us and broadens our outlook. Therefore, the habit of reading should be cultivated. A student should never confine himself to his schoolbooks only. He should not miss **the** pleasure locked in the classics, poetry, drama, history, philosophy etc. We can derive benefit from other experiences with the help of books. The various sufferings, endurance and joy described in books enable us to have a closer look at human life. They also inspire us to face the hardships **of** life courageously. Nowadays there are innumerable books and time is scarce. So we should read only the best and the greatest among them. With the help of books we shall be able to make our thinking mature and our life more meaningful and worthwhile. A Visit to an Exhibition: Recently, an exhibition Building a New India was held in the capital. It was organized by the Ministry of Information and Broadcasting, Government of India. The exhibition was set up in the Triveni Kala Sangam. The chief exhibits were photographs, novels, some sculptures by Indian modern artists presenting Indian cultural **inheritance.** First of all, I visited the general section of the exhibition where different charts and photographs depicting India development in various fields were set. Most impressive photographs among these were those showing India nuclear development. The second section dealt with India magnificent historical background. I was fascinated by the pictures of Mohanjodaro excavation. Then I saw the most beautiful and colorful section of the exhibition i.e. the cultural section. It consisted of paintings, sculptures, photographs etc.

India In 2021 alone, there was a 63 jump in crimes against women and we re talking only about the registered crimes here, be it domestic violence, rape, assault, serial harassment etc. This upswing in crime and threats against women is a matter of national shame and a slew of measures are being taken to address this issue. Ensuring video surveillance through AI backed video analytics and facial recognition systems is one of the best ways to ensure women safety in every household, every city. It has become one of the key tools used for the safety and security framework by the law enforcement agencies and city councils as it offers real time monitoring, analysis of the situation and fast reaction to any potential crime. Let look at how these tools offer prompt and immediate support. Real time monitoring Video surveillance has advanced from analog to IP cameras and in the present day to video analytics using deep learning algorithms and artificial intelligence AI applications. These tools can monitor the movement of people and alert them immediately in case of any unusual activity. They can also monitor the general facial expressions of people and can latch on to distressed, harassed and terrified facial expressions and alert the required authorities immediately. Insightful dashboards The advanced AI backed video analytics tool has a full features notification panel equipped with a real time alert engine that can send signals across multiple platforms like desktop, mobile and more. It can analyze a scene, review long videos, glean out the important parts from it and make them into shorter videos of minutes or even seconds. It also can review, bookmark important subjects and summarize the findings into a report. This leads to prompt action against any kind of threat or crime. Visitor management at workspaces Workspaces are often quite unsafe for women, with many crimes of harassment being reported. The video analytics surveillance tool acts like a guard taking attendance. It recognizes various faces across different streams, both in real time and on an edge portal. It connects users at many touchpoints and can **be** integrated with all access control systems. This makes the entry and exit of people automated on the basis of facial recognition. It automatically identifies unauthorized entry at different places in real time and helps avert any untoward situation. At the same time, it ensures timely reporting of many workspace **incidents.** Works as authentic evidence in the court of law Video surveillance is a robust tool for detecting, defending and preventing crime. Moreover, it acts as an authentic and accurate piece of evidence in the court of law as it can depict the incident as it happened using people analytics, clothing analytics and scene analytics. It is also the most efficient tool for forensic investigations. Conclusion Many Indian cities are now becoming smart cities using technologically advanced solutions like VA FR video analysis and facial recognition. These effective devices are ideal for women safety as they not only detect and **alert.**

Injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural that your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, shoulders, etc. and stretch those parts of your body. More than seventy countries that iodize salt generally serve as the major source of iodine intake. One fourth of a teaspoon of iodized salts has about hundred micrograms of iodine. Note that the salt used in processed foods, which is the major source of salt for most Americans typically does not contain iodine. If salt used in a processed food contains iodine, it will be listed in the ingredients list of that food. Focus on decreasing the amount of salt consumed from processed foods and get your sodium from iodized salt. Seaweed, saltwater fish and seafood are natural sources of dietary iodine. Dairy products also supply iodine in the diet at varying levels. During lactation, the breast concentrates iodine in milk so breast milk tends be a good source of iodine as long as the iodine intake of a mother is adequate. Plants grown in iodine rich soil are also good sources. However, this is not a reliable source of iodine since there is no way of knowing whether produce purchased in grocery stores is grown in iodine rich soil or not. Iodized salt usually adds less than about three hundred micrograms iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit of daily iodine intake for adults set **at** 1,100 micrograms by the IOM it is unlikely to hit an excess amount when including a multivitamin and including natural sources of dietary iodine. The trend of eating less table salt, dairy and bread has some experts concerned that iodine deficiency could be on the rise again. Eating a **healthy,** balanced diet that includes iodine rich foods and iodized salt is key to good health. Using bulkheads, chutes, and vents strategically throughout the trailer also helps to ensure optimum airflow. In addition to this, it is important to understand the role of digitalisation in improving cold storage and supply chain facilities of perishable goods. Digitisation has the potential of being the ultimate game changer in the supply chain industry. This has been explained in the next part Embracing Technological Advancements and Digitisation Because of the increased demand for safe, contactless same day deliveries and the fierce rivalry in the **market.**

Crime but also use AI to analyze facial expressions and distress and prevent its occurrence. These tools are the way forward to ensure that women are supported and safe in public places like cinema halls, parking lots, railway and metro stations, schools, colleges, offices, bars etc. With the advancements in technology and innovations, several start ups promise quick delivery of groceries and other perishable goods. Even though it is an innovative idea, it is also crucial for different stakeholders in a supply chain to ensure that Products remain fresh when to delivered to a customer door step. Thanks to new age cold chain companies that offer sustainable solutions, including fuel free refrigeration, carrier and cartridges, integrated freezers, and asset monitoring systems, making fresh transportation of perishable goods feasible and hassle free, especially in the summer season. During this time, perishable food spoil faster and thus result in wastage. The food wastage challenge in India India, despite being the second largest producer of food items, witnesses food wastage worth Rs. 92000 crones each year due to the lack of cold chain facilities. This wastage is not just financial in nature but also results in environmental degradation. Unfortunately, 40 of the produced food never reaches the end consumers. To address this challenge, cold chain companies must consider two factors whilst transporting fresh food items Handling of Food Items This is a basic factor related to supply chain management but is often overlooked. Food items should be packaged and transported as per their durability and nature. The package and handling should also be as per standards. Even though this might increase the inventory carrying cost a bit, it would also ensure that the shelf life of food increases significantly. Some of the crucial aspects in this process are Creating different supply chains Some companies create rapid replenishment distribution channels for grab and go items that require frequent replenishing, such as pre packaged sandwiches and salad bowls. Another approach is to speed up delivery by using smaller refrigerated vehicles. Maintaining food safety Transportation equipment must be appropriately designed and produced. It also crucial **to** use proper temperature controls and keep food and non food items separate in the same load. Keeping perishables fresh Depending on the product, even minor variances for short periods might impact freshness. Cauliflower, for example, is easily compromised by even minor temperature changes. In contrast, cantaloupe is less vulnerable, **with** a temperature tolerance range of 25 degrees F. Apples keep their crispness and flavor for 240 days, but raspberries only last two to three days. Taking up the issues of produce distribution The natural decay of fruits and vegetables releases heat, making it even more challenging to maintain a consistent temperature. Meats with a longer shelf life The growth of bacteria and germs is influenced by both temperature and moisture. Compared to traditional methods, proper temperature and humidity levels can extend the shelf life of beef by 25 days. Choosing the proper trailer Freshness is maintained in properly insulated **containers.**

Out a case against the accused, then the FIR or the complaint can be quashed. As per clause (4), where the allegations in the FIR do not constitute a cognizable offence but constitute only a non-cognizable offence, no investigation is permitted by police officer without an order dated by the Magistrate as contemplated under Section 155 (2) of the CrPC, and in such a situation, the FIR can be quashed. Similarly, as provided under clause (6), if there is an express legal bar engrafted in any of the provisions of the CrPC or the concerned Act under which the criminal proceedings is instituted, such proceeding can be quashed. 9. Our criminal justice system, rooted in the rule of law, contemplates different approaches for dealing with serious and non-serious offences. When complaints pertaining to serious offences are filed, which are generally categorized as cognizable offences under the CrPC, the police, on receiving such information of the commission of a cognizable offence can immediately start the investigation as contemplated under Section 156 of the CrPC. On the other hand, when it relates to non-serious offences which are generally categorized as non-cognizable offences, the law is more circumspect in letting the full force of the criminal justice system operate. When it is related to non-cognizable offence there are certain safeguards put in place so that the invasive, intrusive, and coercive power of the police is not immediately brought into operation, as enabled under Section 156 of the CrPC? In such a situation any complaint alleging commission of non-serious offence(s) or non-cognizable offence(s) made Page 9 of 27 before the police, has to be vetted by a legally trained person in the presence of a Judicial Magistrate before the police can initiate the investigation. Thus, even if the police receive any such complaint relating to a non-cognizable offence, the police cannot start an investigation without there being a green signal from the Magistrate. Further, when such no cognizable offence(s) pertaining to officials who are obstructed from discharging their official duties, there is the additional safeguard before the Magistrate which permits the investigating authority **to** investigate. It must be preceded by a complaint filed by a public servant before the court/Magistrate. This is to ensure that only genuine complaints relating to non-serious offences or non-cognizable offences are entertained by the Magistrate. This is so for the reason that in a democracy, interactions of the **citizen** with the public servants is more frequent wherein there may be instances where the members of the public cause obstruction to public servants preventing them from discharging public duties properly. With these safeguards, the fine balance between the liberties of the citizens and the imperatives of the State endowed with coercive authority to maintain law and order is preserved. 10. Keeping the aforesaid principles and aspects in mind, we shall proceed to examine the issues and contentions of the parties before us. 11. Chapter XII of the CrPC deals with information given to the police and their powers to **investigate.**

Section 155 (2) of the CrPC provides that when information is given to an officer in charge of a police station of the commission within the limits of such station of a non-cognizable offence, he shall enter or cause to be entered the substance of the information in a book to be kept by such officer in such form as the State Government may prescribe in this behalf, and refer the informant to the Magistrate. Section 155(2) of the CrPC Page 10 of 27 further provides that no police officer shall investigate a non-cognizable case without the order of a Magistrate having power to try such a case or commit the case for trial. Relevant portions of Section 155 of the CrPC read as under: 155. Information as to non-cognizable cases and investigation of such cases. (1) When information is given to an officer in charge of a police station of the commission within the limits of such station of a non-cognizable offence, he shall enter or cause to be entered the substance of the information in a book to be kept by such officer in such form as the State Government may prescribe in this behalf, and refer the informant to the Magistrate. (2) No police officer shall investigate a non-cognizable case without the order of a Magistrate having power to try such case or commit the case Thus; there is a specific bar on the police to investigate any such non-cognizable offence, without the order of a Magistrate. 12. However, no such bar has been placed when it relates to a cognizable offence as provided under Sections 154 and 156 of the CrPC, under which, any officer in charge of a police station may, without the order of a Magistrate, investigate any cognizable case that a court having jurisdiction over the local area within the limits of such station would have power to inquire into or try under the provisions of Chapter XII, as reproduced herein below: 154. Information in cognizable cases. (1) Every information relating to the commission of a cognizable offence, if given orally to **an** officer in charge of a police station, shall be reduced to writing by him or under his direction, and be read over to the informant; and every such information, whether given in writing or reduced to writing as aforesaid, shall be signed by the person giving it, and the **substance** thereof shall be entered in a book to be kept by such officer in such form as the State Government may prescribe in this behalf: Page 11 of 27 Provided that if 156. Police officer's power to investigate cognizable cases. (1) Any officer in charge of a police station may, without the order of a Magistrate, investigate any cognizable case which a Court having jurisdiction over the local area within the limits of such station would have power to inquire into or try under the provisions of Chapter 13. While Section 155 of the CrPC deals with all non-cognizable **offences.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-24-TEST NO.-25624

Where the police cannot investigate without a prior order of the Magistrate, Section 195 of the CrPC provides additional conditions under which the Magistrates can take cognizance in respect of certain kinds of non-cognizable offences as mentioned in the said section, which includes Section 186 of the IPC with which we are directly concerned, only after a written complaint is filed by the concerned public servant to the court/Magistrate. Relevant portions of Section 195 of the CrPC read as follows: 195. Prosecution for contempt of lawful authority of public servants, for offences against public justice and for offences relating to documents given in evidence. (1) No Court shall take cognizance (a) (i) of any offence punishable under sections 172 to 188 (both inclusive) of the Indian Penal Code, (45 of 1860), or (ii) of any abetment of, or attempt to commit, such offence, or (iii) of any criminal conspiracy to commit such offence, except on the complaint in writing of the public servant concerned or of some other public servant to whom he is administratively subordinate 14. Since, the appellant has been charged for committing offences under Sections 186 and 353 of the IPC, it may be appropriate to reproduce the same. Page 12 of 27 Section 186 of the IPC reads as follows: 186. Obstructing public servants in discharge of public functions. Whoever voluntarily obstructs any public servant in the discharge of his public functions shall be punished with imprisonment of either description for a term which may extend to three months, or with fine which may extend to five hundred rupees, or with both. Section 353 of the IPC reads as follows: 353. Assault or criminal force to deter a public servant from discharge of his duty. Whoever assaults or uses criminal force to any person being a public servant in the execution of his duty as such public servant, or with intent to prevent or deter that person from discharging his duty as such public servant, or in consequence of anything done or attempted to be done by such person to the lawful discharge of his **duty** as such public servant, shall be punished with imprisonment of either description for a term which may extend to two years, or with fine, or with both. 15. A bare perusal of Section 195 (1) of the CrPC clearly indicates that there is a bar on the court to **take** cognizance of any offence punishable under Section 172 to 188 (both inclusive) of the IPC except on a complaint in writing made by the concerned public servant to the court. Therefore, if it is found as contended by the appellant that in respect of the offence under Section 186 of the IPC against him, no such complaint was filed by the concerned public servant as contemplated under Section 195 (1)(a) CrPC, the CJM could not have taken cognizance of the offence under Section 186 of the IPC. In this regard, the appellant has specifically pleaded to which there is **no.**

Rebuttal from the State that no such complaint was made in writing by a public servant as required under Section 195(1) of the CrPC relating to the commission of offence by the appellant under Section 186 of the IPC. Page 13 of 27 16. The State has, however, made a feeble attempt to show that there was indeed a complaint filed by the District Probation Officer to the City Magistrate, Varanasi, on 03. 06. 2015, alleging that the appellants and his party were creating obstructions to the officials in the process of sending the minor children residing in the institution run illegally by Sampoorn Development India to other approved institutions and requested the City Magistrate to take cognizance of the same and take legal action. The aforesaid complaint reads as follows: To, City magistrate Varanasi Sir, By your order dated June 3, 2015, letter no. 1346, Mr B. N. John, Ms Susan John and their people are creating obstruction in the process of sending the minor children residing in the non-legal institution run by the Sampoorna Development Trust to other Institutions legally. Please take cognizance of this and take further legal action. Sincerely Prabhat Ranjan 03/06/2013 District Probation Officer. Station Head Cantt/CO Cantt. S/O is creating obstruction in important work necessary action. 17. A careful examination of the aforesaid letter, however, would reveal the following crucial aspect. The said letter in the form of complaint is addressed to the City Magistrate and not to any Judicial Magistrate. As to what is a complaint is defined under Section 2 (d) of the CrPC which reads as follows: complaint means any allegation made orally or in writing to a Magistrate, with a view to his taking action under this Code that some person, whether known or unknown, has committed an offence, but does not include a police report. Thus, a complaint within the meaning and scope of the Criminal Procedure Code would mean such a complaint filed before a Judicial Magistrate and not an Executive Magistrate. 18. As regards the difference between a Judicial Magistrate and an Executive Magistrate, it has **been** clarified by this Court in Gulam Abbas v. State of U. P., (1982) 1 SCC 71 as follows: 24. Turning to the 1973 Code itself the scheme of separating Judicial Magistrates from Executive Magistrates with allocation of judicial functions to the former and the executive or administrative functions to **the** latter, as we shall presently indicate, has been implemented in the Code to a great extent. Section 6 provides that there shall be in every State four classes of criminal courts, namely, (i) Courts of Session, (ii) Judicial Magistrates of the First class and, in any metropolitan area, Metropolitan Magistrates;(iii) Judicial Magistrates of the Second Class; and (iv) Executive Magistrates; Sections 8 to 19 provide inter alia for declaration of metropolitan area, establishment of Courts of Session, Courts of Judicial Magistrates, Courts of Metropolitan Magistrates and appointments of Sessions Judges, Additional Sessions Judges, Assistant Sessions Judges, Chief Judicial Magistrates, **Judicial** Magistrates.

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-24-TEST NO.-25626

Ironically, on the very weekend that Congress was meeting for its chintan shivir in Udaipur, Manik Saha from a Congress background was sworn in as a BJP chief minister in Tripura. Saha is the fourth Congress associated person from the Northeast who is now a BJP CM. Today eight CMs across India are former Congresspersons. The bug of quitting Congress for better options has now bitten Hardik Patel in Gujarat, who only a few years ago was being hailed as the Congress face of the future. What makes so many Congress leaders successful outside Congress? Setting at liberty AG Perarivalan, a 51 year old life convict serving his 31st year in jail for his involvement in the assassination of a former Prime Minister, was never an easy verdict to pen. More so when successive state governments in Tamil Nadu batted for the release while central governments resisted it at every available judicial forum, and even made the state governors exhaust extraneous options to defeat the possibility. Perarivalan, along with two others, would have been executed in a TN jail on September 9, 2011, had Madras high court not stayed his execution just a week before the hanging. It is for this reason that the May 18 verdict of the Supreme Court ordering his release forthwith marks a seminal judicial moment. The top court had to balance the sovereign executive power of state governments to grant pardons, remissions or commute sentences, with the constitutional remit of a governor. On September 9, 2018, the TN cabinet recommended the premature release of Perarivalan and requested the state governor to invoke his power under Article 161 of the Constitution to approve it. The Constitution was crystal clear about the binding nature of the decision. However, the governor kept it pending for about two and a half years, and then made a reference to the President. SC decision faulted the TN governor interpretation of the Constitution and the statute on four main points. First, the law is well settled that the state cabinet advice is binding on the governor in exercising powers of remission **under** Article 161. Second, governor not exercising these powers or causing inexplicable delay in exercising them is subject to judicial review. Third, the governor reference of the cabinet recommendation later is without constitutional backing. Fourth, the reference to the President was incorrect as no express executive power is conferred on **GoI** by the Constitution or laws made by Parliament to supersede state government Article 161 powers in IPC 302 cases. Politically, it is a win win for all. AIADMK made the all important recommendation to the governor. DMK blunted every effort of the Union government to dilute state powers to recommend remissions and commutations. BJP had a say against terrorism in court and the governor did his best to delay the constitutional inevitability. The spotlight is now on the remaining six convicts. SC verdict, however, needs to be seen in a larger context. At a critical juncture in Centre state **ties,**

Digitisation of the fresh food supply chain is more critical than ever. Despite the significant obstacles associated with perishable product storage, shipment, and logistics, gaps in the fresh food supply chain can be bridged with advanced logistics technology. For instance, route optimisation can assist merchants in efficiently planning order dispatches and last mile deliveries. Likewise, real time visibility technologies can assist logistics managers in staying on top of the distribution and on ground operations. Brands can improve every fresh food supply chain element by deploying AI driven logistics solutions, from strategic sourcing through optimal storage, precise packaging, and shipment in the proper containers to timely delivery. Data loggers and are all essential for giving real time temperature and humidity data. If there is a temperature fluctuation, active monitoring to highlight that improved quality control could lead to more dynamic cold chain depending on the. It is aids in the identification of weak links in the chain and can result in structural modifications. It is also essential to ensure that handling and digitisation solutions are integrated with the supply chains by cold chain facilities for reducing food wastage and improving delivery times for perishable goods. The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance studies, proprioceptive neuromuscular facilitation or PNF type of stretching is **more** effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. **Performing** dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit of daily iodine intake for adults set dietary iodine. The trend of eating less table salt, dairy and bread has some experts concerned that iodine deficiency could be on the rise again. Eating a healthy, balanced diet that includes iodine rich foods and good **health.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-24-TEST NO.-25628

It has removed some ambiguity in the scope of a governor power. India neighbourhood first policy has been tested, including in Nepal. The two countries should have had the best relationship in South Asia, but have been unable to capitalise on their connections, caught in the crossroads of Nepalese internal political vicissitudes. High level visits nurture relations. After a 17 year hiatus in bilateral prime ministerial visits from India to Nepal, Prime Minister Narendra Modi visited Nepal four times in his first term. Amidst the commercial arrogance of Mumbai Worli, I learn a lesson in humility. In the basement of a soulless industrial estate, I discover heart. In a windowless vestibule, I see doors to walk out of, unaided. In this modest rehab centre, I find the slow making of miracles. For the past year, I ve been a regular here getting exercised, ultra sounded and electric shocked. But all self pity has slunk away. Instead I feel like an impostor with only an entitled knee, when all around me are such diverse cases of spinal injury. All unnerving Six foot plus X drags his slow, agonised way up and down the narrow passage, his resisting legs encased in sheaths, supported by a walker, his back held up by his therapist. Concentration leaves no room for any other expression, yet 20 something gives me a cheery smile as she hobbles with her trembling frame. She got hit by a wave while wake surfing. Altruism has left her with the same tremors; she had pushed her school friend out of the way of a reckless car. They are mostly so young, in shorts and sneakers. Their youth had spurred them to be daring. But maybe the same youth keeps them spirited, determined to reclaim the normalcy so cruelly snatched away. They chat and joke as they push through their drudging routines; throw balls as blithely as at a picnic. Only they and their therapist know what it takes. Ah, the therapists, also so young, so slight. Yet they propel guys twice their size. Summon muscle to bring to heel the **disobedient** ones of their patient. They get as much inspiration as instruction from the rehab team leaders, Garish, Washita and Fleur. Garish shares a video of the long journey of a 30 year old who had a successful heart transplant only to end up as a quadriplegic; I gasp at **the** last frame where he actually runs down the corridor. Btw, the rehab team also travels regularly with spine whiz Dr Shekhar Bhojraj deep into Gadchiroli Maoist jungle to repair and retrain mangled bodies seldom treated even for simple ailments. The theory of the string and the pearls in the Indian context argues that India geopolitical adversary China has used various tools to encircle India. The pearls are those pliant states which are under the firm control of Chinese influence, and the string is the line connecting all those pearls around India. The goal here is twofold: the pearls can **be.**

Converted to military bases if the situation demands. And second, more obvious, to have geopolitical leverage over India. In the past decade this theory gained more salience. Whether it was the China Pakistan Economic Corridor CPEC passing through Kashmir towards the Arabian Sea or Sri Lanka & infrastructure development projects with the Chinese support, all these indicated, as becoming increasingly clear with the recent developments, not mere economic collaboration, a larger plan. These states fail to pay Chinese debts, lose strategic autonomy and become subservient states. The recent developments in Sri Lanka and Pakistan display multiple trends with two major ones: the increasing Chinese influence is countered by local resistance. The targeting of Chinese workers in Pakistan indicates local resistance. The Corridor that passes through Balochistan has received opposition from local people. The recent suicide bombing in Karachi University campus shows this trend. China has apparently realized the challenges emanating from the local people. Though there are no signs that China will readjust its goals or annul the project, it is increasingly becoming clear that China will face violent resistance to its ambitions from local people and militant groups. Sri Lanka is in the news due its debt failure and massive protests throughout the country. The Rajapaksa brothers who were hailed as heroes some years ago have now fallen from grace. Some years ago, I was listening to a BBC interview of Gotabaya Rajapaksa who was then the defense secretary under the leadership of his brother, Mahindra. Gotabaya appeared genuine and he asserted well how Sri Lanka must protect territorial integrity and sovereignty, whatever the costs may be. It appeared that the post LTTE Sri Lanka appeared to have come of age. China entered the scene and cultivated Sri Lanka as a valued pearl. It developed Hambantota port and engaged in some other projects. The situation looked gaga in the beginning and Sri Lanka leadership appeared to cherish so much its newfound partner that it turned a cold shoulder towards its northern neighbor, India. Despite some of the bitter experiences of the past, it cannot be denied that both **countries** shared long historical and cultural relationships. Instead of learning from China policy in Africa, Sri Lankan leadership undervalued its relationship with India. Now the economy is in tatters, and with massive unrest, the heroes of the past have become villains. Mahindra Rajapaksa was replaced by Ranil Wickremesinghe. In an **address** to the nation, the new prime minister brought to the public the grim situation: At the moment, we only have petrol stocks for a single day. The next couple of months will be the most difficult ones of our lives. He further said that the country does not have enough money to import essential goods. In this volatile situation in the region, what are the options for India? Indian officials following prudence made it clear that it has no ambition to send troops to the neighbor. Instead of bringing the past rancor and ill will, it came forward to **extend.**

350th: "countries" **400th:** "address" **500th:** "extend."

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-24-TEST NO.-25630

Finding the balance between necessary economic development and conserving biodiversity is the defining challenge facing developing countries today. As these countries strive to improve their economies, industrial growth often clashes with the objective of preserving local ecosystems and biodiversity. Living Planet Index 2022 by WWF shows that the Asia Pacific region experienced a perpetual decline in biodiversity between 1970 and 2018. The average decline in monitored populations was pegged at 55. This is particularly concerning for the least developed countries in the region particularly those like Tuvalu that are bearing the brunt of climate change. Developing nations possess vast reserves of biodiversity that contribute to Earth ecological balance. These ecosystems, along with their inherent biodiversity, function as natural carbon sinks, offering organic solutions to climate change through what is known as nature-based solutions. Maintaining biodiversity is not merely an environmental concern but also a socio-economic one. The richness of biodiversity in developing countries is a significant source of food, medicine, and livelihood for local communities. Ecosystem services refer to the numerous and varied benefits that humans freely gain from the natural environment and properly functioning ecosystems. Ecosystem services can be classified into four main categories. The sole issue here is the girl well-being. As it is, messy lawmaking has not only criminalised sex between consenting teens and young adults but also could soon outlaw women from marrying before 21, out of sync with reality. She is thus a statutory rape survivor and the 23-year-old is a rapist. Instead of recognising the case delicate and fraught nature, the judge put off till June 15 the next hearing following a medical evaluation. Pushing off hearing by a full week is traumatising and only serves to affect chances of a safe abortion to which she has every right, regardless of age. The right to privacy says it is a woman right whether or not to carry a pregnancy to term. September last, SC specified all women, married or unmarried, have the right to safe abortion. In December 2022, Delhi HC allowed the abortion of a 33-week foetus saying mother choice is ultimate. **If** court believes she can be a mother, it should equally note her right to a safe abortion too. Stories possess a unique ability to intrigue and captivate human minds, leaving a lasting impact on them. When a story engages our emotions, it becomes memorable. It resonates within us long **after** we have heard or read it, and sometimes even stays forever. Ins that exactly what a brand wants? To stay relevant to its audience forever? In today fast-paced and ever-evolving world of marketing, grabbing the attention and deriving the loyalty of consumers has become the biggest challenge. With countless brands vying for the spotlight, businesses need to constantly be at their best game to stand out from the crowd. One powerful tool that has recently emerged as a revelation in marketing strategies to achieve it is storytelling. By crafting compelling brand narratives, businesses differentiate themselves from the raging competition. **The** power of storytelling lies in its ability to connect with individuals on a deeper emotional and cognitive level. When we engage with a story that elicits joy, excitement, sadness, or empathy, it triggers a response within us. These emotional experiences become linked to the story and, by ex

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-24-TEST NO.-25631

Social Sciences, Hyderabad. Recently, on March 8th, 2026, the Government of India initiated the Say No to Proxy Sarpanch Campaign. It immediately picked up the pace on digital platforms using symbolic hashtags like No Proxy Sarpanch and posting short videos, reels, and grassroots storytelling. This encouraged public identification of proxy practices and community-level social pressure against male interference. This leads us to revisit the institution of Sarpanch Pati Syndrome and how it has become a policy concern within Panchayati Raj Institutions PRIs . Even with the campaign picking up pace with greater public participation through the usage of digital media, if it is unable to urge the policymakers to implement and enhance robust training systems in the Capacity-Building and Training CBT programmes of PRIs, Proxy Syndrome is unlikely to be eradicated systematically. Absence of strong monitoring and training systems would render symbolic campaigns like this futile. Thereby, understanding the socio-cultural roots of this problem before combining it into a digitalized campaign is important. Based on the training processes enlisted in the National Capacity Building Framework introduced by the Ministry of Panchayati Raj in 2014, it aims to strengthen its training ambit using advanced technology and state of the art resources. Even though the NCBF document highlights its efficiency in touching various rural regions of the country and establishing robust training mechanisms, what needs more attention is the ability to measure the impact of such training on women. Based on the Unstarred Question No. 2550 raised by Shri Gaurav Gogoi on August 5th, 2025, regarding Reservation for Women in PRIs, Women's reservation is constitutionally mandated by the 73rd Amendment Act, 1992, requiring at least one-third 33. 3% of seats and chairperson positions to be reserved for women based on Article 243D. Over 20 states in India have increased this to 50% to enhance grassroots participation, as answered by Prof. S. P. Singh Baghel. Based on an article: Women's Political Participation and Changing Pattern of Leadership in Rural Areas of Uttar Pradesh by S. Waseem Ahmad, Nilofer, and Gazala Parveen, argues that women's role in political processes in grassroots governance has **observed** a paradigmatic shift in recent years as more women are entering the political arena and challenging traditional gender roles. Affirmative action policies such as reservations for women in local government bodies, increasing literacy rates, growing awareness of women's rights, and the influence of women's self-help groups are the notable **factors.** Thus, a basic question emerges for every reader: What are the core policy issues here that we need to address? The first major factor causing hindrance to participation of women in such programmes is the issue of Proxy Syndrome, otherwise known in local lingos as the Sarpanch-Pati Syndrome. In simpler terms, this refers to a practice where a woman, pertaining to a political position e. g. Sarpanch, is replaced by her husband or any male member of her household, who takes decisions on her behalf. Women still experience prejudice and stereotyping in the political arena despite laws and constitutional **obligations** supporting gender equality. This bias appears in PRIs when elected women representatives are reduced to symbolic positions and male family members or proxies make decisions in their place. This, henceforth, damages women's credib

Panchayati Raj Institute of Training PRIT , Lucknow, Uttar Pradesh, taking in 102 responses, out of which 66 respondents were women, notable data highlights are brought to light. The female trainees notably described the nature and duration of their training and also the number of times they have been trained and their additional expectations from the training. The most notable highlight from their responses was that even though the majority of them have been trained 2-3 times in various training sessions, the existence of gender biased norms in the workplace continues to be a major obstacle in their work. The field data highlights the persistence of gender biases even after improvement in training programs. On the other hand, when we look at the 36 male trainees, 10 out of them were a proxy of their mothers, sisters, wives, mother-in-law and so on. We should note that this is one data from a particular point of training period in the aforementioned institution, and also, the number of trainees trained versus the number of trainees to be trained emphasizes major policy concerns. This finding is just a portion from a much larger share of data which requires more thorough inspection into proxy syndrome. Therefore, it shows how the programmes still lack the proactive approach to engage larger participants from rural regions. The audit systems pertaining to institutional training frameworks is a major policy concern which demands stricter auditing protocols. The respective State government enables the training institute to prepare a training itinerary to train the trainees and set a target for such training. Since the NCBFs implementation in 2014, there has been an observable deficit of people trained in these programmes, with women being trained less as compared to their male counterparts. Hindrances like attendance of the trainees, checking into the credibility of the candidates attending the training session if they are the actual candidates meant to attend the training, exhaustive time duration of the training sessions constitute minor, yet important parts of such programmes. Therefore, only equipping robust audit systems is not sufficient. Accountability towards managing these audit systems is **also** important in ensuring greater participation and no oversight. The absence of the real candidates, particularly female, explains the operational effects of proxy practices. Even though the data on papers seem to qualify the generalised idea that CBTs across PRIs have improved, the ground reality gives an entirely different picture. **Upon** researching such constraints causing hindrances in the training, the major causative agents were reported to be time constraints, distance factors, resource constraints, understaffing, absence of robust attendance systems and vice versa. Even though present day Panchayat Training Institutes are well equipped with attendance systems like Biometric Authentications, digital illiteracy amongst trainees from rural regions still enables them to use ID Card and Notebook attendance systems which highlights systematic technological failures. Thus, more robust and efficient technological systems should be employed to address these institutional deficits and strengthen the backbone of PRIs. Mandatory verified attendance based on strict biometric authentications **and** regular audits of such attendances are required to be undertaken with great responsibility and efficiency so that greater participation of trainees can be acc

Of their audience, brands create an earnest association, fostering brand loyalty and influencing consumer behavior. How does storytelling help in building a brand? Storytelling as a potent marketing tool forges a bond with the audience. By immersing customers in a narrative that suits the brand, businesses tap into the core of their emotions. Through relatable characters, inspiring journeys, and heartwarming anecdotes, storytelling cultivates a relationship of trust and loyalty between the brand and the customers. These feelings of resonance go beyond mere facts and figures, allowing brands to stimulate connection on a deeper level. Our brains are wired to remember stories far more effectively than dry data or plain marketing messages. Storytelling leaves a memorable impact on consumers. A well-crafted brand narrative has the power to generate curiosity and linger in the minds of consumers, increasing brand recall with the least marketing efforts. When customers remember a brand story, they are more likely to engage with it and become advocates among their peers. This memorability gives brands a competitive edge in a crowded marketplace where making a mark is paramount. In today saturated market, finding a unique selling proposition is vital for success. By using storytelling as a platform, brands can effectively communicate their values, mission, and vision in a distinctive and memorable manner. By communicating their story creatively, brands can create a distinct identity that appeals to their target audience. In a world where consumers have numerous options, it is important for brands to build a look and feel around their name that extraordinary and attracts more eyeballs than others in the league. How to craft a compelling brand narrative? Crafting a compelling brand narrative requires defining the brand unique aspects, journey, values, and mission. This process involves determining the key messages that need to be conveyed to evoke the desired emotions in the audience. Developing a story structure that aligns with the brand personality and is relatable to the target audience is essential for creating a cohesive and memorable brand story. For instance, right from its visual identity to its messaging, Nike brand story positions it as **a** brand that values perseverance and derives its roots from the pursuit of excellence. Targeting athletes and an audience that highly involved in sports, Nike inspires people to push beyond their limits. Characters play a vital role in bringing the brand story to life. It is important to create relatable **and** memorable characters that the audience can connect with. Whether it a founder, a customer, or an employee, these characters should embody the brand values and drive the narrative forward. When we hear Tesla, even before the cars, were reminded of Leon Musk. Such is the association of his personality to the brand that the two can be separated. From disruptive innovation to revolutionary methods of operations, Musk existence remains in sync with everything Tesla stands for as a brand. People trust in Elon Musk journey translates into their loyalty towards Tesla despite its failures. Visuals and multimedia elements enhance **the** storytelling efforts by adding a visual dimension to the brand narrative. Right from the brand color scheme to its social media accounts, every visual element speaks a thousand words about it and adds volumes to the brand story. When we speak of a strong and unique visual identity

Design, Disney visual identity plays a vital role in captivating hearts and minds, creating a sense of wonder that has made Disney an enduring symbol of storytelling and childhood joy. Consistency and authenticity across all marketing channels are key to maintaining the integrity of the brand narrative. Consumers easily detect inauthentic storytelling and detach themselves from a brand that tries to be what it is. By staying true to the brand values and being transparent, the brand can build trust and credibility with its audience. Any difference or distortion in the brand story can bring a substantial loss in brand value. With its iconic red and white color scheme and the unmistakable Spenserian script logo, Coca-Cola branding has remained consistent and instantly recognizable, enhancing its place as a beloved symbol of refreshment and shared enjoyment for over a century. In a time when social media is widely used to express user experiences, encouraging user-generated content enriches the brand narrative. Inviting customers to share their feedback and become advocates for the brand, adds authenticity to the brand. By making the audience feel valued through sharing their content, it also consolidates the bond between the brand and them. Embracing and celebrating customer stories is a powerful asset held by Gore to strengthen its narrative. These global giants are a testament to the fact that only the brands with a strong narrative have stood the test of time. Their stories built the necessary trust and loyalty in their customers and led them toward the unmatched success that they have achieved. With the prime focus on social media in today times, using storytelling as a tool has become even more viable and rewarding. After all, with a range of equally superior products in the market, what essentially sells these days is the story attached to them The southwest monsoon swept over Kerala yesterday as RBI announced its monetary policy resolution in Mumbai. The monsoon eight days behind schedule. To put it in a spatial context, by now in a normal year it would have crossed Goa on the west coast. RBI assessment of **inflation** is influenced by the southwest monsoon. Its decision to keep its policy rate, repo, constant at 6. 5 was widely expected. What was more interesting was the central bank assessment of the inflation trajectory for the rest of the year. India retail inflation cooled off over the last two **months.** It was 4. 7 in April and 5. 7 in March, partly on account of lower food prices. However, among food items, the price trend has been uniform. Milk is dealing with supply challenges and RBI highlighted it. Also, cereal has been inflating in double digits for a while. This is where the monsoon comes into play as rice is the most important cereal by output. GOI data showed that in 2022-23, paddy output was a record 135. 5 million tons. However, preliminary acreage data for this year was worrisome. On June 2, paddy acreage was 2. 17 lakh **hectares,** a decline of 26. 5 in relation to the previous year. The delay in the onset of the monsoon is bound to have influenced the low acreage. In this backdrop, it pertinent that GOI accepted the recommendation of the commission for agricultural costs and prices to enhance paddy MSP for the current khaki season by 7 to Rest 2,183 quintal. It too early to gauge the impact of the monsoon on agricultural prices. What certain is that the regional pattern of rainfall and its volume in July will have a sign

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-25-TEST NO.-25637

Therefore, there is an imperative need to educate and change the mindset of both the shunned and the shunner. Enhanced financial status does help in reduction of social biases to a limited extent but can never eradicate them in totality. The phenomenon of social bias is two way traffic where both the less privileged and the more privileged are involved. Therefore, efforts will be required to educate both sections of the overall society. In a nation with a population of over 1,400 million, this will be a humungous task requiring massive resources and drive to educate the citizens in all parts of the country. The reality is that as a nation we have only paid lip service to address this important issue in last 75 years without making any noticeable dent. Our schools, colleges and other social initiatives have failed to raise awareness in this regard and so caste prejudices continue to flourish. From the aforesaid, it becomes clear that only economic upliftment is not the answer to overcoming the caste biases. Further, such economic upliftment is the fundamental right of every citizen of the nation and cannot be restricted to only those who are socially backwards. Poverty is rampant among large sections of those who belong to the upper castes too and they cannot be ignored. In the overall interests of the nation, terms like SC ST OBC, Dalit etc. must be deleted from the nation vocabulary. Every citizen should have only one classification of being an Indian. In the spirit of the constitution, every Indian who is financially weak or socially unequal needs to be uplifted irrespective of his religion, caste or social status. This must be the basis for all policies and initiatives that are designed and executed for upliftment of the less privileged. Our constitution talks of equality of all citizens by right. Are we not going against this fundamental right if the government deliberately classifies some as SC ST OBC or Dalit through a caste census? Such tagging will ensure that they always remain unequal even in future. No amount of economic up gradation **will** prevent that unless the issue of social inequality is also addressed. The latter needs a generational change in the mindset of the nation as a whole including the government and its leadership. Is it lack of understanding or sheer callousness towards the less fortunate that no one is talking **of** addressing the more important issue of social inequality? The oldest, taken almost a hundred years ago, showed Bunny grandparents, and her father, uncle, and aunt as small children. The later pictures were of Bunny, me, the two of us together, and with friends, taken in the Calcutta of yesteryear. They brought back a tide of memories and an accompanying litany of wonderment. Look at how thin everyone is! And see how much hair the men have on their heads! Are those bell bottoms that everyone wearing? And pupates with their karats? Whatever happened to pupates? And to bell bottoms? **Conjured** by the benign narcotic of nostalgia, the long ago was reborn for us, picture perfect. It struck me that real photographs, images on paper, make for so much better mementos, better keepsakes of the past, than do the impromptu snapshots of today taken by cell phones disguised as cameras, or cameras disguised as cell phones. The taking of a photograph in those far off days was something of a special occasion, commemorating a birthday, or other celebration. People put on their special clothes, and their special faces, fo

The taking of a photograph was a ceremonial rite, so different from the cell phone sulfide, or groupie, taken in the split second of a digital heartbeat, and often deleted just as swiftly. Photographs were a very different proposition. They involved the purchase of equipment specifically designed to take pictures and nothing else, like telephony, texting, or Goggling. Next, a roll of film had to be got. When the elaborately posed photographs had been taken, the film had to be sent for developing in a studio, from where the prints would emerge, to be pored over excitedly, the best ones selected to be securely pasted into albums, and some framed and put up on walls. Photographs, real photographs, are tangible representations of us. And, with age, they begin to fade, the paper wrinkles and creases, as though in bitter sweet affinity with us. Besides, there is the all-important issue of implementation. For, Ayushman has faced a host of problems that need ironing out if it is to meet its goal of reducing out of pocket health expenditure. A CAG report last year highlighted that the scheme is riddled with corruption. Empanelled hospitals in many states were found flouting prescribed standards, impacting the quality of their services. Most important, there are enough empanelled entities to meet the needs of our population. For instance, a state like Bihar has just 1.8 empanelled hospitals per lakh population. Private hospitals in many states have curtailed services given payment delays on account of insufficient fund allocations by goats. Also, the scheme does cover outpatient care, though a study has found that 40 80% of health expenditure in India is on OPD services. Hopefully, income neutral eligibility will put more pressure on authorities to address these lacunae, ensuring that service delivery lives up to the objective of the scheme. Looking at the presidential campaign in the US around (their) burning issues like high cost of child care and that of the elderly population, lowering the costs of renting and owning a home, etc., makes one wonder: is this one of the wealthiest countries in the **world** or actually a developing one? Likewise, look at another of those rich nations, UK, where such a hue and cry is being made around the proposed cut in the winter fuel payments (a subsidy provided to pensioners to meet their heating bills). Indeed, in the wake of Russia Ukraine **war,** several European governments provided some kind of financial support to their citizen to tide over the rising energy bills. But on the other side of the divide, do we ever look askance at our governments for any support in fulfilling our worldly deeds? On the contrary, whether it is child care or their education, healthcare, or elderly care; we dutifully discharge those as our own responsibilities. High cost of renting and owning homes? We don flinch in spending a better part of our monthly or lifelong savings on that? Did we ask any political party to even give such **things** a placeholder in their manifestoes or whatever fancy names they carry nowadays? I do recall that prehistoric period when rising prices of onions, turn dal, and petrol etc., used to be a hot topic of discussions; enough to topple governments. But not anymore. We treat skyrocketing prices at par with our ambitions to conquer the space. Something to take pride in. And pensioners? A tribe exemplified by those superannuating from government services only because rest in any case don draw any pension. An in

Economic support. While China has a larger ambition to make Sri Lanka a client state, India made it clear that it has no such ambition. By displaying friendship in action, India must bring to Sri Lanka the realization that it has no ulterior strategy except to help a friend in need. The Indian Ministry of External Affairs stated, In keeping with our Neighbourhood First policy, India has extended this year alone support worth over USD 3.5 billion to the people of Sri Lanka for helping them overcome their current difficulties. In addition, the people of India have provided assistance for mitigating the shortages of essential items such as food and medicine. According to the reports, India recently sent 12 shipments and over 400,000 tons of fuel to the island nation. Pakistan will be a difficult nut to crack. As both the countries are engaged in some protracted conflicts, it may be difficult to convince the neighbor India friendly intentions. While it may take some time for China to realize the challenging nature of the CPEC project, Pakistan should realize the challenges and address them. It may be able to quell local unrest by resorting to force and killing local leaders, but the roots of discontent will continue to fester. Instead of spending energy and resources, it will be useful to cultivate peace with its people and India, its neighbor. Towards this goal, resolution of protracted conflicts like Kashmir, through which CPEC passes, will be important. Pakistan must realize that a peaceful resolution of these conflicts is possible only with the cooperation of India. 2020 21 was a watershed year. And what a year it was! While the Chinese virus Covid 19 forced almost everyone to stay at home, the need for IT infrastructure & IT solutions leapfrogged. The cumulative development in the past 2 years is roughly estimated to be equal to a decade of progress. Collaborative workflow software tools & apps took the lead on the solutions side. While the internet & amp server infrastructure matched the pace admirably. So what can we expect in the coming years? **Deep** Integration Deep integration between Apps & ERP, Finance, CRM & other existing systems are aiding the business users to a superior experience. As days go by, the readiness to deep integration is growing exponentially. This promises to reduce costs & turnaround times. Ultimately all enterprise software will be integrated **with** sundry apps & software for that seamless user experience. Data Lake Data is the new oil. With deep integration between apps & ERP, Finance, CRM et cetera, there will be an opportunity to pipeline all that data & storing it in a single reservoir in real time. To achieve this, every organization will have to create its own Data Lake and update the lake as and when required. The tools for creating Data Lakes & pipelining the organization data into them will become faster & cheaper. And with so much data it becomes easy to spin up real time **reporting.**

Dashboards for control & decision making. Pacification If data is the new oil, then amplification is the new electrification! Business processes will continue to be amplified at breakneck speed. Even today, new business apps developed by small, agile teams are hitting the market every minute! From Mutual Success Planning to Customer Success Management to Task Management to newer ways of collaboration we can expect to see an app built for every aspect of business. Analytics as a Service Artificial Intelligence & Machine Learning AI/ML is now spreading more rapidly. While there are some issues with the lack of transparency in algorithms & the backend data, the proliferation of AI/ML is unstoppable. The future should logically see many new and important developments in that regard: Analytics algorithms curves will be hosted in platforms which are linked to the right data lake. This will permit reuse of algorithms with newer as well as historical data for extended periods of time until calibration is recommended. The role of Analytics Ombudsman. The recent case of a chronic American patient has highlighted the need for this role. This patient was prescribed opiates for their chronic condition but was immediately labeled as a substance abuser by the newly activated analytics algorithm which was automatically applied to their medical records by the hospital network, causing great anguish & unnecessary suffering. The role of the Analytics Ombudsman will be created to provide an official platform to redress real world grievances caused due to faulty algorithms / incorrect data. From CRM to CDP Customer Data Platform The last 3 decades were the age of CRM or Customer Relationship Management software. It made it possible to store detailed information about customers, their purchases, grievances, service calls made, customer feedback, et cetera. The future is CDP or Customer Data Platform software which will allow businesses to store detailed customer behavior across multiple formats in the digital & offline world. Data will be pulled from online sources as well as CRMs & secondary sales systems. And the CDP will recommend new ways to retarget customers based on this data both online **&** offline. Colors are a crucial element for home interiors as they give meaning to a space. They create a visual experience for the user and add a story to the otherwise meaningless and plain area. They are a powerful element of design that can influence an individual moods and **impact** their psychology and behavior. Home is where one experiences the highest level of comfort and freedom that impacts one daily lifestyle, therefore, it must make one feel welcoming and comfortable. When one plans their dream home, there are innumerable ways to give the space a warm and comforting vibe. But, the magic created by colors through larger elements like walls and floors is incomparable. The selection of color palette is driven by personal choices and multiple factors like the overall interior theme, age factor and more. With a wide range of hues available for décor and design materials, one **can.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-25-TEST NO.-25643

Smartly mix match varying palettes to create the desired look and give a vibrant feeling to the space. One can plan the perfect color palette by getting it curated through a professional interior designer or do it independently based on one own understanding of the shades. A well curated palette helps achieve the desired look, feel, and mood of the home. To choose the right color palette for home interiors, one needs to analyze the space in terms of form and functionality. One must consider the size of their room, the amount of natural light received, and the functionality of the rooms i.e., what it is being used for as colors stimulate and affect one emotional, mental, and behavioral features. For giving an all time refreshing look plain white, pearl white or creamy shades are great. They offer an uncluttered and calming look to the room. While yellow fits the bill for a warm, sunny and happy feeling. It sparks inspiration and, hence, is perfect to be applied on a feature wall. If one is fond of intense shades, then highly saturated colors like red, orange or brown are the go to colors that give the space a feeling of passion, confidence, desire, and motivates one for an action. For giving the space an elegant and rich appeal, tints like burgundy, violets, greys, royal blue or green are a curated set. Black is a rarely selected color for home interiors, as it expresses mystery, sophistication, and ambition. These shades represent richness & elegance and are encouraged for homes that are spacious. These shades must be added through elements like furniture, furnishings and decors in a compact home. Warm earthy colors like orange, yellow, green, blue, brown and grey, makes one feel close to nature and reflects connection which is the basic foundation for a family. These colors are suggested for the feature wall. A striking and contrasting color on one wall distinguishes the room from the rest of the house and gives an instant highlight to the space. Dark shades are advisable for the entire home or a room **as** they make the space appear small and loud, but they can work wonders when used in the appropriate proportion. Alternatively, one can go for selected neutral shades like beige, ivory or taupe, mauve to play safe and give the space minimal theme. Warm shades are attentive colors that are **energetic** and evoke happiness and optimism. One can play with colors to make the space look more vibrant by adding a range of nuances through furnishings, upholstery, furniture, and décor accessories. Pastel shades are trending now and can create a soothing ambience for a home while giving it a welcoming feeling. Shades like mint green, baby blue, light grey, peach, pink, and others that are high on luminance are known to give a cool, minimal, and uncluttered look to the space. Such shades are a perfect fit for displaying art, paintings and showpieces in various rooms of a house a **home.**

Rural areas and 79 of residents of urban areas use private healthcare services. A large part of these hospitals are small nursing homes, with fewer than 20 beds and exist in remote locations. For many families this may be the only access to healthcare families they may have. India achievements in reduction of maternal mortality in recent years can be considered a success story as maternal mortality has declined over the years from 556 per 1000 live births in 1990 to 174 in 2015 at a rate of 15.8 annually. Since 2005, India has experienced an impressive 77 reduction in maternal mortality compared to the global average of 43. In fact, this achievement has not gone unnoticed and India has been commended for this remarkable feat of drastically reducing maternal mortality by the WHO. On one hand, states such as Kerala experience relatively low levels of maternal mortality which are comparable with developed countries, whereas a few of the states like Madhya Pradesh, Bihar and Uttar Pradesh suffer high maternal mortality comparable with some of the poorest countries of the world. But with the outgrowing challenges, how does the medical profession, and the system at large, regulate itself in India? There are different regulatory measures adopted in healthcare. For professionals and the overall system, the primary approaches include command and control, use of incentives, and self regulation. In the command and control approach, the licensing and registration of the providers, as well as the facilities, are given by governments. They employ practice permissions and monitor them through a regulatory body to filter the providers who meet minimum standards and ensure even distribution of the facilities across the country. To curb the limitations of this approach, the use of incentives was introduced, wherein financial and non financial benefits are used to motivate compliance, discourage harmful practices, and influence quality delivery. The incentives include the provision of lands at subsidized rates, free services to the poor, higher insurance package rates for hospitals accredited by NABH or NQAS, etc. However, this technique has turned ineffective as at most times, either the conditions **are** not met or there is a lack of monitoring systems for the provisions. Derived from successful regulatory measures for establishments and professionals, self regulation came into the picture, which is by far the most sustainable, and effective strategy to regulate the quality and monitoring of health care in the **private** sector. The issue of self regulation is largely ignored until an incidence of gross negligence or unfair pricing of health services is reported in the national media. In 2014 as the health ministry was examining issues of corruption in healthcare, there emerged reports about a joint committee formed by members of the IMA and Association of Hospital Providers of India AHPI developing a code of conduct for hospitals health Network, 2014. As neither the IMA nor MCI have any control over hospitals, this code was to be an attempt to self regulate and improve quality of care in hospitals **by.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-25-TEST NO.-25645

Interior with the right mix and balance of colors helps in achieving the desired look and feel of a home. Colors are responsive to light and hence it is important to understand the amount of light a room receives naturally as well as artificially for making the colors work the way you want. Warm shades can work perfectly for a home that receives abundant natural light while the same shade will make a room look dull and gloomy in the absence of enough light. While finalizing the color palette, take into consideration all the home design elements where colors are concerned. This helps in coordinating the color scheme for rooms. The varying nuances can be demonstrated through elements like flooring, furniture, furnishings, upholstery, decors, accessories, hardware, and so on. An uncoordinated color scheme for the walls, flooring, decors etc., gives an unplanned and confusing look to a space. Colors choices are personal to a homeowner and present his or her personality. Thus, while deciding on the color palette, it is imperative to consider personal choices as well as the complete home interior elements. Covid 19 taught us that a robust private healthcare system is the backbone of the country economy. Upon witnessing the plight of overworked medical staff, patient flooding hospitals, and scarcity of medical amenities, the true status of the health sector capacity and resilience began to surface. It was evident that quality private healthcare saves lives, makes India self sufficient, and contributes to its happiness index. As it only when one healthy that they re able to commit to their responsibilities and improve quality of life it clear that people and their healthcare are at the core to strengthen a developed, competent, and flourishing nation. But there are also some specific challenges knocking at the doorstep of the sector. Due to variations in the quality of health services across states, the health outcomes are inconsistent. For instance, contrary to Tamil Nadu and Kerala which have predefined social welfare health systems in place, states such as Uttar Pradesh, Rajasthan, Bihar, and Madhya Pradesh fall behind in offering basic **health** services public and private. With differences in healthcare access in dense urban and remote rural settlements, there is also a lack of accompanying emphasis on the quality and monitoring of clinical establishments. Many polyclinics operate without quality certifications and accreditation status as well. And if this was enough, we **observe** inefficiencies of the public health system including differences in actual versus the reported treatment and diagnostic facilities, unrequired medical interventions, over medication, and the monitoring entities functioning on improper regulatory mechanisms. India has a total of 43,486 private hospitals with 1.18 million beds. Total private infrastructure accounts for 62 of all of India health infrastructure and provides 87 of all ambulatory health services 1 with 70 of the total health workforce, 80 of physicians, and most obstetricians working in the private sector. Over 70 of healthcare services in India are provided by the private sector. About 72 of residents **of.**

Efforts have helped bring down death rates from traditional pollution. But a salient point is that though the death rate due to traditional pollution in India is now less than half that in 2000, the burning of biomass remains the single largest cause of air pollution deaths in the country. In a significant and welcome verdict today, the Supreme Court ordered the release of AG Perarivalan, one of the convicts in the Rajiv Gandhi assassination case. The remission of his life sentence among others had been sought by the state of Tamil Nadu in 2016, then in 2018, and again in 2021. The bench of Justices L Nageswara Rao and BR Gavai limited itself to the reference of the 2018 decision of the Tamil Nadu cabinet made by the Governor to the President. The key takeaway of the verdict is that a state government has the authority to advise the Governor on remission pleas and he need not wait for the President response to take a decision on these. What further follows is that there should not be inordinate delays at Governors end in deciding such matters. Perarivalan case is particularly poignant not only because he has spent 31 years behind bars for the crime of buying two nine volt batteries for LTTE when he was 19 years old but also because in 2017 former CBI officer Thiagarajan revealed to SC that the agency had omitted to record in his confession the part where Perarivalan had said he had absolutely no idea for what purpose the above batteries would be used. The Supreme Court invoked Article 142 of the Constitution, which provides it special and extraordinary power to do complete justice, to set Perarivalan free, paving the way for other convicts to also reach freedom. But it should now be by way of the Governor office. That would be the swifter, humane and just route. Samarth Mathur of Masha art had four grueling days at the India Design 2022 Fair, meeting clients and creating his own statistics for marketing and sales last week. Mathur is known to have clients **that** hand pick anything from blue chip art to masterpieces and emerging artists in the contemporary art firmament. My favorite works in the ID 2022 Fair were two canvasses that spoke of the testimony of time and tide. Cathedral of conversations there was the Indian Master Neural Gownsman the Violin **Player** a work that straddled the past and present and brought joy and contemplation to any viewer who glimpsed it. The landscape of images and narratives in which Go swami images live is more about the innate condition that allows light to progressively appear and scatter into the essence of the people terrain he paints. In fact, these journeys on his canvases are the transitional spaces in which the artist is able to redefine the modernist paradigm according to which painting consists of autonomy and the picture is a place where support and language explore only their own limits and **possibilities.**

To carry out their elected duties in an efficient manner, including the ability to comprehend financial management, policy creation, and governance procedure. A critical angle affecting women's participation in Panchayat politics demands urgent attention. The normalization of such subjugation by the male members of their community has led women in rural regions to not participate in such programmes as well as in the meeting proceedings of the Panchayats. Strong monitoring systems and incentives promote sincere participation among all stakeholders are essential for mitigating proxying difficulties. The results of the independent research emphasized the significance of policy interventions targeted at advancing inclusion and gender equality in Panchayati Raj training initiatives. Gender sensitive curriculum development, focused outreach programmes, and female participation incentives are a few notable strategies that can assist close the gender gap in governance training and promote more inclusive and functional governance structures within PRIs. Therefore, addressing the socio-political aspects linked to such loopholes of CBT systems demand significant attention. A classic case where the aforementioned Syndrome in Panchayats is efficiently addressed is about the State of Kerala. It has provided 50% reservation for women in PRIs and truly the representation has transformed into actual authority. Kudumbashree Network serves as the social capital backbone of the state's women's self-help network integrated with local governance. This network has transformed women from individual political actors to a collective political force. Regular training conducted by Kerala Institute of Local Administration has initiated a robust training curriculum ranging from a wide range of topics like Budgeting, Planning, Governance Procedures, Scheme Implementation, Legal Awareness and vice versa. What makes Kerala the state which has outperformed other states is its well-designed capability cum confidence model, which involves fusion of informal institutions with formal institutions, leading to more acceptance of women as leaders in political processes. Even after such efficient mechanisms, proxy syndrome still exists, yet, Kerala has set an example when it comes to strengthening grassroots level governance based on Capability and Efficient Mechanisms. However, significant efforts to strengthen women's autonomy as regulated by the government should not be ignored while addressing Proxy Syndrome. In **addressing** such challenges, initiatives like Swashakti, Swayamsiddha, and Swadhar have sought to empower women economically and politically. These programmes aim to enhance women's skills, provide support for entrepreneurship, and foster greater participation in decision-making processes. To strive towards eradication of this Sarpanch Pati Syndrome, the government should focus more on **robust** training mechanisms aiming for more participation of women in such programmes, and more inclusive policies aimed at increasing political participation of women in grassroots governance. Reservation alone is insufficient, and building of institutional capacity should be the prime focus of the government in strengthening the PRIs. Alignment of social norms with legal norms, promotion of participatory governance, implementation of robust legal mechanisms to prohibit and punish proxy syndrome is the critical need of the hour. From a policy perspective, implementing a strong gender

after all, has its uses. It sharpens perspectives; and sometimes, if you're lucky, it restores curiosity. Sunday afternoons, in a certain version of India, still carry the faint echo of hooves. Not the hurried, honking chaos of our usual lives but a slower, more deliberate rhythm. Leather on grass, mallet meeting ball; conversation that pauses mid sentence because something elegant just happened in the distance. Polo, like many good things, refuses to shout. It does not trend. It does not explain itself. It simply unfolds, with the quiet confidence of something that has never needed validation from a dashboard. And yet, even such afternoons are no longer entirely immune to the administrative imagination. Somewhere in Delhi, the Jaipur Polo Ground, that improbable stretch of colonial memory and ceremonial leisure, has been asked to vacate. Not dramatically, not even controversially, just a notice. A quiet reminder that history, in modern India, is often a tenant on a short lease. Horses still run with that combination of grace and muscle that makes human ambition look slightly overdesigned. But the ground beneath it all feels less permanent, as though even tradition now comes with a renewal clause. And into this setting walks the Bengali bhadralok. Not literally, of course. The bhadralok does not 'walk into' things. He arrives, observes, adjusts his glasses, and takes a considered position slightly to the side. Close enough to be involved, yet distant enough to retain perspective. Polo is not his natural habitat. He is, by instinct and training, a creature of conversation, of argument, of long-meandering addas that begin with literature and end, several cups of tea later, in civilisational critique. The idea of chasing a ball on horseback, at speed, while others do the same with competitive urgency, appears to him mildly excessive. And yet, he watches; because if you look at polo not as sport, but as structure, it begins to feel oddly familiar. A game of position, of timing, who arrives where and when, advantage that appears natural but is often inherited. The bhadralok understands this language instinctively. He has seen it play **out** in universities, in bureaucracies, in drawing rooms where power speaks softly but carries impeccable pronunciation. So he watches the game the way he reads a novel. Not for the action, but for the subtext. There is, after all, a quiet choreography to it. White trousers that will not remain **white.** Sunglasses that suggest intent more than necessity. The peculiar social ritual where everyone appears both intensely involved and faintly detached, as though life itself were something to be participated in, but not entirely believed. You are watching, but also being watched. You are present, but also performing. This, the bhadralok recognises. He has been performing since Presidency College, long before it became a LinkedIn skill. And yet, beneath the observation, beneath the irony that comes so easily to him, there is also a small, unarticulated sadness. Not abruptly. Not violently. But through process notes and policy decisions and the **steady,** reasonable logic of repurposing. A ground becomes a file. A file becomes a decision. A decision becomes inevitable. By evening, the emails will return. The algorithms will resume their quiet surveillance. The group chats will demand acknowledgement in that tone of urgent triviality we have all come to accept as normal. And somewhere, another notice will be drafted. Another

With an intention to resemble altered realities. Go swami, who has been meditating since 18 years of age, immerses his works into an aura of extreme osmosis, where figurative images, objects and abstractions cohabit, in which the everyday and the fantastic blend together. In a cathedral of conversations, the autobiographical experience of the artist communicates with art history, while the feminine and masculine, the animate and inanimate intermingle through a prismatic lens of multiple indices. Tamil Nadu chief minister MK Stalin does hug just anyone. But then, AG Perarivalan is not just anyone. Hours after the Supreme Court ordered his release on Wednesday morning, the 50 year old who spent 31 years in prison after being convicted in the Rajiv Gandhi assassination case, travelled 200km to meet Stalin. The handshake, almost naturally, gave way to a hug. Stalin called him brother. Perarivalan mother Arputhammal, who waged a three decade battle to get her son back, looked on with moist eyes. For the family, it was an emotional closure. For Stalin, it was a political statement. India indirect tax architecture received a massive jolt yesterday when a three judge Supreme Court verdict overturned the commonly understood remit of a critical constitutional body GST Council. In the five years since GST has been rolled out, the GST Council chaired by the Union finance minister and having representatives of all states, has been the decision making body on all key matters such as tax rates. Decisions of the Council are put to vote and seen to be binding on both Go and states. SC verdict now says the Council decision is merely recommendatory. It a tectonic shift, unsettling India indirect tax architecture. To regard them as binding edicts would disrupt fiscal federalism, said the judgment of GST Council decisions. In practice, it the other way around. To now regard the GST Council decisions as just recommendatory in nature will undermine the current fiscal order which was painstakingly created across governments. For economic agents, including firms and individuals, it introduces a level of uncertainty which is bound to undermine confidence. This, in turn, **will** act as a drag on economic activity. This is why SC judgment is such an unwelcome intervention. The origin of this verdict goes back to a decision handed by a division bench of the Gujarat high court in January 2020. Companies that import coal for domestic industries challenged a **tax** levied by Go under two statutory laws that are a part of the GST architecture. Gujarat HC ruled against Go, which subsequently brought the matter to the apex court. In the apex court, Go did categorically state that GST Council decisions are binding on both legislature and the executive. This argument was rejected by the apex court, thereby overturning the well established hierarchy of decision making in GST. The situation is now untenable. If the GST Council decisions are not binding it opens the door to states cherry picking. That will defeat the whole purpose of transitioning to GST **that.**

That would be beneficial for larger public health good. Etch platforms have redefined education by making learning more student centric and engaging. With the introduction of learning applications, video lessons, virtual labs, and peer to peer discussion portals, students cannot just take ownership of their learning but also build on their critical thinking and problem solving skills. This contributes to a boost in their academic performance and their overall development through the inculcation of lifelong skills. Students have welcomed tech enabled learning methods with open arms to get more information outside of their classrooms, thanks to the multidimensional benefits. This has further cemented the importance of online learning mechanisms to help students gain the most out of their educational journey and minimize future learning disruptions. This is corroborated by industry numbers which state that the Etch sector, valued at US$750 million in 2020, is set to reach US$4 billion by 2025. As online learning continues to become entrenched in mainstream education, here a look at how Etch is leading to a more interactive and interesting learning experience. A collaborative student journey in any industry, a big role of tech is to open communication channels and simplify collaboration to make processes cohesive. As such, teacher and parent involvement is maximized with Etch helming a student learning journey. Technology allows parents and teachers to be more connected and make changes to the student learning trajectory as per their needs and challenges. Specifically for teachers, Etch facilitates teaching in several exciting modes such as audio, visual and even virtual reality platforms. New age end tech platforms allow teachers to offer engaging, tech enabled classes from anywhere. This eventually leads to more interest even in the most complex subjects and better learning outcomes. Prioritizing the student centricity is the key to student success this is a mantra that Etch has proven to be 100 accurate. The education system must prioritize students their needs, their challenges, their interests and put them all together to set a curriculum and learning methodology that sparks curiosity instead of burdening them with rote learning. Etch platforms have made **such** a smooth learning journey possible by reiterating that one size does not fit all when it comes to learning. So, they have introduced quizzes, participative classes, and a customizable curriculum, all backed by continuous internet access and a knowledgeable instructor. At the end of the day, students can set **their** own learning pace, go back to a concept if they need to, or even reach out to their teachers easily to clear concepts. This is further augmented through technologies like data analytics and artificial intelligence that enable online learning platforms to carry out predictive reporting, so teachers can make informed decisions about students learning trajectories by mapping current and future performance. Essentially, this ensures that there is no student left behind. With Etch, students learn at a pace they are comfortable with and through a method they enjoy the most. It all fun and games All work and no **play.**

350th: "such" **400th: "their"** **500th: "play."**

Is an obsolete concept in the world of learning. Today, gasification is unlocking new, fun ways of acquiring and retaining information for students. More than conceptual clarity, gasification motivates students and polishes important life skills like critical thinking and problem solving, as students get through levels of the game by solving problems and earning badges, points, or rewards. Furthermore, application based learning ensures that learning is not limited to the classroom or even at home. They can make their learning journey their own, taking lessons anytime and anywhere. Knowledge showers from the Cloud The Cloud is perhaps the most commonly used technology in Etch as it allows teachers and students to store and access vast repositories of always synced learning content. With flexible storage and ease of use, the Cloud enables collaborative learning, live lectures, projects, and tests where students can learn from their teachers as well as each other. Processes like doubt solving, test correction, sharing learning resources, etc., become seamless, cost effective and time effective with the Cloud. Moreover, Cloud based learning platforms are often fortified with complementary tools like data analysis through which teachers can visualize future performance and utilize adaptive learning methods if required to improve outcomes. Government Impetus bolstering Etch in India With every stakeholder of the education ecosystem, including school teachers, private educators, universities and students, becoming proponents of Etch, it is no surprise that the government, too, is playing its part in making sure that Etch is here to stay. For instance, through the NEP, the government is pushing for equitable access to the highest quality education for all learners regardless of social or economic background. It is also looking at building a robust digital learning infrastructure with the development of platforms for online teaching, virtual labs, and digital repositories. Apart from this, the NEP is also emphasizing teacher education to make sure students get the highest quality learning experience while teachers build their careers through continuous learning in today tech led era. To reap the benefits of Etch as a country, we must bridge the digital divide and ensure the democratization **of** online learning content. To this end, the government every initiative is allowing competitive exam aspirants to prepare using world class resources in their own language. The comprehensive application covers the entire exam syllabus using quick videos, mock tests, and video lectures, giving students the best of Etch to crack **banking,** railways, SSC, defense and similar exams. These are just two of the many initiatives that the government is taking to ensure the proliferation of Etch in India. With the concerted efforts of the industry and the government, we can make sure that interactive online learning reaches and benefits each and every student in the country. An update of The Lancet Commission on pollution and health analysis from 2015 finds that despite efforts against air pollution, India still had the world largest estimated number of deaths related to it in 2019. The toll from modern pollution has increased even while **policy.**

My Favourite Teacher a teacher is called builder of the nation. The profession of teaching needs men and women with qualities of head and heart. There are many teachers in our school and a large number of teachers among them are highly qualified. I have great respect for all of them. Yet I have a special liking for Miss Y. Miss Y is a woman of great principles. She is jewel among all the teachers. Almost all the students respect her. She teaches us English. She is quite at home in this subject. She takes keen interest in teaching students. Simple living and high thinking is her motto. She is a woman of sweet temper and is always ready to help in difficulties. She treats us like her own brothers and sisters. She is an ideal teacher. It is these qualities of head and heart that have endeared Miss Y to the students and teachers alike. She is an ideal teacher in real sense of the word. She is the real model to emulate. May she live as long as there is sweet fragrance in the flowers? When My Teacher Scolded Me Scolding is something common in student life. Being a naughty boy, I am always scolded by my parents. But one day I was severely scolded by my English teacher. She infect teaches well. But that day, I could not resist the temptation that an adventure of Nancy Drew offered. While she was teaching, I was completely engrossed in reading that book. Nancy Drew was caught in the trap laid by some smugglers and it was then when I felt a light tap on my bent head. The teacher had caught me red handed. She scolded me then and there and insulted me in front of the whole class. I was embarrassed. My cheeks burned being guilty conscious. When the class was over, I went to the teacher to apologize. When she saw that I had realized my mistake, she cooled down and then told me in a very kind manner how disheartening it was when she found **any** student not paying attention. I was genuinely sorry and promised to myself never to commit such a mistake again The Saddest Day of My Life Days are not of equal value in one life. Some bring happiness while others bring sadness. Sadness and happiness both are equally important to **man** life, since they are the two sides of a coin. As we cannot forget the happiest day, we are unable to forget the saddest day of our life too. The saddest day of my life was the Diwali Day. Diwali is considered to be a happy festival and till last Diwali, it was my favourite festival. On last Diwali, my sister, my brother and I were busy lighting the fireworks. I was holding a fuljhari in my hand and unfortunately my younger brother, who was standing just beside me, had a cracker in his hand. This cracker caught fire **and** a very loud explosion was heard which shook my sister and me. After that, we all could think of nothing else than blood stained cotton, bandage, Dettol etc. My cousin took my brother to the doctor where he got 14 stitches in his forefinger and thumb. But at home, everybody kept cursing and blaming me for the mishap. That night, I could not sleep and I cried a lot. For next few days, I bore the burden of this blame for being responsible for this unfortunate incident. I felt deeply guilty conscious which I was able to overcome after a long time. Life Is Action, Not Contemplation Life offers many opportunities to us to succeed and see it closely. But action is required for it. Goethe, a German philosopher rightly remarked that Life is action, not contemplation. Even Charles Darvin proved that this life is a continuous str

Sitting on a chair, brooding, man would never have been able to reach the moon. But man thought, imagined and strove. Consequently we reached the hitherto unknown heights. Banwarilal is a simple soul who believes whatever he is told. The village boys are aware of this and exploit his simplicity for a few laughs. One day, Banwarilal is on his way to the market with his son to sell their donkey. He comes across some village boys out to have fun. Seeing the father and son duo walking with the donkey, they first suggest that let the son ride on the donkey and save the effort. The son is put on the donkey back. The boys then ridicule the boy for riding while the father walks. The father and son switch places. The father rides while the son walks. The boys then taunt the father for making the poor son walk and advise the duo to ride the donkey together. Thinking it a good idea they comply. The poor donkey collapses from exhaustion. The boys then express their disgust at the duo for ill-treating the donkey and advice that they take the donkey to an animal doctor. The duo again follows the advice. On the way, they come across barking stray dogs. In the confusion that ensues, the donkey falls into the flowing river. The donkey is lost forever. Banwarilal loses the donkey because he follows what he is suggested without thinking for himself. Moral He who listens to everybody will only become a laughing stock. One hot day, a thirsty crow flew all over the fields looking for water. For a long time, he could not find any. He felt very weak, almost lost all hope. Suddenly, he saw a water jug below the tree. He flew straight down to see if there was any water inside. Yes, he could see some water inside the jug the crow tried to push his head into the jug. Sadly, he found that the neck of the jug was too narrow. Then he tried to push the jug to tilt for **the** water to flow out, but the jug was too heavy. The crow thought hard for a while. Then, looking around it, he saw some pebbles. He suddenly had a good idea. He started picking up the pebbles one by one, dropping each into the jug. As more and more **pebbles** filled the jug, the water level kept rising. Soon it was high enough for the crow to drink. His plan had worked Moral Think and work hard, you may find solution to any problem French Revolution at the beginning of the eighteenth century, and France was a monarchy ruled by an autocratic king. The French society was divided into three Estates, or classes. The First Estate consisted of the clergy. The Second Estate consisted of the nobility. The Third Estate consisted of the peasants and the bourgeoisie, which included professionals and the wealthy merchants. The First and Second Estates **enjoyed** many privileges, and paid almost no taxes. Wealth was concentrated in their hands. The Third Estate had no privileges. This Estate bore the burden of taxation. The peasants had to perform unpaid compulsory services. Tax default was punished with imprisonment in the state prison called the Bastille, which became a symbol of oppression. Inspired by the democratic ideas of French philosophers like Rousseau, Voltaire and Montesquieu, the bourgeoisie demanded political rights and government by the consent of the people. Estates-General France had an assembly called the Estates-General, meant to represent all the three Estates. The Estates-General, however, was never summoned between 1614 and 1789. Benazir Bhutto Benazir was assassinated on December 27, 2007 in Rawalp

Aimed to create a common market in India by dismantling fiscal barriers between states. States voluntarily subsumed their unilateral powers over indirect taxation to usher in GST. For sure, there have been disagreements within the GST Council but the binding nature of its decisions have never been in question. This verdict is clearly one of judicial overreach and intrudes into the domain of the legislature. Go should file a review petition right away. With at least 959 Ukrainian defenders of the Azovstal steel works plant surrendering to Russian forces in Mariupol, Moscow now has effective control of the battered Ukrainian city. Mariupol fall makes it the biggest city to be captured by Russian forces in the ongoing war and gives Moscow total control over the Azov sea coast. It also enables a strategic land bridge from Russian controlled Crimea in southern Ukraine to the separatist Donbas region in the east. But this has come at a huge price for Moscow. The stubborn Ukrainian resistance in Mariupol for 82 days bogged down a huge amount of Russian military resources. In short, Russia military plans have gone horribly wrong. Ukraine continues to be militarily replenished by the US and EU. Hitherto neutral Finland and Sweden have applied to join Nato. And Russia stands increasingly isolated in the comity of nations. Yet, Vladimir Putin can be seen to be losing face and hence has pushed on with his military operations. But the fall of Mariupol potentially gives him the face saver he desperately needs. With Mariupol Putin should have enough to justify his Ukraine gambit and call off wider hostilities. True, Ukrainians will continue to claim Mariupol. But this would be akin to Kyiv claims over Crimea and Donbas since 2014. Besides, it in Moscow self interest to pause now. After all, it clear that the US has shifted its goalpost from defending Ukraine to definitively weakening Russia. Plus, there is still some daylight between EU and US over Russia. But if Russia continues with the war, EU and US positions will coalesce. Halting the war in Ukraine will also provide succor **to** the international community reeling from rising energy prices, disrupted trade and growing food shortages. India, which has been forced to walk a diplomatic tightrope on the war, will certainly breathe a sigh of relief if hostilities cease. It a long shot, but Moscow should play smart and cut its **losses** now. he WHO estimates of excess deaths linked with Covid in India have been controversial. Atul Kotwal, executive director, National Health Systems Resource Centre, explains to Sushmi Dey why Go disagrees with these estimates for 2020 and 2021 What your assessment of WHO estimates about excess mortality linked to the pandemic in India With a robust Civil Registration System CRS established and governed by a statutory legal framework, such statistical modeling based on assumptions and software driven exercises by armchair epidemiologists was not needed for India. Modeling strategies are being used for estimation of excess mortality depending on the **availability.**

The US has articulated its Indo-Pacific strategy in recent summits and meetings. These include the Quad Summit, the G-7 Summit, the IPEF meeting, and the US Secretary of Defense speech at the Shangri-La Dialogue. They all reflect the current US strategy, which is focused on achieving the objectives of the Free and Open Indo-Pacific (FOIP) through strengthening deterrence to keep in check the violation of international law and norms. However, the US is not preparing for a war as China accuses. Its important dimensions merit attention. At the hurriedly convened Quad Summit in Hiroshima, the US joined others to lay emphasis on the importance of adherence to international law, particularly as reflected in the United Nations Convention on the Law of the Sea (UNCLOS), and the maintenance of freedom of navigation and over flight. It also expressed concern, at the militarisation of disputed features, the dangerous use of coastguard and maritime militia vessels, and efforts to disrupt other countries offshore resource exploitation activities. The US expressed concern over the developments in the East China and South China Seas and emphasised the importance of adherence to international law, and the maintenance of freedom of navigation and over flight. At the G-7 Summit, the US, along with others, sharply condemned China expansionism and coercive measures in the East China Sea (ECS) and South China Sea (SCS). The G-7 Leaders Communique stated that they are determined to work together and with others for a free and open Indo-Pacific and oppose any unilateral attempts to change the status quo by force or coercion. At this Summit, two important decisions were taken, which the US strongly supported. The G-7 formed the Coordination Platform on Economic Coercion to increase its collective assessment, preparedness, deterrence, and response to economic coercion, and further promote cooperation with partners beyond the G7. Besides, it was decided to reduce the dependence on supply chains dominated by China. The US-led Indo-Pacific Economic Forum (IPEF) took follow up steps. On the 27th May, 2023, the partners decided to strengthen the supply chains to avoid overdependence on any country. The objective of the **agreement** is to increase the resilience, efficiency, productivity, sustainability, transparency, diversification, security, fairness, and inclusivity of their supply chains through both collaborative activities and individual actions taken by each IPEF partner. They also agreed to create an IPEF Supply Chain Council to oversee the development of sector-specific action plans designed **to** build resilience and competitiveness in critical sectors. In addition, there was an agreement to create an IPEF Supply Chain Crisis Response Network. This can serve as an emergency communications channel when one or more partners face an acute supply chain crisis. The US declared several new technical and capacity building programmers to support the members in achieving the IPEF objectives. These included organising training camps on the issues related to supply chain monitoring and operations; sharing best practices in incident response planning to help industries affected by natural disasters and cyber incidents recover faster; digital shipping pilot projects, including **one** with the Singapore Port; expansion of the U.S. Customs Trade Partnership Against Terrorism (CTPAT) programmed in the Indo-Pacific; an IPEF-STEM Exchange Program; and two-way trade missions with IPE

Of data on All Cause Mortality ACM before and during the pandemic. For countries with no reporting of ACM, it is plausible to use a statistical model to predict the Covid excess mortality. In India, ACM is recorded by CRS that accurately captures death registration data, yet WHO has conveniently labeled India the country with the most complex subnational scenario. As a young boy in Calcutta I went to two schools. The first was La Martini ere where I was taught a lot of things, most of which I vet long forgotten. The second school was the Oxford Lending Library, an adjunct to the Oxford Book and Stationery shop on Park Street. I was taken to the library by my elder sister, Vase, when I was seven and made a member, which entitled me to borrow a different book every day for the payment of Rest 5 per month, a goodly sum then but which, in hindsight, was money well spent. For unlike what I learnt at my formal school and which I soon forgot, what I learnt from my informal school was something which has remained with me all my life, the delight of reading. Like all things delightful the taste of ice cream on a hot day, the scent of a flower, the blueness of sky reading remains a joy both spontaneous and enduring. And as I grew, my reading grew along with me. It grew from Enid Bytom and Billy Bunter to Agatha Christie and the Westerns of Zane Grey and Louis L Amour, from Alexander Dumas to Conan Doyle and Herman Melville. I discovered a curious elasticity about the appetite for reading. The more it was fed, the greater it grew. Spurred by this seemingly insatiable greed for the printed word I devoured books with the zest of a verbal glutton, finding new flavors which further whet my desire for the magical recipes conjured by the simple ingredients of paper and ink. Sometime before I reached my teens the Oxford Lending Library shut its doors for good. But by then it had ingrained in me **a** lifelong addiction for the stolen feast of another words. I don know if, apart from in clubs and cultural centers, lending libraries exist anymore. There are none in Gurgaon where I live. Perhaps like the reading of books in general they vet been displaced by television and the other **allurements** of digital technology. But I m glad that when I was a child a lending library taught me the best thing about reading even when you returned what you had read you got to keep it on the many volume shelves of the mind. That the real meaning of book value. All that is righteous is right, but all that is right may not be righteous. To give an example in the legal parlance, living by law is right, but living by moral law is righteousness. Nay is a Sanskrit word that means right or justice. Etymologically, the word **means.**

Stressed that they share the vision of an open, inclusive, and rules-based regional architecture. He stressed that the shared belief meant transparency, openness, accountability, commitment to freedom of the seas, skies, and space as well as insistence on resolution of disputes peacefully. Quoting Japanese PM, he underscored that the US vision is also based on the rule of law, not might. He stressed that the US seeks a region free of aggression and bullying, a world that respects territorial integrity and political independence, and a world in which all countries-large and small-are free to thrive and to lawfully pursue their interests, free from coercion and intimidation. He pointed out that the Indo-Pacific is at the heart of American grand strategy. Outlining the US strategy for enhancing deterrence, he said that currently more than 3,00,000 military personnel are stationed in the region. The US budget for fiscal year 2023 is the largest investment in the region, which includes $6.1 billion for the US Pacific Deterrence Initiative, aimed at strengthening multilateral information-sharing and supporting training and experimentation with our partners. He indicated that the US is working hard to develop new capabilities that will allow us to deter aggression even more surely, including stealth aircraft, unmanned platforms, and long-range precision fires. He revealed that the US is on the cusp of delivering prototypes for high-energy lasers that can counter missiles. On the security alliances of the US, he stated that they are the source of stability and not meant to start a conflict. In this context, he mentioned the US treaty allies Australia, Japan, the Philippines, South Korea, and Thailand. On AUKUS, he said that the alliance will not be limited to nuclear submarines but will include a range of emerging tech areas that can bolster our deterrence, from AI to hypersonic to enhance deterrence. In a response to a question, on the role of AUKUS, Austin stated that it is significant for the peace and stability of the region. He pointed out that the US was working with its allies and partners and is not asking them to choose between **the** two sides. The US is only trying to enhance the capabilities of its partners so that they may not become victims of coercion. On India, he remarked that its growing military capability and technological prowess can be a stabilising force in the region. The US defense cooperation with Singapore, **Indonesia,** and Vietnam is being taken to the next level, indicating that developing the defense capabilities of its partners is central to its deterrence strategy. Austin came down heavily on the People Republic of China (PRC) for its increasing coercive and aggressive approach to its territorial claims. In the ECS, the PRC expanding fishing fleet is sparking tensions with its neighbors. In the SCS, the PRC is using outposts on man-made islands with advanced weaponry to advance its illegal maritime claims in the nine-dash line. The US supports the implementation of the PCA Ruling of 2016. While condemning the PRC **aggressive** activities, Austin averred that the US does not seek confrontation or conflict or a new Cold War, an Asian NATO, or a region split into hostile blocs. He lamented over the PRC attitude towards not agreeing to resolve the disputes through negotiations. The PRC decision to ignore the proposal for talks with the US, reflects its approach towards the region based on coercion and bullying. The USA polic

things in life are still allowed to be unnecessary and therefore, perfect. P. S. The bhadralok, for the record, is not entirely fictional. Writing about him in the third person is a small act of self respect and a large act of self delusion. TOI News - March 24, 2026 Poetry humanises us in violent times Universities around the world are shutting down humanities programmes, saying they don't lead directly to jobs. But education is not just about employment; it's about shaping thoughtful, ethical, and empathetic human beings. Poetry, philosophy, and music humanise us. Poetry makes us think, and what makes us think guides us. A poem is a hazardous attempt at self-understanding: It's the deepest part of autobiography. Poetry is an ordinary language raised to the nth power. In any language, poetry is the most distilled form of that language. What's stated in a poetic way always strikes deeper and more effectively. Poets are critics and analysts of life. They're also the chroniclers of lives and times. They're the mouthpieces of the emotions that we all have but are unable to express. Poets do for us what we cannot do for ourselves. There's an English adage: A poet is a prophet. Poetry is indeed prophethood Shayari PayambariAst: Jami. The way poetry motivates and inspires all of us, nothing else does. Read Rudyard Kipling's immortal poem, If. Recalling the poem makes us feel intrinsically good: If you can fill the unforgiving minute, With sixty seconds' worth of distance run, Yours is the Earth and everything that's in it, And what is more you'll be a Man, my son! Or read Patricia A Fleming's poem, What life should be. The immortal lines of the great Persian poet Rudaki, which he uttered in ancient Persian, how can I hate anyone when everyone is my extension? When John Donne says, Any man's death diminishes me because I'm involved in mankind. We think with the poet and empathise with all, our differences dissolve. Poetry makes us empathetic and humane. In times of raging global wars, these lines assume much greater significance, and we **must** ask ourselves how we can hate anyone when all are our extensions and brethren? war cannot be averted at all/You'd better fight with yourself. This fight is metaphorical. Poetry is a revelation. It enables satori that dawns as an awakening. It is a pursuit of excellence and enlightenment. Poetry **is** not an ivory-tower production house; it's a manifesto of ground realities. Urdu and Persian poet Nashtar 'Nishapuri' said, Main rahoon na rahoon, no matter whether I live or not. Someday, somewhere, my poetry will be read. Poetry is a balm for weary souls. In turbulent times, poets have a far greater role to play in assuaging humanity's frayed nerves and providing a definite direction for misguided humans. TOI News - March 25, 2026 Counting for community, caring for continuity Do you know that the Government of India runs a scheme that supports families and couples to promote childbirth and **help** increase population, in a country of over 140 crore people? At first glance, this may sound paradoxical. After all, India is often associated with the challenges of managing a large population. Yet, this very fact underscores the nuance of governance in a diverse nation. While the country as a whole is populous, certain communities face the opposite reality, a steady and concerning decline in their numbers. It is in this context that the Government of India's focused intervention for the Parsi community assumes significa

is addressing a demographic concern with sensitivity, foresight, and a data-driven approach. The Parsis, though numerically small, have made extraordinary contributions to India's growth and identity. Their legacy spans industry, science, philanthropy, and public service, an enduring testament to their role in nation-building. However, over the years, the community has witnessed a steady population decline due to a combination of factors such as low fertility rates, late marriages, and changing social patterns. This demographic trend, if left unaddressed, poses a risk not just to the community, but to the diversity that defines India itself. An estimated data shows the community's current population could be as low as mere 45 to 50 thousand. Recognising the urgency of the situation, the Government of India adopted a targeted and innovative approach rather than a generic welfare model. The result was the Jiyo Parsi Scheme, an initiative that is as unique as the challenge it seeks to address. Implemented by the ministry of minority affairs, the scheme combines advocacy, healthcare, and financial assistance to encourage family growth within the community. It offers financial support for fertility treatments, access to advanced medical care, counseling for couples and community health interventions. What distinguishes the scheme is its holistic design, blending modern medical solutions with community engagement and awareness. Building upon this foundation, the government has launched a Special Nationwide Registration Drive (25 March 25 April 2026) aimed at creating a comprehensive database of the Parsi population in India. This initiative is more than a data collection exercise, it is a strategic step towards evidence-based policymaking. Accurate and updated data will enable better targeting of welfare schemes, efficient allocation of resources, real-time understanding of demographic trends, more effective healthcare and social interventions. Importantly, the drive is designed to be inclusive, with no pre-eligibility conditions, encouraging maximum participation from the community. The registration process reflects a thoughtful blend of technology and grassroots outreach. While an online portal ensures ease and accessibility, facilitation camps in cities such as Mumbai, Ahmedabad, Surat, and Navsari will provide on-ground support. This approach ensures that the initiative is not confined to policy **documents** but becomes a people-centric movement. At a broader level, the Jiyo Parsi initiative sends a powerful message about governance in India. It demonstrates that development is not merely about addressing the needs of the majority, but about ensuring the well-being of every community, regardless of its size. In prioritising **the** concerns of a small population group, the Government of India reaffirms its commitment to inclusive and compassionate governance, where diversity is actively preserved and nurtured. As India progresses towards its vision of a Viksit Bharat, initiatives like the Jiyo Parsi Scheme highlight the importance of balancing growth with responsibility. Protecting the future of a community is, in many ways, about preserving a part of India's own identity. The ongoing registration drive is an invitation not just to be counted, but to be part of a larger national effort to sustain heritage, strengthen communities, and build a more inclusive future. **In** counting its people, India is ultimately valuing its diversity and securing its

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-27-TEST NO.-25668

That by which man is guided to righteousness, to do the right thing. Righteousness is an unmodified moral law that we must turn to for attaching meaning to life. Why are we suddenly finding it so difficult to attach meaning to life, despite doing the right things We are all constantly complaining about being too overworked, tired, and anxious. More work has brought us more money, amenities and luxuries, but it has taken away our little joys, our peace. That is because in our race to the top, we have lost balance. We need to learn the art of staying calmly active and actively calm. The next obvious question is how does one learn that art It is easier said than done. To find calmness within, we must first find faith. To find faith we must turn to the philosophy of universal religion that Swami Vivekananda introduced us to. He taught us that to love God, realise Him and feel that all are one is the true understanding of religion. It regulates human life. He taught us if there is no inner life, there is no religion either, for how can religion have meaning without faith. In moving away from the Inner Self, we have traded faith for symbolism and given it the name of religion. Righteousness is what makes religion dynamic, instead of letting it be some stone etched concept. It allows religion to flow, prosper and grow. It teaches us that modern is not always progressive, but being progressive that we must all aspire for, because that will help us evolve. The Bhagwad Gita is the message of dharma, righteous living, delivered by Krishna. The very first shook of the Gita begins with the word dharmakshetra, the field of righteousness. Dharma connotes righteousness, nobility, proper conduct a philosophy of life which makes you a worthy and progressive citizen of the world. Progress is not disruptive. It is the natural order of things. Progress does not scatter things, rather it unifies oneness in all perspectives of life. When someone or society achieves that oneness, it spreads happiness and **fulfillment.** Sustainable development is the path of righteousness. The equilibrating law of karma is that of action and reaction, cause and effect, sowing and reaping. In the course of Rita, natural righteousness, each man, by his thoughts and actions, becomes the molder of his destiny. Whatever universal energies he himself, **wisely** or unwisely, has set in motion must return to him as their starting point, like a circle inexorably completing itself. Santa dharma, eternal righteousness, is entirely different from self righteousness, which not only misleads one but is also disruptive for society. Humanity has suffered since ages because of this self righteousness, holier than thou attitude, of people or sects. Eternal righteousness is rooted in the idea of arrive Bhavantu Sukhinah happiness to all. The writer is Union minister for environment, forest & climate change and labour & employment Technology is a great leveler. Historically in the 1990 and early **2000.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-27-TEST NO.-25669

The cusp of India economic development and resources were concentrated majorly in India metro cities as that where all the big economic activities happened. The large majority in the Tier towns would follow the events in prime time news at night with their families. At that point of time, the concept that India tier towns would adopt and increasingly influence how commerce is done in India was a farfetched dream. I was born and brought up in Guwahati, a tier city in the north eastern part of India and subsequently spent a large part of my formative and education years in small towns. I had a front row seat to observing how life was different in small towns. When it comes to commerce customers in tier towns, they interact differently with retail and commerce compared to their tier customer peers as there is a strong sense of community and a lot of their activities in small towns happens around a shared community level. Right from going to the vegetable market sabzi mandi to the local fashion apparel market, people prefer to go together in groups, browse through different vendors, bargain and always strive to get great deals. So in a way, shopping is more about social experiences, rather than the transaction itself. Take the example of Seema, a homemaker in Guwahati. Every evening she goes to the nearby kirana store and buys her daily share of groceries for her family. Shopping for her used to be simple process just go to the store, give the shopkeeper a list of items she needed, and pay for the same via cash. Now it a whole different story Seema shops her groceries online through her Android smartphone and orders once or twice every week. She gets better deals online, more assortment and variety of products and gets everything home delivered with minimal effort on her part. She is now a happy customer and spends more time gardening and doing other activities. Rakesh is a retailer in Bhubaneshwar he owns a kirana store and enjoys a steady footfall of customers. Earlier he used **to** spend a considerable amount of time sourcing his products from wholesalers in the town twice a week he would make a trip to the local wholesaler and procure his products and bring them back on a tempo rickshaw to his store. Until one day, one of his business associates **mentioned** that he could order his items through an app and get better discounts margins on his purchases and free deliveries to his store. He was sceptical initially with the whole model of ordering through an online app until he realized that technology was actually making his life better buying online from these e commerce players meant better profit margins for his business, saving on his logistics expenses and more time focusing on his core business. Stats on India tech, mobile and e comma penetration Over the last decade, India growth on mobile and internet penetration has been massive currently **80.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-27-TEST NO.-25670

Of India 650 million smartphone owners are from small towns. As per a report, the pandemic provided a massive boost to India e retail penetration, accelerating it by 12 months to reach approximately 4.6 in FY21. The India e retail market is expected to grow at 25 30 annually over the next 5 years to reach 120 140 billion by FY26. Small town India will fuel this growth, accounting for 80 share in new customers growth. The rise of the middle class and customers from Tier 2+ cities ~90 of people in India earn less than INR 30,000 a month and is largely underserved by the current retail or e commerce players. Every new startup seems to be building for the top 1 2 households in terms of economic income in the big cities in India, mostly spending precious VC funds on acquiring the same limited set of customers. The middle and bottom of the pyramid customers are largely overlooked. Not anymore though with rising aspirations and disposable income of India middle class and more technology adoption, a 500 million customer market has opened up. E commerce in small town India remains an untapped opportunity India is still in the early stages of online commerce Only 8 of Indians 105 million shops online for products, with an average spend of 286 per year much lower than other markets. The availability of affordable smartphones and affordable internet connectivity like 4G in tier 2 cities enabled e commerce businesses to enter this enormous market. Digitally connected Indians spend an average of three hours per day online, of which more than two hours are consumed by messaging, social media networking and watching videos. What Sapp itself has approx. 500 million users in the country. By utilizing a variety of formats, including conversational commerce, group buying, video commerce, social resellers agents, and India retail market is rapidly evolving, finding innovative ways to sell directly to consumers through social networks and social media. E commerce transactions in Tier 2 cities like Guwahati, Jaipur and others are at all an all-time high, up 80 from **last** year. Use of digital payments and credit has accelerated significantly, and the last mile logistics and warehousing infrastructure in small towns have also improved over the last 3 4 years. The key to unlocking further growth in small towns is to focus on social commerce and augment their natural **purchasing** behaviours through technology. Social commerce is democratising India e commerce sector, which has been dominated by a few large players, paving the way for a more distributed model that built on community, connection and trust. Social commerce would increasingly target a highly underserved customer segment that can be reached and served through social offerings, This will further democratise technology led commerce in small towns, with three in five social shoppers coming from tier 2 smaller towns. Forecast for next 3 4 years Social commerce will grow significantly in scale, with the rise of innovative models like group buying Group **buying.**

Or community commerce has done incredibly well in other emerging markets like Brazil, China, Indonesia and Vietnam Rise of Voice and vernacular enabled commerce The next wave of India Internet users prefer voice search and vernacular based user interface Reseller led commerce Millions of smaller retailers are finding innovative ways to sell directly to consumers through many social formats. Social led models are empowering Bharat sellers and women entrepreneurs Direct to consumer D2C Growing popularity of online shopping has pushed established and digitally native brands to opt for a D2C channel via their websites. Chatbots and other AI technologies are used to replicate human to human interaction and provide customers with seamless customer experiences Technology enabled logistics and supply chain will be improved to streamline last mile connectivity in Tier 3+ towns and villages Continued rise and penetration of digital payments and UPI payments infrastructure and gradual shift away from cash led commerce to a digital payments enabled commerce in tier 3+ towns The next 5 years will be some of the most transformative times for commerce in small towns in India, and technology will be the key enabler for this change, as we strive towards a 5 trillion economy. Despite being home of some of the world largest river systems, each year more than 600 million people get affected by water scarcity in India. Over the years, pollution, over extraction, unsustainable diversions, and consumption practices along with warming climate have resulted in severe deterioration and scarcity of water in India. To prevent this situation, the country needs to promote sustainable utilisation of water resources. Sustainable use of water resources is pivotal in ensuring robust public health systems, sustained agricultural production and provision of ecosystem services. Devising strategies for increasing awareness and promoting water use efficiency holds significant importance towards ensuring continued water availability and its conservation. A report issued by Niti Aayog in 2019 predicts Day Zero for 21 Indian cities by next few years. Day Zero refers to the day when a place is likely to have no drinking water of its own. This report warns that **by** 2030 water demand can be double the prevailing supply which may lead to severe water deficiency in many parts of the country with a degree of 6 loss to the GDP. Thus, the importance of understanding and managing our water wants and resources in an economical manner is extremely **crucial.** India needs a max. 3,000 billion cubic meter BCM of water a year while it receives 4,000 BCM of rain but India captures only 8 of its annual rainfall, among the lowest in the world. Moreover, India extracts more groundwater than China & USA combined and more than 50 of total clean water is met by underground water. About 89 of groundwater extracted in India is used for irrigation. India has also been poor in treatment and re use of sewage. About 70 of the sewage generated in urban India is not treated and drained out to pollute water **bodies.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-27-TEST NO.-25672

Including rivers and land a significant effort is required to address this problem. Impact of water pollution Reusing and utilization of our water resources can play an important role in maintaining sustainable use of our water resources. India needs to take timely measures to avoid a series of associated problems, ranging from health issues due to poor sanitation and conflicts over water access to food security and climate change. The Niti Aayog report further mentions that India is placed 120th amongst 122 countries in the water quality index, with nearly 70 of water being contaminated. Raw waste material dumped in a water body usually cleans itself through a natural action of stream and self purification. However, the rising population as well as urbanization, has led to a rise in sewage discharge that far exceeds the speed of natural purification. Role of Agriculture in water pollution Additionally, the washed up chemical fertilizers used in agriculture add surplus nutrients to the water streams, causing eutrophication within the water body and gradual deterioration of the water quality. A study conducted in 2017 using advanced modeling techniques to look at the consequences of crop irrigation with untreated water has provided appalling results. The study finds that globally 65 of all irrigated areas within forty kilometers downstream of urban centers 35.9 million hectares worldwide are suffering from untreated wastewater, 86 of which were situated in 5 countries China, India, Pakistan, Mexico, and Iran. Importance of wastewater management Presently, untreated sewerage waste is one of the main causes of surface water and groundwater pollution in India. Given the scarcity of fresh water, wastewater treatment can provide an alternative source of water supply. Depending on the amount of treatment, treated water can be supplied for direct consumption or partially treated for industrial and irrigation purposes. Furthermore, Nitrate and phosphorus recovered from sewage effluent can be used to make high quality manure. As a result, it may also assist the agricultural sector by reducing the amount of manure and fertilizer needed for optimal crop development and maintaining food security. Wastewater as a source of energy is also **underutilized.** Organic molecules in sewage can be used to create a plentiful supply of biogas. Only a few states have implemented wastewater management policies, including Gujarat, Maharashtra, Rajasthan, Chhattisgarh, Karnataka, and Madhya Pradesh. In the absence of a blanket national mandate and standard regulations throughout states to manage the untreated **wastewater** pouring into bodies of water, the initiatives of a few states to control water pollution are ineffective. Conclusion Many of us living in metropolitan cities may not realize it, but our country is on the verge of an impending water crisis that calls for immediate action from all of us. The government cannot manage the water crisis alone it will take the combined efforts of civil society, the private sector including its foundations and the public at large to meet the challenge. With the advancement in technology and the progress in cloud infrastructure, the cloud gaming industry is growing **at.**

350th: "underutilized." **400th:** "wastewater" **500th:** "at."

The hospitality industry that has always been keen in adopting new trends to improve customer experience is shifting focus to crypto currencies. Recently this technology has started influencing the execution of business patterns by providing secure decentralized efficient transactions. Crypto currency systems as a payment method in the hospitality industry, which consists of the hotel and restaurant industry, tourism, travel, and other relevant services, will further influence customers experiences with businesses all around the world. The Appeal of Crypto Payments in Hospitality Use of these crypto currencies provides many benefits for merchants as well as for consumers. From the perspective of tourists, clients, or consumers, they are able to make payments using digital currencies without having to change the cash, with less risks of fraud, combined with more convenience. These business entities; including hotels, restaurants, and other service industries, experience improved transaction fees when compared with the conventional credit card processing costs, faster time of settlement, and enhanced financial security. Furthermore, the currencies use a distributed registry known as block chain that makes it more secure and reduces fraud including double-spend or charge-back. Such a level of trust is especially desirable in the context of the hospitality industry because transaction precision and security are critical. How Hospitality Businesses are Adopting Crypto Payments Some of the well-known global players in the hospitality industry have started to experiment with crypto currency payments. Major chains of boutiques hotels and the known brands in the hospitality industry have started accepting Bit coin, Ethereal, and other such crypto currencies to book services and other products. Most prominently, there are many platforms such as Travala and Expedia, which allow their users to book flights, hotels, and all forms of activities and make payments in crypto currencies. Apart from that, there are companies that adapt crypto payment systems, like Bit Pay or Coin Gate, so customers can pay for the goods or services with crypto currencies directly at a webpage or an application. Such platforms instantly convert the crypto into the local currency thus sparing the business the rigors of volatility in the market. Enhanced Customer **Experience** The use of crypto currencies may also provide a great boost to the guest experience through the availability of other forms of payment. Travelers in the present day are more innovative, especially the young people of the millennial and Gen z generation are more inclined to embrace the new **digital** solutions. An option of accepting crypto payments is beneficial as it can target younger users, tech-savvy individuals, and users who are already into the use of block chain technology and applications. In the same way, it also helps users earn some rewards or use specific tokens as part of a reward system of the crypto wallets. For example, the customers may be able to earn digital tokens and later on use them to get a discount on the room, a chance to get an upgrade among other services in the hospitality network. Challenges in Widespread Adoption As for the **opportunities** of accepting crypto currency payments, their advantages are quite obvious, however there are several challenges that has to be solved for fuller adoption of cryptodurrencies in hospitality industry. The main areas of risk consist of high fluct

This can be dangerous to the companies or customers involve depending on which side of the fence they are on. However, most of the payment processors now integrate an instant conversion option to stable coins or fiat currencies to overcome this problem. The next issue that is relevant to the business is regulatory instability. Currently, the legal framework for using crypto currencies varies from country to country, and therefore businesses have not quite adopted digital assets in their activities effectively. Therefore, clear and coherent regulation and best practices will have to be set in order to facilitate the increased utilization of such technologies. In addition to that, it may be a challenge for the small hospitality businesses whose understanding of the technology to manage and incorporate crypto currency solutions may prove difficult. But this is regarded as a lesser problem since user-friendly solutions can be anticipated to become increasingly common in the future. The Future of Crypto in Hospitality Major worldwide corporations integration of crypto currencies into their transactions, the advancement of decentralized finance Deify) and NFT, predictive that the hospitality industry will also develop itself in this sector. Opportunities to incorporate smart contracts in hotel bookings or even accumulating points in a loyalty program, similar to event management indicates further shifts in the conventional business models. The hospitality industry is expected to adopt crypto currency payments to a much greater extent as consumers get used to digital currencies and as the surrounding regulation becomes more transparent and comprehensible. Crypto currency settlements and other kinds of block chain solutions are set to become one of the primary driving forces behind the industry digitalization. Conclusion The establishment of the use of crypto currencies as a means of payment in the hospitality industry can therefore be said to bring about a major revolution towards more digital and decentralized economy. Despite that, great potential is observed in its initial application by progressive-spirited companies. With respect to establishing safe, efficient, and clear payment solutions, hospitality can not only improve the quality of the clients services but also become one of the main leaders **in** a world that develops very quickly. The answer was yes and yes. We took the ferry over the majestic sweep of the Padma river and, on the other side, we sat in a small shack on the bank and ate freshly caught, freshly fried ilish or hilsa which tasted **divine.** The ilish is the queen of fish for Bengalis there is no king). And the ilish from the Padma is the queen of queens. Though Durga Puja has no real ilish tradition, every year Bangladesh permitted the export of 3,000-5,000 tons of the fish as a goodwill gesture to add to the festive joie de vivre. Usually far less arrived, but this year Bangladesh has announced that tradition would end altogether to make its national fish accessible to its own poorer households. Clearly with Sheikh Hasina ousted, her hilsa diplomacy is also on the chopping block. It could not **be** worse timing for CM Mamata Banerjee. The junior doctors movement in the wake of the rape and murder at R G Kar hospital in Kolkata shows no signs of losing steam, with protest marches every day. Banerjee pleaded with the public to return to the usual Durga Puja festival spirit but now she can offer them neither the justice they dema

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-27-TEST NO.-25677

A lightning pace. The development of 5G networks also adds up as a key factor to this growth. However, there are a few challenges and pitfalls that still need to be resolved before people can fully experience the world of cloud gaming. Here a detailed overview about cloud gaming, and the obstacles in its path to expanding to its entire scope. What is Cloud Gaming Cloud gaming allows users to run video games remotely using the client server on the user device. This eliminates the requirement of heavy hardware to be able to play video games. Just like you can watch movies streaming online from anywhere on your device, cloud gaming allows video games to be streamed online and can be played anywhere, and anytime. Future of Cloud Gaming Globally, mobile gaming accounted for 45 per cent of the market in 2019 and has grown by 10.2 per cent annually to reach more than 68 billion. Over 450 million is expected to be generated by 2023 by the cloud gaming market. And more than 2.5 billion gamers play video games using cloud gaming. These statistics highlight the growth of the gaming industry and the numerous opportunities waiting in the near future around this technology. Many Companies are making strides in this area by launching and growing their own video games. Even Google announced its video gaming platform called Stadia in 2019 enabling players access to games on any type of screen. To summarize, more and more companies are adopting cloud services and the cloud gaming industry is evolving to make the experience even better and faster. Challenges Latency, Infrastructure, Network Bandwidth and more Although there a huge scope in this industry, there are many challenges as well that companies face while adopting cloud services for gaming models. Adopting cloud based services requires the adoption of cloud based infrastructure. And lack of skills in implementing this infrastructure is one of the biggest challenges companies face. This is because companies need more skilled engineers and workers to set up the kind of architecture to support cloud services that they are willing **to** hire. Latency Latency is one of the major issues where companies are struggling. Gaming response time should be as low as possible, failing which it affects the gaming experience putting the company reputation at stake. Gamers adopting cloud gaming are ready for network lags. Hence the need for a **fast,** consistent internet connection. To tackle this challenge, companies can install gaming servers in different regions or at least continents to reduce latency time and improve both streaming quality and responsiveness of the game. However, with massively multiplayer online role playing games attracting millions of online players, IP network architecture must consider where to put those servers to optimize ping time. Server Optimization Meeting hardware requirements and optimizing servers is one of the challenges faced by hosting companies. Guans GPU as a service is growing as a service. Currently, 10MBps is the required connection speed 35MBps for 4K resolution. Network **bandwidth.**

Muraleedharan has defended India position by making the comparison with what had happened to anti Covid vaccines Open markets must not become an argument to perpetuate inequity and promote discrimination. call that India had effectively banned the export of vaccines in April last year, as the Delta wave engulfed it. But if India own vaccine orders had been placed in a timely way, it need not have failed to meet other countries orders. Effectively it joined the richer countries in rendering the open market for anti Covid vaccines nonexistent at that time. Read also Who is responsible for the global wheat crisis In today wheat scenario too what is needed is better domestic policy, including higher MSP, rather than a knee jerk reaction that hurts both the country reputation as a reliable supplier in global markets and its own farmers. Instead of unpersuasively pointing fingers at hoarding and speculation, India should reverse the export ban. The erstwhile state of Jammu and Kashmir was never an issue for India, but Pakistan entangled itself with a problem which was not an issue at all. Unfortunately, the Indian Subcontinent was divided in 1947 based on the two nation theory. Though India moved away from the causes that led to partition, Pakistan embroiled itself in grabbing Jammu and Kashmir being a Muslim majority state. The J&K became an integral part of India on 26 Oct 1947, when Maharaja Hari Singh signed the Instrument of Accession with the Government of India. In its endeavours to get the J&K by force, Pakistan attacked the princely state all along its borders after Pakistan gained independence on 14 Aug 1947, and when Maharaja Hari Singh was still indecisive. When the Kabalis a mix of Ex servicemen and regulars of Pakistan, reached the outskirt of Srinagar, then Maharaja sought help from India and expressed his willingness to join India. On 27 Oct 1947, at 10.30 am, the Indian Infantry contingent landed at Srinagar airport. More than 100 civilian aircraft were mobilised to ferry troops and material to Srinagar. Very rare in the history of warfare has an operation **been** launched with no prior preparation to face the battlefield obstacles. Roads were unclear, and there was a lack of intelligence of the enemy strength and disposition. Indian Armed Forces started successfully pushing back the enemy. However, on 02 Jan 1949, a ceasefire was declared between India and Pakistan on **the** United Nations Organisation UNO interventions, and the operations in J&K ended. Since then, Pakistan has not vacated the illegally occupied territories of the erstwhile state of Jammu and Kashmir. It is almost 1 3rd of the total area of J&K. It is pertinent to mention that the decision of the Government of India to refer the dispute of J&K to UNO was a mistake. The case got stuck in international power politics. At every step, India faced obstacles, and the UN complicated it further rather than solving the problem. Since then, Pakistan has tried to sell its false narrative **on.**

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-27-TEST NO.-25679

To be natural. Like breathing. Or judging relatives at weddings. But here's the uncomfortable truth: empathy is not always inborn, environmental conditioning matters a lot in moulding a person into an empath. Sometimes, it is edited out by apathetic parents. Surgically removed during childhood, like a cyst that might become cancerous later. The upbringing is based on the holy gospel: Stay away from others' pain, bury your head in the sand. Their problem is theirs not for yours to care for. First comes the remote-control philosophy. In my friend Jia's house, the television remote has a very specific emotional function. War. Floods. Starvation. Human suffering in high definition: click click click. The channel is changed by her husband and they land, safely, on a stand-up comedian making jokes that don't land. But that's alright. No one is dying there. No one is crying. No one is asking uncomfortable questions like, How does this make you feel? Over time, I realised there is a system at work. A deeply efficient one: the carpet theory of life. Everything unpleasant, like illness, old age, grief, injustice is swept under a carpet. Not an ordinary carpet, mind you. This one is grand. Expansive. Almost magical in its elasticity. It stretches to accommodate everything, every ignored tear, every silenced discomfort, every moment that might demand empathy. I sometimes imagine it to be larger than those vast, ornate carpets you see in places like the Sheikh Zayed Grand Mosque, except this one isn't woven with craftsmanship, but with denial. And it works beautifully. The thing about empathy is, it needs rehearsal. It grows in small, ordinary moments. When a child is told, Look, that person is hurting When discomfort is not dismissed, but gently held. But what if you grow up in a space where others'pain is treated like bad weather? Something to avoid or else it will smear our world with agony. Then you don't learn to pause. And so, you become an adult who looks away, not out of cruelty, but out of habit. A child with special needs becomes something you don't **know** how to engage with. Suffering becomes something you don't know how to process. She couldn't talk about what happened at RG Kar Medical College, the horror of it, the anger, the helplessness, because the moment she began, she could almost hear the mental remote clicking. Jia couldn't mourn out **loud** when someone like KK leaves us so suddenly. When an entire nation pauses in collective grief, she finds herself quiet. Contained. As if her sadness needs permission. And that loneliness is a strange one. There's nothing poetic about this kind of loneliness where your feelings have to be borne in silence, as if it would otherwise be a venomous obtrusion. So people like Jia develop two emotional selves. One that feels everything, deeply, instinctively, inconveniently. And another that edits, filters, softens, before anything is spoken aloud. They learn to grieve in private. To react internally. To carry the weight **quietly,** pour out the grief into journals, because there is nowhere to place it. When I see such individuals who have been nurtured to evade such emotions, they don't realise that empathy is not just about feeling for distant strangers on a screen. It is about making space for the person sitting next to you. And when that space doesn't exist, something seems amiss. Just a throbbing, persistent awareness that while life may be comfortable, something essential is missing. Because the real

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-28-TEST NO.-25683

Is becoming an obstacle to reaching this speed. Whenever players play online games in real time, a high speed internet connection is required. In the process of sending commands and obtaining video and audio streams viewed once and then discarded, users are required to connect to potentially distant servers. In such a scenario, uneven latency across the gaming ecosystem provides a suboptimal experience for players. Optimizing servers can help resolve this issue greatly. Reduced Visibility Cloud computing offers benefits of not having to manage the infrastructure and resources like servers, systems and saves time, expenses. Users will have reduced control and visibility into software systems, applications, assets etc. This makes it challenging for organizations to verify how efficient the systems are. Most new companies are new to cloud and thus it is important to gain as much information as possible before making the move to cloud. Find the right cloud service provider who can help you provide better insights into data, applications, users and cloud services. Incompatibility While making the move from on premise to cloud, incompatibility issues may arise. If issues are not identified at the nascent stages, later businesses may have to choose a new service altogether thereby impacting costs. It is always suggested to make a list of services, assets, technologies that you would want to move to the cloud. Check with your cloud service provider how compatible their services are and then make the decision to move forward with cloud for your gaming. Insecure APIs Using APIs in cloud infrastructure provides better control for systems and applications. However, using APIs that are insecure can provide an entry point for hackers and provide access to confidential data and also manipulate your environment causing harm. Ensure to check the security protocol in place with your cloud provider and check if they can implement SSL encryption or provide multi factor authentication to avoid risks and manage access. Downtime Having a poor internet connection can play spoilsport for many organizations because a cloud requires a consistent and high speed internet connection. If your business does not have high speed **internet,** then you may face repeated downtimes, errors or lags thereby affecting productivity. Businesses choosing cloud must ensure to have good quality internet connectivity to have an increased work efficiency and reduces security threats during downtime. Conclusion Despite the challenges, viewing the current data and the craze of players adopting **cloud** gaming, we can easily predict the future of cloud gaming. It bright. It has already disrupted the gaming world and the future seems to be even more promising. The focus should be on finding solutions to tackle the challenges faced by cloud models and delivering players a rich gaming experience. Ever since India unexpectedly announced a ban on wheat exports last week it has gotten a lot of international heat for compounding a worldwide shortfall triggered by the Ukraine Russia war. Now at a high level ministerial meeting Global Food Security Call to Action in New York, MOs external **affairs.**

Congress of CPC, Xi mentioned that the use of force cannot be ruled out. tragic death in an airplane malfunction in 2001. In the UPA years, in 2013 Pawn Kumar Banal resigned as railway minister after allegations against his nephew. Maharashtra CM Ashok Chauvin resigned even before an FIR was registered in the Adders housing scam. What have been the results of these resignations? Has public life become free of corruption allegations or have politicians stopped engaging in real estate deals? No. Even after high-profile resignations, governance reforms are never undertaken to check ministerial functioning. Resignations only feed into the political slugfest. When a flyover collapsed in Calcutta in 2016, BJP called for CM Mamata Banerjee resignation and PM Modi even called it an act of fraud. Surely, public deaths in an accident must not be used to settle political scores. Today, after the Odessa tragedy, the Bengal CM is training her guns against the Modi government at the Centre. Amidst accusations and counter-accusations, is the citizen safer? In 2022 over 100 died in Gujarat Morbid bridge collapse. The bridge company MD has been arrested but were lessons learnt in bridge safety? Two days after the train calamity in Balasore, in Bihar Bhagalpur, another bridge collapsed for the second time in a year. Away from hyper-partisan politics, citizens need accountability for systemic breakdowns which are jeopardising our lives. We who do not travel in VIP cocoons must be assured that any inquiry after a major accident will lead to course correction at every level. Those who are elected by us have official privileges but with great power come greater responsibility. Dear ministers, remember you have sworn an oath to protect all citizens. Resigning or not is on your individual conscience. Zero-emission vehicles in India are gaining traction as a viable clean transportation solution. More original equipment manufacturers OEMs are introducing electric two-wheelers, three-wheelers, cars, light pickups, and buses. Although heavy-duty trucks account for 40% of emissions and fuel consumption from road transport, they have been lagging in this transition. But we are beginning to see signs of change. At **the** Auto Expo 2023, we saw zero-emission truck ZET models from leading manufacturers for the first time. India top manufacturers displayed trucks with battery electric, fuel cell electric, and hydrogen internal combustion power trains. These vehicles covered the differing weight and range requirements for typical truck operations. For battery electric **trucks,** most OEMs seemed to prefer lithium iron phosphate batteries for their reliability, safety, and lower cost over the higher energy density and more expensive nickel manganese cobalt batteries. For fuel cell trucks, all the models displayed used stored hydrogen fuel in multiple tanks at a pressure of 350 bars. Cummins a leading global diesel engine manufacturer also showcased fuel cell engines with 125 kW and 240 kW ratings for heavy-duty vehicles, hinting at the new era. Table 1 provides an overview of the prototypes of zero-emission trucks and other notable models that have garnered attention in recent months. The **Indian** job market has undergone a significant transformation in recent years. As the economy continues to grow, companies are expanding and seeking the best talent to drive their success. 2023 is a year of volatility and talent strategy is high on the boardroom agenda. Finding the right talent

Is primarily facilitated by technology. These solutions work together as a whole environment with the organization primary recruitment process to find qualified candidates. Thus, HR professionals have to rethink and reinvent hiring practices. Technology has played a vital role in this transformation, revolutionizing the way companies approach talent acquisition. AI is revolutionizing the hiring process Cutting-edge technologies like Artificial Intelligence AI, Machine Learning ML, is proving to be the most efficient ways to lower the cost of acquiring top talent and lessen the risk of losing them to competitors. Al is penetrating through the recruitment lifecycle including writing job descriptions, sourcing quality candidates, ranking the candidates based on JDs, conducting preliminary interviews, and finally, helping with the engagement of the candidates who are offered the job. Al is proving to be the best friend of recruiters, HR teams, as well as interviewers. Chat bots enable real-time computerized dialogue with candidates to address their enquiries and provide application status update. Interview on demand is aiding candidates with 24 7 availability and assisting recruiters in easing the scheduling and reviewing of candidates to move forward in the recruitment process. In short, Al handles everything for recruiters that include sourcing, evaluating, status updates. In short, interviewing, on boarding, and engaging candidates. The landscape of Al talent technology integration improves the recruiting experience for talent acquisition managers by automating the hiring process and integrating it with other systems, allowing them to focus on more strategic tasks. Some of the emerging trends of applying Al in Talent Acquisition are: Emergence of Catgut and Large Language Models LLMs Al-based language models such as GPT-4 Catgut are proving to be a helpful in the hiring process. Writing job descriptions is taking minutes as opposed to hours earlier. Recruiters and hiring managers are able to screen a large number of applications by automatically matching resumes with job descriptions. By examining their resumes and cover letters, it also aids recruiters in the screening of prospects. It can extract relevant information and keywords and use natural language processing NLP algorithms to match candidates with job descriptions. Regular and personalized **communication** is key to the positive candidate experience. Catgut reduces workload on recruiters and helps them provide a more personalized experience for candidates that increase the likelihood of attracting top talent. Avatar-powered assessments Avatar-powered assessments refer to the use of virtual or digital avatars in the assessment process, where the **avatar** acts as an interactive medium to facilitate the assessment. The proliferation of generative Al technologies has made creation and deployment of human-like Al Avatar easier than before. Avatar-powered assessments provide a more engaging and interactive experience for users, helping reduce dropouts in the hiring process. The recruitment teams can also customize the visual look and personality according to their brand. In recent trends we have seen a product where an Al avatar is conducting first-level screening interviews. It can currently do ice-breaking conversations, specific skills evaluation i.e., programming ability, and help answer candidate questions related to the job profile **and** organization. Insights using Interview Intellige

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-28-TEST NO.-25686

A special status was accorded to J&K by Article 370, which has now been abolished. The constitutional autonomy provision of Article 370 was purely temporary. Indian Constitution on Jan 1950 brought J&K under its wings and thus became an intrinsic part of India. On 17 Nov 1956, the constitution of Jammu and Kashmir came into being therefore, the position of the erstwhile state with India was further strengthened. Pakistan exploited Article 370 to instill distrust among the people of J&K against India. The process of alienation is deep rooted in the history of J&K. In Aug 1953, when Sheikh Abdullah lost power and the Congress Party was established as a new political entity in J&K. It is believed that Sheikh Abdullah issued a Fatwa a religious decree labeling leaders of the Congress Party as infidels kefirs. He behaved like a religious dictator and threatened people not to join the Congress Party. Pakistan observed this very closely. Thus, Sheikh Abdullah politicisation of religion was one of the reasons which later paved the way for fundamentalism and a platform to criticise India. He misused the concept of secularism for clinching power and exploited the people faith, especially the youth. Pakistan was quick to pick up the threads to infuse discontentment among the subjects of J&K. In 1965, Pakistan articulated a plan to annex the erstwhile state of J&K by creating an internal disruption by sending about 30,000 regulars and irregulars troops in plain clothes in the Kashmir Valley, followed by an all out attack on India on 01 Sept 1965 through the Chhamb Jurian sector. In a retaliatory attack, the Indian Army defeated Pakistan Army and almost reached Sialkot near Lahore. Pakistan once again failed in its nefarious design to annex J&K by force. In 1971, with India help, East Pakistan became Bangladesh. It was a humiliating defeat for Pakistan. After the total failure of Pakistan armed forces in the Indo Pak War of 1971 and the dismemberment of Pakistan, then the idea to bleed India by thousand cuts was studied and conceptualised into military doctrine by Pakistan. The basic idea **of** this doctrine was that Pakistan could not defeat India in a conventional war. Therefore, covert, low cost, low intensity warfare in the form of terrorism will effectively degrade India. This strategy was employed by Pakistan most effectively in Punjab, Kashmir, and other parts of India. With this in mind, **Pakistan,** in 1989, launched a full fledged insurgency against India in J&K. Pakistan support to the militants severely worsened the situation on the ground. The events before mid of Jan 1990 indicate that frantic disorder and vicious anarchism had griped J&K, especially the Kashmir Valley. Terrorists in Kashmir Valley ruled the roost and subjugated the public mind, and the rest is history. However, Pakistan policy of interference in Jammu and Kashmir has not, in any way, helped the local population of J&K. Pakistan official oratory of giving moral and diplomatic backing to the people of J&K has ultimately resulted in **the.**

Global terrorism Stretching specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be an integral part of every workout program. It not only helps increase your flexibility, which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching Funding of Islamist terrorist organizations in the region, which has only delegitimised the so called Kashmiri struggle. For a very long time, Pakistan successfully achieved its strategic aim of draining out the vast resources of India. Concerning Jammu and Kashmir, Pakistan today is seen as part of the problem rather than a solution. A regular basis can help increase your range of motion. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of motion. According to the studies, proprioceptive neuromuscular facilitation or PNF type of stretching is more effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural that your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, shoulders, etc. and **stretch** those parts of your body. Iodine fortification is what most countries rely on to encourage adequate dietary intake. In more than seventy countries that iodize salt generally serves as the major source of iodine intake. One fourth of a teaspoon of iodized salts has about hundred micrograms of iodine. **Note** that the salt used in processed foods, which is the major source of salt for most Americans typically, does not contain iodine. If salt used in a processed food contains iodine, it will be listed in the ingredients list of that food. Focus on decreasing the amount of salt consumed from processed foods and get your sodium from iodized salt. Seaweed, saltwater fish and seafood are natural sources of dietary iodine. Dairy products also supply iodine in the diet at varying levels. During lactation, the breast concentrates iodine in milk so breast milk tends be a good source of **iodine.**

GST was a landmark reform initiative it removed multiple central and state taxes and enabled corporate India to treat the country as one common market. But GST ease of doing business regime will now likely be revisited following the Supreme Court decision of May 19. We should note that the case Union of India vs Mohit Minerals Pvt Ltd was dealing with the levy of Integrated Goods and Services Tax IGST on ocean freight and not per se on central and state legislative powers. The Supreme Court decision to shift the Gyanvapi suit from a civil judge to the Varanasi district judge, who the court said is senior and experienced, prolongs a matter the apex court could have ended. The Places of Worship Act, 1991, bars conversion of a place of worship, preserves its religious character as it existed at Independence, and by SC 2019 interpretation in the Ayodhya judgment, it places a bar on the institution of fresh suits or legal proceedings. Having accepted the special leave petition against the Varanasi court ordering a survey, SC should have used its discretionary powers under Article 136 to enforce the 1991 Act, which it praised fulsomely in the Ayodhya judgment. The district judge will decide first on the Muslim side plea for rejecting the plaint under Order 7, Rule 11 of the Civil Procedure Code. Last September too, SC had said that when a suit is barred by law, reliefs sought under it cannot be granted and the plaint is liable to be rejected to put an end to the sham litigation so that no more judicial time is wasted. In this case, the 1991 law minces no words in its statement of object and reasons it says that in view of controversies arising from time to time on conversion of places of worship the Act seeks to foreclose any controversy. Equally worrisome is SC oral observation that the 1991 Act only bars change in religious character but not ascertainment of religious character. Recall that the Act attempts to foreclose controversies. Allowing disputes to fester through ascertainment was clearly not **what** the Act intended. Not only is judicial time being wasted by such litigation, public order and rule of law are at risk. And just as a reminder, a Mathura court has ruled the 1991 Act does apply to the Shahi Idgah dispute. SC must act. After an underwhelming performance **at** the Tokyo Olympics, Indian boxing hopes have been single handedly restoked for the Paris Games by Nikhat Zareen. The Nizamabad born pugilist has delivered the country first World Boxing Championship gold in 16 years, other than all those won by Mary Kom. Her biopic was the very first film that Nikhat watched in a cinema hall but the legend long shadow is something she has battled too. That in the past. Now Nikhat can cheerily josh about who should lead her own biopic. Her triumph over injuries and self doubt will be an inspiration to girls to take up **the.**

So now we have junior senior citizens and then there areSeniorsenior citizens eligible for some government welfare schemes. There exists a scope to introduce creamy layer principle moving forward. One wonders why we are targeting 2047 when we can actually rightfully proclaim that we are already Viksitas opposed to that developed world! In Indian mythology, Lord Vishwakarma stands tall as the celestial architect, known for creating some of the most magnificent and functional structures across the heavens and earth. Temples, cities, and tools of immense importance in mythological narratives bear his name, symbolizing creativity, craftsmanship, and discipline. But beyond his grand designs, there are valuable lessons for personal and professional growth. One such tale unfolds during the construction of Lanka, the golden city, a masterpiece of beauty and grandeur. According to Hindu mythology, Ravana fabled city of Lanka was originally designed and built by Lord Vishwakarma. Vishwakarma took great pride in his work and created the city with shimmering gold palaces, intricate carvings, and flawless engineering. The city was meant to symbolize perfection, brilliance, and wealth. However, once the construction was completed, it was not Ravana but Kubera, the god of wealth, who first inhabited the city. Over time, Ravana, through cunning and ambition, seized the city from Kubera and made it his own. Vishwakarma, who had created Lanka with the intent of glorifying Kubera reign of righteousness, was deeply disappointed by this turn of events. His work of perfection had fallen into the hands of a ruler with a starkly different moral compass. Yet, despite this twist, Vishwakarma did not abandon his principles nor seek retribution. Instead, he chose to focus on his dharma his duty as a creator, unshaken by the change of fate. Lessons from Lord Vishwakarma Story Mastery over Control Focus on What You Can Perfect, Not What You Can Control In the story of Lanka, Vishwakarma demonstrates the importance of mastery over control. As creators, professionals, or even as individuals in day-to-day life, we often invest in our work or relationships with the hope of a specific outcome. However, like Vishwakarma, we must understand **that** the results of our work might end up in hands beyond our control. What matters are the quality, integrity, and dedication we put into our creations, not the ownership or recognition it receives? Detach from the Outcome Let Your Work Speak for Itself Lord Vishwakarma response to the occupation **of** Lanka by Ravana teaches the value of detachment. Despite seeing his masterpiece in the hands of someone less deserving, Vishwakarma did not seek revenge or abandon his work. Instead, he moved on to his next creation, keeping his focus on his craftsmanship. This is a powerful lesson in not allowing external factors whether appreciation, criticism, or changes in ownership to affect your self-worth. Your work is a reflection of your effort, not of its outcome. Adaptability Let Your Skill Evolve, No Matter the Circumstance Despite the changing patrons of his work, Vishwakarma always adapted to the needs of his **environment.** Whether it was constructing weapons for the gods or designing palaces for kings, his ability to pivot and innovate without compromising on quality is a lesson in adaptability. In modern life, whether in business or personal pursuits, change is constant. Learning to adapt without losing the essence of your skills and values is

His identity was not tied to any one project. His role as the divine architect was to keep building, innovating, and pushing the boundaries of creativity, no matter who reaped the benefits. This humility is a stark reminder that our work, no matter how grand, does not define who we are. It is the purpose and intent behind our efforts that give us true fulfillment. Lord Vishwakarma story of creating Lanka, only for it to fall into the hands of a tyrant, is a reminder that the path of creation is more important than the end result. In a world often obsessed with recognition and control, his life embodies the essence of focusing on mastery, adaptability, and detachment from outcomes. For those of us striving in our careers, personal lives, or creative pursuits, Lord Vishwakarma teaches that true mastery comes from dedication to the process. He reminds us to embrace our role as creators with humility, integrity, and an unwavering focus on quality regardless of who benefits from the fruits of our labour. In every masterpiece you create, whether seen or unseen, known or forgotten, let Lord Vishwakarma timeless wisdom guide your journey. Remember, the light you seek outside is only a reflection of the brilliance already shining inside you. The last round of Lok Sabha elections will conclude on June 1. Campaign strategies that have never been seen before have been put to use over the last two months, or ever since the elections got declared on March 16. All the opposition parties, including the Congress, were in disarray the moment elections were announced. And every passing day kept exposing their tactics of spreading propaganda to harm the Bharatiya Janata Party. It is typical to hear criticisms, remarks, accusations and rebuttals during election rallies. Rahul Gandhi, the prince of the Congress, has always disparaged Prime Minister Narendra Modi in the most atrocious and demeaning manner. His use of such language could even be pardoned, given his frustration at repeated setbacks. But this time around, BJP rivals, knowing they would lose, casted doubts on the nation democratic system itself. **Nowadays,** it incredibly simple to disseminate false narratives via social media. Congress leadership was taken aback by their catastrophic loss in the three states of Rajasthan, Madhya Pradesh and Chhattisgarh. Also, in February, the opposition got faltered when the Ram Mandir Pranpratishtha ceremony was discussed globally. And hence, even before **the** elections got declared, BJP opponents grew cold feet, fearing their defeat for the third time in a row. As soon as the opposition realized they would not be able to outbid Modi government pledge of welfare programmers, they started using sly strategies. The opposition first piece of misinformation was that once in power, the BJP will change the Constitution. In actuality, no party can alter the fundamental framework of the constitution, not even if it wins all the 542 Lok Sabha seats. And Congress leadership is fully aware about it. But still, to deceive people, they continued to disseminate **false** narrative that BJP is planning to change the constitution. And this they did because they have nothing negative to speak about the Modi government. Throughout this election campaign, the Opposition blatantly obvious strategy for undermining the Modi government over ten years became evident. The BJP opponents thought that by supporting the farmer agitation in Delhi or attempting to provoke violence over the Agniveer

AI models simulate market reception through virtual focus groups and sentiment prediction. This minimises risk by validating product-market fit early. As the conflict in the Gulf goes unabated, I recollect that our ships Ganga and Khukri were there in the port of Bandar Abbas located in the Strait of Hormuz' in Dec 1992. We left Bandar Abbas for Dubai after a four-day, exciting stay. Dubai was just across and took us a day to arrive and we were outside the harbour the same evening, preparing for entry the next morning, in a smart manner with bows shining and the Western fleet commander on board. The purpose of the visit was also to show to the region our indigenous warships made in Mazagaon docks. Dubai was remarkably different from Iran as the high-rise modern infrastructure greeted us with the fragrance of cosmopolitanism **and** internationalism. A large and impressive reception party was on the jetty greeting us, RAdm Madhvendra Singh was the fleet commander and his flag was flying on board Ganga. There were school children from Indian schools waving our National flag, welcoming us. Suddenly, there was an announcement, ' Logistics officer **Bridge** Admiral'. I panicked and rushed up the ladder to the bridge wing where the Fleet commander was waving at the children below. On seeing me he said 'LOGO, what can we give to these children?' I immediately started thinking about what items we have in our stores worthy for children? Suddenly, I realized that we carry chocolates for the Air crew and I promptly replied 'Sir we can give chocolates!' very well he commanded! I leapt down, announced for my stores in-charge Dharam Prakash and soon we had made packets and distributed them. My job was cut out on **arrival** as the first priority of foreign currency was to be dealt with. Mr Aneja from the Indian embassy was there with his briefcase containing foreign currency and soon it was count

room for me to step out of the ship that day. Some ship chandlers of Indian origin proudly came on board and met me and expressed their joy to provide items to an Indian warship. They said that till now they had given stores to many American warships where the Logistics officers had huge budgets for local shopping. I smiled and stated that in our case our budget and requirement was quite meagre, but they understood. They not only supplied fresh stores of excellent quality at reasonable prices but also gave us many complimentary items. One Indian entrepreneur filled our ship with his brand of potato wafers which lasted us for many days. Such was the love for India! The evening dinner party was my responsibility as a large number of Indians, foreign dignitaries, embassy staff and officials were expected. I was very tired by the time the party was over and in no mood to see the city that day. The second day I went around the city on a wind shield tour but did not find anything interesting to buy. I had to attend a party given by the local Indians for the ship in a five-star hotel in the evening. Many people were buying Sony TVs, which were cheap but I did not buy any electronic stuff. Instead I landed in a cutlery shop selling Japanese cutlery which I purchased and which is still with me. I got a sweet Japanese electronic xylophone made for my children which they played for many years. Yes, a standard Sharjah carpet was also in my kitty. The day before we were to depart the embassy staff said that if it was ok they would collect the balance currency in the evening which was fine with me. They came in the night and once they had accounted for all the cash they asked me if they could do anything for me. I said that I could not buy anything substantial for my children. They were very happy to take me to one of the most reputed department stores. I forgot **the** name and from there I got a small inflatable swimming pool for my children and some toys. It was uncommon then. Our last port of call was Muscat in Oman. The Naval Attache of that region Captain K M Nair was there with his staff and currency to receive **us.** In the evening party on board, there were many influential and respected Indians who attended. I was surprised to see my History Lecturer from University of Allahabad, the late Mr Madhav Chandra, there he was probably a deputy Ambassador he was happy to see me. In 1978, he qualified the I A S and his ranking was no 2 in India. We had interviewed him for our university magazine ' The critic', which I published. We learnt that the Sultan of Oman was a friend of India and was educated in Mumbai. Our survey ships regularly visit the capital **for** their survey work. Many Indians were in the teaching profession there. There were temples and all kinds of freedom for the Indians; it was quite a liberal place despite being a Sultanate. Our ship exercised with their Navy and we also visited their Naval base where they allowed us to shop in their canteen. I was quite happy to see that a number of Indian Navy personnel were employed by the Oman Navy after their retirement. I met Cdr Ghildiyal, an engineer who was working there. He was in uniform, wearing Lt Cdr rank as they employ Indians in a

In this new avatar, Apple has chosen method over magic, persistence over perfection and improvement over Vladimir Putin is playing a losing game. Euro Atlantic has become the Western flavour of the moment. It can inflexion point in global geopolitics, and, as Prime Minister Narendra Modi heads to the Quad summit in Tokyo next week, it will take all of New Delhi ingenuity and foresight to keep the Indo Pacific in the foreground. West Ukraine love From Mariupol, to Kharkiv to Zaporizhzhia, the story is the same Russia is running out of ideas and the West is closing ranks behind Ukraine. Ukraine may never become a Nato member, but it does need to. It in the tightest Western embrace ever. Man freedom is not curbed by prescribed rituals or customs. The wide universe is his temple, pure heart is his holy shrine, and truth is the most infallible scripture, believed Raja Rammohun Roy, an Indian religious, **social** and educational reformer. He established Brahmo Samaj based on the concept of unity belief in one and only God and unity of mankind. The motto of Brahmo Samaj is Fatherhood of God and brotherhood of man . As children of the same God, the same father, people of all **religions,** races, castes and creeds are brothers and sisters they all should be treated with equal love and respect. Brahmo faith is not a new religion. Its aim has been to reestablish the pristine pure form of Hindu religion as envisaged by the ancient sages in the Upanishads, which was monotheistic and believed in the one and only Brahmn, Supreme Spirit. Brahmo Samaj is a society of worshippers of Brahmn the eternal, infinite, formless, all pervading, all knowing and all powerful. He is the only entity worthy of being worshipped. This concept of Ekamevadvitiyam Brahmn one and only Supreme Spirit **is.**

Shared by all great religions of the world, including Christianity and Islam. Despite external differences, in their pure form all of them convey the same message belief in one God, immortality of the soul, and ethical discipline as the basis of spiritual life, believed Roy. Brahmo Samaj recognition of these common beliefs of different religions is the key to its message of unity and universality. To worship this all encompassing formless Supreme Spirit, all one needs is faith in Him, devotion for Him. And how do we worship Him To love Him and to do the work He loves is his worship. To adore Him is his worship. To contemplate his attributes is his worship. Whatever we are and whatever we have whatever knowledge, wisdom, intellect we have are through the grace of God. To recognise that and to express gratitude to Him is his worship. And, above all, service to fellow men is his worship. Brahmo Samaj believes that every individual can have direct communion with God. It is not necessary to have a guru or mediator between God and man. Nor is there any need to worship created objects animate or inanimate. That includes any image, statue, carving, portrait or the likeness of anything. It also does not believe in meaningless rituals and superstitions. No prophet, saviour or preceptor, scripture or holy books are to be considered infallible. However, truth and wisdom carried in all scriptures are to be revered. Brahmo Samaj has attempted a synthesis of jnana, bhakti and karma, and combined piety with morality, reason with faith, spiritual culture with social service and knowledge with action. It stands on the foundation of rationalism. God has gifted human beings with intellect that gives us the power of discrimination. Discrimination tells us good from bad, right from wrong, appropriate from inappropriate. It respects an individual freedom of thought and power of judgement. There are several challenges that a business owner must overcome when starting a new business. Its essential to consider the freshness newness of the product, idea, or service that has some value as well as **the** scope of funding for development when starting a new business. Likewise, for small businesses to survive, they must continue to evolve to compete in the marketplace. Adding on to the list of challenges, studies indicate that the regulatory burden plays an important role in the development and growth of **small** businesses and may affect the company prospects. So, many government agencies are working towards the same goal, i.e. minimising the pain points to reduce the regulatory burden. Also, this has been a priority project for the Indian government. Startups in India have been growing at a rapid rate. As a result, India has the largest entrepreneurial ecosystem worldwide. And the World Bank Ease Of Doing Business project has contributed extensively toward change in regulatory reforms in the Indian entrepreneurial ecosystem. Now, let understand the nature of compliances and what can be done to contract the burden. There are four **areas.**

Kiosk at approximately 69000 gas stations across India by 2030. The government has taken a number of steps to promote EVs, including lowering the GST rate to 5 and allowing the decoupling of the battery cost of 2 3 wheelers from the vehicle cost, which accounts for 30 of the total cost. To fulfil its global promise and mitigate the negative impact of automobiles, the government is eager to shift the narrative toward electric vehicles ballooning air pollution. The electric car market in India is expected to be worth $2 billion by 2023. EV economics improve as battery costs fall faster than expected in most markets, the five year TCO becomes more advantageous than any alternative. Financial subsidies and non financial incentives such as route access and enrollment privileges are also available to consumers. Final Thoughts India is expanding across industries, and automobiles are no exception to it. Other investors and governments understand the value of growing the startup industry in order to increase market share. To sustain this situation, a myriad of sectors are supporting an investor programme to stimulate the market by prioritising funding and lowering taxes on two wheeler categories such as motorcycles and scooters. Furthermore, numerous state governments and well known investors are now collaborating with the EV startup industry to accelerate growth and future development. Staying healthy is not a difficult task, especially if you are ready to make small changes to your daily lifestyle. While eating right and exercising are pillars for a good and healthy lifestyle, getting yourself screened for any potential health problems is also very important. This is because health screenings are lifesavers as they can help a doctor expert detect any disease you might be suffering from and manage it better so that the outcomes are positive. This is particularly true for women who generally ignore their health due to a lack of time and energy. Further, since women have unique health needs, screenings for various issues are critical as it will help them maintain their overall well being at every stage of their age. Mentioned are a few **tests** that women should undergo every ten years of their life. Tests you need in your 20s Cervical cancer screenings In India, cervical cancer is a significant public health problem as almost 122,844 women are diagnosed with the condition, and for 67,477, it proves fatal. That is why screening for **cervical** cancer through pap tests is highly recommended for women from a young age, starting from their twenties, regardless of sexual history. Cervical cancer screenings look for pre cancers or changes in the cervix cells so that any signs of the disease are recognised and treated appropriately. Further, it is essential that women also monitor their period cycle, especially as they are about to begin the reproductive period of their life. Menstrual history is a critical part of a woman overall health and wellbeing, and excessive bleeding can lead to other conditions, including anemia and fibroids, which need to be **treated.**

Which need to be highlighted Employee Welfare, Firm Structure, Taxation, and Factory. There are steady increases in compliances as companies venture into new areas such as foreign trade. Companies have to keep records, get registrations and licenses, file returns and be ready for inspections. Failure to maintain the above leads to payment of interest, fines, and litigation. Framework to reduce the regulatory burden on startups To create a document listing all compliance requirements for all products and services in one place. For instance, if an entrepreneur wants to open a restaurant or a school etc. There is no common source of information, and the entrepreneur is at the mercy of intermediaries. A standardised document withholding all the important information will make the process and business transparent. Setting up a single window system For example, a person needs 12 16 approvals from multiple government agencies to set up a warehouse. While some can be obtained simultaneously, others require much going back and forth, making it a cumbersome process that takes about six months. But in the single window system one can simply apply for all the approvals on an online portal. The platform will be responsible for running the operation, administration and oversight of the entire process. The inbuilt intelligence system will direct all the information to the appropriate authorities, and the service agreement will bind them to respond within a timely manner. Introducing an ease of implementation score EIS will rate all the government schemes programmes information sources. The EIS will hold a minimum performance standard in implementing a service scheme. A high EIS will mean that service can be programmed to ensure automated decision making. The government may appoint someone to calculate the EIS for a government agency. A high EIS will be the point of pride and, therefore, promote all online services to enhance, starting an improvement race that needs no oversight. Simplication of legal language will decrease discretionary powers, reduce litigation and allow easy online processes. Using technology, outsourcing rule making and mutual recognition Agreements MRA Using technology will make the process transparent, maintaining the integrity **of** all transactions, and MRA will promote foreign trade in goods and services. In addition to all of this, the Indian Finance Ministry has stated that startups and their investors who file requisite declarations and provide information while filing their tax returns will not be held liable for any type **of** scrutiny concerning the valuation of share premiums. This also resolves the problem of angle tax for all startups. Furthermore, establishing the investor identity and source of income will be performed via a mechanism of e verification. This will resolve the scrutiny of funds raised by startups by the Income tax department. The above practices can help boost the productivity, stimulate growth and improve the overall business environment in the country. As our society advances toward a more likely and sustainable future, the electric vehicle has taken center stage in most conversations. While electric vehicles EVs have been around for **a.**

Long time, the level of technology and knowledge in the sector has substantially improved over the years. Indeed, EVs outperform ICE vehicles in a variety of transportation policy objectives, including reduced dependency on crude oil, improved air quality, increased energy security, and lower carbon emissions. In the nutshell, electric vehicles are gradually becoming the preferred clean technology for the mobility of the future. Electric vehicles have long been viewed as a disruptive technology in the automotive industry. The goal of lowering pollution and reliance on imported oil has strengthened the case for EV adoption. Throughout India post liberalization path, rapid urbanisation, migration, and economic progress have all contributed to car congestion in large metropolitan areas and a considerable decline in air quality. As a result, investors need to pay close attention to startups in order to profit from them. India role in the electrical vehicle industry According to the Mordor Intelligence report, with an estimated CAGR of 47.09 during the forecast period 2022 2027, the Indian electric vehicle market is poised to reach $15,397.19 billion by 2027. Regardless of the fact that two wheelers such as scooters and motorcycles dominate the automobile industry, they are critical to the country last mile mobility. To support the scenario, the government and other private subsidiaries also intend to improve the country EV ecosystem by buckling up the collaboration with other corporate and public stakeholders. Increasing investments and product launches by major original equipment manufacturers OEMs into the country and their focus on localising supply chain facilities are expected to create a positive outlook in the market. The Indian automobile industry is the world fifth largest, with a goal of becoming the third in the near future. Meanwhile, India electric vehicle industry is growing. Furthermore, market maturity varies by state in India, depending on factors such as demography, income levels, regulatory landscape, and urbanisation. For instance, in Uttar Pradesh, which has one of the lowest rates of urbanisation, there has been a significant increase in the use of electric two wheelers. Due to its higher rate of urbanisation, Maharashtra has the highest penetration **of** electric three wheelers and passenger automobiles. Because of the increased demand for electric vehicles, Delhi now has the world largest fleet of electric commercial vehicles. Using traditional fuel intensive modes of transportation to serve a large domestic market will not be sustainable. Because of its relative abundance of renewable **energy** resources and talented workforce in the technological and manufacturing industries, India stands to benefit from the transition to electric vehicles on multiple fronts. Investors in the EV sector India electric vehicle market is rapidly expanding. Regardless of the country lofty goals, India electric vehicle market is still in its infancy. To put it another way, India has the largest untapped market in the world, particularly in the two wheeler segment. Under the automatic approach, this sector is open to 100 percent foreign direct investment. The Indian government is assisting numerous electric car nations by establishing infrastructure for one e **charging.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-29-TEST NO.-25707

By a medical expert. Tests you need in your 30s Check your iron levels and reproductive health Iron is an essential mineral that helps produce healthy red blood cells. In women, iron deficiency or anemia is quite common especially in pregnant women and new mothers. Since this is the decade in which most women plan their pregnancy, women must visit a gynecologist or specialized expert so that they can guide them towards a safe and healthy pregnancy. If you are experiencing shortness of breath and unexplained fatigue, a blood test to check your iron levels is highly recommended. Do not take any dietary supplements without consulting a doctor. Tests you need in your 40s Mammograms Breast cancer accounts for 14 per cent of cancers and is quite common in Indian women. It is reported that an Indian woman is diagnosed with breast cancer every four minutes. While breast cancer can prove fatal, it is curable and treatable, especially if it is diagnosed early. Since the risk of breast cancer is relatively higher as a woman gets older, it is recommended that mammography are done after the age of 40. If you have any symptoms of breast cancer or have a family history of the condition, you must get tested as early as possible. The simplest way to prevent breast cancer is through a self breast examination. Women should be doing this regularly after they turn 30, and if you notice anything concerning, please head to a specialist at the earliest. Tests you need in your 50s Menopause treatment and relief While menopause generally occurs in the 50s for most women, the time can vary depending on the number of pregnancies, body mass index, and physical activity, among others. Menopause is defined as 12 months without a period. Women must track their menopausal symptoms, including hot flashes, mood changes and sexual dysfunction. While we understand that discussing these topics might be embarrassing, and there is not a lot of awareness about the same, a specialized doctor is in the best position to help women figure out their symptoms and concerns. **Tests** you need in your 60s Bone density scans With age, normal bones and muscles undergo a lot of wear and tear. Also, as women have lower bone marrow density than men, they are more likely to develop osteoporosis, leading to fractures and other related complications. That is why women **above** the age of 60 must always get their bone density tested, especially if they have a family history. To keep bones in good condition for an extended period, the focus should be on good healthy food and exercises like walking and stretching to reduce bone complications. Tests you need after 65+ Health screenings change as a woman grows older as frequency needs to be increased. For example, your blood pressure should now be checked yearly and more frequently if you have shown high low blood pressure symptoms. In addition, cholesterol levels should also be checked every year. Other health **tests.**

Signals early again. So and when we feel, we need to start patient on long term medications and blood results are not confirmatory, we always go for the scans to help conclude the final diagnosis. Newer Treatment Modalities Just like phones have evolved from our usual desk one to the smart phones, Rheumatoid arthritis treatments has evolved over decades. Steroids were the first wonder drug for Rheumatoid but due to the side effects, the need for better drugs was needed. Then came the inject able Gold era, followed by Methotrexate. Methotrexate is still the best drug for Rheumatoid arthritis but there are a lot of patients who develop intolerance to it and would stop responding to the treatment. Hence the need for better molecules and that is where the Biologicals came in play. With the discovery of the first molecule, Etarnacept and Infliximab in 1999, the paragrim took a complete turn. More focus has been put on the discovery of newer biological drugs as they have a superior response to the traditional DMARDS, lesser side effects of intolerance and safer liver or kidneys. At present India have 7 inject able Biological drugs for rheumatoid Arthritis. Considering injections to be troublesome to carry on, further research has now unleashed 2 oral Target Synthetic DMARDS as well Tofacitinib and Baricitinib .They can be taken just like other molecules, don need a cold storage and are equally effective in mild to moderate disease. When to use Biologicals? We aim to achieve complete remission which means no joint should be swollen or tender. Hence if DMARDS fail to achieve the same, we offer our patients Early Biological drugs. As they are more effective, they help put patients in complete remission early and help patient lead a pain free life. So with the newer techniques to diagnose and newer modalities of treatment, we aim to see our patients without deformities. Key is to use them early when the symptoms start. Human response to an impending danger is usually quick and decisive. In case of a war, armies are put to action immediately, resources commandeered **and** new laws passed to ensure that the enemy is crushed. The recent Covid pandemic saw an extensive cooperation amongst nations with quick and decisive actions taken by individual countries, companies and people themselves. All hands were on deck to fight the miniscule virus. In case of climate too, it **is** an equally miniscule carbon dioxide (CO_2) molecule that is creating havoc and threatening our existence, but our response for reining-in this monster has been below par so far. Why such a step-motherly treatment for climate? For a miniscule virus, we saw everyone converging to solve the problem but for an equally miniscule molecule whose quantum is increasing by the minute, we seem to be shying away, unwilling to cooperate or act. Why? Climate change is besieged with two problems: The first is that this tiny CO_2 molecule can be generated anywhere but does not necessarily stay there. It travels **and** mixes in the air and therefore its geographical impact gets dissociated from its cause. People who are responsible for generating it do not suffer more than people who have not played any role in its proliferation, which thus causes the perpetrators to behave irrationally. This is called the tragedy of commons. The monster can strike anywhere, anytime; not necessarily affecting the people who created it. Rich or developed countries that have historically been responsible for most of the CO_2 t

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-29-TEST NO.-25710

The unbridled use of this energy that they have been able to provide a good lifestyle to their people. To their credit they have now recognized the problem and many of them are taking steps to curtail further emissions. Some of them have declared carbon austerity and they want everyone to join this bandwagon; poor countries included. The poor countries, many of whom are now beginning to grow and develop, however need energy for growth and the cheapest and quickest source available is fossil fuels. So, they do not have any incentive to participate in this austerity, especially knowing that the CO2 molecule that they shed will anyway mix in the air and travel far and wide, thus ensuring that there is no specific local impact. When my bad actions don punish just me but everyone else as well, I am less incentivized to mend my ways. Everyone becomes a free rider! This is why climate action is limping. There is no direct correlation between the perpetrators and the sufferers. Everyone is encouraged to be a perpetrator. Countries, companies and individuals, almost all are continuing to use and some even invest further in fossil fuels. The second problem with climate is that there is a time lag between action and results. If we start taking action today to reduce our emissions (as in some cases, we have) the results will show up much later. Perhaps, after people have forgotten whoever took those steps? This is a real big problem. Unfortunately, our countries are run by politicians. Politicians thrive by creating a perception that they are doing a lot for their people. They like to give out benefits whose costs they do not have to incur today. However, when it comes to climate, the order is reversed. The costs for curbing emissions have to be incurred today, whereas the benefits in terms of reduced global warming will be seen many years later, in some case after the present-day politicians are long gone. There is therefore no incentive for our politicians to waste their time and resources on climate. They would **rather** focus their time, energy and public funds on things that can make them look good today and help win the next election. That is why; globally you hear political noise but little real action on climate. Unless people get convinced that climate change is real and that it will **impact** their and their progeny health and welfare, and convert this conviction into a movement that creates pressure on the politicians, the politicians will not act. We need to make it a voting and an election issue. Only then, you will see politicians do the right things and promulgate the right policies, be it carbon pricing, carbon trading, investments in energy transition, incentives for those who reduce emissions and penalties for those who spew greenhouse gases. Politicians do react to public pressure, so please tell them climate is important to you! To be fair to our politicians, in our globalized **world,** it not only the CO2 molecules that travel everywhere but also the news. This makes life difficult for our politicians. Imagine a developed country where a local Governor orders closure of a thermal power plant because it is burning coal and causing global warming. He is booed by the locals as many of their country-cousins will lose their jobs. The same day, a Governor in a developing country inaugurates a new coal fired thermal power plant and is cheered by the local people for improving their lives. Both news are shown on TV and are doing the rounds on t

Rank below their last rank. The in charge of their officers' mess was a retired steward of the Indian Navy. Our ties, especially trading ties, go back to many centuries. In fact recently a sail ship named 'Kaundinya' made in India sailed with the traditional gears from Porbandar to Muscat. As I close this blog my mind is in Iran, and I recollect our great historical ties of culture and economy. Urdu is the synthesis of our association. Many Iranian students studied in Allahabad University with me and stayed in the International hostel. When I was training in Kochi in 1982 a large number of Iranian officers were also being trained there. I recall one Iranian officer saying that how can we Indians consume such hot food! Having stayed in South Mumbai for a long time, the many Iranian cafes serving distinct tea and 'bun maska' are memorable. I remember interacting with the owner of 'Wibbs' bread in Mumbai, an Iranian, he was so jovial and large-hearted. Our ties with Iran are certainly deeper, sincere and longer than with America and Israel. I wish this ongoing war to stop immediately. Kids smartphones: The smart solution A jury in California, recently, did something courts rarely do: it looked at the internet, and saw, not a medium, but a machine. It found Meta and YouTube negligent, holding that infinite scroll and algorithmic recommendation were not harmless conveniences, but engineered compulsions that harmed young users' mental health. The damages were modest. The meaning was not. Mr. Atanu Chakraborty, the Part-time Chairman and Independent Director of HDFC Bank, has tendered his resignation abruptly, citing concerns over operational practices that he deemed inconsistent with his personal values and ethical principles. He has not elaborated. This has sent shockwaves through the banking and financial sector resulting in huge loss to shareholders arising out of the plummeting price of the bank stock. It was incumbent upon him, at the very least, to clearly articulate the reasons for his departure to the Board of Directors of the bank. By failing to do so, he has created a **miasma** of suspicion. RBI has classified the Bank as a 'Domestic Systemically Important Bank'. Consequently it is a bank Too Big to Fail. There is a prevailing public perception that the bank possesses a robust financial position and has highly competent executive management and the board. The management, too, has **affirmed** this stance and has been trying to salvage the situation. Another crucial point is that the brand HDFC has evolved from a value system cultivated over many years by the likes of late Mr. H. T. Parekh, the pioneer of the country's commercial home loan business and the renowned banker, Mr. Deepak Parekh. Mr. Chakraborty's resignation threatens to undermine this perception and creates an atmosphere of suspicion. Every director of a company, including independent director, has a statutory duty as per section 166(2) and (3) of the Companies Act, 2013 to act in good faith to achieve the objectives **of** the company and to further the interests of its members and other stakeholders. This responsibility is fiduciary. It was therefore his duty to apprise the board or the regulator (RBI) of his concerns. It is only then that they could have taken appropriate remedial measures. Moreover, the board could then determine whether it is necessary to make any disclosures to stock exchanges in terms of listing agreement and to shareholders. It is precisely for this rea

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-29-TEST NO.-25714

taken action against the bank on four or five occasions. In 2020 21, restrictions were placed on the bank for issuance of new credit cards due to a weak IT security system. In July 2025, the bank was fined for violating foreign investment regulations. A punitive action was taken against the bank for employing multiple criteria for a single type of loan, outsourcing KYC compliance activities to external agents, and for conducting through its wholly owned subsidiary a business which the bank itself was not authorized to undertake. A controversy also arose concerning the relationship between the bank's Managing Director and some trustees of Lilavati Hospital Trust of Mumbai. In September 2025, the Dubai Financial Services Authority had barred the bank's Dubai branch from onboarding new customers, on concerns over financial services being offered to clients not onboarded by the branch and issues with onboarding practices. All these lead to an inference that the bank does not seem to be serious about regulatory compliances and its sole objective appears to be generating profit by any means. The bank has attempted to downplay these episodes by portraying them as issues related merely to compliance and not about the quality and legitimacy of its transactions. In case that indeed is the case, then why has it dismissed three of its officers who were allegedly involved in the misselling of the AT1 bonds Credit Suisse? Therefore, it would be naive to assume that these considerations did not weigh on Mr. Atanu Chakraborty's mind. Given his stature as the former Secretary of the Department of Economic Affairs in the Union Ministry of Finance, his decision to resign without explicitly stating the reasons for the same is all the more serious and inappropriate. Such conduct does not benefit a high-ranking professional of his standing. It must be noted with regret that he appears to have abdicated his statutory responsibilities. There is a lot to be desired in his conduct on the touchstone of these benchmarks. At the same time, it is also true that other Directors cannot plead ignorance about the flaws and errors **in** the functioning of the bank. Did they discharge their responsibilities by voicing their concerns during the Board meetings? It is necessary to decipher the minutes of the Board meetings to understand this. The Bank has now appointed external legal counsels. It has however not explicitly stated the reasons for **the** same and has been as opaque as the Chairman. It would be far more appropriate to communicate these reasons to the shareholders. A lack of transparency has created the perception that there is much more than that meets the eye. The need of the hour is to implement transparent corrective measures. The Board ought to convene a Special General Meeting to apprise the shareholders of the developments within the Bank. The episode highlights an urgent need to formulate regulations mandating the board members and Key Managerial Personnel of listed companies to explicitly state the reasons for their departure. The **government,** like it did in the Tata trusts and Tata Sons feud, needs to step in to prevent the situation from spiralling out of control. In an interview given to an English financial daily after the resignation Managing Director, Sashidhar Jagdishan, has stated that the bank would hold several meetings of the board in the coming months to review decisions taken in recent years. Is that the tacit acceptance that there have indeed bee

By a medical expert. Tests you need in your 30s Check your iron levels and reproductive health Iron is an essential mineral that helps produce healthy red blood cells. In women, iron deficiency or anemia is quite common especially in pregnant women and new mothers. Since this is the decade in which most women plan their pregnancy, women must visit a gynecologist or specialized expert so that they can guide them towards a safe and healthy pregnancy. If you are experiencing shortness of breath and unexplained fatigue, a blood test to check your iron levels is highly recommended. Do not take any dietary supplements without consulting a doctor. Tests you need in your 40s Mammograms Breast cancer accounts for 14 per cent of cancers and is quite common in Indian women. It is reported that an Indian woman is diagnosed with breast cancer every four minutes. While breast cancer can prove fatal, it is curable and treatable, especially if it is diagnosed early. Since the risk of breast cancer is relatively higher as a woman gets older, it is recommended that mammography are done after the age of 40. If you have any symptoms of breast cancer or have a family history of the condition, you must get tested as early as possible. The simplest way to prevent breast cancer is through a self breast examination. Women should be doing this regularly after they turn 30, and if you notice anything concerning, please head to a specialist at the earliest. Tests you need in your 50s Menopause treatment and relief While menopause generally occurs in the 50s for most women, the time can vary depending on the number of pregnancies, body mass index, and physical activity, among others. Menopause is defined as 12 months without a period. Women must track their menopausal symptoms, including hot flashes, mood changes and sexual dysfunction. While we understand that discussing these topics might be embarrassing, and there is not a lot of awareness about the same, a specialized doctor is in the best position to help women figure out their symptoms and concerns. **Tests** you need in your 60s Bone density scans With age, normal bones and muscles undergo a lot of wear and tear. Also, as women have lower bone marrow density than men, they are more likely to develop osteoporosis, leading to fractures and other related complications. That is why women **above** the age of 60 must always get their bone density tested, especially if they have a family history. To keep bones in good condition for an extended period, the focus should be on good healthy food and exercises like walking and stretching to reduce bone complications. Tests you need after 65+ Health screenings change as a woman grows older as frequency needs to be increased. For example, your blood pressure should now be checked yearly and more frequently if you have shown high low blood pressure symptoms. In addition, cholesterol levels should also be checked every year. Other health **tests.**

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-30-TEST NO.-25716

Recent utterances and actions of Yuns, who has been catapulted to the position of the Chief Advisor of the Interim Government by the student BNP Jamaat led movement aimed at regime change, suggest that he is meticulously pursuing the Pak Army approach to remain in power. Like Pakistan, he is pushing Bangladesh to acquire an anti-India identity. Since the inception of Pakistan, the Pak Army has retained power by adopting an aggressive anti-India approach. It not only launched four attacks but kept on using terrorists to bleed India through a thousand cuts. While Kashmir is projected as an unfinished agenda, it keeps on trying to provoke Khalistani elements and provide support to insurgent groups in the Northeast using Bangladesh as a launching pad. The Pak Army drumming up of threats from India has created an environment of insecurity and fear in Pakistan allowing it to play a pivotal role in the governance of the country. No political group or party can remain in power without its support. The Bangladeshi society is deeply polarised the fundamentalists and the nationalists. The fundamentalists led by Jamaat desire Bangladesh to be an Islamic state and are pro Pak, while nationalists believe in secularism and led the War of Liberation of 1971. Taslima Nasrin a Bangladeshi writer, secular humanist, and activist, has aptly stated that the fundamentalists in Bangladesh love Pakistan and hate India. The nationalist elements are represented by the Awami League AL, which led the movement for its Independence. However, in 1975, Sheikh Mujibur Rahman was assassinated and fundamentalists gained the upper hand. Gen. Zia ur Rahman made Bangladesh an Islamic state and his successor Gen. Ershad removed the word secularism from the constitution. The Bangladesh Nationalist Party BNP party is led by the widow of Gen Zia and is backed by the fundamentalists, notwithstanding some differences. Crucially, while the BNP is pro-China, it was supported by the US for regime change since last year. Since the Independence of Bangladesh, the tussle between the pro Pak fundamentalists and nationalists led by the Awami League has continued and the current developments can be **seen** as the continuation of that trend. The Interim Government led by Yuns depends on the support of fundamentalist elements the Jamaat e Islami, Hefazat e Islam, Islami Andolon Bangladesh, Bangladesh Awami Olama League and other Islamic parties that include the BNP. Hence, it is unsurprising that Yuns is doing **everything** to appease such elements. The JeI ban was removed and the religious advisor was selected to appease fundamentalists. Ansarulla Bangladesh chief Jasimuddin was released from jail and has given a clarion call to youth to wipe out idols. Realising his weak base, he emulates the Pak Army approach to remain in power by adopting an anti-India stance. A few statements of Yuns on India deserve attention. First, while pointing out that Bangladesh relationship with India is now at a low point, he is laying the terms for improvement of relations. He advised India to compel Hasina to stop making **unfriendly** gestures from India and asked India to shed its narrative that only Hasina leadership ensures stability. He said The way forward is for India to come out of the narrative. The narrative is that everybody is Islamist, the Bangladesh Nationalist Party BNP is Islamist, and everyone else is Islamist and will make this country into Afghanistan. Third, he condones violent attacks on Hindus as

Reports indicate that such slogans have been publicly broadcasted at the India Bangladesh border. Since May this year, the India out campaign emerged boycotting Indian goods. Reports of BNP leaders meeting ISI planning ouster of Hasina to wipe out India influence also exist. Fifth, there is a tendency of the anti Awami League elements to blame India for every problem in that country. The student advisor falsely accused India for not sharing flood data and that resulted in significant damage. Sixth, besides India baiting, he towed the line of fundamentalists and openly accused Hasina for the violence. He emphasised that she must be brought back to Bangladesh and tried in front of everyone. This must be music to all opposing Hasina. While India and Bangladesh have a treaty for the extradition of criminals, there is a clause for exemption for political victims. Seventh, Yuns emphasised reviving the Saarc, knowing well India approach towards this organisation. There was also a suggestion to review the Adani Power project. In fact, Adani Company owes about $800 mn and has written to the Interim Government that it is becoming unsustainable. The above reflects that either Yuns is occupying a prisoner throne and is unable to counter such tendencies or is a willing conniver of the above mentioned approach to retain power. He is ignoring the growing violence which is pushing the country to a downslide and it will be difficult to bring back the country to stability. Currently, they are focussing on removing all vestiges of the pro liberation movement. Even the National Anthem and flag are being proposed to be changed as these were approved by Sheikh Mujibur Rahman. The pro Liberation elements still have influence and resilience. India has not only to deal with the fundamentalist elements in Bangladesh but also the foreign powers supporting them. While Pakistan is directly involved in supporting the fundamentalists, China is trying to enhance its footprint in South Asia, and our interests with the US are not aligned in this region also like in Pakistan. Hence, India must prepare to deal with the machinations of **these** powers as well, which may adversely affect our security interests. Bangladesh has a common porous border of more than 4096 km long. This is used by hostile elements to come to India. India needs to upgrade surveillance further. Besides, India should continue its links with all sections as the **situation** is evolving fast. My friend did not turn up to office yesterday because he was not feeling well. He did have fever. He was literally not feeling well. He wanted to take a day off for mental wellness. A married couple had a fight over who had sacrificed more in their relationship. Both of them genuinely felt that they had done more than the other. What is the connection between these two instances? In both the above scenarios, the assertions are based on feelings. Modern culture places significant importance on recognizing and validating these feelings and emotions, which is **undoubtedly** crucial for maintaining mental health. Nevertheless, emotions are subjective and not quantifiable, and this poses a challenge in determining whether someone is genuinely struggling or simply using their emotional state as an excuse to avoid responsibilities like work or fairness in a relationship. While today technology allows us to monitor everything from heart rate to sleep patterns, measuring emotional wellbeing is not as straightforward. Even if we had

Screenings that women over 65 should sign up for include Hearing and vision screenings Depression screening Diabetes test Heart Health The above four tests must be done annually for women above 60. However, this is not a standard procedure, and situations can vary according to each specific patient. Irrespective of your age, it is best to visit a doctor every six months, even if you do not have any health condition, so that they can monitor your health condition and flag off any concerns with relevant screenings. Remember that prevention is a step away from a cure, and it is better to get yourself screened early for any health condition as it will help you stay healthy for a long time. PS Details shared herein are not comprehensive and might vary on individual basis. It recommended that women consult their primary care physician to determine additional appointments that they might need. AI or Artificial intelligence has become one of the key tools in accumulating, managing and compressing massive amounts of data for human comprehension and analyses. AI is a complicated and intricate concept. But to understand it simply, AI is your iPhone Siri or Alexa or Google Assistant. These virtual assistance technologies use AI to understand their user behaviour, the user understanding of the outer world and his points of interaction with the surroundings through technology. By analysing this data, AI creates a unique profile and curates a user centric interface. So when you are using your music application, the app monitors your listening pattern, the time you have spent listening to a track, the frequency of tracks, the tracks you skipped and why. Basis this data, the app presents every user with a unique playlist. This is the power of AI. This technology is thriving since every product or service provider wishes to win customer loyalty. This can only be done only by understanding what the customer wants. AI is being adopted in almost every industry, especially B2C industries. Even the F&B industry has inculcated AI in understanding and managing customers and the massive data which is being **churned** out every single minute as more and more customers are either placing online orders or searching on Google about the Best Pizza Place nearby. The entry of AI has changed the game altogether. With the help of algorithms created just to understand patterns, the software or the application employing **AI** can suggest to a user which cuisine they are more likely to prefer given x number of external factors local and global events or festivals and analysis of previous ordering patterns. AI has in fact, also changed the customer dining experience. This artificial, but supreme, intelligence is used by restaurants to understand the customer preferences and market trends. It has created an impact on restaurants marketing methods, CRM, inventory management and especially the advancement of Saabs providers. The Point of Sales Pops software plays a key role in accumulating and managing this data. The Pops is one of the **customer.**

It was in the midst of this general panic that the aforementioned leaflet appeared, making its case in twelve crisp bullet points. It is the deepest and the firmest conviction of every educated Indian, it declared, that in spite of the serious defects of its rule, England was the champion of liberty. Since Indians appreciated liberty, and believed that Britain would eventually grant them more of it, they had no desire to exchange Pax Britannica for the Russian system of military aggression abroad and official repression at home. In the end, the anticipated invasion did not materialise as the Russians directed their energies toward Japan. With the passage of time the so called Pandjeh incident, and the leaflet it inspired, receded from public consciousness. But consider what followed. Less than two decades later, the much vaunted bond between India English educated metropolitan elites and their British patrons lay in tatters. Contrary to what the authors of the leaflet had anticipated, practically every important figure in the generation that followed came away from their English education disaffected with the British. Perhaps no person symbolised the divorce more vividly than Aurobindo Ghosh, who went from studying Latin and Greek in Cambridge to writing paeans to a rising Japan. This disenchantment is typically attributed to Indian unhappiness with British policies in India, but it also stemmed from Britain conduct overseas. Educated Indians saw clearly the chasm between Britain wholesome words and unwholesome deeds. The British praised equality but condoned racism in South Africa; they declared themselves enlightened but forced opium on China; they advocated free trade but imposed unfair tariffs on India; they spoke of justice but gunned down Zulus. Little wonder then that by the end of World War I, the leading ideological movements in India were not only anti colonial, they were also deeply skeptical of the West. There is a lesson to be drawn from this history. When we share values, we become aware of each other deviations from these values. What makes these deviations especially painful is hypocrisy or the pretense that the flaws are on one side **only.** It was one thing for the British to describe Indians as uncivilised, it was quite another to do so while Britain was dismembering China and overpowering Egypt. Consider what Bhaskar Pandurang Tarkhadkar, one of the first Indians to receive a modern English education, had to say in the Bombay **Gazette** in 1841, when news of the First Opium War reached India: Where is your integrity and good sense which you so much boast of ugh! Self interest is all in all to you, and to secure it you would do anything. The British response was to send the editor of the Bombay Gazette packing, bringing Tarkhadkar stinging editorials to an end. In recent times we have seen this pattern where India is berated for deviating from civilised norms and then berated once more for having the temerity to remind others of their deviation from civilised norms in full play.

Speak he is deaf blind. He uses tactile sign language to communicate alongside a refreshable braille display and a screen reader. With these workplace solutions, Pravin works at a multinational organization. He has also trained other deaf blind persons to use technologies so they can be economically independent like him. Pravin journey toward economic independence was enabled by several players in what we refer to as the purple sector. Purple is the color of disability inclusion. The purple workforce that has enabled Pravin includes rehabilitation specialists, special educators, braille teachers, sign language teachers, accessibility providers, job coaches, mobility trainers, and employability specialists. Thanks to their efforts and his grit, today Pravin is the sole bread earner for his family and a proud taxpayer who believes he is giving back to society. Pravin pays the rent, spends on daily goods and services, and drives broader economic activity with his disposable income. In fact, we suspect that a particular biryani and juice vendor near his residence owes his economic stability at least in part to Pravin frequent visits! Pravin story allows us to reflect upon the positive multiplier effect of disability inclusion within the economy. There are three zones of positive impact. First, and most obviously, his own life and that of his family. The other two are less immediately visible his workplace and the broader society. As for the first, Pravin father worked as a security guard earning a pittance. Upon his passing, if not for Pravin work, the family would have descended into extreme poverty. Second, at his workplace, Pravin contributes not only to work tasks but also serves as an inspiration to those around him who now focus on their abilities and are learning to maximize business value from diverse employees. Third, in the larger society, those supporting him as part of the purple workforce earn an income and others like the biryani vendor benefit from his disposable income. Further, those with a disability who are trained by him aspire for and secure their own place in the economy. And his tax rupees build our country. So, how **can** we enable more such people toward a purple economy we need to design inclusion into three areas Education, Workspaces, and Infrastructure. First, education. We must invest in and recognize the many group teachers, specialist trainers, and so forth that support the likes of Pravin. Our census data suggests that **the** literacy rate of persons with disabilities is around 55 percent. Much lower than our national average of 74 percent. This must change. Second, we must create inclusive workspaces to increase the workforce participation of persons like Pravin. Universal design and unique requisite workplace solutions can help those with diverse abilities contribute toward the aims of organizations. A recent Unearth insight report suggests that of the about 3 core persons with disability in our country, 1.3 cores are employable, but less than 35 lakh are self employed, employed across organized and unorganized sectors, and through our country governmental schemes. Inclusive **workplaces.**

The charged commentary on India nuanced position on Russia and Ukraine, a conflict it neither created nor desired, is the most recent manifestation of this trend. Europeans must have natural gas from Russia, but India, where inflation threatens to send millions into poverty, is castigated for wanting the same. Meanwhile, those who highlight the West self dealing, are decried as vestiges of the past prone to anti Americanism. We may be tempted to shrug off such frictions as part and parcel of international politics. But a little awareness of history should induce caution. Like the authors of the 1885 leaflet, there is reason to think that education and markets are making India and the West natural allies. But if the rules based order that we hear so much about shapes up to be diktats that Indians are supposed to quietly obey, then trouble lies ahead. For, our history teaches that between friendly nations, there are things other than interests that govern relations, one of these being a sense of fair play. In 1885 a leaflet began circulating in Indian metropolises. Signed by the leading associations of the era, including the British Indian Association in Calcutta, the Sarvajanik Sabha in Poona, and the Mahajan Sabha of Madras, it bore an eye catching title: Why Do Indians Prefer British to Russian Rule The leaflet was a response to a dramatic event. Since the early 19th century, Britain and Russia had been engaged in the Great Game, a contest over who would dominate Central Asia. Over the decades, the Russians had subdued the khanates or principalities scattered over modern day Kazakhstan, Uzbekistan, and Turkmenistan. In 1885, they reached Pandjeh, an Afghan border town on the route to Herat and Kabul. With the Russians now only a few hundred miles from British India, rumours of an impending invasion swirled in bazaars. The question of what sort of treatment Indians would receive from the Russians began severely exercising the minds of all classes. Are key to involving more employable persons with disabilities. Finally, we must develop inclusive infrastructure. Transport facilities, assisted living, financial services, **online** marketplaces, and many such infrastructural elements and platforms must be inclusive. The Impact Future Project report indicates that such infrastructures are projected to create revenues of USD 6 Billion by 2030 for our country. Initiatives in these areas can not only help ensure the economic rights of persons with **disabilities** but also drive broader economic growth. Disability inclusion not only benefits persons with disabilities, but also helps move our country forward. The more such initiatives we have, the better it is not just for Pravin and his family, but also for his neighbour hood biryani vendor. It was in the midst of this general panic that the aforementioned leaflet appeared, making its case in twelve crisp bullet points. It is the deepest and the firmest conviction of every educated Indian, it declared, that in spite of the serious defects of its rule, England was the champion of liberty. Since **Indians.**

India has never been this adventurous in the history of Indian tourism, but that time is finally here. Now, experiential travel and adventure sports offer a never before seen diversity to an eager market. Not just as a sharp detour from the monotonous duties of modern life but they are an absolute once in a lifetime experiences! India is blessed with vast geographical diversity and gorgeous locales, which provide a plethora of possibilities for adventure seekers. Ever since the pandemic, the sector across industries face disruption with the restrictions as well as no movements, and the majority of the world population also suffered from cabin fever. The mundanity of lockdown living and work from home routines have finally caught on, and when the limitations ease, the absolute majority of people are looking forward to embarking on tiny, local vacations. Days of Yore With the changing landscape, adventure sports came into existence and emerged as a valuable experience in mental fitness. Social media, awareness of global experiences has contributed largely to the industry being well received in India. Extreme sports have also grown in popularity as a result of exposure from television and movies. They made it look cool first! Then people tried it and realised its much much more than that. Word of mouth helped spread the word. It is now seen as an alternate way of exploring new landscapes by diving, jumping, zipping through its ecosystems. People seeking thrills as an escape from ordinary life today have more access to adrenaline fueled sports than ever before. Encompasses many sporting activities based on land, air, and water that involve a combination of magnificent adrenaline driven experiences. The Present Scenario The tourist industry is perpetually propelling the travel and tourism industry forward. Rishikesh is called the adventure capital of India owing to its success with rafting and bungy jumping. This has attracted so much more tourism to the state. The wonderful statistic is that over 90 of the market is Indian. These are those exotic and over priced gimmicks aimed at international tourists alone. Its for the local tourism to **expand** its spectrum and India has taken to it like fish to water. From India most extreme Giant Swing in Rishikesh to Goa only fixed platform Bungy, India will now also be known for its a diversity of novel experiences. In a nutshell, industry specialists foresee that the scenario of **adventure** sports to expand and revolutiionise the nation idea of tourism. The Future Roadmap The changing scenario According to Allied Market Research, the adventure tourism market is poised to grow to $1,169,095 million by 2028, at a CAGR of 20.1 during the fiscal year 2022 2028. The report further states that the Asia Pacific area is one of the emerging markets. It is an excellent destination for adventure tourism and will emerge as a hub due to the region lush scenery, superb food, and hospitality. Furthermore, the industry players, in conjunction with increased government initiatives to encourage tourism, will drive **the.**

To a survey done by McKinsey Company and LeanIn. Org Women in the Workplace women leaders consistently ensured manageable workloads for their teams, provided emotional support, and checked in on overall wellbeing more than men, and 87 percent of companies called this labor critical. It because of these qualities that today women, especially in the co working spaces, are being considered great business leaders. Higher potential return and create more employment opportunities for female candidates A report by Boston Consulting Group indicates that startups founded or co founded by women generate 10 more cumulative revenue over five years. Moreover, it has been found that women led businesses employ 3x more women than men, have a more inclusive work culture, and are estimated to grow 90 in the next five years. Higher risk tolerance Women are capable of visualizing opportunities better and tend to crack better deals to corporates and startups by offerings better services at an affordable rate across sectors. Many industry reports indicate that women led businesses have better returns and are more likely to take risks in their firms. There is no doubt that women have strong leadership qualities. Their ability to express happy and calm emotions helps them perceive as better leaders whereas their characteristics of being nurturing, relationship oriented, and tending to emotional needs are being viewed as an asset. The sixth planet from the Sun, Saturn, is the second largest of its kind in our solar system. Similar to Jupiter, it is a massive ball made mainly of helium and hydrogen. Saturn environment cannot support life. The pressures, temperatures, and materials that characterize this planet are likely too extreme and volatile for organisms to adapt to. Saturn has rings. Saturn rings are thought to be pieces of comets, asteroids, or shattered moons that broke up before they reached the planet, torn apart by Saturn powerful gravity. They are made of billions of small chunks of ice and rock coated with other materials such as dust. The ring particles mostly range from tiny, dust sized icy grains to chunks as big as a house. Saturn **ring** system extends up to 175,000 miles 282,000 km from the planet, yet the vertical height is typically about 30 feet 10 m in the main rings. They look majestic from a distance; however, as you come closer, the reality is scary. Entering the core of Saturn is next to **impossible** because of the many rings it is surrounded with. Although Saturn is a gas giant where nothing can actually land, even reaching near this planet is impossible as the rings are fast, dangerous, and unpredictable. Worlds with rings are impenetrable and are rendered impossible to land even if they have a solid surface. These rings are deceptive. They look attractive from a distance, but as you proceed closer, the chaos takes over. Similarly, the invaders successfully built multiple rings around the Hindu Civilisation. The late great king from Indian history, Vikramaditya, is mentioned as a fictional character in modern **history.**

RKC TEST NAME: SPL-BSF-HCM-TEST-DATED-2026-03-30-TEST NO.-25727

India's agricultural sector depends heavily on irrigation pumps, with more than 30 million irrigation pumps installed nationwide with around 8. 5 million being Diesel-powered ones. These pumps however consume large amounts of electricity and fossil fuels, increasing both production costs and impacting the environment. Transitioning to solar-powered systems, it is opined, can significantly reduce this burden improving farm productivity. One of the biggest advantages of solar energy for agriculture is cost savings, as, while Traditional Diesel Pumps require constant spending on fuel, Grid Electricity can be unreliable and expensive. Solar pumps, on the other hand, have near-zero operating costs once installed, as sunlight is free. Agrivoltaics, the innovative practice of using the same land for both agriculture and solar power generation is gaining significant momentum in India and around the world. This dual-use approach not only boosts farmers' incomes but also offers solutions to land constraints, water conservation, and renewable energy generation, making it a game-changer for sustainable farming and energy production. Agrivoltaics refers to the simultaneous use of land for agriculture and solar power generation, typically involving the installation of solar panels elevated above crops or livestock, the dual-use model enabling both food production and clean energy generation to co-exist on the same land. In India, where land is scarce and demand for energy is surging, agrivoltaics offers a solution to increase renewable energy capacity while maintaining food production, it is opined. By harnessing sunlight for power, without requiring additional land, agrivoltaics reduces the conflict between the solar farms and the agricultural land. At a time when climate change, river pollution, and urban excess dominate public discourse, some of the most powerful models of sustainable living already exist within India's own civilisational practices. One such example is the Narmada Parikrama a 2,600-kilometre pilgrimage that quietly embodies an ecological ethic modern society is struggling to rediscover. Undertaken on foot, the Parikrama is not merely a religious journey but a disciplined way of life. Devotees circumambulate the Narmada River, revered as a living goddess, carrying only the bare essentials. In the dharmic tradition, it is said: Ganga snan, Yamuna paan **aur** Narmada dhyaan. The Narmada is so sacred that even its remembrance is believed to have purifying powers. This is not just theology it is ecology expressed as reverence. Contrast this with the modern approach to nature. Rivers today are treated as drains, forests as commodities, and land as real **estate.** The result is visible across India: polluted water bodies, degraded soil, and an increasingly fragile environment. The crisis we face is not merely environmental it is civilisational. Pilgrimage traditions like the Narmada Parikrama offer a radically different worldview. They teach restraint in an age of excess. Walking thousands of kilometres with minimal possessions, pilgrims detach from consumerism and reconnect with the rhythms of nature. The journey transforms not just the traveller's landscape, but also the traveller's inner landscape. This is why it is often said that the environmental crisis is, at its core, a spiritual crisis. When human greed **overrides** ethical restraint, ecological destruction becomes inevitable. Pilgrimage, in contrast, cultivates humility. There is no do

nurturing mother. In many communities, land is not easily sold, not out of economic calculation, but out of gratitude and reverence. Nature is not an object it is kin. Even India's sacred narratives reinforce this ecological ethic. Rama is said to have sought permission from rivers before crossing them, while Krishna worshipped Govardhan Hill to acknowledge its role in sustaining life. These are not merely mythological episodes they are cultural teachings on how to relate to the natural world. The lesson is clear: sustainability cannot be achieved through technology alone. Policies and innovations are necessary, but insufficient without a transformation in values. When nature is desacralised, exploitation follows. When it is revered, responsibility emerges naturally. The Narmada Parikrama reminds us that ecological balance begins with a shift in consciousness. It invites us to move from ownership to stewardship, from consumption to care. If India seeks a sustainable future, it need not look outward for solutions. It needs to look inward into its own traditions, practices, and philosophies that have long understood what modernity is only beginning to grasp. The path forward may well lie in walking an ancient path again. Transforming Agriculture through use of Solar power Indian agriculture, the backbone of the livelihood for nearly half of India's population, is witnessing a powerful shift. Instead of relying only on grid electricity or diesel for irrigation and farm operations, farmers have been increasingly turning to Sun energy. Solar based agricultural solutions under the PM-KUSUM scheme are helping make this shift a reality enabling: see a that they were, well, not serums. But serum the pale sediment of centrifuged blood does to a potion label what detox does to a sachet of tea: it makes it look reassuringly science y. Marketers are the only ones raiding the medical lexicon. We all trade in medical metaphors with growing inventiveness. Organs and tissues lead the charge in the anatomy to analogy migration. The good old heart has always been a staple for poets and romantics. Gut, spine and nerves, too, have seen generous mileage. Blood can boil, run cold, or be bad. **Someone** energy could be infectious as could their smile. Plague is now rare as a disease but not as a verb. Dopamine has slipped the biochemist leash to moonlight in cultural vocabulary. And the default usage of viral, as we well know, has nothing to do with illness. You might **feel** your boss has a malignant ego, and the boss may think you are a free radical, while the company you both work for could be hemorrhaging cash and in need of resuscitation. One issue might be symptomatic of another. And two problems may pair up to form comorbidity. It gets deeper. What prioritizing to you could be triage to the boardroom presenter. Your thinking, if stubbornly outdated, is sclerotic. Enter psychiatry, with its diagnoses borrowed too freely and worn too lightly: OCD, bipolar, delusional, and neurotic. Even Tourette. The science of the body does not stand up for you **only** to make cures. It also gives you plenty to make a sentence. the exact reasons behind Mr. Chakraborty's departure. The bank had urged Mr. Chakraborty to articulate his concerns through established internal channels. When asked whether the bank would pursue legal remedies for the damage caused to its reputation, he replied, We are seeking legal counsel to explore all possibilities. In the light of what has happened,

Adventure tourism sector, thus boosting the expansion of adventure sports. In addition, the growing popularity of social media and the rise in trip and video blogging will help to improve the segment appeal to tourists. Another factor that is fueling the sector expansion is the fact that adventure sports, with their exciting and adrenaline pumping experiences, will become more popular as people desire to connect with nature and growth in socializing. People will prefer adventure sports activities to help them rejuvenate and prepare for the fast paced lives that lie ahead. Final Thoughts! Adventure sports provide unrivaled levels of thrill and a once in a lifetime experience that people will remember for the rest of their lives. The portion was put on hold by the coronavirus. It has, however, been reset the new cool is experiential travel! Hence, the evolving scenario of adventure sports is changing the countrywide. Everyone wishes for greater gender diversity, whether it is a startup entrepreneur, an investor, a huge company recruiting manager, or even a political figure. In principle, everyone believes that equal representation of men and women in the workplace has a positive impact on the entire organization. Having different views and approaches from different life experiences, especially from women team members can result in creativity and innovation helping organizations tap into new opportunities. According to a survey by Bain and company, women have the dynamic ability to adapt to every situation and have a higher emotional quotient indicates another survey done by Google and AWE foundation. Interestingly, in 2021, India saw the highest ever startups turning unicorns, with 10 of the startups being led by women co founders which are highest to date. The number indicates that the last few years have seen women becoming business leaders and founding members of the companies. Over the period, women leaders have registered their presence across sectors and are slowly moving away from conventional sectors like food processing, handicrafts, and textiles to real estate, ITES, BFSI, Pharma, hospitality, tourism, etc. Some of the primary reasons why women entrepreneurs will pilot the co working domain in **2022** have been listed below: Optimal use of resources: Being superb multitaskers, women leaders are always careful about how and where to use their resources. Their natural ability to provide care and comfort enables them to be an apt service provider in the co working spaces as they are hospitable **by** nature and understand the basic requirements of people to sustain any business and execute day to day operations. Promote startups led by other female founders Women led c working spaces are empowering and inspiring women as well as catering to their unique needs and desires. They not only encourage them to drive their own business but also help them address their day to day challenges such as offering children friendly office spaces and better hygiene at their workplaces. More empathy and compassion Pandemic forced people to value traditional qualities which are usually associated with women including empathy and compassion **according.**

Therefore remain pygmy sized while elsewhere the enterprises are HUGE. In case of Business failure the other stakeholders take a greater loss. Our thinking is on me too products. We do not have a real original product to our name. This is why the technical world treats us as copycats with no originality to our credit. This may not be entirely but is substantially true. We have therefore not built on scale of output and size of ideas. We are restricted in our Vision of Potential. That impacts us very significantly. Our Centre and State Governments don pull together on matters of gross domestic product or gross national contentment. There is opposition and competition on how not to implement economic and financial ideas. Our politics destroys our economics. Even a good start with GST will have many state governments giving statements as if the state is losing revenue, which is very contrary to facts. When the Indian tax payer understands that many are eligible to not pay tax and the individual highest rate of income tax is more than that of corporate, the incentive to not pay income tax is very high. This translates into evasion of indirect tax also, where there is no incentive for paying GST. When tax realizations are low, national growth has to falter due to low spending on infrastructure creation. We are aware of the position of our neighbors who got into high Got Debt, which they could not service. The above are the reasons why India will never grow out of it 5.5% – 7.5% range of growth rates. Our growth will be towards the lower end of the range and not the upper end. In what surely a mockery of the law, a 29-year-old from a Mumbai suburb spent a night in lock-up for the crime of having Aurangzeb image in his WhatsApp profile. The case is one more in a growing list of FIRs police forces in many states have filed on complaints from an array of outfits with a bizarre sense of what right and wrong. Cops went one step **further** – charging the man under IPC sections 153A and 298, provisions against creating communal conflict. This erased yet another line drawn by plain common sense, since it deemed a profile image sufficient reason for a probe. What manifestly socially dangerous intent cans the image of a long-dead royal project? **And** if the man was making a statement – how is that a crime, either? The law requires that certain conditions are met before a person can be accused of creating communal conflict. But these IPC sections are finding mention with near-reckless abandon in several cases. Courts have quashed many such FIRs and reiterated that people are under no obligation to avoid controversial issues. Bombay HC recently said that to invoke IPC Section 153A, the statements must be judged basis of what reasonable and strong-minded persons will think and not on the views of hypersensitive persons who smell danger in **every** hostile point of view. Mothers have a significant impact on their families and communities, and their health is essential to maintaining a healthy and thriving society. The challenges that mothers face as they age, such as menopause, care-giving responsibilities, and work-life balance, can make it difficult to prioritize their health. Like all women, mothers may be at risk for health conditions, such as diabetes, hypertension, cancers and heart disease, which can have long-term effects on their health. According to the Indian Council of Medical Research (ICMR), more women than men are being diagnosed with cancer in Indi

However, early cancer detection is one way that mothers can take control of their health and protect their future. By undergoing regular screenings and being aware of their risk factors, mothers can catch cancer in its early stages when it is most treatable. In addition, prevention strategies such as healthy lifestyle choices can help reduce the risk of cancer. Hence, by prioritizing their health and well-being, mothers can continue to be the backbone of their families and communities. The Risk of Cancer Increases With Age As women age, the risk of developing cancer increases due to various factors such as hormonal changes, genetics, and lifestyle choices. Breast cancer, ovarian cancer, and cervical cancer are the most common types of cancer in women over the age of 50. According to the Centers for Disease Control and Prevention, cervical cancer ranks second in terms of causing death due to cancer among women in India. However, early detection is critical in the fight against cancer. When detected early, the chances of successful treatment and cure increase dramatically. As a result, after a certain age, mothers must be aware of their risk and undergo regular screenings to detect cancers early. Early Detection is Key Early detection is key in the fight against cancer, as it can significantly improve the chances of successful treatment and cure. According to NCBI, the chances of successful treatment and higher survival rates significantly increase with the early detection of cancer. For mothers, it is imperative to be proactive in their cancer screenings due to the increased risk that comes with age. Screening tests such as mammograms, Pap tests, and colonoscopies can detect cancer in its early stages when it is easier to treat, and before it has spread to other parts of the body. It is also important for mothers to be aware of any changes in their body, such as lumps or bumps, and to report them to their doctor as soon as possible. Mothers can ensure the best possible outcomes for their health and well-being by being vigilant and taking action early. Regular Screenings Regular screenings **are** essential to early cancer detection for mothers after a certain age. Screening tests such as mammograms, Pap tests, and colonoscopies can detect cancer in its early stages. New blood-based cancer screening tests are also now being developed and available which can detect cancers before any symptoms appear. These tests **can** also detect pre-cancerous conditions, allowing for early intervention to prevent cancer from further developing. Therefore, it is important for mothers to work with their healthcare provider to determine the appropriate screening schedule based on their risk factors. Risk Factors Several risk factors increase the likelihood of developing cancer in women after a certain age. Some of the most significant risk factors include age, family history of cancer, obesity, and smoking. Additionally, women who have undergone hormone replacement therapy, have a history of breast or ovarian cancer, or have a weakened immune system is also at higher risk. Mothers who **have** experienced pregnancy and childbirth may also be at increased risk for certain types of cancer. Thus, understanding these risk factors is essential for mothers to take proactive steps to prevent cancer and detect it early through regular screenings. Prevention strategies can help reduce the risk of cancer in mothers after a certain age. Maintaining a healthy lifestyle is one of

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-31-TEST NO.-25734

Climate Change The climate is the commonly considered to be the weather averaged over a long period of time, typically 30 years. Somewhat more precisely, the concept of climate also includes the statistics of the weather such as the degree of day-to-day or year-to-year variation expected. The Inter-governmental Panel on Climate Change IPCC glossary definition is Climate in a narrow sense is usually defined as the average weather, or more rigorously, as the statistical description in terms of the mean and variability of relevant quantities over a period of time ranging from months to thousands or millions of years. The classical period is 30 years, as defined by the World Meteorological Organization. These quantities are most often surface variables such as temperature, precipitation, and wind. The factors that determine the climate at a location are the rainfall, sunshine, wind, humidity and temperature. Climate change refers to long term changes in climate including overage temperature and precipitation. Earth climate is changing and this is causing great concern. The changes place in the atmosphere have become one of the serious threats that world faces today. Human's activities have the potential to disturb the balance of natural systems and cause warming of the plant to an unprecedented extent. Some of these countries are increasing the greenhouse gases emission to an extent that nature system is now not able to assimilate these gases. As a result, climate change has started endangering biodiversity, food and fresh water supply, impacting human health worldwide, especially in developing countries like India due to low adaptive capacity. India climate can be classified as a hot tropical country, except the northern states of Himachal Pradesh and Jammu & Kashmir in the north and Sikkim in the north eastern hills, which have a cooler, more continental influenced climate. In most of India summer is very hot. In India, summer, winter, and the rainy season are considered to be the main seasons. We also divide the year into six seasons, namely, vasant, grishma, varsha, sharad, hemant and shishir. Anecdotal evidence indicates that millennial and gen z are generally more sensitive to **their** emotions than previous generations. The vocabulary used to discuss emotions has also grown significantly. This development has a beneficial aspect it simplifies the process of identifying emotions. Renowned author Breen Brown emphasizes that accurately naming our feelings helps us manage them more effectively, as she notes, when we can **accurately** label our feelings, we are better able to take care of them. However, there is a downside. This increased sensitivity to emotions has sometimes resulted in all negative emotional states being perceived as equally impactful. This can lead to individuals avoiding their genuine responsibilities under the guise of emotional distress. Millennial and gen z have significantly expanded the emotional lexicon, emphasizing complex and negative emotional states. For example gas lighting refers to emotional manipulation that causes doubt in one reality. Triggered describes intense emotional reactions linked to trauma. FOMO reflects anxiety about missing out on social events. Micro aggressions **capture** subtle discriminatory actions. Cancel culture highlights the emotional dynamics of social ostracism. Quiet quitting reflects emotional disengagement at work and toxic positivity critiques forced happiness. Even a mild emotional di

RKC TEST NAME: BSF-HCM-TEST-DATED-2026-03-31-TEST NO.-25735

Naming emotions, Value of Science The present era is the era of science. Science has undoubtedly done a great service to mankind. Man, a rational being, has been curious to explore mysteries of nature and this led to many discoveries being made in various part of the world. But he is never satisfied with the acquired knowledge and is always keen to unravelled mysteries of the universe. He has conquered the land and air. His incredible lust for knowledge has revolutionised human life and raised the standard of life. He was able to invent innumerable ways of making his life comfortable and happy. Every sphere of life has been revolutionized by science. There have been innumerable inventions. One of the greatest inventions is the invention of medicines. There has been a series of tests carried out using animals as subjects and various medicines have been tried out on these animals to check their efficacy. Many fatal diseases can now be cured because we have the drug to fight those diseases. It has reduced the rate of infant mortality and increased the life span. Before these inventions millions of people died for lack of medical care. Science has given us many machines that have made our lives very comfortable. Buses, cars, sewing machines, mixies, grinders, etc. are all machines that are used every day by us and the discovery of electricity has made it possible for us to change night into day and summer into a comfortable cool season. It is now easy to cultivate fields as we have tractors. New forms of irrigation are now being employed. It is easier to protect the crops because of the use of various chemicals and pesticides. Even mosquitoes can be driven away because of the discoveries made in science. It has enabled man to entertain himself in many ways. TV, radio, video and the cinema are all popular means of entertainment. Besides entertainment they educate the masses. Today the computer has made life even easier for us. The press, the means of communication, etc. have all improved because of science and its **gifts** to us which has always existed but only recently identified precisely, can indeed facilitate better communication. However, once an emotion is named, it becomes harder to disregard. Past generations might not have even noticed these fleeting emotions that came and went. By naming them, there is a risk of **assigning** them too much weight. They can also be used to justify actions. This justification is prone to misuse also. For instance, the concept of self-love is generally positive but can sometimes be used to excuse selfish actions. This is because despite emotions having specific labels, they still remain subjective and vary from person to person. Someone might skip work due to distress from online content, claiming they need time for self-love to cope with their emotional response. Given the subjective nature of emotions, these feelings are often beyond scrutiny. This presents a paradox in our modern era. On one **hand,** advancements in science and technology have enabled us to quantify nearly every aspect of human existence, reducing complex human experiences to mere data points. Yet, in the realm of emotions, we are moving towards a heightened subjectivity where personal truths dominate, often without a universal benchmark. Historically, a clear distinction has existed between objective truths and subjective experiences. In contemporary times, we observe an over extension in both areas. Scientific methods have encroached into

The skin from harmful UV rays and getting vaccinated against certain viruses, such as HPV and hepatitis B, can also reduce the risk of developing certain types of cancer. By adopting healthy habits and taking steps to reduce their risk, mothers can help ensure their long-term health and well-being. Early Detection Saves Lives Early cancer detection is essential for mothers after a certain age. Regular screenings, awareness of risk factors, and healthy lifestyle choices can all help to reduce the risk of developing cancer. Early detection can lead to more successful treatment for mothers who develop cancer and ultimately save lives. It is crucial for mothers to be proactive about their health and to seek support when needed. By doing so, they can continue to be there for their families and live healthy, fulfilling lives. The field of medical technology is constantly evolving, bringing forth fresh advancements—novel methods, innovative technology, innovative techniques, and ingenious utilisation of existing systems. In India, the healthcare system caters to an enormous population of over 1.3 billion individuals, and the role of technology in healthcare has become increasingly vital. It plays a significant role in enabling accurate diagnoses, enhancing communication between healthcare providers and patients, and expanding healthcare accessibility in remote areas. To ensure equitable and exceptional healthcare, Indian healthcare should embrace advanced global technologies that have the potential to revolutionise its healthcare industry. Additionally, a growing number of healthcare technology start-ups and innovations in India are providing world-class healthcare solutions. Let examine some essential areas where advanced technology is making a noteworthy difference. Rise of Robotic Assisted Surgery The rise of robotic-assisted surgery in India has been remarkable. With advancements in technology and increased access to robotic systems, surgical procedures are becoming more precise and efficient. The integration of robotic arms allows for enhanced dexterity, improved visualisation, and reduced invasiveness, leading to shorter recovery times and better patient outcomes. This innovative approach has gained popularity among both surgeons and patients, paving the way for a new era of advanced surgical techniques in the country. Today robots are being used for many kinds of **surgeries** ranging from open heart to knee replacement. Enhancing Accessibility and Affordability of Tech-Driven Surgeries Gaining a precise understanding of the expenses associated with cutting-edge procedures is crucial. While India has emphasised the importance of affordable healthcare, it is essential to prioritise the quality of care aspect. For instance, in **the** case of kidney cancer, there are three treatment options: complete removal of the kidney through an open operation, removal of both the cancerous part and a portion of the kidney or precise removal of only the necessary cancer cells, ensuring no extra cells remain. Although all three methods aim to eliminate kidney cancer, the choice may depend on factors like the patient recovery time and the extent of kidney function retained. This could potentially shift the treatment paradigm and necessitate considering costs based on the overall outcome. There are healthtech startups coming up that solve this precise problem of **information** asymmetry, by educating the patient on their options, price ranges and insurance coverage

As most of his history was destroyed by invaders and suppressed by their present day loved ones. Building their places of worship over temples, the invaders have created multiple rings over the Hindu Religion, thereby making it very hard for us to visit these places. It is said that there a hidden temple beneath over 40000 mosques, and these temples have not seen the light since the 16th Century. Same as planet Saturn, which has seen the light for the past many thousand years due to the rings. The new monuments constructed by invaders on top of our temples look beautiful from a distance, but when you go closer, dig deeper, and find remnants of Sanatan Dharma, these monuments feel like suffocating rings that are stopping Sanatani history from coming out. Silver Lining: The rings around Saturn are collapsing gradually. Scientists estimate that the rings will disappear in about 300 million years. Saturn will then look different, feel different, and we never know; the gas giant might very well become a destination par excellence. Similarly, our history can be recovered too, gradually, right Few Pirs or Sufi saints in South Asia can match the popularity the 14th century Pir Haji Ali Shah Bukhari, popular as Haji Ali, enjoys. I have been to the doors of this sacred soul umpteenth times. I went there again last week. The latest visit was more as a journalist than an ardent devotee. I was cautious while I covered a news feature. And I was respectful to the sensitivities of the people. While I tried not to allow my personal faith to come between professional duty as a reporter and a faithful, I resisted the temptations to sensationalise some issues. To any casual visitor who does dig much, at present, the Haji Ali Dargah complex does give a pretty picture. The over 550 year old Haji Ali Dargah is currently under renovation. A high ceilinged shed robs you of the full view of the monument. The shed has been erected to protect visitors from the harsh sun and soon to come heavy rains. Piled **on** the Dargah premises are marble slabs from the mines of Makrana Rajasthan the supplier claims his ancestors had given marbles to the Taj Mahal, that wonder of wonders Mughal emperor Shah Jahan got built for his beloved wife Mumtaz Mahal on the banks of the Yamuna in Agra. As **I** stood there watching the Western horizon bathed in a golden hue while the sea waters lashed against the naked black rocks acting as protective arms to the shrine, a thought came to my mind. Shah Jahan was badshah of India which was bigger in territory than what we have today. He could order the best and the costliest marble available on the planet then to build a mausoleum, which outshines most world monuments, in majesty and beauty, many centuries later. There are some people who have openly shown strong itch to, if not demolish the Taj, at least change **its.**

Naam mein kya rakha hai a lot. But then that deserves another essay. Let us keep that for another day. In contrast, Haji Ali did own a kingdom. He was a fakir, a holy man who had eschewed the desire for power and self. Yet, his kingdom continues to flourish five centuries after he departed. Commoners have added to the shrine coffers. There may have been some big donors too. But much of the money in charity to the shrine comes from the commoners, men and women, who throng the shrine seeking solace and blessings. The administrative officer of Haji Ali Dargah Trust, Mohammed Ahmed Taher, told me that there are over a lakh visitors on Thursday, Friday and Sunday while over 50,000 visit on other days of the week. Huge donation boxes are kept near the shrine. Nobody forces anybody to dig into her pocket. The devotees donate out of their own will. So, when the trust needed to renovate the old structure, they debated for a while whether it was prudent to replace it with another RCC structure. Engineers and architects told the trustees that the salt mixed sea water and air corrode cement and iron structure easily. They would eat into the shrine structural strength in a few decades. And the structure needed to be earthquake resistant too. Then someone cited example of the Taj Mahal which stands on the banks of an ancient but living river. Majestically and seductively. What is in the Taj that makes it so strong and gives it such longevity among other things, it is Makrana marble. They found an owner of a mine in Makrana whose ancestors had supplied marble to the Taj. While digging the mine, says Taher, a miracle happened. They stumbled upon Grade one marble, better than the ones used in the Taj. After all, Shah Jahan ruled a country. Haji Ali rules millions of hearts. The saint deserved and deserves better treatment than what was accorded to an emperor who had lost his heart to his bewitchingly beautiful wife who bore 14 children. Seven of them **survived** to adulthood. Their third child, Aurangzeb, went on to rule India for nearly 50 years. What he did and did do during his long reign is for the historians to comment. And they must tell the world the whole truth preferably from atop the Qutub Minar. Will the honest **historians** who have done rigorous research come out with the explanations why Aurangzeb did what he did To me, Aurangzeb forebear Akbar is the most important among Mughal emperors. Aurangzeb eldest brother Dara Shikoh and heir apparent of Shah Jahan, could have changed the course of history had destiny not played a cruel joke with him. Those who hate the Mughals so much that they are bent upon erasing the memories of the dynasty need to separate wheat from the chaff. Dara Shikoh spent months in Banaras, learnt Sanskrit and understood the Hindu scriptures and mythologies from learned Pandits and **translated.**

Many of the Hindu holy texts into Persian. The translations travelled far and wide, making the world aware of much of the ancient wisdom. His Majmaul Bahrain Co mingling of the oceans is a great treatise on commonalities between Islam and Hinduism. But in the hatred of the Mughals and frankly today Muslims who cannot be held responsible if some places of worship were razed by a fanatical king, the hate brigade is burying rich legacies of even Akbar and Dara Shikoh in the mighty Ganga and Jamuna. Did I mention Ganga Recalling the arrival of Muslims to India as well as acknowledging debt of the Ganga, the poet Allama Iqbal said: Aye abroad e Ganga who din hai yard tujhko Utra tere kinare jab caravan humara O river Ganga, do you remember the day When our caravans descended on your banks. But those who have put on the blinkers refuse to accept if there ever existed something called Ganga Jamuni tehzeeb or the widely celebrated synthetic ethos of India. In urgency to rob the rainbow that drapes India and to turn India into a dull, divisive monocolour they are hitting at its soul. When I was in college in Patna I wrote an essay titled India of my dreams and sent it to the Patna edition of The Times of India. The editor was kind enough to publish it though it needed heavy editing. Admittedly, I did know then much grammar and syntax of the firangi zubaan. In that essay I had dreamt of an India where no mullahs or mahanths could succeed to fan the fires of communalism. How wrong I have been proved decades down the line that was in the 1990s when we were fighting in the name of Mandir Masjid. One thought the handing over of the Ayodhya land by the Supreme Court to the Hindus would put closure to future disputes over places of worship. It did happen and we are still fighting in the name of Mandir Masjid. Once at a book discussion function in Mumbai years ago, I called former BBC **correspondent** and noted romantic writer Mark Tully who believed Indian masses would defeat the purveyors of hate. Yes, I am a romantic and believe so, replied Tully at the session that late journo writer Anil Dharker anchored. Have we not proved Tully wrong by creating an atmosphere of animosity and **hatred** decades later In these times, one thinks departed holy souls like Haji Ali are rays of hope. I saw hordes of devotees, irrespective of religions they profess and practise, standing shoulder to shoulder near the Sufi saint tomb, offering flower petals and seeking blessings. One mujawar shrine attendant kept touching foreheads of the devotees with a broom like thing. Perhaps he was passing on the benevolent touch of the Pir to the aam junta who needs divine intervention to get their suffering mitigated. Politicians cannot solve our problems. We need plentiful of divine touches. When am I visiting Haji **Ali.**

Third advance estimates of crop production for the year 2021 22 are out. India has harvested a record food grain production of 314.51 million metric tons met, up by 3.77 met over the preceding year. Rice is at a peak of 129.66 met, up by 5.29 met over the previous year. Wheat production stands at 106.41 met, only 3.18 met less than last year. This raises a moot question: why did go press the panic button on wheat exports and ban it so abruptly go did what needed doing on Saturday by lowering excise duties on petrol and diesel as well as offering a subsidy for log cylinders. Not just inflation, growth is also threatened by accelerating prices. States must now follow. Opposition governed Kerala has announced a reduction in state fuel levies. Other states should delay Indian politics does come in here. The combined impact of tax cuts will provide much needed relief to stressed household budgets and small business balance sheets. The package of fiscal measures marks an adjustment in the overall economic policy. Many say the current spell of inflation is reminiscent of the experience a decade ago when sharp increases in food and fuel prices catalysed a more generalised rise in price level. However, there a crucial difference. A decade ago, elevated inflation took place on the heels of high economic growth. This time, it happening in the backdrop of five years of economic weakness, a pandemic shock followed by slowing growth. This requires a different approach in finding the right mix between fiscal and monetary policies. India fiscal policy, both at the level of go and states, has been relatively tight given the current context. Even last week reduction in go excise duties only takes them back to the level that prevailed in march 2020. Since then, we have experienced the first annual contraction in gap in over four decades and the subsequent recovery has been uneven. Another relevant factor is that a sharp rise in inflation has helped governments in two ways. It led to buoyant tax collections. Also, the growth of nominal **gap** is way more than the interest on government borrowings. Therefore, there no threat to the sustainability of government debt. For instance, go net tax revenue between April 2021 and February 2022 was rest 14.88 lakh core, almost rest 3.75 lakh core higher than what was collected two years ago **in** a pre pandemic year. The situation is similar in most states and many of them have budgeted for a ratio of fiscal deficit to state domestic product in 2022 23 that lower than the cap fixed by go. In short, there is room for using fiscal policy as the primary tool to find the balance between keeping a check on inflation while simultaneously protecting private consumption and economic growth. Rbi has no choice but to tighten monetary policy now. To do its bit, go will need to be nimble, keeping a watch on domestic and global factors, as this **financial.**

Nuances of managing ongoing collateral risks Dr Rao is currently teaching risk management in the institute of Insurance and Risk Management (IIRM). A career banker with Bank of Baroda, he held the position of General Manager Strategic Planning, Later was Associate Professor with National Institute of Bank Management (NIBM) and was Director, National Institute of Banking Studies and Corporate Management He runs a Youtube channel Bank on Me Knowledge series He likes to share his perspectives with next generation potential leaders of the banking industry. His book on "Transformation of Public Sector Banks in India' was published in September 2019. His most interesting work is in Ideasforindia. com blog. The resilience of the financial sector is essential for maintaining growth and inflation dynamics, but recent rises in collateral risks due to ongoing geopolitical risks threaten its stability. As a key player in the economy, the banking sector faces major challenges from interconnected geopolitical risks. The banking sector and the economy are mutually supporting and dependent, boosting each other's growth. In a bank driven economy, providing credit to productive sectors is crucial to sustain growth and foster a growth oriented ecosystem. The landscape of geopolitical risks began with the pace of the post COVID 19 recovery phase, when the economy was slowly regaining stability. During this period, a series of geopolitical risks began to threaten the global economy, including the domestic economy. In the financial sector, banks' role in managing these collateral risks is particularly significant for the productive sectors. The Russia Ukraine war (2022), the Israel Hamas war Gaza crisis (2023), the Red Sea disruptions by the Houthis of Yemen (2023), the Venezuelan crisis (2025), and the recent Israel US Iran armed conflict (2026) are among the ongoing geopolitical threats that branch out into multiple collateral risks with unknown unmeasurable consequences. The escalating conflict in Iran, which is targeting US based assets and disrupting merchandise flow through the Strait of Hormuz, could lead to serious supply chain problems for many dependent economies. Their reported route to friendly nations by charging a passage fee could increase costs, pushing inflation higher **due** to increased collective input expenses. The ongoing tariff war, delays in trade agreements, the polarization of the global order, and strained bilateral and diplomatic relationships have increased risks in the external sector. This has led to a slowdown in exports and rising import costs, widening the trade deficit and **potentially** impacting domestic fiscal deficits. Amid geopolitical uncertainty, the Central Banks' ongoing fight against inflation continues, and the direction of policy rates in Western economies remains in a stalemate, offering no clear clues to markets. According to government estimates submitted to the Standing Committee on Finance testimony (report Mar 17), CPI inflation is expected to stay in the upper part of its glide path, remaining below 6 percent. In an evolving macroeconomic environment marked by risks, the banking sector's constituents, particularly large borrowers, may face downside risks that could affect banks' risk baskets. The steady FPI outflows and the depreciating **INR,** now at Rs. 94. 61 per US$ on March 27, compounded by crude oil prices breaching US $ 120 per barrel LPG supply disruptions, could increase borrowing costs, tone down priva

asset quality. Credit growth of 13. 8% exceeds the deposit growth rate of quarters, exerting pressure on profitability. It may push up the MCLR, though the repo rate is expected to remain at 5. 25 percent. In the face of rapidly increasing collateral and interconnected risks, banks' risk management frameworks may not fully capture the nuances of geopolitical risks and their economic effects. Banking business risks can suddenly surge, leaving little room for manoeuvring unless proper action plans are in place to reduce them. Banks should be proactive in building greater preparedness to manage risks that may require immediate action. Closer watch on data related to the special mention accounts (SMA), CRILC, downgrade trends of corporate credit, and conduct of loan accounts. Managing upcoming risks will involve recalibrating the risk management framework to match the complexities of new streams of unknown collateral risk, whose impact may not be immediately measurable. The market intelligence system in the risk management sector should be adjusted to better capture geopolitical and geoeconomic events, allowing it to understand, interpret, and assess their impact on specific asset and liability portfolios. A continuous risk impact analysis should help banks intervene and support the third line of defense in risk management by understanding the scope and severity of risks, enabling preventive measures. Consortium leader banks should coordinate with other member banks to handhold large borrowers experiencing genuine stress amid temporary disruptions in the evolving situation. CMA data should be closely scrutinised to perceive the borrower stress. Enhanced CMA data can be collected to make credit control dashboards risk event sensitive, with greater granularity on their impact on borrowers' repayment capacity. Developing a template for handholding with reciprocal conditionalities for stressed large borrowers, if any, considering long term interests to prevent asset quality slippage. It is necessary to realise that the borrowers are as much at risk as the lenders, and understanding their pain points is a sine qua non for the stability of the credit portfolio. Wading through the crisis times collectively is necessary in the interest of all stakeholders. A focused effort to support the MSME **sector** will be critical to protecting entrepreneurs at the bottom of the pyramid, on whom the livelihoods of millions of people depend. Given that this sector of borrowers is the lifeline of the economy and their export capacity is under stress, the monetary authorities may explore ways to relax the **IRAC** norms for a couple of upcoming quarters until geopolitical risks subside. In addition to providing liquidity support, the RBI may consider providing medium term funds through LTROs rolled out during pandemic times to protect the interests of stakeholders. A collective, proactive risk management approach by all stakeholders in the financial sector, initiated at an appropriate scale, is essential to effectively handle geopolitical risks, minimize adverse impacts, and maintain growth. When prioritizing risk mitigation, long term interests should outweigh short term goals both in practice and principle. Just be the change: Ideas for reflection by small study circles during schooling **to** know & learn ability to 'walk the talk' Sunil Kumar is currently member, managing committee, Ramakrishna Mission, New Delhi. An engineer and project manager trained at Vickers A
