## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25747

Year progresses. The supreme court appointed inquiry commission into the 2019 encounter killing of four accused in the rape and murder of a veterinarian in telangana confirmed the worst fears of many. The commission found the encounter fake, the state government keen to hide the truth and the police guilty of destroying and or withholding evidence. Consequently, rightly and in a landmark decision, the commission has recommended murder charges against all 10 policemen involved in the act. True, the horrific November 2019 case had led to genuine public outcry. Charred remains of the victim body were found the day after the crime and the police had picked up the accused on the basis of cut footage. But although the encounter Indian the police claimed the accused had snatched their guns and attacked them Indian had raised several questions, several politicians, from syrup, tars and chi, and sections of the public had welcomed the killings. This was always wrong, and particularly irresponsible on the part of politicians. Encounter killings are not an effective substitute for proper policing. The main reason crimes against women are so numerous is the poor rate of conviction in such cases. According to a report by the public health foundation of India, the country rape related crimes rose by more than 70 between 2001 and 2018. But only 10 of the cases completed trials by 2018 Indian with acquittals in 73 of the cases. This clearly shows the lack of necessary investigative professionalism among police forces. Plus, let not forget that in the 2019 case the victim family had said the police failed to provide timely assistance to the victim. The outrage following this was followed by the encounter Indian another demonstration of how encounter killings are often used by the police to hide their failings. Cops everywhere in India should know from the telangana case that a major precedent has been set, and that they should be careful henceforth. The supreme court appointed inquiry commission into the 2019 encounter killing of four accused in the rape and murder of a veterinarian in telangana confirmed the **worst** fears of many. ## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25749

Moms and dads Indian at last, the rascals were off! Teachers grimaced as they discovered they had been returned savages. Forget those beaming faces straining from the front benches to answer every question, whether it was gandhiji role in the national movement or the principal focus of the concave mirror. Those angels who had their notebooks complete and projects spiral bound, they were long gone. Instead, what was left of the covid batch was a motley bunch excited in spirit to meet their friends but with complete memory loss of what attending a class entailed. Save a few eager beavers, they could hardly sit still, forget paying attention to a 45 minute lesson. Some just slopped off to sleep a la online class while others looked glassy eyed as the chem teacher droned on about charge no, not the phone one. One fellow, so used to pottering around at home all day, now forgets to even ask permission and takes a stroll when the whim strikes him. Another is given to fainting spells overwhelmed by the dual combination of Delhi heat and the constant chatter of a classroom. Tie your hair neatly, clip your nails, polish your shoes Indian for children it seems the wonderful world of camera off screen has been swept aside by endless routine of school. Every other teacher spits out the b word boards with extra emphasis ranging from shrill to shriek. Or uses lines like, is this a class or a fish market is there a difference amidst all of this, emotions swing from predictable teen angst over a bad hair day, to the 1,000 megawatt as yet unarticulated thrill of seeing your crush glide by. And now, the wait for summer holidays. May seems to move as slowly as a tired fan in a classroom. Almost to make up for lost time, parents have signed up their progeny for everything from kayaking to guitar lessons. Then there are those folks who are grateful if their child so much as stretches towards a ball. Everyone is dissatisfied. It as if the old normal is **back.** Human life is a unique blessing for linking the soul with god, the omnipresent mainstream of consciousness. Philosopher set Augustine of hippo writes, restless are our souls, until they rest in thee, my god. As we cannot think of using a pen without ink within, we cannot think of **world** civilizations without enlightenment of souls within. Civilization is another name of humanism, which is the outcome of spiritual awakening. Therefore, world civilization does not have to be merely collective but unified consciousness essentially born out of the actual knowledge of one god for all, which results spontaneously and simultaneously in the sense of organic unity of mankind. It is like a blood relationship. It means humanity comprises each of us, whether you are a Christian, Jew, Muslim, or a Hindu. We desperately need the feeling of cosmic kinship that inherently results from the realization of one source. Austrian quantum **physicist.**

**350th:** "back." | **400th:** "world" | **500th:** "physicist."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25750

Erwin Schrodinger is known for the phrase, the total number of minds in the universe is one. In fact, consciousness is a singularity phasing within all beings. The phrase implies that apparent multiplicity of minds is just an illusion and that there is only one mind or one consciousness that expresses itself in myriad ways. In such a worldview, a separation between subject and object does not exist. In a world without the subject object split, we are all an expression of the one. On the same point, max Planck says, i regard consciousness as fundamental; i regard matter as derivative from consciousness. In the absence of actual knowledge, god is different for different persons and for the same person on different occasions. The concept of one god for all foresees the idea of one religion for all that suits the whole human race. Albert Einstein told us that everything is energy and that a human being is a part of the whole called by us [the] universe. His words echoed the most ancient spiritual and philosophical teachings and still underpin today cutting edge scientific discoveries. He says, universal mind goes by many names Indian unified field, universal consciousness, and in religion we call upon god who himself goes by many names Indian Jehovah, Allah and brahma. Each one of us is a manifestation of this single universal consciousness. We are all connected Indian not only to each other but also to all nature and to everything in the universe. Connecting with the unified consciousness is normally understood as meditation. But it does not need any meditative process. It requires one to get connected with a true master, who reveals god through a combination of spoken words and practical hints about the omnipresent one. Argon did not meditate or do any practice. He just listened and accepted whatever Krishna told him. Once we know and experience god, his remembrance becomes a spontaneous and natural process. Sat guru sudiksha, the spiritual head of sant nirankari mission, says: life gets a meaning if it is lived for others. It combines the **theory** of mutual relationship through spiritual awakening with the innate spirit of living for others, blossoming world civilization in full spring. Life can be extremely cruel. One has been enjoying power for two decades. Delivery of one dreams have been ensured at the cost of the nation by one parivar **but** alas one still fails to get desired respect and recognition at home and abroad. People bow to the position, not to the person. One does his best to imitate the original pratham sevak whom the nation lovingly addressed as chacha because he was bapu choice to lead the nation and whose birthday is celebrated as children day. Now the pradhan pretender wears pirated versions of nehru jacket, gets photos clicked with children, one minions in school boards force students to participate in one pre exam charchas, one goes globetrotting to get nam like vishwaguru tag. But alas the global **leaders.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25751

Treat you more like a social media influencer who has come visiting for photo ops. A foreign leader with half Indian parentage whom one outranks in protocol gives one gyan in full public view on importance of preserving democratic traditions. The captive audience of students would prefer to hear one plans to fight the unemployment crisis plaguing the nation. And once again the time, money and energy expended comes to nought as the dream of being darling of people at home and abroad is not delivered. Till a couple of years ago one was felicitated with highest civilian honours by islamic countries despite one history on religious tolerance. But today one trades barbs with them because they speak Pakistan tongue on Kashmir. The reason for this change is that those islamic countries feted one for helping a dictatorial ruler sort out his family problem and not because of one diplomatic ingenuity. Again the dream of being recognised at least as a regional vishwaguru is not delivered. How one delivery is far from what one sees in one dreams is often cruelly exposed by neutral observers. One boasts at the world economic forum that one saved lives across the world during the covid pandemic by supplying vaccines. But bam comes the slap on the face by the world health organization which says that one undercounted covid deaths by ten times. One is left with egg on face and retaliates by claiming who needs to be reformed. The same who was good when one was inaugurating a traditional medicine center with it but must now needs a lesson in bhakti. After all there history of shooting the messenger by supreme leaders. One is out of touch with reality at home but in desperation to global recognition keeps shooting one mouth off. The world faces wheat shortage in the aftermath of Russian invasion of Ukraine. We already have enough food for our people but our farmers seem to have made arrangements to feed the world. However, we have to work according to the laws of the world, so i don know when **two** will give permission and we can supply food to the world, one tells the global audience. Soon one has to eat crow and ban wheat exports which were supposed to be one another shot at becoming vishwaguru. The egg on one face would be hard to wipe off. Another **failed** delivery which ruined dream of gaining respect at home and abroad. The dreams get further soured when one own party men, intentionally or unintentionally one is sure, start switching one designation with one junior. The nation feels sorry for when one kursi prem gets exposed by the statement that one is not retiring in 2024. The other pretenders must not dream of the throne being delivered to them anytime soon because to get it vacated one will have to be taken off kicking and screaming. The voters throwing one out is a dream opponents are praying hard to be **delivered.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25752

The mind is always given to thoughts. Just as the blood in our body is constantly in circulation, the lungs breathe in and out, and the mind, too, will always be given to thoughts. It is the very characteristic of the mind to produce thoughts incessantly. Thoughtfulness is the nature of the mind. What is thoughtfulness? Whatever we call the mind, it has the nature of linking the past with the present and then projecting into the future. The future itself flows out of the present, and the present has evolved from the past. So, our mind continuously links the present with the past and future. In this process, memory has a dominant role. What is memory? Memory is the mind stock of the events that have taken place already. It is impossible to remain interactive in this world unless the mind is active. Our lives will become meaningless. Can you imagine what may happen if we have no memory? So, the mind will be in a constant state of circulation between the past, present, and future. Ensure this: There should be a note of enlightenment and enrichment in all the thoughts that arise in your mind. Thoughts that involve victimising and agitating are not welcome. Whenever these thoughts come, you should feel free to let them know. Mind is unphysical, metaphysical. You cannot physically enter the mind and do anything. So, dissuade these thoughts. If you go on dissuading the undesirable thoughts, after some time, finding that they are ineffective, their number will be reduced and finally, they will become extinct. How can this be achieved? Suppose the mind goes on thinking about a subject for a long time. After some time, the mind will feel tired and become quiet. When the same job is done with concentration for a few hours or days, after some time, you will become tired and stop working. Similarly, after continuously thinking for a long time, the thoughts in the mind will reduce, become lighter and feebler and gradually reduce, naturally. Allowing them to justify nearly any action or behaviour. While society **has** long navigated the tension between reason and emotion, finding a balance has been crucial. During the Renaissance and Enlightenment, there was a deliberate pivot toward rational thinking as a response to the extremities enacted under the banner of faith and belief. Today situation is distinct, as there is an **overextension** from both directions rational thought intruding into personal experiences, and emotions receiving disproportionate emphasis as a matter of personal subjectivity. Recognizing and respecting emotions is essential, but becoming subservient to them is problematic. Similarly, while relying on scientific methods and data driven approaches provides many benefits, we must avoid reducing human complexities to simple data points. As data driven decision making becomes more prevalent in personal aspects of human experiences, there might be a strong reaction to fiercely guard our subjective emotional experiences, potentially leading to an overemphasis on emotions. Like in previous eras, it is hoped that we **will** discover a new equilibrium. As tributes pour in for the eminent educationist Shomie Ranjan Das, I wonder, do legends ever truly die? In fact, they leave behind a legacy that continues to influence the lives of those who had the privilege of crossing their path. Born on August 28, 1935, Das was one such legend who has left his footprints on the sand of time. I remember him as an embodiment of the old-school ethos that has now be

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25755

His grandfather, driven by a passion for education, wanted Indian students to get exposure to a Western style of education within India, a vision realised through the founding of The Doon School. After completing his schooling in 1951, Shomie Das pursued further education at St Xavier College in Calcutta, followed by a degree in Physics from the University of Cambridge. In the 1960s, he taught at the prestigious Gordonstoun School, where he took great pride in having taught Physics to none other than King Charles, then the Prince of Wales. Das, whose tenure at The Doon School was from 1988 to 1996, joined as the successor of a larger-than-life-figure, Gulab Ramchandani, a stalwart in the field of education. Das, with his liberal outlook and openness to new ideas, made his own mark on the institution, while respectfully sauntering through the giant shadow of his predecessor. More than just a headmaster, he was an innovator and a passionate educator, especially in the field of Physics. Though his administrative duties limited his time in the classroom, he left a lasting impact by encouraging the establishment of a Physics Museum at The Doon School an unconventional and out of the box initiative. One of Das notable contributions was diversifying the faculty at The Doon School, an all-boys boarding school that had traditionally only employed male teachers. Drawing on his experience from Sanawar, a co-educational institution, he introduced the practice of hiring female teachers, a move that continued thereafter. In fact, my wife, Somita, was the first woman offered a teaching position in the school history department, though she humbly declined for personal reasons. It was a remarkable coincidence that both Das and I hailed from the same place Bikrampur in Dhaka. Despite spending significant time in Europe, he remained a true Bengali at heart, deeply attached to his roots. He relished Bengali cuisine and often gathered with his Bong circle, indulging in lively add. Our bond, both professional and personal, grew strong over time. In fact, when I had the opportunity to take a sabbatical to teach History at Aiglon, Switzerland, or **pursue** a Rotary scholarship in the USA, he was perhaps so fond of me that he could not bear the thought of parting with me, and never approved my leave! Instead, he entrusted me with bigger responsibilities. He put me in charge of the school garden and estate, a role **previously** held by Mrs Ramchandani. I continued in this position until my tenure ended. He also tasked me with organising the Founders Day exhibitions, a multifaceted experience that honed my administrative skills and proved invaluable in my future endeavours. I will never forget how he stood by me like a pillar of strength when I lost my wife in 1992. His emotional support during that difficult time was beyond words. Seeing my 7-year-old daughter, Shreya, struggling after her mother passing, Shomie went out of his way to request Shanti Verma, the principal of Welham Girls School, to admit her, even **though** Shreya was 18 months shy of the admission age. Verma, moved by his earnest appeal, immediately granted the request. Later, with Shomie blessing, I started a school in my wife memory. That school, Seven Oaks, has since grown steadily, and both Shomie and his successor, John Mason, proudly remarked that Schools like Seven Oaks are the need of the hour for a town like Dehradun. It was during his tenure that Shomie successfully implemented the pension schem

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25756

A constant criticism of India first past the post electoral system is that it does not really reflect the electorate intent. A small swing in votes of 45 results in a very different electoral outcome. In a national election, one popular candidate can win in a constituency by a lakh votes while in constituencies neighboring this constituency, the margin of victory may be less than a thousand votes. Perhaps, there is a need to recast the electoral win method that we have. The operative word is recast and not replace. I to take care of parties which lose by the narrowest of margins in constituencies, the electoral law be amended to include 15 of seats as non elective seats in the Lok Sabha and or state assemblies. Currently, the Lok Sabha has 543 seats and 272 seats is the magic number for majority. 15 of 543, ie 81 seats are available to be distributed between political parties who have gotten more than say 8 of the eligible popular votes cast at national level. In this way, political parties, if they are narrowly defeated can get representation inside the Lok Sabha. Before the elections take place, the parties must disclose 50 names per their Priority of those they would like represented as non elected members of the Lok Sabha II These non elected members can participate on a money bill deliberation but cannot vote on it. They cannot participate or vote on a no confidence motion against the government in power. III The upshot of the above arrangement would be that if the party in power gets 40 of the all India popular eligible vote as non elected members they would get 40 of 81 seats ie 32 seats. Suppose there is another party which gets 10 of the all India popular eligible vote but gets just 6 seats in the direct elections. That party would get 8 seats as nonelected seats. However, a defeated candidate cannot come as a nonelected candidate. That is why the names must be pre declared. The advantage is that Indian democracy gains by varied **participation** in debates but the rights of non elected members are lower than elected members. Please see Para II above. IV NOTA None of The Above While the NOTA button has become mandatory in the EVM keyboard, it has no practical purpose except highlighting that in some constituencies the of **NOTA** has been high. The Election Commission needs to build on NOTA usage. What could be considered is that if the NOTA in a constituency exceeds 5 of eligible votes cast and the margin of victory is less than 2 of the eligible votes cast in that constituency, then there should be a runoff election between the 2 top vote gainers. All constituencies which meet this new NOTA criteria go to polls on the same day. It is fairly certain, that this will keep political parties on their toes. V The staggered election process in India over several weeks and **at.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25757

Varied geographies, in my view is not capturing the mood of the entire electorate on a given time interval. Within 3 weeks, national elections MUST BE completed. In long staggered elections there is a risk than an event in the intermediate period could play a major Role in impacting the results of the seats where elections have not occurred. This is unfair to those who have already cast their votes. VI If India wishes to reduce the criminalization of politics, then the declaration filed by prospective election candidates of cases against them should be publicly declared and publilized by the political parties in the constituency that the person is seeking votes for. Alternatively, this can be done in a very formalized manner by the Election Commission office, overseeing the election. The electorate MUST KNOW who they are voting for. When the non elected prospective members are announced by political parties, the same rig our of cases against those individuals should be applied at the Central EC Office. VII Before Lok Sabha and State Assemblies elections are announced, the Election Commission must publicize whether political parties have filed their audited financials accounts before them. This requirement is necessary to bring transparency and compliance in the political process. That political party which has not filed its audited accounts should be debarred. Say for the National elections due in May 2024, the political party has not submitted it audited accounts for year ended Mar 31, 2023, it cannot contest the elections of May 2024. Parliament cannot legislate that individuals, businesses, corporates MUST fulfill certain obligations on disclosures and submissions and not be bound by similar limitations on themselves. Has there been a default in political parties filing annual income tax returns Income of political parties is exempt from income tax but submission of income tax returns is mandatory. Can the electorate be informed on the performance of political matters in this matter. The Indian electorate MUST take control of his her politics. Politics and it possibilities cannot be defined by its practitioners. It MUST BE defined by the impacted Citizens. Hence the **need** for new political Dynamics! Block chain games, also known as crypto or NFT games, are those video games that contain elements based on block chain technology. Block chain games provide players with true ownership of in game assets. In other words, unlike centralized games, assets like skins, in game **currency** points in block chain games can be traded for crypto currencies, which can further be converted into fiat money real money that we use in our day to day lives. As you would have guessed, this opens up the possibility of video games becoming a second source of income for gamers. Prior to block chain gaming, only gifted professional players or video game content creators were able to monetize their playtime. It might come as a surprise to a lot of people that block chain technology was first conceptualized way back in 1991 by scientists, Stuart Haber and W **Scott.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-01-TEST NO.-25758

Trust me or not, future generations will have more bots than friends in their daily life. Artificial Intelligence (AI) is an evolution in this era, and in the future, it will be part and parcel of human life. Coming to branding and marketing, do you know what AI will change in these segments? Well, a lot has already changed in branding and marketing. As you can see, more advanced marketing tools like Adobe Marketo are incorporated. The rising number of AI based bots pops up a big question in our minds. How will advertisers and marketers target humans in future, as there will be so many bots in between? So is it true to say that advertisers will target bots more than humans in the near future? Having an AI based bot as an assistant with you will be part of daily chores in human life. Amazon Alexa, Apple Siri, and Google Assistant are the initial developments that have taken place already. Communications coming from different marketing channels will reach customers via bots. Also, the communication, in return, will come out through the bots. As of now, it seems like a minor change in the digital world, but if we scale it up, then it reflects a bigger picture. AI Possibilities in near Future Endless opportunities and limitless possibilities are there for Artificial Intelligence (AI). In the advertising world, there will be more advancements in tools, data, resources, and ways of targeting humans through marketing campaigns. Advertising will look like bulk processing and individual targeting going hand in hand. In other words, the advertising chores will be made easy with bulk processing, even though they will have algorithms set up for micro level individual targeting. The Big Game of Data will be polished at the source. Currently, what happens is users give their input, advertisers collect from different sources, and then they analyze the big data to get the data reports sets and define buyer persona, etc. But in future, as there will be bots dealing with humans, they will be taking the input from the humans and sending **it** to different Gamification is the advanced marketing technique in which design elements are used to attract and retain the customers. The Gamification in marketing incorporates common game elements such as scoring points, leveling up, or earning virtual currency into marketing campaigns to boost user engagement and drive conversions. KFC **mobile** gaming, Starbucks reward apps, Nike Fitness competition are some examples of Gamification marketing. Nike Fuel is a fitness app that pairs with Nike wearable devices and encourages users to share their fitness goals and accomplishments. Not only does this help promote social recognition of the brand but also helps Nike integrate their brand into the everyday lives of users. Gobibo in India gamified their app to capitalize on Indian Premier League (IPL). Infect in last few years the gasification has witnesses varied innovations. Gamified loyalty programs are also increasing in marketing to enhance the customer engagement. Gamification also has **the** potential to promote 21st century skills, such as critical thinking, problem solving, and creativity. Coca Cola launched the Coca Cola Shake up summer app, a game that encourages customers to collect virtual bottle caps to win prizes. The App Annie Intelligence is gamified app of Coca Cola to analyze user engagement data for their apps. Gamification can enhance the understanding of consumer behavior. In the rapidly evolving business lands

Passion lies in applying Indian wisdom & Vivekananda's principles to managerial situations. His vision and managerial expertise led to the setting up of a unique Management Institute in Delhi, called SriSIM, of which he was a Founder Trustee and Professor and which offered education in Indian ethos based Management. He is currently taking the message of Vedanta centric human development to public servants through programs on 'Ethics in Governance. Our National Vision has been very aptly expressed. It is in harmony with global, universal ideals and is the ideal of all the Western & Islamic cultures too. Remain on the Critical Path of Righteousness to attain all round peace, bliss, prosperity, and perfection. The Kingdom of God is within you. Seek you first the Kingdom of God and his Righteousness and everything else will be added unto you. 3) GOI has given us Fundamental Duties which all citizens must learn to Imbibe & Assimilate. Among others, these include, 'strive for excellence scientific temper, harmony of religions, spirit of 'tyaga and seva' of the Freedom Fighters etc. For G20 Nations GOI had given the Global vision of One World. One Family. One Future. The new PMO office is named Kartavya Bhavan with the motto of Nagrik Devo Bhava. To understand the wisdom behind these, GOI had nominated Vivekananda as our Youth icon since his works will now inspire the Youth, as they inspired the Freedom fighters. Study Circles can choose their own universal ideals from Bible, Koran, B. Gita, our Epics, Gandhiji, Vivekananda ideas on education, Practical Vedanta, Karma Yoga, Mind Management, Love for India, Harmony of Religions, Swaraj, etc. It should be the responsibility and accountability of teachers and preachers etc. to ensure that citizens Imbibe and Assimilate the spirit of selfless kartavya palan & Identify and nurture those who are inspired 'to be and make mentors What, Why, How of Righteous conduct, Dharma, Swadharma? We all must learn to reflect and awaken Viveka buddhi, i. e. to take those choices actions which lead towards the higher and highest goal of life and the inspiration to strive to build **powers** of mind by getting established in the habit of Daily Self development Life skills practices to be inspired, intellectually convinced & strive to walk the talk towards the 'defined' good, better Best 5) Objective of Education isn't mere knowledge for a Vocation, but TRUTH to spread the idea and **the** ideal that we need to provide the time, space, environment, opportunity, inspiration, life skills to learn & realize that I and I alone am Responsible for whatever I am and whatever I wish to be. I do have the freedom to change, but I must build the power of mind to Know and Walk the talk. 6) Righteousness in simple words means i) to know and be selflessly committed to 'kartavya palan', our respective duties. Why? Because this 'purifies' our Mind which is a field for flow thoughts and only good, selfless, purer thoughts are amenable to control towards **the** Best! a) To Know & learn to manage our Mind, we need to get established in the habit of daily universal self development Inner governance Life skills practices, Praxis. b) This involves the need to study, discuss, reflect, explore, open debates, life long practice PRAXIS because changing our mindset is a very difficult and life long process. Childhood is the best opportunity to get established in values and disciplines and the older we get, the more difficult it gets. However, we all do

On this by building a robust online platform, offering personalized shopping experiences, and utilizing data analytics to drive sales. In contrast, Shoppers Stop, a traditional brick and mortar retailer, struggled to adapt to the changing retail landscape. Their reluctance to embrace technology led to a decline in market share and customer footfall. This example highlights the imperative for MSMEs to adopt technology as a means to enhance their competitiveness and ensure long term viability. Automation and Artificial Intelligence Technology, such as automation and artificial intelligence (AI), revolutionizes business processes by enhancing productivity, accuracy, and cost efficiency. MSMEs can automate repetitive tasks, streamline workflows, and optimize resource allocation through AI driven tools. This empowers them to focus on core competencies, innovation, and value creation. By embracing automation and AI, MSMEs can operate with greater efficiency and compete effectively in an increasingly digital marketplace. Streamlining Cash flows: One of the biggest challenges for MSMEs is managing and optimizing cash flows. Majority of the MSMEs do business on credit terms which requires a rigorous follow up for payments. Some of the MSMEs have smartly adopted platforms to manage their manual tasks starting from setting credits terms, raising invoices to collection of payments. For example, 1000s of MSMEs in India have automated collection process by using a technology based comprehensive credit to cash platform called Recordent. Using the same platform, some of the MSMEs are setting right credit terms by using data insights and analytics. Conclusion The lack of technology adoption has stagnated organizations, while early adopters have reaped the benefits of increased market penetration and extended business lifespans. I hope it clear that, in today highly dynamic business environment, we cannot overstate the potential of technology to propel the growth of MSMEs. By opening up scaling opportunities, access to new markets, and optimized distribution channels, technology empowers MSMEs to overcome barriers and achieve long term success. Automation, AI, and other technological advancements further enhance productivity and competitiveness. Platforms channels. Bots will be made capable enough to capture all the data at the source and clean, classify and visualize data to make it **a** ready to use piece of information for the advertisers. Time saved with this process will be utilized to target users more accurately. Personalization At Its Peak Nowadays, you receive personalized offers in your mailbox and personalized pop up notifications with your name on them, but the future will have **a** different story. Personalization will be at its peak in future. As almost every human being will have their own bots around them, it will be easy for the advertisers to target through these bots. Sounds confusing, right? Well, let make it simple. Who will develop bots for humans? Obviously, tech giant companies will make bots for different purposes, platforms and devices. So the giants will be controlling these bots in a similar way the biggies control advertising platforms these days. Potential to significantly improve telemedicine, treatment, and accessibility to specialised care. By leveraging AR, surgical procedures can benefit from **real** time holographic overlays of images and data, leading to enhanced surgeon efficiency and improved clinical outcomes. Additionally,

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-02-TEST NO.-25764

Varied geographies, in my view is not capturing the mood of the entire electorate on a given time interval. Within 3 weeks, national elections MUST BE completed. In long staggered elections there is a risk than an event in the intermediate period could play a major Role in impacting the results of the seats where elections have not occurred. This is unfair to those who have already cast their votes. VI If India wishes to reduce the criminalization of politics, then the declaration filed by prospective election candidates of cases against them should be publicly declared and publilized by the political parties in the constituency that the person is seeking votes for. Alternatively, this can be done in a very formalized manner by the Election Commission office, overseeing the election. The electorate MUST KNOW who they are voting for. When the non elected prospective members are announced by political parties, the same rig our of cases against those individuals should be applied at the Central EC Office. VII Before Lok Sabha and State Assemblies elections are announced, the Election Commission must publicize whether political parties have filed their audited financials accounts before them. This requirement is necessary to bring transparency and compliance in the political process. That political party which has not filed its audited accounts should be debarred. Say for the National elections due in May 2024, the political party has not submitted it audited accounts for year ended Mar 31, 2023, it cannot contest the elections of May 2024. Parliament cannot legislate that individuals, businesses, corporates MUST fulfill certain obligations on disclosures and submissions and not be bound by similar limitations on themselves. Has there been a default in political parties filing annual income tax returns Income of political parties is exempt from income tax but submission of income tax returns is mandatory. Can the electorate be informed on the performance of political matters in this matter. The Indian electorate MUST take control of his her politics. Politics and it possibilities cannot be defined by its practitioners. It MUST BE defined by the impacted Citizens. Hence the **need** for new political Dynamics! Block chain games, also known as crypto or NFT games, are those video games that contain elements based on block chain technology. Block chain games provide players with true ownership of in game assets. In other words, unlike centralized games, assets like skins, in game **currency** points in block chain games can be traded for crypto currencies, which can further be converted into fiat money real money that we use in our day to day lives. As you would have guessed, this opens up the possibility of video games becoming a second source of income for gamers. Prior to block chain gaming, only gifted professional players or video game content creators were able to monetize their playtime. It might come as a surprise to a lot of people that block chain technology was first conceptualized way back in 1991 by scientists, Stuart Haber and W **Scott.**

Stornetta However, even they would not have predicted that their technology would be reshaped by Satoshi Nakamoto to trigger a Deify revolution, let alone monetize a leisurely activity such as gaming. The block chain gaming industry is expanding rapidly. According to Pitch book data, the world saw a 280 rise in block chain investment from 2017 to 2018. In 2019, Torn, a block chain company, invested USD $100 million into their own block chain gaming fund. In the same year, Ripple teamed up with Forte, a block chain gaming company, to fund a USD $100 million project aimed at fusing block chain and gaming. According to trends in investment data, it clear that quite a few big players in the block chain game consider block chain gaming to be the next big thing. So…. What the Big Deal Almost every centralized game features in game assets that have to be earned by putting in a lot of hours into it. Yet, these coveted assets often do not have any real value outside of that particular game. Of course, there are underground markets for trading accounts for real currency on the internet. However, these markets are unofficial and not supported by the developers. Block chain games, on the other hand, encourage gamers to make money off of their in game skills. Gamers makeup of the global population. According to TechJury, the gaming industry would be worth well over $256 billion by 2025. With rapid technological developments such as VR and AR, the gaming experience is becoming almost indistinguishable from reality. The point is that gaming in itself is a lucrative activity. Adding the possibility of owning assets that are valuable in the real world only makes it more popular. That is exactly why a lot of studios are publishing block chain games left and right. From industry giants such as Animoca Brands to Sky Mavis, a lot of players have claimed the block chain gaming industry to be the future of video games. Some Popular Block chain Games Here are some of the most popular block chain games of 2022 **that** work on a play to earn model Silks Silks is one of the best NFT P2E games of 2022. It a game about horse racing. A player can own a digital racehorse in the Silk unique met averse. This digital horse would itself be a tradable NFT Non fungible **token.** Moreover, this game further blurs the line between the real world and its own met averse, as the racehorses are based on real racehorses. If your twin horse wins a race in real life, you earn STT, which is the native token crypto currency of this game. You can use this crypto currency to buy in game land, stables, and wager on races. Crypto pop One only needs three words to describe this game Block chain Candy Crush. Instead of gems and diamonds, however, this game uses symbols for various crypto currencies. If you get 10 points in a **game.**

350th: "that" | 400th: "token." | 500th: "game."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-02-TEST NO.-25766

You earn 1 crypto pop. This P2E game is very popular due to its sheer simplicity. It recommended to anyone who new to P2E games. With Crypto pop, you can earn fairly large amounts of crypto currency quite easily. Crypto kitties This cute little NFT game allows players to own, breed, and sell virtual cats. This game is one of the most reputable open source block chain Ethereal. You can use ETH tokens to make in game purchases. So, if you are a cat person, this is one P2E block chain game that you must try! Axe Infiniti To play Axe Infiniti, you must buy three characters, also known as Axis. Your Axis, then, have to battle other players Axis in the Axe met averse. Like in most block chain games, all assets in Axe Infiniti are non fungible tokens. Produced by the legendary studio, Sky Mavis, Axe Infiniti has taken the block chain gaming world by storm. These games are just the tip of the iceberg. There are a lot of other amazing P2E games in the market such as Gods Unchained, Splinterland, Alien Worlds, etc. Turning Block chain Gaming up a Notch Now we get to the crux of the matter. We ve established the fact that one can easily earn real money by investing time in P2E block chain games. What, then, is a block chain gaming ecosystem Most crypto games are not a part of any block chain ecosystem that is complete in itself. In other words, players who are able to make money with their skill in crypto games have to face a lot of hurdles to convert their winnings into fiat. These hurdles often result in the accumulation of high fees, as an individual has to deal with a lot of middlemen. A block chain gaming ecosystem is a platform that features multiple games, native tokens, a marketplace to trade NFTs, a wallet, and NFT creation capability. It enhances the trading experience and integrates it with gaming. Such a comprehensive ecosystem eliminates all the middlemen. In fact, eliminating middlemen is the very basis **of** block chain technology. OneTo11, the world first such comprehensive block chain based gaming ecosystem is exactly that. Conclusive Remarks The future of block chain gaming is closely tied with the met averse and multiverse. According to Jonathan Sterling, it is highly possible that the lines between various game universes **may** blur. The concept of Metaverse is already here. Sterling has termed it a second life experience, where an individual can exist through the avatar that they create. It would be a sort of second world where a person can do whatever they want. What interesting is that the lines between various games can also become blurred. The implication of this being that in game assets could be transferred from one game to another. The technical term for this phenomenon is Interoperability. Thus, if you ever get bored of one game, the assets you ve earned in it will not **go.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-02-TEST NO.-25767

Nations in this crisis remains under question, other organizations are also struggling to respond in a collective manner. While the institutional mechanism faced its own problems, the Russia Ukraine war has exacerbated the challenges and divisions are apparent within various institutions such as the European Union EU, the NATO and the ASEAN. While the EU countries, along with the US, have been in the forefront of imposing economic sanctions on Russia and providing economic and military assistance to Ukraine, these countries are still divided over the energy purchases from Russia. Despite sanctions, the EU has relented to its member countries continuing to buy gas from Russia. The EU even consented to European companies opening bank accounts with Gazprom bank and making payment for the imports in rubles. Germany and Italy are set to make payment for energy imports in rubles. Earlier, Austria, Hungary and Slovakia have also been making payments in rubles. Despite opposing the war, energy dependence on Russia is keeping the EU divided. Like the EU, the NATO is also facing crisis from within. The Russia Ukraine war was perceived as giving a renewed purpose to the NATO whose existence was questioned in the post Cold War era. The continuing war and the threat of spill over effect into their respective territories led Finland and Sweden to apply for the membership of the NATO. However, Turkey has blocked their bid. NATO membership can be granted only with unanimity and Turkey veto could prevent Finland and Sweden from becoming NATO members. At a time when NATO appeared to be gaining strength Turkey reservations against Finland and Sweden have highlighted the potential cracks within the organization. Besides, dependence on Russian oil and gas on the part of NATO European allies remains a concern which reduces the intensity of a unified response against Russia. Similarly, the divisions within the ASEAN were evident for the past few years. The ASEAN, which was experiencing friction among the member countries over engagements with China and the US and over the military coup in Myanmar, now stands divided over the Russia Ukraine war. This **was** evident during the voting in the United Nations General Assembly on a resolution condemning Russia aggression against Ukraine. In this voting, Laos and Vietnam abstained while the remaining eight ASEAN member states voted in favor. The recent US ASEAN Summit also confirmed the existing internal differences within the ASEAN **as** the outcome indicated lack of consensus over the Russia Ukraine war as well on measures to contain China. Challenges for the Quad Maintaining focus on the Indo Pacific Region The Russia Ukraine war has shifted the geopolitical focal point of the world to Europe. In this summit the Quad countries must ensure maintaining their focus on the Indo Pacific Region. The Quad was conceptualized concomitant to growing strategic importance of the Indo Pacific Region. In a special briefing on Prime Minister Namenda Mode visit to Japan, India Foreign Secretary Vine Karta said, Quad cooperation is anchored in shared values **and.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-02-TEST NO.-25768

Commitment to the principles of democracy, international law rules based international order as also a vision for a free, open and inclusive Indo Pacific. Karta further added that since the first Summit, the Quad has been working to implement a positive and constructive agenda with a strong focus on enabling peace, prosperity and stability in the Indo Pacific Region. The focus on the Indo Pacific by the Quad has a number of objectives other than strategic cooperation. The purpose of the Quad is to cooperate in a number of areas which include strategic and economic cooperation, climate change, health, cyber security, diversification of supply chains etc. Stretching s specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be an integral part of every workout program. It not only helps increase your flexibility, which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of motion. According to the studies, proprioceptive neuromuscular facilitation or PNF type of stretching is more effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural **that** your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, **shoulders,** etc. and stretch those parts of your body. Strategic and economic challenges from China While the Russia Ukraine war may overshadow other geopolitical challenges, it is important for the Quad to keep track of the strategic and economic challenges that China poses. China assertion continues uninterrupted whether it is in the South China Sea, against Taiwan or in the South Pacific. China has been actively pursuing the Pacific Island Countries. China has signed a security pact with Solomon Islands which is perceived as China getting a foothold in the South Pacific. China is looking for similar pacts with other **Pacific.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-02-TEST NO.-25769

Also China economic engagements across the Indo Pacific Region are a challenge for the Quad. The Quad countries need to deliberate upon the challenges that China poses in the Indo Pacific Region irrespective of India stand on the Russia Ukraine, along with the and Australia have also been imposing sanctions on Russia. India has however avoided calling out Russia directly. India has condemned the violence and has called for dialogue and diplomacy as any economic sanctions on it. It is important for the other Quad member countries to work around these differences with India by focusing on the common challenges and India potential role in the Indo Pacific Region. Change of guard in Australia in Australia. Labor Party Anthony Albanese has won these elections by defeating Scott Morrison of the Liberal Party. As the new Australian prime minister attends the Quad Summit, it of engagements with the Quad from Australia side is Iodine fortification is what most countries rely on to encourage adequate dietary intake. In more than seventy countries that iodize salt generally serves as the major source of iodine intake. One fourth of a teaspoon of iodized salts has about hundred micrograms of iodine. Note that the salt used in processed foods, which is the major source of salt for most Americans typically does not contain iodine. If salt used in a processed food contains iodine, it will be listed in the ingredients list of that food. Focus on decreasing the amount of salt consumed from processed foods and get your sodium from iodized salt. Seaweed, saltwater fish and seafood are natural sources of dietary iodine. Dairy products also supply iodine in the diet at varying levels. During lactation, the breast concentrates iodine in milk so breast milk tends be a good source of iodine as long as the iodine intake of a mother is adequate. Plants grown in iodine rich soil are also good sources. However, this is not a reliable source of iodine since there is no way of knowing whether produce purchased in grocery stores is grown in iodine rich soil or not. Iodized **salt** usually adds less than about three hundred micrograms iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit of daily iodine intake for adults set at 1,100 micrograms by the IOM it is unlikely to hit an excess amount when **including** a multivitamin and including natural sources of dietary iodine. The trend of eating less table salt, dairy and bread has some experts concerned that iodine deficiency could be on the rise again. Eating a healthy, balanced diet that includes iodine rich foods and iodized salt is work around whatever differences may exist among its members. It is observed in case of the institutional mechanisms that the divisions already existing have been exacerbated by the Russia Ukraine war. The Quad countries need to avoid falling into this trap and focus on the strategic and economic priorities in the Indo Pacific **Region.**

**Software Link: https://rkcnawada.online/best-typing-software-rkc.php**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-02-TEST NO.-25770

At every stage of our lives, we set goals for ourselves and spend time working toward these goals. We may seek to establish ourselves in the world, become physically fit and healthy, amass wealth and possessions, forge strong relationships, or excel in other areas. Looking at our lives, we find that we are stuck in a web of worldly affairs. Living at the level of our physical senses, we believe that all we experience through our senses is real. We become attached to attractions that adorn this worldly stage, pinning our happiness on what we believe will bring us physical, emotional, and intellectual benefits and joy. Few people find contentment and peace when they live to gather only material gains. But too many leave the world before they can find that peace. However, we must awaken to the temporary nature of everything in this material world. If we are to lead life as it should be lived, we must follow the blueprint offered to us by the saints and mystics. The spiritual path calls on us to make the most of the rare opportunity we have been given in this human body so our soul can find its way back to God. However, the path Godward does not require that we negate life. We can enjoy this world beauty, attractions, and bounty, but we should not become attached to them. To find the perpetual happiness we seek, we must attach ourselves to the Almighty. To do so, we need to learn to move our attention from the outer world to the inner world through meditation. As we do so, our soul connects with the Divine light and embarks on the journey within. Through meditation, when we go on this journey into the inner worlds, we tap into the source of all love, joy, and happiness. The divine nectar of the Creator love is ever present in the worlds within. It is up to us to partake of this sweet nectar, and we can do so as we sit in silence and withdraw our attention from the outer world and **focus** it on the inner worlds. Contact with the Supreme Being love nourishes the parched soul, which blossoms forth to reveal its pristine beauty. Through meditation, we realise God presence in our lives, and when this happens, all worry and fear dissipate, and happiness and joy overtake our being. As **we** withdraw our attention from the outer world and focus it within, we can connect with the Divine love and nourish our soul. This is the grand purpose for which we were given this human existence. We need to use this golden opportunity to help our soul find its way back to God so that the light of the soul merges again into the Light, just as the waves of the ocean merge into the ocean. Our private inner retreat can be accessed through meditation, and it serves as our refuge from the stresses and strains of everyday life. In **the** revulsion over decisions of Namibian and Zimbabwe govts to cull elephants to feed needy communities, what gets lost is a classic duality. The desperate need to feed hungry millions by killing wild animals that need protection, those long droughts, those shrinking spaces for wildlife, man-animal collisions they are the flip side of human progress. This is not to argue that Namibia or Zimbabwe govt should abandon their citizens. Or that culling is a widespread practice. Namibia culls hippos during droughts, since the pools of standing water hippos need to survive dry up. But the point is that the frequency of droughts have increased. What not being talked about is that killing elephants to feed humans captures the rising demand for meat 80% of t

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-02-TEST NO.-25771

That means every year, around 16 animals are killed for each meat-eating human. Note, too, hunting has returned in parts of Africa. Trophy hunting of Trans border super-tuskers who cross over from Kenya to Tanzania has become a contentious issue. Kenya banned hunting. Tanzania allows it. A truce to not hunt the Ambos Eli super-tuskers a single tusk weighs 50kg and fetches dizzying prices had protected these elephants, but hunts have resumed. For Tanzania, hunting brings in the global affluent, especially from US, generating millions in revenue. The reality is human prosperity has extracted too great a price on Earth. At just over 8bn, humans are a burden. All the chest-beating over fossil fuels has dimmed unbridled expansion of the energy-guzzling AI shebang. From water-intensive crops to marine life, human demand on resources is off the charts. Also, politico-industrial-military establishments around the world want expensive wars the highest number of conflicts since are running post-Covid. Wars are a most profitable industry. Human beings are bad news for the earth. But who on earth is listening? In some countries like Namibia and Zimbabwe, the governments have decided to kill elephants to feed people who are hungry. This decision has upset many people, but it highlights a big problem: humans need to eat, but wildlife also needs to be protected. As humans grow and take up more space, there less room for animals, and this leads to problems like people and animals clashing over land and food. It important to note that these countries are alone in making tough choices like this. During droughts, Namibia also kills hippos because the water they need to survive disappears. And droughts have been happening more often. The issue of killing elephants also shows a bigger problem the rising demand for meat. Around 80% of people in the world eat meat, which means about 100 billion animals are killed each year to supply that demand. That about 16 animals for each meat-eating person, every year. In some parts of Africa, hunting has even made a comeback. For example, in Tanzania, rich hunters, especially from places **like** the US, pay to hunt elephants with huge tusks. These tusks can weigh as much as 50kg each and are worth a lot of money. Even though Kenya banned hunting these elephants, Tanzania allows it because it brings in millions of dollars. The bigger picture here is that human **growth** and prosperity are hurting the planet. With over 8 billion people on Earth, humans are using too many resources. We continue to grow crops that need a lot of water, over fish our oceans, and demand more and more energy for things like technology. And wars, which are happening more now than at any time since World War II, only make things worse. Unfortunately, while humans are thriving, it coming at a huge cost to the Earth. But who paying attention to this problem Cleopatra had a pronounced nose which was seen as a sign of a strong personality, **a** trait which enabled her to become Pharoah and which attracted Mark Antony to her. Their liaison ended with a clash of arms between Antony and Octavian, Caesar adopted son, which weakened and, according to historians like Pascal, contributed to the ultimate fall of Rome as an imperial power which dominated the globe. Is today world at another turning point when anatomical measurements will determine the course of history? Some White House-watchers scrutinising the minutiae of the US presidential race claim that one of t

We had joy, we had fun we had seasons in the sun. Although that seems an inappropriate elegy for Davos the Swiss town that hosts the World Economic Forum is not exactly sun drenched the pathos of nostalgia that made those song lyrics famous is very appropriate. With at Davos is on now but it is no longer the premier gathering for the great and the good. Three things contribute to Davos loss of uber relevance. One, the forward march of the communications revolution beginning in the 1990s and early 2000, just when Davos was the mecca of globalising capitalism, that saw the birth of social media. Two, the relative decline of transatlantic economies in global heft and, in particular, the growing importance of Asian ones in driving global growth. Three, the hubris behind the assumption that global hotshots could together ward off Armageddon being shown up for what it is. A Delhi court four page bail order should become mandatory reading for police and judicial officers everywhere, especially given these fraught times for free speech. While quickly freeing Ratan Lal, an associate professor of history at Delhi University Hindu College, arrested Friday night for a Facebook post on the Gyanvapi mosque controversy, chief metropolitan magistrate Siddhartha Malik gave a fine lesson in what free speech means that another person view may offend you does mean that person has committed an offence, and a democracy is nothing without a wide diversity of opinion. Extraordinarily, Lal was booked under IPC Section 153A promoting enmity between different groups on ground of religion on a complaint lodged by a local lawyer. Malik noted that with over 130 core Indians, any issue can have 130 core different views and that feelings of hurt nursed by an individual cannot be equated with targeting an entire group or community. Significantly, given how the police use these laws, he said determining the presence or absence of intention to create animosity by words is a subjective exercise, and perceptions of those who read these words are subjective, too. As Malik explained, he personally found Lal post distasteful **and** unnecessary as a proud follower of the Hindu religion, but others may agree with the professor, and still others may have varying degrees of disagreement. Where the criminal offence in any of this? But dangerously for Indian democracy, cops are not making these distinctions, and seem all too willing **to** create a crime where none exists. Obviously, there the motivation to please political masters, and 153A, 124A sedition, 295 and 295A blasphemy or even UAPA are favorite options here. While a citizen right to report a crime is sacrosanct, the police job is to do due diligence. The lack of that is effectively making these laws tools of denunciation for partisans against political, and even personal, enemies. As the magistrate said, courts have to adopt higher standards before jailing citizens. Let also note that the law in question, 153A, has seen a sharp rise in its use as a **blunt.**

Challenging, remained confined to working with pre-approved designs. This meant I had limited involvement in influencing project cost, design decisions, or overall execution timelines. Q What was it about your school and programme that encouraged you to enrol? Located in a prime area of South West London, Kingston Business School offered an ideal environment for international students to experience UK culture while remaining connected to a diverse, multicultural community so I never felt alone. The teaching approach was heavily case study driven, with a well balanced mix of individual and group assignments, allowing me to learn not only from faculty but also from the varied experiences of my peers. I arrived without knowing anyone, but the University was extremely supportive. They consistently helped me navigate essential processes such as visas, course selection, and accommodation. Even after joining, I was able to adapt quickly both culturally and socially because the University organised various events that encouraged students to break the ice, and several dedicated support services that helped students address personal, academic, and practical challenges throughout their stay. The programme combined case based learning with foundational concepts, allowing me to connect my prior experience with new scenarios. This consistently pushed my understanding and provided a safe environment to apply newly acquired skills. I had the opportunity to work as a consultant to the UK Ministry of Defence, giving me valuable exposure to high stakes problem solving and real world consulting methodologies. Understanding the UK job market and learning how to adapt to it whether it was building a CV that aligns with UK expectations or developing a network. Identifying what employers value and adjusting my skills and approach accordingly was a crucial part of the transition. This required flexibility, openness and a willingness to rethink established ways of working. The MBA at Kingston helped me redefine the kind of leader and professional I want to become, deepening my understanding of my strengths while teaching me how to remain adaptable without losing my authenticity. The programme has made me more ambitious and broadened my perspective. I now aspire to create a **global** impact rather than limiting myself to contributions within a regional market. I am actively involved from the tendering stage. I contribute to offering the right technical solution to clients while ensuring project budgets and estimated timelines are accurately considered during planning. My role requires regular collaboration with teams across **the** UK and India, enabling effective project execution across different time zones and cultures. My most recent project is a wind farm installation commissioned near Dundee for SWEL. The University offers a range of valuable facilities, including a CV builder that helps students create ATS (HR tech) friendly CVs. The University organised workshops and sessions where we learned from the experience and insights of industry experts. Regular alumni meetups were held to maintain a strong network. The most exciting part of my day is realising the impact I am having on the UK energy sector. I play a key role **in** building a reliable and efficient energy infrastructure by collaborating with teams across the UK and India. I aim to progress into management roles within project execution, further strengthening my technical and commercial expertise. My goal i

They expect both input costs and output prices to harden. Given these uncertainties, RBI average inflation forecast for 2023 24 was 5, a tad lower than what it expected two months ago. In short, the economy is not yet past the point where inflation is no longer a threat to macroeconomic stability. However, on the supply side, price cooling levers are all in GOI hands. RBI interest rate weapon can and should be used any time soon. The never before witnessed most extensive lockdown in the world made heated waves of impact in India. In India, healthcare and fitness were invariably overlooked, but the Covid 19 period challenged the consumer sense of wellbeing and post pandemic times accelerated health and fitness consciousness behavior. While there was an alarming impact of Covid on all sectors of industry, one segment that thrived and in fact dominated within e commerce post Covid is healthcare and fitness D2C. As consumers made a more proactive approach to their sense of well-being, became more devoted to healthier lifestyle, made conscious dietary choices and increased focus on boosting immunity, the healthcare D2C leveraged the changing attitude of people post pandemic. Healthcare D2C broke the stereotype of traditional offline channels and gathered steam in India by launching online shopping portals to deliver healthy, organic, natural, and fitness boosting products. During Covid times, owing to the widespread closure of gyms and fitness centers, the fitness industry experienced a huge slump but the pandemic steadily transformed the fitness industry. Home based fitness culture evolved and fitness D2C gravitated around home fitness. The D2C brand sought to establish a stronger online presence to connect with the customers and increased the production of fitness equipment that takes up less surface area. Home fitness gear like weights, cardio machines, yoga mats, GPS led fitness trackers, AR screens, and lighter fitness equipment like jump ropes, resistance bands, kettle bells, medicine balls, foam rollers, and cycling gear was sold like wildfire. Fitness D2C brands capitalized on this trend by coming up with innovative fitness products and leveraging digital opportunities to connect with customers. Home **workout** apps experienced a surge post covid, the Pilates, and online yoga experienced an upward graph. A phenomenal growth in the sales of fitness wearable gadgets like smart watches was seen post covid. Post Covid initiated the trend of D2C with more brands launching their own websites and brands catering **to** the demands of nutritional supplements have experienced a surge. The supplement sales post Covid has doubled, propelled by the huge shift in consumer buying pattern. The trend for a healthy lifestyle set by Covid is not going to cease and consumers increasingly prioritize fitness and well-being and embrace the convenience and personalization offered by the D2C industry. Health and Fitness D2C has gained greater influence over the brand image. Besides the advancement in the healthcare and fitness sectors, investment in these sectors looks promising. Post Covid, D2C has allowed manufacturers to gain rapid entry into the market, gain immediate **access** to customers and aim for competitive advantages. Social media marketing, the growth in e commerce, digital payment, and faster delivery will support the expansion of the health and fitness D2C industry in India. Indian Fitness D2C has rapidly transformed and will evolve into something much

Support, increased internet users, analytics driven customer engagement, technology enabled services like digital payments, digital advertisements, and smartphone penetration make it a relatively solid infrastructure for to create new brands. The demand for fitness gadgets will penetrate in the coming years. A great deal of technological innovations and investments is expected in fitness to leverage the home fitness market. Going forward, consumers will rely on dietary supplements as the prophylactic for maintaining and improving health and fitness. Covid accelerated the remote fitness trend and fitness took a stride in offering flexibility, customization, and convenience. Healthcare and Fitness perfectly fills the instant response seeking behavior of busy individuals and will last and grow. An efficient financial planning should always aim at generating optimum returns from an investment portfolio. However, making wrong investment choices or ignoring important investment fundamentals can create major gaps in your investment portfolio, which can adversely impact your portfolio returns over the long term. Here I will suggest some tips for fixing the gaps in your investment portfolio for generating optimum returns: Invest in equities to achieve long term financial goals: Many investors fail to appreciate the impact of inflation on their investment portfolios and financial goals. As inflation reduces the purchasing power of money, inflation rates exceeding the returns from the investments would land one with inadequate financial corpuses for achieving his future financial goals. Note that fixed deposits and other fixed income instruments barely beat the inflation rates while equities as an asset class beats inflation rates as well fixed income investments by a wide margin over the long term. Thus, investors should invest in equities and equity oriented mutual funds to achieve their long term financial goals. They should invest in fixed deposits or other fixed income instruments for achieving their short term financial goals as equities can be very volatile in the short term. Shift to growth option from dividend option in mutual funds: Many investors opt for dividend plans while investing in mutual funds as they wrongly consider mutual fund dividends to be a windfall income. However, the dividends declared by mutual **funds** are paid from the funds own AUM. As a result, the NAV of the dividend declaring mutual fund is also reduced by the value of dividend paid out on the dividend record date. Moreover, the dividend amount is calculated as a percentage on the funds face value and not **on** the basis of its NAV. Opting for the dividend plan is also tax inefficient as the mutual fund dividend receipts are taxed as per the tax slabs of the investors. Thus, mutual fund investors should opt for the growth option to reduce their tax liability while making the most from the power of compounding. Shift to direct plans from regular plans: Direct plans of mutual fund schemes have lower expense ratios, usually up to 1 lower, than their regular counterparts. Expense ratio refers to the per unit cost incurred for managing a mutual fund scheme. Apart from the fund **administration** expenses, management expenses, etc., the commission paid to its distributors is also factored in while calculating the expense ratio. As investors can directly invest in direct plans without the involvement of the fund distributors, the savings made in the distributor commission is pass

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-03-TEST NO.-25780

Allows direct plans of mutual fund schemes to generate higher returns than their regular plans. Although the outperformance in returns might seem trivial in the initial years, it can become significant over the long term due to the power of compounding. Thus, consumers invested in regular plans of mutual funds for their long term financial goals should shift to their direct counterparts to build bigger corpuses. Invest in ELSS to save tax under Section 80C: Equity Linked Savings Schemes ELSS are diversified equity mutual funds, whose investment contribution qualify for tax deduction under Section 80C. These schemes have a lock in period of three years, which is one of the shortest amongst all investment instruments eligible for Section 80C deduction. As ELSS funds invest primarily in equities, the returns generated by these schemes outperform the Section 80C eligible fixed income instruments as well as the inflation rates by a wide margin over the long term. This makes ELSS an excellent tax saving instrument for achieving long term financial goals. Review your portfolio at regular intervals: Periodical review of one mutual fund portfolio is as important as regular investing. Even funds having consistent track record of outperformance over their peer funds and benchmark indices can become long term laggards due to the changes in market conditions or fund management style. Thus, funds consistently underperforming their benchmark indices and peer funds for 3 4 consecutive quarters can be considered as under performing ones and can be redeemed for better performing ones. Investors should also identify the changes in their risk appetite, financial goals, funds fundamental attributes and macro economic factors. This would allow them to make necessary adjustments in their portfolio for deriving optimal asset and security mixes. Maintain an adequate emergency fund: The main purpose for maintaining an emergency fund is to cover your unavoidable expenses for at least six months in the event of loss of income caused by unemployment, ailments or other unforeseen events. Without an adequate emergency fund in place, one might be forced to redeem his investments earmarked for crucial financial goals or avail loans at **high** interest rates to deal with financial exigencies. Financial emergencies occurring during bear market periods may also force one to redeem his market linked investments at loss. Investors should park their emergency fund in fixed income instruments offering high liquidity and capital protection features. In the current market scenario, one **can** consider high yield savings accounts offered by some scheduled banks offering interest rates in the range of 5.5 7 p.a. Investors comfortable with internet and mobile banking can open bank FDs with scheduled banks offering FD yields of 7.5 p.a. and above to park their emergency funds. In the event of a crisis, brands need to have a clear and concise communication plan in place. This plan should address how the brand will communicate with its stakeholders, including customers, employees, investors, media, and the general public. The first step in any crisis communication plan is to establish a command **center.** This is a central location where all crisis communications will be coordinated. What Is Crisis Communication? The term crisis communication refers to the process of effectively communicating with your audience during a time of crisis. Crisis communication is essential in order to maintain re

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-03-TEST NO.-25785

But was still living. His hopes were gone and he felt miserable. Where does true happiness lie? he asked. Man biggest and most ancient search is need to put in effort actually proper and adequate effort. For misery to go, you need such effort. For a lazy person putting in effort is hell. Misery can exist in an effortless happiness. He has looked for happiness in the external world, and through the world of objects, and what he has found is pleasure instead of happiness. To know the distinction between pleasure and happiness is an important awakening. The meaning of education is to bring forth. One has to bring forth distinctions and clarity in life. Gathering information is not education, but seeing distinctions is what education is about. Man has looked for happiness outside and found pleasure. But if he looks for happiness inside instead of outside, it is a great turning point. To look inside means to look inside his body, inside his mind, inside his feelings. When one looks within, he can see there is something beyond the body, mind and feelings. That beyond ness is inner space and it is not limited by the body, mind and feelings. In deep sleep you were not limited by the body, mind and emotions but still felt a deep sense of joy and happiness. This inner journey is the true journey. Why do we find ourselves familiar with misery and alien to happiness? Misery is the result of ego. Misery is safe for the ego. Ego can exist only in misery. Ego is hell and misery is the material for hell. When understanding arises, the darkness of misery has to go. For understanding to happen, you need to put in effort actually proper and adequate effort. For misery to go, you need such effort. For a lazy person putting in effort is hell. Misery can exist in an effortless state. What is ego? Ego is an arrogant self. A self that is addicted to its point of view. A self that is proud of its achievement. For any achievement, **one** should be grateful and not proud. If one is humble, one will see there are many factors to one success. To see many factors for your achievement gives a sense of humility and not vanity. Once there is humility, ego can exist. In humbleness there is joy. True joy **is** the death of the ego. When you are egoistic you enjoy life in the form of pleasure and suddenly feel guilty. This guilt is also the result of ego. We are imprisoned by the ego and hence in hell. Because of the ego we are not growing. It is like a rock which is preventing the plant from going deep into the ground. Understand that ego is like a grave. Don live in the grave and don think it is a safe place. Ego is energy, but this energy has to be transformed in humility, in love, in true **joy.**

350th: "one" | 400th: "is" | 500th: "joy."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-03-TEST NO.-25786

Biodiversity the variety and variability of life on Earth, is a critical natural resource that underpins human well being and economic development. Biodiversity loss, however, continues at an alarming rate, driven largely by habitat loss and degradation, overexploitation of plants and animals, climate change and pollution. The Millennium Ecosystem Assessment MA 2005 report identified 24 global threats to ecosystems and their services that impact human well being. By 2015, an analysis of 1,360 new studies found that the number of threats had increased to 60. Agriculture, forestry and fisheries are the main human activities that affect ecosystems and their services. These activities can both degrade and protect ecosystems, depending on how they are managed. To date, only a fraction of the world land has been sustainably managed, meaning that the majority of land based ecosystems continue to be degraded. The degradation of ecosystems not only diminishes the services they provide to people but also leads to species extinctions and land cover changes that can amplify climate change. Consequently, efforts to improve the management of ecosystems and their services are essential for both human well being and climate stabilization. Required: Environmental buffers Global analysis reveals biodiversity importance to productivity and stability of marine ecosystems. Researchers are developing and implementing tools and methods for the quantification and mitigation of threats to biodiversity and ecosystem services. Many opportunities exist for exciting research projects, such as optimizing ecosystem function and biodiversity for sustainable societies, or determining the link between biodiversity and ecosystem stability. People are starting to recognize connections between biodiversity, climate change, and other components of sustainability. Biodiversity is a solution to some of the biggest problems in the world, from climate change, to poverty, to food security. Biodiversity is not just about collecting plants and animals across Earth; it is about the ecosystems that are native and promoting a healthy environment in which living things can flourish. Biodiversity is intimately connected with other concepts such as species and ecosystems a geographical community of life. A shared and sustained life Biodiversity, as healthy ecosystems, filters our air and water; it keeps our **soils** healthy, and provides environmental buffers from storm damage. Biodiversity enhances multiple ecosystem services, including yields from crops, fisheries yield stability, timber yield, forage yield, resistance to plant invasions, carbon sequestration, soil mineralization, and soil organic matter. All food systems are dependent upon biodiversity and ecosystem services supporting crop yields, **soil** fertility, and water quality and availability. We depend on biodiversity for food and energy, and we depend on its indispensable role in maintaining air quality, providing fresh water and soil, and modulating climate. In short, soil biodiversity is critical for nearly every aspect of sustaining biodiversity and for humanity. Soils are the source of over 25% of the world biodiversity, and they sustain virtually all land based organisms, including humans, as well as contributing to healthy aquatic life. Soil biodiversity supports multiple aspects of the sustainable development goals, and yet it is largely overlooked in efforts to achieve them **going.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-03-TEST NO.-25787

Well beyond the remit of Sustainable Development Goals 14 and 15, which respectively target life under water and life on land, biodiversity and healthy ecosystems provide critical resources and ecosystem services that directly support a number of social sectors and economic activities, such as agriculture, forestry, fisheries, and tourism. The design and implementation of cohesive, integrated, and mutually beneficial policies is needed in all areas of biodiversity, climate change, and sustainable development, as illustrated by the adopted voluntary guidelines on designing and effectively implementing ecosystem based approaches for climate change adaptation and Disaster risk reduction DRR. A global effort at individual levels The Convention on Biological Diversity CBD, an international body whose main objective is the conservation of biological diversity, and its protocols have long traditions of deliberating new technologies and considering their potential impacts on the protection and sustainable exploitation of biodiversity, and fair and just benefit sharing. Even by merely supporting our local wildlife, we can help preserve the bionetwork of the environment around us and its native ecosystems. While protecting rainforest sounds daunting, we can do many things at home to help foster and protect our local biodiversity. Essentially, one cannot address a biodiversity issue unless we address all these issues cohesively, as well. Improved conceptual frames, as well as the discourses and studies that feed into them, could contribute to shaping sustainable development agendas beyond the provision of urgent needs for survival, and toward creating societies that value biodiversity recovery both as a baseline condition and a product of improved human well being. Horticulture as a practice is as old as when humans were hunter gatherers. It is the science and the art of cultivating fruits, vegetables, flowers, herbs and spices. Despite being a branch of agriculture, the cultivation of food grains aka agriculture gets more prominence in India in terms of the farm land dedicated to it and the public discourse. But, it is horticulture that holds the key to boosting farmer incomes as well as our country overall economic output. Here is why this seemingly far fetched proposition can very much be a **reality** for India. The present in numbers Agriculture undoubtedly remains one of the largest livelihoods in India. About 42 per cent of India total workforce is employed in agriculture and allied activities, accounting for nearly 20 per cent of the country Gross Domestic Product GDP, as per data from the **Economic** Survey 2020 21. Of this, horticulture accounts for a third of the total agricultural gross value added. Despite horticulture occupying only a fraction of the area under agriculture about 20% of the total area under food grain in 2018 19, its productivity was 12.3 tons per hectare versus 2.3 tons per hectare given by agriculture. These numbers are clear indicators that horticulture, even while taking up only a fraction of the cropped area in the country, is already able to generate a much higher value output. The seeds of growth As a positive sign, the area dedicated to horticulture **is.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-03-TEST NO.-25788

Vietnamese Buddhist monk Thick Nhat Hanh said in a statement on Climate Change for the United Nations that all civilisations are impermanent and must come to an end one day. But if we continue on our current course, there no doubt that our civilisation will be destroyed sooner than we think. The Earth may need millions of years to heal, to retrieve her balance and restore her beauty. She will be able to recover, but humans and many other species will disappear until the Earth can generate conditions to bring us forth again in new forms. According to the World Economic Forum, billions of animals are slaughtered for food every year. One of the reasons for increasing greenhouse gas (GHG) emissions is the rearing of livestock for human consumption. Add to that deforestation, wars, massive fishing and whaling activities in the oceans, and other human activities that impact millions of different species and expedite the extinction of some. The seeds of the Sixth Extinction may have been sown by modern Western philosopher Rene Descartes argument that animals lack self-awareness, or emotions. His proposition Cogito ergo sum, I think therefore I am may have established humans perceived superiority over other species and may have even unintentionally contributed to rationalising mechanised meat production as the Industrial Revolution powered the world. Details of the sixth extinction may be disturbing. In the realm of environmental ethics and philosophy, there are discussions on how human actions impact other species and ecosystems and how different species might be praying for human extinction. This brings us to the question of whether humans are worth saving. What is the point of saving a person who causes suffering by eating the flesh of other animals or destroys their habitat to serve his ends? Movements such as the Voluntary Human Extinction Movement, VHEMT, has been advocating voluntary extinction of humanity by choosing not to reproduce, furthering the proposition that the cessation of human existence would prevent the degradation of the Earth ecosystems. Imagine grey wolves, Arctic foxes, hippopotamuses, rhinoceroses, cheetahs, tigers and lions roaming without a worry in urban **concrete** jungles in cities such as New York, London, Paris, New Delhi, Tokyo and Beijing. However, should we be worried as the gloom and doom reports regarding climate change and the sixth extinction boosted by algorithms appear on our social media feeds? Perhaps not. From the Indic standpoint, it is **comforting** to know that existence is cyclical and duties and responsibilities regarding creation, preservation and dissolution are neatly distributed among the trinity of Brahma, Vishnu and Mahesh. Brahma creates, Vishnu sustains, and Mahesh dissolves creation, only for it to be renewed for another cycle, ad infinitum. Krishn says in the Bhagwad Gita, Arjun, if you suppose this soul to be the subject of constant birth and death, even then, you should not grieve. Death is certain for the born, and rebirth is inevitable for the dead. You should not grieve over the inevitable. For what is existence, if not a **brief** pause between being manifest and manifest, it is all but a Divine play, Krishn Lila. In his Budget Speech for 2020-21, the then Finance Minister of Assam Dr. Himanta Biswa Sarma, and now its popular Chief Minister, passionately introduced a new scheme, aptly named Orunodoi, meaning sunrise. The aim was clear: to eradicate poverty and promote socio-economic inclus

in a single phase, for an electorate of 2. 5cr people. While delimitation, carried out in 2022-2023, by ECI, retained legislature size B Purushartha The word 'shakti' is derived from the potential indicator root 'shak'. Therefore, 'Shakti' is the ability to do something. Outcome is inherent in the cause, in its unmanifest form, and requires Shakti to After US bombed Kharg Island, which handles 90% of Iranian oil exports, and dispatched marines and amphibious assault ships, such as USS Tripoli, to the region, talk of a US ground offensive has increased. But Elections in Assam, TN, Kerala and WB might, finally, help resolve the national opposition's core dilemma. Will INDIA bloc evolve into a jointly led 'coalition of equals', or into a Congress-led front, as 'first among equals'? To truly understand the essence of Navratri, one must first understand the nature of existence, which operates on three distinct levels: the gross, subtle, and causal. This triad can be beautifully understood Autism Awareness Day: Moving beyond awareness to acceptance in India Dr (Prof) Sadhana Kala is a USA-trained robotic & laparoscopic surgeon, Uppsala University, Sweden, trained fertility specialist, and 'National Icon Endoscopic Surgeon' of India. University topper and winner of several gold and silver medals and Certificates of Honor and the unique 'Distinction' in medicine in medical college, she is the youngest-ever Professor in any medical college anywhere, and the only-ever gynec Hon Consultant to the Army, Navy and Air Force. FORMER: President Family Welfare Foundation of India (now closed) one of the few UN -accredited NGO since 1997; Member of Central Consumer Protection Council, Government of India, the apex national advisory body on consumer affairs; Advisor, Ministry of Women and Child Development, Government of India; Member, Advisory Committee, MTNL (Delhi). Awardee of C L Jhaveri and P N Behl Awards of Indian Medical Association for professional excellence. Chief emeritus and currently Sr Consultant gynecologist and laparoscopic surgeon, Moolchan Medcity and Apollo Cradle Hospitals, New Delhi. She is a published-writer on varied topics. World Autism Awareness Day a moment to pause, reflect, and recognize the experiences of millions of individuals **on** the autism spectrum. Yet, in 2026, awareness alone is no longer enough. The conversation must evolve from simply knowing about autism to actively embracing inclusion, acceptance, and meaningful support. Autism, or Autism Spectrum Disorder (ASD), is not a disease to be cured but a neurological variation that shapes how **individuals** perceive, interact with, and experience the world. The term spectrum is crucial; it reflects the wide range of abilities, challenges, and identities within the autistic community. Some individuals may require significant support in daily life, while others live independently and excel in highly specialized fields. Breanna Clark, diagnosed with autism at four years old, is a professional athlete and Olympian, a gold medalist. In India, awareness around autism has grown recently, thanks to advocacy groups, media coverage, and increasing diagnosis rates. However, deep-rooted misconceptions persist. Autism is often misunderstood as a mental illness, a result of poor parenting, or **something** that can be fixed through discipline or alternative therapies. These myths not only stigmatize individuals but also delay early intervention, which can make a significant difference in deve

support services. Early intervention programs, speech therapy, occupational therapy, and behavioral support can empower children to develop communication and life skills tailored to their needs. However, access remains uneven. Urban centers may offer specialized services, but affordability and availability are major barriers for many families, particularly those from low-income backgrounds or underserved communities who may struggle to access these essential resources. Bridging this gap requires systemic investment in healthcare infrastructure and inclusive education policies. India's education system is at a critical juncture regarding autism. While policies promote inclusive education, implementation often falls short. Many schools still lack trained special educators, sensory-friendly environments, or individualized learning plans. Inclusion is not just about placing autistic children in mainstream classrooms it is about adapting teaching methods to accommodate diverse learning styles. Some autistic students may excel in visual learning but struggle with verbal instructions. Others may need structured routines to feel secure. Teachers must be equipped with training that goes beyond textbooks. Empathy, patience, and flexibility are as important as academic expertise. Peer sensitization is equally vital. When classmates understand and accept differences, schools become spaces of belonging rather than exclusion. As autistic children grow into adults, the conversation shifts toward employment and independence. Unfortunately, this phase is the stage where support systems often fade. Despite possessing valuable skills, attention to detail, pattern recognition, and deep focus many autistic individuals face unemployment or underemployment. Corporate India has begun to take steps toward neurodiversity hiring, but these initiatives remain limited, often lacking comprehensive staff training and clear career advancement pathways for neurodiverse employees. Workplaces need to move beyond tokenism and create genuinely inclusive environments with flexible communication styles, sensory-friendly spaces, and supportive management practices so that autistic individuals can thrive and contribute their unique skills effectively. Success stories do exist. From tech professionals to artists and entrepreneurs, many autistic individuals are reshaping narratives around capability. Their journeys highlight a crucial truth: when given the right support, neurodivergent individuals don't just adapt they thrive. Dr Temple Grandin, diagnosed with autism at a young age, is a widely known and honored professor, author, and researcher **For** many autistic individuals in India, family remains the primary support system. Parents often navigate a complex journey seeking diagnoses, therapies, and educational opportunities while also confronting societal judgment. Support groups and community networks can make a profound difference. Sharing experiences reduces isolation and provides practical guidance. At the same **time,** communities must move away from pity-driven attitudes to respect-based engagement, which fosters a more inclusive environment that empowers individuals with autism rather than defining them by their condition. Language matters. Terms like suffering from autism reinforce negativity. Many advocates prefer identity-first language autistic people as a way of acknowledging autism as an integral part of identity, not something separate or lesser. The media plays a p

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25793

The timing was critical; across the country, the poor were bearing the brunt of the COVID-19 pandemic, and Assam was no exception. A decisive, enduring, and substantial intervention was needed, and Orunodoi, launched on October 2, 2020 emerged as a game-changer in empowering the poor. Today, it brings smiles, relief, and comfort to millions. On September 19, 2024, Chief Minister Sarma launched the third edition of Orunodoi, expanding its benefits to 37.2 lakh beneficiaries across the state. A brainchild of CM Sarma, the scheme has evolved into a comprehensive social security net addressing nutritional, financial, medical, and ancillary needs. Much like Assam first monthly Assamese-language magazine, also called Orunodoi, which began printing in Sibsagar in 1846 and heralded a new era in Assamese literature, the Orunodoi scheme is ushering in a new wave of confidence in governance. At the heart of Orunodoi lies CM Sarma deep understanding of his constituents, honed over two decades of public service. Sarma has been an MLA since 2001, winning five consecutive elections, and has proven himself as an able administrator who understands the needs and aspirations of the people. His leadership of key departments such as education, health, and finance has driven all-round development for all segments of society. The commitment to social welfare and to improving people ease of living is exemplified by the scale of the program and its generous budget: Rs 5604 crore annually, or Rs 467 crore every month. The third edition will see the addition of 12.5 lakh new beneficiaries, bringing the total to 37.2 lakh, making Orunodoi the largest state-run DBT initiative in Assam history. As the CM aptly put it, Orunodoi 3.0 represents more than just welfare; it is a transformative initiative aimed at economic empowerment and inclusive growth. By specifically including the third gender, widows, and unmarried individuals over 45, divorced and deserted women, and persons with disabilities, CM Sarma has effectively targeted segments of the population that may have been overlooked by previous welfare programs. Since its launch in 2020, Orunodoi has been transforming lives, inspiring other state governments to develop similar schemes, such **as** the Ladli Behna scheme in Madhya Pradesh, the Gruha Jyothi scheme in Karnataka, and the Mahtari Vandana Yojana in Chhattisgarh. One of the finest features of Orunodoi is its universality. Always staying in close contact with his officers, CM Sarma ensures the benefits of the scheme reach every corner **of** the state. Despite Assam cultural, geographical, and ethnic diversity, Sarma has maintained a consistent approach to implementing the scheme across the state. Assam is home to a rich tapestry of traditions, languages, and communities, spread across a wide variety of landscapes from the fertile plains of the Brahmaputra Valley to the hills of Karbi Anglong, from the scenic upper Assam to the dense forests of Kaziranga, Manas, and Desoi. Sarma leadership has ensured that Orunodoi 3.0 embraces this diversity while delivering uniformly. To this end, he directed that around 10,000 beneficiaries be selected from each of Assam 126 Assembly **Constituencies.** With Sarma determined to elevate Assam to the ranks of India top states, transformative welfare and social security programs like to take the rule of Rank point of the Indian culture of the Famina World Orunodoi will be the cornerstone of that success, creating a harmonious, thriving

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25794

Study sees the potential of the Indian attach market to be about $24 billion worth by 2025. Leveraging emerging technologies such as the Internet of Things Iota, Artificial Intelligence AI, Machine Learning ML, Block chain, etc, several attach companies are able to bring predictability and precision into farming, aspects that could never be tied to farming before. Big data is helping in efficient supply chain management, yield prediction, and therefore, predictable income for farmers. Through the aforementioned precision farming technologies, startups are able to help horticulture farmers get a better picture of their farms, receive real time alerts and advisory on the weather, soil conditions, pest and disease predictions and much more. Thanks to technological interventions in recent years and the 1300 attach startups in India dedicated to improving the entire ecosystem, horticulture production in the country has more than doubled from 146 million tons in 2001 02 to about 314 million tons in 2018 19. Technology has been able to create a manifold impact for horticulture farmers and their crops, as per the National Bank for Agricultural and Rural Development NABARD research. For instance, high tech farming has been able to increase yield up to an average of 5 8 times more and save on inputs such as water up to 50%, fertilizers 25% as well as pesticides. Farmers are now able to predict the incomes they can achieve through their farming practices. Considering all these factors, it is evident that horticulture can unlock the next level of possibilities not just for farmers in doubling their incomes and more, but also for the country on the whole to bolster its economic output. If they have a product for which there is a demand and that does not require repeated infusions of large amounts of capital, nonprofit organizations can be sustainable for decades, if not centuries. I was at a Living My Promise retreat recently when someone spoke about why a social enterprise needs to be a for profit entity in order to be sustainable. I immediately recalled a conversation I had had with another social entrepreneur a few **months** earlier. He was talking about his new venture related to mental health and mentioned that he was going to set it up as a for profit entity. I asked him why he was structuring it as a nonprofit, to which he replied, To make it sustainable. In response, I **asked** him if he could recall a nonprofit he is associated with that is more than 150 years old, and he could not. I said, St Joseph Boys High School in Bangalore, where both of us studied. Our school was established in 1858 and is still going strong as a nonprofit. Then I asked him if he could recall a nonprofit he is associated with that is 2,000 years old, and again he could not. I replied, The Catholic Church, into which we were both baptized. These two organisations have always been nonprofit entities and have survived longer than most **for.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25795

Gradually rising over the years, leading to a significantly higher rise in the output generated by it. India currently stands as the second largest producer of fruits and vegetables in the world, next to China. It is, therefore, no surprise that a large amount of fruit consumed by the world such as grapes, mangoes, pomegranates, oranges, etc. and spices such as black pepper, ginger, turmeric, cinnamon, saffron, etc., take their roots in India. A lot of vegetables consumed by the world, including tomatoes, onions, green chili, potatoes and many others, also come from the country soil. In addition, government policies and schemes such as the Mission for Integrated Development Horticulture MIDH offer a great stimulus to ensure the holistic development of the horticulture sector in the country. The awareness raised by schemes such as the MIDH is ensuring a steady rise in the land area under horticulture. The average horticulture farmer household income grew from 0.73 lakh per annum to 1.30 lakh per annum an average of 78% rise ever since the National Horticulture Mission programmer has been implemented, as per a study conducted by the Institute for Social and Economic Change in 2017. Hedges to overcome Tapping more land for horticulture comes with the opportunity of not just increasing farmer income, but also lending a shot in the arm to the country food production capabilities. But, like any other farming practice, horticulture farming, too, is ridden with its own set of challenges. While unpredictability brought on by nature remains a constant, horticulturalists also face hurdles such as difficulty in accessing institutional loans and a lack of insight into the market needs and opportunities. When compared to food grain production, horticulture requires a farmer to tend to each of the plants on the farm, thereby making it much more labor intensive. Therefore, input costs for horticulture are also much higher in comparison, making the transition from agriculture to horticulture a difficult step for many farmers. For those already practicing horticulture farming, the gap in the availability of infrastructure such as cold storage facilities right from the village level makes **it** difficult to keep the high value fruits and vegetables safe from the weather conditions. Despite the country being the world second largest producer of fruits and vegetables, nearly 30 35 per cent of the output is said to be wasted due to post harvest losses arising from an inefficient **supply** chain. Government schemes such as the Operations Greens to uplift the tomato, onion and potato farmers and value chain in the country through minimum support prices help to a great extent in shielding farmers from external variables. Extending these minimum support prices to other vegetables and fruits can help empower horticulturalists and further increase their incomes. Technology comes bearing fruit With an upswing in horticulture adoption, several newer opportunities are also opening up, thanks to technology. GTECH has become a booming sector globally and in India, inviting high interest from venture capital and private equity investors. An Ernst & **Young.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25796

Profit corporates similarly take Alcoholics Anonymous, which was set up in 1935. It operates in approximately 180 countries and has more than 2 million members. The meetings is too havey between rush and Ukrain but solution not resolve war I is continue problem face public, are free to attend and there is no complicated organisational structure. Members take turns to help the organisation as rusted servants, and each group is a self governing entity that relies primarily on donations from local members. There are no ages or educational requirements. Most importantly, Alcoholics Anonymous has been around for 87 years. These organisations show us that if you have a product for which there is a demand and one that does not require repeated infusions of large amounts of capital, you can be sustainable for decades, if not centuries. A child, who watches his parents working hard, having faith in success through their words, behavior and body language, is likely to develop a similar attitude. The children of short tempered, over cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parent behavior in front of their children. The legislations that govern nonprofits in India the Indian Trust Act 1882, the Societies Registration Act 1860, and the Companies Act 2013 enable them to be set up in a way that they are sustainable for a long period of time. Their governance structures are tried and tested requiring nonprofits to set up supervisory boards, conduct audits, comply with regulatory audits, and more thereby allowing them to continuously raise funds for decades. Of course, if governance is poor and only lip service is paid to these structures or if the team has limited fundraising capabilities, organisations cannot be sustainable, irrespective of their structure. Distorted incentives So why do social entrepreneurs feel the need to set themselves up as for profits in order to be sustainable? This myth has been perpetuated for a long time and creates an unnecessary distortion of incentives along the way. The reason for this is that organisations end up **being** driven by the need to make money for shareholders as opposed to improving the lives of the communities they are working with. I remember a social entrepreneur telling me about her business that had both a for profit and a nonprofit entity. She argued that she needed the for **profit** component to be able to raise capital, create economic value for herself and others in the team, and build a sustainable organisation. It been more than five years and no significant additional capital has not been raised nor has significant economic wealth been generated because the business model did not justify it. But both entities are still alive and thriving and continue to positively impact marginalised communities. Another social entrepreneur told me that she needed her organisation to be structured as a for profit. When I asked her why, she replied, So that we can distribute dividends to the **shareholders.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25797

The shareholders were primarily she and her family. Is positive thinking an inherent characteristic of a person or can it 786 be developed in one takes psyche. The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. As for inheritance theory, since positive attitude is not a physical feature but a mental faculty, it cannot be purely hereditary. It can be developed. Moreover, parents play a major role in developing this quality of a child. They must exude confidence, self belief and hope, especially in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. There is no better education for a child than watching his parents come out of a tough situation by means of earnest endeavours. Such success not only gives more joy but also increases self confidence. When asked how much surplus money she thought she would earn to distribute as dividends, she mentioned a figure of INR 25 lakhs. I told her that if she structured her organisation as a nonprofit and got donors to fund it, she could easily pay herself a monthly salary of INR 2 lakh, without worrying about being a for profit entity and being unable to access donor money. It is also worrying to see social entrepreneurs get caught up in the stories of venture capitalists and smart bankers about how there is a fortune to be made at the bottom of the pyramid. I recently attended a well structured presentation on impact investing. No one can get success every time even after making efforts, **nor** can one fail constantly. Moreover, success has different meaning for different people. For some students, getting per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. The presenter spoke about one investment with a **targeted** return of 25 percent. I do not see how that can be achieved if the communities they serve were to get a fair share of the revenues. Clearly, the corporate entity would be gouging a significant share of the profits and the communities creating the product would continue to be exploited. In contrast, I recall the amazing transparency of an organisation whose name I can no longer remember that sold handmade products online. Every product had a detailed break up of the selling price, indicating what the artisan made and what was spent on each part of the supply **chain.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25798

Quad leaders met in Tokyo even as the war in Ukraine raged on. For Quad countries, whose principal concern is China, the key takeaway is that Beijing domination dreams look less credible given its unsureness after Moscow invasion. 2022 was meant to accelerate China ambitions as Xi Jinping New Year address rang ominous portents: The complete reunification of our motherland is an aspiration shared by people on both sides of the Taiwan Strait. Three weeks before the Ukraine war, Russia and China inked a joint statement of mutual support that underwrote Xi support for Russia in its war with Ukraine in exchange for Vladimir Putin support to China on Taiwan. Thirteen countries, including India and the US, launched a process to establish the Indo Pacific Economic Framework for Prosperity IPEF. It a platform for economic negotiations among members who contribute about 40 of global GDP. The common thread running through them is anxiety about China aggressive positioning. Therefore, it a measure to complement a security oriented platform like the Quad. IPEF currently is amorphous. The US has stated that it not a traditional free trade agreement. Yet, it the foundational element of their overall Indo Pacific strategy. How is IPEF to be gauged IPEF needs to be juxtaposed to two critical FTAs many of its members have joined, the Comprehensive and Progressive Agreement for Trans Pacific Partnership CPTPP and Regional Comprehensive Economic Partnership RCEP. RCEP, which came into force in January, includes China and is the world largest FTA spanning 30 of global GDP. China has also formally applied to join CPTPP, which is the gold standard for deep trade agreements that aim to dismantle barriers hindering freer movement of goods, services, capital, people and ideas. Therefore, the evidence shows many IPEF members chose tighter trade integration with China despite security concerns. This challenges IPEF latent potential. Barring the US and India, other key members have moved towards greater harmonisation of their respective trade regimes with China. To that extent, China will remain a part of the supply value chains which run through these economies. The US till 2016 **was** the catalyst for an ambitious FTA such as the original TPP, which sought to set standards that would keep China out. However, American domestic politics makes it unlikely that the US will soon opt for a deep trade agreement with East Asian economies. True, IPEF does represent a useful **platform** for India as it chosen to opt out of RCEP. But it also brings out the limitations of India current approach to trade policy. Opening the door to bilateral FTAs is a positive sign but it cannot match the potential of broader agreements in linking up with global supply chains. India should not shy away from real trade agreements spreading across the Indo Pacific. The costs of keeping away are too high. With Bihar chief minister Nitish Kumar upping the ante on caste census, an issue peripheral to governance may take center stage again. Caste counting is both unnecessary **and.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25801

Problematic the 2011 socio economic caste census had revealed a staggering 46 lakh castes and sub castes, making that part an unusable document for policy. Plus, individuals and community leaders, aware now of the proximate link between census, surveys and handouts, have made discovering the truth about various caste, asset, income and material claims tougher. Caste is so charged a political concept that incentives for untruth are very high. Flawed data can set off massive political churning. Unsurprisingly and rightly, GoI has been sceptical about enumerating caste, unlike vote bank focussed regional parties. Not willing to wait, state governments in Chhattisgarh, Maharashtra and Odisha are pushing ahead with surveys ; the Constitution bars states from conducting a census. States reckon they can claim implicit sanction for these surveys: the Supreme Court has made quantifiable data on backwardness the key criterion for clearing state level caste quotas in jobs, education and elected bodies. Politics is a factor too. JD U, SP, RJD and TRS are worried about BJP OBC outreach. But political will to conduct surveys is the easier part. Marshalling the data and managing outcomes, which will include agitation, litigation and competing quota demands by several castes, are the tough asks. Karnataka Siddaramaiah government started India first state level Social and Educational Survey in 2014. But it back pedalled as 2018 state elections approached. Tamil Nadu survey, initiated in 2020 following Vanniyar demands for a separate quota, is also in limbo. Even GoI OBC sub categorisation exercise is stuck. Instead of obsessing over caste numbers, political parties should worry about the lack of contemporaneous economic data. Policymaking without credible data, especially after an economic shock, is a terribly suboptimal way to govern. Good data, for example, on household consumption, can help everyone, no matter their caste. What opposition parties and BJP allies like Nitish should press for is another NSO consumer expenditure survey the 2017 18 one was never officially published as well as the decadal census, which is now delayed by two years. The National Family Health Survey V 2019 21 brings out significant gains in access to **electricity,** full immunisation, bank accounts for women and access to Ujjwala LPG gas connections. To understand what brought these about, it is necessary to understand the Gram Swaraj Abhiyan, carried out in two phases in 2018, to reach 63,974 purposively selected villages with seven services. How to reach the marginalised **These** were large villages of 1,000 plus 500 plus in the Northeast, with over 50 population belonging to Scheduled Castes and Scheduled Tribes, among whom deprivation is high. Seven services, including the four listed above plus distribution of LED bulbs, accident insurance and life insurance were the key deliverables to the eligible marginalised. If many members of your own family were going hungry, would you send across food to feed your neighbours That the first and foremost question which arises following the Indian government ban on the export of wheat, a move which the US and G7 countries have asked **New.**

**350th:** "electricity," **400th:** "These" **500th:** "New."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25802

Aggressiveness, they must recognise that a stable world also needs an India US China conversation: A combination of hype and hope has always defined PM Modi visits to the United States. Despite the worrisome and divisive domestic political environment in both countries there is every time much talk about a meeting of minds between the two great democracies. This time excitement has been generated about Uncle Sam lining up toys for the boys. In common with several such opinion based rankings, this index too stretches credibility by placing India below conflict ridden countries such as Sudan 148, Pakistan 150 and even Afghanistan 152. This article looks into the source of these systemically biased reports, and shows that it is part of a well-coordinated web of global funding that is deliberately hardwiring certain agendas into the way the world works. Maharashtra now has five political parties with electoral clout, and will host a real humdinger of a battle: Political advertisements are today a useful lens to view the unsettled state of Maharashtra politics. The first of this week advertisements seemed to show one gunmanship between CM Kenneth Shined and his deputy Defender Vadnais. The next one tried to project that the Shiv Sena BJP alliance is harmonious. Next week advertisements around Shiv Sean foundation day on June 19 are likely to be about whether the Shined faction or the Buddha Thackeray faction is the true inheritor. Juxtapose political advertisements with the series of low intensity communal flare ups Maharashtra has witnessed for a few months, and there a sense that the political positioning is an expression of an underlying social churn. These changes are complex, but a useful way to get a sense of what happening is to look at the unprecedented ideological fluidity in political alliances. Let go back to the 1995 assembly elections. This was a watershed as the Shiv Sean BJP alliance formed the first real non Congress government. Subsequently, the Congress split but the two ideological poles for the next two decades were Shiv Sean BJP and Congress NCP. Even if they fought assembly elections without **an** alliance, 1999 and 2014, post poll alliances coalesced around similar ideological anchors. The 2019 assembly elections followed by the rupture between Sean and BJP, and the subsequent formation of MVA, further fragmented political coalitions but with a difference. From a predominantly four cornered contest, the next election will have **five** parties with the clout to make a difference. Also, remember that smaller parties were never really unimportant. They have been necessary to sometimes cobble majorities over the last three decades. We now have three parties that use Hindustan as an ideological anchor but are not on the same side, and two who feed off the erstwhile Congress vote base. The long delayed civic elections, particularly for BMC, should be the first indication of how the state politics will evolve. In addition, the gradual buildup of communally charged campaigns by the Sacral Hindu Samar indicates that the Hindustan political plank **itself** is in the throes of change. The Karnataka Rural Development and Panchayati Raj Department RDPR has upgraded 5600 gram panchayat libraries and provided computers and internet connectivity in 4000 of these. Over three million children between the age group of 6-18 years have enrolled in these libraries that are free of charge. This revival of these public libraries includes adding carefu

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25803

Books to their elders and door-to-door collection of books. In another heartening development, the Ball Bahrain Library in Pune, belonging to the Maharashtra State Textbook Production and Curriculum Research Board, which had restricted access, opened its collection of over one lakh books to the public. A public library is a social institution and despite the sweep of digital content, will continue to exist as a social space, an antidote for the isolation of the digital world. Memories of my grandfather introducing me to books at the Institute of World Culture, Bengaluru while I was in school and of the B C Roy Memorial Library at my institute in Kolkata and its musty pleasant vanilla! smell have remained with me. In my travels, I have always been attracted to libraries, memorably among them, the Bodleian in Oxford, the Library of Congress in Washington DC, and a unique public library in Istanbul with a glorious view of the Mediterranean. It is believed the first libraries were established in Mesopotamia in the 7 century BCE. That libraries have thrived for over 2700 years of human history is a testament to their usefulness to citizens. As one of the last surviving democratic spaces, public libraries need to be safeguarded at all costs. They are fundamental to the transmission of civilisational values. When during the Ferguson riots in 2014, in the United States, all public services were closed the only place open was its public library. Despite this, throughout history, conquest and conflict have destroyed libraries the National Library in Sarajevo with its three million books was destroyed during the siege in 1992 and the Great Library of Alexandria was ruined in a civil war in 48 BC said to have turned the clock back on human development by two millennia. There have been similar stories from Baghdad and Nalanda. Closer home, in Bihar last month, a mob vandalised and set fire to a 113-year-old library, leaving its collection of over 4,500 books reduced to ashes. Andrew Carnegie 1835-1919 gave millions of dollars to establish more than 1,600 libraries in the United States. There **have** been many other examples of generous philanthropy towards libraries. The organisation I work for runs 278 libraries in towns across the country, each with approximately 2500 books and one large library in Bengaluru with over one lakh books. Several large collections have come from donors, including the scientist, P **M** Bhargava the economist, H M Patel and the educationist, David Horsburgh, who hope that future generations will benefit from what they have curated. Libraries are seeing an extension beyond just a collection of books. In many places, libraries have become a haven for children who need a productive space till their parents return home, aspirants preparing for exams, or senior citizens looking for company. Recently, there is a trend of extensions to digital spaces and Exploratoriums. North Carolina James B. Hunt Jr. Library has technology labs, media production rooms, and creativity studios making it as much a lab ray. **The** use of technology in indexing and archiving is revolutionising libraries making them more user-friendly and accessible. Some public libraries even deliver books to where the readers are Swiggy Zomato style. In Mandekolu, a remote area in Dakshina Kannada, Savithri ram Kanemaradka, started Ammanigagi Ondu Pastaza one book for my mother, a unique initiative in which books from the library were issued to children who read it to the

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-04-TEST NO.-25804

Such as Rajasthan, Andhra Pradesh, Karnataka have a library whereas only 62% of schools have a library in the 10 lowest achieving states such as Arunachal Pradesh, Uttar Pradesh, Punjab. Samagra Shiksha and the National Educational Policy envisions school libraries to serve students and the community as well. The recent Union Budget has provided for a National Digital Library and funds to set up physical libraries at panchayat and ward levels with infrastructure to access this National Digital Library. From June 22 to June 24, 2023, Prime Minister Modi will visit Washington D.C. for the first time as a guest of State. As per the Office of the Historian, US State Department, since 1947, the United States President, at whose instance a state visit is accorded, has only twice before hosted an Indian leader as a guest of State, Manmohan Singh in November 2009 Obama and Dr Radhakrishnan in June 1963 Kennedy. Modi will also address a joint session of Congress for the second time, a rare occurrence. Therefore, this high honour is a manifestation not only of the now natural trajectory of US-India bilateral relations but also of recognizing India heft and role on the global stage. Although the recent cover of the Economist magazine, inspired by Netflix Series Tiger King, sardonically portrays the Indian Tiger as Uncle Sam newest pet, the analysis within builds the case as to why India is becoming more prominent in Washington strategic calculations. While consistent growth rates and strong macro-economic fundamentals have certainly worked in India favour, it is the United States and the western world ever-growing concern with China that is most advantageous. As America under Biden promotes its new Washington consensus and re-globalizes with greater concern for national security and its domestic industry, India has been touted as one of its most important potential geo-economic partners, not only as a market for defence goods but to build critical supply chains and innovation hubs. An example of such technology transfer will be seen during the state visit with the announcement of India being granted the technology to indigenously build the GE **414** engine to power its new generation of fighter planes. It was also recently announced that defence minister Rajnath Singh-led Defence Acquisition Council DAC has approved the outright purchase of 30 MQ-9 Reaper or Predator B drones for a consideration of $3 billion. New Washington Consensus Small Yard With A **Big** Fence In major recent policy statements directed towards China, Ursula von der Leyen EU President, Janet Yellen US treasury secretary, Jake Sullivan US National Security Advisor and the G7 Hiroshima Leaders Communique have highlighted that future economic resilience and security are to be based on diversifying and deepening partnerships in order to de-risk as opposed to de-coupling from the world second largest economy. Both Yellen and Sullivan in their speeches, while they state that the United States is eager to maintain a healthy economic relationship on the one hand, are adopting a strict policy qua China when it comes **to** national security and critical technologies and connected supply chains. Sullivan states that the United States will protect its foundational technologies with a small yard and a high fence, meaning that sensitive sectors will be off-limits to trade, investment and collaboration with actors who seek to challenge the US militarily. However the US is acutely conscious that it ca

To autistic voices and involving them in decisions that affect their lives. In India, where diversity is woven into the social fabric, embracing neurodiversity should be a natural extension of our values. Nevertheless, true inclusion demands more than ideals; it demands action. Autism Awareness Day is not just symbolic; it is a call to action. Here are a few ways individuals and institutions can contribute: Small actions, when multiplied across communities, can lead to significant change, including increased awareness, stronger support systems, and improved healthcare and diagnostic services for autistic individuals. As India moves forward in its journey toward inclusivity, Autism Awareness Day serves as both a reminder and a responsibility. The goal is not to fix individuals but to fix systems that exclude them. A truly inclusive society is one where every individual regardless of neurological differences can learn, work, and live with dignity. Autism itself does not hinder this vision; rather, our perceptions create barriers. It is time to move beyond awareness. It is time for acceptance, inclusion, and action. Currently a China and journalism educator, Dr Tilak Jha is an academician-journalist with over a decade of exposure with various media, non-profit, consultancy, academia, and research institutions. He writes on China, India-China relations, media, and public policy issues. Do you think students have a social responsibility, a political responsibility, an economic responsibility, a cultural responsibility or an environmental responsibility? If your answer is no, you possibly missed the purpose of education. Education is not just about earning a living. It is the art of making people responsible towards themselves and the wider society. However, if you already agree with it, remember that responsibility has many more dimensions and in that sense, we are all lifelong students and learners. Being a student is also about being responsible towards the nation, towards humanity, and even towards the silent rhythms of existence: the trees, the soil, the oceans, the sky, the noise and the silence alike. A student, effectively, stands accountable to everything the physical and the spiritual, the mundane and the magical. Even though earning a living and enhanced **consumption** may be the primary thing on your mind, that is actually not the fundamental purpose of education, let alone higher education. Being a student is fundamentally about applying your mind and soul to gain the skills and interests towards being a meaningful member of society. Sometimes, the society in **which** you grew and feel responsible for may be exploitative, conservative and uncaring. In such a situation, a responsible education is about empowering the learner to apply his/her conscience and question, challenge or reform any such parochialism. At a deeper level, thus, being a student is also about being responsible to the highest goals of humanity and recognises one's being, independent from any limited sense of identity. Before you change the world, you must confront a quieter, more difficult question: Every civilization, every faith and tradition whether it speaks of cycles like Kalyug and Satyug, or of a final reckoning **like** the Day of Judgment agrees on one thing: life is finite. Even though we experience that whether the world ends or not is uncertain, our time certainly will. And when that time comes, all that will matter is: How meaningfully you lived. How gracefu

the instrument comes together in a consonance. Every knob, every nail, every single little element, every dimension, even the settings, the atmosphere help give a note the place it has. The player, the maker, the seller, or a listener all comes together in one unknown symphony to make the music matter. Some take the more visible role; others don't even notice their part and how they contributed to it. But you would agree that music magic happens when each of them play their part well. Put together, the key to know yourself begins from recognising the beauty of your contribution and how it makes the music of the world hum. If it sounds too big to imagine, just notice how you, by being an active student, a caring classmate or a responsible human being can contribute to the lives of people around you. The people you empower then enable others and the chain goes on. However small a contribution, it is never insignificant. Rather, it is always a critical component getting ready to become more magical and melodious. Let's be clear first. We all begin with the mundane. Those whom you see as magical gained it and learned to be so through practice, persistence and patience. A simple talisman to learn commitment is to start committing to something for a day, a week, a month, a semester, a year. Or if you are willing, for a lifetime. Don't just keep thinking what to commit to. Clarity does not come from thinking endlessly. It comes from the beginning to commit. With humility. With awareness. With grace. When you commit deeply to something truly, obsessively, meaningfully clarity follows. Some memories of war never fade. Even after more than five decades, the events of 4th Dec 1971 in the Tangdhar Sector of J&K remain as vivid to me as that cold morning in the mountains. I was a young officer then, leading an ad hoc commando platoon of the 8th Battalion, The Rajputana Rifles. On the evening of 3rd Dec 1971, as war was declared, our CO, ordered an immediate attack on **two** objectives: Through the night, our companies moved along narrow mountain tracks. By early morning, Ghasla Top had been captured. But Ring Contour stood firm, heavily defended and firing relentlessly. Our leading company could go no further. At first light, I received orders to attack. It was an unusual task. **We** were a small commando platoon, asked to assault a strongly held position in broad daylight, across difficult terrain and a suspected minefield. But hesitation was not an option. Taking a steep and lesser-known route, I led my men forward. From a distance, the enemy position seemed quiet. Believing we had an opportunity, I ordered the charge. What followed was a moment I will never forget. We rushed through the minefield and straight into the enemy bunkers. In those first few minutes, we managed to overrun several positions. But soon the enemy regrouped. Heavy machine-gun fire came down on us. **We** began taking casualties. Ammunition started running low. Some of our weapons even failed at a critical moment. Yet, there was no question of pulling back. We held our ground and closed in, fighting hand-to-hand, shouting our war cry Raja Ramchandra Ki Jai! With everything we had left. I remember urgently calling for reinforcements. Soon, Bravo Company reached us. Together with the leading troops, we launched one final assault. This time, the enemy could not hold. At 9. At 20 am on 4th Dec 1971, we stood on Ring Contour. The Tricolour was raised, and the objective was ours. The capture

Base that the and its like mind part and like, can invest in and rely upon together. Yellen refers to this strategy as friend shoring. She states that in certain sectors, China have resulted in of the of critical good inside China. And that the is not only in at home, it is also a strategy call friend shoring aimed at that can lead to supply. To create in critical apply chain with the large number of trading partner the can count on. It is for India and to critically gap this position and to position the country to take of the desire to with India for mutual. Given India unique of the Chin threat as well as the of access to critical tech India does indeed find itself in a geo eco sweet spot in this respect. The More Than Just a recent piece in the Harv by Hemans Taneja Firm Gen. Catalyst and Fared Zakaria grasps this geo poll entirely and build a case for the United State and India to develop a corridor. It India that in add to its highly skilled work force it has built up a digital public on the back of the piece also the success of Jo in broad base and making. The of the piece is that must shift their of Indian from one of to one of radi this, in turn, will not only cycle of but also make Indian. How in order for both sides to this both countries need to slash the red tape and for the creation of the of ideas and to build a truly dynamic market. The of the India initiative on Critical and the second edition of which was held earlier this week is a to address such concern. A Post Ashley Tellis of the to and one of the architect of the from the side has emerged as a voice urging the Biden to curb their qua India. In his dated May he states, of India are. India with China, and its to it that New Delhi will never involve itself in **any** goes on to argue that India values with for the it brings but does not believe that it must, in turn the United States in any crisis even one a common threat such as China. While many in India foreign policy may agree with this they certainly will not **the** bet as one that is going to yield it even if that is indirectly. For example the Indo defence has grown at speed after the nuclear deal, similarly one can expect India trade with respect to digital goods raw materials and green and raw materials to boom under the umbrella of this this century between the and India. This is largely in line with an to bolster its middle class and base. Foreign Minister to the a to a question about still desire to uphold a post order, the response can serve as a substantial reply to Mr. Tellis **argument** as well, one the normative base of which is in the need for security alliances. Jaishankar states, I think they western governments and Biden administration are acutely conscious that the post order has been severely challenged, and that they need a new template, new partners that they need to look beyond alliance constructs. Broadly the included While the popular narrative is certainly of India joining the as a measure to sit self in the coming test of strength with its eastern neighbor, it is but certain that it is not in India interest the have two hot borders. While continued efforts are underway, with level talks between China and India, India must certainly cater for the day when the border situation is normalised so that the two can return. While the Rajiv has certainly elapsed, it is incumbent upon the two powers to evolve a new form of association. One that is fit to build frameworks and rules around the ever burgeoning

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-05-TEST NO.-25810

If you live for 80 years, consider this You spend about 25 years asleep. If a person spends an hour a day in the bathroom, an hour eating, and if you live in a busy city like Mumbai or New York, an hour in traffic, that 10 years But how much time in our lives is filled with enthusiasm, love, care, compassion, and a sense of belonging? How much time do we spend truly enjoying nature? Barely 3 to 5 years, and that too, mostly in our childhood Can we reverse this? Yes, we can. We need to teach people the importance of mental hygiene. We have all been taught dental hygiene how to brush our teeth, but no one teaches us how to maintain our mental well-being. No one teaches us how to keep our spirits high or how to preserve the innocence we were born with. That where meditation comes in. Meditation is mental hygiene. It like wiping the slate clean before you write something new. Without it, we keep overwriting old thoughts, creating confusion and chaos in our minds. Our minds need clarity. A genuine smile arises naturally when we are free from inhibitions, stress, and anxiety, and when we experience a deep sense of belonging, recognizing that everyone and everything is connected. There a greater power in the universe, and we are a part of it. It belongs to us. There are things we do not know. There are questions that went unanswered in our childhood, and as we grew up, we stopped asking them until we have children of our own. When I questioned my parents repeatedly, they likely said, It too late now, go to sleep. Honestly, I do remember, but that what I told my own children. Whenever we try to comprehend these mysteries using our faculties body, mind, and intellect we often come up empty-handed. Our sages faced the same dilemma, as recorded in the Taittiriya Upanishad The home minister proposal to rename Port Blair as Sri Vijaya Puram to honour the memory of the 11th century Chola empire is the **third** major renaming associated with the Andamans. In 2002, the Atal Bihari Vajpayee govt had renamed the airport in Port Blair as Veer Savarkar International Airport. In 2018, the BJP govt had renamed three islands Ross, Neil, and Havelock as Netaji Subhash Chandra Bose, Shaheed, and Swaraj Dweep. These successive **name** changes are being done in the name of decolonisation freeing the Indian subcontinent of the cultural effects of British colonialism and restoring its hubris. The latest renaming has generated three popular misconceptions that the Srivijaya kingdom was an Indian empire the word Srivijaya is a Sanskrit name for the Chola or Vijayanagar Empire and the Andamans were an integral part of the Chola Empire. The Srivijaya kingdom, however, was a maritime Indonesian empire that flourished from 7th to 13th centuries and had mercantile connections with the Indian subcontinent. According to a Tamil prasasti eulogy of the Chola ruler Rajendra **I** at the Thanjavur temple, in the early 11th century, he sent naval expeditions to the Srivijaya kingdom. Nilakanta Sastri, professor of Indian history at University of Madras, in his seminal history of the Cholas 1955 presented these expeditions as militaristic raids carried out by King Rajendra to remove obstacles in trade and to extend his digvijaya or world conquest. Almost all the men of the air-station were lined up on the apron on one end of the runway for the formal parade commanded by the station commander himself. The Marshal landed in a Chetak helicopter on the apron at the other end of the runway, abo

We began the journey from the helicopter in an Ambassador car driving on the deserted taxiway. About halfway down, the car stalled Car battery was weak and could not start the engine. The Marshal got down. And, in full regalia, medals and all, began to push the car. I too rushed to assist him, and we push-started the car. The Marshal got in. And at the parade he got out smiling, tall, erect, and not a crease on his regalia The United Nations values the important role cooperatives play in social development. In 1995, the world summit for social development held in Copenhagen had recognised the importance of cooperatives in its people-centred approach to development. It agreed to utilise, and develop fully the potential and contribution of cooperatives for the attainment of social development goals, in particular, the eradication of poverty, the generation of full and productive employment, and the enhancement of social integration. To monitor the implementation of the project and to ensure its seamless integration with the existing policies programmes at the state level, state cooperative development committee at state level and district cooperative development committee in each district of the state UT have been constituted. Farida Akhter, advisor to the Bangladesh ministry of fisheries and livestock, countered, We will have goodwill gestures in all other ways. But we should not do anything by depriving our people. At a time when some Indian politicians in states like West Bengal and Assam are trying to whip up public anger by complaining about Bangladeshi infiltrators crossing the border illegally into India, Dhaka has smugly said, This time we will not allow the fish to cross the border. This is not just politicians fishing in troubled waters. The hilsa future itself is troubled. Demand far outstrips supply. Despite bans, juvenile fishing still happens. This year, Bangladesh, the world largest producer of the fish, has seen a lower harvest anyway. Writer Chitrita Banerji told the food and travel site Roads and Kingdoms One could almost worry someday this princely fish, with its burnished silver scales and eyes like blue gems, will **not** be dancing on the waters anymore. This could actually be a moment to face that harsh truth. We complain about higher and higher prices for the fish each year but refuse to face the reality that our own insatiable demand and environmental degradation are some of the reasons why **we** are at this fishy impasse. Instead of a monsoon staple, it has become at best a once-a-year delicacy in many homes. That probably not a bad thing, yet every year restaurants host hilsa festivals and food magazines run Ilish specials as if it inexhaustible. But despite glossy pages of innovative hilsa recipes with curry leaves or pineapple or coconut milk, when the ilish finally arrives at home, if it does at all these days, my mother circles back to old recipes mustard paste, yogurt and a simple light curry with nigella seeds and eggplant. The fish is so expensive, **it** not worth experimenting, she rightly decrees. And every bit of the fish, from head to tail to its oil, gets used. The current fracas shows Tenuous ilisha is way more than a fish. Some have called it an emotion. In a way, it is a wistful reminder of a different time when the subcontinent had not been sliced up to create different countries. For Bengalis on this side of the border, the Padma ilish has become the symbol of loss and the repository of nostalgia. It has

Delhi to reconsider in view of the Ukraine conflict which has impacted global food supplies, leading to fears of acute grain shortages in African and other countries. India has defended its decision by citing the rising domestic cost of wheat and wheat products which over the past month have risen by between 20 and 40, partly due to the recurrent heatwaves in large parts of north India which have led to crop failures. The ban on wheat exports has brought into focus a fact that not many in the country knew about, that India is the world second largest producer of wheat after China, and is followed by Russia and the US. Last year we produced over 109 million tonnes of wheat of which 7 million tonnes, valued at over $2 billion, was exported, mainly to neighbouring countries like Bangladesh and Nepal. It a friendly gesture to supply food to neighbours. But should we first see to it that our own people are adequately fed Currently India ranks 101 out of 116 countries on the Global Hunger Index, a rating slightly worse than sub Saharan Sudan; and an estimated 14 of our population, some 200 million people, don have enough to eat. So why the wheat export ban now, and not earlier while chronic hunger and slow starvation have been stalking the country for years And why are over 20 million tonnes of wheat and other food grains lying in government god owns, and even out in the open under makeshift cover Over 1,500 tonnes of food grains are destroyed every year through exposure to the elements or are eaten by rats and other vermin. Officialdom works in mysterious ways, its wonders not to perform. All of which prompts much food for thought, in more ways than one. Or, considering that such acts of unbending negligence are an offence, to intelligence if nothing else, should that be food for tort Whenever a person lives in misery, he would like to destroy everything. Misery is destructive, happiness is creative. There is only one creativity and that is of blissfulness, cheerfulness, **delight.** When you are delighted you want to create something, maybe a toy for a child, a poem, a painting something. But when you are miserable, you want to crush and destroy something, create some situation in which you can be destructive. That why every now and then war erupts **somewhere** on the earth. All politicians go on talking about peace. They prepare for war. In fact, they say, We are preparing for war to preserve peace. Most irrational. To preserve peace, one should prepare for peace. That why all over the world, the new generation is a great danger to the establishment. They are only interested in being happy. They are interested in love, meditation, music and dance. They are not communists and they don belong to any ism. A happy person belongs to himself. Why should he belong to any organisation That is the way of an unhappy **person.**

**350th: "delight."** **400th: "somewhere"** **500th: "person."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-05-TEST NO.-25813

To belong to some organisation, to belong to some crowd. He has no roots within himself, he does not belong, and that gives him anxiety that he should belong. He creates a substitute belonging. He becomes part of a political party, a revolutionary party, religion, or anything. One should be rooted in oneself, because the way from oneself moves deep down to God, to existence. If you belong to a crowd, you belong to an impasse and no further growth is possible from there. There comes the end, a cull de sac. But politicians depend on your sacrifice. They don want you to be happy. They want you to be miserable, so miserable that you become destructive, angry, in a rage. Then you can be used for their ends. They teach you to be unselfish, to be martyrs. They teach you to sacrifice your life for others. And they are teaching the same thing to others too. I don teach you to be unselfish, because I know if you are selfish, you will be unselfish automatically, spontaneously. If you are not selfish, you have missed yourself and now you cannot be in contact with anyone else because the basic contact is missing. The first step has been missed. Forget about the world, society, utopias and Karl Marx. Forget about all this. You are just here for a few years, to be. Enjoy, delight, be happy, dance and love. Out of your love and dancing, out of your deep selfishness, an overflowing of energy will start, and you will be able to share with others. Love is one of the most selfish things. If you want a still deeper selfish thing, then comes meditation and prayer. If you want a still more selfish thing, God. You cannot be related to God through someone else, there is no via media. You alone in your superb aloneness will encounter that supreme experience. I teach selfishness, but if you understand my selfishness you will understand all that is beautiful, all that is unselfish. Biodiversity, the variety and variability of life on Earth, is **a** critical natural resource that underpins human wellbeing and economic development. Biodiversity loss, however, continues at an alarming rate, driven largely by habitat loss and degradation, overexploitation of plants and animals, climate change and pollution. The Millennium Ecosystem Assessment MA 2005 report identified 24 global threats to ecosystems and their **services** that impact human wellbeing. By 2015, an analysis of 1,360 new studies found that the number of threats had increased to 60. Agriculture, forestry and fisheries are the main human activities that affect ecosystems and their services. These activities can both degrade and protect ecosystems, depending on how they are managed. To date, only a fraction of the world land has been sustainably managed, meaning that the majority of land based ecosystems continue to be degraded. The degradation of ecosystems not only diminishes the services they provide to people but also leads to species extinctions and land cover changes **that.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-05-TEST NO.-25814

Saw several detach players making some grim announcements. In February 2022, Lido announced to its employees that the company is closing down due to lack of funds. In April, Academy laid off employees, followed by Vedanta which laid off 200 employees, and the latest where 800 White Hat Jar employees resigned from the Bijou owned detach start up within a span of 2 months after being asked to work from office. While the undertones and speculations of these detach companies not performing well, or not having funds have been the point of discussions, one cannot ignore the fact that these companies are well funded with deep pockets. Detach startups in India raised more than 4.7 B in 2021, and four of them reached the unicorn status during 2021 22, so why are the B2C detach models in India struggling despite a good funding to back them? Let examine High Customer Acquisition Cost CAC In the beginning of 2020, when detach was in full bloom, the cost of customer acquisition shot up by 70 80 of revenue of the detach platforms from a humble 20 25 . It is a simple dynamic, the marketing and branding activities for all B2C detach platforms remain the same its digital. They all relied mostly on digital only channels to generate leads and then hired expensive sales executives to convert them, throwing targets and incentives at them. The cost to acquire a single customer that includes your whole lead generation and acquisition cycle became so high that it became impossible to justify the unit economics. Kr. Asia reported in one of its articles that the for an detach company operating in the K 12 segment in India varies from INR per student. Simply put, after investing an exorbitant amount in marketing and retention, B2C detach firms in India will not be able to make enough money from their models. While the deep pocketed startups were able to splurge money on marketing and advertisements, smaller players had no choice but to exit. Unrealistic Pricing Model for Indian Markets Another issue with the detach platforms in **India** is the unrealistic pricing models which they try to thrust on parents. Undeniably high repeat pushes the detach players to increase their pricing, without realising that the end customer the parents have only as much. Central Square Foundation, a nonprofit organisation focused on education, advocates that there are more **than** 400,000 affordable, low cost or budget private schools across India enrolling more than 7.9 crore students this number is speculated to be 12 Cr by now, 95 are paying an annual fee of less than 30K INR. The subscribed or paying user ends up paying anywhere between Rs 2000 Rs. 2500 per month which in most of the cases is more than the school fees. On top of that, various detach players push the parents to take loans, purchase the devices they recommend to access their courses, like tabs etc., and coerce them to sign up for a long **term.**

**350th: "India"** **400th: "than"** **500th: "term."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-05-TEST NO.-25817

Subscription model, which parents sometimes do not even know how to cancel. This challenge was highlighted by a report by RedSeer Consulting and Omdiyar Network on detach 2020 and talked about the gap between the current prices offered by various b2c edtechs and the average price a consumer is willing to pay. The fact that some of the detach services can cost more than a school annual fee is a problem statement that edtechs are failing to solve. Sensibly any parent will invest up to 50 of School fees in after school activities, it should not be the case that they have to choose either or. Contextual Integration is Missing | School Context What a student learns in school and what he practices at home or invests his time on, improves his her academic skills that is the context at least parents have in mind. Indian parents do not want to shell out money on courses which are out of context from the school curriculum. The best example to understand this is from the tuition or coaching a child takes. The first question that the humble tutor asks is what did your teacher teach today? And they help the child revise exactly that. This school context is essential but unfortunately the Detach companies lack this. The 6 hours spent by the child in school are reset to 0. Limited Time of the Child The total time a child has only so much. Traditionally speaking, in a school going kids household, a child spends 6 hours of his time in school, after that he she comes back home to do the homework, or maybe go attend tuition, or just play around or watch TV etc. The amount of time available to start a child on something afresh is fairly limited. When the schools during the pandemic were fully online, or in hybrid mode or semi functional, parents and children could have the liberty to pick up something new. In fact we saw a slew of non school curricular focused startups gaining momentum. However, as the schools are opening up, the **whole** dynamic of how the services of b2c detach companies is integrated within a schools or child timetable has changed. And this is where we see them beginning to struggle. A lot of B2C detach players during the boom, and backed by deep funding, failed to factor in time, effort, **context** and cost of their target audience before rolling out or marketing their services to the consumers. As things go back to normal, all the above problems we discussed will get compounded, in fact they have already begun to. During the global crisis, organizations around the world understood the importance of effective, empathetic, and authentic leadership like never before. The first year of the pandemic brought multiple businesses across various sectors to either a grinding halt or slowed down their growth significantly, putting a stop to almost hiring activities. Fortunately, the last 9 12 months have been a completely different **story.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-05-TEST NO.-25818

This surprising turn of events is a direct result of the influx of capital and the rapid expansion of business opportunities. A change that has triggered a rise in the demand for hiring. While some might see this as a hiring rebound, there are many other factors at play than pent up demand. Companies across industries are focusing their efforts and resources on strengthening existing talent, they are also preparing for the next wave of growth with robust hiring plans for senior leadership roles. This trend can be seen happening across sectors, but it is primarily led by the technology sector. As the economy gradually picks up, sectors like BFS, automotive, healthcare, consumer, and manufacturing are also not far behind and have aggressively contributed to the growing need for executives. Technology is at the forefront of this change The pandemic brought innovation, technology, and personalization into the spotlight. This rapid tech adoption has put the technology sector right at the center of it all. Over the last few months, there has been a surge in new tech startups as well as established businesses adopting technology into their operations and processes. The sector, no doubt, is witnessing extraordinary growth. The massive influx of capital and the renewed knowledge that technology can help simplify and solve a lot of problems for businesses, customers, and consumers alike has led to an unprecedented demand for leaders and C level executives who can help build and scale emerging businesses. Tech companies are broadening their search beyond their industry to hire for almost all C level positions. Some of the most in demand roles are CTO, CPO, CIO, and CDOs. At the same time, the public listing of some of these organizations in the recent past has also driven the need to bring on board more experienced CFOs and CHROs. Business expansion is just one of the pillars supporting the boom in CXO hiring. The world of crypto and block chain has had a big impact on hiring. A large number of companies are looking to embrace decentralization and jump on the block chain bandwagon. **However,** they need expert guidance to help them understand how they can tap into block chain technology in order to add value to their business. The increase in demand for leadership in this sector is almost at 100 which is phenomenal. In the last few years, the traditional BFS sector **has** been consistently disrupted by new players leveraging technology and powering the move to a cashless society, especially in urban areas. Banking practices, B2B, and B2C payments are being given a makeover by finch companies and established players are being forced to play catch up. This has translated into the BFS sector investing heavily in strategy and transformational leadership which can enable them to compete in a fast moving new generational world. The rapid rise in technology has impacted hiring in most sectors. Recently, the automotive sector has seen the emergence of the electric vehicle segment which has captured the **imagination.**

**350th:** "However," **400th:** "has" **500th:** "imagination."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-05-TEST NO.-25819

Following the cut in excise duties on petrol and diesel by the Centre, a lot of claims have originated from states. But let separate facts from fiction. First, let us correct the misperception that some states have actually cut their taxes in the last few days. For instance, a news report on May 23 stated: Kerala LDF government reduced taxes by Rs 2.41 and Rs 1.36 per liter on petrol and diesel, respectively. The Congress led Rajasthan government cut VAT on petrol by Rs 2.48 per liter and diesel by Rs 1.16 per liter, while the Shiva Sean led Maharashtra government cut VAT by Rs 2.08 per liter on petrol and Rs 1.44 per liter on diesel. Operative words in the report are reduced and cut. However, the perception these operative words create is incorrect. Russian and Chinese military planes conducted a joint exercise close to Japan airspace, forcing Tokyo which was hosting the Quad summit to scramble its own jets in response. This was the first joint exercise between Beijing and Moscow since Russia invasion of Ukraine and showcases increasing military convergence between them. Equally portentous is Russian defence minister Sergei Shoigu saying his country military operations in Ukraine will continue until all objectives are met. This shows Moscow is in no mood to end the war anytime soon and is preparing for a long drawn out conflict. Both developments present a serious challenge to the international community. It clear that Russia and China have decided to form a close strategic military compact to take on what they see as Western hegemony and rewrite the international rules based order. Both countries also nurse deep seated grudges. While the Russian leadership as embodied by President Vladimir Putin never fully got over the collapse of the Soviet Union, China wants to right what it sees as 100 years of humiliation between the 19th and 20th centuries and restore the glory of the Middle Kingdom. The fact on the ground is that both countries are coordinating their foreign policies to achieve mutual goals. Therefore, for the foreseeable future there will not **be** much daylight between Moscow and Beijing. In fact, there is now a serious possibility that Beijing will use Moscow for its strategic security aims in the Indigo Pacific. This certainly puts India in a tough spot given its considerable military ties to Russia and its continuing confrontation with China **along** the Himalayas. Hitherto New Delhi has pretty much stuck to its ingrained non aligned position, refusing to condemn Russia for its invasion of Ukraine. But while Indian foreign policy must serve Indian interests, the current geopolitical situation demands that New Delhi takes issue based stands along with the West. A good model here is Vietnam. Despite its party to party relations with Beijing, Hanoi staunchly defends its maritime territorial claims in the South China Sea against Chinese belligerence and has joined the Japan led Comprehensive and Progressive Agreement for Trans Pacific Partnership and the recently launched US led Indigo **Pacific.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-05-TEST NO.-25820

Of the people. Regardless of the current challenges, EV is the way forward for plenty of reasons. The rising costs of diesel and petrol across the world, and the impact on the environment are all reasons why EVs are becoming widely accepted. Leadership hiring in this sector is primarily focused on innovation, marketing, and sales. Another sector witnessing large scale transformation is the healthcare sector. Post pandemic, this sector has seen increased investment, massive tech adoption, and a rise in digital and e healthcare. Many of these changes are happening at breakneck speeds and the right leadership can help sustain this growth. The post pandemic world is also fast redefining the strategies to attract high quality talent. Initiatives such as accelerated vesting, and generous severance packages are already becoming the standard across leadership roles. With organizations having faced the worst of the crisis, there is a shift in the mindset of the leaders of the future. Leaders today are expected to not only bring future ready skills to the table but also empathy, and transparency. As enterprises, both large and small, accelerate their C suite hiring, they need to focus their attention on hiring transformational and growth oriented leaders who will help them build businesses of the future. Each day, billions of people around the world rely on critical infrastructure to access power, clean water, food, healthcare, transportation, and the communication systems that connect us. For example, when you pick up your cell phone or buy groceries, you rely on an interconnected series of infrastructure networks. Investments in infrastructure, such as railroads, highways, digital technology, and airports, have a direct benefit to trade, economic growth, and job creation, forming the backbone of our economy and society. With a long life cycle, if constructed well and adaptable to shocks, infrastructure can pave the way for a sustainable future. However, this infrastructure must bear the brunt of both natural and human forces and is highly vulnerable to climate change and natural disasters, leaving many communities across the globe one disaster away from poverty. In every affected country and community, the impact **is** not isolated to just the poorest. Extreme weather events, such as tsunamis and tornadoes, can destroy roads and bridges, disrupting local transportation and commerce higher temperatures can cause fires, destroying houses, hospitals, and schools and flooding can destroy crops, threatening livelihoods. Since 2000, climate related disasters have affected nearly **4** billion people, with an estimated cost of more than 17 million crore rupees 2.2 trillion U.S. dollars. As the frequency of climate related disasters increases, communities, and the people who live in them, are increasingly at risk. We must come together as a global community to bolster climate resilience and mitigate risks, while closing the global infrastructure gap. Therefore, in September 2019, Prime Minister Namenda Mode launched the Coalition for Disaster Resilient Infrastructure CDRI, a first of its kind global climate initiative bringing together governments, multilateral agencies, the private sector, and knowledge institutions to help foster disaster and climate **resilient.**

Of Ring Contour opened the gateway to the Lipa Valley in POK, enabling further operations. Looking back today, I do not remember the fear as much as I remember the resolve of young soldiers who refused to give up despite the odds. That day, we lived the spirit of our regimental motto: Veer Bhogya Vasundhara The brave shall inherit the earth. This is not just my story. It belongs to every soldier who fought there, many of whom never returned. It is for them, and for the generations that follow, that this memory must be told. Just why does the Cross of Christ evoke so many emotions and find an echo in so many hearts? It is because it speaks to us about one of our deepest experiences of grief and sorrow, which are part and parcel of our lives. It is a reminder of our universal human response to situations that challenge us and sometimes even break us. The wounds of Jesus become for us wounds of humanity. The answer to this is not to nurse our wounds till they become sore, but to seek healing just in the way Jesus' cross brought redemption to all of us.  Today, the world does not give us much choice, with its violence against those considered our enemies. Jesus taught us another way, more human and more liberating. The cross of Christ was paradoxically a way of suffering and yet redemptive. The greatest message of the Cross is that just as Jesus died for our sake to redeem us, we too must die daily to ourselves and transform our lives by accepting suffering as a path to peace and reconciliation.  Often, we revolt against suffering. But our greatest friend is suffering, because it teaches us life lessons. Suffering for some is a meaningless exercise in accepting what we do not want for ourselves or need. But finding meaning in it can save us from the great harm others sometimes do to us. Viktor Frankl, who survived the Nazi concentration camps even after his entire family was wiped out, **was** able to find meaning in suffering. That experience inspired him to write Man's Search for Meaning. Suffering is also linked to purpose. It is not the wholly negative experience that it is made out to be. It creates in us a longing for deeper spirituality and urges us to **move** further inwards, until we touch the core of our being, where we find our true purpose. Once we do that, we will find treasures of wisdom and understanding that go beyond the immediate cross to glory of the Resurrection.  Rulers have dominated and enslaved people, empires have been built and destroyed, nations have been invaded, and power has been misused to oppress others The horrendous war that has broken out in West Asia, the damage it has caused, and the suffering of innocent people; then there are conflicts in Myanmar, Syria, Ethiopia, Yemen all creating humanitarian crises. And **yet,** there are plenty of good people around who try to negotiate and bring peace. They work to build bridges, heal wounds, and restore societies, which are plagued with division and intolerance of the 'other'. Where and when does Good Friday bring meaning to such situations? The cross of Jesus is a pointer to how we can work to restore peace and harmony in the world. The cross of Christ invites us to bring warring nations to a peaceful compromise. Thich Nhat Hanh, the Buddhist Vietnamese monk who later lived and taught in Plum Village, France, often used his meditation

Economic Framework. Vietnam also has historic ties with Russia as the Soviet Union strongly aided it during the Vietnam War. But this has prevented it from developing close ties with the US. If communist Vietnam can take such nimble positions, India should, too. Staying permanently neutral on Russia if the Ukraine war gets even uglier and as the Moscow Beijing axis gets stronger is not a smart diplomatic position for India. Sugar this week joined wheat on Goo list of farm commodities facing an export clampdown. It been placed in the restricted category. There also a cap on the volume of sugar that can be exported in the current cycle. Goo overarching aim of checking food prices has everyone support. However, resorting to blunt instrument measures such as export bans is unwise because of the collateral damage. There are three consequences of export bans. One, it undermines the larger policy objective of allowing greater play for market forces in agriculture to give farmers more options. For example, the ban has led to disputes between firms exporting wheat and the agricultural chain. A trust deficit between farmers and other stakeholders will make it harder to reform agriculture. Two, export bans are an implicit tax on farmers as they amount to a cap on income. They make it harder to garner support from farmers for reform. Three, export bans when global foods prices are raising undermine India credibility. Reports indicate that India is reluctant to participate in the UN World Food Programmed for grains if it means acceding to a binding pact. It unwise to quibble over conditions when there a food crisis facing many emerging countries. Is there an alternative to export bans yes, fiscal policy can be used to top up support prices and enhance Goo procurement. The third advance estimate showed that wheat output in 2021 22 will be 106.4 million tones, a mere 3 lower than last year. This estimated drop can be offset by fiscal policy that will help farmers, raise India global standing and aid the cause of agricultural reforms. As for attendant fiscal costs, **it** far less distortionary than disallowing producers to respond to price signals. India maiden Thomas Cup triumph has come as a surprise to Pullela Gopichand as he is the one who created the system that has helped produce world champion shuttlers. The former All England champion tells Manne Ratnakar how **he** now wants to focus on turning India into the most dominant badminton nation in the world: Where do you rank this Thomas Cup victory, compared to the medals won by Saina Nehwal and PV Sindhu Each of these victories Saina, Sindhu etc was very important but the Thomas Cup victory is an icing on the cake. In some sense each of these earlier wins contributed to this new success and ensured that we built a system where the players thrived. The depth in the singles, doubles and men teams is really scaring the other nations. Since the controversial mosque **is.**

Called Gyanvapi, it only natural that we should acquire some gyan. Vapid, btw, means a reservoir, and no, it is no relation of the English adjective, vapid. In our current yearning for learning, the main subject on today blackened board is history. The class of 2022, has a lot of revisionism to do. For some time now, it has become hiss Tory, a threatening word for those we want to punish for the sins of not quite their fathers. For the opposite camp, however, history is now a gratifying purr word, the means to right the wrongs of a past imperfect. No matter if it results in a tense present; or an uncertain future for a supposedly secular India. Now, children, you may get a little confused because the original temple was destroyed by Muslim invaders, but rebuilt during the reign of those now reviled Munhall, first by Akbar finance minister Raja Today Mal in 1585, and then refurbished by his successor Jahangir close associate, Vir Singh Deo Bundela. But you must forget these all embracing emperors. The only M to remember here is Aurangzeb, an oxymoron since he was the architect of destruction. He did the tandav on the original Shiv temple in 1669. Since the Gyanvapi mosque is being subjected to so much study, other subjects can jump on the sillybus. The problem has already spread across Geographies. Much anger STEMs from this dispute, so science, technology, engineering and math can be deployed to support the claims of the plaintiffs or the defendants. However, after the ling gave the mandir ka mandal its Eureka moment, methinks the chances of the other side are rather mu slim. There is little Chemistry between these contentious parties. With opinion split, fission rather than fusion is the likely outcome. As for Physics, forget Newton law of motion; we have an Oldton law of non motion: no discussion moves forward because every action has an opposition and far from equal reaction. True, science is the dependable discipline, but these virulent times call for more emphasis on humanities. We are very conscious and **careful** before making an important investment. We conduct a thorough research and get a list of best options available. We evaluate each option one by one, take expert advice and make the best pick. After investing, we keep tracking the progress of our investment carefully and try to ensure that **despite** all obstacles, we get the expected returns. A typical teenager along with parents invest a lot of time, effort and money to choose the best college for graduation and get admission in it. The same story continues till placement. As adults, when they earn a lot, they want to invest their savings in stocks. They spend a great deal of time evaluating each stock, investing and tracking their investment getting excited when the stocks rise and feeling depressed when they fall, analysing the causes and hoping that stocks will recover. Individual and collective level as a country, we are **becoming.**

Richer, our infrastructure is getting better and our lives are becoming comfortable externally. This progress reflects our success in rightly investing our time, energy and wealth. What about our life where are we investing it Are we giving the right purpose to our life Is our desired life purpose being fulfilled Are we making progress in this vital aspect we need to take a few moments to reflect on this vital and often neglected aspect of life. Anything done today will not go in vain, including these few moments of ours. We want to be happy in our life. We are trying for it with all our might. The statistics show that we are missing it quite a bit now. The deltas, demigods, or the universal administrators possess riches and opulence far beyond our estimation. They have access to amrit the most coveted elixir of immortality that grants a prolonged lifespan and vitality of senses. Despite all this, they get victimised by lust, pride and envy. They are not satisfied. Where are we going wrong We are trying to find happiness in a world of finiteness, duality and impermanence, says the Bhagwad Gita, verse 5:22. Therefore, we are left with distress, discontent and depression. We need a source of happiness that is eternal, pure and unlimited. It can only be found in the spiritual realm in relationship with God, states the Gita, verse 9:33. This is the right place to invest. The story of the poor Sudama illustrates this. He was a great devotee of Krishn. He lived in abject poverty, but he was completely satisfied by the virtue of his unmotivated devotion to Krishn. On the request of his wife, he decided to meet Krishn. He was so overwhelmed with gratitude and love by seeing how Krishn is so kind to a lowly, undeserving devotee like him that he forgot to ask Krishn for any wealth. Let us desire this spiritual wealth of loving devotion and start investing our time and energy in Bhakti yoga the means to acquire it. The landfall of the Covid 19 pandemic has **undoubtedly** led to an upsurge in online shopping and digital transactions. Besides other sectors, the pandemic led business disruptions led to the closure of physical stores and bruised the retail industry, affecting its segments like Fashion apparel & clothing. As a result, the industry noticed a significant drop in sales **and** feared the closure of businesses. The emergence of omnichannel retail When brick and mortar stores were closed, fashion retailers opted for e commerce solutions for survival. The e commerce sector received a notable boost from the pandemic due to the strong emphasis on social distancing, safety measures, and a convenient return policy. Therefore, the retailers and fashion brands turned to an omnichannel approach over a multichannel approach by recognizing its unparalleled benefits and competitive advantages. Fashion as a sector has always been keen on adopting an omnichannel approach as they wished to offload the seasonal collections at the entire **markup.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-06-TEST NO.-25828

I just wrapped the two-day Zero Projects India 2024 conference (popular as Zero Conidia) hosted by Youth Jobs as its Master of Ceremonies. So, what new here, you may be wondering. For starters, it was probably the first ever conference in India which had a person with multiple disabilities as its host I, a wheelchair user and a deaf individual. The theme of this second edition of the conference was Building Bridges between Global Networks and Innovations. What made this possible is the entire story. Let me begin at the start. It beside the point that I have experience in theatre, moderating and emceeing. The point here is that none of them were aware of my capabilities. I was surprised to hear Shenoy calm the last-minute jitters of some young organisers saying, Oh! She will manage everything. Don worry. Her confidence in me gave me the assurance to anchor the show without a glitch. That the confidence they have in every person with disability. At this conference, no person with disability was left out true to the spirit of nothing about me without me. The disability community was well represented, and every disabled person felt included because of the inclusivity woven into each aspect of the forum. The stage was accessible with a gently sloping ramp and had handlebars. Closed captioning was enabled on the screens and there were sign language interpreters in different languages to cater to the international disabled community. The conference epitomised innovation. The exhibit area was designed to be accessible and was a microcosm of India innovation hub for assistive technology. A total of 26 start-ups for and by people with disabilities had exhibited a range of assistive devices and advanced assistive technology using AI. Each stall was made totally inclusive to both the sighted and the visually impaired and blind through Space felt, a unique smartphone app that provided audio descriptions. You just had to scan the QR code located at the right corner of each stall table and pronto, you could get descriptions of the innovations and contact details of the exhibitor. The app is **a** product of Grailmaker Innovations, a startup co-founded by Aishwarya T V Pillai, a Blind 3D Artist. In a classic example of how accessibility innovations benefit a larger group, the app became a boon for even the sighted visitors who were seen scanning with their smartphones. I will write about **the** innovations and the innovators in my next articles. For now, suffice to say that the range of assistive tech on display was astounding, and mind you, these were just a selected few. Coming back to the conference, let me summarise my own learnings vis-à-vis the thoughtfully curated panel discussions. For one, disability is universal, and while how we experience a disability individually may be different dependent upon a number of factors from type, age, socio-economic conditions, family, upbringing, society, education and a plethora of other factors, by and large, there is a thread of similarity among all our experiences. **What** is noteworthy and a cause for concern is the institutionalised neglect of people with disabilities across all geographies. People with disabilities in low-income countries have similar challenges and are the worst off. Education of people with disabilities is imperative for their empowerment and this is true across the globe. Education and financial empowerment of women with disabilities is even more critical, as across the world the biases agains

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-06-TEST NO.-25829

Shoots of change are visible across the world with powerful voices for the inclusion of people with disabilities gaining traction. The challenge is huge and given the history of marginalization of people with disabilities, pushing them into the mainstream and their inclusion in society requires mammoth efforts. But it must be done if we want this section that holds the key to up to 7% of GDP to transition from dependents to economy drivers. Hearteningly, inclusion of people with disabilities despite the huge challenges is happening thanks to an enabling ecosystem of cross-border collaborations, investments and innovations. Add the power of technology, specifically AI, to this mix and you can see magic happen. Precisely what Zero Project India, started by The Essl Foundation, Austria, in 2023 in partnership with Youth4Jobs and Enable India to power assistive tech innovation, is making possible scaling up and scaling out India frugal innovations in the assistive technology space. There is no need to reinvent the wheel. We just need to join hands to create this enabling system for the inclusion of people with disabilities across the world. The collaborative approach to disability inclusion also promises to be economically viable. India jugaad and frugal innovation system has just found another plank global disability inclusion. We are witnessing the emergence of another startup and innovation hub the assistive-techpreneurs with a shared goal to create one world, one people with disabilities. The recent tragic death of a young woman working for a prestigious firm has evoked anguish, with so much being discussed about having a reasonable work-life balance. This highly qualified individual worked for a firm with presumably world-class corporate governance. However, there is only so much the human body can handle; lack of sleep, rest, and proper nutrition can destroy health. It is the responsibility of society and the state to protect the citizens when these things are violated. People have pointed out that the working environment in modern offices has become toxic and unhealthy. Perhaps they are right. But these are times of great revival in the nation, and a demanding work environment is **an** inescapable reality. This is the reality of the challenges, opportunities and rewards of the times, and there is only so much the state can do to regulate the modern workplace. So, it crucial that we, as individuals, take matters into our own hands to protect ourselves and our young. **The** first is to examine the work environment. A famous leader of our country was recently asked about what he does to relax, especially with the mind-boggling stress his job brings. His answer is revelatory and inspirational. He said his work was relaxation, an answer that aligned with India ethos. After all, our forefathers were emperors, merchants and scholars, and we can find their imprints across the globe. Even the most nationalistic Indians of today cannot claim to have surpassed their achievements. They did not have to resort to finding a balance because dharm governed their lives. Somewhere, in the **mad** rush for modernity and prosperity, we have abandoned principles based on ancient Indic wisdom, so work and workplaces have become so stressful. But what about life after work, which is supposed to act as a counterbalance? A cursory examination reveals that we are not doing enough to unwind; our activities are contrary. If work brings stress, we should do those things th

IT Act of 2000. This to the of the need for an. Meaty multi stake holder are and the intended as a, must ensure that it tackles the problem of harms and makes the internet a safer place for all. Has the dilution of safe harbor safety in other globally, countries are in the process of laws that are due of with the of safety and tackling harms, be it the Act or the Online Safety Bill. However, would making safe on a large amount of due be the silver bullet to clean up the internet from harmful content? Not really, and it appears that such efforts might be. Largely, is a with the right kind of user rights and. However, the notice and therein might not be the best digital rights. Under this law, the definition of has been expanded to allow on the behest of user as well the legality of user will no longer be a sole judicial or exercise and will also be to the subjective judgment of the Act refrains from a of what would be illegal content. Such and may amount to an even more dilution of Safe Harbor and trigger greater by the, who would prefer to err on the side of caution in order to protect their Safe which will impact speech on the to the the scope of the by the Online Safety Bill includes not only public, but also that use. This would require the creation of backdoors on the private which will put the in a more spot. Their data will now be to owing to the backdoor access, which will weaken make users prone to and blunt the ability of law to due to lack of. Facing the risk of, dilution of safe harbor can mean more stringent terms of service for some platforms while for others it may lead to over-reliance on filters. Both these could lead to on free speech, violation of the right to privacy and stifling of innovation of the world. Exploring mechanisms that are sustainable and rights enabling the cross jurisdictional experience **explains** that compromising free speech and privacy to promote online safety does not render the desired results and in turn undermines the freedom and inclusivity of the internet. This idea has been further strengthened by the decision of the Supreme Court of the US in the cases of Twitter v. **Tame** and Gonzalez v. Google where it was observed that while greater accountability from the platforms in respect of the development and deployment of their algorithms is important, making this a precondition for availing safe harbor is not the right step. The Court observed that recommendation algorithms allow platforms to deprioritize potentially problematic content and facilitates the content moderation efforts of the intermediaries. Accordingly, holding platforms liable for any unintended harm caused by their recommendation and moderation algorithms may result in them redesigning their entire architecture, in a manner that may be less useful for the users, in order to **avoid** lawsuits and protect their Safe Harbor immunity. This would lead to an increase in online harms and safety threats, as in the absence of these algorithms, users will be exposed to all kinds of content on the internet including age inappropriate posts, pornographic content etc. These rulings become even more important given that they directly respond to the current trend across jurisdictions where countries are delimiting the scope of Safe Harbor by imposing greater number of due diligence requirements on the intermediaries. It is important that India looks at the observations made in these cases and undertakes a practical approach under DIA towards tackling

Instead of holding platforms accountable for content shared by users or forcing platforms to scan every piece of content uploaded on their servers, the law should focus on envisaging co-regulatory models and setting out standards for intermediarie processes, such as improving their terms of service and prompt publication of their compliance reports. Privacy by default, improved transparency, and procedural safeguards, such as due process and effective redressed mechanisms for removal or blocking decisions, can help protect digital rights and enhance online safety. Over the last 2 years, D2C brands in India have been soaring to new heights, experiencing a remarkable upswing in demand. Undoubtedly, the pandemic has expedited the transition towards online shopping, leading to a surge in e-commerce transactions throughout the nation. Recent research indicates that the D2C market in India is poised to achieve a staggering valuation of $100+ billion by 2025, exhibiting an impressive compound annual growth rate CAGR of 40. The report also brings to light the fact that the pandemic has acted as a catalyst for the growth of D2C businesses, with a significant proportion of consumers preferring to purchase directly from brands, rather than traditional retail channels. Let not forget the real reason behind the growth of D2C businesses in India the increasing digital literacy and smartphone penetration. This has definitely made it easier for D2C brands to reach and engage with customers directly through online platforms and social media channels. Additionally, D2C businesses in India have been leveraging technology to offer personalized products and services to customers. The D2C market in India is also becoming increasingly competitive, with many new players entering the market There are over 800 D2C brands currently in India. To stand out in this crowded market, D2C brands need to focus on innovation, product quality, customer service, and efficient supply chain management. In a country where the D2C market is booming, a well-managed supply chain can make all the difference in ensuring that your customers receive high-quality products on time every time. Over the past few years, the D2C market in India has seen tremendous growth, with consumers **increasingly** opting for online shopping. Supply chain management is now emerging as a critical factor for the success of D2C brands in India with many investing money in it to ensure the best service to their customers in terms of reliability and peace of mind. Inefficient supply chain management can **lead** to delays, higher costs, and poor product quality, all of which can impact customer satisfaction and ultimately, the success of the business. Become a consumer favorite brand: In the D2C business model, customers expect fast delivery, proactive communication and accurate tracking, and excellent customer service. A well-managed supply chain can help ensure that products are delivered super quickly and in good condition, which can lead to satisfied customers, generate repeat orders and build on customer loyalty. The percentage of shipments that you can deliver within 12 24 48 hours, percentage of consignments that you can deliver on or before **the** promised times, how many perfect deliveries you can make are some of the metrics in order to win customer love. Save the extra buck: Efficient supply chain management can help D2C businesses reduce costs by optimising inventory levels, minimising transportation cost

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-06-TEST NO.-25835

Unit economics is a dream for every brand. Scale to a higher level As businesses grow and expand into new markets, supply chain management becomes more critical. An efficient supply chain can help businesses scale production and distribution to meet growing demand while maintaining consistent quality and customer service. This becomes important while expanding to newer markets. Be better than your competitor In the highly competitive world of D2C business, supply chain management can be a significant source of competitive advantage. A well-managed supply chain can help businesses differentiate themselves from competitors by providing faster delivery, higher quality products, and more personalised service. In addition to optimising your supply chain, being future-focused and keeping up with the latest trends in the market is very important for D2C businesses to scale. Technology is constantly evolving, and to stay ahead of the curve you need to leverage data analytics and AI to gain insights into customer preferences and behavior. D2C brands need to be ahead of the curve when it comes to their supply chain design as a leader in their respective categories. As the D2C market in India continues to grow, supply chain management will become even more critical for the success of businesses. By focusing on efficiency, quality, and innovation, brands can continue to meet the evolving needs of their customers and stay ahead of the competition. In conclusion, supply chain management is an essential component of any successful D2C business in India and will become a distinct competitive advantage if managed well both in terms of speed and costs.. By investing in technology, logistics, and innovation, you can ensure that your brand continues to deliver high-quality products to customers while maintaining its position as a growing D2C brand in India. I am a journalist, so you may call me biased. But I think the Nobel Peace Prize should go this year to Jimmy Lai, owner of Hong Kong Apple Daily, for going to jail in support of free speech and human rights. Billionaires usually prostrate themselves before autocrats rather than stand up to them: They have so much **to** lose and so little to gain by speaking truth to power. But Jimmy Lai said goodbye to his billions and went to jail for what looks a hopeless cause asking China to honor Deng Xiaoping pledge when Britain handed over Hong Kong in 1997 that Hong Kong unique system **of** civil rights and independent institutions would continue for 50 years. It was part of Deng one country, two systems policy. Prime Minister Mode state visit to the US from June 21-23 has already generated a high level of anticipation and voluminous commentary. While this is common in India during visits of Indian PMs, this time the excitement in Washington DC political and policy community has been at unprecedented levels for several reasons. The excitement partly centers around the invitation list for state dinners, which are rare occasions. In the two and half years of the Biden administration, this will **be** only the third such event the earlier two were for the French and South Korean Presidents. President Biden reportedly told the Indian PM, when they met on the sidelines of the G7 meeting in Hiroshima in May, that he was under tremendous pressure for invites to the dinner on June 22. The US policy community, across the administration, Congress, media, think tanks and businesses, is also trying to figure out the exact framework a

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-06-TEST NO.-25836

Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey locates mates and offspring avoid predators guide their navigation and locate habitat as well as to listen and communicate with each other. Oceans are full of sound. Waves, earthquakes and icebergs all contribute to the underwater soundscape. But so do human activities and this can be a problem for marine life as it can seriously affect their physiology behaviour, reproduction and even survival. Being able to produce and detect sound in an environment where light penetrates only a few hundred metres is crucial for animals to communicate, feed, avoid predators and navigate vast underwater habitats. Large whales generate low frequency communication calls that can travel thousands of kilometres. While the snapping shrimp, native to the western Atlantic, can produce a loud snapping sound capable of stunning and killing its prey. The noise generated by humans changes the natural acoustic environment of our oceans and our capacity to produce it is increasing. Noise is often the unintentional by product of transport infrastructure development and industry. Yet noise can also be produced deliberately. Many navies use sonar system to detect ships and submarines while geologists survey the seabed for oil and gas using seismic airguns. The noise produced by an airgun can exceed 200 decibels louder than a gunshot at a range of one metre. Sound travels further and four times faster in water than in air at a speed of almost 1500 metres per second. The noise produced by humans can therefore spread considerable distances underwater. These sounds can be relatively constant such as the noise produced by the engine of a ship and propeller or sudden and acute in the case of naval sonar and seismic airguns. assessments in moments of challenge. So far, it has been more forward leaning in dealing with its perceived challenges to the European security architecture, but less so **when** China challenged the status quo in East and South China Seas through grey-zone activity or militarisation of features. It also expects its allies to fall behind its own decisions to respond to global and regional challenges. India has consistently kept itself out of any formal alliance structures. It assertively **wants** to maintain the strategic autonomy and independence of its decision-making based on its own assessments of its national security interests. Its positioning on the Russia-Ukraine issue since the outbreak of conflict in February 2022 reflects that. At the same time, it can be argued that the comprehensive national interest of India gets served by a deepening partnership with the US, which is now described as a Comprehensive Global Strategic Partnership. The US is India largest trading partner at $191 billion, with the surplus in India favor. Companies from the two countries have invested more than $40 billion in each **other,** with presence of Indian investments across all 50 US States. At 4.9 million individuals, Indians are the second largest immigrant group in the US. As many as 200,000 Indian students in US universities constitute a potential for building business and other networks for the future. The US and India now do more military exercises with each other, with increasing complexity a

Real bad news for the world. A month into the Iran war, three things strongly hint at a possible US ground invasion. On a malign force that has the world worrying, early warning signals are flashing. A big bad bully is rolling up its sleeves, and is all set to go into action, making people in many In India, the pace of legal change is generally slow. Yet, when change takes place, it is often radical, and overturns long-held assumptions. Uttarakhand's Uniform Civil Code was one such example. Now, Gujarat state assembly, we are entering the second, more dangerous phase of the current Gulf war four weeks down, one more week of a pause to go. Let's just say there are no good options left for By Brother Dao Hanh Karm is not fate etched in stone. It is far more intimate and more immediate. It is the sum of our actions: of body, speech, and mind. Every habit we cultivate, The target is not the transition Climate change communication expert who is otherwise a journalism and science communications professional with close to two decades of professional experience in media outlets like Times of India, Hindustan Times, Press Trust of India, Agence France-Presse, and multilateral agencies like UNICEF, and UNDP. He has also worked with the Government of India and Government of Uttar Pradesh. There is a particular kind of institutional dishonesty that does not involve lying. It involves announcing the right destination, then doing nothing meaningful to get there, and treating the announcement as the work itself. The first SteelWatch Corporate Scorecard, released this week, has put numbers to that behaviour across 18 of the world's major steelmakers. The results are illuminating, not because they reveal a surprise, but because they make legible what was always structurally visible to anyone paying attention. Not a single company scored above 50 out of 100 on transition readiness. The median score is 27. The average score on scaling green iron and renewable energy is less than one point out of 25. Every company assessed currently runs coal-based blast furnaces. Every company **assessed** scores zero on green iron consumption. Several do not even have reportable data on renewable energy use. This is the core of what the scorecard makes undeniable: a net zero target, stated with sincerity and timed for 2050, is compatible with doing almost nothing structurally today. The goal and **the** architecture required to reach it can exist in complete separation, housed in the same annual report, without contradiction, because no one was previously measuring the distance between them. The SteelWatch methodology is worth understanding precisely because it refuses the usual accounting flattery. Half the score is based on actual progress exiting coal-based production and scaling near-zero-emission iron. Not on targets. Not on emissions intensity ratios, which can improve as production declines rather than as technology changes. On the structural decisions that determine what a company's asset base looks like in 2035, and whether those assets are compatible with a **decarbonised** sector or not. ArcelorMittal, for instance, is ranked third overall, but its score reflects, in part, production declines rather than genuine technological transition. It has the largest blast furnace fleet among all 18 companies assessed and did not score a passing mark in any of the five transition categories. The steel sector matters for a reason beyond its own footprint. It accounts for roughly a t

three. A blast furnace built or relined today does not retire in five years. It runs for decades. Which means the transition readiness of a steelmaker is not an abstract ESG metric. It is a question of physical infrastructure, and whether that infrastructure is being reshaped in time. The two companies that separate themselves from the rest, SSAB of Sweden and thyssenkrupp of Germany, scored 46. 2 and 41. 9 respectively, are not there because they have arrived. They are there because they have made the structural commitments that the others have deferred: retirement plans for blast furnace capacity, no reinvestment in coal-based assets, and credible pathways toward green iron. The distance between them and the rest of the field is instructive. It is not primarily a distance in ambition. It is a distance in structural decision-making. The worst performers, Nippon Steel at 16. 8 and HBIS at 8. 3, illustrate the other end of this logic. Nippon Steel has a net zero target. It has also continued its structural reliance on coal-based blast furnaces and expanded its global asset base, including into the United States and India, without sufficient disclosure of the emissions responsibilities that expansion brings. A net zero target at headquarters does not automatically apply to overseas acquisitions made with coal-heavy operating models. That gap, between the stated destination and the physical reality of what is being built and bought, is where transition readiness actually lives. This matters beyond the steel sector because the pattern is not unique to it. Across heavy industry, the last decade has produced an extraordinary proliferation of net zero commitments. The commitments are real in the sense that they were made. What has not followed, in most cases, is the parallel reconfiguration of assets, capital allocation, and supply chain decisions that would make them credible. Target-setting has become, in effect, a substitute for transition planning rather than an expression of it. The SteelWatch scorecard is useful because it creates accountability architecture around a distinction that has been too easy to blur. A company that has set a 2050 net zero target **but** is still relining blast furnaces and has no green iron in its supply chain is not a company in transition. It is a company with a target. These are different things, and the difference is measurable. What the scorecard does, and what this kind of tracking will increasingly do **across** sectors, is make the space between announcement and action visible, year on year. Scores are expected to rise as companies move. The question is which ones will move structurally, and which ones will continue optimising the language of their targets while the assets underneath remain unchanged. The answer, for most of the 18 companies assessed, is not yet determined. But the clock embedded in those blast furnaces is not waiting for the language to improve. TOI News - April 6, 2026 The War on Iran: Reshaping the Global Order Dr. B. Bala Bhaskar has over 38 years of experience **as** an engineer, economist, and diplomat. ## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25841

In it, the retailers have effectively bridged the gap between offline and online models with a standard view of customers in omnichannel retail. They have also positioned the customers as the center of attention in the omnichannel ecosystem. This way, fashion retailers strive to ensure customers homogenous and enjoyable shopping experience. Here are further details on why fashion leads the omnichannel adoption in retail. Faster offloading of the latest collection As fashion brands ideally work for offline and online stores, their latest collection has complete visibility across multiple channels. These include online, different marketplaces, brand website, intercity & intracity store, and warehouse sync. The significant visibility helps them offload all their collections, thereby facilitating garnering maximum revenues with ease and convenience. Fashion retailers have also considered the vital aspects of fashion, i.e., the speed to market aspect. In this aspect, customers expect brands to deliver products as quickly as possible. Hence, brands can meet and serve such growing customer demand by leveraging an omnichannel retail solution. Customers are more likely to buy apparel online as compared to other products Two integral factors make online fashion immensely appealing to customers online fashion offers lower prices than other sectors, and apparel is easy to pack and ship across multiple pincodes in India due to easy logistics. Unfortunately, industries like electronics and luxury products jewellery & watches fail to offer such convenience. It is because larger electronic products cannot be shipped quickly, and hence the sector fails to make a significant impact like fashion. On the other hand, the high price point makes people careful when purchasing luxury items like jewellery and watches online. Moreover, online shopping embraces instant gratification, and its journey tends to be way longer than in store shopping. Customers also tend to purchase more when shopping online as they get huge discounts and free shipping on products. Faster delivery & faster returns of fashion items Customers have become ever increasingly comfortable with online shopping of apparel today. Phenomenal options like faster deliveries and replace return facilities when products do not match the size, style, or expectations help drive **more** customers to rely on online shopping by staying at home. Omnichannel retail offers unprecedented visibility Omnichannel provides the apparel segment unprecedented visibility across various online and offline sales channels. It is exceptionally beneficial for fashion brands because older products seasonal collections become obsolete. However, omnichannel retail prevents such blockage **by** offering much needed visibility of products and customer journeys. Omnichannel bypasses seasonal demand The diverse Indian geography and omnichannel interstate connectivity are brilliant opportunities for fashion brands. These fashion retailers can sell seasonal products across various states and regions that do not have extreme climates. As omnichannel bypasses the default.

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25842

A space, maintain an inventory, and have a delivery system to meet the target of 30 minutes delivery and robust technology at the back end to manage the entire process seamlessly. The other business model of Quick Commerce gaining popularity and has a big potential to grow is, enabling Quick Commerce via local shops. In this type, the local neighborhood stores are on boarded on an e commerce platform from which they can interact directly with the buyers and fulfill orders. As we are all aware, these shops have been relying on the walk in customers for their business, so giving a digital presence will not only empower them but increase their business and add up almost all the product categories into the purview of quick commerce. A video shopping app adopting this model has already been launched in India and has been successfully registering the local sellers on its platform. Let have a look at the challenges faced by the players doing Quick commerce via dark stores and Quick commerce via shops. The retail dark stores have to stock up on inventory that includes perishable items. The cost of inventory, operations, back end technology, and rent for dark stores is high. Moreover, the players also have to deal with the perishable goods and their shrinkage and ensure proper storage, speedy delivery, and replenishment daily to maintain quality and customer satisfaction. This model of a business incurs higher running costs and the discounts offered lead to high cash burn. The quick commerce dark store model also has a significant impact on local markets. When buyers shop from dark stores, the neighborhood shops lose business. Quick Commerce through shops also has its own set of challenges. Sellers need to stay online and available to receive orders. Also, shops generally operate from 9 AM to 9 PM, which means late night orders become difficult with fewer shops available to service such orders. However this solution is extremely scalable due to the huge number of shops in every locality, it needs no additional investments and has low risks of inventory expiry, shrinkage, **etc.,** as the shopkeeper himself manages the inventory and sells the same inventory offline plus online, and needs no additional holding of inventory. Also, every possible category including long tail products can be serviced with this model. Human interaction is lacking in dark stores quick commerce. In the retail purchasing **experience,** ever since the beginning of trade between humans, interaction has always been and will continue to be important for completing any kind of commerce. The path forward is to automate last mile logistics, store pickups, label printing, shipping, tracking, and communication flows, as well as empower salespeople to connect with their consumers in new ways, keeping the confidence that customers have in their favorite brands as well as their favorite stores where they like to buy from. The quick commerce shop is a better solution for the entire retail economy keeping it in mind that the customer is the **King.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25843

Geographical, seasonal demand, it facilitates selling pan India without the need for physical products in that particular city, thereby offering a big boon to sales for fashion brands. In a nutshell The omnichannel approach undoubtedly offers unparalleled benefits to fashion retailers. As brands gradually recognise omnichannel true potential, the industry expects more players to embrace the novel approach. After all, this route helps control real estate costs, inventory holding, and operational expenses when implied as a long term strategy. The country is witnessing a significant surge in hiring activity due to high employee turnover rates. In 2022, there is going to be a 31 increase in hiring activity across all key sectors. In order to retain their top talent, organisations are now upskilling employees and providing them with opportunities for growth and development. Among several other ways to empower employees, talent mobility helps companies retain talent by providing employees with opportunities for career growth. Candidates tend to be associated longer with organisations that add value to their experience in a certain field whereas employers try to retain employees who contribute to the growth of the company. About 88 of employees would stay at a job longer if there were career development opportunities and clear career paths as per a recent Lighthouse report, sponsored by SHL. There are several ways in which companies can leverage talent data and talent management tools to provide opportunities for talent mobility within the organisation: Transparent progress evaluation: In most cases, the existing talent is unaware of available opportunities within the company. This leads to employees missing out on a better opportunity. Such occurrences can lead to the loss of talented candidates as they seek out employment elsewhere. Organisations are now using tools that give them insights on existing talent performance and showcase available opportunities within the firm. When a company helps its workforce monitor their progress over time and helps them achieve better goals, they take the role of mentors. Employees are keen on upskilling themselves or learning new skills Hence, such platforms for growth in their existing workplace create a sense of loyalty **among** them. Providing equal opportunities: Bias in the workplace has been a concern for several years. A recent report revealed that women hold 17.1 percent of the board seats in India. Organizations are trying to introduce initiatives and allowances to create a more inclusive culture with equal opportunities for everyone. **Advanced** talent mobility tools can address this issue and accelerate diversity. Talent assessments and real time people insights drive accuracy, thus facilitating analytical decision making. Which minimizes the possibility of perception based recommendations for internal job openings. Helping employees prioritise career goals: When an individual showcases loyalty towards an organization, there are expectations that a company has towards the candidate role. Some employees might focus on learning and experience while others have more futuristic career goals in mind. The data driven performance insights that talent mobility tools provide, act as a motivator to both the short term and long term **ambitions.**

Through these tools, individuals are assessed basis their behavioral style, factors motivating them, their cognitive abilities, and their past experience. Access to such a comprehensive understanding of one progress helps them assess themselves on a deeper level and guides them to map their career goals more efficiently. Talent mobility has been a key motivator for employees and has facilitated stronger employee employer relationships. Using advanced tools for talent management and providing opportunities for talent mobility is not only beneficial to employees. Collecting all the information, deriving real time insights on candidates discovers those with the aspiration and ability to succeed, highlights group talent gaps and developmental needs, builds effective talent pipelines, and continually aligns talent to the changing business goals. Talent mobility is an instrument for companies to create a happier, more productive, and motivated workforce that helps them and the organization succeed by having the best fit person in role. The need to become an autonomous digital enterprise is pressing now, more than ever. From how we do the work to who is doing the work is changing at a rapid rate. For most enterprises, the future will be autonomous, else they ll become inconsequential. Machines will deliver services that are auto compliant, self healing, self learning and self aware, helping organisations make precision level decisions based on data. What is an autonomous enterprise Autonomous enterprises or self driven enterprises are those organizations that apply artificial intelligence and automation to solve problems of operations and management. They require minimal human intervention to complete daily jobs that a robot system can very efficiently do. These robots systems can learn and adapt on the job leaving the human resource free to concentrate on better things like business development, innovation, research, etc. Such self sufficient enterprises are able to adapt to the changing environment and business dynamics faster than others. How are self driving enterprises delivering exceptional user experiences Autonomy powered by AI, ML algorithm based systems are helping organizations innovate like never before. They are allowing human beings to think out of the box and design once in a lifetime **experiences.** Autonomy is industry pervasive and can be adopted by hospitality, healthcare, banking, telecommunications, and almost every other sector. In the post Covid era, the intervention process of autonomy self driving systems in enterprises is running in an accelerated mode. Let see how hospitality, healthcare, and telecommunications industries can deliver **superior** end user experiences through autonomy. Hospitality Enhancing the guest journey is vital to the hospitality industry. In India, we say Atithi Devo Bhava which means Guest is equivalent to God, and our hospitality and tourism industry lives by this saying. During the pandemic, the industry bled. People were scared to step into a hotel yet wanted the warmth and pampering a hotel offers. Today it the opposite. We are dealing with revenge tourism. In both situations, autonomy helps change business dynamics. From checking in to placing meal orders, everything can become contactless and faster. One message on the phone **with.**

**350th:** "experiences." **400th:** "superior" **500th:** "with."

# RKC NAWADA TYPING TEST RESULT

**Software Link: https://rkcnawada.online/best-typing-software-rkc.php**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25845

The customer reservation number can make the guest journey seamless. With AI, the possibilities for improving customer service become almost endless, ranging from increased personalization to tailored recommendations. From chat bots to robots at the concierge, AI is already revolutionizing the industry and elevating the customer experience. It is only going to go upwards and onwards from here. Healthcare Self driving healthcare facilities can change the industry to become efficient and error free. If at all we have learned anything from the pandemic, then it should be that healthcare facilities need a facelift. They need to be prompter, less dependent on human availability, and more digitized. Someone going to a hospital should have to stand in a queue. A digital assistant, probably, can answer more visitors than a human being can do in an hour. Monitoring health can also be made more efficient and accurate with AI technology. Our smart phones are already helping us track our health through heartbeat tracking, sleep cycle, blood pressure, etc. We need to amplify this system to make health monitoring a continuous affair so that interactions with doctors happen based on real and accurate data, helping them make better decisions. From ambulance on call to medicine on call, we are already living in a digital system that will only help humans live better. Telecommunications Voice assistants like Sire, Alexi, and now Samsung Neon are examples of how AI intervention is disrupting the telecom industry. These robots voice assistants are designed to learn people preferences and respond to their queries in life like ways. They can even speak vernacular languages and conserve like human beings Along with customer service, AI intervention is also helping tacos become operationally efficient with reduced man hours, increased saving opportunities, and faster turnaround times for orders. Taking the autonomy route is a pragmatic approach for organizations that seek to develop a go forward strategy and modernize. Go autonomous or you ll be irrelevant soon It interesting how technology has been the enabler of change for years. With artificial intelligence, we can optimize both simple and complex tasks to make **human** lives better. It time that enterprises start believing in the harmony that humans and machines can co create to deliver superior human experiences. Keeping people, processes, data, and applications connected on one platform will launch them towards a highly rewarding growth trajectory. Quick commerce is a trending topic of **conversation** in the e commerce industry. Quick commerce evolved during the pandemic to solve consumer needs around convenience and faster delivery of groceries and daily essential items. The players who grabbed this market opportunity and catered to the consumer demand were Swingy, Duns, Blink it, Big basket, Zippo, and Tomato. The business model adopted by these businesses was to set up dark stores and hold fast moving inventory knowing the pulse of the locality consumers and organizing inventory as per the market appetite on a daily basis. This is one type of quick commerce wherein the hyper local has to **rent.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25846

Whatever might be the origin of science and religion, the main point is their area of activity and their method of working. Science makes a man rational and free minded. Religion wants man to believe blindly in what he is told to be true and worthy of being practiced. Science asks questions and puts every thesis or proposal to test. Religion abhors such methods. Science believes in logical experiments and wants to declare something truthful and true if it comes out finally resultant of the experiment. Religion pre-supposes the result and wants to stick to it irrespective of the outcome of investigation, inquiry or experiment. So, religion and science both are complementary to each other. For mankind, both are required in equal measure and simultaneously. Thus intrinsically, both are essential for man. The role of education as an agent or instrument of social change and social development is widely recognised today. Social change may take place if When human needs change. ii When the existing social system or network of social institutions fail to meet the existing human needs, and iii When new materials suggest better ways of meeting human needs. Social changes do not take place automatically or by themselves. As MacIver says, social change takes place as a response to many types of changes that take place in the social and non-social environment. Education can initiate social changes by bringing about a change in outlook and attitude of man. It can bring about a change in the pattern of social relationships and thereby it may cause social changes. There was a time when educational institutions and teachers were engaged in transmitting a way of life to the students. During those days, education was more a means of social control than an instrument of social change. Modern schools, colleges and universities do not place much emphasis upon transmitting a way of life to the students. The traditional education was meant for an unchanging, static society, not marked by rapid changes one method is to detach psychologically from work. The mind has to be engaged in something removed from **work.** The authors suggest practising mindfulness as a solution. What did our forefathers do? One way was to practise evening sandhya, a practice prevalent throughout the land. It is performed at dusk, a time for transitioning from day activities to contemplation, of connecting with the Divine. In the past, everyone **did** it as dharm. The bindings of dharm are no longer applicable today. However, people can embrace proven methods from the past because they can help solve today problems. The key is to engage the mind and to train it to stay engaged. In this field, we can be proud of inheriting humanity treasure trove of knowledge. The time has come to unearth the eternal treasures and profit from them. Kudos to Zero Project India for providing the impetus! Playing a pivotal role in both his personal and professional life. Phiroza managed the headmaster office with grace and professionalism, maintaining **her** individuality and dignity throughout. Despite her proximity to the headmaster seat of power, she strictly adhered to school rules, even going so far as to request my permission to take her nephew, Rishad Choksey, on an outing. An excellent homemaker, Phiroza skilfully balanced her professional responsibilities with raising their children Rohit, Nishad, and Sheshe ensuring they received the best upbringing. To pay my heartfelt tribute, I would like to say that the

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25849

The importance of these can hardly be overemphasized. T.V. films, newspapers, and periodicals, etc. are the various forms of the mass media and communication. The importance of these can hardly be overemphasized. They play a vital role in dissemination of knowledge and information, formation of public opinion, national integration and removal of superstition. The urgency and importance of multi-channels of mass communication for a country like India, with a population of more than a billion, is clear. Radio broadcasting started in India in 1927, in Mumbai and Kolkata. Since then it has spread as a vast network, covering almost all the villages, hamlets, towns and cities. It was christened Akashvani in 1957. Now, there are over 100 stations of All India Radio, serving as very effective means of communication, education and entertainment. Radios and transistors are very popular as they are cheap, handy and affordable. Over 95% of our population is covered by its vast network of stations and broadcasting centres. Now there are about 273 bulletins for duration of 37 hours in its regional, national and external services. It is one of the biggest news organisations of its kind in the world. There are 78 news bulletins in 19 languages in home service from Delhi alone. Then there are 127 regional bulletins in 62 languages. In the external air service, bulletins in 67 languages and dialects are broadcast every day. Besides, there are sports bulletins, special bulletins, weather and Parliament bulletins. There are hosts of other, very useful bulletins, commentaries and broadcasts to cover events, people, news, and views of national and international importance. Yuma Vain is a programme for the youth of the nation, by the young men and women of the country, between the ages of 15 and 30. For school students most of the AIR stations have regular programmes, based on their school curriculum. Television came to India in 1959, with three days a week limited transmission. However, from 1965 these became regular. Since 1976 when Doordarshan came into being, it has emerged as a very powerful and effective means of mass communication. It has **seen** a phenomenal growth of installation of one transmitter a day in 1984 and after. A vast network of over 350 transmitters of the Doordarshan now reaches an estimated 80% of our population. The popularity of television is on the increase and soon it will cover the entire population of **our** country. In order to cater to the wide interests of large sections of our population, more channels are being added and introduced. The introduction of the Metro channel in 1984 in Mumbai, Kolkata and Chennai has been historical. Now, it is available in many cities and towns. The services of Doordarshan for school and university education have helped a lot in the promotion of education and training. The satellite communication has really revolutionised the means of mass communication and information. The radio and television broadcasts via satellites have made communication instant and universal. It has turned the whole world **into** a global village. Now viewers have access to more and greater selection of viewing on T.V. The implications of satellite communication are really very complex, varied and far-reaching. It has its own inherent strengths and weaknesses, which are unfolding with the passage of time. But it is beyond any shadow of doubt that satellite communication will go a long way in helping a developing country like India

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25850

When people see nandi maharaj, they know shiva, the mahadeva, has got to be around nearby. We always see nandi maharaj in the sitting position, facing shiva. Nandi is a protector of shiva, a bhakt, a devotee, a messenger, and a symbol of shiva himself in many ways. While shiva bristles with energy, and is full of creative tension, writes henryk skolimowski 1930 2018, a polish philosopher, in dialog with nandi 1998, nandi is passive, forever watching, and ever present. Situated at the bank of the river Ganga, the mother, is the holy city of kashi also known as varanasi or banaras. Kashi is known as the city of light and is considered the oldest continually inhabited urban settlement. Talking of kashi history, mark twain famously wrote in his following the equator journey around the world 1898 benaras is older than history, older than tradition, older even than legend. Local and foreign literary accounts are full of details about kashi and gyanvapi. According to the skand purana, gyanvapi is superior to all important holy teerthas and is the cosmic form of shiva himself. The Chinese traveler hiuen tsang visited kashi in the 7th Ce. In his memoir, he wrote about seeing a hundred or so temples and three thousand priests meenakshi Jain, flight of deities and rebirth of temples, 2019. Kashi saw its first muslim attack in 1033 ce. Ahmad nialtagin, son of mahamud ghaznavi, and his army plundered kashi. the markets were plundered the people of the army became rich, for they all carried off gold, silver, perfumes, and jewel, and got back in safety, Jain quotes from abut fall al baihaki 995 1077 ce description. Jean baptiste tavernier travels in india, 1889 called the pagoda of banaras the most famous after jagannath. Frequent acts of vandalism by the religious zealots continued on Hindu temples across the Indian subcontinent for another 700 years. One of such attacks rendered maharaj nandi of gyanvapi separated from his beloved shiva. So, when people see nandi outside the gyanvapi mosque, they know precisely the location of shiva. when i had traveled to **kashi** eight years ago, wrote author adyta Banerjee the curse of Gadhafi, Bloomsbury, 2019 on her Facebook wall, i had seen nandi maharaj, of course, bereft of the dashing of his beloved shiva. Many take nandi position outside gyanvapi Sanskrit, meaning well of knowledge as an example of Hindu pacifism. **However,** such characterizations show a lack of basic understanding of Hindu dharma. An and devotee wait patiently when his Ishtar is held captive, insulted and defaced, marred with spit and dirt from washed hands and feet Asks Banerjee in her post. no, she continues, nandi maharaj has been stuck there, frozen, devastated, and helpless in the face of a pain of which we only can feel a fraction. Nandi maharaj is an ardent devotee of shiva. To impose the morality of a Kshatriya fighter on the saintly sufferance of maharaj nandi would be to use sir aurobindo term preach varnasankara. **Iconoclasm.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25851

Destruction, and desecration of religious places exemplify barbarism. They are an instrument of power. Our history is replete with examples of such destructions. Catherine nixey he darkening age the christian destruction of the classical world describes the destruction of the temples of serapeum in alexandria and the parthenon in athens. Sita ram goel Hindu temples what happened to them is a detailed listing of destroyed Hindu temples across the subcontinent. Notwithstanding the theological and textual underpinnings of the islamic invaders and rulers, the large scale destruction of Hindu temples and the desecration and dismemberment of their sacred deities is a living reality for generations of hindus. It has also been a source of grave civilizational trauma. No standing grand ancient Hindu temple older than about a hundred years exists in and around the national capital region of Delhi is a testament to the defeatist Hindu psyche. So have been the sites of Ajodhya, kashi, and Mathura. Over time and maliciously, leftist historians perpetuated a narrative that, historically, hindus were not attached to their sacred spaces, such as temples. However, this cannot be farthest from the truth. When Aurangzeb army attacked the vishwanath temple in 1669 ce, the troops had to face the wrath of the warrior sadhus of the dashnami naga order. The sadhus won the victory in a fight with the sultan Aurangzib, and gained great glory, writes jadunath sarkar a history of the dasnami naga sannyasis, 1958. from sunrise to sunset, sarkar continues, the battle raged and the dasnamis proved themselves heroes they preserved the honour of vishwanath seat. In 1809, the hindus of the area fought the war of the lat with the local muslims. On october 20, a minor dispute between the rajputs and the julahas weavers started a three day carnage in kashi. The clashes broke out when hindus attempted to erect a small shrine on the narrow strip of neutral ground between the mosque and the vishwanath temple Jain. Both sides suffered losses. According to Jain, these clashes were among the worst Hindu muslim conflicts in kashi modern history. The hindus of india **are** once again starting to see themselves and their history from their native lenses, not colonial or marxist. They are now ready to reconcile with their transgenerational trauma. And that will mean reclaiming our Hindu heritage one deva, one vigraha, and one mandir at a time. The market is flooded **with** study abroad consultants for facilitating admissions of Indian students to foreign universities. The relevance of these facilitators is demonstrated by the success rate in securing admissions in post graduate courses abroad. It is becoming a trend that students completing undergraduate degrees from higher education institutions he is in the country aspire for pursuing postgraduate degrees from better ranked he is in other countries. The growth in the number of admission facilitators for foreign universities points to a continuously increasing number of students wishing to go abroad. Bypassing the covid period, there is a significant increase in the number of **such.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25852

Aspirants for postgraduate and undergraduate courses particularly in stem science, technology, engineering, and mathematics in the last two decades. Still, it is solacing that the charm of pursuing undergraduate courses in selected premier hikes in the country remains intact but the exodus of students pursuing postgraduate courses overseas is gaining momentum year by year and needs introspection for necessary timely corrections. What lures students abroad Among different reasons for students getting enticed for studying abroad, the positive perception nucleated by different global ranking indices about foreign he is and negative perception about the limitations of Indian he is in securing good positions in the ranking list seemingly plays a predominant role. Importantly, the global ranking parameters simply discount the societal welfare obligations taken care of by Indian he is. Nevertheless, it remains to be seen, how worthwhile the ranking systems are which only create competitiveness amongst he is on selected attributes that are not always coherent with the basic purpose of higher education. Undoubtedly, why a student getting into the education process once in a lifetime should be bothered about all this. As a result, after completing an undergraduate degree, a good number of students wish to move out for seeking a better institutional tag in their profile that holds potential for opening new vistas in their career. Simultaneously, the other two factors playing a significant role include time duration and cost of the postgraduate programs. The lackadaisical approach of he is in handling post graduate courses, especially doctoral programs is contrary to their dealing with the undergraduate programs offered by them. The time duration required for completing a particular post graduate degree varies hugely across the institutions in the country. Thence, the prevailing uncertainty is the function of the student involvement in completing prescribed work, matching mentoring support from the supervisors, and widespread acceptability of the extended timelines for completing the course properly. For example, there are a good number of premier he is in the country where the average time for completing a Ph.D. degree hovers around 5 6 years and hardly anyone completes Ph.D. degree in **the** stipulated period. These extended durations have become part of the culture in some premier he is and the students consider it as usual time for completion of degrees. Whatsoever the reasons for extraordinary delay are, whether it is due to the candidate, supervisor, or institutional facilitation, the completion of **pg.** degrees must be accomplished in a stipulated time duration so that the students can utilize their young age potential for other pursuits. Further, there has been a significant increase in the fees of postgraduate courses across the country. The uncertainty about scholarships for continuing higher education after us degrees along with the bleak career prospects even with higher qualifications compels the students to either stop furthering education or migrate out of the country for a better quality of pg. courses. Introspecting the fees envisaged by the all india council for technical education and trained human resource pool. The high **costs.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-07-TEST NO.-25853

Columnist for leading newspapers. He holds a B. Tech. from NIT Warangal and a PhD in Economics. After joining the Indian Foreign Service in 1993, he served in several challenging assignments. He was posted in China and the United States as Minister and Deputy Chief of Mission during critical phases in bilateral relations. Dr. Bhaskar played a key role in resolving India China border tensions in May 2013 and September 2014, while also advancing trade and investment ties. He was part of the negotiating team for the India Thailand Free Trade Agreement. He went on a special mission to Iraq when ISIS captured Mosul in 2015. As Joint Secretary (West Asia & North Africa) from 2016 to 2019, Dr. Bhaskar played a significant role in shaping India's foreign policy towards West Asia and the Gulf. As Ambassador to Norway, Dr. Bhaskar was instrumental in developing India's Arctic policy, establishing a permanent research station in the Arctic, and securing ISRO's antenna in Svalbard, critical for monitoring climate change. An accomplished economist, he has deep expertise in the Indian economy, global trade, energy dynamics and infrastructural challenges. He has delivered lectures at leading institutions worldwide and is the author of Energy Security and Economic Development in India (TERI, 2012), a pioneering work in the field published by TERI. There are no winners in West Asia's wars, and the unfolding conflict with Iran is unlikely to be an exception. At some point, each side will craft its own narrative of success. Yet the war at the theatre of energy politics, sectarian contestation, regional dynamics and great power rivalry is revealing deeper geopolitical and structural shifts in technology, energy, alliances and ideology that will outlast the conflict. A striking feature of the conflict is the changing character of warfare: low-cost Iranian drones and missiles are offsetting conventional disadvantages by challenging advanced air defences across Israel and the Gulf. With a roughly $15 billion defence budget, Iran contests America's trillion-dollar edge powered by rare-earth magnets in which China holds a 90% monopoly as the principal supplier. This advantage is reinforced by China's BeiDou-3 navigation **system,** which delivers superior precision and jamming resistance over GPS in contested environments. The conflict is exposing fault lines in the Gulf security architecture. The Gulf Cooperation Council, long reliant on its partnership with the United States, appears increasingly vulnerable underscoring the limits of outsourced security and prompting reassessment. Perceptions **that** Washington's priorities align closely with Israel, at times at the expense of Gulf interests, have deepened unease, reinforcing the China-brokered Saudi Arabia Iran rapprochement and Saudi Pakistan defence cooperation. These vulnerabilities are longstanding. Opposition to foreign military presence articulated by Osama bin Laden in his 1996 Ladenesee Epistle branding the Gulf Rulers as Apostates persists despite the weakening of such groups and resurfaced during the Arab Spring. Ironically, a Shia state like Iran, along with Shia organisations such as Hezbollah and the Houthis, has emerged as a prominent advocate of the Palestinian cause, challenging Sunni Shia binaries. Amid renewed **instability** and declining Western credibility, tensions between regime security, external alignment, and domestic legitimacy of ruling dynasties may sharpen, lending renewed resonance to He

across the Gulf has long been seen as a strategic encirclement. Its retaliatory doctrine extends beyond military targets to the broader American economic and security footprint. Under these conditions, there may be renewed interest among Gulf states in alternative frameworks such as a collective security arrangement for the Persian Gulf, long proposed by Russia. A nuclear-armed Israel has long portrayed Iran as an existential threat, even as it remained a major adversary. The Iranian question has served as a unifying axis in Israeli politics, unlike the more divisive Palestinian issue. In the aftermath of the war, Iran could emerge as a more entrenched challenger, less constrained by American pressure. At the same time, Israel faces mounting internal strains. The dominant mood reflects war-weariness tempered by cautious relief, alongside deep polarisation and persistent anxiety over an uncertain future and inconclusive wars. Around 70% of Israelis oppose military exemptions for the ultra-Orthodox (Haredi), underscoring widening social divisions. In the United States, while official support for Israel reached its peak, public opinion is sharply critical of the war. Divisions within the American Jewish community evident during the Gaza conflict persist and may deepen if the war continues. A September 2025 Washington Post poll found 61% of American Jews (around 7. 5 million) believed Israel committed war crimes in Gaza, with 39% describing its actions as genocide. Growing dissent among Jewish and non-Jewish constituencies may temper future U. S. support. These trends may compel Israel to reconsider notions of Greater Israel and adopt more pragmatic approaches, including substantive engagement with the Palestinian question. For Iran, the leadership has long invoked a religious decree (fatwa) attributed to Ali Khamenei prohibiting nuclear weapons. However, the scale of destruction and perceptions of resilience against United States pressure could revive nuclear ambitions, even as the regime may gradually adopt a more accommodative domestic posture amid reduced suspicions of citizens' collusion with foreign intelligence. The constriction of the Strait of Hormuz could trigger a structural shift in global trade, accelerating the salience of Arctic corridors such as the Northern Sea Route and the Northwest Passage. Reinforced by the **huge** presence of rare earth elements in Russia, the United States and Russia may be compelled to collaborate. This war could also revive stalled momentum in the transition to renewable energy, coal and nuclear energy. For an energy-constrained Europe, the crisis underscores the limits of full decoupling from Russian energy. **Reliance** evident in continued flows from projects such as Yamal LNG is likely to persist, forcing a reluctant recalibration of ties with Russia. The cumulative effect could destabilise NATO, with strains already visible. As economic pressures clash with security commitments, internal divisions may widen especially as the United States shifts its strategic focus away from Europe. Beyond the battlefield, the Iran conflict is reshaping global finance: Tehran's push to link oil trade through the Strait of Hormuz to the Chinese yuan challenges the US-backed petrodollar system established in the 1970s with Saudi Arabia. Central banks have already shifted about 30% **of** reserves from dollars to gold, signalling a gradual move toward a more multipolar monetary order. Another emerging trend is the prospect o

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-08-TEST NO.-25857

Programs, the absence of sufficient fellowships scholarships, and the worthiness of these programs are a few of the apparent deterrents for the number of aspirants who find it appropriate to look moving overseas for higher education, but the unavailability of intellectual potential for the larger good of the country is concerning. It is high time to ameliorate the state of affairs in pg. programs, especially in stem disciplines. This can be suitably addressed by enhancing the quality of teaching learning processes in them, running pg. and above programs in stipulated time frame with minimum deviation in exceptional circumstances, reducing their fees, augmenting research facilities, and meeting the program expenses from other resources for increasing the student enrolment in pg. education system of the country. Academics and regulators should collectively ponder upon the challenges faced by the postgraduate programs being run in he is of the public sector and private sector for harnessing the full potential of the demographic dividend available in the country. Education across the globe has transformed along with the civilizations. We vet literally travelled from gurukuls to online schools. It has not been an easy journey adapting all the major upgrades that came in the way. But it has surely enriched the educational resources over the decades. Hybrid mode of learning is super adaptive and useful for people from every class and background. It can be customized according to the students caliber without even hampering the whole classroom structure. We have been through an immense tragedy in the past two year which hampered every aspect of our lives and education was no exception. So, as the tragedy unfolded and the country went into lockdown to save lives, people struggled to comprehend the new normal of life. It was way more difficult for the students since they were still exploring the society through their school lives. Students were hit so bad with this sudden lockdown because they were unable to go to schools or outside their homes to play or interact with their peers. This put a halt on their intellectual and physical development. That is when **hybrid** mode of education became even more relevant. Schools shifted from classrooms to zoom & Google meet classes. Workbooks shifted to puffs and word files. Online classes brought a new normalcy into students lives and it became an option for the students to socialize while sitting at home. However we **can** never completely adapt the online mode of learning as an alternative for the offline and physical schooling system. Traditional way of education provides students a vibrant atmosphere along with their teachers and fellow students which is extremely important for the overall growth of any child. Therefore we need to find a balance between the both modes to settle upon an atmosphere where every students is comfortable to learn and push his her own limits in order to achieve an overall development of his personality. That balance is hybrid mode of education. Hybrid mode of education emerged after the pandemic **took.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-08-TEST NO.-25858

Of armed drones are on the anvil. The two are now exploring defence technology cooperation, and authorisation for transfer of jet engine technology is in the works. Since the start of the new phase in the relationship with President Clinton visit to India in 2000, repeatedly new elements have been infused to try and build this unique architecture. President Bush inked the civil nuclear cooperation agreement with India in 2008, ending India nuclear apartheid. President Obama invited Prime Minister Man Mohan Singh as the first State visitor of his administration in 2009. During his own visit to India in 2010, he articulated support for India permanent membership of UN Security Council, and later worked successfully for India membership of the Missile Technology Control Regime the Wassenaar Arrangement a multilateral export control regime, and the Australia Group. During his and the Trump administration, there were other breakthroughs on higher-level technology releases. President Biden elevated the Quad with India, Japan and Australia to summit-level meetings. A new group met at the summit level in July 2022, acknowledging India interest in West Asia. National Security Advisers of the and Saudi Arabia had their first-ever meeting in this format on May On January 31, the launched a major new initiative for a partnership on critical and emerging technologies, which seems to have now become the organising framework for the new phase in the bilateral relationship. India has also taken many steps to deepen the partnership, as it navigates global multipolarity. In 2015, it declared, along with the US, a Joint Strategic Vision for the Asia Pacific and Indian Ocean. It has signed agreements for logistics support, communication security and compatibility and sharing of geospatial information. With PM Mode visit, the urge to put the relationship in neat constructs will continue, but it should be seen as a partnership based on convergence, and allowing space for the two to disagree on occasion. Only then will it have a more enduring foundation. Well as India internal capabilities, it imperative for our leaders to ensure adequate space for a normalised relationship with the middle kingdom in **the** future. Jaishankar response to a recent question on US-India ties benefitting from the recent Chinese troubles are certainly assuring, he states, there no correlation between this set of problems I am having with China and the development of my relations with the United States. My relations with the United **States,** as I pointed out, have been steadily developing for two decades, and in the last decade, have accelerated. There empirical data out there to show that quite independently of anything that happened on the China border, India-us relations were ticking along, more than ticking along, just fine. So I won encourage you to make that connection at all. I think it a false one. Even though Delhi police has kept its June 15 deadline to file charges against the six-time BJP MP, there is no jubilation among the wrestlers. Excised from the 1,500-page charge sheet is Pecos, the stringent **law** to protect children from sexual offences. Brig Bhutan had earlier claimed it was being misused and needed to be changed, by force if necessary. Delhi police on Thursday filed a charge sheet against BJP MP and former Wrestling Federation chief Brig Bhutan Sharan Singh for the offences of molestation, stalking and sexual harassment against wrestlers. It took about six months fo

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-08-TEST NO.-25859

उत्तर प्रदेश सरकार ने खान-पान की शुद्धता सुनिश्चित करने और बढ़ती मिलावटखोरी व बदनीयती को नियंत्रित करने के इरादे से इस कारोबार से जुड़ी दुकानों व संस्थाओं के लिए जो नए दिशा-निर्देश जारी किए हैं, वे स्वागत के योग्य हैं। इन दिशा-निर्देशों के मुताबिक, राज्य में खान-पान की दुकानों के बोर्ड पर न सिर्फ संचालक, मैनेजर को अपना नाम लिखना होगा, बल्कि होटलों, ढाबों और रेस्तरां में सीसीटीवी कैमरे भी लगाने होंगे और वहां काम करने वाले कर्मियों को मास्क पहनना होगा। सरकार ने संबंधित अधिकारियों को सूबे के सभी होटलों, ढाबों व रेस्तरां की नियमित जांच के आदेश दिए हैं। जाहिर है, स्वच्छता एक ऐसी अपेक्षा है, जिसके लिए शासकीय हस्तक्षेप की जरूरत ही नहीं पड़नी चाहिए थी, मगर दुर्योग से हम इस मामले में एक लापरवाह समाज रहे हैं और मुनाफाखोरी की बढ़ती प्रवृत्तियों ने इस लापरवाही को जानलेवा हद तक पहुंचाना शुरू कर दिया है। ऐसे में, राज्य सरकार के दिशा-निर्देश बिल्कुल मुनासिब हैं और ऐसी ही सजगता दूसरे राज्यों को भी दिखानी चाहिए। मगर विडंबना यह है कि ऐसे जरूरी कदम भी कई बार राजनीति से प्रेरित होकर उठाए जाते हैं या फिर उन्हें सियासी चश्मे से देखा जाता है। उत्तर प्रदेश सरकार ने यह कदम हाल ही में घटी कुछ ऐसी घटनाओं के मद्देनजर उठाया है, जिनमें खाने-पीने की चीजों में अखाद्य पदार्थों की मिलावट करते हुए वीडियो सोशल मीडिया में वायरल हुए थे और स्वाभाविक ही वे सामाजिक आक्रोश की वजह भी बने। फिर अभी चंद रोज पहले ही देश के सबसे प्रसिद्ध देवालयों में से एक तिरुपति बालाजी के प्रसाद में कथित रूप से पशु वसा की मिलावट की खबर ने पूरे देश को झकझोरकर रख दिया था। करोड़ों श्रद्धालुओं की आस्था को इससे गहरी चोट लगी है। धार्मिक शुचिता और आस्था से परे नागरिक हितों से भी जुड़ा यह एक गंभीर प्रश्न

The ingredients list of that food. Focus on decreasing the amount of salt consumed from processed foods and get your sodium from iodized salt. Seaweed, saltwater fish and seafood are natural sources of dietary iodine. Dairy products also supply iodine in the diet at varying levels. During lactation, the breast concentrates iodine in milk so breast milk tends be a good source of iodine as long as the iodine intake of a mother is adequate. Plants grown in iodine rich soil are also good sources. However, this is not a reliable source of iodine since there is no way of knowing whether produce purchased in grocery stores is grown in iodine rich soil or not. Iodized salt usually adds less than about three hundred micrograms iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit of daily iodine intake for adults set at 1,100 micrograms by the IOM it is unlikely to hit an excess amount when including a multivitamin and including natural sources of dietary iodine. The trend of eating less table salt, dairy and bread has some experts concerned that iodine deficiency could be on the rise again. Eating a healthy, balanced diet that includes iodine rich foods and iodized salt is key to good health. On the other hand all of us have also seen students who need inspiration from their surroundings to study. Be it government or corporate, is trying its best to be tech friendly, it is so important to be flexible. The students who experienced both the modes of education will comparatively find it easy to work in modern corporate companies. Hybrid mode of learning offers our students the best of both worlds. As citizens and parents we must think about making it more affordable for every student. Stretching s specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be an integral part of every workout program. It not only helps increase your **flexibility,** which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, **but** can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. They just learn and perform better in groups. It a part of their personality, so hybrid mode of education gives them offline classes and a lively classroom. Interestingly online education started as an alternative, but it is now helping students to prepare themselves for their future professional lives. As we all know every office. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of **motion.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-08-TEST NO.-25862

That the rest of us must aspire too. Only neo-colonialists sworn to cultural exceptionalism would today dare to exalt a strictly Western sense of democracy and stand in judgment of another model. The third mistake the Economist makes is to distance the West from all responsibility for the war in Ukraine. Chroniclers obsessed with objectivity will agree that there is ample evidence to suggest that while there is little excuse for Putin neo-imperialistic muscle flexing U.S led NATO brinkman is equally responsible for provoking the conflagration. Let not forget that hostilities have negatively impacted the nations of the Global South the most, slowing post-pandemic economic recovery. In fact, these nations should be compensated by Western powers for suffering in silence as the first world pursues its unfinished objective of settling post-World War II scores in heartland Europe. In this context it is plainly duplicitous of the Economist for having a go at India for having propped up Russia war economy. Reeling from the war induced oil shock and cut off from affordable oil what choice did India have but to shop for the cheapest source to protect its poor from runaway inflation? While it is true that India oil imports from Russia have spiked from 1 before the war to around 40 of its total off-lift from Russia, it is also true that the surplus petrol and diesel is being bought by Europeans by exploiting a loophole in EU regulation on oil imports. According to data cited in a leading Indian daily, India petroleum product exports to the European Union rose 20.4 percent year on year between April 2022 and January 2023 to 11.6 million tons. Will Europe western democracies be ready to forego this infusion? And if they are loathe to do so because they fear full-scale economic destitution why should the Economist single out India for not putting the economic well-being of its people ahead of joining someone else war? Truth be told, more than the United States or European powers it is India that has maximum reason to be upset at Western intransigence in Ukraine. The **Ukraine** war has served to undermine India security interests in its own backyard. The West backed war in Ukraine has only served to push Russia into the Chinese sphere upsetting the balance of power in the Indo-Pacific. The Russia-China axis, deepening in the face of growing Western support to Ukraine **deprives** Delhi of the option of leveraging Moscow influence over Beijing in the face of the latter expansionist designs on India sovereignty. The third and most outrageous insinuation in the piece is that the Indo-American relationship is based on fewer principles than the two nations care to admit. This is a jaundiced one-dimensional view of the bi-lateral relationship. Delhi and D.C are natural allies united by a shared liberal political and moral philosophy that flows in India case from its ancient pluralistic dharma tradition and in America case from the high ideals of the Enlightenment. This enviable core of exalted **civilizational** values commits the two nations to pursue altruistic foreign policy objectives for the greater good of humanity. Indeed, even when in pursuit of their individual and sometimes diverging interests. There are many examples of Indo-American collaboration that have been driven by the elevated objective of bolstering a global rules-based order. Is it, for example, the Economist case that the influential QUAD alliance lacks a moral core and is based on fewer principle

Eating a healthy, balanced diet that includes iodine rich foods and iodized salt is key to good health. On the other hand all of us have also seen students who need inspiration from their surroundings to study. Be it government or corporate, is trying its best to be tech friendly, it is so important to be flexible. The students who experienced both the modes of education will comparatively find it easy to work in modern corporate companies. Hybrid mode of learning offers our students the best of both worlds. As citizens and parents we must think about making it more affordable for every student. Stretching s specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be an integral part of every workout program. It not only helps increase your **flexibility,** which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, **but** can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. They just learn and perform better in groups. It a part of their personality, so hybrid mode of education gives them offline classes and a lively classroom. Interestingly online education started as an alternative, but it is now helping students to prepare themselves for their future professional lives. As we all know every office. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of **motion.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-08-TEST NO.-25866

Salute from a junior many years ago, I had learnt the answer to this question the hard way Thapa of Gorkha Rifles the First of the Ninth Gorkha Rifles was posted as a drill at the was a cadet an officer trainee there. This was the year. He was the senior drill of my ate the and was a hard. He would accept the while putting us through our paces on the drill square in turn-out arms drill and so on. After my at the and at I proudly donned the rank of a of the Indian Army. The Indian Army had this rank back in that era. Having opted to serve in the Gorkha Rifles, I found myself into the Gorkha Rifles. Dhruv Singh Thapa, by then had not only returned to the unit but had earned a to the rank of Subedar Major, the highest rank in The Indian Army below officer rank. Although he held a in the unit, his rank was still junior to mine that of which is an officer rank. I duly joined Gorkha Rifles after post leave a rookie joining his first unit. Subedar Major Dhruv Singh Thapa proud to receive an officer he had himself trained into his own unit had come to receive me at the railway station. It was a fond and yet very meeting between teacher and student. The next day my first day on duty as an officer in The Indian Army I was outside office waiting to be called in by for the joining interview. Subedar Major Dhruv Singh Thapa emerged from office. He spotted me and saluted smartly a military courtesy to his erstwhile cadet who was now his senior officer. Newly as I was, I was not yet quite used to being by. The salute I returned was perhaps a rather one. Dhruv Singh Thapa stopped and marched up to me. His Subedar Major cane smartly under his left arm, he looked me in the eyes and said Sahib, this is the kind of salute I trained you in at the. He then added, **I** shall salute you again. I request you to salute me the way I trained you a beat, he retraced his steps and saluted me again, forcing me to return a salute this time one befitting the NDA drill square. Needless to say, I was never sloppy in returning a **salute** for nearly three decades that I served in uniform since. My morning has begun with a bit evolved social media wisdom about how NASA is secretly designing super computers using Sanskrit. I am happy to note that even fake news scriptwriters are pressurized to up the ante over time as even when it is a blatant lie, people still keep needing novelty! As I had the pleasure to listen to an Indian genomics legend just yesterday, arrival of Sanskrit on my social media stream led to formation of a neural connection, as the language of Devas and the language **of** Life on Earth share a common superpower and a possible Achilles heel. The fact that I am writing this piece in English and not in Sanskrit has many reasons, but the one that is my preferred muse is excessive use of metaphors. One of the most charming and yet highly irritating qualities that Sanskrit has is each word having multiple meanings. The reason for this is that when a word is used in a metaphoric way, it is often bestowed upon the contextual meaning in the lexicon thereafter. So, if Kalidas has described Vishnu using a metaphor of a flower, very soon the word used for the flower gets an additional meaning as Vishnu for future use. This tradition makes Sanskrit a great language to write poetry, but also makes it confusing when the context is lost. When a word has more than one meaning, it is very difficult to decide what the author originally intended, especially when cultural continuity i

Used by to write an eternal epic, but for the poor writer they are with has a huge problem. The poem written by must be to a of a planet that rejects it every time, forcing to keep it. The poem of is written and over ages and passed down to beings, and hence it just the way a poem would, with some with clear cut and some where the writer uses a akin to a is an tool as it can crunch a lot of in a few words, and hence it is no fault of to use it for the sake of sheer brevity, but just like how has turned when the context is lost today, also has it in the form of. as the word is the of code, as the genetic code has to inscribe options that a life form can choose from based on the example, if you are an egg, the will only be read if the nest stays in the range If the is higher or lower, no will be needed as you will be forged as a female by the code. is clearly a very smart way to keep the code having, but it also faces the same that faced and failed, and that is change in the normal. As Earth has a with far more than fifty shades of greys, it keeps by too hot or cold or having too much oxygen or carbon in the air and poor finds itself to keep its poem full of while the context of in most cases, as the of tells us. But, as the change in context over time is faced by all and tools, be it a human language or code, we still have and life on earth to keep up with the loss of by to the change through the users, but this is where the fate of is making me get worried. In to the normal and slow that all face, had an and that was of and the context. When I see life on earth in the age **of** and I find the example of. The genetic code has an and this in a way has always been as natural as genetic code. Cometh and we made new mine made new and that never ever existed on this planet as they were not part of the of Earth. **The** scariest examples some of these aliens amidst us are various carcinogenic materials now spread all around us. Just as a modern translator tries to decipher a Sanskrit stanza today written for a different context and makes a mess of a meaning, the machinery of life ends up translating these carcinogenic materials by treating them as epigenetic agents and makes a mess we call a cancer. If the plastics, the rare and heavy metals, and radioactive substances were not enough, we are now making Nano-particles that completely defeat the machinery of life that has no sieve to stop them. The **net** result is, the modern DNA code is now facing the same unsolvable without cost problem that a Sanskrit translator does, and that is of metaphors now biting back. Sanskrit that was getting overboard with metaphors could not survive the onslaught, let see what DNA does when confronted by a similar problem. My guess is that Life on Earth is going to do some serious purging and move on! In the pre-Daglocked days, one had to store all their physical documents safely & produce them whenever required. A certain security & accountability was ensured as physical documents are harder to forge & the copies are easier to detect. But the absolutely unexpected Covid-19 pandemic necessitated a pivot to online activities, financial & otherwise. Consequently, identification gained digital forms as well and while they are highly convenient to store, they are also much easier to forge. And in this increasingly digitised world, verifying an individual identity is a critical component of security & trust. Today reality is that fraud has reached an unprecedented level of soph

It deeply disturbing to witness the continued violence and injustices faced by women, a stark reminder of the inequalities that demand urgent action. Just last month, the entire country protested after what happened to Kolkata Tilottama, and now a rape survivor has been allegedly killed by her own family in UP Sambhal. And many such stories. The longest doctor strike in India post-independence history happened with the alleged rape and murder of a post graduate trainee doctor at Kolkata RG Kar Medical College & Hospital. Junior doctors from 26 hospitals-cum-medical colleges across West Bengal were calling for justice for the victim of the indescribably horrific rape-murder at Kolkata premier hospital-teaching college. The government, unwilling to allow a televised dialogue with the strikers, had finally conceded to most of their demands, including the depowering of senior bureaucrats and the Kolkata police commissioner, who the strikers viewed as responsible for tampering with the evidentiary trail. With Durga Puja just around the corner, the usual excitement in the air feels different this year. Among Bengalis, this time of year typically brings a sense of joy and festivity, but something is missing. Instead of the usual anticipation, there a quiet tension people are sad, even angry. Conversations that would have been about pandal themes or cultural programs are now filled with frustration. What people truly seek is celebration it justice. It is collective yearning for something deeper, more meaningful. The usual festive sparkle seems dimmed. Now it is a resolution that goes beyond rituals, touching the heart of what really matters this year. Yet Durga Puja is more than just a festival, it an economic powerhouse. From vibrant markets bustling with eager shoppers to the small businesses thriving on the season demand, the festival breathes life into local economies. It driving everything from retail to tourism. Durga Puja is a celebration of both spirit and commerce. It is much beyond its cultural significance. A study conducted by the British Council reveals that the total estimated economic value of creative industries associated with Durga Puja amounts to INR 32,377 crores (for the fiscal year **2019** 20), which is roughly 2.58% of West Bengal GDP. Think about Durga Puja people get bonuses and spend more on stuff like clothes, jewellery, and gadgets. Shops see double the sales during the festival! And then there the whole idol-making, pandal-decorating, and advertising scene it a big deal. This **festive** cheer is just fun it helps a lot of people make a living. Nearly 3 lakh people find work during Durga Puja thanks to all the extra spending. It like a domino effect more people spend, which makes businesses do better, and that helps the overall economy grow. But having said all these, as Maa Durga prepares to descend upon the earth, as is the belief, bringing with her the eternal message of good triumphing over evil, this time, I can help but wonder how will she look into the eyes of Tilottama parents? How will they bear her **divine** gaze, living each day with the unbearable loss of such a talented daughter? Their lives, once filled with dreams and pride, now seem consumed by grief. In the midst of the upcoming divine mother worship, their pain feels even deeper, as they quietly mourn a future that will never be. Hello and welcome to the 11th edition of the Weekly Vine. There was a time before capitalism and the Industrial Revolution when mo

And the global order. At the same time, the apparent limits of US power projection may accelerate China- and Russia-led integration across energy, infrastructure, and defence, including nuclear cooperation, with an elevated role for Pakistan. Even ending the war could depend on credible security guarantees involving Russia and China to avert renewed hostilities. Taken together, these shifts point to a gradual but consequential narrowing of India's strategic and economic space, set against the backdrop of China's expanding influence across South and Southeast Asia. Yet, India continues to be viewed as a resilient democracy marked by diversity and cultural pluralism, as well as a civilisational source of spirituality in an unsettled world. This enduring appeal strengthens the case for an urgent recalibration of India's foreign policy more agile, representative and regionally attuned to preserve its strategic autonomy and global standing. How well do our teens take an insult? Gurudev Sri Sri Ravi Shankar is a humanitarian and spiritual master. He has founded The Art of Living, present in 180 countries, known to empower individuals through its unique breathing techniques and tools for mind management. Our ability to accept and look at the criticism indicates how much we have grown. Usually, just one word or one critical sentence is enough to throw us off balance and totally disturb our emotions. Emotional stability is a big concern today in the world across all age groups, especially amongst the youth and teens. We have to make sure we don't bring up our kids in a way that they grow up to be fragile adults. We don't let them cry, we don't let them be upset even for a few minutes. We keep them insulated from challenges and all of a sudden, they face a world that is very uncertain. That is when youngsters fail to adjust. We need to immunize them against emotional ups and downs. And teach them how to balance their emotions, how to get out of negative emotions, and how to calm the mind. We haven't been giving our students peace education when it is a must today. In our **brain,** there is something called the Anterior Cingulate Cortex (ACC) in the frontal lobe. When this part of the brain is strong, people have emotional resilience. They are able to take any blow. Do you know how ACC grows stronger? When you do things you don't like. When you do **some** hard work. It also gets stronger when you do some exercise, when you meditate or practice breathing techniques like 'Sudarshan Kriya'. When ACC is well developed, a person becomes very stable in his emotions, and demonstrates good human values. We don't build our emotional muscles. When we are used to getting everything easily, we aren't ready to do even a little bit of hard work. Then, we don't let our ACC develop, and our emotions go up and down at the slightest inconvenience or disagreement. People who are into athletics, or who go to the gym and do other **physical** hard work, have stronger ACC than the rest. A strong mind can carry a weak body. However, a weak mind cannot even support a strong body. Neither in schools nor in our homes are we taught how to control our emotions! It is normal to get agitated. Our emotions aren't in our control. The question is, how long do such emotions linger? Physical exercises, yoga, pranayama, and meditation have a very vital role to play in bringing up an emotionally stable and focused generation. It is no longer a luxury, but a modern-day necessity. We have seen

who were emotionally unstable before they started doing yoga. But when they practiced some yoga regularly and spent time in spiritual wisdom, reading books like the Bhagavad Gita, they became mentally powerful, more intuitive, clear, intellectually sharp and emotionally stable. Their inner strength really grew. Meditation helps us experience a rare state of outer dynamism and inner calm. We cannot control our emotions from the level of the mind alone. But we can do so by tapping into our breath. Each emotion is linked to a particular way of breathing. If emotions can impact how we breathe, the reverse is also true. From ancient times, people have been using breath as a way to relax and strengthen their minds. If we know a little bit about our breathing patterns and how they impact our minds, the knowledge itself is very empowering, because, by modulating our breathing, we can take charge of our emotions. Another thing we need to do is, give our children a bigger vision. Whatever work we do, there will be someone to find fault with it. We need to keep working without losing your enthusiasm and spirit. A wise man by his very nature will keep doing good work. His attitude does not depend on someone's praise or blame. TOI News - April 8, 2026 Ballot points Times of India's Edit Page team comprises senior journalists with wide-ranging interests who debate and opine on the news and issues of the day. Two weeks to elections, around 27L people, as things stand, will not be able to vote in upcoming Bengal elections. This is unprecedented. And deeply worrying. Their status in the electorate is suspended, because processes that'll allow them to be on the new voter roll, being created through EC's Special Intensive Revision, have not been completed. The question is, how did the system get to this point? The onus of proving eligibility was passed on to the voter. Because of the short timeframe of just five months to create a new electoral roll, the process was inevitably going to be challenging, chaotic and, in effect, **unfair.** Bengal is densely populated, with diverse communities, high rates of partial literacy, also hobbled by poor tech upgrades, and an uneven documentation culture. Which state-level documents, or residency papers, were legit for SIR has not been consistently determined recall Aadhaar in Bihar. Bengali Muslims, Matuas, Nepalis, have all suffered. **The** breakdown in trust between TMC, the incumbent party in Bengal govt, and CEC, has meant a fractious rollout, vitiated exchanges. The Supreme Court stepped in to make the last-mile journey smoother. But that hasn't, exactly, worked out. Indian citizenship is multi-layered. So, deciding on documents that prove citizenship needs thinking through, training and time. In election time, with tight deadlines, how can some tribunals be enough? That fully documented Bengalis have got excluded showed that, depending on a tech interface, which didn't even account for spelling variations, was an error. And, there's this robotic demand for perfect papers, in **a** highly unequal society. If the idea of Indian citizenship has hardened and narrowed, EC should have had a nationwide programme, conducted over a longish period, sensitising everyone, before embarking on SIR. Most importantly, there's a principle involved here. Recall what jurisprudence says: better a hundred guilty persons go free, than one innocent getting convicted. The same applies to the fundamental right to vote. Let's assume a huge number

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25873

Speaking of chessboards, India has suddenly emerged as the dominant force in world chess by securing double gold in Budapest. Given the evolved state of our brain, thanks to a millennia-old culture, this was always inevitable. This week, we also explain why you need to win just seven states to secure the USA election, explore the Diddy controversy, highlight another king named Ashwin, and observe celebrities behaving like our grandfathers. Chess, if you think about it, is the perfect metaphor for the cis-hetero-patriarchal capitalist nature of our society. The Queen does all the work, the King barely moves, white goes first, and the pawns are expected to sacrifice themselves for their superiors. No wonder Indians are extremely good at it. There was a time when a young kid named Viswanathan Anand was single-handedly taking on the might of the Soviet Union on the black-and-white board, but now, he has company. At the 2024 Chess Olympiad in Budapest, India achieved a historic double gold, winning both the Open and Women sections. This significant achievement highlights India rising status in the global chess scene, following Neeraj Chopra earlier victory at the World Athletics Championship, making Budapest a memorable city for Indian sports. The Indian Open team, led by young talents like D. Gukesh, Arjun Erigaisi, R. Praggnanandhaa, Vidit Gujrathi, and Pentala Harikrishna, dominated the tournament, winning 10 out of 11 rounds and drawing only once against defending champions Uzbekistan. Gukesh performance was outstanding, with eight wins and a performance rating exceeding 3000. Their victories over strong teams like China and the USA solidified India position among the chess elite. In the Women section, Divya Deshmukh and Vantika Agrawal were instrumental, contributing 14 of the team 23 wins. Their strong performances on Boards 3 and 4 were crucial in beating top contenders, including a decisive victory against China. The team secured their historic gold after overpowering Azerbaijan, aided by a favourable result in the match between Kazakhstan and the USA. In the Harry Potter universe whose creator is now defined by her gender-bending takes the number seven is pivotal. That why Lord **Voldemort** decided to create seven Horcruxes that would have made him immortal, had his sidekick not fancied the mother of a scrawny git. The number seven frequently recurs in fiction and non-fiction. There are seven kingdoms in Game of Thrones, seven colours in the rainbow, seven musical notes (svars), and **the** number seven graces the backs of iconic sportsmen like MS Dhoni and Eric Cantona. Speaking of Kings, it will be a sad day for Test cricket and cricket in general when Ravichandran Ashwin calls it a day. Ashwin achieved his fourth double of scoring a century and taking a five-wicket haul in the same Test, marking his second consecutive instance of this feat at Chepauk. His 37th five-wicket haul brought him level with Shane Warne, trailing only Muttiah Muralitharan 67 in the all-time rankings. Additionally, Ashwin surpassed Courtney Walsh 519 wickets, moving up to No. 8 on the all-time **wicket-takers** list. But what really sets Ashwin apart from his cricketing abilities is his lack of PR chicanery or picking up pet causes on Instagram. There a let get on with it no-nonsense vibe that very refreshing among Indian celebrities. When he speaks whether in English, Tamil, or Hindi we listen, because for a cricketer, he makes remarkable sense. And who can forget h

Is positive thinking an inherent characteristic of a person or can it vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. As for inheritance theory, since positive attitude is not a physical in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. There is no better education for a child than watching his parents come out of a tough situation by means of earnest endeavors. Such do this proprioceptive neuromuscular facilitation or PNF type of stretching is more effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural that your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, shoulders, etc. and **stretch** those parts of your body. which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves **your** day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. You can either go for static or dynamic stretching as they both are effective when it more effective for immediate results. ## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25875

At the best of times, political discourse in America is marked by fine manners and exaggerated courtesy. Every lawmaker is gentle and every state is great. Senators and Representatives in Congress invariably address each other as gentleman or gentlelady from the great state of even if it is Rhode Island the smallest state or Mississippi poorest state or West Virginia least educated. The pro forma respect and deference extends to other branches of government, including white majority law enforcement and police, whose menacing record in a militarised America does not preclude them from addressing violators or criminals with a sir. However, the country long history of political civility is now fraying rapidly. At a press conference this week, the mayor of Uvalde, the Texas town now and forever associated with the massacre of 19 elementary school children, publicly and in front of TV cameras called a political adversary a sick son of a hole for questioning the state permissive gun laws. Another Democratic lawmaker used a copulatory verb to tell a Republican colleague to self fornicate and propel his thoughts and prayers for the shooting victims up his fundament. Through the traumatic aftermath of the latest school children massacre, many Republicans and Democrats who disagree on gun rights called each other piece of s t, successfully trending the hash tag pos. Even as a special NIA court in Delhi handed concurrent life terms to JKLF chief Yasin Malik for funding terror in J&K, Kashmiri TV artist Amreena Bhat was shot dead outside her home in Budgam district. Amreena death comes a day after an off duty constable Saifullah Qadri was shot dead in front of his home in Srinagar. These are the latest in a spate of targeted killings in Kashmir that began around October last year. That the militants have targeted ordinary Kashmiri Muslims, Kashmiri Pandits, non Kashmiri Hindus and Muslims, and individual security personnel shows a concerted attempt to sow fear, disrupt everyday life and challenge the attempts at attaining normalcy since the nullification of Article 370 in August 2019. Targeted killings by their nature are extremely **difficult** to prevent. Security personnel have no way of knowing who the militants will target next. This is in contrast to big ticket terror operations that can be tracked through effective intelligence gathering. In fact, over the last two years the joint security mechanism in J&K has been quite successful **in** neutralising cross border terrorists. But targeted killings use hit and run tactics and can be carried out by local agents who may not be on the radar of security forces. This is precisely why it is also possible that the militants are trying to bait the security forces into an overreaction and create conditions akin to the height of the Punjab militancy or the Naxal movement in Bengal. A similar situation in Kashmir today will represent a severe setback, something terrorists and their cross border handlers will be delighted with. To their credit, security forces have shown considerable restraint **the.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25876

Main challenge now is to curb extremist ideological networks that have proliferated, aiding terror organisations in recruiting locals. About 49 cases of local recruitment have been reported this year this is the cadre terror handlers use to keep low level targeted killings going. This strategy also suits Pakistan, which is facing its own political problems and is under increased international scrutiny. The only way to counter this is to strengthen J&K civil society so as to shrink the space available to extremist elements. But that can only happen if the democratic process is fully restored in the region. Now that delimitation has been notified, J&K assembly polls need to be held at the earliest. The number of stakeholders for peace in J&K can increase only if the legislative executive structure is rebuilt. The longer students get school education the worse they can do, seems to be a brutal fact, going by the National Achievement Survey 2021. This large scale assessment of Classes 3,5,8 and 10 conducted last November shows that average performance keeps declining up the class ladder. The average math score for example declines from 57 to 44, 36 and 32. Scores not only trend down as children go to higher classes, they have also come down in general since the last survey in 2017. The Class 3 national average of math scores which is 57 now, was 64 then. One commonsensical explanation is that the higher the class the more complex the subject matter, and therefore more the need for advanced pedagogic skills to deliver lessons effectively. Without appropriate support and training, teachers will fall even more out of step with senior students learning levels and needs. But how much of all this is the pandemic effect While 25 of sampled schools do suffer from lack of parental support in student learning, and 28 of sampled students lack access to digital devices at home, the key metric is that a thumping 80 say that they learn better in school where peers are there to help. Almost perversely, an impressive 97 of teachers report job satisfaction, quite out **of** step with teaching outcomes. A closer analysis of scattered success stories is needed, to replicate them. For example, it important to find out how Punjab students race ahead in every class and subject averaging 46 in Class X science compared to the 35 national average. The pandemic caught teachers **as** unawares as anybody else. Many of them were leery of digital tools. But the NAS survey is pointing to a problem that is above and beyond specific pandemic challenges, particularly as it is designed to assess competency based skills rather than rote learning. Young Indians future readiness is at stake here. Recent data from Our World in Data suggest Covid 19 related infection around the world and India is waning. Hospitalisations and deaths are very low. Vaccines must take great credit for keeping Covid largely out of the headlines after two years. There are now 10 Covid 19 vaccines **recommended.**

**350th: "of"** **400th: "as"** **500th: "recommended."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25877

By the World Health Organisation, for a disease that was unknown in December 2019 and over 60 vaccine candidates in late stage clinical trials or pending regulatory review. This innovation triumph has been matched in manufacturing too: by December 2021 there were around 12 billion doses manufactured, enough to vaccinate the world population. Currently, vaccine supply far exceeds the global distribution capacity Africa first Covid vaccine manufacturing plant in South Africa recently announced it may close due to lack of demand. If you are feeling the pinch of inflation, blame it on Uncle Sam. The Regency period dandy and fashionable man about town, Beau Brummell, spent a fortune on clothes which he never paid for. Whenever his tailor would ask him to clear his long pending dues, Brummell would order yet another suit of clothes on credit. The tailor, fearful of losing a customer who already owed him so much, would comply, and Brummell wardrobe, and his debt to his tailor, would keep increasing. Modern America seems to have taken a tip from the 19th century fashionista in that it learnt the trick of living on perpetual credit. It has done this by making its monetary unit, the US dollar, the pillar of international commerce. Over 60 of all global business is done in US dollars, including the all important trade in oil. All oil importing countries have to buy their oil in US dollars. India has to import more than 70 of its oil without which factories can operate and trains, buses, cars, and trucks can run and it has to pay for this in dollars. All countries have to keep large amounts of dollars in their national piggy banks, making the USD the most sought after currency in the world. So how does America meet this endless demand for dollars Simple. It just goes on printing more and more dollars. What is the actual worth of the dollar What is its value based on The US imports far more than it exports, its annual trade deficit being over 600 billion USD. The US went off the gold **standard** in 1971, so the dollar is not backed by gold reserves. Like Beau Brummell tailor bill, the dollar incurs ever increasing debt. The world keeps wanting more and more dollars Monopoly money, in more ways than one which the US is happy to keep supplying. The result is that **from** being Rs 5 to the dollar in the 1960s, the dollar is now almost Rs 80. And since we have to pay for our oil in dollars, that adds fuel to the fire of inflation. The dollar is the biggest con game played on the world by Uncle Sam. Or should that be Uncle Scam We seek happiness like a thirsty man in a desert chases a mirage of an oasis. The Sanskrit word for happiness is khan. Etymologically, u is good and khan is space. Sukkah suggests happiness that is generated by cultivating a harmonious space in one **mind.**

350th: "standard" | 400th: "from" | 500th: "mind."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25878

Which is not dependent on acquiring success in life to better than if u Try more try for your target Exam Life or somebody love. The opposite is dacha a space of unease. The worthy man of Niching Buddhism and the thitapragya of the Bhagwad Gita is a person who does not get tossed about by the vagaries of life. A person whose wisdom is firmly rooted in his intellect is a sthitapragya. Stoicism proposes the value of ethics for living a worthwhile life, relegating material happiness to a subservient position. The Veds expound the ultimate reality of existence as advaita. Brahmn is God, the non that transcends opposites such as sukha and dacha; birth and death. from the root Brihad, meaning o expand it emanates to weave out an endless, ever changing web from its own substance. Brahmn Aum, the pulsation of bliss is not only transcendental but also immanent in every particle of the hierarchically layered cosmos. The Ishavasya Upanishad prescribes abiding in the transcendental, while enjoying the material, taking care not to grasp or covet what belongs to another. Prosperity, harmony, and unconditional love have to be appreciated and shared without asserting any ownership. Carlos Castaneda, a twentieth century spiritual author, writes about the teachings of his Mexican Yaqui guru, Don Juan: A human being at best perceives only a thousandth of the physical domain. We are multidimensional beings and citizens of many worlds simultaneously, which we need to cognise, enter and gain power from. Dukha is not born out of desiring material happiness. Sage Patanjali defines klesha, suffering, as the torment generated by the mistaken identification with your body, personality, and desires. The Gayatri Mantra of Sage Vishvamitra, which is the quintessence of the Veds, encompasses experiences of other seers like Castaneda. It says: Aum tat savitur varenyam Aum is the divine creative source, the only one worth wooing and choosing; bhargo devasya dhimahi we meditate on the self effulgence of the supreme divine being, which scorches narrow and fixed moulds of perception; dhiyo yo na prachodyat may the Brahmn inspire us to the ever **expanding** frontiers of perception and noble actions. Aum aapo jyoti raso amrutam Brahm bhur bhuvah suvah Aum is the extended Gayatri Mantra, which gives finishing touches to the poet vision of the acme of human aspiration. Aum is God. It flows like aapah, waters of consciousness; is the jyoti, self **effulgent;** is the rasa, essence of all experiences; is amritam, immortal. The infinite frequencies of Aum constitute bhur, the visible universe of forms; bhuvah, the astral plane; and suvah, the celestial plane. A rishi is one who perceives the universe as the energy essence and expands his perception to its maximum potential, in order to consciously gain entry and mastery of subtler dimensions of existence. Mukti, liberation, from suffering cannot be realised by acquiring power, affluence, or even virtues. Salvation lies in breaking the narrow perceptions and ascending one awareness to progressively subtler bandwidths of perception, inspired noble actions and **bliss.**

**350th:** "expanding" | **400th:** "effulgent;" | **500th:** "bliss."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25881

Our homes are safe havens for us and our families. With a significant change in lifestyles and the work cultures, the at home time grew manifold, and the home evolved from being just a physical space to an epicenter of work, play, and life. Being locked in for long, people spent more time with their families, which accentuated the emotional connection associated with one home. Everyone realized this emotional need and the importance of owning a home amidst uncertainties along with its positive impact on health and comfort. Especially, the young millennial generation who shifted from being asset light to investing in properties. As validated by Morgan Stanley research, India property market sales are expected to grow at an 18 compound annual rate from 2020 25, thanks to the young, educated workforce and the significant growth in their disposable income. This increase in demand has considerably boosted the housing sector. According to IBEF, the Indian real estate industry is expected to reach a 1 trillion market size by 2030 and contribute 13 to the GDP by 2025. Considering this massive growth, the real estate developers and the sector at large are pivotal in ensuring that the growth progresses sustainably, thereby resulting in a healthier ripple effect on the entire economy and the environment. Additionally, the impact of climate related issues has unequivocally been accepted as real. From shifting weather patterns that threaten food production to rising sea levels that increase the risk of catastrophic flooding, the impacts of climate change are global in scope and unprecedented in scale. The UN Intergovernmental Panel on Climate Change states that the role of human influence on the climate system is undisputed and that human actions still have the potential to determine the future course of climate, pointing to strong and sustained reductions in emissions to limit climate change. Understanding the same, there is a noticeable shift in the lifestyles of present day consumers, wherein sustainability holds dominance. Fulfilling the necessary requisites, sustainable developments serve as the perfect solution. Such developments help attain human development goals, simultaneously sustaining the ability of natural systems **to** provide the natural resources and ecosystem services on which the economy and society depend. These developments meet the needs of the present without compromising the ability of future generations to meet their own needs. Green certified buildings are thus becoming the preferred choice of the environment friendly cohort. Green **buildings** are environmentally conscious and sustainable structures throughout their lifecycle. Through sustainable design, construction and operations, green buildings are climate resilient, consume less water, optimally use energy, conserve natural resources, generate less waste, and enhance biodiversity. As a result, they ensure a better livability quotient and provide better ventilation, adequate daylight, superior air quality, and overall wellbeing, thus meeting the basic principles of healthy housing. From an economic standpoint too, green homes reduce the operating costs of buildings, improve productivity & efficiency, and provide higher ROI, higher asset rental value, rebates on property taxes, and savings on recurring costs like **electricity.**

**350th: "to"** **400th: "buildings"** **500th: "electricity."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25882

Water medical etc bills with regards to children, the aspect of having the opportunity to walk to schools in their developments as well as greener surroundings offer them numerous mental, physical & social developmental benefits, refrain them from screen addiction and spur their growth into ecologically aware & responsible citizens. A discussion paper by UNICEF titled he Necessity of Urban Green Space for Children Optimal Development states that children who grow up in green neighborhoods are often less depressed, less stressed, and generally healthier and happier. Increasing safe and accessible green spaces not only directly benefits a child holistic development but also conveys a host of significant health, economic and environmental benefits to individuals in general. As per UNICEF, approximately 55 of all children right now almost 1.5 billion live in cities. By 2050, the number of children in cities will be close to 1.9 billion. Hence, in the current context, caregivers, communities, institutions, corporates, and governments should come together and take immediate action to create new green spaces and improve existing green spaces in urban neighborhoods. The planned green and open spaces are one of the sustainability indicators for maintaining the wellbeing of residential communities. The residential communities comprise varied age groups and everyone deserves the right to lead a better quality of life. Specific amenities for the elderly like healthy social hour, letting them enjoy their favorite hobbies, being active in greener spaces can have a greater impact on their lives. These can lead to a better impact on families of having vibrant communities. Thus, housing environments should enable residents to have positive experiences through the allocation of diverse green environments, which lead to physically and mentally happy, healthy living. For example, one of our properties in Amara Thane has 40 acres filled with 1000 trees and Palaver has 60 open spaces along with efficient water, energy & waste management. Moreover, the country construction sector is responsible for about 22 of the total emissions. The industry thus has immense potential to combat climate change and pave the way for a carbon neutral future. A JLL report titled **sustainable** Real Estate: India response to a greener future highlights that 81 of respondents see real estate as a game changer in achieving the sustainability agenda. Developers should set science based decarburization targets for achieving carbon neutrality in operations and accordingly formulate sustainable frameworks. Sustainable living spaces not only nurture **families** but also help accomplish our responsibilities towards the environment and the communities we live in, while providing a better place for future generations. It is thus crucial to accelerate the integration of sustainable methods and approaches in designing homes the safest abodes. It is essential to make green building a revolution in India and responsible real estate developers must be at the helm to continue playing an assertive role in shaping the very narrative. Sustainable development and the 17 Sustainable Development Goals SDGs are critical timelines to continue living the way earth inhabitants have. Block chain technology can help **achieve.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25883

Sustainable development in myriads of ways to impact how resources are utilized for development. The latest technological advances in block chain are clustered around what could be called Block chain 3.0, which focuses on addressing the drawbacks of the previous two generations of block chain technology, such as scalability and interoperability between different block chains. This innovation has created many opportunities to solve the most enduring problems that impact sustainability. Digital Identity: Personal identity management: Identity management is a cornerstone of governmental services, but legacy data management tools fail to provide secure yet rapidly accessible and updateable identity. Over one and a half billion people globally lack officially recognized identity. This has been exacerbated due to global dislocation, war, famine, and other natural calamities. It is among the most critical issues facing urban systems. There is a growing crisis brewing in recording, updating, and correcting information about an existing identifiable person. Logistics, shipping, and distribution networks are all changing dramatically in the post pandemic era. While these differences had been forming during the preceding decade, the pandemic has undoubtedly catalyzed their spread. With the introduction of cutting edge technology such as artificial intelligence, machine learning, the Internet of Things, block chain, and cloud computing, modern supply chain management has effortlessly transitioned into a full stack automated operation. Along with the fourth industrial revolution, the supply chain system employs modernistic future technologies to improve enterprise wide connectivity, perform real time analytics, automate tracking operations, and optimize resources with pinpoint accuracy. Companies that fail to improve their supply chain ecosystem with these innovations will undoubtedly be at a disadvantage in the future. How the emergence of e commerce has affected logistics Unlike any other business, the online retail industry has experienced a transformation in the previous five years. Infrastructure improvements, increased awareness, technologically equipped logistics platforms, and compelling online shopping offers have all contributed to the expansion of both the e commerce and logistics industries. According to the IBEF, the Indian e commerce industry will increase by 21.5 percent to 74.8 billion by 2022. The emergence of online retail marketplaces is **not** a new phenomenon, but the pandemic has surely accelerated it. The growth of the e commerce sector has a direct impact on businesses that provide logistics, warehousing, and supply chain management services. Online businesses are increasingly outsourcing logistics to third party logistics companies to ensure that orders are filed **correctly** and on schedule. How technology will be the core link for the logistics industry Technological innovation has permeated every aspect of our existence. The outbreak of the pandemic not only expedited the change in the E commerce industry, but it also had an influence on consumer behavior. At the same time, logistics service providers pushed themselves to become more technologically adept in order to satisfy the delivery demands of online retailers at competitive prices. Companies have started incorporating cutting edge technology into their platform capabilities in order to manage online businesses supply chains as effectively as possible, including artificial

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25884

Machine learning, the Internet of Things, and automation. The adoption of advanced technology is propelling the Indian logistics sector forward, allowing for the comparison of shipping rates from multiple carriers on a single platform; cloud calling for order confirmation; real time tracking; an optimized NDR process; and the selection of the most cost effective carrier partner from a full stack of shipping companies based on various metrics. Aggregation of advantages: The multiple courier aggregators End to end courier aggregators that are tech enabled may be coupled with e commerce companies to boost their reach and efficiency. Aggregating multiple advantages, logistics aggregators enable e commerce businesses to connect with several shippers with less effort and based on essential needs such as reasonable price and a wide pin code coverage area. The three C of e commerce logistics compatible convenience, continual connection, and consumer contentment may be achieved in this way. The changing technical tier: The Three C and its effectuation Acting as the fluid for convenience, courier aggregators create an interlink that flawlessly connects the logistics loop and completes the chain of the three Cs. The compatibility quotient is naturalized through the effortless and diverse variety of shipping partners available on a single platform. This is amplified by the continuous connectivity provided by the ingeniously integrated framework used by the courier aggregators. As a result, making the entire process extremely streamlined and enabling for speedier delivery and an perfect supply chain ensures a bright smile on the customer face; a noticeable show of contentment. Most e commerce businesses that can nurture and sustain a smooth and unbreakable logistics loop containing the three Cs will be the leaders of the logistics management bandwagon and ride the ascending waves of the competition curve. Logistics aggregators will surely be the propulsion force that thrusts the technical tier of alterations within the e commerce ecosystem. Vantage view To thrive and remain successful in the market, logistics aggregators must continue to develop solutions that provide agility, flexibility, simplicity, and competitive pricing. Companies may also effectively develop and meet the ever changing customer needs by embracing **technology** improvements. The Indian logistics sector is likely to prosper in the future, thanks to growing consumer expectations, digital transformation, and significant expansion in the e commerce market. Rahul Gandhi has just said that India is going the Sri Lankan way, which will meet with howls of protests from Hindu **Fibsters** a Hindu Firstar is someone who wants Hindu First to prevail in India. Hindu Fibsters want to demolish Rahul for they know that he the only one who stands between themselves and their dream of a saffron India. Rahul is the only leader who can stop them. ## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-09-TEST NO.-25885

As a small proportion of voters. We have to recognise it's a big blow to the spirit of electoral democracy. deeper and wider road to success Dr Jaideep Devare, Co-Founder & Executive Chairperson, OneCircle Insurance Brokers Pvt. Ltd. He has been awarded his PhD for a thesis on the Indian Insurance Industry. Views expressed are personal. The Economic Survey 2025-2026 in its coverage of the insurance sector, appears to highlight the fundamental idea that the high dependence on intermediaries reading 'high' distribution overheads acts as a barrier to increasing insurance penetration. The Survey notes that rising customer acquisition cost through the intermediary channel causes not only an operational friction, but is also a structural constraint for the growth and evolution of the insurance industry. It could be argued though, that the vision of Insurance for All by 2047 articulated by the government and the Insurance Regulatory and Developmental Authority (IRDAI) would be realised only when the road to achieve this vision is made inclusive, and viewed from a holistic perspective of strategic development and execution. With over 63% of India's population living in rural areas, translating into over 900 million people, an inclusive approach for covering Bharat is critical for success. If insurance penetration has to grow significantly from the current 3. 7%, intermediaries will continue to play a pivotal role and be a cost-effective channel to reach Bharat. In addition to life and health insurance, adequate coverage for assets and protection for Small and Medium Enterprises (SMEs) are essential to ensure that the momentum required from the insurance sector to support Bharat's growth story is effectively maintained. In order to protect lives and livelihoods through insurance, both under life and general insurance, a comprehensive perspective that intrinsically highlights the critical value contributed by the intermediaries would hence need to be adopted. I have encapsulated this into a 5-A framework. As per a survey conducted by Insurance Regulatory and Development Authority of India (IRDAI) through National Council of Applied Economic Research (NCAER) in 2021, television serves as the major source of information for both the insured and uninsured. However, **when** it comes specifically to insurance, the major source of information is insurance agents. Fewer than 2% of the Indian population are equipped to directly access and purchase financial products including insurance using technology. Intermediaries are the critical last-mile interface, enabling access to the rest of Bharat. Intermediaries must be **adequately** incentivised to remain economically viable as they bear significant costs in soliciting and marketing insurance products tailored to customer needs, and due to the low lead-to-customer conversion as a result of low perceived value of insurance in India. Personalised advice for products like insurance is essential to make informed decisions by the customer, given the complexity of terms and conditions associated with such products. Products also need to be customised to suit the requirements of every individual. Intermediaries play a pivotal role in this process, guiding customers through their purchase of insurance policies. The Point of Sales Person (PoSP) **model** introduced by the IRDAI about a decade ago to go deeper and wider across India, has gained significant traction, with an estimated 2 million PoSPs offering personalised advi

to risk protection and facilitating informed purchase decisions. If India is to move swiftly toward Insurance for All by 2047, commissions to intermediaries should remain flexible rather than restricted. Furthermore, in a large country like India, it would be prudent to incentivise innovative distribution models which can improve overall affordability by leveraging economies of scale. Under the existing regulation on Expenses of Management (EoM), insurers are subject to a cap on total expenses including intermediary commissions. This framework allows insurers sufficient discretion and provides equal safeguards to effectively manage underwriting profitability, incorporating checks and balances which can be reviewed periodically to address any challenges. The policy-making direction with its sharp focus on improving insurance penetration and sustainability would definitely be beneficial if it continues to encourage the elemental and productive role that intermediaries play in the progression of the insurance industry. The unforgettable saga of valour: CRPF's epic stand at Sardar Post 9th April 1965 Rakesh Kumar Singh is a serving Deputy Inspector General in the Central Reserve Police Force (CRPF) with 32 years of distinguished service. He has served in conflict zones including Kashmir, North-East, and Naxal-affected Bastar, earning several Commendations. A prolific author of 11 books, his notable fiction works include - Colours of Red (Rupa, 2021), Lockdown Love (OmBooks, 2022), Ek Ghoont Chandani (Rajkamal, 2017), and Affairs of Deception (Rupa, 2024). His non-fiction includes the award-winning Naxalwad aur Police ki Bhumika (2012) and Naxalwad Ankaha Sach (2021), both recipients of the prestigious Govind Ballabh Pant Puraskar by BPR&D, MHA. He also co-authored Behind the Uniform: Not Just a Cop (Garuda, 2023) and wrote Beyond the Baton on police training. Kuchh Tinke kuchh baatein (Setu,2025) is a hybrid literary style that transcends traditional genres. He has contributed over 100 articles to leading newspapers and serves as a resource person in police academies. CRPF is an organisation full of stories of valour and sacrifices untold stories are numerous, but what stands most significantly is that it repulsed a Brigade-level attack by the Pakistani Army on 9th April 1965. A full infantry brigade was countered by just two companies **of** CRPF's 2nd Battalion. War historians were amazed, enemies were dazed, and both military and para-military forces found it awesome. That was the legendary Battle of Sardar Post in the barren, salt-crusted Rann of Kutch, Gujarat. On 9th April 1965, barely two companies of the 2nd Battalion CRPF, stood firm **against** over 3,500 battle-hardened Pakistani soldiers of the 51st Infantry Brigade (including 18 Punjab, 8 Frontier Force Rifles and 6 Baluch). Supported by artillery and mortars, the enemies launched Operation Desert Hawk in the dead of night. What followed was twelve hours of relentless fighting that became a glorious chapter in India's paramilitary history; unparalleled in the history of war. The attack began in the early hours of 9th April. Pakistani troops advanced stealthily towards Sardar Post (named after its Sikh company commander) and nearby positions. The CRPF men, lightly armed with. 303 rifles, a few machine guns and 2-inch **mortars,** had no tanks or air support. Yet they were ready. As the enemy closed in, the CRPF jawans responded with fierce determination. Subedar Balbir Singh and his men dir

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-10-TEST NO.-25889

At a solid pace, were still some ways from ensuring end-to-end security at scale. Read on as we explore the emerging trends in the space & make some predictions too. Rise of Multimodal Verification Validating a single identity document is no longer enough to ascertain if a person is who they claim to be. The process of verifying an individual is expanding to involve more steps. While Face & Fingerprint authentication is already commonplace, the next 5 years will see the inclusion of biometric factors such as voice, iris, gait, and even heartbeat for more robust and accurate identity verification. Unverified users pose a greater threat to security, pushing Know Your Customer KYC processes to be more elaborate & all-encompassing. The fusion of various biometric modalities will enhance security and provide a seamless user experience. Comprehensive Document Verification Solutions Machine learning and artificial intelligence AI will play a pivotal role in the future of document verification. These technologies can analyses vast amounts of data, identify patterns, and detect anomalies associated with fraudulent documents. Document Verification APIs enable real-time document verification & ensure compliance with regulatory requirements. Independent verification technologies are being rapidly developed & are diversified across document verification & biometric authentication. However, there are multitudes of checking points to cover before one can confidently confirm an individual identity. The contemporary theme of speed & convenience will materialize as organizations & industries begin to expect end-to-end Identity Verification Solutions, aggregated into a single platform. There is an undeniable need to streamline verification processes in order to deliver the ideal customer onboarding experience. Growing significance of Livens Checks A livens check is a test performed to determine whether biometric samples are from a living person and from not a non-existent or lifeless person. The need for this evaluation has arisen from the evolution of technology that can create near-perfect duplicates of faces & biometric templates. The dangers of its misuse are grave & in the effort to render stolen or fabricated biometric templates useless, livens checks are going to be of paramount importance. Rise in fraud attempts by rookies As **technologies** such as and such, continue to become more easily accessible, increased attempts of fraud are inevitable. While realistic models and simulations can be created by a slew of software, they are rather easy to detect. These technologies are not the easiest to wield with malicious intent and produce results **that** cheat professional verification systems. Considering the high payoff if one succeeds, were expecting many ambitious yet amateur fraudsters to try and outwit the system. Upward trajectory of market growth in the post-pandemic world with rampant digitisation, it a rather safe prediction that the demand for identity verification solutions will balloon. Currently valued at, the global identity verification market is predicted to reach 6B by 2027, increasing at a CAGR of Banks & Financial Service providers account for the largest market share & understandably so. Financial data is extremely sensitive information and warrants sizable investment in its authentication & protection. **Stringent** regulations & mandates regarding privacy will continue to drive demand & the subsequent growth of the industry. The groundwork f

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-10-TEST NO.-25890

This judgment marks a new, bold and significant beginning in liberating electronic media from government control and monopoly the influence of films on Indian masses, means of mass communication, has been vast and abiding. The popularity of films is unquestionable. Hundreds of feature films and documentaries are made every year in India. Our film industry is one of the biggest in the world. In spite to its commercialism, its appeal and popularity is vast, abiding and immediate. It has tremendous possibilities but we should see to it that its box office aspects are not allowed to run riot. The Indian film industry should not forget its social and moral obligations. The industry should be precise, clear and sure about its scope, purpose and objectives. Similarly, the government should have no aphorism in respect to its policy in regard to the control, purpose and regulation of the industry. The multiplicity of authorities, which have a say in the industry, should be removed so as to provide healthy growth to the film industry. Moreover, censorship should be more liberal in its approach to films produced and screened. But filmmakers should avoid too much sex and violence in their films. They should aim at healthy entertainment and desirable social and cultural change through this popular means of communication. Freedom of speech and expression is very significant in a democracy. It includes the freedom of the films, the press, and broadcasting, etc. In other words, freedom of speech and expression means autonomy of the media. But autonomy also involves greater accountability. It means that there should be no loss of credibility. But commercialisation of mass media without proper safeguards can be dangerous. There is a lot of money in different media and there is the possibility of misuse of the media for personal gains. Autonomy of mass media is desirable but it is also desirable that it is self-regulatory and self-disciplined so as not to come into pressures and that it fulfils its commitments to values and ideals enshrined in our Constitution. Rights and duties go together. The word Kashmir is derived from **the** Sanskrit word meaning Land of Kashyap. Rishi Kashyap was one of the Saptarishis who was a Saraswat Brahmin and formalized the ancient Historical Vedic Religion. His descendants or the Kashmiri Pandits as they are commonly known named the valley in his honour. Kashmir falls in the north western region **of** the Indian subcontinent. The geographical demotions of Kashmir include the valleys between the Great Himalayas and the Pir Panjal Mountain range, until the mid-19th century. At present, it also includes the larger area of Indian administered state of Jammu and Kashmir comprising of the three divisions of Kashmir valley, Jammu and Ladakh. Kashmir shares its borders with Pakistan as well as China. Kashmir region has been a center of Hinduism, Buddhism followed by Kashmir Shaivism. Shah Mir became the first Muslim ruler of Kashmir in 1349 inaugurating the Salatin i Kashmir. Muslim monarchs continued to rule Kashmir over next **five** centuries. Mughals ruled from the period of 1526 until 1751, after which Afghans ruled forming the Durrani Empire from 1747 until 1820. Thereafter the Sikhs, under the leadership of Ranjit Singh captured Kashmir. The Dogras became the rulers under Gulab Singh after signing the reaty of Amritsar through which they purchased the region from British rule in 1846. Dogra rule continued until India got its independe

The crown of India as it is popularly known for its beauty and the geographical location with respect to the country other states has been a victim of terrorism. All sectors of the economy, of which agriculture is the pre dominant have been affected by the frequent turbulences and failed to provide food and life security to the population of the valley Assam, known as the land of blue hills and red river, is also a land of many feasts and festivals, which are marked by music, dance, mirth, gaiety, community sharing, and spiritual colouring. Among these, Bihu is the most impressive and prominent. Bihu is the chief festival of the people of Assam celebrated by everyone irrespective of caste, creed, and race. Assamese celebrate three types of Bihus in a year Rongaali Bihu or Bohaag Bihu, Kati Bihu or Kongaali Bihu and Magh Bihu or Bhogaali Bihu. The word Bihu comes from the Sanskrit word Vishu. The Bihus are closely associated with the farmer life, which characterises ancient rural Assamese life. It marks three distinct phases in the cultivation of paddy the native crop of Assam. Bohaag Bihu marks the advent of planting time, the Kati Bihu is celebrated at the completion of sowing season while Magh Bihu symbolises the culmination of harvesting period. Rongaali Bihu is the most important Bihu among the three Bihus. It is celebrated in the month of Bohaag, the first month of the Assamese calendar. Thus, the festival marks the advent of Assamese New year. Hence, it is characterized by lots of merriment, gaiety, songs and dance. The festival coincides with the arrival of spring season in the state providing greater reason for merriment. The nature is in its finest form fully adorned with blossoms and flowers. Therefore, this Bihu is known as Rongaali Bihu or the festival of merriment (Rong means joy in Assamese). Bihu festivals are an integral part of Assamese life and culture. Bihu geet or Bihu songs constitute an important part of Assam rich heritage and literature. The uniqueness of Bihu celebrations is that they are celebrated by everyone **in** Assam irrespective of caste, creed, or race. The festivals are true community festivals and promote a spirit of love, brotherhood and sense of oneness among the people. It is therefore, the duty of every Assamese to preserve these national festivals in their original form and grandeur Social environment is **influenced** by one power and wealth. This, in turn, determines success or failure in people lives. If one were born with a silver spoon in his mouth, he would easily be able to attend a fancy school no matter how intelligent he is or have any luxury he wants just because of power and wealth. On the flip side, if one were born to a poor family in a bad neighbourhood infested with violence and drugs, he would have a much smaller chance of succeeding in life, more especially, going to an upper class school. It is hard for many **poor** to go to college because of such high tuition costs. Scholarships are available; but, even though one shows financial need, one still has to have a high grade point average and test scores. Even if one has a good mind, trying to study in a gang ridden neighbourhood with constant gunfire is easy. With both parents working two jobs, there is any parental guidance. Whereas, the affluent, even if busy or working, have the means to insure that their children are supervised and well taken care of. The rich also have the luxury of affording special tutors to help their children while

Rahul and Piranha, no matter what the G 23 claim. The prime minister wants to be seen as a global leader, constantly hobnobbing with world leaders. He has left foreign and national security policies to Alit Dorval and S Jaishankar, and the rest of the government to Amit Shah. In his first term, he was interested in the economy and came out with the land acquisition bill, Make in India, demonetization and GST. The land bill he had to take back. Demo went nowhere. GST is what it is. Make in India has devolved into indigenization of arms. I was just seeing a show on indigenized arms held in Jammu. The army northern area commander, Gen. Dwivedi, said that Indian firms lack a systems approach. India is far from coming out with reliable arms, even in joint ventures with foreign firms. Consider the Tejas plane. It has many imported goodies in it, but even after 20 years of development, it is unclear if the plane will operate reliably. India is back on the global market with a huge tender for a fighter aircraft. India has two main enemies. China is building state of the art weaponry like hypersonic missiles, which even the US does have. Pakistan gets its weapons from abroad, mainly China now but other places as well. I worked for a massive global conglomerate. It always pretended to build but almost always ended up buying. India may hold as many defence expos like the one in Jammu, but military officers are canny enough to buy what works. And what works is what is made overseas and not in India. So the PM push to make arms in India is bound to be a flop, at least in the near future. Maybe in 20 years, when Indian manufacturers diligently start following a systems approach, yes, but not now. Today they are just too immature in their thinking and processes. In his second term, the PM launched the farmers bills, which turned out to be an utter flop. Now he seems to have lost interest in working on the **economy.** Thus spoke Rahul. Hindu Fibsters have only one aim, and that is to stay in power. Since they have never built much since Golwalkar came out with his green book or was it red, now they feel that the destiny of India lies in their hands. It does not. **Hindu** Fibsters have only one purpose in life. To reclaim mosque after mosque. The Supreme Court of India, in its judgment on the Babri Masjid issue, said that the mosque was built on a non Islamic structure. These were the findings of the Archaeological Survey of India. Hindu Fibsters latched on to the verdict to proclaim that the underlying structure was a Hindu temple, although it could have been a palace or a Buddhist temple as well. Now that they have won the Ram Temple, through which P Chidambaram calls the Supreme Court flawed judgement, they are on to their **next.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-10-TEST NO.-25893

Comprehensive Verification Platform-as-a-Service are key trends that will shape the landscape over the next 5 years. As these technologies mature and become more widespread, identity verification processes will become more secure, efficient, and user-friendly, fostering trust in our increasingly digital world. To maintain India steady growth momentum, organic capital formation alone is not enough. With Covid-19 in the rear-view mirror, the time is right to roll back restrictive FDI rules imposed during the pandemic to protect domestic companies. Despite the doomsayers, the Indian economy has bounced back from the ravages of the pandemic to be hailed a bright spot in the global economy. India GDP swelled to $3.75 trillion, racing past other giants. Last year India overtook the UK as the fifth largest economy after emerging from two successive years fraught with challenges. Recently, a stronger-than-expected fourth quarter lifted India growth to 7.2 per cent in FY23, exceeding the 7 per cent cited in the second advance estimates released in February. The International Monetary Fund IMF says India will grow 6.1 per cent in 2023-24 and accelerate further to 6.8 percent in 2024-25. India is projected to be the third largest economy by 2030, behind only the US and China, underlining its resilience despite slowdowns brought by the pandemic. India has also set itself the ambitious goal of becoming a developed country by 2047, on its 100th year of independence. To get there, the Indian economy will have to consistently grow at an average rate of around 7-8 per cent per annum. Organic capital formation will not alone be able to sustain and drive growth and investment. Foreign Direct Investment FDI is necessary to propel India forward. However, FDI inflows into India declined 16 per cent to $70.97 billion in the last fiscal year as against $ 84.83 billion in 2021-22 due to lower inflows in important sectors such as automobiles, computer hardware and software. Yet India remains a haven of stability in the backdrop of global chaos the muted investment environment, recovery pains from the pandemic and geopolitical conflicts. Amid this turbulence, it is reassuring that global investors **continue** to repose faith in India as a trusted partner and attractive investment destination. India must take full advantage of its place in the geo-economic picture with growth supporting policies. India has also recently surpassed China to become the most populous country with a predominantly young population. The country can **reap** huge demographic dividends if it can maximise their potential contributions to the economy. The capital infusion needed to maintain India momentum should not stall. In this context it is pertinent that barriers to FDI that were imposed during the Covid-19 pandemic should be rolled back. It is reported that 40-50 FDI proposals from countries sharing land border with India are pending under the provisions of Press Note 3. Press Note 3 of 2020 imposed a ban on FDI from countries like China, Bangladesh, Pakistan, Bhutan, Nepal, Myanmar and Afghanistan via the automatic route. India amended its FDI policy to **guard** against possible hostile takeover bids of stressed assets at a time when the pandemic ravaged world economies. Many other countries like Australia and Germany had taken similar protectionist measures. Press Note 3 dated 17 April 2020 provides that an entity of a country, which shares a land boundary with India or the beneficial owner of

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-10-TEST NO.-25894

Sir, I would like to state that the Budget is only an annual financial statement anticipating the total revenues and the total expenditure of the Government. It can try to solve the existing problems in the country and also carry forward the process of growth that has been achieved so far. A Budget has to be implemented in a number of parameters. We have to look at the parameters and then judge the Budget. After looking from all these angles, I would say that the Union Budget is a good Budget, among other things, the most salient aspect of this Budget is that it carries the mandate given in the Common Minimum Programme. The Budget has to carry forward all the plans and schemes that have been given in the Plan and it has to serve the goals of not only growth but also inclusive growth. Only growth can relieve India from the clutches of poverty and unemployment. No magic remedies are available except that we have to promote sustained growth in agriculture, sustained growth in industry and sustained growth in infrastructure. Without that it is not possible, and that would be possible only with generous fundings. Sir, I rise to support the General Budget which has been presented by the hon. Finance Minister. He deserved our appreciation for presenting the growth- oriented Budget. As you know, this is the fifth Budget of the hon. Finance Minister as well as of this Government. In my considered view, this is the finest of all the Budgets which has been presented by this Government. Some hon. Members were finding fault with the Government for not eradicating poverty and not reducing inequalities in this country. These are all old problems and cannot be tackled by Budget. A budget expresses intended expenditures along with proposals for how to meet them with resources. A budget may express a surplus, providing resources for use at a future time, or a deficit in which expenditures exceed income or other resources. By utilising advanced analytics technologies. This crucial information makes it easier for sales executives to spot **cross-selling** and up-selling opportunities, improve pricing tactics, and target particular client categories with tailored marketing initiatives. Collectively, data analytics provides sales representatives with useful information that they can leverage to make data-driven decisions and increase revenues for their companies. AI powered solutions to optimise various sales processes AI can be **utilised** to analyses large volumes of sales and customer data, enabling brands to identify patterns, trends, and customer preferences. This information can help sales teams make informed decisions, develop targeted marketing campaigns, and personalise their interactions with customers. AI algorithms can also assist in demand forecasting, allowing brands to optimise inventory management and ensure timely product availability. All things considered The FMCG and CPG sectors in India are at an inflection point, where several transformations are happening at a swift rate. Amid these changes, digital tools have been reimagining field sales and distribution for brands. With digital tools such as **mobile** applications, CRM systems, and data analytics at their disposal, businesses can empower their sales executives, enhance customer engagements, and explore new market opportunities, which tend to enhance field sales processes. However, in a bid to implement these tools in their processes, the brands require expert solution providers who can not onl

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-10-TEST NO.-25899

Target, the Gyanvapi mosque in Kashi. It always four or five bozos who petition a lower court, which orders a survey, and voila, a shivalinga appears. Everyone knows that the Gyanvapi mosque was built over a temple. It apparent to the naked eye, and the fact can also be gleaned from historical records. But there is also an Act of Parliament signed into law by the President of India in 1992 to preserve places of worship as they are. The prime minister takes an oath to uphold the Constitution and the laws of the land. The PM should be desisting Hindu Fibsters from going after more mosques after the Babri Masjid. Some other bozos are now going after the Taj Mahal. Where will all this end I all tell you where all this will end. The PM has his eye on world glory. His acolytes are already positioning for winning power after him. The PM remains silent on most communal issues, but not so his acolytes. They are ferocious in their pursuit of a Hindu India. What they will end up with is converting India to a Hindu Pakistan. A strong, stable India and the ideology of Hindu Fibsters cannot coexist. This is what Rahul points out and for which he is pilloried, and called all sorts of names like papa. India as it exists today was not built by Hindu Fibsters. To grow economically, militarily and diplomatically, one has to have laser like focus. Many of our previous PMs had that. Mode has lost it. One cannot have one eye on promoting communalism and pretend to focus on India with the other. That way you will only end up with the average level of governance that Mode has provided. Today Hindu Fibsters do not beam with pride over how the economy is doing or whether India is part of G7 or whether it has won a permanent seat in the UN Security Council. They exult about it Kashi now, and Mathura next, and then maybe 10 more mosques or even two thousand. The G 23 that go after **the** Gandhi family, what exactly do they want from the Gandhi family They want to replace it with a Sachem Pilot, Shashi Tharoor or Manish Tewari. But once the Gandhi family is displaced, what will the Congress new leader do to tackle Mode. Become a soft Hindu Firstar or even **a** hard one Rahul Gandhi utters the bitter truth. He has been in the crucible of active politics for two decades. Hindu Fibsters go after him because his mother is of foreign origin and Christian. Hindu Fibsters only want India for Hindus, and only those Hindus who believe in an imagined glorious past of Hindus. Rahul dares to stare them down. More power to him. This week saw a bridge between two chess generations, from 52 to 16. In Warsaw, at the Superbet tournament, Viswanathan Anand executed brilliance on the board, winning the rapid section with a flourish. Many of **his.**

Rivals were not even born when he turned Grandmaster, but Anand overwhelmed them with his fearsome tactical skills. In the placeless ether that is the internet, teenage sensation Praggnanandhaa stormed into the finals of the Chessable Masters, setting up a clash with China Ding Liren, a remarkable performance that saw his win over world champion Magnus Carlsen in the qualifying section relegated to a footnote. As this year International Booker Prize was announced and applause broke out and the spotlight turned a la the Oscars on Geetanjali Shree and Daisy Rockwell, the Hindi author and the English translator embraced for intense moments, and then walked up to the stage hand in hand. Tomb of Sand has become the first novel translated from Hindi to win the prize. Indeed, this is a first for all of bhasha literature, as writing in Indian languages has peaceably come to be called thanks to UR Ananthamurthy. This literature has got its worldly due because an eminent subsection of Indian writers write in English and that sufficed. But no more. After rolling up the hill of English a translated and celebrated book comes to the notice of other languages, from Spanish to Japanese, for further translation. Within the country English of course remains the commonest target language and hence the main bridge across our richly diverse linguistic landscape. As Rockwell and Shree have themselves told TOI, though translations readership remains low compared to work originally written in English, every English publishing house is these days keen to have a foothold in other languages and literature festivals are competing to be more multilingual. In a widely shared sentiment Wittgenstein once said, The limits of my language mean the limits of my world. Translation is about overcoming these limits. It also the only way for Indians to access the literary wealth born across their vast land. And one day it may even decolonize pavement book shacks where a Dan Brown can be found in more Indian languages than a Normal Vera. There no such thing as untranslatability, there only lack of effort. To borrow from Tomb **of** Sand, translating a book is where two worlds meet. And embrace. Narcotics Control Bureau admission in its charge sheet in the drugs raid on a luxury cruise that no drugs were found on Aryan Khan calls for some rewinding to October last year when he was held in custody **for** nearly four weeks. Because going back will help us take note of two key issues. First, What Sapp conversations of Aryan with an actress were leaked to the media to maliciously suggest that he was a drug trafficker. Before the purported evidence even reached court through a charge sheet, it was laundered in public. The intent was clear reputational damage and molding public opinion against Aryan. This was utterly unconstitutional it was a violation of the right to be deemed innocent before guilt is proven, right to a fair trial, right to reputation, and right to privacy. The buck **stops.**

Nerves and inspiring presence. Deputy Commandants and other officers coordinated fire and movement under heavy barrage. HC Kishan Singh displayed selfless gallantry by racing a jeep loaded with ammunition straight into the enemy fire zone when supplies ran dangerously low. His daring act kept the defence alive. Company commanders and their deputies refused to let numerical inferiority or superior enemy firepower break their will. They fought from the front, setting personal examples of leadership and bravery. When one forward platoon was briefly overrun, the rest held firm. For twelve gruelling hours, the CRPF repulsed three major assaults. The enemy suffered heavy losses, 34 soldiers killed (including two officers) and four taken prisoner. Six brave CRPF jawans made the supreme sacrifice that day. 19 brave souls, including the post commander Major Sardar Karnail Singh, were taken captive along with others, but the post was saved and the enemy ultimately withdrew, dazed and defeated. This was no ordinary defence. A small element of paramilitary force had held a full infantry brigade at bay in open salt flats for an entire day. The grit, discipline and indomitable spirit of the CRPF troops amazed everyone. War historians still regard it as one of the finest examples of courage where CRPF men rose to become legends. The company commanders were the backbone of this resistance; their calm leadership under fire kept the men united and motivated. The unit commandant's training and ethos turned the force into an unbreakable wall. These officers and jawans embodied the highest standards of bravery and selfless service to the nation. The Battle of Sardar Post had a lasting impact. It highlighted the need for a dedicated border guarding force and directly contributed to the raising of the Border Security Force later that year. The stand is often called the Saragarhi of Independent India. Every year on 9th April, CRPF observes Valour Day to honour these heroes and renew its commitment to the nation. Today, when CRPF personnel stand resolute in Naxal-affected areas, Kashmir or during natural calamities, the same spirit of excellence shines through. The blood of those martyrs **at** Sardar Post continues to inspire generations. To the brave officers and jawans of 2nd Bn CRPF who fought on 9th April 1965 you are the epitome of excellence in bravery and service to the country. Enemies were dazed that day, military minds were awestruck, and India stood taller. Jan **Vishwas** Bill 2026 may mark a turning point for Cantonment Law The Jan Vishwas (Amendment of Provisions) Bill, 2026, introduced in the Lok Sabha on March 27, may come to be seen as a turning point in the legal history of India's cantonments. While the Bill has a much wider canvas proposing decriminalisation across dozens of central statutes, its implications for the Cantonments Act, 2006 are especially noteworthy. For the 61 cantonments governed under the ministry of defence, the proposed amendments signal not merely statutory tidying up, but a shift in legal philosophy. The Cantonments Act has always stood apart **from** ordinary municipal law. It regulates civic life in notified cantonment areas sanitation, roads, public health, water supply, buildings, markets, trade licences and local administration but does so in spaces shaped by military ownership, defence land management and security sensitivities. This dual character has historically produced a more control-oriented legal framework. Like many

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-10-TEST NO.-25904

of defence Union government has reviewed 38 criminal provisions in the Cantonments Act and identified 31 for decriminalisation and three for partial decriminalisation. The broad pattern is unmistakable: several contraventions that were earlier criminally punishable are proposed to be converted into civil defaults attracting administrative penalties. In provision after provision, the phrase punishable with fine is sought to be replaced by liable to penalty. This is a meaningful shift. It marks the movement from a prosecution-led system to a compliance-oriented one. The centrepiece of this reform is the proposed insertion of Section 333A, which creates a formal mechanism for adjudication of penalties. Under this framework, the Chief Executive Officer of the Cantonment Board would be empowered to impose penalties for specified contraventions after giving the affected person an opportunity of being heard. The Bill also makes an important conceptual clarification: a penalty under this framework is civil in nature, does not amount to conviction, and the proceeding itself is not criminal prosecution. An appeal is proposed to lie to the President of the Cantonment Board, with defined timelines for filing and disposal. This is a major structural change. It may reduce unnecessary criminalisation of municipal and licensing defaults, lessen the burden on courts, and enable more prompt disposal of minor regulatory matters. For traders, shopkeepers, property owners and residents in cantonment areas, this could mean a more proportionate response to first-time or technical breaches. For the administration, it could mean faster enforcement in areas such as sanitation, markets, licensing, public nuisances and building compliance. The Bill, however, does not advocate a blanket relaxation of regulatory standards. Instead, it adopts a calibrated and graded enforcement framework. Under this approach, initial violations are treated with relative leniency through the imposition of civil penalties, while repeated or subsequent breaches attract stricter, including criminal, consequences. The treatment of building-related violations reflects a nuanced balance between deterrence and fairness. Under Section 244, which governs restrictions on the use of buildings within cantonment areas, a first contravention attracts a civil penalty of up to Rs 1 lakh. However, any second or subsequent violation escalates into **criminal** liability, with a conviction-based fine of up to Rs 2 lakh, along with additional daily fines for continuing non-compliance. A similar graduated enforcement mechanism is incorporated under Section 247 concerning unauthorized constructions. The intent is clear to extend leniency to first-time offenders while ensuring stringent action against habitual violators. **The** framework recognizes that not every regulatory lapse warrants criminalization, yet it equally ensures that the law retains sufficient deterrent force to address repeated and deliberate non-compliance. If enacted in its current form, the amendments would move cantonment regulation away from a criminalisation-first model and toward a civil enforcement regime. That is a sensible and overdue transition. Overall, the Jan Vishwas Bill represents a concerted effort to move towards a more citizen-friendly, efficient, and modern administrative framework, while maintaining necessary safeguards for public order, safety, and planned development and is likely to be seen as a modern, trust-based reform t

With investigating officers for leaks and NCB ex honcho Sameer Winched must be probed. It will also deter other cops from trying the same stunt. The second aspect of Aryan case was the approach of courts. NCB candid admission now that Aryan was found with drugs was evident even then. Yet he was denied bail twice by a magistrate court and a session court before the Bombay high court called the NCB bluff. In many cases custody ins necessary. Suspects can be questioned without the harsh optics of arresting them. What was done to Aryan Khan must happen again. Humans are wired by biology, psychology and culture to seek and do more, but it can be more rewarding to go in the other direction, argues a book called Subtract The Untapped Science of Less by Leidy Klotz. Why is it that we make to do lists, but not stop doing lists We add incentives for performance, but rarely think about removing obstacles. We draft new laws, without abolishing superfluous ones. We are driven to acquire more information, and more things. But all too often, improvement comes from doing away with. The book touches on examples of radical change that began with a taking away from city planner Sue Bier man who revitalised San Francisco by tearing down a highway from the famous waterfront to Leo Robinson, the dockworker in the US who began the anti apartheid boycott that flamed into a bigger movement and ended the old South African regime, and the Nobel winning economist Elinor Ostrom who disproved an enduring idea that common resources would inevitably be eroded. All of them tapped into the power of subtraction, says Klotz. Big tech platforms have market caps bigger than the GDP of most countries that known. Big country governments, let call them political states, spend big on defence, typically 3 4 of GDP, to protect citizens and national assets that also known. Big tech platforms, let call them economic states, also spend big on security. But there a big, big difference and that less known. We are a wonderful mix **of** three very different personality traits. At times we are serene, contemplative, and inspired, and at other times, full of drive, passion, and activity. And there are occasions when inertia, sloth and indifference get the better of us. The permutations and combinations of these gunas, attributes sattva, rajas and tamas **make** for a staggering variety of humans in the world. This is Vedanta greatest contribution to the understanding of the inner personality. All beings have all three attributes. It is their proportion that makes the difference. There is energy, power, and creativity when you operate out of your sattvic content. In rajas, you blunder because of mental agitation caused by an overload of desires. Tamas is primitive when you are asleep to your talent, abilities, and potential. Chapter 17 of the Bhagwad Gita explains how the relative strengths of the three gunas affect one shradha, faith. Shradha is translated as **faith.**

**350th: "of"** **400th: "make"** **500th: "faith."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25906

Two dimensions were palpable in the Quad meeting in Tokyo First, India growing influence and its centrality in the group and second, the Quad is emerging as a permanent structure in the Indo Pacific. India increasing sway resulted in moderating the Joint Statement on Ukraine Russia conflict and dilution of the Indo Pacific Economic Framework and new initiatives have been taken by the group that places it on a solid foundation. A number of decisions statements suggest the members of the Quad consider that India is pivotal for achieving the objectives of the Quad, hence they accommodated India concerns. First, though the US pulled no punches against Russia and Joe Biden in his statement termed the Russian invasion as brutal and unjustified, this did not find any place in the Joint Statement. It mentioned only that members discussed respective responses to the conflict in Ukraine and the ongoing tragic humanitarian crisis, and assessed its implications for the Indo Pacific. Second, the main tenor of the Joint Statement focused on the Indo Pacific issues. It stated that the Quad is a force for good, committed to bringing tangible benefits to the region. This reverberated PM Modi words he objective of the Quad is to do global good. Indian leaders have been pushing this view at various international and bilateral forums. Third, there was stress on the non acceptability of unilateral attempts to change the status quo a term used for the Chinese efforts at the LAC and the South China Sea SCS. Without naming China, the statement said the members strongly oppose any coercive, provocative or unilateral actions that seek to change the status quo and increase tensions in the area, such as the militarization of disputed features, the dangerous use of coast guard vessels and maritime militia, and efforts to disrupt other countries offshore resource exploitation activities. India has been opposing the Chinese incursions into EEZs of other countries and safeguarding its interests in the SCS is included in the Indian Naval Doctrine. Besides, India oil exploration activities were objected by China in the past. Fourth, importantly terrorism was **condemned** in all forms an Indian objective. It specifically condemned the 26 11 and Pathankot attacks sponsored by Pakistan. It also took notice of about the concerns of the growth of terrorism in Afghanistan and underscored the importance of UNSC Resolution 2593 2021. The Joint Statement also stressed the need **for** upholding international standards on anti money laundering and combating the financing of terrorism by all countries, consistent with FATF recommendations. This recommendation would add to the problems of Pakistan, which it is under the observation of this international body. Fifth, the Indo Pacific Economic Framework IPEF was modified to accommodate India views. Instead of directly launching, it now focuses on consultations on the lines of India Indo Pacific Oceans Initiative IPOI on its four pillars. This change has resulted in the acceptance of IPEF by 13 countries including India. India External Affairs Minister Jaishankar has aptly put its importance **in.**

**350th: "condemned"** **400th: "for"** **500th: "in."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25907

An article in the Hindustan Times the launching of the Indo Pacific Economic Framework is expected to advance common interests in trade, supply chains, infrastructure, and finance. While PM Modi emphasis on neutrality on the issue of Russia was expected, hte change in the US approach is noteworthy. From shaky position of India and that there would be consequences for not condemning Russia, now Biden desires he US India relations to be closest on earth. India Foreign Secretary Vinay Mohan Kwatra remarked that there was good appreciation of India position on the issue. Biden also praised PM Modi handling of Covid and contrasted it with the Chinese failure. He also highlighted that the Vaccine Maitri scheme helped several countries in their fight against the pandemic. The newly elected PM of Australia Anthony Albanese also praised India contribution stating that he vaccines supplied by India to other countries made a difference on the ground. Similarly, the Japanese PM also complimented India role. The statements and decisions in the Quad Summit indicate that all members accept India key role in achieving the objective of free, open and inclusive Indo Pacific. The Tokyo Summit also indicates that the Quad has taken the shape of a permanent structure in the period of fast shifting of strategic equations among the international players. And importantly in the words of Jaishankar, while India has overcome the hesitations of history, it also meant not giving other countries a veto on our choices. That this collaboration would not affect India national interests is quite comforting and also indicates India rising stature. An underlying objective that remains significant is to check the Chinese expansion. An important step taken in this context is to promote debt sustainability and transparency, including through the Quad Debt Management Resource Portal. A commitment to extend more than 50 bn of infrastructure assistance and investment over the next five years has been made. The Quad fund will be spent on creation of demand driven infrastructure in the region. Obviously, this step is aimed at countering the Chinese debt trap scheme under its BRI. However, now **Quad** agenda has broadened and covers more aspects needed for the economic development of the region. Besides the above mentioned infrastructure to save the countries from becoming a victim of the BRI, four additional steps deserve attention. First, arrangements have been made to mitigate problems arising from the natural disasters. **According** to the US White House statement, Quad would also work with the New Delhi based Coalition for Disaster Resilient Infrastructure CDRI. The Indo Pacific Partnership for Maritime Domain Awareness IPMDA, a new initiative designed to work with regional partners to respond to humanitarian and natural disasters and combat illegal fishing. It will cooperate with the Indo Pacific nations and regional information fusion centres in the Indian Ocean, Southeast Asia and the Pacific Islands. Second step is the creation of the Quad Climate Change Adaptation and Mitigation Package Q CHAMP. This includes ongoing activities under the Quad Climate Working Group **on.**

**350th: "Quad"** **400th: "According"** **500th: "on."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25908

Green shipping and ports, clean hydrogen and clean energy supply chains. Third step is the building of the capabilities of the countries in the domain of cyber security under the Quad cyber security Partnership programmer. An understanding on 5G supplier diversification and Open RAN will contribute to secure telecommunications in the region. Fourth, a STEM Fellowship establishes the educational connection between the member nations. The data satellite portal connects all the members in space, which had been introduced earlier. The big picture that emerges is that the Quad has assumed the shape of a permanent structure to ensure peace and stability in the region, which is facing the increasing Chinese aggressiveness after the latter has discarded the mask of its peaceful rise. And India is not only a part of this mechanism but has a leading role in it. In essence, the Quad is geared to change the environment that allows coercion of smaller countries and obstructs economic development by paving the way for rule based order for security and trade development for the benefit of all in the region. It must be added that it needs greater support from the countries in the region for achieving the full potentials of the combined strength of all. Yes, the current environment is putting the Indian diplomatic skills to test it has to maintain good relations with US, EU and Russia and manage China to restrain it from indulging in aggressive acts at the LAC and contain its undesirable acts in the SCS and Indian Ocean. Laddu Pinto was a brave soldier. He had an opportunity to defend our nation on the borders. As an army personnel, he had experienced a couple of combat actions. Laddu shared many stories of courage and the challenges they used to overcome day in and day out. He once shared the challenging life situations amidst which our great soldiers survive. According to him, we never get to know most of the difficulties they face while protecting our borders. They are now so used to overcoming bottlenecks that barriers have become a routine part of their **lives.** Looking at his unwavering enthusiasm, I was curious to know the secret of his energy. After facing a tough day when the challenge was as huge as survival, I asked him how is it possible for people to get up the following day refilled with confidence. Laddu replied Passion **and** Commitment are the tonics which never let us lag. Moreover, since we love our nation and take pride in our job, hence our work is never tiresome! He further said, Not every day is the same. Sometimes we get into such severe circumstances that our life is at risk. Yes, on some days, we do get to move ahead into the next day without any major issues. One thing is very sure, we never expect our mornings to show us a peaceful and conducive way ahead. We never hope for any definite form for the day to unfold we **get.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25909

Up every day, fully prepared to face the unexpected. If the day showers difficulties, we sing songs of joy. That when we tell ourselves that things shall get better very soon. He further said it is not just about external circumstances. There are times when members of your team disappoint you. Some fellow might take a crazy decision and let you down. These are the times to maintain the cool. Our temperament is our biggest asset. We are trained to stay peaceful in the most stressful situations. These are moments when we remind ourselves that no permanent harm is caused to us. We still have the opportunity to set things right. When we remain focused on our self belief and trust our judgements and opinions, life becomes easy, he said. There is a lot to learn from our courageous friends on the border. The fact is that life will never be simple. There will always be non conformities one needs to put up with. To make life easy, one has to be non resistant and ready to imbibe changes in our thoughts and actions. The bottom line is never to resist what you did not expect just accept it and make efforts to move ahead. While discussing with Laddu, he said something heart shattering and immensely enlightening. He said, at least you civilians are assured that you are moving in a safe direction. When a soldier walks through unchartered territories, he never knows what lies ahead of him in the next moment! The better part of the insight was, Laddu suggested to start believing in your inner guidance. He said, Whenever you are under a struggle phase, your best friend is your intuition. Always believe in it. This is how a soldier survives amidst crisis! He added, Never breach the basic rules of discipline else the consequences might become much harsh. Before we parted, Laddu shared yet another experiential gem. He said, Never think that you are going through the toughest challenge in life. After completing a combat assignment, the soldiers returned to base camp after a few days. **They** started sharing their individual stories. That when they realised that each one of them had a uniquely terrifying experience. No one could claim that theirs was the most challenging situation! A few of their colleagues could not even manage to remain alive! That is the life and pride of **a** soldier. Friends, this was just a sneak peek into the life of a soldier. I must say this is just 1 per cent of the tip of the iceberg. However, that is so inspiring. Ins it We are privileged to have safe homes and relatively risk free lifestyles. Why not learn the success rules from our beloved soldiers Today, we live in a highly competitive world where everyone is in the pursuit of success. It is a growing norm for parents to opt for the best options for their children. With this in mind, every year, new parents are **faced.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25910

With the decision of deciding which school to enroll their child in. With new innovations and technological progress made every day across the globe, every school promises the best facilities, high quality curriculum, and rigorous practices that hone the child talents. Parents, inspired by their visions of success or hardened by their own struggles, hang on to these promises of their children bright future and eventually come to the conclusion based on their own insight. However, in the run to bring out the best in their children, they often forget to keep the children in the center. In such situations, it is important to analyse the parent awareness of the needs of their children. In addition, it is equally crucial to figure out the source of their awareness. Most parents set a benchmark for their children based on their own journey or conformity with the existing standards of academic achievement among other children of the same age group. For instance, children being able to recite numbers and alphabets, being able to copy words and sentences from a blackboard or another notebook, and following instructions are the basic benchmarks considered by parents. However, there is so much more to it. As per studies in developmental psychology, responsive relationships have been stated as a crucial block of children learning. As the child grows, actions like playing peekaboo, establishing routines, breaking big tasks into smaller chunks, encouraging pretend play, and other games help children to build problem solving skills, working memory, and impulse control which are necessary skills for executive functioning even as adults. Skills such as compassion, critical thinking, problem solving, teamwork, imagination, and expression are developed from the initial days of learning through responsive relations which are even used by the adults to carry on their daily tasks. Thus, when parents successfully understand their child cycles of development and offer the right activities at the right time, one can be left amazed by the child spontaneous interest. This necessitates accessible curriculums for parents which can help them in understanding their children and their needs better. When it comes to making **decisions** by the parents, studies have found that the holistic development of a child has always been dominated by varied other attributes. This includes board affiliation of the school, proximity to their place of residence, availability of school transport, affordability of the school fees, and feedback from other parents of **children** in their community. Beyond these, some other factors of varying influence that come into play, particularly for financially stable families, are the facilities that a school provides, focus on extracurricular activities, media coverage of school events, academic results of previous years, and so on. The irony here is that, while every parent has the objective of developing children into good citizens and individuals, they vehemently fail to consider holistic growth. Even parents who appreciate the value of play in building foundational learning skills, end up getting enamored by schools that offer children the advantage of early preparations for competitive **exams.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25913

At an age when they should be encouraged to play, explore their interests and essentially learn how to learn. By supporting the holistic development approach, teachers and childhood educators can create a safe, positive and interactive environment in their community to support childhood development in a better way. Children have been pushed into the rat race of excellence by prioritising rot learning that they are missing out on emotional, social, and physical development. The world has been knit around a few milestones for the students which have in a way limited the horizon of their pursuance. Children are not given the center stage of their lives. Parents get so engrossed in their pursuit of excellence and miss out on channelizing their children true potential. This often leads to anxiety, depression, and other allied issues among young people which are avoidable. As a parent, learning to be the friends of their children. Today, success is not measured only by the virtue of marks but incorporates so many other attributes which need our attention. In the age of divided teams and virtual workspaces, modern enterprises are scrambling to solve the productivity puzzle. The outbreak of the coronavirus pandemic compelled organizations and workforces alike to adapt to new age digital business practices such as digital marketing and adjust to distributed forms of work such as remote and hybrid teams. But at a time when burnout rates are through the roof and employee engagement has plummeted to the bottom, how can leaders and teams be functionally productive. In the present corporate world, forward moving organizations want to maximize the return on investment from their human capital and are finding effective ways to unleash workforce potential. While software organizations are providing technical skill building to their employees, BPOs are focusing on process training for their associates. As organizations across the globe aim to unlock human potential in a dynamic workplace with a dynamic workforce, they take diverse approaches to build productive teams. Approach Establish measure goals In recent years, there has been a significant surge in demand for Objective amp Key Results OKRs products **and** consultation services. Several organizations are directing attention towards their goal setting and goal tracking processes. OKRs seems like an obvious choice for performance management as they enable organizations to define clear goals, measure employee and team performance against those goals and direct managerial action where need be. By aligning **performance** to goals, modern enterprises can effectively communicate strategies, optimize team performance and build productive teams. Approach Use collaboration tools With a divided workforce and hybrid work models, employees and leaders find it hard to engage, communicate and collaborate with each other. While platforms like Office 365, Jira and Slack try to remove most roadblocks in remote and hybrid work models, they cannot fix productivity issues. Team building and collaboration can be effective at elevating employee engagement, performance and teamwork. This approach leaves the development of the individual to chance. As a result, organizations embracing team building and collaboration may **not.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25914

Bangalore Chennai expressway The two capital cities of Bengaluru and Chennai make for one of the most important business destinations in India owing to being the IT, medical, and education hubs. Moreover, keeping in mind the geographies and the proximity of the two capital cities, the route is known to be one of the busiest in the world. Currently, there are over 100 Private Bus operators and state owned plying over 500 buses every day, with over bus passengers traveling either way. With the new expressway coming in, there would be a reduction of 100 km, which would lead these 500 buses to avoid the additional burn of over diesel every day. This could lead to up to INR 100 crore worth of diesel saved every year. The construction of the four lane Bangalore Chennai expressway will reduce the distance between the two cities to just 262 km. Moreover, the expressway will be access controlled and will pass through Karnataka, Andhra Pradesh, and Tamil Nadu. Superb traveling experience in half the time via Delhi Mumbai expressway One of the most remarkable and audacious road projects in the history of India, the Delhi Mumbai expressway will revolutionize travel for commuters. Delhi and Mumbai are two of India megacities, and the new expressway will connect the national capital to the financial powerhouse, unlike any other region. The world class, 8 lane expressway will cover a distance of around 1,200 km, and it will take commuters only half the actual time to travel when the entire stretch is completed. Powered with state of the art features including intelligent transport systems, advanced tooling technologies, and fully integrated service areas, the Delhi Mumbai expressway will make for a wonderful driving experience. It is set to ensure good fuel efficiency even under the 120 km her speed limit. Better access to the mountains via Delhi Dehradun expressway Traveling to the mountains in India is an exciting experience that many people want to embark on. However, owing to the rugged terrains, challenging road conditions, and unforeseen natural disaster situations like landslides, the mountains have often been **cut** off from the rest of the country. However, the introduction of the Delhi Dehradun Expressway is clearly seen as a game changer in smoothing the travel to the mountains for travelers. In the past, a drive from Delhi to Dehradun in Uttarakhand would take around 7 hours. However, thanks **to** the new expressway, commuters can easily cover the same distance in around 4 hours. Currently, there are about 145 Private buses on this route, and on average there are 7000 daily travelers. While the entire expressway will be completed by March 2024, the six lane, access controlled expressway will be instrumental in transforming the economy of the country. Enhanced connectivity & real estate opportunities via Dwarka expressway Also known as the Northern Peripheral Road or NH 248 BB, Dwarka expressway is a 27.6 km long, under construction, 8 lane, elevated grade separated expressway which will bring Delhi and Gurgaon **much** closer. Not only does it promise enhanced connectivity between major hubs like Delhi and Gurgaon, but it ensures a futuristic travel network that will relieve office goers from getting stuck in traffic for hours. Approximately 4000 daily commuters travel this route in about 80 buses The under construction expressway guarantees economic growth and development across the region, with their also being emerging real estate opportunities f

And is then very affectionate. I love him a lot, because I know that he is always there, even though it is only in the background. I do get angry any longer when he introduces me to his friends by my nickname and says that I am studying in Class Six, when I am actually in Class Seven. Examiner is warm, caring and impulsive, but not the world greatest cook. However, when she gets into the mood and goes on a cooking spree, we have a good time. I think she is frightfully cleaver because, apart from managing a career, she manages home, a husband and the two of us. She is not always around, but got used to that by now and try. Books are like coffers filled, not with gold or silver, but with high ideals, and the wisdom of our forefathers. If we learn to love books, we need no other riches. However, we must read the right kind of books. Just as we need nourishing food for the body, similarly we need to read good books to enrich our minds. Much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen coffers filled too would have been very different from what you see now. There would have been no toaster, blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. Reading is of different kind. It may be light or serious. It may be adventurous or spiritual. Every reading has its distinct pleasure. Some people like to read coffers filled newspapers, periodicals, journals etc. They are storehouse of general information **about** current events and various socio political and economic problems. It has been well said, Books are like axe they cut through the snow within. Indeed electricity is one of the most important blessings that science has given to mankind. Of all modern inventions, electricity is perhaps the most wonderful. **To** those who experienced its magic for the first time, it must have felt like being transported to a fairy land. Today, we take it so much for granted that we notice its existence only when there is a power cut nourishing food and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle coffers filled light with no fans or air conditioner. Ice creams, soft drinks **and** cold water would have been unheard of. Your kitchen too would have been very different from what you see now. There would have been no toaster.

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25916

And the smart classroom market in India is the increasing penetration of mobile devices. Besides, the easy availability of Internet connectivity and users have helped grow the demand for Etch solutions. The Etch sector grew and evolved in a matter of months, which, otherwise would have taken years to fructify! The sudden outbreak of the COVID 19 pandemic threw the education system into turmoil. It upturned the education system across the world and schools were forced to adapt. They opted for online education to avoid educational and learning loss for children. The rapid shift to digital learning led to the adoption of technology at a fast clip. Yet, the adoption of technology came with its infrastructural challenges in terms of scalability, performance, and security. The challenge was humongous in India, with its millions of schools. 1 The Indian education system is one of the largest in the world with over 1.5 million schools, 8.5 million teachers and over 250 million children. They hail from varied socio economic backgrounds. The pandemic only accentuated the difference between those with access to technology solutions and others. But, the pandemic speeded up some major shifts that were taking place across the global economy. Businesses were forced to take to the digital platforms. Many universities have brought down the geographical boundaries by offering courses online. An example is that of the MOOC or the Massive Online Open Courses platforms which gained in popularity. To ensure the continuing success of these solutions, while implementing Detach those funding it, the researchers working on them, and the implementers should stay focused on student learning. It should not differentiate between students economic backgrounds while implementing Etch. The sudden emergence of the pandemic prompted schools that had the wherewithal to opt for online education to avoid any educational and learning loss for children. The Etch sector is now poised to play a critical role in ensuring that quality education reaches all students, irrespective of their geographical location, socio economic conditions, or other externalities. Just as access to Wi Fi has now been elevated to a Fundamental Right in many **parts** of the world, in India too, the pandemic has shown that a robust digital education framework is not a luxury but a necessity for the schools and students alike. 2 A few of the tech trends that could reshape the Indian Etch industry would include Big Data and AI **that** are transforming most sectors, are set to play a major role in the Etch space moving forward. It is enabling schools to deliver better quality education through highly engaging lessons that are easily understood by the students. They could help assess aptitudes more intuitively and objectively to guide the students towards career options more relevant to their aptitudes. The future will see AI and Big Data bringing profound changes to formal education. As English remains the preserve of a small minority, there is an acute need being felt to make educational content available in the vernacular languages one learning **platforms.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25917

Seems to understand my question in the first place. This is a familiar-sounding tantrum we hear often at home and at the workplace. In college faculty desks, the discussions have shifted from no holiday for Holi this time to can you approve my request to allow me to use Claude instead of ChatGPT? And then the reasoning and the sales pitch for Claude. If your productivity has not increased tenfold over the last two years, you probably should take a reality check (or an industry check). Large language models make us sound more intelligent with ideas that an individual would have missed otherwise. Many emails I used to receive from colleagues in the first twenty years of my corporate life were rife with errors and screamed at me. Those errors have vanished. Good thing. The final output is greater than the sum of the outputs from individual LLMs. What is the number of prompts that are submitted by employees of an organisation in a day, a week, or a month? How many of those generate content that is meant for sharing with prospects, customers, and the external world? How many different Generative AI tools are used to generate those? Different LLMs have different strengths and weaknesses. Not all of them interpret and generate content in the same way. There are differences. Does the content from four teams in the organisation sound like coming from four different companies? If yes, then alert! My friend says one must not fear technology, but rather try to tame it. One way to tame LLMs is to ensure that the organisation's vision, mission, and values are included in the prompt that every employee submits. With that context in mind, the LLM will align with the organisation's vision, mission, and values. This way, prompts designed by the same employee from time to time, and those across the organisation have a standard to follow. Introduce the standard HITL (Human in the Loop) to review the LLM responses. That will reduce the chances of misalignment. Having done all of that, if there is still a marketing or **branding** crisis, make swift corrective decisions to contain the damage. I wouldn't be surprised if one relies again on Generative AI tools for corrective action. True. I have a soft corner for LLMs. If a crisis happens, it's likely we haven't designed the best prompt, haven't instructed the LLM enough, **and** have probably missed the HITL from the process. The solution to road accidents is not a ban on driving. It is to introduce sufficient guardrails and controls to promote disciplined driving. Effective prompting is not just about technical skill it reflects clarity of purpose and disciplined communication. Every interaction with an LLM extends how we think, plan, and express organisational intent. When employees treat prompts as strategic tools rather than text entry boxes, the result is far more coherent and better aligned with the brand's voice. The art of prompting is, in essence, the art of direction and the **ability** to guide intelligence to serve vision. LLMs, therefore, are mirrors of our mindset. The better we define our goals, standards, and context, the more accurately these models reflect them. What you prompt is what you reap. In the long run, organisations that respect this principle will not only tame technology but also thrive alongside it. Best prompting practices must exist not only in the prompt window of an LLM provider but also in the everyday programs we write, the applications we develop, and the emails we intend to communi

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-11-TEST NO.-25920

The invisible forces shaping leadership behaviour Dr Krishna Athal is a renowned life and executive coach. He is currently the Executive Director of the International Coaching Institute (ICI). He writes and talks about leadership, coaching, strategy, entrepreneurship, management, and decision-making. He is a recipient of numerous national and international leadership and innovation awards. We like to believe leadership is built on vision, competence, and confidence. That is the official story. It sounds polished in annual reports, keynote speeches, and LinkedIn captions. But when I sit with leaders in coaching rooms, and when I observe teams in the wild theatre of organisational life, I often see something more human and far less glamorous. I see status anxiety disguised as authority. I see shame masquerading as perfectionism. I see power used not always to serve, but sometimes to protect a frightened identity. This is where leadership behaviour becomes fascinating. Because what shapes a leader is not only strategy, skill, or seniority. It is also the invisible emotional weather they carry within them. In India especially, where hierarchy is often normalised early in life, where family, school, and society teach us to obey, impress, and rise, many leaders do not merely manage people. They manage old wounds while pretending to manage performance. At the heart of much leadership behaviour lies one quiet hunger: the need to matter. Status is not just about title, salary or corner office. It is about psychological position. It answers the ancient human question, Where do I stand in the tribe? In the workplace, that tribe may be a boardroom, a startup team, a government department or a family business. The nervous system often does not care. It still scans for rank, safety and belonging. A leader who is excessively protective of image is not always arrogant. Sometimes he is terrified of being seen as ordinary. A manager who dominates every meeting is not always confident. Sometimes she has confused control with worth. Years ago, I worked with a senior professional who could not tolerate being questioned by junior team members. He called it discipline. But beneath that **polished** word sat a painful truth. He had grown up in an environment where respect was fragile and criticism felt like humiliation. Every question from below felt, to his nervous system, like a threat to survival. This is the trick status plays on us. It takes emotional insecurity and dresses **it** in formal wear. Shame is one of the most misunderstood forces in leadership psychology. People assume shame looks like withdrawal, tears, or visible collapse. Often, it does not. In high-performing environments, shame becomes sophisticated. It teaches etiquette. It wears a tie. It can appear as defensiveness, overwork, blame, coldness, relentless self-comparison, or an obsession with looking composed. Shame says, If they see my imperfection, I will lose love, respect, or relevance. He speaks more than he listens. She micromanages because mistakes feel morally dangerous. He cannot apologise because being wrong feels like being reduced. She keeps achieving but cannot **rest,** because rest risks contact with an unloved self. I often say this to clients: guilt says I made a mistake. Shame says, I am the mistake. That difference changes everything. When shame drives leadership behaviour, feedback becomes insult, delegation becomes risk, and vulnerability becomes unthinkable. The tragedy is that

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-12-TEST NO.-25921

At same time Jesus performed many such miracles due to which he was not only called the messenger of God so his birthday was celebrated as Christmas. On this day all schools and colleges and government and private offices have their holidays. The history of this holy Christmas celebrated with joy and cheerfulness is associated with birth anniversary of Jesus Christ. Birth of Jesus Christ had already been predicted that a man on earth would be born who would grow up to be an influential king and his kingdom would have no limits and he would be saviour of the world the painter and will be the right guide. After this when Jesus Christ was born in a cowshed from womb of mother Mary in Bethlehem in Israel his prophecy came true. This holy festival is celebrated every year on twenty fifth December as a celebration of the birth of Jesus Christ with full joy and gaiety. Christmas festival is celebrated with great pomp. This day is celebrated as birth anniversary of God Jesus Christ. This festival is celebrated in country and abroad with its customs and traditions. On this festival decorating the Christmas tree and cutting cakes going to church and gifts from Santa Claus has a different significance. Christmas festival has special significance for people of Christianity. According to the religious book Bible of Christianity Jesus Christ was born on this day however different views have been given regarding the birth date of Jesus Christ. Jesus spent his entire life in the well being of others and inspired people to follow the right path he is also known as liberator and protector of liberating people from suffering. After which his birthday was celebrated as Christmas festival. Christmas feast is especially associated with Santa Claus. He expects me to fetch things for him and does not allow me to use the telephone or listen to my favorite singer. And, of course, watching my favorite television programmer is simply out of question. As for myself, I am twelve years old, fond of reading but not very keen on studying. **I** do know what my exam. My exam consists of my father, Examiner, elder brother and myself. We all love each other very much, though you would believe it if you saw us at home, especially when my brother and I have had a fight! Father is always busy. Sometimes **he** goes to office even on a Sunday. I know he is doing very well because I have heard people talking of him with respect. My exam consists of my father, Examiner, elder brother and myself. I think she is frightfully cleaver because, apart from managing a career, she manages home, a husband and the two of us. She is not always around, but got used to that by now and try. Books are like coffers filled, not with gold or silver, but with high ideals, and the wisdom of our forefathers. If we learn to love books, we need no other riches. However, we must read the right kind of books. Just as we need nourishing food for the body, similarly we need to read good books to enrich our minds. Much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen coffers filled too would have been very different from what you see now. There would have been no toaster, blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. Reading is of different kind. It may be light or serious. It may be adventurous or spiritual. Every reading has its distinct pleasure. Some people like to read coffers filled newspapers, periodicals, journals etc. They are storehouse of general information **about** current events and various socio political and economic problems. It has been well said, Books are like axe they cut through the snow within. Indeed electricity is one of the most important blessings that science has given to mankind. Of all modern inventions, electricity is perhaps the most wonderful. **To** those who experienced its magic for the first time, it must have felt like being transported to a fairy land. Today, we take it so much for granted that we notice its existence only when there is a power cut nourishing food and life comes to a standstill. ## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-12-TEST NO.-25924

The student from the upper class community will have the best chance of succeeding. Tuition will never be a problem and chances are that those parents 156 Top School Essays have some pull because of who they are. The middle class student won have a great problem but there is still the fact of paying tuition, which would limit the options quite a bit. One may be smart enough to get grants but the family makes too much money. Also, if he sought admission into a prestigious school and it came down to the student or someone richer, the middle class student would probably lose out. The Upanishads and Bhagwad Gita talk of universal love. Is it possible? How can I love a child on the street as much as my own child? Love my parents or spouse same way as some stranger? If we define love as feeling, then it is not possible. We have different feelings towards different people. However, universal love is possible as an outcome of understanding our connection with everything else. If we analyse the emotion of love, it is an expression of our deep connection. We end up loving the person in whose presence we feel accepted, connected, cared for, and completely validated. On the other hand, loss of connection with others leads to our feeling deep void, emptiness, loneliness, sadness or grief. According to the Gita and Upanishads, connection is the reality of the universe. The whole world is one vast, intelligent cosmic order, which connects us to everyone and everything. For example, the iron in haemoglobin molecule, which runs in our blood comes from iron particles that were released by the collision of stars. The food that we eat is quietly produced by plant kingdom with the help of sun, water, and earth. The houses that we live in, the cars in which we travel, the entire economic, social and physical infra available to us are an outcome of contribution of countless people whose names and identities are not known to us. The world is a vast network of connection, and **our** existence is deeply intertwined with everyone else through the intelligent order Ishvara. If we are alive to this connection, our lives are lived with different expressions of love. We understand that all our accomplishments can be attributed to countless factors, including our efforts, contribution of parents, teachers, friends, and **employees.** This makes us more grateful and less conceited. As we see the generosity in the creation, we begin to open our hearts and reach out to others. We feel empowered as we understand that what we do today connects us to future outcomes. As we are all part of one large cosmic order, we take utmost care not to harm any being that includes humans, animals and plant kingdom through thoughts, deeds and speech. It makes us more accommodative towards others. We protect ourselves against abuse and exploitation but without anger or hatred towards others. For instance, if teeth **bite** tongue, we take enough precaution to ensure that our tongue does not get hurt again but we do start hating the teeth. Recognising and honouring this connection through above attitudes and acts is an expression of universal love. Our connection to countless others can be expressed through care, compassion, non-labelling, gratitude, not hurting living beings and environment. As we express love in different forms through our behaviour, we not only bring about external harmony but increase our own levels of satisfaction, cheerfulness, and joy. On the other hand, if we are oblivious to

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-12-TEST NO.-25925

To conclude, the Upanishads and Gita do not advise us to love everyone. They show us the reality of connection. If we grasp this reality, different expressions of universal love towards every being will flow naturally and organically. In essence, all human beings are seekers, driven by an innate and profound desire to uncover meaning and purpose in life. This search is not a superficial quest but a deep-rooted yearning embedded within the very fabric of our being. Our true nature transcends the mundane. We aspire to rise above the ordinary struggles of existence and realise our highest potential. The pressures of survival meeting our basic needs, fulfilling our desires, and adhering to societal expectations can overshadow our deeper purpose. As a result, we find ourselves slipping into a survival mode, a state of existence that prioritises immediate needs and concerns over our creative and spiritual growth. In this state, we forget our true nature, which is inherently blissful and expansive. We become entangled in the endless cycle of fulfilling our base desires, losing sight of the higher Self. This entanglement creates attachments that bind our chitt, consciousness, preventing it from exploring the higher realms of sat, truth and anand, bliss. The ancient wisdom encapsulated in the phrase Atman is Brahmn the understanding that our individual soul, Atman is, in fact, an integral part of the universal consciousness, Brahmn becomes a distant memory. This wisdom, which holds the key to our highest potential, is often overshadowed by the fragmented nature of our thoughts and actions. We become isolated, viewing ourselves as separate from the whole rather than recognising our true identity as a vital part of the cosmic order. This fragmentation of our consciousness prevents us from reaching the higher levels of intelligence and awareness necessary for true fulfilment. Rarely do we live in harmony with the macrocosm it is only when we consciously and consistently bring this awareness into our daily lives that we begin to see beyond the horizon of the mundane. By doing so, we can rise above the limitations of ordinary existence and connect with **the** infinite possibilities within us. Life is not a scientific equation that can be solved with logic and reason alone it is a multifaceted journey that requires intuition, wisdom, and a deep understanding of our true purpose. The key to navigating this journey lies in our awareness of Dharm the **righteous** way of living. Dharm serves as our guiding principle, prompting us to perform our karm, actions that are aligned with our highest values and purpose. This is the prudent and desirable way of living, leading to true fulfilment and contentment. In this context, the framework of purusharth comprising Dharm, righteousness, Arth, prosperity, Kaam, desires, and Moksh, liberation serves as the prime driver for right conduct. When we bring these principles into our conscious awareness, our actions begin to align with this ideal code of conduct. It is away of leading a meaningful life, where every action is infused with **a** sense of purpose and every decision is made with the highest good in mind. Our true Arth and Moksh lie in understanding the governing principles of life and practising them in a way that leads to fulfilment. This fulfilment is not just about achieving personal goals or desires it is about realising our highest potential and living in harmony with the universe. When we do this, we transcend th

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-12-TEST NO.-25929

Learners will be able to better understand and up skill themselves with in demand skills if they are able to receive the training in their mother tongues and vernaculars. This will not only help in shaping the dynamics of knowledge but also help in uplifting the Real Bharat with accessible education. Is positive thinking an inherent characteristic of a person or can it be developed in one psyche. The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance theory, since positive attitude is not a physical feature but a mental faculty, it cannot be purely hereditary. It can be developed. Moreover, parents play a major role in developing this quality of a child. A child, who watches his parents working hard, having faith in success through their words, behavior and body language, is likely to develop a similar attitude. The children of short tempered, over cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parents behavior in front of their children. They must exude confidence, self belief and hope, especially in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. There is no better education **for** a child than watching his parents come out of a tough situation by means of earnest endeavors. Such success not only gives more joy but also increases self confidence. It is the ability to conceive a goal and constantly put in effort until the mission is accomplished. The most **important** determinant of success in any field of endeavor, material or spiritual. An inclusive Etch policy must focus on ensuring access to learning, especially to the underprivileged. It must enable the online teaching, learning, as well as evaluation processes. It must enable teachers training and their professional development on a continuous basis, and improve the governance systems, including planning, management, and monitoring processes. With personalization being the trend today Cloud that offers a personalized learner experience would catch on. Making it possible is the all pervasive Internet connection across the country. There is a lot of optimism regarding the sector **prospects.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-12-TEST NO.-25930

The future prospects of the Indian industry can be gauged by the fact that it had received Segment, the higher education, and the up skilling categories. Coupled with the growing popularity and distant education, India sector is expected to touch 30 billion over the next decade. But has a far deeper meaning. Shradha can be sattvic raja sics or tama sic. Stretching s specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be an integral part of every workout program. It not only helps increase your flexibility, which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of motion. According to the studies, proprioceptive neuromuscular facilitation or PNF type of stretching is more effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural that your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the **stress,** such as your neck, shoulders, etc. and stretch those parts of your body. Sattvic shradha is the consistency with which one pursues higher ideals. Raja sic shradha is the frenzied quest of material, myopic goals. Tama sic people are unwilling to work hard and resort to bizarre methods to **achieve** success. Krishna then categorises aware, food Yana, sacrifice tap, austerity and dean, charity as sattvic, raja sic, and tama sic. Sattvic foods are health foods tasty, wholesome, and nutritious. Iodine fortification is what most countries rely on to encourage adequate dietary intake. In more than seventy countries that iodize salt generally serves as the major source of iodine intake. One fourth of a teaspoon of iodized salts has about hundred micrograms of iodine. Note that the salt used in processed foods, which is the major source of salt for most Americans typically, does not contain iodine. If salt used **in.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-12-TEST NO.-25931

A processed food contains iodine; it will be listed in the ingredients list of that food. Focus on decreasing the amount of salt consumed from processed foods and get your sodium from iodized salt. Seaweed, saltwater fish and seafood are natural sources of dietary iodine. Dairy products also supply iodine in the diet at varying levels. During lactation, the breast concentrates iodine in milk so breast milk tends be a good source of iodine as long as the iodine intake of a mother is adequate. Plants grown in iodine rich soil are also good sources. However, this is not a reliable source of iodine since there is no way of knowing whether produce purchased in grocery stores is grown in iodine rich soil or not. Iodized salt usually adds less than about three hundred micrograms iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit of daily iodine intake for adults set at 1,100 micrograms by the IOM it is unlikely to hit an excess amount when including a multivitamin and including natural sources of dietary iodine. The trend of eating less table salt, dairy and bread has some experts concerned that iodine deficiency could be on the rise again. Eating a healthy, balanced diet that includes iodine rich foods and iodized salt is key to good health. They give long life, vitality, health, and happiness. Sattvic people naturally like healthy food that is conducive for intellectual and spiritual growth. Raja sic people gravitate to excessively bitter, pungent, sour, and salty foods that cause discomfort and disease. Stale, tasteless, unclean food and leftovers are the inherent choice of tama sics people. Sattvic tap is performed because it ought to be done, without desiring a reward. Sacrifice made with a selfish motive, for profit, name or fame is raja sic. And sacrifice performed without charitable intent, no higher ideal or desire to share is tama sic. Krishna speaks of three kinds of tapas that of body, speech, and mind. This threefold austerity performed steadfastly with shradha faith, desiring no fruit, is **sattvic.** Raja sic austerity is done only to earn respect, honor, and reverence. Misguided, self torturing austerity practiced with deluded obstinacy, often to hurt others, is tama sic. Dan is one of the most elevating practices. When you feel deeply indebted for everything that has been provided to you, in **abundance,** unasked for and unacknowledged, you develop the irresistible urge to give, share, and contribute. When you give, you gain. A gift given without expectation of reward, to a worthy person at the right time and place, is sattvic charity. Given grudgingly and expecting a return is raja sic. And a gift given contemptuously to an unworthy person at an inappropriate time and place is tama sic. Sativa shines forth through every aspect of your personality. Gain knowledge of the Bagdad Gita and build on your sattvic assets. You will transform from an ordinary person to an outstanding leader for **live.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-12-TEST NO.-25932

Does like placing the phone to her ear and is too lazy to use her ear buds. Taking cues from Dale bhaisaab, I have discovered that not only must you converse with the other person on topics that interest them, but if you want them to change, make it seem like it was their idea all along. Instead of berating her about the speaker phone, I started talking about her current obsession with the Cannes red carpet looks. Then as she started chattering away, I said, here is some strange echo, I can hear anything, I will call you later. She immediately replied, No, it this speaker phone, wait let me use my air pods. Mission accomplished. On the other hand, I did have to spend the next 15 minutes discussing a gown that, if worn by Cinderella, would have made her throw up and relegated her fairy godmother status to that of a goblin. 3. What your good name Another afternoon, while waiting for my daughter to finish a class, I spotted an acquaintance. Recalling my ongoing experiment, I gave him a wide smile. This obviously worked because he walked over and plunked himself opposite me. Dale jig says that a person name is the wettest sound to their ears. Unable to recall if his name was Adders or Aides and since I could exactly ask him, I decided to call him, Ado. He warmed up even more and continued regaling me with anecdotes. When my husband arrived to fetch us, I had to make introductions, so a bit flustered, I said, Ado, why do you tell Auk what you were saying about OTT platforms, so that he would think I routinely shorten names in a haphazard manner. On the way back, when my husband started narrating a script, instead of turning up the radio, I practiced listening and smiling at him. In delight or perhaps shock, he missed the turn to our lane, and we went for a long drive instead. In the last two weeks, the results of my likeability experiments have been tops curvy. I **managed** to disgruntle a stalwart by praising a younger actor in front of him. I found myself repeatedly stuck in lengthy, dull conversations where I began to believe that not just ventilators, but even headphones could be considered life saving devices. It was while scooping dal out of a serving **bowl** that I realised that being universally likeable was a bit like the sprinkling of dahlia on top of boiled moon. A bit decorative. A smidgen of flavor. An innocuous ingredient that does arouse either love or hate. I don seem to be a sprig of dahlia though. I am an acquired taste, not quite caviar, but let say, dried bombed. My circle of loved ones may be too small to even fit my ring finger, but they are the ones that deserve this upgraded version of me. The ones that I need to smile for more often and lend **an.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25933

Undistracted ear whenever it needed. I must also finally accept that no one will ever call me sweet. But then I suppose, sweet could only be considered a stellar adjective, if you are a bowl of cheer. A recent poll conducted by the Lowy Institute on Indonesian public attitudes to the world revealed that a significant number enjoyed Indian pop culture the most. This stood in stark contrast to how India fared in the overall poll only 41% of Indonesians reported trust in India and only 38% had confidence in Namenda Mode doing the right thing regarding world affairs . But there hope yet. Indonesia appreciation of Indian pop culture highlights an opportunity in how India can better engage with Southeast Asia, a region which is strategically important to India underlined by its recent decision to join the Indo Pacific economic bloc. India is also looking to strengthen its regional engagement under the Mode government Act East policy, a key example being its membership of the Quad alliance with Japan, the US and Australia. Historically, India and Southeast Asia have shared many common attributions in how their foreign policy was conducted. During the Cold War, Indonesia and India were both prominent members of the nonaligned movement under Sukarno and Jawaharlal Nehru as well as being staunchly anti colonial as decolonisation took place across Asia. Not so incidentally, Sukarno was also the first guest to be invited to India Republic Day celebrations in 1950. Nehru also had strong ties with Vietnam Ho Chi Minh, as India supported him during the Vietnam War with popular slogans like Amaar Nam Tomar Naam Vietnam . However, relations between India and the region have been patchy since. The Cold War bonhomie shared in particular by Sukarno and Nehru did not outlast their leadership and in the years since the countries have remained distant. A more recent budding bromance between Joko Widodo and Mode, both elected in the same year, fizzled out, with the potential for strategic policy convergence between the countries yet to be realised. Yet, on the cultural front, India and Southeast Asia **share** deep linkages spanning a common ocean. Indian epics such as Ramayan and Mahabharat were carried from India to Indonesia by traders, warriors and craftsmen over hundreds of years along with other linguistic and religious exchanges. Nowadays the connection is bridged via movies. It was the 1998 film Kuch Kuch **Hota** Hai featuring superstar Shah Rukh Khan that captured the imagination of the region. The movie was reportedly a bigger hit in countries like Indonesia than Hollywood Titanic released in the same year. Bollywood music also remains hugely popular in Indonesia, as shown by Indonesian police officer Briptu Norman Kamaru who earned a massive following online for his efforts singing another Shah Rukh Khan classic, Chaiyya Chaiyya . A zoo in the Indonesian city Bandung even named a Royal Bengal tiger cub after the Bollywood star. More recently, Indian television, particularly its daily soaps, have gained popularity in Indonesia Indian **TV.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25936

Soap stars have even visited small cities in Indonesia such as Cilacap to meet their fans. Modern adaptations of epics such as Mahabharat by Indian TV have also gained a huge following due to the historical links in rural Indonesia and smaller towns including Serang and Bandar Lampung. The Indonesian TV station that ran the majority of Indian TV shows, ANTV, was able to turn its fortunes around by showcasing Indian TV shows and became the most watched television station in Indonesia in 2014. The popularity of India film and television industry extends across Southeast Asia. Shah Rukh Khan remains a star in Malaysia, where many of his movies were shot, and local authorities even knighted him to boost their tourism industry. Vietnam is hoping to attract Bollywood attention, while Thailand is already a popular destination for filming Indian movies, helped by the support of a large Sikh diaspora. Timor Lester also has a place in the Bollywood club, and again, it was Shah Rukh Khan who popularised Indian movies and their music. One Timorese local gushed, He is god for many Timorese. We wish he could come and visit this nation he taught us love and romance at a time when we needed it to guide us to keep us alive and sane and also to dream of a better future. The appeal of Indian pop culture revealed in the Lowy poll suggests a manner in which India can better engage with the region perhaps a visit by Shah Rukh Khan could reinvigorate the sluggish relations between India and Indonesia Soft power should not be underestimated. Many countries use it effectively. South Korea sent K Pop music stars BTS as a part of their delegation to the United Nations. India pop culture appeal remains one of its strongest yet wholly under utilised diplomatic tools. As India looks and acts East, instrumental sing this asset could provide it useful influence in the region. When it comes to commercial lending, a strong approach to credit risk management is essential. Accurately and efficiently determining the creditworthiness of new or returning borrowers **will** help both traditional and newer lenders increase the amount they lend to businesses, in addition to also reducing the risk of late payments or defaults. In our experience, most banks are limited to using traditional data sets, such as historical financials, personal experience of a particular sub sector and, **critically,** no real time data to provide forward looking insight. However, with more and better data, commercial lenders can find the right path to yes, expanding the range of businesses they lend to and uncovering new opportunities with their existing clients. With an increased level of understanding, relationship managers and analysts working at the banks will undoubtedly gain the confidence to lend to unfamiliar industries, supported by industry insights and peer comparisons. Take a forward look view A typical high growth business grows at 20% year on year, so the difference between its last 12 months and its next 12 **months.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25937

Is so, if a lender is only lending to this business based on its historical data past performance, they re not lending to it based on what needed to support its current or future growth trajectory. This is akin to driving by only relying on what you can see in the rear view mirror as opposed to driving looking ahead through the windshield. It so important for lenders to use data and insights to build a clear picture of a business future growth potential and where it going, rather than simply relying on where it been. Unfortunately, so many lenders still see high growth as high risk, and because they re unable to develop a reliable forward look view of a business, they re unable to get comfortable lending to them. Data and analytical capabilities At Oak North were firm believers that traditional lenders can leverage data and credit science to enhance humans rather than replace them. This hybrid approach is a pragmatic compromise where computers perform various tasks to allow the credit analyst to be more efficient, but the analyst remains in the driving seat and is able to train the models and direct and shape the final outputs to ensure they are coherent and understandable. Due to the complexity of the space, we don believe full automation is a desirable end goal and aim instead to achieve c.80 automation, with a human analyst always involved in the process. This critically allows human judgement to always have an influence on the outcome and helps ensure the understandability of outputs. Furthermore, when it comes to commercial lending, traditional lenders need to assess the ability of a business to sustain a certain level of debt and repay loans. This is where data science comes in. The only way they can effectively assess commercial credit risk is by using multiple data sources including what may be unconventional or previously unavailable data rather than just relying on what they vet used in the past. At Oak North, we apply data science techniques to create unique models that provide each borrower granular level **of** analysis. By combining borrower provided data with our vast repository of external data, we are able to add depth to point in time analysis and monitoring. Develop a granular, loan level understanding of a business Traditional lenders tend to lump all businesses into one of a dozen or so **categories** for example, all restaurants, hotels, bars, leisure facilities, etc. fall under hospitality and leisure . There are a couple of issues with this approach firstly, it ignores the unique differences between businesses within the same sector, and secondly, human bias can mean that certain relationship managers or teams are reluctant to lend to a specific business because it falls in a sector they have had a negative credit experience with in the past. This issue was thrown into the spotlight over the last two years with COVID, as businesses within similar sectors or sub sectors had vastly different experiences **at.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25938

Moving beyond a strategic convergence is also frustrated by the dominant position of the Modi regime in the country domestic politics. Had the territorial incursions and gains made by China on the borders since mid-2020 happened under another government, it would have been severely cornered and compelled to respond more assertively. But the regime hold on foreign policy narrative is strong and it can drown out even the strongest criticism of its conception and handling of India national interest. Having managed the Chinese threat perception, it faces negligible domestic pressure to respond according to the realist logic. Modi impending state visit to the US must be seen against this backdrop. Breakthrough agreements in defence and security cooperation may be inked. And we may just see substantive beginnings in India quest to lessen its dependence on Russia for its military needs. But it is highly unlikely that India would commit to such geopolitical China and Russia that the US expects it to adopt. American expectations could only be moderately met. In India, however, the symbolism of the state visit will dominate the narrative. How should a student interact with his study materials books, videos, exercises, etc.? The purpose of student interactions should ideally be open ended. Rather than merely focusing on surface level or rote learning, a student should strive to find open questions concerned with their materials. Making such a change in their learning process means that the student now works like a scientist. A scientist never learns anything; he merely pursues open questions and consequently learns his subjects. But, a scientist will only be able to pursue such open questions after achieving mastery or sufficient expertise in his domain subjects. Thus in the pursuit of open questions, the intrinsic motivation to pursue knowledge gets instinctively fostered. This leads to a state of immersion in which the person becomes unaware of the learning process they are engaged in. As a result, he does not have the pain most people associate with learning or remembering. Therefore, a student following the path of pursuing open questions essentially makes him a scientist. **Students** at all levels can emulate this process of learning. To accomplish this, students should be encouraged to identify and ask open questions about everything they interact with. For example, a class five student reading a short story from their English textbook, has several open questions he can pursue like; **why** did the author write this short story? Or what are the other choices the protagonist could have taken? Another example is when the student first learns about neutrons and protons in their science class. They can formulate open questions like; what if a neutron collides with a proton inside a cell? What if one of them gets out accidentally? From the above examples, we can thus deduce a key property of open questions they are difficult impossible to decipher at the current proficiency of a student. They may not have enough data or knowledge to attempt to answer these **questions.** When a student pursues such open questions, with interest, the only way he can progress is to understand the current state of knowledge before him. This is already provided in the textbook chapter. Thus, without even attempting to, a student learns the current state of knowledge. But after deriving these open questions, if the student seeks the help of Google to answer them, then the purpos

The fact that he has based them on the knowledge available to him is the best learning he can have. While answering questions can also be accomplished as simple thought experiments, the best way to make use of such open questions for learning is to write their answers in detail, like an essay. While they may struggle in structuring their arguments, the writing process will bring out clarity in their thoughts. Students of all ages can learn by pursuing open questions. While this comes naturally for children, often this instinct of questioning usually restrained due to adult interventions. It essential for coaches to understand why confidentiality is so important in this setting, as well as understand our ethical responsibilities to ensure we are protecting people information. In this blog post, we will discuss the importance of confidentiality and workflows regarding life and executive coaching so that everyone can ensure their practice adheres appropriately to ethical standards. Confidentiality is an essential aspect of any coaching relationship, but particularly so in life and executive coaching. The coach is responsible for keeping any information the client shares during coaching sessions safe and secure. Confidentiality creates an environment of trust that enables the client to open up and freely share personal experiences, thoughts and emotions. This openness is essential to the client progress as it allows the coach to assess and understand the client and offer effective support holistically. Breaching confidentiality can destroy this foundation of trust, making it impossible for the coach to create an environment for growth and change. Thus, confidentiality is necessary to ensure a safe and supportive space for clients to explore their inner selves and make meaningful changes towards fulfillment. The ethical principles surrounding confidentiality is crucial in many fields, including healthcare, law, and journalism. It involves keeping sensitive information private and only disclosing it to authorised parties. While confidentiality is often necessary to preserve trust and privacy, it can sometimes conflict with other ethical principles, such as the duty to protect individuals from harm. Understanding the appropriate use of confidentiality in different situations and considering the consequences **of** breaching it is essential. Sometimes, violating confidentiality may be necessary to prevent harm, such as reporting abuse or disclosing a patient medical information to other healthcare providers. Balancing confidentiality with other ethical principles can be challenging, but it is essential for maintaining trust and ethical practice. Practical measures that **coaches** can take to ensure client confidentiality As a coach, protecting client confidentiality is of utmost importance. Practical measures that can be taken include ensuring that client files are kept digitally and physically securely. Paper documents should be locked in filing cabinets, whilst digital copies should be encrypted. Coaches should also consider working in private, soundproofed rooms to prevent eavesdropping. It may also be helpful to brief clients on the importance of confidentiality and what measures are being taken to ensure it is maintained. In addition, coaches should only share client information with other professionals when necessary and with the **client** express permission. These steps may seem small, but they are crucial in creating a trusting relationship with

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25940

India parliamentary system of democracy inherited from the British Westminster model is superior to the US presidential system in one aspect every vote from every state counts in the general election. In the US, most states are solidly red Republican or blue Democratic. Presidential candidates need concentrate their energies on a handful of swing states the three Midwestern states of Pennsylvania, Michigan, and Wisconsin, which constitute the Blue Wall because they have traditionally voted Democratic, but which wall Donald Trump breached in 2016. Now another set of swing states has emerged called the sun-belt states Georgia, North Carolina, Arizona, and Nevada which have traditionally voted red, but which now the Democrats feel are up for grabs. In all of these states, Pennsylvania with 19 electoral votes is the most critical. It is commonly heard that he who wins Pennsylvania wins the presidency. Pennsylvania has a very popular Democratic governor in Josh Shapiro whose approval rating hovers around 65%. Shapiro was a finalist in the race to become Kamala Harris vice presidential nominee. He would have delivered Pennsylvania to her and thus the White House. He is extremely articulate. But he Jewish and a supporter of Israel. The left wing of the Democratic Party hates Jews. Harris used that excuse to deny Shapiro. But the real reason was that Shapiro would have outshone her on the campaign trail and even in the White House. Instead, Harris chose the bumbling governor of Minnesota, Tim Walz, who brings no state to her because Minnesota is already solidly blue. Walz has become a cheerleader of sorts for Harris on the campaign trail. He is known to embellish his resume, for instance he said he fought in a war but actually he never did so. Already a liability for Harris, she has dispatched him to never land. How could a woman aspiring to the most powerful office in the world make such a grave mistake. Was she so insecure of Shapiro that she dropped him from the ticket? In his interview for the vice president job, Shapiro apparently asked Harris what his job description **as** VP would look like. That was a fair question, even though it is well known that the VP serves as an assistant to the president and does whatever the president asks him to do. In no case must the VP outshine the president. But Shapiro is naturally articulate and **to** the point Harris is anything but. That is why Shapiro lost out. Walz came in saying that he would do whatever Harris asked him to do. He got the job. Donald Trump was delighted with Harris decision to anoint Walz and dump Shapiro. He knew that that his path to the White House had become much easier. All he had to do was win Pennsylvania or Wisconsin or Michigan and retain the sun-belt states and he would be home and dry. How can the presidency be entrusted in the hands of a woman who makes such a grave error **at** the outset of her campaign? One who is so insecure, that she won have the best man as her running mate. Sometimes, Harris says she is Indian South Indian to be specific, at other times she embraces her Black identity and Christian faith. Who exactly are you, Harris? The world needs to know. Mr. Modi was in the US recently and she probably did meet him because she was apparently too busy campaigning. But did she not want to associate herself with an Indian leader and accentuate her Indiannes? Being Indian is a liability for the top job. Ask Nikki Haley. Vivek Ramaswamy. Bobby Jindal. In some cases it is the

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25943

To escape all that, Harris is reinforcing her Black identity and Christian credentials. The US acts like a mature country, but actually is still quite immature. And immature Harris has been by dumping Shapiro. It could very well cost her the White House. One mistake and she would have handed the presidency to Donald Trump. Can she still undo her mistake? No, it too late. It will magnify her appearance as an error-prone leader on the highest stage imaginable. Harris is all smiles now but her gut must be churning. Oh, Pennsylvania, the bridge between the Midwest and New York, how could you do this to me? That gives it a kind of geopolitical poignancy in a time where we try to put people in boxes and restrict their movements. In a region where hyper nationalist currents are on the rise, the overfished hilsa keeps swimming stubbornly upstream reminding us of the many ways we are destroying the planet. We try to ignore its message and just douse it in mustard paste. But it still needles us, stuck somewhere inside our conscience like an errant fishbone. Later historians have questioned Sastri idea of Chola expeditions being the outcome of a desire for conquest but have upheld the commercial motive theory. According to Himanshu Prabha Ray, an Indian Ocean historian, Tamil inscriptions from southern India, Myanmar, Malaya, and South China provide extensive information about the seafaring Tamil merchant associations that built temples and water tanks and had private armies. There is a general agreement that the purpose of these expeditions was to protect the commercial interests of the seafaring mercantile community, especially in wake of the rise of Fatimid in Egypt and the Song in China. The Chinese sources studied by historian Tansen Sen also confirm the view that the reasons for Chola expeditions were primarily commercial, i.e., to counter the Srivijayan attempts to block maritime links between Chola and the Chinese Song dynasty markets. So, despite the absence of historical evidence to substantiate the Chola digvijaya claim, it has become part of the popular nationalist lore. We know it **was** not the Chola expeditions or the ancient and medieval maritime maps that integrated the Islands into the Indian subcontinent but British colonisation in 1858. It was colonial cartography that reoriented the Andamans to face India. The subsequent transportation of Indian political prisoners to Cellular Jail after 1905 initiated the **nationalist** appropriation of the Andamans. The climax came with Lord Mountbatten handing over the Andamans to Jawaharlal Nehru in 1947 and their incorporation as a Union Territory in 1956. Post-Independence, the Andamans has continued to serve India nation-building project through commemorative celebrations of arrival of rebels of 1857, the conversion of Cellular Jail into a national memorial in 1967, tribal Andamanese being invited to perform at the Republic Day celebrations, and the subsequent renamings. How should we understand the renaming of Port Blair as Sri Vijaya Puram? It is directly correlated to digvijaya imagination. What is being imposed in the **name** of celebrating or honoring the memory of the Cholas is a hegemonic cartographic imagination of a grand and luminous ancient Hindu empire that goes beyond the idea of Brihad or Akhand Bharat that encompassed the Indian subcontinent including Afghanistan and Myanmar. The propagator of this imaginary Hindu cartography was the ideologue Purushottam Nagesh Oak, a member of B

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25944

Different stages of the pandemic. Take a golf club and an indoor climbing center in the same city for example both would be classified as physical leisure activities, but their experiences over the last two years will have varied significantly. The golf club which takes place outdoors, is played across huge social distances, and where players bring their own clubs will likely have been able to re open and begin trading much sooner than the indoor climbing center, which, being indoors, will have less fresh air, and which will see climbers touching the same climbing holds in quick succession. Developing a granular, loan level understanding of a business will enable them to structure a bespoke facility for that business needs. Conduct events based scenario analysis As demonstrated by the COVID 19 pandemic, when it comes to adverse events, the traditional approach to commercial lending using historical data, financial modelling of a base case, worst case and best case scenario, and conducting annual reviews is an approach that is not fit for purpose. In uneventful times, these models are fine. However, for unprecedented events such as the pandemic, the traditional models proved useless as historical correlations were broken employing the traditional look back approach was meaningless. Commercial lenders need to be able to run a bottoms up analysis of their loan books, assigning each business a vulnerability rating based on a subsector specific, forward looking credit scenario taking liquidity, debt capacity and profitability into account. This more dynamic view of risk is still valuable in a more stable economy because we can update risk inside a lender review cycles, allowing them to take a critical view of their loan book and maintain constant focus on the highest impact items. The realization that many industries experienced through COVID 19 is the same we can predict the future, but we must be better prepared for the unknown and reduce risks across our businesses with an ability to adapt quickly with data driven decision making. In doing so, banks will identify opportunities to lend faster, smarter and more to businesses. What triggers your **desire** to smoke Anger Boredom Fatigue Happiness You can associate all these feelings with smoking, but stress and anger can set themselves apart as smoking triggers. When you are nervous, the need to smoke can be intense. You could think you need cigarettes to keep your cool, but smoking tends **to** cause more stress than it solves. Also, in today time with technological intervention in healthcare, people can now get genetic testing to learn their nicotine dependency and predisposition of lung related diseases. This will help them to quit smoking and make lifestyle modifications to reduce the risk, if any. It goes on to say that the COVID 19 pandemic has caused millions of smokers to quit smoking. This is because the risk of Covid is higher in smokers. Smoking is an established risk factor for respiratory infections, including the flu. It weakens the immunity against viral infection. Nearly, 60 **of.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25945

Smoker worldwide want to quit smoking, but only 30 of the world population has access to quality tobacco cessation services. According to Indus Health Plus data7 of the population continue to smoke, and about 3 have smoked in the past but are now no longer smoking. For tobacco consumption, the study revealed that 8 were in the habit of tobacco chewing consumption, and 2 no longer consume these products. Learning how to cope with stress without smoking is hard, especially when you quit smoking for the first time. With a few tools and a bit of practice, however, you will find it less difficult than you might have anticipated. Recovering From Nicotine Addiction The healing of nicotine addiction has two major components. Physical withdrawal of nicotine and healing of the ceremonial spirit associated with smoking. Managing Nicotine Withdrawal Your body physically reacts to nicotine withdrawal and the thousands of chemicals in the cigarette smoke you inhale. This recovery phase creates its own stress that you need to be ready to handle. Having an awareness of the place of stress as a by product of early recovery from nicotine addiction and some tools to address discomfort will help you manage it successfully. Tackling Mental Challenges Emotionally, quitting smoking forces you to deal with losing cigarettes as a crutch you are lied on to manage your feelings. Mental difficulties can be one of the toughest aspects of quitting smoking. Managing Stress When Quitting Nicotine Be patient with yourself and give it time for the recovery process to show results. The release of nicotine addiction happens over time. It happens when you erase old associations and habits one by one, replacing them with new, healthier choices. Over time, you all probably find that stress is easier to manage smoke free than it ever was when you smoked. Here are a few practices that will make quitting less challenging Eat properly balanced food Your body needs good quality fuel, as it works to remove toxins from your system. Cigarettes deplete many nutrients and vitamins, so you will need to focus on eating a **well** balanced meal. Drink water Water can help you quit smoking. It helps you detox faster and can work well as a vacuum buster. Staying hydrated is good for your body as well. Cut Out Caffeine When you stop smoking, the amount of caffeinated coffee or soda you consume can **add** to your anxiety and stress. Once you are through the withdrawal process, you will probably be able to drink coffee again, if you choose, but perhaps not in the same quantity as you did before. Take a Warm Bath Enjoying a bath is a great way to calm down and relax. Ignite a few candles, use scented bath salts, and sink into your bathtub. One study found that those who bathed regularly improved their mental and physical health. Severe for both the coach and the client. For the client, the consequences can range from feeling violated and mistrustful of the coaching profession to experiencing significant damage to their personal and professional reputation. For the coach, the repercussions may include legal and ethical sanctions, loss of professional credibility and reputation, and potential civil lawsuits. It critical to recognise that confidentiality goes beyond just protecting personal information; it also ensures that the coaching environment remains safe and trustworthy for clients to explore their goals and challenges. Any breach of confidentiality, intentional or unintentional, can have far reaching and long lasting effects on everyone involved. Therefore, coaches and clients must take seriously the obligation to keep confidential information confidential. How to handle situations when a breach of confidentiality occurs Maintaining confidentiality is a crucial aspect of professional conduct in today world. It is imperative when a third party is involved. The consequences of a breach of confidentiality could be grave, resulting in loss of trust, credibility, and even legal repercussions. To handle such situations, it is essential to be proactive. Implement strict confidentiality policies and procedures, educate your employees on the importance of confidentiality, and ensure that everyone involved has signed a confidentiality agreement. Additionally, only disclose confidential information on a need to know basis, and ensure that third party contractors or vendors have sufficient safeguards to protect sensitive data. By taking these steps, you can mitigate the risk of a breach of confidentiality and protect your reputation and business from any potential fallout. Best practices for maintaining confidential information Maintaining confidential information is a crucial responsibility for any individual or organisation. Physical security measures, such as restricting access to areas where sensitive data is stored, are essential to maintaining confidentiality. Equally critical are digital security measures, including strong passwords, firewalls, and encryption. In an age where cyber-attacks are becoming increasingly prevalent, confidential data must be protected with the utmost vigilance. Additionally, the implementation of effective procedures for data disposal and regular security audits are critical best practices for ensuring that valuable information is kept confidential. While it is always **better** to err on the side of caution regarding confidentiality, following these best practices can protect sensitive data from falling into the wrong hands. Confidentiality is an important aspect of Life and Executive Coaching, and coaches should implement the necessary protocols to ensure a trusting relationship between themselves and their **clients.** Confidential information must be treated with the utmost respect and care to protect both coaching professionals and clients interests. To maintain confidentiality, coaches should introduce workplace policies to inform employees of procedures for sensitive data handling. Additionally, steps should be taken to implement physical security measures, such as locking filing cabinets and ensuring digital encryption of sensitive files. Most importantly, the coach must be able to deal with any potential breaches of confidentiality professionally, calmly and quickly by using their training and experience to assess what actions are ap

Become performance. If they have not worked through their shame, power can become domination dressed up as standards. This is why two leaders in the same role can behave so differently. One uses power to create psychological safety. Another uses it to create silence. One helps others grow. Another needs others to stay small. The real question is not whether a leader has power. The real question is what inner state is holding that power. In my own reflections on leadership, I have returned again and again to one central truth: power without self-awareness quickly becomes theatre. It may impress for a while, but it rarely transforms. And teams know this. Employees may obey positional power, but they do not deeply trust borrowed authority. Human beings can sense when leadership is anchored in wisdom and when it is merely propped up by hierarchy. Why do we still celebrate leaders who are emotionally inaccessible, chronically reactive and addicted to image? Why do organisations call someone strong when what they often mean is unaffected by others? Why is tenderness mistaken for weakness, while intimidation is still confused with executive presence? Part of the answer lies in cultural conditioning. In many Indian homes and institutions, shame has long been used as a behavioural tool. Children are corrected through comparison. Students are driven by fear of embarrassment. Professionals are rewarded for endurance, not introspection. Then we act surprised when leaders rise through the system with polished résumés and unexamined wounds. We do not just build companies. We import our emotional inheritance into them. And so the workplace becomes a stage where old family dramas get re-enacted with better furniture and larger salaries. As a student of psychology and neuroscience, I find it impossible to discuss leadership behaviour without discussing the body. A leader under status threat may experience an actual physiological stress response. The heart rate changes. Muscles tense. Attention narrows. The brain becomes less reflective and more defensive. In those moments, what looks like a bad attitude may actually be an unregulated nervous system protecting identity. Leaders who have never learned emotional **regulation** often confuse internal activation with external emergency. A delayed email feels like disrespect. A dissenting colleague feels like rebellion. A failed presentation feels like public exposure. This is why self-awareness is not a luxury skill. It is a leadership necessity. If a leader cannot notice what is happening within, **he** will project it onto everyone around him. Whole teams then pay the tax for one person's unprocessed insecurity. Mature leadership is quieter than performance culture would have us believe. It looks like a leader who can stay steady without needing to appear superior. It looks like someone who can receive feedback without collapsing into defence. It looks like the capacity to apologise without feeling diminished. It looks like strength that does not need witnesses every five minutes. I remember one founder telling me, after months of coaching, For the first time, I don't need to win every room. That **sentence** was not weak. It was liberation. The most powerful leaders I know are not free from ego. They are simply less possessed by it. They recognise when status is pulling at them. They notice when shame is scripting their reactions. They learn to hold power with responsibility, not hunger. It is also the kind of leade

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-13-TEST NO.-25950

If leadership behaviour is shaped by status, shame and power, then transformation begins not with better slogans, but with deeper honesty. A leader must ask: What am I trying to protect when I overreact? What do I fear losing when I am not the smartest person in the room? Why does disagreement feel so personal? Why do I need visible authority to feel inwardly secure? And this is where real leadership begins. Not on the podium, but in presence. Not in image, but in integration. Not in looking powerful, but in becoming trustworthy. I believe this is the leadership revolution hiding in plain sight. We do not merely need more skilled leaders. We need less defended ones. We need leaders who have the courage to examine the invisible forces within them before those forces start shaping entire cultures. Because when status stops ruling the ego, when shame stops scripting behaviour, and when power is held with consciousness, leadership becomes less of a performance and more of a practice. And that, in the end, may be the most powerful form of leadership behaviour of all. That the talks collapsed was predictable. Trump may go for a naval blockade of Iran. That'll make Netanyahu happier. And Iran angrier. Expect renewed turbulence A breeze of cautious optimism had swept through various diplomatic The best kind of music, like Asha Bhosle's songs, tells us where society is headed. The best kind of tribute, never mind India's official idea of itself, is that everyone, at some point, has hummed that the US, Iran meeting is a good beginning, even minus an agreement. Israel-Lebanon talks can offer an off-ramp to both Vance's statement that US-Iran talks yielded no breakthrough, should not be a cause for quiet Regulators can't be MIA as people buy weight-loss drugs off the internet, including from China Many have a big medical need, others are merely driven by vanity. ## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-14-TEST NO.-25951

Smoker worldwide want to quit smoking, but only 30 of the world population has access to quality tobacco cessation services. According to Indus Health Plus data7 of the population continue to smoke, and about 3 have smoked in the past but are now no longer smoking. For tobacco consumption, the study revealed that 8 were in the habit of tobacco chewing consumption, and 2 no longer consume these products. Learning how to cope with stress without smoking is hard, especially when you quit smoking for the first time. With a few tools and a bit of practice, however, you will find it less difficult than you might have anticipated. Recovering From Nicotine Addiction The healing of nicotine addiction has two major components. Physical withdrawal of nicotine and healing of the ceremonial spirit associated with smoking. Managing Nicotine Withdrawal Your body physically reacts to nicotine withdrawal and the thousands of chemicals in the cigarette smoke you inhale. This recovery phase creates its own stress that you need to be ready to handle. Having an awareness of the place of stress as a by product of early recovery from nicotine addiction and some tools to address discomfort will help you manage it successfully. Tackling Mental Challenges Emotionally, quitting smoking forces you to deal with losing cigarettes as a crutch you are lied on to manage your feelings. Mental difficulties can be one of the toughest aspects of quitting smoking. Managing Stress When Quitting Nicotine Be patient with yourself and give it time for the recovery process to show results. The release of nicotine addiction happens over time. It happens when you erase old associations and habits one by one, replacing them with new, healthier choices. Over time, you all probably find that stress is easier to manage smoke free than it ever was when you smoked. Here are a few practices that will make quitting less challenging Eat properly balanced food Your body needs good quality fuel, as it works to remove toxins from your system. Cigarettes deplete many nutrients and vitamins, so you will need to focus on eating a **well** balanced meal. Drink water Water can help you quit smoking. It helps you detox faster and can work well as a vacuum buster. Staying hydrated is good for your body as well. Cut Out Caffeine When you stop smoking, the amount of caffeinated coffee or soda you consume can **add** to your anxiety and stress. Once you are through the withdrawal process, you will probably be able to drink coffee again, if you choose, but perhaps not in the same quantity as you did before. Take a Warm Bath Enjoying a bath is a great way to calm down and relax. Ignite a few candles, use scented bath salts, and sink into your bathtub. One study found that those who bathed regularly improved their mental and physical health. Having a bath in hot water can reduce tiredness and irritability, which are the two common symptoms of nicotine withdrawal get **art.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-14-TEST NO.-25952

Massage Our bodies tend to keep the tension we feel in our muscles, so a good massage is worth its weight in gold to alleviate stress. Ask your partner a masseuse to help you get rid of the stress from your muscles. A full body massage is awesome, but even 10 to 15 minutes spent on your neck, shoulders, face, and scalp can do wonders. You can also try an auto massage tool such as a massage pistol or even a massage cushion. Get Enough Sleep The first few days of smoking cessation can be tiring because your body and mind are stressed. Research has shown that the less you smoke, the less tired you will feel. One study revealed that fatigue among people who quit smoking peaked after six weeks and then declined. Our minds can make small problems look big and turn each small thing into a complex issue especially when our emotions are out of control. If you have a bad day, stop and re center. Be good to yourself, indulge (or both) and keep your emotions from getting better of yourself. Tomorrow is a new day, you will feel better, and you will be happy to be smokeless again The era of digital revolution propelled by the pandemic has left almost every industry and sector grappling with waves of transformation. The ways in which customers engage with brands and services across the globe has changed drastically and like everyone else, the banking sector must adapt. A recent survey report highlights that an estimated 205 million Indian adults already have a digital only bank account. And this number is expected to grow to 397 million within the next five years. This shows how customers today demand evolved and integrated services at every step of the way. And since payments, finance and money are existential to our day to day activities, the need for integration across financial services is even more. Owing to this growing customer need, we have seen the emergence of embedded finance, as fitness and non bank companies have started to offer financial services **which** are otherwise offered solely by traditional banks. As more and more companies embrace embedded finance, the opportunity for banks to grow through partnerships has increased exponentially. And these partnerships are enabled through none other than the Banking as a Service Basal model. So, what exactly is Banking as Service **Imagine** a platform that allows you to browse through travel options and apply for loans on the same app. This is just one example of Banking as a Service. Through Basal, banks are able to offer their services such as accepting payments, providing loans, or offering insurance options to consumers through the digital platforms of other non banking companies. Therefore, permitting these businesses and companies to directly integrate financial services into their digital platform without having to acquire a banking license of their own. It is a model that will enable both banks and businesses to partner with each other **in.**

A mutually profitable manner, while negating the need for the two to compete with one another. While on a broader level, this will enable an ecosystem where end to end services are offered on a single platform for the ease and convenience of customers. The possibilities become endless. A stimulus for banks In recent times, many tech giants such as Google, Apple and Facebook have entered the digital payments space. In addition to this, the rise of new age digital banks and fintechs has increased the competition for the conventional banking system, making it a challenge for them to remain relevant. In such instances, Basal provides conventional financial entities an opportunity to reimagine and restructure themselves to benefit in a competitive financial landscape and establish themselves as a strong digital presence in the industry. By developing strategic partnerships banks will be able to access new streams of revenue and product growth while building a larger customer base and offering them enhanced customer engagement and integrated experiences. Upon implementation, the Basal model can prove to be beneficial across four strategic areas Enhanced revenue sources Integrating with non banks will help open new streams of revenue in the form of fees from third parties and keep banks relevant as big tech and fintechs offer consumers high concept apps. Moreover, the most lucrative collaboration would be with businesses that have a highly scalable business model. Increased customer base Attracting new customers is challenging enough, especially now as customer demand for integrated financial services is more than ever. Therefore, by collaborating with partners from different industries such as health, travel, education, and real estate, banks can broaden their customer base while saving the organization resources, money, and time all together. Access to enhanced sources of customer data Partnering with businesses will give banks access to an ocean of financial data allowing for a deeper understanding of each consumer buying habits, hence enabling superior and personalized customer experiences. The data will help banks understand when to engage with the consumer and how to make offers aligned to the cumulative goals of banks, customers and **fintechs.** Improved profitability and lower costs of business The Basal model presents an opportunity for banks to reach a larger number of customers at a lower cost. They can benefit from the non banking entity capabilities and capitalize on cross selling opportunities. The road to futurist finance While Basal will **revolutionize** the face of banking, it will also prove to be the future of finance as a whole. Its ability to create a 360 degree service ecosystem for consumers will change the way people look at financial processes. For instance, within a financial ecosystem powered by Basal, in addition to product choices consumers will also have various short term and long term payment options, loan preferences, investment choices and many more. Its use will lead to an empowering shift in the consumer banking experience and will allow for truly integrated and superior client experiences. As for businesses, the opportunities through **Basal.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-14-TEST NO.-25954

Of years the Drugs Technical Advisory Board DTAB has recommended that barcodes or QR codes be introduced in the top 300 brands of drug products available in the Indian market to help track and trace these brands. As members of the pharmaceutical industry, we believe that this should be the standard for all drugs produced in the country. What we must also keep in mind is that practically we will have to roll this out in various phases. Government will also have to help the manufacturers execute the same. This will help to reduce the threat of counterfeit the country. The QR code will aid in the tracking and tracing of medication throughout the supply chain, as well as ensuring its authenticity. The barcode data must include the unique product identification code, the name of the API, the brand name if any, the name and address of the manufacturer, the batch number, the batch size, the date of manufacturing, the date of expiry or retesting, the serial shipping container code, the manufacturing license number or the import license number, and any special storage conditions that are required if any . Nitti Analog, concerned about the spread of counterfeit drugs, proposed a plan to put the entire drug inventory produced and consumed in the country on a block chain, preventing fake drugs from entering the supply chain. To counter the problem of fake medicines, more such tech aided solutions are required in the country. Pharmaceutical Technology Up gradation Assistance Scheme PTUAS Support for SME Industries is proposed under the PTUAS scheme, either through interest subventions of up to 5 per year 6 percent in the case of units owned and managed by SC STs or a 10 credit linked capital subsidy. The loan supported in both cases is limited to a maximum of 10 cores. For the five year scheme, a budget of 300 cores has been set aside. PTUAS will assist small and medium sized pharmaceutical companies in upgrading their plant and machinery systems, automating them, and maintaining quality. It will also help the country formulation of research and **development.** Setting up a task force for quality checks Despite the fact that there are quality checks mandated by the government in pharmaceutical companies, manufacturing plants, and even retail stores, there is still much to be done. The urgent need is to establish a task force whose sole purpose will **be** to ensure the quality of pharmaceutical products. The task force, which should be formed under the DCGI, should conduct several duties, including conducting raids on manufacturing sites, checking the stipulated production norms along with collecting samples from the sites. API quality check currently, the quality of final medicine batches or pharmaceutical formulation is being tested. The government has set a few parameters for APIs to be used in formulations, but it has been observed that many companies are selling APIs that do not meet the requirements. Many small to large manufacturers use this inferior material to create their formulations **and.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-14-TEST NO.-25955

Are innumerable. Integrating with banks will give them access to a treasure trove of financial consumer data, core systems, licensing capabilities and financial functionalities, without having to apply for a banking license or having to manage all the regulatory requirements associated with it. Basal will enable them to integrate digital banking and payment services into their own platforms and further create a seamless and integrated digital ecosystem for their consumers. Moreover, businesses can also leverage on the bank acquired trust to increase their own customer base. As consumers gradually turn to digital and integrated platforms to manage all aspects of their finances, banks will have to look for smart and scalable solutions to remain relevant. I believe that Basal can be that solution for banks. It has the potential to combine digital technology platforms and finance to change the shape of economies, the financial landscape, and most sectors for years to come. Schools and colleges across the country shifted to online mode during Covid as the enforcement of lockdown and social distancing rendered classroom teaching impractical. In all cases, parents were keen to safeguard their children against the virus and hence were not mentally prepared for the traditional classroom studies. The country was adapting to the innovation of distance learning or eLearning as it is popularly called , But in effect it is online method of instruction while distance learning as previously known varies from the new evolving scenario. Online Classes or Distance Learning is in fact the new version of correspondence course. The new way of learning requires computer, smartphone, reliable internet connection, whereas in correspondence course an address for sending study materials was the only thing required. Online classes or distance learning has got an edge over correspondence learning as in this mode of education the teacher and students can interact simultaneously, by sitting at the comfort of their home preferred location and see each other. Simply put, there is a subtle difference between online eLearning and distance learning though the objective remains common for both these approaches. It is prudent to clear the distinction between the **two.** In online studies, the instructor bundles the students together through virtual means i.e, without being physically present in a single location. The paraphernalia required for digital eLearning includes PC, tablets, laptops or smart phones with hi speed internet connection for all the participants. When using eLearning methods, students work **online** while the teacher assigns work and checks assignments digitally. Whereas, distance learning takes place without the teacher presence students study on their own. This mode of study is popularly known as correspondence course in which students and teachers interact over email or postal mail in some cases. It is pertinent to note that approximately 58 percent of Indian youths suffer from some degree of skill deprivation. Since conventional education system is too time consuming or expensive for those who missed the bus, the void is bridged by the open distance learning eco system. Distance learning has been helping students **to.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-14-TEST NO.-25956

Design an overarching national urban employment guarantee programme. That leaves two key questions, on cost and design. One estimate by researchers at Azim Premji University showed that 100 days of guaranteed work for 20 million workers with wages fixed at Rs 300 a day, and the overall wage bill capped at 50 of the total outlay, would cost GoI Rs 1 lakh crore. For perspective, the latest GoI annual budget is pegged at Rs 39.4 lakh crore. GoI existing urban employment schemes can be subsumed into an urban job guarantee scheme to control costs. As for design, it prudent to take an intermediate step such as Duet decentralised urban employment and training proposed by economist Jean Dreze. It envisages using public institutions initially to introduce the scheme. Instead of going all out, it will allow GoI a chance to observe its working in smaller settings as urban governance capacity across India is uneven. But it worth sorting out these details because an urban employment guarantee plan can help those most hit by recent economic shocks. It a truism to state that public policy today is heavily data dependent. India no exception, with copious data being generated by its statistical system. However, it the quality of data that needs urgent attention as it influences the efficacy of public policy. The 2020 report on medically certified cause of deaths MCCD released some days ago was based on the civil registration system set up in the 19th century. The key takeaway of the report is that a mere 22.5 of the 8.1 million deaths in 2020 were medically certified. It is an improvement over the previous year 20.7 but the overall proportion is low. Some populous and poor states are reporting abysmal numbers, which makes crafting a sound public health policy a matter of chance. For example, it 3.4 in Bihar, 6.1 in Jharkhand and 6.7 in MP. Despite infrastructural limitations, there scope to improve registration levels quickly. The MCCD report observed that not all hospitals report data. For instance, only 30 of Tamil Nadu medical institutions with in patient facilities are **covered** by MCCD reporting requirements. Such gaps hamper policy making. To illustrate, the International Diabetes Federation estimates India accounts for one in seven adults living with diabetes. But when adjusted for age, India fares better than Sri Lanka and Bangladesh. With better data, such debilitating health problems can be tackled **early,** improving the quality of life. All hospitals with in patient facilities must be mandated to report MCCD. Once this is done, it will be easier to identify key weaknesses in the registration system: paucity of doctors and health facilities in rural areas or forbidding medical expenses for those seriously ill. Panchayati and grassroots medical workers can then be roped in for facilitating hospital access. Manipur leapt from 50 medically certified deaths in 2018 to 100 in 2020. Follow Manipur example. The last weekend marked the beginning of the birth centenary year of Nandamuri Taraka Rama Rao, popularly known as **NTR.**

**350th:** "covered" | **400th:** "early," | **500th:** "NTR."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-14-TEST NO.-25959

Continue with their studies from home or at remote location rather than attending university or school classrooms which is not available in the conventional education environment. It gives the flexibility of entry, exit and reentry to the learners while fine tuning their technical skills. The flexibility that the distance learning provides is unmatched as learners can continue to fulfill their work commitments without adhering to strict timelines. Progressive professionals who are engaged in office environments or scheduled to attend work related obligations can do so without having to miss their structured online classes. Assignments are sent to instructors over email which were earlier sent by post. Distance education is one of the most preferred education systems in India as a large number of students resort to studying on the go. In India, enrollment in the open distance learning constitutes about 24 percent of the total enrollment in the conventional system. This has been steadily increasing over the years because of the opportunities it gives to employed workforce and enables them to enhance their technical qualifications contributing to their personal and professional growth. IGNOU is the flag bearer of distance learning enabling working professionals take up higher studies and advance in their careers. Currently, there are 10 popular open universities in India offering distance learning programs though over 50 in total are offering cost effective higher education certification. Master of Business Administration MBA is arguably the most preferred programs in the country, followed by Human Resource Management and Bachelor of Computer Applications BCA besides Bachelor of education among others. Importantly, the quality curve is on the upswing juxtaposed with transparent regulation. Government of the day has legitimised distance education and private ownership. The authorities have recognised vertical mobility among short term certificates and medium term diplomas by deregulating higher education and study center frameworks. It provides opportunities to the students to enhance their qualifications as it is least stressful and the study material available to distance learners is more student friendly. Distance learning has books, study guides, help books that enable easy comprehension leaving long lasting impressions in the minds **of** students. Help books make self study a breeze which the predominant underlying factor which enables professionals to select distance learning. The tweaking of skills and employment ecosystem in distance learning education is challenging the domain of regular education system and is increasingly becoming preferred choice for the professionals to **opt** for even though eLearning remains a viable option to meet educational requirements. The US Trade Representative USTR has questioned India for the country growing spurious medicine problem. According to the USTR report, nearly 20 of all pharmaceutical goods sold in the Indian market are counterfeit, which is a damning claim given India growing pharmaceutical market and its decades long reputation as the pharmacy of the world. The Indian pharmaceutical industry ranks third in the world in terms of volume, supplying 20 of the global demand for generic drugs. With a strong network of 3,000 drug companies and approximately 10,500 **manufacturing.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-14-TEST NO.-25960

Reservation policy fails to achieve its purpose of giving equal opportunity to everyone because of lack of infrastructure in the rural areas of the country where the proportion of backward classes is significant. A number of people living in some remote areas in Orissa, M. P. or Bihar are not even aware of these policies. They are deprived of even primary education and basic employment which make them more backward financially. It fails to establish which causes disequilibrium in the status of the states. The total reservation quota stands at 49% in many states of India and this includes the SCs, STs and OBCs. The trend seems to have shifted to reverse discrimination rather than more affirmative action. Some backward class s elite have gained political and economic clout based on this reservation. However a majority of the backward classes is not living any differently than before because their subsistence is meagre and rural lifestyles do not provide them with any of the benefits. The worst thing is that many are not even aware of these policies, especially in the interior parts of the nation. Thus a distinct economic class system exists within the backward classes. Mostly undeserving people have gained the advantages and the deserving ones are still without any significant positive change in their plight. It is interesting to note that the constitutional provisions regarding reservations which explicitly single out certain castes for special preferential treatment contradicts the documents prohibition on discrimination based on caste, race and other such other criteria. Besides, despite the creation of commissions to monitor the implementation of reservation policy by the centre the constitution gives great liberties to the individual states to determine the quantity and limits of reservation which often lead to exploitation. In reality there is no abolishment of caste system. Instead the disparity increases because of antagonistic attitude on both sides it is said that around 3.7 billion years ago, the earth cooled down and had warm oceans. In these warm water bodies, the first single-celled organisms evolved. Thus, water was instrumental in the origin of life. 70% of **the** earth is covered with water, and up to 70% of the human body is made of water. Today we have millions of marine species, but many plants and animals evolved to survive in non-saline conditions. The human civilization rose on the banks of rivers. Early human beings settled down **along** the fertile river basins as it was easy for growing crops, and was convenient for transportation too. Presently, agriculture demands for 70% of the freshwater needs. Industries and domestic uses share the rest thirty percent. But this precious resource has become scarce due to many human-made reasons. Only three percent of the total water available is freshwater. But more than sixty percent of this potable water is locked up in ice caps and glaciers. Moreover, we haven t kept our water bodies clean. Industrial effluents and sewage discharges are directly let into rivers. In cities, buildings come up on **dried** ponds and lakes. So, when it rains, we don t have the facility to store the rainwater. Therefore, we not only have frequent flash floods, but the rainwater goes to the sea and gets wasted. We use the fertile soil from riverbeds carelessly, and it leads to flooding in riverine areas too. So, we humans are primarily responsible for reducing the holding capacity of water bodies. We live

Lesser warming implies a slower melting of ice sheets and glaciers, thereby, preserving the largest source of freshwater. Floods and storms are natural events, but nature has its way of replenishing the water that flows into the seas Holi is one of the important festivals of the Hindus. It is a colourful festival of great joy and enthusiasm. This festival is celebrated all over the country as a day filled with complete mischief, fun and enjoyment. Holi indicates the end of the winters and the beginning of the spring season. According to the Hindu calendar it is celebrated on the full-moon night of the month of Phalgun. Holi is celebrated to mark the victory of truth over evil, the victory of Prahlad over King Hiranyakashyap. Prahlad was a devotee of God. His father, King Hiranyakashyap did not believe in God but-believed in his own powers. He failed to deviate his son s devotion to God and decided to kill him by burning him alive. Prahlad s sister, Holika, had a God-gifted boon that she would not be burnt in the fire. She sat with her nephew in the blazing fire. Holika let herself be burnt and Prahlad was saved. The truth, the powers of the Supreme God, defeated the false evil. During the day women folk worship a stack of wooden logs called Holi. At the end of the day in the full-moon night Holi is burnt in a holy way. The green ears of barley and gram are heated up in the fire and distributed among friends and relatives new. Friendships are made and old enmities are forgotten. Next day is the festive day of Holi. All hearts are filled with joy. Children throw colored water on each other while the elder people apply gulal or abir, There are noisy scenes as little groups of children move from one locality to another exchanging holi greetings, singing songs and laughing at their own jokes. It is almost mid-day when people move indoors to freshen themselves. Though this is a festival of brotherhood and unity, it has some disadvantages too. **Some** ill-minded people-take this day as a chance to take revenge. They use dirty mud water. Use of strong colors harmful to the skin, charcoal and grease often create a serious quarrel. This leads to unnecessary enmity and spoils the charm of the festival the average temperature of the Earth **has** been increasing continually since the late 19th century. The mean global temperature in the 1960s was 13.9 degree Celsius whereas in 2017 it was 14.9 degree Celsius. Thus, no one can deny the fact that the temperatures have been rising on our planet. Ice ages and warmer periods have occurred alternatively and naturally on Earth. Natural warming happens when Earth is closer to the Sun. But, it is the greenhouse gases that lead to a rapid temperature increase and disrupt the natural cycle of changes. The gases such as the oxides of carbon and sulfur are greenhouse gases. These **gases,** when present in the atmosphere, trap the incoming radiation and heat from the Sun. The phenomenon of atmospheric gases acting as a shield is known as the greenhouse effect. We humans have been primarily responsible for the release of these harmful gases. Our activities such as industrial production, petroleum extraction, transportation, burning fossil fuel, mining, cattle rearing, and deforestation are primarily responsible for global warming. The first impact of global warming is the melting of polar ice caps and glaciers. So, a loss of habitat for species in the frozen zone is likely. Losing tones of ice could result in the rising of

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-14-TEST NO.-25962

Design an overarching national urban employment guarantee programme. That leaves two key questions, on cost and design. One estimate by researchers at Azim Premji University showed that 100 days of guaranteed work for 20 million workers with wages fixed at Rs 300 a day, and the overall wage bill capped at 50 of the total outlay, would cost GoI Rs 1 lakh crore. For perspective, the latest GoI annual budget is pegged at Rs 39.4 lakh crore. GoI existing urban employment schemes can be subsumed into an urban job guarantee scheme to control costs. As for design, it prudent to take an intermediate step such as Duet decentralised urban employment and training proposed by economist Jean Dreze. It envisages using public institutions initially to introduce the scheme. Instead of going all out, it will allow GoI a chance to observe its working in smaller settings as urban governance capacity across India is uneven. But it worth sorting out these details because an urban employment guarantee plan can help those most hit by recent economic shocks. It a truism to state that public policy today is heavily data dependent. India no exception, with copious data being generated by its statistical system. However, it the quality of data that needs urgent attention as it influences the efficacy of public policy. The 2020 report on medically certified cause of deaths MCCD released some days ago was based on the civil registration system set up in the 19th century. The key takeaway of the report is that a mere 22.5 of the 8.1 million deaths in 2020 were medically certified. It is an improvement over the previous year 20.7 but the overall proportion is low. Some populous and poor states are reporting abysmal numbers, which makes crafting a sound public health policy a matter of chance. For example, it 3.4 in Bihar, 6.1 in Jharkhand and 6.7 in MP. Despite infrastructural limitations, there scope to improve registration levels quickly. The MCCD report observed that not all hospitals report data. For instance, only 30 of Tamil Nadu medical institutions with in patient facilities are **covered** by MCCD reporting requirements. Such gaps hamper policy making. To illustrate, the International Diabetes Federation estimates India accounts for one in seven adults living with diabetes. But when adjusted for age, India fares better than Sri Lanka and Bangladesh. With better data, such debilitating health problems can be tackled **early,** improving the quality of life. All hospitals with in patient facilities must be mandated to report MCCD. Once this is done, it will be easier to identify key weaknesses in the registration system: paucity of doctors and health facilities in rural areas or forbidding medical expenses for those seriously ill. Panchayati and grassroots medical workers can then be roped in for facilitating hospital access. Manipur leapt from 50 medically certified deaths in 2018 to 100 in 2020. Follow Manipur example. The last weekend marked the beginning of the birth centenary year of Nandamuri Taraka Rama Rao, popularly known as **NTR.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-15-TEST NO.-25966

For each district as a reference point that these resources were once intact. The PLPCs could assume this responsibility by design. To achieve responsive governance of common resources, the effectiveness of a top down rule of law approach, which puts encroachments at the centre stage, needs to be evaluated. Land is a political issue, and thriving common lands characterise social capital, social cohesion, and social harmony. PLPCs can thus focus on more effective interventions to support Panchayati and village institutions in managing these resources. Working to improve social relations, while having conflict resolution as an auxiliary arm, may deliver more just outcomes. With almost two years of empty classrooms, silent playgrounds and deserted corridors, schools are set to welcome students back to the campus. This is a good time to reflect on how we can make this transition as smooth as possible for our students. All children might have had different experiences during the lockdown, and they may react quite differently to the reopening of physical schools. Some will readily return to school, while others will struggle and experience anxiety or apprehension about moving out of the comfort of their homes. Teachers must be prepared to deal with this and devise a transition plan that benefits everyone and allows for a smooth return to school. It might make sense to reopen in a phased manner. Fewer school hours for the first few days might be the best way to go as it will help students make the gradual transition from online school to physical school. Some basic guidelines that can help educational institutes and teachers to make this smoother for children, include: Focus on safety protocols: As schools reopen, everyone emphasis will be on safety protocols, especially because children are not vaccinated. Parents may be wary and have reservations about sending their child to school. Try to put the parents mind at ease by informing them of all safety guidelines that are in place in the school. Creating a virtual tour so that new parents can see the infrastructure and classrooms and understand what it would be like for **their** child to attend school will definitely be very useful. Additionally, schools can organise virtual parent orientations to debrief parents about everything they need to know and prepare for before school starts Need for structures and routines: An important thing for teachers to focus on would be how can he **she** create a classroom environment that welcomes children back to school after the long hiatus Creating a daily schedule will help children know what to expect. This schedule can be shared before the school reopens to give students time to understand it and come well prepared on the first day of school. Having a physical copy put up in the classroom might also prove beneficial. Setting up classroom routines will be extremely important as students have not seen a normal school day for a long time. The online routines and structures were significantly different so teachers will need to spend **time.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-15-TEST NO.-25967

I am a tree, tall and imposing, standing all alone near the campus of a temple. My life is ever so interesting as, I see a huge spectrum of society, funny gestures of people, and hear all kinds of conversation of the devotees who pass by me. I was not always so huge. As is true of all living beings I was also a long time back, a young sapling with this huge tree within me. At that time I looked fresh and beautiful as all other beings who are young, but, at that time I was of course not so imposing. This is what I have seen about life that, every stage has something good about it. I understand that, I am a peepal tree which just grows anywhere and everywhere. Ever since I was young, I remember several people coming to my root and worshipping me. They would light an earthenware lamp, and put it near my root, say their prayers and go away. This was a daily ritual which scores of people followed at my root ever since I can remember. As I started growing up bigger and bigger, the temple authorities put a two feet wall like boundary around my trunk. This was done to protect me from being destroyed by crowds who thronged to me. Since I am near a temple, I have always had the pleasure of a lot of company daily and, the great honour of being worshipped by scores of believers every day. Now, I am a full grown tree, and that two feet wall has been converted into a broad platform all around me, with my root out of sight, and the trunk also somewhat covered from vision. Here on the platform people sit and say their prayers and relax. At times they also consume their temple prasad while sitting on this platform. Oh, what a wonderful feeling it is to be so loved and cared for and, above all, being so honoured and respected. This honour is given to me as; I understand now that, a section of the **Indian** society considered me a holy tree to be worshipped. This is why there is so much hype about me and my kin. In fact all great ideals and philosophies are the outcome of great men contemplation. But these philosophies and ideals would easily have been forgotten, had they not **been** applied to real life. Who could remember Marx if Lenin had not motivated people to follow communism? Rousseau name would certainly have been rubbed out of our memory, had France not accepted socialist democracy. Lives of various great men and even religious leaders endorse the view that action is not only natural instinct; it also the essence of life. Karl Marx was a German philosopher during the 19th century. He worked primarily in the realm of political philosophy and was a famous advocate for communism. He co wrote The Communist Manifesto and was the author of Das Kapital, which **together** formed the basis of Marxism. Marx political and philosophical thought had enormous influence on subsequent intellectual, economic, and political history. His name has been used as an adjective, a noun, and a school of social theory. Marx believed that humanity core conflict rages between the ruling class, or bourgeoisie, that controls the means of production such as factories, farms and mines, and the working class, or proletariat, which is forced to sell their labour. At the request of the Communist League, Marx and Engels coauthored their most famous work, The Communist Manifesto, published in 1848. A call to arms for the proletariat Workers of the world, unite! the manifesto set down the principles on which communism was to evolve. The main classes in capitalism are the bourgeoisie and the pr

Once Emperor Akbar became very angry at his favorite minister Birbal. He asked Birbal to leave the kingdom and go away. Accepting the command of the Emperor, Birbal left the kingdom and started working in a farmer farm in an unknown village far away under a different identity. As months passed, Akbar started to Miss Birbal. He was struggling to solve many issues in the empire without Birbal advice. He regretted a decision, asking Birbal to leave the empire in anger. So Akbar sent his soldiers to find Birbal, but they failed to find him. No one knew where Birbal was. Akbar finally found a trick. He sent a message to the head of every village to send a pot full of the wit to the Emperor. If the pot full of wit cannot be sent, fill the pot with diamonds and jewels. This message also reached Birbal, who lived in one of the villages. The people of the village got together. All started talking about what to do now? The wit is not a thing, which can be filled in the pot. How will we arrange for diamonds and jewels to fill the pot and send to the Emperor? Birbal who was sitting among the villagers said, Give me the pot, I will fill the wit in one month end. Everyone trusted Birbal and agreed to give him a chance. They still did know his identity. Birbal took the pot with him and went back to the farm. He had planted watermelons on his farm. He selected a small watermelon and without cutting it from the plant, he put that in the pot. He started looking after it by providing water and fertilizer regularly. Within a few days, the watermelon grew into a pot so much that it was impossible to get it out of the pot. Soon, the watermelon reached to the same size as the pot from inside. Birbal then cut the watermelon from the vine and separated it with the pot. There is a nine-year-old kid sitting at his desk and all of a sudden, **there** is a puddle between his feet and the front of his pants are wet. He thinks his heart is going to stop because he cannot possibly imagine how this has happened. It never happened before, and he knows that when the boys find out he will never hear the **end** of it.. When the girls find out, they all never speak to him again as long as he lives. The boy believes his heart is going to stop; he puts his head down and prays this prayer, Dear God, this is an emergency! I need help now! Five minutes from now I am dead meat. He looks up from his prayer and here comes the teacher with a look in her eyes that says he has been discovered. As the teacher is walking toward him, a classmate named Susie is carrying a goldfish bowl that is filled with water. **Susie** trips in front of the teacher and inexplicably dumps the bowl of water in the boy lap. The boy pretends to be angry, but all the while is saying to himself, Thank you, Lord! Thank you, Lord! Now all of a sudden, instead of being the object of ridicule, the boy is the object of sympathy. The teacher rushes him downstairs and gives him gym shorts to put on while his pants dry out. All the other children are on their hands and knees cleaning up around his desk. The sympathy is wonderful. But as life would have it, the ridicule that should have been his has been transferred to someone else Susie. She tries to help, but they tell her to get out. You vet done enough, you klutz! Finally, at the end of the day, as they are waiting for the bus, the boy walks over to Susie and whispers you did that on purpose, did you? Susie whispers back, I wet my pants once too. Moral all of us go through

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-15-TEST NO.-25973

Common lands are natural resources that are used collectively by a community, such as forests, pastures, ponds, and wastelands. They act as a resource base for non cash, non market economies that provides fodder, fuel wood, water, oils, fish, medicinal herbs, and a wide variety of fruits and vegetables to the local communities. Various studies estimate that common lands contribute between 12 and 23 percent to rural household incomes. They also capture carbon, act as repositories of biodiversity, and relics of indigenous knowledge. India common lands have been steadily declining. Grazing lands alone faced a 31 percent loss in total area between 2005 and 2015. The pressures from rapid industrialisation, over utilisation, and more perceivable productive land uses like agriculture, infrastructure, and extraction are driving the change in the landscape. India clean energy transition is the latest addition to the mix. Common lands are also vulnerable to encroachments and private expropriation as tenure is less likely to be legally recognised in common lands than in private lands. Fuzzy boundaries that lead to costly and incomplete enforcement and overlapping land and property laws compound this issue. To tackle this problem, on January 28, 2011, the Supreme Court of India pronounced a landmark judgement to set in motion a mechanism for the preservation of common resources across the country. In the case titled Jagpal Singh & Ors vs State of Punjab & Ors, the court recognised the socio economic importance of common lands and directed state governments to prepare schemes for speedy removal of encroachments. The lands were then to be restored to the gram Panchayati for the common use of the village. This judgement provided hope and momentum for rural communities to reclaim the lands they had lost to encroachments, and prompted state governments to evolve mechanisms for protection, management, and restoration of common resources through programmers like MGNREGA. It also served as an inflection point for lower courts to develop jurisprudence over common lands in the country. What are public land protection cells Common lands cover 36 percent and 37 percent of the total land area of Rajasthan and **Madhya** Pradesh respectively, and ensure dignity, security, and livelihoods for millions of rural people. At the same time, the state courts have been inundated with public interest litigations over their encroachments. Taking this into account and following the footsteps of the Jagpal Singh judgement, the Rajasthan High Court in 2019 **and** the Madhya Pradesh High Court in 2021 directed the respective state governments to establish permanent institutions known as public land protection cells PLPCs. These cells receive complaints on encroachments of rural common lands, follow the due process of law to resolve such disputes, and restore the resources to the gram sabra or gram Panchayati. Today, PLPCs have been constituted in each district of the two states and are headed by the district collector. These institutions are a welcome intervention when more than two thirds of India court litigations relate to land or property and most land conflicts relate to **common.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-15-TEST NO.-25974

Lands at communities can defend their common lands by making a direct representation and avoid navigating through the complex land legislations. This reduces the need to engage professional legal assistance or pay court fees and thus allows a larger section of the population to access legal recourse at a much cheaper cost. By institutional icing an alternative mechanism for dispute resolution, lengthy and costly court battles can be avoided and the judicial workload can be lowered. At present, the high courts only entertain cases where do not intervene; assuming the role of a watchdog allows the judicial processes to monitor conduct and ensure accountability of these cells. How can be made more effective Despite being at a nascent stage, PLPCs are already proving to be instrumental in democratising legal information, building access to justice, and providing swift redress in encroachment cases. However, the larger role that PLPCs can play for the management and governance of common lands, beyond just settling issues of encroachments, needs to be explored further. Land is a subject that comes under the purview of the states. More often than not, common lands are legally classified as a subset of government lands, unless the ownership of a governmental department such as the forest department is already established. The responsibility to survey, record, and maintain land records also lies with the state revenue departments. Simultaneously, the Panchayati Raj system assigns the gram Panchayati the duty to manage and protect the village common lands. However, experience from the ground shows that, while access and usage rights are usually recognised at the local level, they are not formally recorded. Even when common lands are entered into permanent land records, they are not routinely updated. Spatial identification of their boundaries is also missing. Such informational gaps weaken the claim of the community, lead to poor use and neglect of common lands, and encourage private encroachments with little to no defense. An ideal PLPC can attempt to address some of these barriers and focus on preventing encroachments rather than removing them as a corrective measure. For instance, a strong step forward **can** be to undertake comprehensive identification, survey, and boundary demarcation of common lands and prepare cadastral maps. The Digital India Land Record Modernization Programme, which seeks to overhaul the management of land records, is also largely focused on private land ownership and titling. Common lands have also been omitted from **the** latest SVAMITVA Scheme, which uses drone technology to survey inhabited rural areas and formalise land tenure. PLPCs can undertake a similar exercise to create an open access, spatially referenced database for common resources and bring them to the foreground of land governance. They can then enable the database to be synchronised with Panchayati asset registers, lay the groundwork for social audits, and be the baseline to monitor encroachments. Recently, in an attempt to deal with rampant encroachments across the state, the Madras High Court directed the Tamil Nadu government to conduct satellite imaging of all water bodies and maintain **them.**

Since its ins has been its protect rights. In the past five it has played a major role in shaping the country future by with secular. The has been in students issues as well as people the globe. Its cadres have been at the of several the protests against the War, the Mandal report, and the recently held farmers stir. The lost many for its stand against the and the groups in Assam. It was an protest that forced to bus ride service for a section of students. In Kerala, our policy was the first of its kind protest against neo. The Andhra its decision to make all aided the protest. The to get wide support for its protest against in the Class in Assam months ago. At present, has around 40 lakh members across the country, and we also have a strong in states where parties are weak. After Kerala, we have the highest number of in united Andhra Pradesh a national level yatra covering 23 states and it turned out to be a big success. We are a in at least six districts in Gujarat. In is at the forefront of on and the is scaling up its activities in as well. We remain strong in. Do you think there is an among workers? No, I do think so. The ins and are also. They are at the of protests and grants. They are in many relief to contribute a huge amount to the fund in Kerala. The workers take a strong stand against all types of based on gender, caste, and race. Maybe there are some who fail to follow the, but we have been in Kerala In Kerala alone has around 16 lakh members. Unlike in the rules most in the state. Annually, more than union office bearers get elected under its banner. There are for the to keep a tab on all, but we will not support those who are in any illegal activities. If the court finds former leader Vidya K guilty, we will take action against her and those who her in. **We** had noticed the in Nikhil Thomas admission months ago, but he misled even our leaders. We are happy to get an opportunity to scrutinize our cadres and take action to maintain discipline. But we request the media to audit the activities of other organizations as well. Do you think **the** leadership of PM Arsho, who is facing police cases, will send out a wrong message? Arsho has been targeted because he is an influential leader. There is a campaign that he is an accused in a criminal case for attacking a woman. The case is fabricated. He is also not responsible for the mistake in the exam results published by the Maharaja College. It was a conspiracy planned against him. Are SFI cadres losing focus on studies while leading struggles? Our leaders have always given importance to balancing studies with struggles. It still sanctions leave for its office bearers **to** prepare for their examinations. Hundreds of students active in protests perform well in academics. Your views on police action against media persons in Kerala? We have always protested against police actions against media and are unhappy over India fall in the media freedom index rankings. There is nothing unusual in registering a case against a TV reporter who was named by a complainant. But the media should not act as the mouthpiece of anti-left forces. A large number of students in Kerala are opting for foreign countries for higher studies. How can SFI intervene to improve the quality of the higher education sector? Comparatively, the number of students going abroad from Kerala is low—it is around 4%. We are performing well in primary education, but the government has to focus on the quality of higher education. We should go for energy-efficient lights such as LED bulbs that don t generate much heat. We can drive less and use public transport instead. Recycling has to become a habit in our society as the production of new components takes lots of energy and leads to pollution too. Make judicious use of natural resources such as water. Plant trees as a single tree can absorb one ton of carbon dioxide over its lifetime. We should also use less electronic devices for recreational purposes this significant day aims to increase awareness of older people rights and needs, emphasize their contributions to society, and advocate for laws and practices that protect their dignity and well-being. With the worldwide population of older persons growing unprecedentedly, the IDOP has become increasingly important. In 2024, the theme ageing with Dignity the Importance of Strengthening Care and Support Systems for Older Persons Worldwide underscores the critical need to create an environment that respects, empowers, and supports older people as they age. Dignity for older people is a fundamental human right that transcends culture and society. It is about recognizing the wisdom, experience, and strength that older people possess and understanding the great contribution they bring to their families, communities, and society as a whole. Older people frequently serve as stewards of tradition and culture, passing on information, values, and life skills to future generations. Their tenacity in the face of personal and societal problems demonstrates their strength and endurance. Despite their significant contributions, older people are frequently marginalized, enduring ageism and discrimination. Dignity entails ensuring that people are defined not by their age or perceived limitations, but by their abilities, accomplishments, and potential. It involves enabling people to live their lives with autonomy, self-esteem, and a sense of community. However, in many parts of the world, including India, the dignity of older people is regularly undermined by institutional challenges that impede their ability to thrive. India, with over 140 million older adults, is rapidly ageing, presenting both challenges and opportunities. As the number of older adults grows, so do their challenges. One of the **most** pressing issues is the prevalent ageism in Indian society. Ageist attitudes manifest in various ways, from undervaluing older people skills to perpetuating stereotypes that portray them as burdens on their family and society. These attitudes often lead to neglect and a lack of meaningful interaction with older people. Moreover, **the** need for age-sensitive infrastructure in urban and rural settings further complicates their situation. Older people mobility and health needs are rarely considered when designing public places, transit and healthcare facilities, resulting in exclusion from crucial services. Traditional and cultural norms in India value honoring elders highly. However, there is frequently a mismatch between showing respect and recognizing the actual needs of older people. It is not enough to express reverence society must ensure that older persons have the resources to maintain their dignity and self-esteem. This includes listening to their concerns, respecting their desire for independence, and giving appropriate **resources** to meet their physical, emotional, and financial requirements. Climate extremes are exacerbating the issues that older people in India experience. Heat

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-16-TEST NO.-25981

Medical care, and aid distribution during emergencies. The lack of policy and infrastructure to address the special needs of older people during climate crises exacerbates their vulnerability. Shelters, relief camps, and disaster response systems are not designed with older people in mind, and they frequently lack accessible facilities, medical treatment, and suitable support for their mobility and health needs. As India continues to experience the effects of climate change, the country must adopt policies and infrastructure that prioritize the safety and well-being of older people in such situations. The Indian government has taken several measures to empower older people, with a focus on financial stability, healthcare, and overall well-being. The Maintenance and Welfare of Parents and Senior Citizens (Amendment) Bill, 2019, for instance, mandates financial support from children and legal heirs, along with allowances for medical expenses. The Atal Pension Yojana (APY) is another significant initiative that provides pension benefits to informal workers, ensuring retirement security. However, there are still challenges in promoting awareness, particularly in rural areas where older people may need assistance to access these benefits. Greater collaboration is needed to ensure these programs reach disadvantaged groups, enabling them to live with dignity and independence. The issues that older people face cannot be solved in isolation. Addressing these difficulties requires a collaborative effort from all segments of society, particularly the younger generation. Intergenerational discourse and collaboration can effectively bridge the gap between young and old. By cultivating understanding and empathy across generations, we can establish a culture that recognizes and values the needs and contributions of all age groups. This collaboration can help break down age prejudices and develop intergenerational respect, fostering a more inclusive society. Older people have a wealth of experience, knowledge, and wisdom to share, while younger people provide new perspectives, enthusiasm, and energy. Together, they can cooperate to find solutions that benefit society as a whole. This partnership can also help break down age prejudices and develop intergenerational respect. Intergenerational interaction has more benefits than problem-solving it promotes social cohesiveness, improves community relationships, and fosters an inclusive society. Conclusion As we commemorate the **International** Day of Older Persons 2024, we must focus on the value of ageing with dignity. Strengthening care and support services for older people is more than just a moral imperative it is critical to building a society that appreciates all its members, regardless of age. By eliminating ageism, upgrading **infrastructure,** assuring older people resilience in climate change, and encouraging intergenerational collaboration, we can create a world where older people can age with dignity, respect, and support. Last month an unforgettable exhibition was Chameli Ramachandran still life studies of flowers and nature tensile terrain that opened at Vadehras in Delhi. The moment you set your eyes upon her tender, tactile flower studies on the 1st floor at Vadehras you are immediately transported to the world of poets. Demanding and storing Aadhaar. Covid forced employers to green light working from home. One outcome, as normalcy at the workplace returns, is disaffection at having to go to office. Organisations, particularly in the technology industry, are facing employee churn. So employers are experimenting, especially in the West, with concepts like a 4 day working week. It early days and research shows mixed responses higher productivity somewhere, higher stress elsewhere. But the real question is which kind of employees will usually get almost half the week off. Economic historian Joel Moyer posits that only about 2 3 of people drive economic growth and progress. The ones with the fundamental ideas and applications to change the way an entire society does things. Add some more skilled people to that list. And it still a sliver of the workforce that, for practical purposes, is indispensable. It a supplier market here and a 4 day week for this cohort can become the norm. The rest are caught in the maelstrom of the onset of the fourth industrial revolution when digital models fundamentally change almost every activity. What the first three industrial revolutions teach us is the impact of these transformations on work is a combination of three incongruent forces destruction of traditional jobs, productivity increases and eventually creation of new kinds of work. These forces play out over time and a 4 day week in this context can have a very different implication. For some workers, it may mean less work and also less pay. For some employers, it may mean a Hobson choice between hiring more to allow 3 day weekends or losing top talent by sticking to 5 day working weeks. The idea of a 4 day week will evoke elation or apprehension depending on the nature of one skill and job. It may also test the implicit social agreement that underpins the interaction between markets, workers and the state. The future not all rosy. Tagore won the Nobel in 1913. Is the award of the International Booker prize to Geetanjali Shree for Tomb of Sand in Hindi Ret Samadhi, 2018, **translated** into English by Daisy Rockwell, 2021 the next biggest landmark in the history of Western recognition of literature in the Indian languages Surprisingly and sadly it probably is. The excitement and jubilation caused by the award is, understandably, in direct proportion to how seldom the West casts on us **an** eye of kindly, if not condescending, approbation. The acclaim for the award both here and there has focused on this being the first novel from any Indian language to have won this prize. By implication, however, the award honors also the mass of Hindi literature that lies behind this one lucky book and equally the literature in all our languages and, indeed, in all the languages of South Asia as Geetanjali herself was quick to point out with becoming modesty. Remember that fable of how the shoe was invented, when the humble man proposed that the king cover his **feet.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-16-TEST NO.-25983

The Supreme Court recent ruling that GST Council decisions are not binding on states can at one level be seen as a reiteration of the constitutional provision there is nothing in constitutional amendments relating to GST to force compliance with GST Council decisions. It just a healthy convention that has developed that the Centre and states have decided to fall in line with the Council collective decisions. All governments still go back to their respective legislatures to give statutory sanction to GST Council decisions, which means the ultimate power continues to reside with legislatures. A UIDAI advisory warning citizens of the misuse of Aadhaar card photocopies and e copies by unlicensed entities went viral across the country. A stung GoI withdrew the note and asked cardholders to exercise normal prudence while sharing Aadhaar numbers. However, specific concerns raised by the UIDAI advisory were addressed. Officials seemed more worried about the possibility for misinterpretation and stressed that the Aadhaar ecosystem had adequate safety features. Many private agencies demand and collect Aadhaar card photocopies even when they are not licensed to do online authentication. Digital photo editing tools can easily manipulate images and text on Aadhaar card copies. However, such fraud can evade authentication checks against UIDAI central identities data repository. Still, it is a fraud. But one that has a solution. UIDAI allows offline verification seeking entities OVSE, which don have to be accredited, to scan the QR code on Aadhaar cards to check identity and demographic information of a person. And Section 8A 4 of the Aadhaar Act 2016 stipulates that no OVSE shall collect, use or store Aadhaar numbers or biometric information of any individual. Perhaps recognising the scale of unauthorised storage, UIDAI regulations in February mandated that any organisation seeking to check identities offline should scan the QR code on Aadhaar cards, verify the authority digital signature, and tally identity information encoded by the QR code. UIDAI was therefore not wrong in suggesting caution in the press release that was withdrawn. Such digital identity scanning should certainly replace the collection of photocopies. And UIDAI should perhaps penalise **unauthorised** storage. An additional threat is the collection of biometric information like fingerprints by employers, lenders, state agencies. Unlike UIDAI, these smaller entities cannot boast of robust security protocols. Theft of such poorly stored biometric data is undermining Aadhaar enabled payment systems. Telangana police recently warned users who lost money **they** should disable their biometric link to Aadhaar. These crimes require GoI to strongly regulate biometric and Aadhaar data collection by private entities. The crux of the problem is that governments have been too permissive about private and public entities seeking and collecting personal data. The Supreme Court had barred commercial entities from demanding Aadhaar. The flipside was that many people in a document poor country did have any means to prove identity when, say, applying for a SIM card. GoI specifically allowed telecom companies to use Aadhaar for e KYC. But restrictions should be put in for many other **entities.**

**350th: "unauthorised"** **400th: "they"** **500th: "entities."**

In leather rather than what the wise men suggested he do, which was to put the entire world in a pouch Hearing a section of American politicians, principally of the Republican persuasion, trying to diagnose the cause of the uniquely American way of dying, namely getting shot while in school, reminds one of that fable. Schools, they say, should be locked in like a prison, with a single entry and exit. It might make the school a deathtrap in a fire, but hey, you asked for a solution. Or better, equip every school teacher with an AR 15 because obviously what would make a school safer than gun toting, armed to the teeth math teachers, with the armory right next to the library It good business for the gun manufacturers, why sell to the shooter when you can also sell to the school There should be stringent background checks and mental health checks even though each and every school shooter used legally procured guns and would not have failed a background check. The wise men in the fable were not so bright, but here, it is not that the politicians do not know, they know perfectly well because many countries which have outlawed firearms have seen school shootings go down to zero, but yet, yet, nothing happens, except yet another tragedy on an epic scale. Baby food may be sold out in today USA, but assault rifles are always available. For an outsider, this is possibly the most difficult thing to understand about the American way. It is a country that seemingly cares so much for the life of its own citizens that they put safety stickers everywhere, and will even bomb a country for harming an American citizen, they don even care if it the right country or not. However, they are willing to put up with the slaughter of innocent children, in order to preserve a notion of individual liberty, a notion that has become an article of faith. Like the worst kind of blind faith, here is no America without guns cannot be reasoned against, and **there** are financial interests in American politics that ensure that the blind faith morphs into fanaticism, which is why America will continue to stay in this relentless cycle of violence and grief, despite a very simple solution staring at it in its face. Spirituality entails looking inwards to assess our **thoughts,** shed negativity and work toward imbibing purity and positivity, moment to moment. Self control, quest for truth, and intuitive wisdom are all embellishments that one gathers during the course of one spiritual evolution. Over a period of time, spirituality paves way for a mind that thinks on the lines of inclusiveness and is full of love. These virtues are at the core of all religions. Acceptance of the fact that all religions lead to the common goal puts an end to all differentiation. And one realises within the presence of Ek Omkar the universal divinity. It is such a **liberated.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-16-TEST NO.-25985

Mind, reverberating the eternal Pranav mantra, His Naam, that defeats miseries and soaked in the nectar of divine bliss, oozes an and every moment. The spiritual journey starts with the acceptance that there is one supreme energy, power and beauty, a single reality called at, the Truth, which has no name, but people call it by different names as per their perception. Every other thing, in its essence, is just a different manifestation of the same unifying reality. We are just one of the various variables in the equation of reality. We humans have two abstract identities the soul and mind distinct from our physical entity but related by the divine thread of Ek Omkar. The consciousness of universal oneness of mankind is complete and pure by default, though it may at times be shadowed by our mind that is full of desires and in constant search of outwardly pleasures through senses. Inward reflection in our mind is essential to minimize attachment to outwardly attractions. This can help in piercing the wall of illusion to reach the Truth. In detachment, your love can be directed to the whole and the whole includes its parts. Oneness is the deep understanding that we are all interconnected and interdependent. While this is a simple truth, it also profound and powerful, because it so different from the belief that we are separate and that we need to struggle and compete against each other to survive. We are much better off when we work together to survive. In Oneness, there are no winners or losers. All of us become winners. Once one starts living and acting in this manner, life moves towards its aim and success. Oneness is not a religion, but it is at the core of every religion. And more than a belief, it a scientific fact. Scientifically also, at the subatomic level, we are all connected. The same energy that powers me powers you. Consider the light bulb. It does matter where that light bulb is made or what it looks like, it is electricity that lights all light bulbs. The **Law** of Purpose is another important spiritual law, and it tells us that everyone shares exactly the same purpose in life, which is to add the highest value to everyone at all times. When we understand that this is our purpose in life, it is like having the power of **the** Universe on our side. This is the only way to achieve permanent bliss, joy, and harmony in society. The sale and purchase of a home calls for a common platform for homebuyers and sellers. The same applies for landlords who have rental properties and tenants seeking rental properties. Real estate brokerage firms act as a common platform for homebuyers, home sellers, landlords, as well as tenants. Real estate brokerage firms have sprouted up in India since the economic liberalisation of the country housing market. The Indian real estate market currently has numerous brokerage firms that offer world class services **to.**

Home buyers, home sellers, tenants, and landlords. In fact, these brokerage firms have played a pivotal role in facilitating home sales during the period of lockdowns induced by the COVID 19 pandemic. The future of real estate brokerage firms in India seems bright firstly, due to the advent of advanced technologies. For instance, Met averse is a new technology that promises very high potential for real estate brokerage firms in India. Forward thinking real estate brokers across the country have stayed relevant by adopting ground breaking technologies more than any other service based industry. The adoption of pioneering technologies are not only uplifting consumer experiences but also enabling real estate brokerage firms to stay ahead of the curve. Additionally, the thriving real estate brokerage firms also actively leverage online marketing programs, including Google Ad words, social media, and other forms of digital marketing for promoting resale properties, new homes, and future developments. Real estate brokers understand how difficult it can be to navigate the housing market and how clients are always looking for assistance. Client driven real estate brokerage firms are, therefore, emphasizing on training their brokers so they can better understand the needs of their clients in order to make their home buying and home selling experiences seamless. It is no wonder that more people want a trained professional on their side if they are buying or selling a home, as it is one of the biggest financial transactions of a person life. As a result, real estate brokerage companies are taking steps to groom their agents brokers in the best possible way in order to stay top of mind with clients and generate more revenue. Additionally, training sessions also provide agents with the opportunity to learn time management and perseverance skills that will allow them to succeed in the industry. Last but not least, it can be intimidating to deal with the latest technologies that are disrupting the industry. Real estate agent training is, therefore, critical to assisting them in mastering technology rather than being threatened by it. Furthermore, regular training sessions not only upgrade the skills **of** real estate brokers, but also standardize the procedure transactions are handled by real estate agents backed by the company. Conventional CCTV cameras for monitoring crime scenes have now become redundant and are being replaced by smart image video based analytics. The capability of video analytics devices to interpret and **analyze** video clips seamlessly makes them indispensable for law enforcement agencies. Video analytics systems that have been playing an instrumental role in assisting law enforcement agencies in streamlining criminal investigations are currently in high demand. How does Video Analytics Work One of the fastest growing areas of Artificial Intelligence AI is Video Analytics, known for helping law enforcement agencies and significantly reducing crime rates. It makes use of AI to gather accurate data to detect and prevent crimes. Furthermore, this computer based video footage assessment leverages algorithms to distinguish between object types and helps identify particular actions in real time, **besides.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-16-TEST NO.-25989

Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural that your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, shoulders, etc. and stretch those parts of your body. Is positive thinking an inherent characteristic of a person or can it (69) be developed in one psyche?. The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance theory, since positive attitude is not a physical feature but a mental faculty, it cannot be purely hereditary. It can be developed. Moreover, parents play a major role in developing this quality of a child. A child, who watches his parents working hard, having faith **in** success through their words, behavior and body language, is likely to develop a similar attitude. The children of short-tempered, over-cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parents behavior in front of their children. They must exude **confidence,** self-belief and hope, especially in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. There is no better education for a child than watching his parents come out of a tough situation by means of earnest endeavors Such success not only gives more joy but also increases self-confidence. Stretching s specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be **an** integral part of every workout program. It not only helps increase your flexibility, which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-16-TEST NO.-25990

India, a land of rich cultural heritage, breath taking landscapes, and bustling cities, is in a formidable battle against air pollution. As one of the most polluted countries in the world, India faces significant challenges in tackling the pervasive problem of deteriorating air quality. This formal introduction to India Battle against Air Pollution sheds light on the urgent need for comprehensive measures and collective action to address this pressing issue. The battle against air pollution in India is not just about improving the air quality we breathe; it is a fight for public health, environmental sustainability, and the well-being of future generations. Air pollution in India has reached critical levels, posing severe threats to human health and the environment. Major cities, including Delhi, Mumbai, and Kolkata, regularly experience hazardous levels of pollution characterized by high concentrations of particulate matter, harmful gases, and other pollutants. The consequences are dire, with respiratory illnesses, cardiovascular diseases, and other health complications rising. Vulnerable populations, such as children, older adults, and those with pre-existing conditions, are particularly susceptible to the detrimental effects of polluted air. Furthermore, the impact of air pollution extends beyond human health, affecting ecosystems, agricultural productivity, and economic sustainability. The dire state of air pollution calls for immediate and concerted efforts to combat this pressing challenge and secure a cleaner and healthier future for all. Air pollution in India is a significant and pressing issue with severe consequences for public health, the environment, and overall well-being. The country consistently ranks among the most polluted nations globally, particularly in densely populated urban areas. The extent of air pollution impact can be seen in the Health Effects as Air pollution in India contributes to a wide range of health problems. High levels of particulate matter PM2.5 and PM10 and toxic gases like sulfur dioxide SO2 and nitrogen dioxide NO2 have been linked to respiratory illnesses, such as asthma, bronchitis, and lung cancer. Prolonged exposure to polluted air can also lead to cardiovascular diseases, weakened immune systems, and premature death. Many major cities in India, including Delhi, Mumbai, Kolkata, and Bengaluru, frequently experience hazardous **levels** of air pollution. During certain times of the year, such as winter in northern regions, pollution levels can reach alarming heights, leading to visible smog that poses immediate health risks to residents. Furthermore, Air pollution has far reaching economic implications. It negatively affects productivity in both the agricultural and **industrial** sectors due to crop damage, reduced worker efficiency, and increased healthcare costs. The tourism industry can also suffer as visitors are deterred by poor air quality. Air pollution contributes to environmental degradation and ecological imbalances. It can harm vegetation, reducing crop yields and impacting biodiversity. Pollutants emitted into the air can also lead to acid rain, further damaging ecosystems and water bodies. Circumscribing this, Air pollution exacerbates existing socio economic disparities. Vulnerable populations, such as children, the elderly, and low income communities, bear the brunt of its effects due to limited access to healthcare and inadequate living conditions. This **further** widens the gap between

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-16-TEST NO.-25991

Fossil fuels and biomass all contribute to the problem. Additionally, geographical factors such as landlocked regions, weather patterns, and stubble burning in neighboring states exacerbate the situation. Inefficient waste management systems, construction activities, and industrial emissions compound the issue, leading to a toxic cocktail of pollutants pervading the air. The Indian government has recognized the gravity of the air pollution crisis and has implemented various initiatives and policies to address this pressing issue. These efforts aim to reduce pollution, improve air quality, and protect public health and the environment. Some notable government initiatives and policies include National Clean Air Program NCAP, Launched in 2019; the NCAP sets ambitious targets to reduce particulate pollution in 102 cities across India. It focuses on a multi sectoral approach, including city specific action plans, increased monitoring, and implementation of pollution control measures. India has also implemented the Bharat Stage VI Emission Norms, which aim for stricter emission norms for vehicles transitioning from Bharat Stage IV to Bharat Stage VI. This has resulted in reduced vehicular emissions and regulations more stringent on fuel quality, contributing to improved air quality. The National Green Tribunal has been established as a specialized body to handle environmental disputes and enforce environmental laws. It plays a crucial role in holding polluters accountable and promoting ecological justice. The government has promoted renewable energy sources, such as solar and wind power, as alternatives to fossil fuels. This shift toward cleaner energy helps reduce pollution from power generation and mitigates the overall carbon footprint. I would also like to thrust upon the Swachh Bharat Abhiyan Clean India Mission. While primarily focused on sanitation, this nationwide campaign also emphasizes waste management and cleanliness, contributing indirectly to the reduction of air pollution. While government efforts are crucial, combating air pollution requires a comprehensive and multi stakeholder approach. Stricter enforcement of emission standards, investment in public transportation and infrastructure, and the promotion of clean energy alternatives are imperative. Urban planning should prioritize green spaces, walking and cycling infrastructure, and the reduction of vehicular congestion. Public awareness campaigns on the health impacts of air pollution can **drive** behavioral change and encourage citizens to adopt sustainable practices. Technology and innovation play a crucial role in combating air pollution in India. They offer promising solutions and advancements that can help reduce emissions, improve air quality monitoring, and promote sustainable practices. Advanced monitoring systems equipped with sensors and data **analytics** can provide real time information on pollution levels. These systems help identify pollution hotspots, track pollutant sources and facilitate targeted interventions. Additionally, mobile applications and online platforms can empower citizens with access to air quality data, enabling them to make informed decisions and take necessary precautions. Innovation in industries, transportation, and energy sectors can lead to developing and adopting low emission technologies. This includes cleaner fuel alternatives, such as compressed natural gas CNG, electric vehicles EVs, and hybrid vehicles. Advancements in renewable energy t

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-16-TEST NO.-25992

Minimizing the release of pollutants from landfills and waste disposal sites. Innovative waste treatment technologies, including waste to energy systems, can help convert waste into usable energy while reducing the environmental impact. Nowadays, Remote sensing techniques and satellite imaging provide valuable insights into the sources and patterns of air pollution. These technologies can help identify pollution hotspots, track changes in air quality over time, and inform targeted interventions and policy decisions. Technology driven smart city solutions can contribute to reducing air pollution in urban areas. Integrated transportation systems, smart grids, and energy efficient buildings can help optimize resource utilization and reduce emissions. Additionally, using smart sensors and automation can improve the efficiency of public transportation, reduce congestion, and promote sustainable urban planning. It is crucial for India to foster an environment that encourages research, development, and innovation in technologies aimed at combating air pollution. Collaboration between the government, research institutions, industries, and startups is essential to harness the potential of technology and drive sustainable solutions. By embracing technological advancements and promoting innovation, India can make significant strides in its battle against air pollution and pave the way for a cleaner and healthier future. Active citizen participation is vital in the battle against air pollution. Individuals can contribute by making sustainable choices, such as using public transport, carpooling, and reducing personal vehicle usage. Promoting green practices at home, such as proper waste management and energy conservation, can make a substantial difference. Citizens can also engage in advocacy efforts, raising awareness and holding both the government and industries accountable for their actions. India battle against air pollution is a fight for clean air and healthy lives. It requires unwavering commitment, collective action, and a comprehensive approach involving the government, industries, technological innovations, and citizens. By implementing and enforcing stringent policies, promoting sustainable practices, investing in clean technologies, and raising Yes, it is not good to go outside one comfort zone. This idea contradicts the widely accepted gyan given by seers that Success lies beyond one comfort zone. However, I share a different perspective on comfort and discomfort as a function of **Success.** Laddu Pinto was an MBBS aspirant student. He appeared for his first attempt at the NEET National Eligibility cum Entrance Test conducted by National Testing Agency in 2022. He could not qualify. Dejected Laddu met a lot of coaching experts. On proper analysis of Laddu preparedness, they all concluded **that** Laddu had the potential to succeed in the examination. However, he needed to put in additional quantum of effort to crack the test. The coaching centres suggested ideas and ways to be successful. Laddu was asked to burn the midnight oil. They told him to go beyond his comfort zone. There is no other way out, You will have to go beyond your comfort zone to be successful, said one guru. If you really love your goal, be ready for hardship and discomfort. With all this Gyan, Laddu pulled his courage and started preparing for NEET 2023. Initial few **days** went on a high note. Laddu could only sustain his enthusiasm for up to two months. He started experienc

Month-long military confrontation involving US, Israel, and Iran, which began in late Feb, was suspended on March 25, 2026, under a temporary ceasefire. The conflict claimed nearly 5,000 lives, and left many of these passengers, a railway journey is not a choice but a necessity. In a system that carries such volumes across vast distances, safety is not a technical metric. It is a matter of public trust. GOI's railways minister argues that the past decade has seen clear policy, sustained funding, and modern technology transform the safety ecosystem of Indian Railways Every morning, as India wakes up, its railways are already in motion. More than two crore passengers step onto the country's trains each day, from office-goers, students, and migrant workers to families and soldiers. The good news is that, despite the Iran war and energy crisis, India's economy is not in hot water. But agriculture, which still makes up about a quarter of GDP, may have to skim warm water later this year. The IMD has predicted a weak monsoon, due to the El Nino effect, which is caused by the warming of the Pacific Ocean. Whenever that happens, every few years, summer rainfall over India suffers. IMD's predicted the country, as a whole, will get 92% of normal rain, which doesn't sound so bad, until you read the fine print. First off, per IMD's forecast, monsoon is more likely to be deficient than below normal this time. This has been the case in most El Nino years. And the difference is significant: in a deficient monsoon, rainfall is less than 90% of long-term average. Secondly, rainfall distribution is not uniform across the country. For example, 2024 was a good monsoon, yet, key agricultural states like Punjab, UP and Bihar got less rain. Even in a deficient year, some parts may get surplus rain, some may be near-normal, while the rest could have acute dry conditions that make farming extremely challenging. It's a fact that much of Indian agriculture remains rain-fed, and monsoon provides 70% of moisture for farms. In states like MP, half of wheat acreage **is** rain-fed. In Maharashtra, rain dependence rises to 80%. Production of pulses, an important source of protein in India, falls in every El Nino year, sometimes by more than 25%. Ground water levels fall, as farmers run tubewells longer. Meanwhile, there's less water in reservoirs for irrigation and power generation. **This** year, the challenge is tougher because unseasonal rain damaged standing crops over lakhs of hectares in March-April, and Iran war has shrunk supply of fertilisers. What else? If war continues, diesel might become costlier. It's not quite the Goldilocks story we heard at the start of this year, but look at the bright side. An S&P analysis shows India's banks and businesses are in good health. In the worst case, crude at $130 over the year may shave off 0. 8 percentage points from GDP growth. But crude has mostly tended below $100 over the past week. Last year, **agriculture** acted as a stabilising force on the economy. This year, if farmers need help, the government should step up. Although there's a chance that formation of a different climate phenomenon, called Indian Ocean Dipole, could cancel out El Nino in Aug-Sept. We can use a miracle. Whether it's oil & gas or crucial inputs like gallium or cobalt, import restrictions/high prices rarely produce a complete breakdown. Because markets find alternatives. What's scary is knowledge-based chokepoints. There's no easy solution. That's where i

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-17-TEST NO.-25997

For Laddu was different. I asked him to draw a circle on a piece of white paper. This was named the circle of comfort. I asked him to list down all those daily that he feels he is with. These were to be placed inside the circle. Then I asked him to list those he finds and. Laddu started jotting down and finally got an extensive list ready. Most of the items on his list were like these: Laddu had written all these outside the circle drawn on the paper. Then I asked Laddu to draw one more circle outside the inner circle. The was to draw the new circle outside the list of able activities by him! I told Laddu to name this outer circle the Circle of Revised Comfort. With this, all those activities spotted outside the circle of comfort got inside the circle of Revised Comfort. Friends, what we say and think, makes a lot of impact on our energy levels. In the earlier situation, Laddu was working hard, but he was convinced that he had made with his precious life comfort. The sense of doing beyond his mental and physical drained his energy very fast. Eventually, he could not sustain the overload of hard work and. After meeting me, the circle of comfort became bigger. All those lying outside the comfort level were now placed well within the Circle of Revised Comfort. This made Laddu the believe that he could do all the work naturally. He did not face any inertia in slogging hard. As a result, he qualified in the fresh attempt of the. PM Modi arrived in the US and from portraying India soft power on the 21st of June at the United Nations where it was that Yoga from so many different nations had come together that it had made it to the Book of World Records, to and big he made Indians in every proud. It was a gruelling three days. But then Modi is known to drive himself to limits in most human beings. After all he is the only **world** leader who has worked for nine years without taking a break and his working hours can extend to anywhere between 12 to 14 hours a day and sometimes he is known to work even longer than any of his staff I had just left the US for London when **the** PM visited but the buzz was already there. Even I who have seen many state leaders visit The US could not quite grasp the extent to which President Biden went to make this visit special and different. Some journalists said that the kind of welcome he got at the White House during his visit, only the Pope had got before him. But having lived and reported from the US I could not believe that 7000 Indians were invited to the graceful and lavish ceremony during the day, with all the pomp and glamour that is not often given to **a** head of state and that to in the White House premises. Biden was right when he told Modi on 21st May, in Japan, You are too popular, I want your autograph. Rarely has the President of America said this to the PM of a country. PM Modi apart from selecting gifts that would intrigue the President and his wife never forgot to say that the welcome he got was for the 1.4 billion people of India and the diaspora. The 7.5 carat diamond made with green energy or the first edition of a book by poet WB Yeats on The 10 Principles of the Upanishads, and the hand crafted sandalwood box with a Ganesh, had a special significance for the President and First Lady. When PM Modi was asked the question on Minority Muslim treatment in India, he answered he was amazed that such a question could even be asked in a vibrant democracy where every program and policy of the government was

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-17-TEST NO.-25998

Shiromani Akali Dal President, Sukhbir Singh Badal); The decision to extend the jurisdiction of the BSF, is an infringement of the rights of the state, and an attack on the federal structure of the country; The decision was taken without consulting the state governments; If the BSF has to conduct any search, it can always do it along with the state police, which has been the practice for years. Why was the sudden need felt to enhance the BSF's jurisdiction? The BSF doesn't have a good track record, particularly, when it comes to human rights in the villages on the border; The Centre and the Home Minister Amit Shah are trying to weaken the states; The Centre's move, is a brazen infringement of the territory of the states; The move is not in the spirit of cooperative federalism, and is an encroachment upon state's rights; The states are already agitated with the politicising of the Government Agencies. On the top of it, if the government resorts to such things, then it is encroaching upon the states' rights; It may be tempting for the Centre, but it should be careful of its greed, even if they have a majority. Amrinder Singh, Former Chief Minister of Punjab, while supporting the move, has opined that, the BSF's enhanced presence and powers, will make the state stronger. He has therefore cautioned against dragging the central armed forces into politics. Similarly, Assam Chief Minister, Himanta Biswa Sarma has welcomed the move, and said that the move will serve as a deterrent for illegal infiltration. welcoming the extension of BSF's operational jurisdiction, he opined that, in coordination with the state police, this move will serve as a strong deterrent for cross border smuggling & illegal infiltration. He opined further that, the move will strengthen national security and better serve the national interest. BSF officials opine that the amendment will help them in effectively curbing trans-border crimes. The new amendment, they say, brings in uniformity in its operations in the border states of Punjab, West Bengal, Gujarat, Rajasthan and Assam, where it can now **operate** within 50 kms area from the border. The amendment effected on October 11, 2021, establishes uniformity in defining the area, within which BSF can operate as per its charter of duties and execute its role and the task of guarding the border in its area of deployment. The move **will** enable improved operational effectiveness on the part of the BSF, in curbing trans-border crime up to 50 kms from the international border within the states of Gujarat, Rajasthan, Punjab, West Bengal and Assam, which have areas touching their border with our neighbouring countries. The notification will allow the BSF, guarding the border, to execute the powers of search, seizure and arrest, for the purpose of prevention of any offence, punishable under the Passport Act, the Registration of Foreigners Act, the Central Excise and Salt Act, the Foreigners Act, the Foreign Exchange Management Act, the Customs Act, or for any **cognisable** offence, punishable under any other Central Act. In the areas demarcated by the Centre, the BSF will have powers of arrest, search and seizure, at par with the police. The BSF, however, will not have the power to investigate crimes, and the force will have to hand over suspects or accused persons to the local authorities. The BSF can only be involved in can

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-17-TEST NO.-25999

ses related to arms and ammunition, and the Narcotic Drugs and Psychotropic Substances Act. Expansion of the Border Security Force jurisdiction from 15 km to 50 km inside the international border along Punjab, West Bengal and Assam by the home ministry, has been done to curb trans-border crime, and is not an intrusion into autonomy of the states. The fear of the states therefore seems to be unfounded. This amendment is going to enable improved operational effectiveness on the part of the BSF in curbing trans-border crimes, which include, smuggling of drugs, ammunition, busting the cattle smuggling and fake currency rackets, in the said states. This move has thus given more responsibility to the BSF, as the depth to which it can operate, has been expanded. Also, it has been clarified, that the action on the part of the BSF will be need-based. It is not that the troops will always be deployed in that 50 km area of the state. It is only that the area of operation of the BSF has been increased. Looking at the factual picture as reported, it is obvious, the move on the part of the Home Ministry is in the larger interest of national security. On all the borders mentioned above, it is widely known that the country has been facing the problem of infiltration of illegal migrants from the neighbouring countries, particularly Bangladesh, in Assam & West Bengal. On the Punjab, Jammu & Kashmir borders, as also on the Gujarat border, since the days of partition of the country, we have been facing the problem of infiltration, besides terrorist attacks from the terrorist groups aided & abetted by Pakistan and smuggling of narcotics, to name a few. Border Security Force has contributed immensely in safeguarding our borders along with the army & other para-military forces. Extending their jurisdiction was therefore utterly essential to enable the force to operate more effectively in discharging its duties. Casting aspersions on the force, as Senior TMC MP Sougata Roy has done, is highly undesirable & needs to be condemned in the strongest words. Looking at **the** reactions of most of the opposition leaders, including Chief Ministers of the states ruled by the opposition, accusing the Central Government & the Home Minister, Amit Shah, of trampling down the principle of cooperative federalism & politicising, it can only be said that, it is not the Home Minister, **but** the opposition leaders, who are needed to be blamed for politicising an issue, that concerns the security of the country. China objected to the recent visit of Vice President M Venkaiah Naidu to Arunachal Pradesh, saying ‘the country was opposed to his visit as it has never recognised the state’. Chinese Foreign Ministry spokesman Zhao Lijian, known as one of the important ‘wolf warrior diplomat’, told reporters in Beijing: “China’s position on the boundary issue is consistent and clear. The Chinese government has never recognised the so-called Arunachal Pradesh established unilaterally and illegally by the Indian side and firmly **opposes** the Indian leader visit to this above-mentioned area. He further asked India to earnestly respect China major concerns, stop taking any action that would complicate and expand the boundary issue and refrain from undermining mutual trust and bilateral relations. China has been routinely objecting to the visits of the Indian leaders to Arunachal Pradesh to buttress its claims. India has been routinely objecting to such statements. This time also the MEA spokesperson

And mills. The types of white collar crime are varied and many and they take place in all segments and professions of the society. The range of white collar crimes has vastly expanded with advent of technology and complex financial products and arrangements. Almost everyone these days comes across fraudulent emails purportedly sent by one friends and relatives stating they are in distress and requesting urgent financial help of a substantial amount. These are the crimes where perpetrators do not necessarily come face to face with the victims and their identity therefore remains veiled or shrouded in secrecy. They are far more harmful to the society because these are the very people who ideally should be cited as a moral example and role model to others because of the glory and fame attached to their alma mater. They are the ones who are expected to behave responsibly but are unfortunately committing such crimes and polluting society. These crimes have hardly any eyewitnesses, evidence is difficult to come by because they are committed mainly while sitting in cool environs and behind closed doors of the chic rooms of modern corporate offices. They are committed silently and in a nonviolent but cold blooded manner. Supreme Court of India in State of Gujarat v s Mohanlal Jitamalji Porwal and An has very poignantly observed the cause of the community deserves equal treatment at the hands of the court in the discharge of its judicial functions. The Community or the State is not a persona non grata whose cause may be treated with disdain. The entire Community is aggrieved if the economic offenders who ruin the economy of the State are not brought to books. A murder may be committed in the heat of moment upon passions being aroused. An economic offence is committed with cool calculation and deliberate design with an eye on personal profit regardless of the consequence to the Community. A disregard for the interest of the Community can be manifested only at the cost of forfeiting the trust and faith of the Community in the system to administer justice **in** an even handed manner without fear of criticism from the quarters which view white collar crimes with a permissive eye unmindful of the damage done to the National Economy and National Interest. The trend of white collar crimes in India poses a threat to the economic development of the **country** and has the potential of tarnishing its image in the comity of nations affecting it credibility as a favored investment destination. It therefore requires immediate and serious intervention by the government by not only making stricter laws but also by ensuring its proper and strict implementation. Reverting to the front running episode at a mutual fund it must be borne in mind that having regard to the fact that mutual funds use money of not so well informed common investors, Ministry of Finance and SEBI must look at the acts of malfeasance and misfeasance of key employees of mutual **funds.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-17-TEST NO.-26001

The symptoms of bladder cancer are often similar to urinary tract infection. However, patients are advised to treat symptoms running past 10 to 15 days as a red flag, and book an appointment with an oncologist. Bladder cancer ranks among the top 10 types of cancer globally. Among men, it is the fourth most prevalent type of cancer, following prostate, lung, and colorectal cancers. Yet the awareness about bladder cancer remains limited in India. As per official records, 18,921 new cases of bladder cancer were reported in India in 2020. In all likelihood, there are many more people suffering from the ailment, but undiagnosed owing to several reasons. This bladder cancer awareness month, let try to understand this little understood disease. More common in older men bladder cancer, a common type of cancer that begins in the cells of the bladder is more common in adults who are on the other side of 60. Men above the age of 60 are a lot more prone than women of the same age, or younger adults. Globally, the average age for diagnosis of bladder cancer is 73 years. When we consider this in the context of Indian patients, it is easy to understand why there is such low awareness and lack of proactive access to timely diagnosis and care. Often, any kind of symptoms that don seem life threatening are seen as a part of ageing, and hence, not dealt with expeditiously. Not the same as Ute moreover, it does help that there are several similarities between the symptoms for bladder cancer and urinary tract infection Ute, an infection of the urinary system that is relatively common. In fact, transitional cell carcinoma and squamous cell carcinoma, the two prevalent types of bladder cancer, are known to exhibit symptoms that are very similar to Ute. This includes a strong burning sensation while passing urine, signs of blood in the urine, urge for frequent urination, and back pain, among others. Given the Ute like symptoms, it is critical for patients to look out for distinguishing factors to help reach an accurate diagnosis. One **of** the key signs to look out for is how long the symptoms persist or even recur. Most Utes recede within a week or so. Therefore, patients must treat symptoms running past 10 to 15 days as a red flag, and book an appointment with an oncologist. Unlike bladder cancer, **women** are more likely than men to get Utes. Incidentally, a history of frequent Utes is considered to be a risk factor bladder cancer. A family history of cancer, especially bladder cancer, and any long term exposure to specific industrial chemicals also play a role in increasing a person risk for bladder cancer. In case of doubts related to the symptoms, it is best to seek medical advice. Remember that medical test results can take a couple of days. Diagnosis and treatment, in case the results turn out to be positive, can only begin post that. Just as with other **types.**

Providing users with instant notifications alerts. It generates automatic descriptions of what appears in the video stream, which can later be used by investigators for tracking criminals, automobiles, and other objects. The advent of Video Content Analytics VCA technology has increased the significance of video footage at an exponential rate. The use of video analytics can assist law enforcement agencies in monitoring live feeds and searching recordings for video evidence. Apart from these, such smart systems also help law enforcement agencies in multiple ways Accelerates Investigations Surveillance devices integrated with video analytics technology can expedite video investigations by providing an easy way to review hours of video footage in minutes. Face recognition software identifies potential suspects quickly with the help of digital images taken from videos or alternative sources. Identifies Criminals Suspects with Ease The integration of deep learning technologies into video analytics devices helps in detecting specific details that human eyes cannot quickly identify. Such smart devices can differentiate people based on gender, figure, complexion, and other relevant factors, such as the color of their dress, objects they are carrying, and so on. For example, if an investigator is searching for a red clad woman suspect carrying a tote bag, analytics allow the investigator to focus only on people who match the description. Once the suspect has been identified, the device can track down the person on other live streams. Moreover, once she is isolated it becomes simple to monitor her actions. Identifies High Crime Areas Drug trafficking is an illegal trade not only in India but around the world. The crime of drug smuggling is combated vigorously by the country customs authorities. In the past, finding sites of illegal drug sales called for an entire team of investigators to watch certain suspected neighborhood for countless days. However, it is now possible to completely automate this task by setting up a hidden virtual analytics enabled surveillance camera and customizing the system to detect significant foot traffic. When a suspected individual or a group of individuals travels frequently between locations, it is most likely that the place is being **used** for smuggling drugs and then sold. Video analytics systems can provide valuable and actionable information to street crime investigators about such activities in real time. Mitigates Crime Rate Video analytics systems play a key role in combating crimes. These advanced surveillance systems have the potential to track down accused **rapists,** murderers, and traffic violators in fewer than 24 hours. Additionally, technical capabilities of video analytics, such as facial recognition algorithms, allow law enforcement agencies to easily chase down criminals, thus reducing crime rates. The use of video analytics can reduce crime through the detection of intruders, abandoned objects, and burglary, as well as individuals suspected of carrying out the crime. Video Analytics Overhauling the Future of Crime Detection Video analytics systems have made the process of surveillance more reliable and efficient. Advanced technologies such as these provide law enforcement agencies with unprecedented power to stem crime. The image processing **technology.**

Provides evidence for crime investigation. The law enforcement agencies are increasingly deploying security cameras with AI based video analytics in public facilities across the country to maintain the safety and security of the masses. This is among the major advantages offered by this technology in surveillance and security. Keeping security in mind, the virtual analytics surveillance cameras do not store data on their SD cards. Instead, they instantly upload the video to the cloud using a secure wireless connection. Moreover, the process of video analysis offers investigators to overcome the problem encountered due to fuzzy images. Each frame holds its own importance in the investigation since it is related to different features of the criminal suspect like vehicle license plate number, etc. Digital image processing algorithm solves the problem and enhances the target details thus offering valuable information. The application of video analytics is extremely extensive in order to provide favorable conditions for rapid detection of crime. With violent crimes on the rise in society, advanced video analytics surveillance systems have become indispensable because they give law enforcement agencies reliable information about crimes that have occurred in a particular locale at a given time, as well as a way to validate every piece of evidence. A recent front running episode which has come to light at a well known mutual fund is one more addition to the long list of white collar crimes that have occurred in India in last couple of decades. The stars in the list include Harshad Mehta, Satyam, Ketan Parekh, Saradha Chit fund, PMC bank and Punjab National Bank. The sociologists and criminologists define white collar crime as crime committed by people who enjoy the high social status, great repute, and respectability in their occupation. The reason for this is that human beings by nature are greedy. The white collar crime harms society more than other normal offences mainly because of the financial loss that the innocent gullible people suffer due to it. The irony and tragedy is that most people fail to understand that they are the victims of crime. They say ignorance is **bliss.** Also it destroys the moral fiber of society, US Federal Bureau of Investigation describes the term white collar crime as synonymous with the full range of frauds committed by business and government professionals. These crimes are characterized by deceit, concealment, or violation of trust and are not dependent on **the** application or threat of physical force or violence. The motivation behind these crimes is financial to obtain or avoid losing money, property, or services or to secure a personal or business advantage. These are not victimless crimes. A single scam can destroy a company, devastate families by wiping out their life savings, or cost investors billions of dollars or even all three. White collar employees historically have been the shirt and tie people, carrying out office jobs and management functions. They stand in contrast to blue collar workers, who traditionally were blue shirts and work on shop floor in **factories.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-17-TEST NO.-26007

Of cancer, timely diagnosis is the key to combatting bladder cancer. Cure is possible bladder cancers can be cured if diagnosed at an early stage. In case of early stage detection and noninvasive bladder cancers, wherein the cancer is only present in the inner linings of the bladder, the transurethral resection of bladder tumor turbot procedure, followed by intravesical therapy, serves as an effective treatment and cure, in most instances. Even in the case of slightly more progressed but low grade bladder cancers, multiple turbot procedures prove to be adequate in combatting cancer. Partial or complete cystectomy, which is removal of the bladder, is prescribed only in the case of advanced cancers. Living a normal life is possible post surgery, depending on the nature of the cystectomy conducted, and the patient inclination to adapt. After the surgery, many patients continue to participate in numerous physical activities, including workouts such as swimming. Awareness matters smoking is the single biggest risk factor for bladder cancer. Studies show that smokers are three times more likely to develop bladder cancer in their lifetime. It important to be aware of the risk factors that increase the chances of bladder cancer. It equally important to seek medical advice in case of any signs and symptoms, without any delay. Early detection, timely diagnosis, and prompt treatment can significantly reduce the risk of advanced bladder cancer. Post treatment lifestyle stigma continues to impact how often, and how promptly patients reach out for diagnosis and timely care. However, this needs to change. We need to realize that cancer, including bladder cancer, does not necessarily translate into a life threatening or life limiting illness. Will smith chris rock slap gate at oscars has once again brought limelight on the issue whether there is any limit for humour. Of late, in India also there has been many instances wherein comedians have received strong response for a joke which did not go well with many people. Ideally, an act of humour must be accepted as appropriate in a given situational context. If it is not so then response can be as **strong** as that of will smith or even more. In order to understand its nuances, one needs to first go through the theories of humour and its recent evolution. In this context, it would also be important to understand the various levels of humour. The two major branches of study **of** humour are incongruity theories and superiority theories. Incongruity theories of humour claim that humour is based on cognitive discrepancies. Broadly it concerns something which is unexpected, out of context, inappropriate, unreasonable, illogical and so forth. As an example, a child laughs if someone falls down. Even if it appears inappropriate it generates humour for the child. Various cartoons like mickey mouse, Masha and the bear, duck tales are examples of such humour. Under superiority theories, humor is the manifestation of a loss of self-restraint triggered by somebody else flaws and inabilities. The basic claim of superiority theories is that **events.**

Cities in India the state governments have also undertaken various initiatives to attract it firms and provide a conducive ecosystem by establishing industrial clusters, sees and various skill development initiatives to stay ahead in the digitization process. Industry bodies such as nasscom, Ascham, tie have also created access to financial assistance, mentorship, incubation and network opportunities to support path breaking ideas from the hinterlands. According to an estimate by zinnia a leading management consultancy, about 976 monks have set up 1,257 global in house centers gigs in India, out of which 68 gigs are in tier ii locations. The relaxation in the department of telecommunications compliance guidelines allowing its firm to work from anywhere amid covid 19 will further provide a fillip to this trend. The upcoming large scale developments such as Delhi Mumbai industrial corridor dim, metro neo and metro lite, Haryana orbital rail corridor will bolster connectivity and put tier 2 and tier 3 cities such as sonata, Jaipur, Dehradun, etc. On the infrastructure map. On the technological front, the proposed rollout of 5g technology augurs well for the it its industry in tier 2 and tier 3 cities. A datacenter policy is also in the pipeline that will escalate the digital transformation process in India. Moreover, the work from home model amid the covid 19 pandemic has set off a trend of reverse migration. Leading multinational firms are embracing the idea of expansion in tier 2 and tier 3 cities due to multiple advantages of cost effectiveness, lower land and labor costs, availability of the talent pool, and low attrition rate of the workforce. Besides serving as a consumer market, the cities such as Jaipur, Indore, luck now have emerged as an education hub, thereby generating skilled human capital employed in various firms. As a result, firms are moving to tap talent in Indian hinterlands instead of workforce migrating to tier 1 cities for employment. It has led to the rise of the emergence of the hub and spoke and edge model wherein tier 1 cities serve as hubs while tier 2 and 3 towns form **the** spoke network, and the edge implies the work that can be done remotely. This model allows leading it firms to diversify their operations at comparatively lower cost in tier 2 and tier 3 cities while retaining their clientele in tier 1 cities. Another emerging trend is the gig economy, **wherein** firms are looking to diversify their workforce through contract employees who impart flexibility and agility to their operational models. Bolstered by these factors, tier 2 and tier 3 cities will emerge at the forefront of the digital revolution. This trend will have a multiplier effect in terms of employment generation, curbing migration to metropolitan cities, boosting the local economy, improving living standards, and bridging regional disparities in economic development. However, it will be critical for these cities to sustain the digitization wave. Focus on strengthening infrastructure, encouraging skill development among the youth, fostering an entrepreneurial ecosystem, and catalyzing innovation **through.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-17-TEST NO.-26009

Many of us have mixed memories of our childhood: a good portion of joyful moments, a certain number of painful memories, a few life changing experiences, and many routine recollections. These memories exist in a cohesive narrative that continues to give us a unique sense of who we are, what we want, and how the world is. This narrative was created as we lived our lives, experienced our emotions, shared it with those around us, and learned how to find meaning in our lives. It is this narrative which tells us that despite all cycles of ups and downs, life is beautiful and worth living. But an increasing number of our children are grappling with a disconnected narrative of darkness, agony, and suffering. A lot of them feel and express that life is very painful, traumatic, and difficult. Rates of self-harm and suicidal thoughts have increased alarmingly by 22% in children in recent times, according to a study, published in the journal of Social Psychiatry and Psychiatric Epidemiology. How do we understand and deal with this worrying trend? An important causative factor behind this phenomenon is loneliness. When children feel low, they need a person who loves them and has a fair degree of patience and wisdom to tell them what is happening, how they can soothe themselves and find a meaning in their experience. Adults are too busy and too fatigued to deal with children's emotional turmoil. Consequently, children are left to themselves, their peer group, and their young role models on social media to make sense of their pain. The result is that children keep telling themselves that life is traumatic, the other children around them keep reaffirming it, and social media keeps on endorsing it. There is nobody to tell them that this is not the reality; it is just one way of many ways of looking at reality. Life continues to feel dark if we keep focusing on trauma, misery, and pain. Change happens when we start noticing and admiring the silver lining in the dark cloud. So, what is the silver lining that we **can** encourage our children to notice? I can think of two very important virtues that we seem to have forgotten. The first is gratitude: acknowledging and appreciating the small joys that life offers us daily, the things we often take for granted and do not feel thankful for. The second **is:** perceiving pain as an opportunity. We often feel that pain is an anomaly and it should not be a part of our life. However, we don't realise that it is this pain that tests our endurance, and if we can find a way to face it with wisdom, it can offer us tremendous self-growth. But these are the virtues that we can neither teach our children nor the AI can explain them. These virtues can be appreciated and adopted by children only when they spend a lot of time with adults who personify these traits. That's why as parents, **grandparents,** teachers, and as a conscious society, it is now very crucial to prioritise children in our lives. blocked this geographical tap, through which 20% of the world's oil flows. Indo-Pacific Affairs in Sweden. As South Korean President Lee Jae-myung prepares to visit India, the moment carries significance far beyond ceremonial diplomacy. The international order is passing through one of its most unsettled phases in decades. Great-power rivalry is intensifying, protectionism is returning, technological competition is accelerating, and military conflicts in one region are producing economic shocks in another. The war involving Iran has once again demonstrated how instability in West Asia can disrupt energy flows, maritime routes, insurance costs, inflation trends, and investor confidence across continents. For countries such as India and South Korea, these developments are not distant disturbances. They are direct strategic realities. Both economies are integrated into global trade, dependent on secure sea lanes, and increasingly conscious of the risks created by geopolitical fragmentation. In such a context, India South Korea ties deserve to be seen not as a useful secondary relationship, but as one of Asia's most promising strategic partnerships between capable powers. India and South Korea differ in geography, history, and immediate security environments; yet their broader strategic circumstances increasingly overlap. Both are major democracies located near powerful and often unpredictable neighbours. Both rely on open markets, stable regional balances, technological competitiveness, and uninterrupted access to energy and maritime trade routes. Both also seek to preserve strategic autonomy in an era when pressure to align with competing blocs is growing. That shared outlook creates natural convergence. In a world shaped by tariffs, sanctions, selective decoupling, and sharpened strategic competition, countries like India and South Korea need dependable partners that enhance autonomy rather than constrain it. Partnerships among capable middle powers are becoming more valuable precisely because they provide flexibility and resilience. India offers scale, a vast domestic market, demographic depth, growing industrial capability, and strategic reach across the Indian Ocean. South Korea offers advanced manufacturing, globally competitive firms, innovation ecosystems, shipbuilding leadership, and high-end technological capacity. These strengths are complementary rather than competitive. India requires trusted technology partners, investment, and manufacturing collaboration to accelerate its economic transformation. South Korea, meanwhile, needs diversified markets, secure production bases, and stronger strategic links beyond Northeast Asia. **Each** side increasingly possesses what the other requires. For India, deeper ties with South Korea also broaden its influence in East Asia and strengthen its Indo-Pacific profile. For South Korea, closer engagement with India creates wider diplomatic and economic options at a time when Northeast Asia is increasingly shaped by **the** U. S. China rivalry and security uncertainty on the Korean Peninsula. The bilateral relationship is therefore not merely beneficial; it is becoming strategically necessary. Beyond the bilateral prism, the next chapter of Asian growth will not be defined only by trade volumes or market size. It will be shaped by technological capability, industrial resilience, digital power, and control over supply chains. This is where India and South Korea can generate long-term strategic value. India has emerged as a leading digital economy with strengths in software ser

Far more seriously the ailment is serious enough to require a surgery and merely pasting band aid would be a mockery. The concerned employee must be subjected to criminal prosecution under the extant criminal law and SEBI must also deregister the concerned broker and debar him, his family members and associates from any capital market related activities after following a due process of law. This is necessary to deter others and avoid recurrence of such events in future. With fast moving technology and commerce across the world, the types and kind of white collar crimes such as cybercrimes are going to increase. These crimes are such that they can be committed from across any country border. Ease of committing such crimes has made this sophisticated breed of criminals greedier and bolder. The security and law and order agencies need to pull their socks up for strengthening surveillance and preventive measures to combat this menace. As the Modi government completes eight years in office, its diplomatic achievements must be appreciated against a volatile and uncertain world. It has addressed long standing issues effectively while responding to emerging challenges. And all this while harnessing diplomacy more for development at home and for meeting the expectations of ordinary citizens. Is positive thinking an inherent characteristic of a person or can it 69 be developed in one psyche. The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it **may** not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance theory, since positive attitude is not a physical feature but a mental faculty, it cannot be purely hereditary. It can be developed. Moreover, parents play a major role in developing **this** quality of a child. A child, who watches his parents working hard, having faith in success through their words, behavior and body language, is likely to develop a similar attitude. The children of short tempered, over cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parents behavior in front of their children. They must exude confidence, self belief and hope, especially in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a **task.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26014

There is no better education for a child than watching his parents come out of a tough situation by means of earnest endeavors. Such success not only gives more joy but also increases self confidence. A greater clarity is evident in India foreign policy thinking since 2014. A generous and non reciprocal engagement underpins a Neighbourhood First approach. On the ground, it is realised through road, rail, power and energy projects, broader contacts and as a first responder during distress. That project delivery has vastly improved on PM Modi watch is key. The extended neighbourhood has seen an Act East policy, a SAGAR doctrine, a Gulf engagement and a Central Asia initiative. Stronger commitment to Africa and the Global South is similarly visible in health, education, digital and green growth. The murder of singer and Punjab Congress politician Sidhu Moose Wala a day after the state AAP government reduced his security cover raises several questions about VIP protection in this country. That Moose Wala security cover was scaled down may have been a police decision that followed AAP stated goal of rationalising VIP security. What was strange was AAP Twitter handle identifying Moose Wala as one of those with scaled down protection. This needs to be investigated because it possibly made the singer politician vulnerable. Whether the Punjab government judicial commission will get to the truth is a good question. Even more important questions, which need to be asked despite all the media frenzy over Moose Wala death, are about the system that decides who gets what level of security and what strain this puts on policing, which suffers from personnel inadequacy to begin with. Especially at state levels, security covers are often political favors bestowed on those in or close to power gun toting cops are another status symbol in our hierarchy obsessed politics. And just as real assessment of threat is not done while granting a security cover, often it is done while reducing or withdrawing the cover. Politics influences both decisions. The result is a VIP security culture that perhaps has no parallel in any other **democracy.** As per data from the Bureau of Police Research and Development, more than 66,000 police personnel were providing protection to more than 19,000 ministers, MPs, MLAs, judges, bureaucrats and others in 2019, in the Centre and states. The bulk of this protection force is drawn from state police ranks. **Even** more revealingly, none of the top three states in this list Bengal, Punjab and Bihar are suffering from entrenched insurgencies or violent movements. Look at this data: Bengal had more than 3,000 VIPs under protection and Punjab, more than 2,500, but Maoist hit Chhattisgarh had only 315 people under security cover. Remember, in this context, that almost the entire Chhattisgarh Congress leadership was wiped out in the 2013 Hiram Ghazi massacre by Maoists. India has police personnel per lakh population, against the UN recommended standard of 222 cops per lakh. Overworked cops are a daily danger sign that goes **unnoticed.**

**350th:** "democracy." **400th:** "Even" **500th:** "unnoticed."

There also a serious skew in distribution, with many parts of non urban India being seriously under policed. Of course, protection is essential for a number of public figures. Equally, no political party will want to review a system that gone haywire but that suits them so well. Stretching s specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be an integral part of every workout program. It not only helps increase your flexibility, which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of motion. According to the studies, proprioceptive neuromuscular facilitation or PNF type of stretching is more effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural that your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, shoulders, etc. and stretch those parts of your **body.** growth is far lower than what was forecast a few months ago. So, Omicron plus the beginning of the Ukraine war had a big impact. Two, private consumption in per capita terms remains below the pre pandemic period, a measure of the unevenness in recovery. RBI in December estimated **Q4** GDP growth would be 6. At 4.1, growth is almost two percentage points lower, which gives a sense of the extent to which the economic environment has worsened in the last few months. Other than the Omicron wave, the partly war induced surge in global commodity prices is the most significant influence on fourth quarter results. Unlike Omicron, this impact will last longer. The consequence of these developments is that per capita private consumption in 2021 22 was Rs 61,215, a level lower than the Rs 61,594 recorded in 2019 20. It the most telling indicator of weak demand **the.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26016

We live in a world where Alexa plays the music in the living room, and Siri sets the alarm on the phone. Not far is the day when most of us will have robots in our homes, loading the dishwasher and assembling our furniture. We already have drones, and experiments on driverless cars are going on. Computers are vital in the communication and transportation industries. They control our satellites and traffic signals. Through Big data and analytics, companies make business decisions. Technologies like Artificial Intelligence, Machine Learning, and IoT (Internet of Things) could bring a sea of changes in our daily lives. Cockscombs, areca palms and landscapes. Unforgettable was Prof Menon talk in which he spoke of his love for Rajasthan, the varieties of the hibiscus flower, including the tropical hibiscus double orange, Chinese hibiscus, white hibiscus or rose mallow, and hibiscus rosa sinensis. He also spoke of the lotus at length, he said, Sanskrit has many words for lotus, one being pankaja, or mud-born. Panka means mud, and ja means born. Chameli explained her love for the lotus in 2010, I have a particular fascination for the lotus, and it is truly unique imbued with the supreme quality of the eternal, finding expression in nearly all forms of religious art literature poetry and philosophical discourse. The lotus is beautiful but not easy to paint, it is always part of a larger more intricate structure of the plant and so one cannot be as selective in the part to be created. Yet in its representation, lies endless scope. Over centuries from an ancient past to now the lotus has been demonstrated in so many mediums in different ways of seeing. I spent a great deal travelling many countries to see mountain ranges to see the oceans but my eyes failed to see at home so close by on the tip of a stalk a solitary sparkling dew drop. Her statement unveils her love for the minuscule. Chameli monochromatic mountain ranges on the top floor at Vahedras, have a feathery wave of snow lacing their undulated crests and this creates **a** narrative of belonging to so many sojourns. We can see that Chameli uses a finely kept brush to capture the delicacy of the feathery leaves of different plants, trees and shrubs. Sometimes she paints a whole tree, sometimes a complex detail. The palm fronds are an enchantment in the **language** of elusiveness. Here at Vadehras the Shimul or silk cotton flowers form an immersive group and create a wave of memories. Her handling of form and her feathery, wispy strokes create a silent sonata. One recalls her curator in early years Ranesh Ray stating that her love for nature is translated into her concentrated precision for finding connotations in form and colour. Ray said her flower studies stand alone for their conceptualisation and the language of progression from bloom to the withering moments that are so minimal in mortality. We had these flower plants trees in our garden which **used** to blossom twice a year. The flowers look different throughout the day. Here the flowers have withered. But I found them beautiful in their own ways. A range of industries right from agriculture, textiles to our defense field is highly dependent on computer technology. There does not exist a sector, which is untouched by the magic of computers. Computers, smart phones, and cheap internet data packs have revolutionized the field of education. A data-enabled mobile phone opens the door to vast resources. Online learning and distance education have

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26017

Moreover, computers have vast storage spaces, and the durability of the study material is also high. In specific fields like architecture and mechanical engineering, there is a paradigm shift in pedagogy. They learn and use software technologies like CAD and CAM. We know that the word computer comes from compute and thus, they were mostly computing devices. The first computer was for the military, and the U.S. army used it for calculating artillery firing tables. Today, computers are used in tanks, planes, and ships to target enemy forces. They play a vital role in providing training and simulations to soldiers. They are essential to safeguard the confidential activities of the defense forces I have painted them as drying in different stages, adds Chameli. The Shimul flowers in its evanescent elegance echoe the sonorous notes of the Rabindra Sangeet songs that Chameli knows by heart.Her love for Tagore poetry could be seen in her exhibition at Grosvenor Gallery in 2010 when Vadehras unveiled her at Frieze. Chameli love for plant life over decades reflects embers and elements of empathy including a distinct identification with the world of botanics.Chameli long-time friend the brilliant critic and curator Ella Datta has said in the past, her response to nature has been shaped by her Chinese heritage and her growing up in Rabindranath Tagore Shantiniketan. At Vadehras viewers could gaze at the soothing sway of the palm fronds, the luscious lilt in the movement of the kash phul plumes, as well as the ethereal elegance of the light blue spider lilies. In an email she explains you may be wondering why I painted white spider lily blue I was wondering how to paint a white flower on white paper. First I tried silver. But the silver was not clear enough so I added a little blue to the silver and I was happy with the result. Realism is not my aim anyway .I just wanted to create the feel of each object I painted. Chameli smoky embered orchids are a resonant study in the articulation of soft petalled perfection. One can sense her mastery **over** the medium and her love for lacing her strokes in threads of fine ten drilled calligraphic strokes that brim the depths of their being. She states when I painted these blue orchid flowers some were quite dry and withered. I painted the dry ones also because I found them **beautiful** even in their dry form. Here too, it is the fragility of life that endears, as they drop in delicate feminine stupor. Her chrysanthemums are a cherished lot. They present an offering of contemplative idioms. She says I have painted the chrysanthemums as Mandalas. Here the emphasis is on petals which are painted with fine flowing brush lines. These unique flower studies express a vision of the artist as an observer of deeper measures with a poetic intensity with which she creates her wispy melancholic meditations. Ultimately this exhibition is an ode to the essence of colour and form. **Within** harnessing the technique of close encounters to creating her own pictorial vocabulary of undulating forms and soft gradations of tone, Chameli recreates botanical subjects into compositions that oscillate between abstraction and representation. No matter what her subject, Chameli seems to extend elements of nature beyond its frames, as if without measurable boundaries. By utilising small, ordinary flowers and plants to suggest the immensity of nature, she extols the beauty of the Purusha Prakriti principles of antiquity. Her cockscomb studies are a

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26018

In addition, The PM spoke about how multilateral institutions such as the United Nations had to change with the changing times and countries that were either colonised or not recognised in 1945, when the United Nations was created, must have a seat at the high table. This was applauded and is but necessary for the future of an equitable world. In short PM Modi and President Biden have moved the relationship between India and America to a whole new level, in spite of critics and naysayers. The Western media may be divided on its reportage but sometimes even they have to get out of their opinionated glass houses and hear the voices of the more than eight billion people on this planet. Anything less would be disastrous for them as they will forever be playing catching up. With the kinds of social media available today, the mainstream media need to listen, yes listen to the comments You Tubers and other such channels reporting from their countries get. For they are closest to the voices of the people. And when you interview not celebrities but ordinary people every day on different subjects, you will be surprised by the wealth of information and their feeling about where their country is going. I do this for hours every day and I can say with conviction, PM Modi is right. India is a country that is a pipeline for talent; it citizens are smart, hardworking, have family values and pride in their country and aspirations towards making it great. The government just has to give them the right tools and infrastructure, which it is speeding up to do. Every two seconds, someone somewhere requires blood transfusion leukemia patients, thalassemia patients, pregnant women, accident victims, and those undergoing elective surgeries, all depend on blood transfusions for a new lease of life. In fact, according to a WHO report, in low income countries, up to 54 % of blood transfusions are given to children under 5 years of age.1 Now, marine a 10 month old child getting infected with HIV during a blood transfusion. What **will** be its impact on the life of the child and the parents? We have read and heard such stories even before. Inadequately screened blood and unsafe blood transfusion process may lead to transfusion transmissible infections TTIs like HIV, Hepatitis B & C, syphilis, and less commonly malaria, toxoplasmosis, and **other** viral infections further risking the life of immune compromised and vulnerable patients. According to the Asian Journal of Pharmaceutical and Clinical Research, India lies in an intermediate zone of Hepatitis B HBV endemicity with the prevalence blood is screened for infections. Largely blood screening tests for Haig and antibodies to HIV 12 and HCV. However, screened seronegative donations are still at risk for TTIs and thus, the need for a sensitive screening test arises. Nucleic acid testing NAT, a gold standard test is a molecular technique for screening blood donations to reduce the risk of TTIs in the recipients, **thus** providing an additional layer of blood safety. Currently, only 3 states MP, Odisha and J&K offer 100% NAT screened blood. Therefore, in India a large number of people who receive blood transfusions are vulnerable to TTIs. To address this issue, recently, the National Blood Transfusion Council has put together some action points to improve blood safety in India. These may include not allowing at risk persons to donate blood and introducing NAT testing in a phased manner as a centralised facility in high volume

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26021

Most positive aspect of the fourth quarter result was the healthy growth in fixed investment over the pre pandemic period. At Rs 13.7 lakh crore, it was 15.8 higher than the level two years ago. This growth was helped by a similar surge in government expenditure. Government expenditure will have to continue supporting economic growth as RBI monetary policy is tightening fast to stave off a second round impact of elevated inflation. Fiscal support won worsen debt sustainability as high inflation has pushed up nominal GDP and tax revenue. For instance, GoI net tax revenue of Rs 18.2 lakh crore in 2021 22 comfortably exceeded the year revised estimates. UIDAI withdrawn advisory on not sharing Aadhaar card photocopies with unregulated players like hotels and movie theatres unsurprisingly raised more questions on safety. The key question is: what happens if your Aadhaar copy is compromised worse, what happens if your Aadhaar linked mobile OTP or biometrics and Aadhaar copy are both compromised Let find out. What happens if your Aadhaar copy is stolen before we answer this question, let understand how your identity can be verified using your Aadhaar copy. One way is to scan the QR code on your Aadhaar copy through UIDAI QR Code Reader app. An old saying goes that you should look a gift horse in the mouth. Apparently you can tell the age of a horse by looking at its teeth and seeing by how much the gums have receded from them, making them longer. So by looking a gift horse in the mouth you are calling into question the actual worth of the present being made to you: Is the freebie, in this case a horse, a sturdy beast which will be of good service to you, or is it an old, decrepit creature which is not of much use to you A good question, because what seems to be a boon a free horse might turn out to be a bane, a rundown nag not worth its maintenance. The takeaway being that the old saying has got it wrong, and that you should **always** look a gift horse in its oral cavity before bestowing thanks for it. What holds true for horses holds true for many things, including free LPG cylinders. Under the Ujjwala Yojana scheme launched in 2016 under the aegis of the ministry of petroleum and natural gas some 80 million **rural** households have received interest free loans to get a cooking gas connection, along with a refill cylinder. Suddenly it was Santa Claus time for village India, where womenfolk have the arduous daily chore of collecting firewood for their cooking choolas, or using cow dung cakes, both of which are a source of toxic pollution, unlike LPG which is clean and efficient. But Santa Claus turned out to be Santa Claws, in the form of soaring fuel prices which have reached an unprecedented high, with an LPG cylinder now costing over Rs 1,000. So even with the Rs 200 per **cylinder.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26022

Virus and hepatitis virus. NAT helps prevent the spread of infectious diseases by identifying infected donations, and maximising blood safety and availability for patients. Having said that, it is important to educate patients and policymakers about the need for safe blood. India needs to build a robust national blood system to ensure timely access to quality, safe and sufficient supplies of blood and blood components for all the patients needing transfusion. Similarly, in a decentralised, fragmented market like India, centralisation of blood banks for NAT testing is the way forward to enable access to safe blood. Integration of processes, equipment and materials, together with large volume processing in a centralised blood bank, can result in a greater consistency of blood components, as well as an overall improvement in quality, safety and efficacy, resulting in better patient outcomes. As the world looks to celebrate the World Menstrual Hygiene Day on May 28th, conversations around the need for increased access to sanitary pads and creating awareness will once again come to the fore. However, in many parts of the world, a dark cloud hovers above the subject of menstruation and leaves much to be desired. In India, women and girls are still secluded and discriminated against just for menstruating. The stigma around the subject also makes it difficult for people to talk about it. Several studies have shown a very low level of awareness about menstrual hygiene among women and girls in India. The March 2022 National Family Health Survey 5 report showed that women with education of up to 12 years or more were more likely to use menstrual hygiene products compared to women who had no education. In fact, the study showed a disparity between both groups of 90% versus 44%. Beyond products like sanitary pads, there are also vitamins and other nutritional requirements to manage menstruation better. This shows we have a long way to go as a country in creating awareness. Breaking the taboo of menstruation with education and awareness Menstruation is a natural biological occurrence. Socio cultural norms and beliefs have led to severe gender parity **in** India which makes it difficult for women to receive the kind of information and access they require to deal with menstruation. Efforts to raise awareness about menstruation and menstrual hygiene among women and young girls must be intensified. It is crucial to create an environment where they feel comfortable **discussing** and asking questions about this natural process. Providing them with the necessary resources for maintaining healthy and hygienic menstrual practices is equally important. Rural areas should be a priority for such initiatives due to the challenges of low education levels, high ignorance, and stronger social taboos in these regions. To effectively reach rural communities, it is essential to educate and involve influencers and opinion leaders who can help disseminate the message. Utilizing social media platforms can also play a significant role in driving social change and promoting open conversations about menstruation. By addressing these issues head on, we can **contribute** to breaking down barriers, empowering women and girls, and ensuring their overall well-being and dignity. Promoting vitamins and minerals for healthy menstruation triggers loss of blood and often makes many women lose some bodily fluids and nutrients. Others tend to lose their appetite and have to go hungry for or maln

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26023

Government subsidy for those covered by the scheme, cooking gas has become prohibitively costly for millions of households, leaving them no choice but to bear crippling economic hardship or revert to using their old style choolas to which they vet now become unaccustomed. The moral of the story is that there no such thing as a free lunch, even if it cooked on an LPG stove. So it best to inspect the mouths of gift horses, sarkari given or otherwise. For you never know when one going to turn around and bite you in the most unexpected of places. We live our lives economic hardship with the aspiration for achieving some significance households, leaving and permanence: beautifying our bodies, amassing wealth and possessions, glorifying ourselves, earning scheme, cooking gas economic hardship name and fame and building a legacy that we hope will endure through generations. No wonder, a large majority across the globe carries a sense of entitlement that they should be admired, celebrated, and worshipped because they are special. They go to great lengths making the world believe that they are special: buying economic hardship luxurious vehicles and lavish scheme, cooking gas homes on mortgage, creating iconic personal brands and doing almost anything and everything that will build their presence on social media. Iodine fortification is what most countries rely on to encourage households, leaving adequate dietary intake. In more than seventy countries that iodize salt generally serves as the major source of iodine intake. One fourth of a teaspoon of iodized salts has about hundred micrograms of iodine. Note that the salt used in processed foods, which is the major source of salt for most Americans typically, does not contain iodine. If salt used in a processed food contains iodine, it will be listed in the ingredients list of that food. Focus on decreasing the amount of salt consumed economic hardship from processed foods and get your sodium from iodized salt. Seaweed, saltwater scheme, cooking gas fish and seafood are natural households, leaving sources of dietary iodine. Dairy products also supply iodine in the diet at varying **levels.** During lactation, the breast concentrates iodine in milk so breast milk tends be a good source of iodine as long as the iodine intake of a mother is adequate. Plants grown in iodine rich soil are also good sources. However, this is not a reliable source of iodine since **there** is no way of knowing whether produce purchased in grocery stores is grown households, leaving in iodine rich soil or not. Iodized salt usually adds less than about three hundred micrograms iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit of daily iodine intake for adults set at 1,100 micrograms by the IOM it is economic hardship unlikely to hit an excess amount when including a multivitamin and including natural scheme, cooking gas sources of dietary iodine. The trend of eating less table salt, dairy and bread has some **experts.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26024

The other day I went to buy a weskit or waistcoat popularly known as jacket with prefix depending upon pre or post-2014 era from a fabulous outlet famous for its ethnic Indian wear. Well, there were rows of these jackets but whichever color or design I happened to like, I was told very politely were in lime-fit style. With great difficulty a few pieces in regular fit could be found for me to pick from, which I did gratefully knowing very well that beggars can be choosers. By now you must have guessed that I am one of those who are neither slim nor very fit. This, however, was not my first such experience. A few months ago, when I visited a showroom of a popular garment company, known for turning ordinary souls in to complete men, to get a pair of trouser; I was least prepared for a rude shock. For ages I was sporting its trousers in comfort fit style because that loose-fitting cut somehow managed to accommodate my apple body shape. But while my body continued to remain true to its erstwhile dimensions, the new dawn came with `slim-fit trousers and shirts. Somehow rummaging through its old stock, I got lucky to find a couple of pieces in comfort-fit . In his recent address to the United States Congress, Prime Minister Mode mentioned the word democracy 14 times. Our Constitution, as all know, guarantees us six fundamental rights, amongst which the most important is the right to freedom of speech and expression. This incidentally is a right also guaranteed by international statutes, such as the Universal Declaration of Human Rights, of which we are signatories. Our first Chief Justice of the Supreme Court, M Patanjali Sastri, as early as in 1950, included freedom of the press as a part of freedom of expression. In his judgment he averred that Freedom of Speech and of the Press lay at the foundation of all democratic organizations, for without free political discussion no public education, so essential for the proper functioning of the process of Government, is possible. Clearly, **this** landmark judgment was meant to allow the media to fulfill its primary role of acting as the fourth pillar of democracy. Its centrality in social, political and economic development and in shaping public opinion cannot be overstated. It acts as a watchdog and provides a balanced factual and transparent **perspective** on issues, thereby holding the powerful to account. Quite understandably, vested interests spare no effort to curtail and subvert the media through a variety of means to push through their own agendas. While in the short term a compromised media will help those in power shape the public narrative, ironically, since credibility, transparency and governance share a symbiotic relationship, such control can only end in disaster for all concerned. This also explains the reason why all assessments and quantifications of the health and well-being of democratic systems give the utmost priority to the aspect of freedom of speech and **expression** that citizens and the media enjoy. In fact, the degree to which one is free to speak can be relatively easily identified and consequently quantified. It is in this context that the assessments and rankings, such as the one given in the Democracy Index, published by The Economist, need to be examined. These tend to be of immense value to decision makers to understand how well those nations are governed while making investment decisions. However, we also must take into account that such assessments tend to be seriously fla

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-18-TEST NO.-26025

Approach diversification not as an anti-China policy, but as a matter of strategic prudence. Their objective should be to build resilience, not confrontation. Alternative production networks in electronics, automobiles, pharmaceuticals, critical minerals, clean energy components, and maritime industries would strengthen both countries. South Korean firms can benefit from India's expanding industrial base and policy push for manufacturing. India, in turn, can benefit from Korean efficiency, technology transfer, and integration into global value chains. The Iran conflict has further highlighted why these matters. Energy insecurity, higher freight costs, and volatility in Gulf sea lanes affect both countries directly. South Korea remains heavily dependent on imported energy, while India's trade and energy interests are closely tied to maritime stability from the Gulf to the Indian Ocean. Economic security can no longer be separated from geopolitical risk. That makes cooperation in shipbuilding, ports, logistics corridors, storage systems, and maritime security especially important. South Korea's world-class shipbuilding industry and India's expanding maritime ambitions provide a natural basis for collaboration. Naval industrial cooperation, port modernization, and shipping resilience should become core pillars of the partnership. India and South Korea have often described each other as important partners. The challenge now is to transform that language into sustained strategic purpose. This requires more regular political engagement, stronger institutional mechanisms, deeper industrial coordination, and expanded defence collaboration. Existing economic agreements should be modernized to match contemporary realities in digital trade, advanced manufacturing, and services. Strategic dialogues should become more frequent and outcome-oriented. Defence ties, already evident in selected industrial cooperation, can gradually expand to include maritime systems, co-development projects, and logistics cooperation. Equally important is societal depth. Universities, think tanks, startups, research centers, and skilled professionals can build habits of cooperation that official diplomacy alone cannot sustain. Youth exchanges, innovation platforms, language training, and academic mobility would help anchor the relationship for the next generation. Most importantly, both countries must begin to view each other as priority partners in an unsettled Asia. Both seek prosperity without dependency, security without bloc politics, and growth without strategic vulnerability. Those common objectives provide the foundation for an autonomous partnership **suited** to a changing era. India and South Korea already have a good relationship. What they now need is a strategic one: serious in intent, ambitious in scope, and capable of shaping a more balanced, resilient, and innovative Asian order. The spectacular election defeat of Hungary's longtime strongman, Viktor Orbán, **is** just the latest in a clutch of ballots that shows European publics' increasing disenchantment with the Trump-style gospel of militant Christian nationalism. And yet, here's something surprising: the world is drinking less alcohol. Sure, it's still strictly regulated. There are age limits, massive taxes, tough licensing, restrictions on sales & advertising, and some places even have total prohibition. All By Jaya Row Gita is the most powerful and comprehensive guide on how an ordinary mortal can rise a

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-19-TEST NO.-26031

This week I got an opportunity to travel to Colombo in Sri Lanka during a transit flight to London. I wanted to utilise the long layover to visit the country which is at the peak of its economic, political and social turmoil. I was advised against going into the city marred by social unrest, protests, and political upheavals but I still went ahead since I had visited Colombo 15 years ago and wanted to see the beautiful country again. As soon as I landed, I found the arrival terminal of the airport not busy or crowded considering that global travel has opened up and flights were occupied to the highest capacity. The immigration was smooth and I was allowed to visit the capital city in a few minutes as there were no large crowds or queues of foreign nationals visiting Sri Lanka. The exit was devoid of crowds and seemed calm despite being the lead airport of a popular destination in Asia. I was looking for a money exchange outlet to change my INR into the Sri Lankan rupee but all the counters refused to change it into INR. Some offered to convert it to dollar or pound sterling but there were no takers for the Indian Rupee Re 14.66 Sri Lankan rupee. I was surprised and wondered if I should go back to the airport but a travel agent quickly managed to get me a car to travel into the city and back in the stipulated period before my flight to London. He also gave me an exchange rate to convert my money into local currency. With dwindling traffic due to domestic turmoil, the agent had just one Indian family coming to visit and nothing much to look forward to. He was keen to convert my proposition to visit the city. The cab driver who took me around for the next few hours spoke of the economic hardships the citizens were facing in the country. The road towards the city had petrol pumps barricaded with no staff. Fuel had become scarce and had to be imported from friendly **nations** like India. As per the www.globalpetrolprices.com website, the price of petrol per liter which hovered around Rest 207 on 21st February 2022 has now gone up to Rest 373 on 30th May 2022. Fruits, vegetables, daily essentials, and cooking gas have all shot up, serving a hard blow to **the** citizens who have taken to the streets to protest against the Rajapaksa government and its policies. A change of Prime Minister was hurriedly executed to calm tempers but that has not pacified the protestors. The Sri Lankan NRIs residing abroad took to street protests in various countries disappointed with the state of affairs back home. Sri Lanka has witnessed the rule of 25 Prime Ministerial terms and 8 Presidential stints since its independence in 1947. While India has been a stable country since its inception, Sri Lanka has seen frequent changes in government with a stunted vision of the **country.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-19-TEST NO.-26032

A conversation with a group of Sri Lankans provided an insight into their outlook towards India with whom they share a deep relationship. The stability of India and its institutions built over the decades have become an inspiration and aspiration for Sri Lankans. Today in their dark moment, they look up to their large neighbor to provide every support they can get. While India has sent billions of dollars in assistance and supplies, the state of Tamil Nadu has also flagged emergency assistance to a nation with a substantial Tamil speaking population. The Chinese seem to deviously entrap Sri Lanka into its debt trap with an open credit line, the government has been cautious to not fall for the lucrative Chinese offer for now. A foot in the door for the Chinese in India southern neighborhood does not augur well for its host nor India strategic interests in the Indian ocean. The triumphant win over the LTTE a decade ago raised hopes that the tiny Asian country will devise a great future for itself but a decade later, the progress of the nation has only tapered down. As I landed at the Heathrow Airport in London, the charming smile of air hostesses and attendants of Sri Lankan Airlines only made me wish their country recovers fast and prepares a vision of its future. India must have its neighbor back India alcohol industry in popular perception is closely linked with election campaigns of political parties. It does stop there. The industry is also associated with the political economy of corruption at the level of state governments. Perhaps the most important way by which state governments maintain a tight grip on the industry is by controlling its retail prices. It an industry where almost the entire production chain and even the prices of the end product are controlled by states, which makes them vulnerable to pressure. India is in the midst of a surge in prices of most commodities. There no industry that has been left untouched. Yet, in this operating environment, liquor manufacturers cannot adjust retail prices without the concurrence **of** state governments. Prices usually change after much lobbying. There no economic or policy reason for this level of control on a product that is not an essential one. States must unshackle the industry. But the resistance to it is strong as it affects the political economy of political corruption **in** India. India has grown tremendously over the years in agriculture. The country has managed to become food self sufficient. As agriculture has become one of the most profit making businesses in the world, there still exists the biggest challenge of food shortage across the globe. With global population rising massively, it is expected to reach 9.7 billion by 2050. Now, the food industry is posed with a challenge to make ends meet. More than 27 of the global workforce is employed in agriculture and India has about 152 million people working in the agriculture sector as of FY 2021 **here.**

New technologies in agriculture Aristech are making it favorable for the agriculture sector to flourish in India and across the globe while helping to suffice the demand on the continuously increasing population. What is Aristech In simple terms, Agriculture Technology Aristech is a branch of new innovative technology in agriculture developed to increase efficiency and improve yield of agricultural processes. Aristech consists of a number of technologies like AI and IOT with various applications but all work toward growing more food with fewer inputs and less, reducing cost, time. Aristech market and demand the global Aristech market is growing exceptionally at a CAGR of 12.1 and is expected to value more than $41,000 million by 2027 from nearly $17,500 million in 2019. The activity in the country Aristech industry had been increasing significantly. With more than 1000 startups, adding a GVA of 56 in FY2020, the Aristech market potential in India that was more than $2.4 billion is expected to reach value $24 billion by 2025. Another study also predicts the potential to be $35 billion by 2025. A lot of entrepreneurs, engineers, venture capitalists have been interested in the Agra Tech space over the Years. India has also seen the investments in the Aristech industry to be soaring at a CAGR of 53 between 2017 2020 to value nearly $330 million in 2020 from $91 million in 2017. There is a huge demand for people in the agriculture space Agra space to build effective systems and teams. Aristech is creating new jobs with a number of startups attracting a lot of talent. Aristech companies are looking to create diverse careers to bridge the gap between farmers and technology. Careers in Aristech Science and technology have become the core of everything. Now agriculture has advanced with innovations and technology. Even Agro based countries like India is realising and seeing huge potential in Aristech. There is seen to be great career opportunities and new career avenues being created for skilled people who are interested in and likely to adopt the innovations and technologies. Here, are some of the Aristech careers **that** would be in great demand in the future. Food scientists Food scientists work towards discovering foods, analysing the foods nutritional content, finding ways to make processed foods healthier and safer. In simple terms food scientists improve food products while also creating new ones with the help of scientific principles **and** applications of technology. Hydrologists Hydrologists are majorly involved with surface water. They research physical properties, distribution, circulation of surface water as well as underground water and also supply clean and safe water across the globe. The job of a hydrologists also includes protecting the environment and promote sustainability. Drone technologists the use of robotics, sensors, aerial images have made it easier to increase efficiency. Here, drone technologists provide farmers with ways to reduce crop damage and increase yield. Agronomists They are the ones who connect agriculture with technology. Agronomists are also called as crop doctors. They work towards providing **practical.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-19-TEST NO.-26034

As Israel continues its ground and aerial assault on Lebanon as part of its battle against Hezbollah, more than 1,100 Lebanese have been killed and around 1.2 million have been displaced by the fighting. This is the largest displacement in Lebanon history. That saying something given the country devastating civil war between 1975 and 1990. But Lebanon was always a war-ravaged country. Beirut was once called the Paris of the Middle East both because of the city affinity to French culture harking back to the old French mandate, and its cosmopolitan atmosphere. Curse of sectarianism Lebanon was a major tourist destination and a secure banking hub for Gulf Arabs. But it all came crashing down in the mid-1970s with the outbreak of civil war. The root of the problem was and continues to be Lebanon unique confessionals political system that saw power being shared between major religious communities. Hence, Lebanon president has to be a Masonite Christian, its prime minister a Sunni Muslim, and its parliament speaker a Shia Muslim. Dangerous mothering though the end of civil war saw an agreement to dissolve Lebanon confessionals system, its politics continues to be divided along sectarian lines. This in turn opened the door to international actors, who made Lebanon their battleground. From the West to Arab states and Iran, all cultivated Lebanese proxies that eventually undermined the Lebanese state. The failure of Lebanese society as a whole to come together irrespective of religious and sectarian differences is the reason why Lebanon continues to suffer. Caution for nations Lebanon holds out a lesson in what happens when deep religious divisions take hold of a country. Lebanon could have been a jewel in West Asia. Instead, religious extremism, political polarisation and foreign interference combined to bring the country to this ruinous moment. Lebanonisation serves as a warning for all nation states. India renewable energy journey is a story of ambition, progress, and evolving challenges. With an impressive 150 GW of installed capacity, the country has firmly positioned itself as a global leader in the green energy movement. However, behind this remarkable achievement lies **a** complex web of challenges that are testing the resilience of the industry. Recently, news that leading renewable energy firms are seeking buyers for 20 GW of operational and under-construction assets has sparked conversations about the roadblocks on the path to a greener future. So, what causing this shift? Why **are** companies that have long been champions of clean energy now looking to offload projects? To understand this, we need to unpack the layers of infrastructure, policy, and market dynamics that have created hurdles for the sector. One of the biggest challenges facing renewable energy in India today is transmission connectivity. While the renewable-rich states of Gujarat and Rajasthan offer vast potential for solar and wind projects, they are struggling with a shortage of substations to connect new projects to the national grid. This is just a technical hiccup it a fundamental bottleneck. Without adequate grid infrastructure, even the most **innovative** renewable projects remain stuck in limbo, unable to deliver the clean energy they generate to consumers across the country. This lack of connectivity impacts project timelines and profitability. Developers are left waiting for their projects to be connected to the grid, delaying power sales and revenue generation. It a

# RKC NAWADA TYPING TEST RESULT

**Software Link: https://rkcnawada.online/best-typing-software-rkc.php**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-19-TEST NO.-26037

These agreement's are the lifeblood of any renewable energy project, ensuring long-term contracts between developers, procurers, and distribution companies. Yet, as things stand, there is a growing reluctance from power distribution companies (discos) to sign long-term deals. This hesitation stems from multiple factors, including financial stress within the disco sector and evolving market conditions that have led to tariff declines. In a market where renewable tariffs have fallen below Rest 2 per unit, older projects with higher tariff's are now finding it hard to compete. As a result, unsold assets are piling up, and investors are becoming cautious, pushing down valuations. This presents a paradox even as renewable energy becomes more affordable, the sector faces increasing financial strain. Despite these hurdles, it important to recognize that government policy has played a key role in boosting renewable energy adoption. The waiver on ISTS charges since 2019 has significantly lowered costs for solar and wind developers. By allowing renewable projects to transmit power across the country without hefty fees, the policy has been instrumental in driving down tariffs and making renewable energy more accessible. However, as the government reconsiders extending the ISTS waiver, the industry is holding its breath. Any changes to this policy could have far-reaching consequences for both existing projects and future investments. While there hope that ongoing efforts to strengthen state-level power transmission infrastructure will alleviate some of the pressure, the larger question remains who will buy the power generated by these new projects? Typically, it is pocket-book issues like the economy and the cost of healthcare that are at the top of US voters minds during election's. The state of democracy in the country is not usually a concern. This time is different. This year, the stability of US institutions, their capacity to withstand another attempt to overthrow its system of governance, has come to the fore as well. Many Americans are worried about what will happen if Trump loses again but refuses to concede defeat. This is also the issue casting the largest shadow from the vice-presidential debate this week, which was the last big, scheduled **event** before the Nov 5 elections. It should be remembered that the VP only has two official duties under the US constitution to preside over the Senate when necessary and inquire daily about the president health. The larger question perhaps is how such caste discrimination went unnoticed all these decades **since** Independence. In the most recent reformatory step, members of National Human Rights Commission and NALSA, a statutory body that provides legal aid to weaker sections, were among contributors to the Model Prison Manual of 2016. The expert committee was formed by SC on a suo's motu writ petition in 2015 on inhuman conditions in 1,382 prisons. The 2016 edition was an update on a 2003 manual. State prison manuals have been modernised by states which care for prison reform largely based on guidelines in the central manual. In all the modernisation, however, one aspect division of prisoners labour by **caste,** and segregation of quarters by caste remained a blind spot although it an open secret. SC Thursday order ensures it is no longer unseen. Reform limited With the Constitution promising equality, caste activism and reform almost entirely focused on Dalit uplift, limited to stopping atrocities agains

And scientific solutions to enhance soil control, crop production and soil management. They also carry out experiments to increase plant nutrients and determine soil health. Agriculture communicators and advocates every industry needs someone to create, develop, share the stories to aid in establishing relationships, interchange ideas and so much more. Agriculture communicators and advocates are science communicators that work and focus mainly on communicating and engaging on topics related to the agriculture with the agricultural and nonagricultural stakeholders On the whole, the Aristech benefits the future of professionals in the Agra space providing the ones interested in both agriculture and new technology a strong hold in their careers. UPI or Unified Payments Interface has earned gigantic popularity for its user friendliness interface. It is a single platform that brings a myriad of banking services and features under one universal roof. One needs a UPI ID and generates a PIN to send and receive money. This has proved to be a boon for its efficacy and in providing a hassle free experience to the end consumers. But as the famous adage runs Every coin has two sides so has been the case with every development taking place in the internet age. With the increased number of transactions happening through UPI, there has been a significant rise in the case of bank frauds due to social engineering. As UPI a very secure platform, secure transactions are dependent on smartphones and the internet, every user has to be digitally literate enough, if not he is tricked by social engineering by seamstress, fraudsters and hackers tricking them to enter their financial details to enable the UPI IDs, or entering UPI PIN for receiving payments. Some key scams and ways in which consumers can protect themselves from fraudsters are as follows There have been numerous reports of hoaxes and tricksters swindling consumers through online financial attacks, UPI frauds, hacking, cybercrimes, and other financial hazards. Phishing Scam A very commonplace scam where payment links are sent by fraudsters in the form of an SMS. These fake bank URLs will look similar to the original URL. **Upon** clicking, it will take you to the UPI payment app on your phone, where any app can be chosen for an auto debit. Upon giving permission, the money will be deducted from the UPI account immediately. Also, the phone will be infected by a virus or malware that can **steal** the financial information that has been stored on the phone. Users need to recognise and ignore or even delete such text messages. Unauthentic Links many users are unaware that receiving money via the UPI app does not require scanning a QR code or entering your UPI pin. Hackers frequently send fake links with the option to request money. Once the user clicks on this link, it will ask for the UPI pin or to scan a code. This exposes your financial information to hackers and paves the way to empty the entire bank balance of users.

Remote monitoring When **consumers.**

Download an unverified app like Pegasus or Trojan silently bundled with other app downloaded from app store, it can result in a privacy breach and data leak. These third party apps can collect personal information from your phone and access UPI app information, which can lead to UPI fraud. These malicious apps ask for plenty of access to the information upon download. It is the responsibility of the user to cross check each app and check the access they are allowing post downloading. Fake Calls Sometimes, fraudsters contact customers claiming to be bank employees, asking for UPI pins, OTPs, or requesting to download a third party app for verification purposes. This provides them access to their personal information and account information. The customers should ignore such inquiries unless they are from authentic sources. Malware Malware is one of the most common forms of cybercrime, and it can be downloaded by accident via a phishing email attachment or an unprotected website. Malware is created to extract and copy data from the infected device. Users need to check the secure icons which are symbols associated with authentic emails and websites. Online transactions have been a blessing for a majority of customers. It has eased the burden on both the bankers and the customers to avail hassle free day to day transactions. No longer do customers have to wait in unending queues to carry out trivial monetary transactions. Consumers need to be aware and protect themselves from such swindlers. There are some recent developments in financial services where even non tech savvy users can conduct transactions via missed calls, voice IVR, mobile STK, ultrasound. Some of these methods do not compel a user to have a smartphone or use the internet. Especially, senior citizens or people with limited internet access can make use of these services. Technology adoption in healthcare has come a long way now, in terms of refining its data management processes, from traditional storage to digitalization of healthcare data. Healthcare institutions were looking towards digital transformation methods in order to stay afloat and provide the best possible patient centered **care.** Hospitals and health systems have had little choice but to alter care delivery to meet the pandemic challenges since the outbreak. Years of digital evolution in healthcare happened in a short time, even before the covid 19 pandemic. The benefits of cloud optimization have been demonstrated for both healthcare **practitioners** and patients. On the business side, cloud computing has proven to be effective in lowering operational costs while enabling healthcare providers to offer prompt, high quality, tailored treatments. Cloud computing has also improved patient engagement, helping them be more involved in the process of making informed decisions, by giving them access to their own healthcare data. The democratization of healthcare data and its remote accessibility, liberates both clinicians and patients, removing location obstacles to healthcare, has been a hallmark move in healthcare technology. Here are some of the ways cloud optimization is impacting the healthcare sector Lower costs Cloud **computing.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-19-TEST NO.-26040

Is based on the availability of computer resources such as data storage and processing power on demand. The requirement for hospitals and healthcare organizations to purchase hardware and servers altogether is eliminated. There are no upfront costs connected with data storage in the cloud. You just pay for the resources you utilize, resulting in significant cost savings. In addition, cloud computing provides the most ergonomic environment for scaling, which is a desirable attribute in today world. With patient data streaming in from a variety of sources, including EMRs, healthcare apps, and health wearable, a cloud based system is ideal for scaling and undergoing capacitive upgrade while keeping costs down. Access to advanced analytics Healthcare data, both structured and unstructured, is a tremendous resource. In the cloud, relevant patient data from many sources may be gathered and calculated. Medical research can be boosted by using Big Data analytics and artificial intelligence algorithms on cloud stored patient data. Processing huge data sets becomes more viable because of the cloud enhanced computational capability. Analyzing patient data can also lead to the development of more individualized care plans for patients on an individual basis. It also guarantees that all relevant patient information is recorded and that nothing is overlooked when prescribing medications. When it comes to retrieving essential patient data, cloud based data analysis comes in useful. Advanced diagnostic technology Accurate and timely diagnosis is the key to win a fight against any disease or illness. Over the years, diagnostic technology has seen some breakthrough innovations and set some remarkable examples of tech adoption, from ML, AI, Iota and block chain. Laboratory automation has been one of the key features, along with automated test report generation and distribution. In times like the pandemic, tech adoption is helping laboratories effectively manage the huge load of samples, carry out accurate test procedures, and share results faster. Apart from the Covid tests, diagnostic technology can also help streamline and handle the other routine tests, in spite of the huge Covid sample load, ensuring the laboratory operations are seamless and that other patients are equally catered to, **during** these crises. Robotic Process Automation RPA Hospital Automation AI powered automation has been adopted across industries and is seen to be one of the single most disruptive factor to bring in efficiency, increase TAT, reduce dependency on human resources and drive productivity, at reduced costs. Hospital automation, or RPA **is** one such tech innovation that can be of immense help for managing hospitals and healthcare facilities, especially in times of such crisis. From scheduling of doctors and nursing staff, assigning beds or rooms, scheduling OR and consulting room assignments to creating and maintaining a patient treatment record, managing out patients and, especially during Covid, manage the testing and vaccination rush, automate reports and send reminders and appointments for regular patient visits. Apart from these routine operations, AI powered automation is also been used to assimilate and analyses patient and treatment related data that can be crucial to medical research, **assimilate.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-19-TEST NO.-26041

Emotional distance. There are times when you must lead from the front. But let us be honest. That phrase has become dangerously romanticised. In India especially, we often glorify the visible saviour. The strong boss. The fearless founder. The commanding figure who steps in, speaks loudly, and becomes the centre of gravity. We applaud dramatic leadership because it photographs well. Yet real crisis leadership is not a performance of power. It is a disciplined act of service under pressure. As a coach, I have seen this repeatedly. In a crisis, some leaders disappear. Others dominate. Very few know how to step forward without making the crisis about themselves. There is wisdom in leading from behind. It develops people, creates ownership, and prevents dependency. But a crisis is not a normal day at work. It is a nervous system event inside an organisation. Their minds race ahead to consequences. Their bodies move into threat-response mode. Cortisol rises, tunnel vision narrows judgment, and emotional contagion spreads faster than logic. One person's panic becomes five people's confusion. Five people's confusion becomes organisational paralysis. This is where leadership becomes more than strategy. It becomes containment. To lead from the front in such moments is to offer steadiness when others are flooded. It is to say, through your tone, decisions, and presence, we are in difficulty, yes. But we are not in disorder. The polished leader who looked confident in board meetings may become impulsive under fire. The quiet manager whom nobody noticed may suddenly emerge as the calmest person in the room. This is because crisis strips away rehearsed identity. It reveals how much of your leadership is rooted in self-awareness, and how much is built on image. I remember speaking with a senior leader after his team went through a reputational crisis. He kept saying, I had to show strength. When we explored what he meant, his version of strength was clear. He had shut down dissent, dominated every meeting, and made sure no one questioned his authority. He did not lead the crisis. He defended his ego in public while his **team** silently bled trust. Many leaders do not become egoic because they are arrogant. They become egoic because they are scared. Ego is often feared in a tailored jacket. A leader must absolutely be visible in a crisis. But visibility is not the same as vanity. Presence is calming. Performance **is** exhausting. Presence says, I am here, I am accountable, and I will help us think clearly. This is where many leaders get seduced by the mythology of heroism. They begin to believe that being central is the same as being useful. It is not. The most effective crisis leaders are not always the loudest. They are often the clearest. They reduce noise. They simplify priorities. They make difficult decisions without emotionally leaking panic into the room. In my own reflections on leadership, including in my recently launched book, Power Without The Podium: Leadership from the Front vs Leading from **Behind,** I have often returned to this tension. Leadership from the front is necessary in some moments, but it becomes dangerous when the self starts feeding on the spotlight of the emergency. A crisis gives the ego a stage, urgency, and moral permission. Suddenly the leader can interrupt, command, centralise, overrule, and justify all of it in the name of necessity. Control becomes easy to disguise as responsibility. This is why some leaders almost seem m

the closest thing they have to self-worth. So when a crisis hits, they over-function. They rescue, micromanage, and over-identify with being indispensable. The problem is not commitment. The problem is fusion. They stop serving the moment and start needing the moment. And the organisation pays for it later. Team confidence drops. Initiative weakens. Dependence increases. People learn that in hard moments, the leader will take over anyway. So why build muscle? It begins with emotional regulation. Before a leader can regulate a room, they must regulate themselves. This means slowing down their own reactivity, noticing their urge to dominate, and separating genuine urgency from internal panic. It also means being decisively transparent. Not brutally honest in a careless way, and not artificially optimistic either. People can smell false confidence. A mature leader names the reality, frames the priorities, and communicates what is known, what is unknown, and what will happen next. Then comes moral courage. Crisis leadership is not only operational. It is ethical. Who gets protected? Who gets blamed? Who gets heard? Who gets sacrificed to save appearances? These questions reveal the soul of leadership far more than polished speeches do. I often tell leaders this: in a crisis, your team is not only watching what you solve. They are watching who you become while solving it. When you lead from the front, keep checking your inner motives. Ask yourself: am I stepping in because the moment requires me, or because my identity requires me? Am I giving direction, or am I feeding on control? Am I helping the team grow through this, or proving I matter most? A healthy leader steps forward to create order, then gradually restores agency back to the team. An unhealthy leader keeps the crisis alive in subtle ways because it keeps them important. I have seen beautiful examples of the opposite. A founder once had to step in during a severe internal breakdown in her company. For two weeks, she took direct charge. Clear instructions. Daily communication. Strong visibility. But the moment stability returned, she began re-distributing responsibility, inviting feedback, and openly **acknowledging** others who held the centre with her. That is leadership without ego. Front-footed, but not self-inflated. There is grace in knowing when to step in. There is wisdom in knowing when to step back. Why do we still associate leadership with dominance so quickly? Why are so many workplaces **built** around dependency on one powerful figure? Why do we applaud overwork, over-control, and over-presence as if burnout were a badge of honour? Maybe because uncertainty makes us crave authority. Maybe because many institutions still confuse hierarchy with wisdom. Maybe because we are more comfortable with command than with conscious leadership. But the future will not belong to leaders who merely look powerful in a crisis. It will belong to those who can stay grounded, think clearly, act ethically, and protect both performance and people. In the end, crisis leadership is not about being the hero. It is about becoming **the** hinge. You hold the door steady while others move through fear, confusion, and consequence. You do not need applause for that. You need clarity, nervous system discipline, and enough humility not to turn urgency into self-worship. Yes, there are moments when you must lead from the front. But leading from the front is not standing above people. It is standing available to

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-20-TEST NO.-26045

As a matter of fact, India has been so categorised ever since this Index was first published in 2006. Such a categorisation however does quite gel with the fact that in this period numerous free, fair and peaceful elections have taken place, at the municipal, state and national level and there has never been the slightest doubt cast on our democratic process or our stability as a nation. Incidentally, the United States has also been similarly categorised ever since 2016 when Trump won the elections. Moreover, if activists are to be believed the state of democracy has deteriorated greatly under Mr. Mode, the Index does not really reflect that. Between a detailed examination of these scores shows that it had reached a low of at the height of the pandemic, but has since then shown steady improvement. Also, some media reports suggest that our poor scores can be attributed to the abrogation of Article 370 and the passage of the Citizen Amendment Act which is a tad unfair to the Government. The abrogation of Article 370, incidentally its promulgation had been strongly opposed in the Security Council by Pakistan in the 1950, has given a new direction and impetus to the moribund state that Jammu and Kashmir had been reduced to by an insurgency aided and abetted by Pakistan. Removal of this Article and subsequent reorganisation of the State has freed the populations of Jammu and Lathan from being discriminated against by the majority community. In the same vein the provides Hindus, facing religious persecution in our neighbourhood, a means to obtaining citizenship on priority. To suggest that they be treated on par with others applying for citizenship is to deny history and consequences of the British departure from the region. The fact of the matter is that the authors of this report have completely misunderstood the impact of these initiatives on our democracy. Governing India with its vast and diverse population, humungous problems, competing priorities and endemic corruption is no easy matter and requires a strong and focused leadership. Coalition governments that ruled in the past have, by **and** large, indulged in unethical compromises in their efforts to remain in power that only led to misgovernance. This was the reason that the BJP was voted to power in 2014 with an overwhelming majority in Parliament. None of that however takes away from the fact that Mr. Mode and **his** governments have pushed the authoritarian envelope further than those before them. Also, numerous accusations that Mr. Mode government has damaged all our democratic institutions is not without some truth, but it always takes two hands to clap and those responsible for running those institutions have been just as complicit in this regard for their own selfish ends. Lack of integrity and honesty are a widespread problem here because of the lack of accountability, thanks to a corrupt police and a somnolent judiciary. However, BJP needs to assimilate the fact that its so-called overwhelming majority in Parliament, in actual fact **represents** a bit more than a third of the total electorate, and thus cannot be a license to do as it pleases. As the events in Manipur have starkly brought out, excluding communities on the basis of ethnicity or religion do immeasurable damage to social harmony and economic stability and development, apart from starting a cycle of violence that is difficult to end. To fulfil their aspirations and ambitions they would do well to persuade the remaining tw

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-20-TEST NO.-26046

Is an inescapable necessity. This entails the need for genuine outreach, interaction and dialogue with all sections of society and the polity at large. That is what genuine democracy is truly about. May be then rankings such as these will be of little consequence. The irony is that the tailoring shops meant for the ordinary folks are getting rare by the day. One could still find those fancy, bespoke ones which could give tough competition to Seville Row. But being financially slim, I find it beyond my means to afford something that costs an arm and a leg. And now readymade garments too are slipping like sand through an hourglass. And the way ready-to-wear garments are shaping up, it appears that both this tribe and mind, most of middle-aged and senior citizen category people in our country would be belonging to it is disappearing or is not worth paying attention to. Perhaps that why our ancient texts ordained Vanaprastha to save people like us from this embarrassing body-shaming in disguise. Vitamin D, folic acid, iron and Omega 3s are a great way to keep your nutritional level up during menstruation. Furthermore, menstruation exposes women and young girls to infections, especially among those who lack basic hygiene, so adequate use of supplements and nutraceuticals can boost the immune system to fight against such attacks. The consumption of vitamins has increased globally in recent years, and understandably so. In fact, demand grew significantly by double digits in some jurisdictions like the United States that analysts projected the global vitamins supplements industry would grow from 47.9 billion in 2021 to 98.6 billion by 2031. On the other hand, is folic acid, a version of vitamin B, which is considered an important supplement for the growth, multiplication, functionality, and maturity of red blood cells, creation and repair of DNA, production of certain proteins, and prevention of health problems like anemia, heart disease, and some cancers? However, there is still some reluctance among Indians about the intake of supplements like vitamins and folic acid, due primarily to preexisting beliefs and superstitions. Finding a way **the** situation is currently a two edged sword. On one hand, there is a lack of adequate awareness about menstrual hygiene. On the other hand, the supplements required for blood formation, helping with cramps, and replenishing lost blood are yet to gain acceptance among women. The situation is worse in **rural** areas where many of the women are already malnourished and lack basic menstrual health products as well. Beyond sensitisation, there is a need for public private sector collaboration to find ways to make sanitary pads, menstrual cups, supplements like vitamins, magnesium, and iron available to rural girls and women at no cost. Only with proper sensitisation can the issue be addressed. Whether or not you have a direct connect with the startup ecosystem, you probably heard about the rebrand and regroup at Sequoia Capital and India business finding itself a new name and new independent structure as Peak XV. **Sequoia** is a privately held fund that invests privately held Limited Partner Capital in companies that are private (until they go public of course) and really owes no explanation to you, me or average joe on the street, the move is massive from an India macro vantage point. The reason this is significant is to begin with Sequoia legacy is iconic and seeded in the growth of venture and startups globally. The

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-20-TEST NO.-26047

About being young is that you are not experienced enough to know that you can possibly do the things you are doing opined a wise person. I heard similar sentiments from the manager of a leading IT company who now supervised a new cadre of young employees who began their IT careers right after high school. This manager was ecstatic and animatedly talked about the energy, enthusiasm and spirit to learn that was brought to the workplace by these still in their teens young IT pros, and how with no prior mental baggage, they approached every task and problem with greater optimism and ingenuity than many employees from the traditional cadre. Obviously, for the IT Company with which the said manager works, a new non traditional talent stream of high school grads is emerging and can potentially provide the company with a distinct edge in the talent wars that are being fiercely fought between tech firms during the current decade, a decade which NASSCOM now prefers to call as a Tec hade. However, before we conclude high school graduates as a new talent gold that could be mined by the tech firms, let me try and answer the following 3 questions Q1. Does a pressing need exists for tech firms to consider nontraditional talent streams Q2. Can high school graduates emerge as a reliable and enduring new talent stream Q3.What is the potential employment model that can attract, develop and retain talented high school graduates in the tech industry Let me take the above questions one by one below Does a real and pressing need exist for tech firms to consider nontraditional talent streams I find the following three catalysts that should make a compelling case for the tech industry to soon begin tapping the nontraditional talent streams Serious talent gap forecast in digital tech skills Let me begin by reiterating the often repeated but serious statistics about talent crunch faced by the Indian tech industry. As per now a more recent NASSCOM report called the Drau Bascom India Talent story, the talent gap in new age digital skills **in** India will increase from 5 Lac in 2021 to 18 Laces in FY 26. These digital tech skills mainly comprise of areas like web mobile development, Cloud computing, AI and Big Data Analytics, Iota, Cyber. Not enough graduating with required new age tech skills As per the same NASSCOM **report,** in Computing and only 2k 3.5K studied Cyber security in their college curriculum. This indicates that most higher education institutions in India did not offer programmers and curriculum aligned with pressing talent needs of the tech industry. Reskilling is an answer but not a complete one Indian tech industry has catapulted its investments in reskilling and it is estimated as per some reports that 65 70 of the digital talent gained in India during FY 21 was through reskilling. However, despite such praise worthy progress, one must keep in mind that core tech talent base available and trainable for **reskilling.**

**350th: "in"** **400th: "report,"** **500th: "reskilling."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-20-TEST NO.-26048

Asian startups. What is audacious and welcome is the move by the team at Peak XV to build an independent India franchise. Founder equivalent of buying back their company and building for long term, stronger successes. And nothing is more awesome than self-belief. A young high potential nation like ours needs these wins to trigger fresh thinking and paths. When I started my entrepreneurial journey. India had probably 3-4 venture funds all local franchises of an American fund. Sometimes with no feet on ground in India or local teams or partners who had little clue about India and its dynamics. I have made enough startup pitches, where conversation ended up with questions like Is there a model like this in the US? Is the company based in US? Are other investors from the US? There was always a search for an anchorage in safety of a foreign fund, a US brand name or model. While the landscape has dramatically changed and there are both local and foreign funds in a thriving startup ecosystem. We are now an ecosystem with 100+ unicorns, public listed companies, immense support in incubation, acceleration, seed funding and so on. Whatever the Sequoia spilt means to others, to me it means a sense of self-assurance and confidence or as the spiritually inclined me would say self-love. For the first time, we are owning the narrative and being completely being accountable for it and at peace with it. A sense of belief in our abilities as an ecosystem and economy and nation. While Peak XV will build it as a privately held company, their decisive move has set the tone for Indian venture on a global stage. India as a market deserves its own capital structures and ownership of its destiny. We also are going to witness a ripple effect with more funds following suit, local funds seeking global outcomes, besides making India allocation a trend in the world of Limited Partners. It will also encourage a lot of first-time funds to think of India as a key option in their scheme of things. Global capital **channels** have a chance to bet on India independently a market with over 750 million internet users and expected to grow to 900 million by 2025. Founders in the ecosystem have been tilling away at building from India for the world and building in India for India whatever their direction **is,** when a multi-billion-dollar global fund team bets on India, it is a power move and likely to boost the presence and impact of Indian startup industry on global stage. The message home is there is a lot of upside in India and subsequently Asia. Already funds are building Indian models for the world and cross border from India for the world. But capital is a catalyst like no other. It has compounding impact in multiple ways. Unlocking global capital to India markets, increases are stakes at the table, being a direct voice in the global economic narrative and of **course** an example of bold audaciousness for young India, which wants to see more of this self-belief and accountability in its icons. There is also a geo-political sub text of India being a strong anchor in Asia a significant narrative in larger scheme of things. SEA, which has been growing with promise as an investment and manufacturing destination for the world. Unleashing synergies in the region is key to economic and political outcomes that impact this very large high potential region. Entrepreneurs appreciate large markets and supportive capital. It is also a chance for India to become a hub of capital for Asia and s

and process the best of updated international developments in oncology, surgery, the Covid pandemic and other illnesses, to ensure that the doctors and the medical staff are well informed and updated at all times. The use of cloud computing in healthcare provides a number of benefits, including cost savings, scalability, and the opportunity to collaborate among healthcare experts. According to the most current research on the issue, clinical associations are considering implementing a cloud platform, with the biggest barriers being security concerns. For a wide scale application of cloud, data security is of utmost importance. Implementing processes like VPC, data encryption, etc. cloud optimization can be made more secure, with lower costs, enhanced data security, scalability, and business agility, while minimising the danger of cyber attacks for many firms. However, in order to get and effective and efficient solution, it is vital for businesses to partner with and enlist expert Cloud computing service providers who are well versed and experienced in modernizing or customizing existing cloud infrastructure to meet the demands of healthcare sector, so as to ensure you can leverage the maximum benefits of the new technology. The world for content creators has undergone tremendous change recently. Since the beginning of the 21st century, creators have been catching up with the rapid pace of technological evolution. However, for most creators, a long standing pain point still persists. The long standing pain point of content creators Perhaps the biggest grievance shared by all creators is that content creation often takes large amounts of time, financial investment, and effort that may only yield low dividends. Even in the age of ubiquitous social media, when almost everyone has engaged in content creation and or content consumption, it takes tremendous effort to garner attention, attract likes, shares and comments, and win over followers. Until a content creator attracts a sizable following and is able to consistently capture attention, there absolutely no earning. There is a strong fight even then content creators largely depend upon brand associations and collaborations to earn money. Most creators would admit that the joy of creating content and **the** hope to make it big someday are the major driving factors to keep doing what they do. Still, there are very few ways for active users of social media not necessarily creators to earn something for the time and effort they put into social media. Creators will also admit **that** although the prospect of earning from social media is very attractive, the reality is that it is very difficult to earn livelihood from creating content. Most social media platforms are flooded with advertisements, which revolve around user generated content. While content creators are busy attracting people to the media platforms and keep them there, the social media platforms earn rich dividends through ads while content creators may earn only a small percentage or have to wait for paid partnerships. New age technologies driving change However, all this struggle may soon shift. The wheels of change are already set in **motion.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-20-TEST NO.-26050

The arrival of block chain, crypto currencies, and related technologies is transforming the digital space for content creators and ushering in a new chapter of creator economy. What exactly is happening Crypto currency is powering a new social economy, restoring considerable power to content creators and consumers. Conventionally, crypto currency is based on block chain technology which can be understood as a decentralized immutable digital ledger. The technology records all exchanges and transactions in real time. Block chain forms the foundation of digital currency as well as non fungible tokens NFTs. How crypto is rewarding creators Crypto currency can be used for digital trade and has real world financial value. NFTs, once minted, ascribe a certain value to a tangible or digital assets, which can range from art to music. Artists can also choose to collect royalties. NFTs can be auctioned off or sold on a block chain with crypto currency, which can be converted into real money. The social media platforms today are increasingly leveraging advanced technologies to offer better experiences to users. From hosting game platforms to offering virtual worlds, decentralisation technologies are making users the owners of their creations. The ownership of content is becoming more equitable. The next generation social economies are linking creators of content directly with consumers, facilitating an exchange of value made possible by crypto. This is increasingly giving rise to the concept of engage to earn, which is driving the creator economy. According to the Benchmark Report 2021, the creator economy is witnessing staggering growth with, $800 million in industry growth [that] was recorded from only 31 startup capital investments since October 2020. The report estimates the total creator economy market size to be over USD 100 billion, and it also states that 46 of creators generating content for over 4 years are earning more than USD 20,000 annually. The India story The world over, much like in India, there is some skepticism around crypto currency and NFTs. The inclination of governments is towards formulating policies in order to adapt to all the innovations in technology. This endeavor is visible in **policy** moves by the government, which has mandated taxation of earnings from crypto currency. Furthermore, the government does not have a fixed negative view of crypto. While it is monitoring crypto promotion closely, it has not yet felt the need to intervene. There is enormous public interest in crypto currencies, **and** the space is gaining more users with each day. At the same time, there is a need for spreading mass awareness and education around crypto currency and how web3 works. Along with awareness and education, people are also keen to experience crypto. India is witnessing the advent of new age social media networks, and just as any other social media channel, the networks encourage people to create, consume, share, and build a range of content. As the biggest differentiator, content creation or consumption with even basic levels of engagement are rewarded on new platforms with crypto tokens. Indian social **media.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-20-TEST NO.-26053

And crypto currency enthusiasts can experience investing, transacting, and building a crypto portfolio while creating or consuming content online. By creating social media platforms that offer a secure and simple crypto experience, innovators in India are creating a social economy, opening better avenues for earning from digital content creation and engagement. Finally, the times are changing in the favor of a more fair and rewarding creator economy Hiring is a challenging yet extremely essential activity that every business spends a lot of time, money and effort on. Off late, many organizations, particularly in the IT sector, have been leveraging Recruitment Process Outsourcing RPO to drive hiring objectives and combat the rise in attrition. Recruitment Process Outsourcing RPO is a workforce solution in which a business transfers all or part of its permanent recruitment activities to an external agency. While the concept of recruitment process outsourcing is nothing new, its adoption, especially in sectors that hire in big numbers, have been steadily increasing. Today RPO providers use talent analytics, recruitment technology and innovative sourcing strategies to get organizations the people it needs. They help companies source, screen, engage, hire and onboard the right talent while building business agility. However, in a dynamic market environment with a significant talent demand supply gap, it is imperative that the RPO provider has the ability to scale its operations to match changing business needs. The service provider ability to scale its own talent, to meet client requirements, and also source candidates with niche skills across multiple channels should be evaluated. Outsourcing recruitment can help bridge the talent gap faster with the global RPO market being forecasted to reach $20.8 billion by 2027, it especially vital for HR leaders to truly understand the quality of external partnerships. The expected talent demand surge in the near future also needs to be kept in mind. Today, nearly 25 of Global Fortune 500 companies have Global Capability Centers GCCs in India not just for operation related roles but also for Research Development roles. With this number expected to rise in the coming years, India needs to prepare for **this** growth potential and build talent supply chains proactively. Engaging with an RPO provider will help ease these talent hiring and managing activities, and bridge the gaping talent gap in the market. Yet, many organizations often enter into multiyear RPO partnerships without knowing how to evaluate the engagement. Let delve **into** why some RPO partnerships fail and others succeed. With the demand for the service on the rice, impact evaluation metrics need to evolve Most RPO providers use two key parameters to measure their success Cost to hire and time to hire. While these are essential metrics, they fail to consider a holistic and long term scalable goal for the RPO. Being purely focused on processes for recruiting rather than building a robust talent supply chain is a short sighted stratagem. As most RPO players are experts in hiring, they don have the tools or network to tap into the **right.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-20-TEST NO.-26054

In its landmark 2017 privacy judgment, SC was unambiguous about sexual autonomy – it clearly linked it to dignity and privacy. An individual fundamental right to privacy is not one any aspect of the relationship of marriage can impinge upon. Until this judgment, the idea of privacy in Indian law would cease and desist at the threshold of the union of marriage. Thus, privacy tended to be used more as a cover to deny married women their rights, perpetuating ideas of honor, duty, and home. The privacy judgment placed the individual at the heart of the law, thus turning privacy into an empowering tool for all women, including married ones. The belief that non-consensual sex within marriage is in some way different from non-consensual sex outside marriage is premised on an archaic view that marriage renders women their husband property. This goes against every tenet GOI professes. As it reiterated in its affidavit, empowerment of women – from economic freedom to safe mobility – is core policy. GOI bats for women freedom of choice. That would include her right to decline sexual activity. GOI also argues consent within a marriage is for legislatures to decide upon. What SC is doing is deciding upon the unconstitutionality of the said provision. It is in fact the court job to do so. The work more brigade believes being young is about building your career and contributing to the nation. Work-life balance, according to them, is for the weak. Who needs sleep or health when you can add to the company bottom line? Working hard, they argue, is just another way to outwork the competition. And life is all about beating the competition. With Iran missile attack on Israel this week, there little doubt Tel Aviv will retaliate. While US have ruled out Israel striking Iran nuclear facilities, there now talk of a hit on Iranian oil producing infra. That would be disastrous in a different way. Washington must do everything in its power to restrain Tel Aviv from targeting Iranian oil. Huge provocation | Hitting Iranian oil infra would be a huge **escalation.** For, Iran may choose to retaliate by targeting oil shipments from the Persian Gulf. That itself could drag countries like UAE and Saudi Arabia into the conflict. Plus, Iran, despite sanctions, pumps out about 2mn barrels of crude a day, or 2% of global supply. A hit on this **production** will see crude prices jump, given that oil trade is driven by global market dynamics. In fact, Brent crude has already crossed $78 a barrel from $71 a barrel before Iran missile attack. Bad for India | Countries like India that rely on oil and gas imports from the Gulf will suffer if Iran disrupts this route. Also, oil is traded on forward contracts. These will go for a toss in case of wider war. The knock-on effects for these economies will be considerable. Additionally, India has a huge diaspora in Gulf Arab states. A wider regional conflict may **necessitate** emergency evacuation. Biden final test | Hitherto US has been unable or unwilling to rein in Netanyahu. There are now reports that Hezbollah and Israel had agreed to a US-France ceasefire before Nasrallah was killed. If that true, Biden can be accused of being a lame-duck President. That certainly not the legacy he wants and many Democrats are privately upset with Israel. The least Biden can do is not let Netanyahu cause anymore major damage. The Tirupati contaminated laddoo controversy, now lobbed into the lap of the Supreme Court, is in danger of diverting attention from

The wealth of these institution's. The bench hearing the laddoo petitions has already made some caustic comments about the politicisation of the issue, but this should not blind us to the larger reality where Hindus, and Hindus alone, face discrimination when it comes to running their own temple's. At that time, renowned journalist Rajdeep Sardesai had tweeted that protesting farmers were killed in police firing. But that is not what had happened. There was a full-proof strategy to incite the demonstrators by disseminating fake reports of protestors being killed by police firing. Also, instance of hoisting Khalistan flag atop the Red Fort took place with intent to create unrest in the country. Luckily, the oolkit exercised by some external forces during the farmer movement got exposed. Just a few days prior to the election, a petition was filed in the court pleading that voting should not be carried out through the electronic voting machines. This petition was aimed at spreading rumours about the Election Commission objectivity through the mainstream and social media. Neither the opponents nor the thinkers and journalists realized that by doing this, they were casting doubt on the credibility of government machinery. There was thorough and drawn-out discussion about the EVMs in the Supreme Court and later, through its decision, the court made it clear that EVMs will be used for voting in all elections. By the end of the second round of voting, journalists and other media houses methodically started promoting a narrative that the I.N.D.I Alliance was steadily gaining ground and that the BJP was not polling as many votes as anticipated. Around the same time, there was also a fall in the index owing to selling in the stock market, which became another premise to spread a rumor that now, the tables have turned. The opposition used it as a nation-wide campaign, thus demonstrating the resilience of their ecosystem. There was also a widespread misinformation that Muslims will be forced to leave the nation once the CAA came into effect. Many mosques around the country issued fatwas urging people to vote against the **Bharatiya** Janata Party. Attempts, both domestically and internationally, were made to guarantee that Muslim electorates voted against the BJP. By referencing the promises made by the Congress in its manifesto, Prime Minister Narendra Modi exposed Congress anti-reservation stance to the electorate. Congress claims to survey the wealth of the citizens **of** the country which will then be redistributed in a manner that the minorities to get a share in it. Prime Minister revealed Congress cunning scheme to give reservation of the OBCs to the Muslims. Congress went into frenzy the moment the Prime Minister launched such a scathing attack. In response to the Prime Minister aggressive demeanor, the Congress was compelled to retreat. The Congress also questioned the real-time voter turnout data and the final figures released by the Election Commission, with the sole aim to create doubts about constitutional institutions like Election Commission. Never before has the opposition experienced **being** out of office for such a long duration of 10 years. And fearing that they might once again have to go without power for another five years, the Congress and its allies resorted to spreading misleading narratives. Seeing the patterns in voting and realizing that none of their strategies would succeed, the Congress and its allies attempted to create confus

About being young is that you are not experienced enough to know that you can possibly do the things you are doing opined a wise person. I heard similar sentiments from the manager of a leading IT company who now supervised a new cadre of young employees who began their IT careers right after high school. This manager was ecstatic and animatedly talked about the energy, enthusiasm and spirit to learn that was brought to the workplace by these still in their teens young IT pros, and how with no prior mental baggage, they approached every task and problem with greater optimism and ingenuity than many employees from the traditional cadre. Obviously, for the IT Company with which the said manager works, a new non traditional talent stream of high school grads is emerging and can potentially provide the company with a distinct edge in the talent wars that are being fiercely fought between tech firms during the current decade, a decade which NASSCOM now prefers to call as a Tec hade. However, before we conclude high school graduates as a new talent gold that could be mined by the tech firms, let me try and answer the following 3 questions Q1. Does a pressing need exists for tech firms to consider nontraditional talent streams Q2. Can high school graduates emerge as a reliable and enduring new talent stream Q3.What is the potential employment model that can attract, develop and retain talented high school graduates in the tech industry Let me take the above questions one by one below Does a real and pressing need exist for tech firms to consider nontraditional talent streams I find the following three catalysts that should make a compelling case for the tech industry to soon begin tapping the nontraditional talent streams Serious talent gap forecast in digital tech skills Let me begin by reiterating the often repeated but serious statistics about talent crunch faced by the Indian tech industry. As per now a more recent NASSCOM report called the Drau Bascom India Talent story, the talent gap in new age digital skills **in** India will increase from 5 Lac in 2021 to 18 Laces in FY 26. These digital tech skills mainly comprise of areas like web mobile development, Cloud computing, AI and Big Data Analytics, Iota, Cyber. Not enough graduating with required new age tech skills As per the same NASSCOM **report,** in Computing and only 2k 3.5K studied Cyber security in their college curriculum. This indicates that most higher education institutions in India did not offer programmers and curriculum aligned with pressing talent needs of the tech industry. Reskilling is an answer but not a complete one Indian tech industry has catapulted its investments in reskilling and it is estimated as per some reports that 65 70 of the digital talent gained in India during FY 21 was through reskilling. However, despite such praise worthy progress, one must keep in mind that core tech talent base available and trainable for **reskilling.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-20-TEST NO.-26057

That have voted or are voting this month, Tamil Nadu is probably the most difficult to assess. The competition in other states is between familiar players, but the entry of actor Vijay's Tamilaga Vettri Kazhagam adds a big unknown to the equation. Vijay's non-ideological messaging may allow him to attract fence-sitters across party lines. Is Tamil Nadu's electoral arena, defined by the dominance of the and the as two nodes, in a moment of transition? The immediate temptation is to see Vijay as part of Tamil Nadu's long tradition of cinema-to-politics transitions, seen in figures such as M G Ramachandran, J Jayalalithaa, and, more recently, Vijayakanth, as well as Chiranjeevi and Pawan Kalyan in neighbouring Andhra Pradesh. But it is more important to understand how his presence may be reshaping the competitive equilibrium of state politics. The 2021 elections happened in the shadow of J Jayalalithaa and M Karunanidhi's deaths, the two emotional anchors sustaining the bipolarity of this system. It is into this opening that Vijay has stepped in. Besides the comparisons with past cinema crossovers, some are also asking whether Vijay might meet the same fate as Prashant Kishor in the 2025 Bihar assembly elections. Kishor, like Vijay, positioned himself as an outsider promising systemic change. He sought to transcend deep-seated political cleavages and appeal directly to voters disillusioned with existing parties. Yet, his Jan Suraaj Party (JSP) struggled to convert visibility into electoral traction. To be sure, Vijay brings mass popularity and a pre-existing cultural connection with voters. His films, often laced with anti-establishment messaging, have cultivated a constituency that sees him as an outsider capable of disrupting entrenched elites. Opinion polls in the past few months have given varying estimates of his party's popularity, some indicating around a quarter of voters and others indicating half of that. However, these polls have been consistent on the support base, which is largely urban and semi-urban youth, sections of the lower middle class, women, a segment of Christians and Muslims, and those generally disillusioned with both DMK and AIADMK. The history of Tamil Nadu politics offers a cautionary **tale** in the form of Vijayakanth. When Vijayakanth launched the and eventually to an irrelevant 43% in 2021. Whether will follow trajectory is a moot question at this moment. Vijay's appeal is qualitatively different from Vijayakanth, but whose chances will his success hurt more? The answer is not straightforward. Some **believe** the AIADMK-led bloc may be more vulnerable because Vijay's appeal overlaps more with the anti-incumbent, floating voters who might otherwise oscillate between the DMK and AIADMK alliances depending on context. They further argue that in the absence of a figure like Jayalalithaa, Vijay's outsider appeal and anti-establishment rhetoric may resonate particularly with disillusioned supporters. At the same time, is not immune. In 2021, the difference between and was relatively narrow in terms of vote share did not underperform as much as was expected. Subsequent realignments and consolidation of different factions under the leadership of EPS or Edappadi Palaniswami, including **the** return of Dhinakaran to the AIADMK fold, may also have some bearing on electoral arithmetic in specific regions. Such shifts could help consolidate sections of the vote base that had previously been fragmented. Furthermore, the anti-incum

have a far-reaching effect. However, popularity alone can take so far. A party requires booth-level presence, cadre mobilisation, and credible local candidates. Tamil Nadu's political system remains deeply structured by party organisations, welfare networks, and alliance arithmetic. Moreover, the logic of bipolar competition exerts its own pressure. As elections approach, voters often revert to strategic calculations, choosing between the two alliances most likely to form the govt. The results on May 4 will show whether Vijay's star power can translate into political power and breach TN's entrenched duopoly. A 'dead language' Reviving a Nation: The breeze from Indus, a Shiva mantra at Kailas, a trek in Chushul and a chadar walk on frozen Zanskar. All this put together describes Tarun Vijay. He is a former BJP member of Rajya Sabha. The blog revolves around everything that is Mother India and her concerns. Through Sanskrit, Bharatvarsha descends into your heart. Mohan Bhagwat, Sarsanghchalak, RSS Since the days of invasions, the first attacks by enemies have often been directed at the pillars that sustained the nation and its people: libraries, books, authors, and gurus followed by common men, women, and children. The motive was to dismantle belief systems, erode society's confidence, and destroy the institutions that gave strength to the people. There was also an attempt to diminish respect for Brahmins, who were the custodians of the Vedic system. They wrote, memorized, and disseminated knowledge, ran gurukuls, and intellectually sustained a society that was being targeted for destruction and conversion. Sanskrit was one of the first targets. It was the language that nourished the mind and soul of the land and its people, and it served as a shield against foreign influence. As a result, it became a focus of Islamic and Christian invaders. Sanskrit schools were banned, and campaigns were launched to shame the language and those associated with it. Once Kashmir was the global hub of Sanskrit learning and hundreds of schools flourished under Hindu rule. The destruction of Sanskrit schools, along with the broader, centuries-long decline of Sanskrit learning in Kashmir, is historically rooted in the barbaric Islamic **invasions** and the forced conversions of Hindus. All Muslim invasions resulted in the destruction of temples and the burning of ancient manuscripts. The forced exodus of Kashmiri Hindus by Islamic terrorists in 1990 led to a massive loss of the traditional keepers of this linguistic and cultural heritage, resulting in **the** closure of remaining local educational spaces for Sanskrit. Under Modi govt Lt Governor Manoj Sinha has initiated efforts to revive Sanskrit in schools. It is an Islamic extremist position that India's one state rejected its original, mother language Kashmiri to be its state language and imposed Urdu as its official language in favour of its so-called Muslim identity. During British colonial rule, particularly through the English Education Act of 1835 led by Thomas Babington Macaulay, Sanskrit education and the traditional gurukul system were further marginalized. By withdrawing state funding and making English the medium of instruction for higher education, **the** British replaced vernacular and Sanskrit-based learning with a Westernized curriculum. Over time, the claim that Sanskrit is a dead language gained traction. Missionaries and those educated in colonial institutions often promoted this idea, which was lat

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-21-TEST NO.-26061

Might shrink. The demand for digital tech talent is reportedly growing 5X faster than core tech talent and will be much larger to be adequately met through reskilling efforts alone by tech firms. Can high school graduates emerge as a reliable and enduring new talent stream Well, I think there is a tremendous promise and potential in high schools graduates to emerge as a robust talent pool for the tech industry due to the following three reasons Digital natives have a greater natural acumen to learn skills for digital tech jobs The Gen Z now graduating from high schools are the true digital natives. Born in the 21st century, they are more home with digital technologies of 21st century than any of the previous generations. They take to new technology as Fish to water. While evidence of Gen Z being power users of new tech are fairly ubiquitous, one can often see these power users also active in creation of new apps and putting new technologies to imaginative new purposes. We are living in the times where in India an 8 year old created an app to aid dyslexic kids, a 9 year old created an app to reduce bullying and a 16 year created an app to lighten the school bags. With coding now also being learnt at a much younger age, the potential of finding acumen that can be transformed into productive tech talent has gone up immensely for the tech firms. Many tech jobs can be performed with skills that can be learnt during and after high school While more prevalent in the developed countries, there is ample evidence of people successfully performing technology job roles with high school credentials only. They are able to do so by rapidly acquiring the essentials skills required for some tech job roles. In India also there is a growing evidence where a few visionary IT companies have begun on boarding high school graduates into their innovative talent transformation ecosystems and are successfully transitioning them into productive full time employees. There is also proof emerging that such models would endure. **For** instance a leading cloud solutions software company has been operating successfully with a unique training employment model with high school graduates now for over a decade. Employer Value Proposition EVP of tech firms may trump Education Value Proposition delivered by many higher education institutions in the country Let me **clarify** that one can deny the life transformation impact of quality higher education and the fact that its value cannot be compared with what one employer can offer. However, there is also a question about how many students in India are offered such a transformative higher education experience. A large number of even bright students are unable to find seats in institutions reputed for their quality curriculum, faculty and stimulating education environment. India has over 3 Cores students enrolled into Undergraduate UG programmers out of which approx. 2 cores are pursuing B.A 1 Core, B.Sc. 47Lacs and B.Com 42 laces **programmers.**

**350th: "For"** **400th: "clarify"** **500th: "programmers."**

**Total Words: 500 | Total Keystrokes (with space): 2998**

# RKC NAWADA TYPING TEST RESULT

**Software Link: https://rkcnawada.online/best-typing-software-rkc.php**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-21-TEST NO.-26062

And 37.8 Laces are pursuing Engineering programmers. As per India Skill report 2021, the employability of these students upon graduation ranges between 30 40 for B.A, B.Sc. B.Com programmers and even for engineering graduates it is not over 46. This leaves almost 2.2 cores UG students in India at risk of unemployment or underemployment. This creates an opportunity for tech firms to create an Employer Value Proposition that can attract many bright high school graduates from the vast available pool to pursue a more assured career path with them, a path that enables them to learn apply new skills, gain financial independence and also provides rich work experience to boost future employability career progression. What is the potential model that can attract, develop and retain talented high school graduates in the tech industry I am fortunate to have personally witnessed one of the largest and among the most admired IT company in India craft an innovative and attractive employment model for bright high school graduates. Also, my job entails interacting with technology professionals, students of tech programmers and also HR leaders of leading tech companies. In my assessment, any tech firm that wishes to successfully tap into this new talent spring, must build an employment model on the following three planks A Shared Long Term vision While the high school grads over time can potentially help tech firms address the massive talent crunch and contribute to meet its business imperatives, the firms also needs to offer a compelling long term shared vision of career progression to this new employee segment. Since, the nature of work at tech firms would entail attracting only quality high school grads, it needs to convince these just out of school youngsters about the superiority of its Employer Value Proposition against the easily available but not so great higher education options. A leading IT company, I know, shows a career progression with work integrated higher education path for next 8 10 years to potential recruits contemplating between traditional higher education options and working for this reputed IT firm. Communicating a shared vision to this segment **is** vital for building a successful talent model with high school grads. Embed work integrated higher education paths in collaborations with top universities While it is important to train for job readiness, it is even more important to educate for career and life readiness. Skilling alone, however attractive it may **seem** in these talent starved times cannot build professionals and citizens who will provide an enduring strength to corporations and the country. Tech firms should build the model to not just find skilled workers for today but to also build a pipeline of future leaders. This would entail the firms to go beyond training and collaborate with top universities to offer transformative higher education experiences to this segment. One such collaboration between a leading IT firm and a top university led to creation of even a new innovative bachelor degree that offered a multi disciplinary curriculum aimed at building future.

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-21-TEST NO.-26063

Today over 1000 high school grads are There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. Stretching s specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be an integral part of every workout program. It not only helps increase your flexibility, which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. Pursuing this innovative bachelor degree while simultaneously pursuing their careers with this IT Company. Is positive thinking an inherent characteristic of a person or can it be developed in one psyche. The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of motion. According to the studies, proprioceptive neuromuscular facilitation or PNF type of stretching is more effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the **gym** know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural that your muscles get tense when **you** experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, shoulders, etc. and stretch those parts of your body. is likely to develop a similar attitude. The children of short tempered, over cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parent behavior in front of their children. They must exude confidence, self belief and **hope.**

**350th: "gym"** **400th: "you"** **500th: "hope."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-21-TEST NO.-26064

Especially in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. There is no better education for a child than watching his parents come out of a tough situation by means of earnest endeavors. Such success not only gives more joy but also increases self confidence. Such work integrated higher education paths with top universities will also meet aspirations and dreams of young high school grads to study with a top university. It will also attract them towards a more fulfilling and engaged long term employment with the tech firms. Nurture for assimilation mentor for growth High school grads as full time employees would be much younger and inexperienced compared to a majority of other employees. It is important that this segment finds acceptance and are made to feel welcome in the world of work which is very different from the high school environment they knew. This requires building a nurturing ecosystem that also involves their supervisors and coworkers to ensure faster assimilation of this young workforce in the mainstream. Since this segment will need to balance full time jobs with work integrated higher education paths, they would also require access to mentors who will both motivate as well as guide them to achieve greater work study life balance. I believe there is a strong case for tech firms to soon consider the creation of employment models targeted at high school graduates. It will not just help fill the skill gaps but will also enable them to shape the talent they need in the future. The tech firms who will do this early will likely enjoy an advantage over others and perhaps even be in a superior position to win the talent wars of the future. If you are a business or HR leader still thinking if you should tap into this very young segment or not, then let me in conclusion just state a quote from Joseph Jobber Ask the young, they know everything. India, having more than 10000 years **old** civilization and existence, has always been a leader for the world to teach life skills and wisdom. The very concept of existence in ancient Indian scriptures revolves around higher consciousness of individuals i.e. each and every individual has a capacity to attain higher self, which indeed is all about **going** beyond self. Selflessness and being there for others arises from the Indian philosophy about Duck duke. The literal meaning of Duck is Durefers to Duse i.e. others and KHz refers to key lie i.e. for, so for others. Sifting through history, we can identify common traits amongst noted leaders globally, there surely are few foundational common aspects of which going beyond self is the highest. Even from the evolutionary perspective, the basic foundation of human existence with an evolved neo cortex is to grow beyond our reptile or limbic brain. To go beyond self, awareness of self is imperative **highly.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-21-TEST NO.-26065

Conscious leaders carry inherent characters of being aware of self and others and the environment. Which in turn allows them to go beyond and extend themselves to be there for others? Since leaders have the inherent quality of being self aware, they are easily able to navigate through the intertwined and ever evolving networks of values and virtues. The qualitative traits of our personality exist in the structure of value systems. As a part deeply ingrained in personality, being highly intertwined, if one aspect is worked upon, all the other progressive values and virtues emerge too. This being a major aspect of life sciences was always targeted by Indian scriptures, be it mythological or historical, in the form of holisticism. So, becoming a leader was not for some, but for all. Since the eastern sciences got shadowed for a while, while the world was looking at all from conservative lenses of logic, the idea of leadership also naturally got redefined and got sieved down to ideas like competition and individualism along with the world view which shrunk in terms of boundaries. From these times, there were few characteristic traits which emerged along the idea of leadership. The characteristic that generally distinguishes the individual from the herd, is initiative. A leader is distinguished by his or her initiative since it is more than merely doing what is instructed. If a leader role is to make progress, then the initiative is the means through which that progress may be made. Leaders realise that in order to accomplish anything, fresh avenues and innovative techniques must be explored. It is not enough to just think about our objective. Leaders are born initiators, cultivators and nurturers. Leadership hence is not merely restricted to actions or is not constrained to certain job roles, it is a way of life. Since thoughts and words are meaningless until they are translated into actions, leaders would always be seen in some or the other form of movement. Since it is a way of life, the traits of leadership enables a person to not just separate elf but also **to** go beyond it. Born leaders can always be witnessed to be expanding themselves beyond beyond boundaries, beyond capacities and even beyond spaces. A leader comes with a dynamic mindset which is expansively stretchable. This too showcases much beyond their work life. This vastness of approach and always having a **peeing** eye into the bigger picture is prominent in all spheres of their lives. When witnessed in home spheres, they turn out to be the planners, decision makers and culture drivers. In social spaces their value system showcases in ways where they turn out to be great thinkers, well connected, supported, validated and their presence can be remarkably felt. As a human, they hold a strong hold on values and virtues along with having an enlarged idea of self, not by grandiosity of ego but by wealth of self worth supported by humility and kindness. Good leaders are highly conscious **high.**

**350th: "to"** **400th: "peeing"** **500th: "high."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-21-TEST NO.-26066

Indian manufacturers have made remarkable progress in recent years, contributing significantly to the country economy. However, to remain competitive in a rapidly changing global marketplace, they must adopt new technologies that can help improve efficiency, reduce costs, and increase productivity. Cloud technologies coupled with AI and automation capabilities offer immense potential for Indian manufacturing to enhance its competitiveness and resilience. With increasing technology adoption, modern manufacturing gas entered the Industry 4.0 phase, also known as the Fourth Industrial Revolution. Industry 4.0 is a transformational shift from traditional, isolated manufacturing to interconnected smart factories that leverage a range of advanced technologies. These technologies include the Internet of Things, Artificial Intelligence machine learning, digital twins, and real time data monitoring. By using these technologies, Industry 4.0 enables manufacturers to create highly efficient, automated, and adaptable factories that can quickly respond to changing market demands. As a result, Industry 4.0 represents a significant leap forward in the productivity, efficiency, and flexibility of modern manufacturing. Modern manufacturing from the lens of automation and AI Automation is an essential part of modern manufacturing, and it plays a significant role in increasing productivity, reducing production errors, and making labor more efficient. Automation, along with cloud technologies, can be a powerful force, reducing the time from concept to production. The adoption of automation in the Indian manufacturing sector is projected to increase by 50 in the next five years and the demand for industrial robots in India is expected to increase by 10 times by 2025. The adoption of AI is expected to increase productivity by 25 and reduce errors by 35, according to NASSCOM. Tech advances have even revolutionized Supply Chain Management SCM in recent years. SCM plays a critical role in the value chain by ensuring that the goods and services are delivered to the customer on time and cost effectively. Technology advancements like GPS tracking, RFID, and Iota devices have enabled real time tracking of products and assets. Using predictive analytics, one can forecast demand, identify potential supply chain disruptions, and optimize inventory levels. This helps companies to plan and execute their supply **chain** operations more efficiently, reducing costs and improving customer satisfaction. Similarly, computer vision, a branch of AI used to analyze visual information from the real world, can be used to inspect products for defects before they are shipped, helping to prevent recalls and loss of faith reputation with customers. It **can** also be used to identify potential safety hazards on the shop floor to avert accidents that can result in loss of inventory and life. AI as a Service Akas eliminates the need for businesses to invest in expensive hardware, software, and infrastructure. It boosts productivity, reduces defects, and provides better insights for decision making, leading to increased profitability and competitiveness. Manufacturers can access AI technologies on a pay per use basis, significantly reducing costs. Amass is highly flexible and can be customized to meet business specific needs, enabling them to implement customized AI technologies. How Iota can help manufacturers **succeed** As per. Industry 4.0 is at an inflection point in Indian manufacturing, with

Range of consciousness makes them very accepting and resilient. We would hardly find them looking out for balance as they would find themselves agreeing with how Alain De Bottom expresses there is no such thing as work life balance. Everything worth fighting for unbalances your life. The growth mindset which a leader possesses helps them be people oriented and humanistic, across their life operations. In terms of workspace, their work self would always be expanded to ensure the wellbeing of their team and targeting growth in terms of organisational goals. They would always be seen taking radical responsibilities for not only the tasks assigned with their job role but also those associated ones which tag along by the virtue of their caliber with great pride and contentment, always striving for excellence. A leadership temperament cannot truly be defined. Inability to craft it in words is a result of its inherent nature of evolution and everlasting growth spurs. This vigorous journey of being an epitome and exhibiting the horizons of humanity in action is not all hunky dory. The emotional turmoil and roller coasters tag along with this evolutionary journey. Leaders undergo loneliness. At that height of thought and action execution, they hardly find anyone who can truly empathize with them. Someone who may be not able to share but at least understand their concerns and have a glance at life with their wide eyes. This loneliness and lack of this deeper connection exhausts them. This aspect necessitates the need to cater to their wellness. Addressing Leadership wellness is like striking numerous pins with one ball. Resilience is an essential trait of high performing leaders. To advance and prosper, leaders must nurture it within themselves. Self care is evolutionarily imperative for anyone who goes beyond self. These trips beyond oneself could only be sustainable if one is returning to a healthy and fuller space rather than an empty castle. Driven by inner meaning and existential purposes, a leader is truly an indispensable resource, universally. The art of developing a successful team is actually a science. Just like in a scientific **experiment,** one must ensure the right elements and atmosphere for success. Leaders must create a performance enabling environment, which is motivating and inspirational. So, what is the secret of creating a successful work team How does one establish a culture of collaboration that inspires an employee How do you motivate **an** employee to put in his her 100 every day Here are some basic rules to start with Get the mix right The first step toward developing a successful team is to induct the right mix of people. The members should have the right skill sets, talent, qualifications, and experience to ensure a diverse team with multiple subject matter experts. However, the team must have a broader theme that unites them and personality traits that develop a healthy work environment. Know the impact each team member has a role to play that matches his her area of expertise. These responsibilities **must.**

Various parts of the manufacturing process, such as machines, equipment, and production lines. These sensors collect real time data on the performance of these systems and send it to a central control system. Iota sensor data is used to predict when maintenance is required for machines and equipment. By scheduling maintenance at the most appropriate time, businesses can reduce downtime and increase productivity. This leads to cost savings, improved efficiency and better asset management. Iota can be used to track inventory levels, monitor the movement of goods, and optimize the supply chain. This allows businesses to reduce costs, improve delivery times, and increase customer satisfaction. The sensors can be used to monitor the quality of products during the manufacturing process. For instance, Indian glass packaging company Primal Glass adopted the Azure Iota platform to transform its manufacturing operations. They were able to get real time visibility into their manufacturing operations and analyze the defects at various stages. To facilitate this transformation, a plant monitoring system is hosted on an Iota hub. The data from equipment and high speed production line sensors is then pushed to the cloud for further analysis. This led to one of the first of its kind, Real Time Manufacturing Insights being developed to provide stage wise losses, production reports, and quality control workflows, as well as role specific key performance indicators. How can assist workers in the shop floor? Indian manufacturing companies are increasingly exploring the use of emerging tech such as Augmented Reality Mixed Reality to create immersive environments to collaborate remotely in troubleshooting, problem solving machine breakdowns preventive maintenance scenarios. These new technologies are also being used to effectively impart training and up skilling to blue collar workers. The use cases of remote assistance delivered through wearable, potentially in industrial Met averse environments, can enable on demand expertise anytime, anywhere. Another way how AI and cloud technology have helped Indian manufacturers is by improving the customer experience. By leveraging AI powered catboats, manufacturers can provide customers with instant support and assistance. This not only enhances the customer experience but also helps reduce the **workload** of customer service representatives. Increasingly, Indian manufacturing companies are looking to leverage Large Language Models LLMs available on the cloud to assist factory personnel query on Equipment Manuals etc. to cater to situations in real time. Another way in which AI and cloud technology have helped Indian manufacturers is **by** improving the customer experience. By leveraging AI powered catboats, manufacturers can provide customers with instant support and assistance. This not only enhances the customer experience but also helps reduce the workload of customer service representatives. To aid factory personnel in real time situations, Indian manufacturing companies are increasingly utilizing Large Language Models LLMs available on the cloud to facilitate queries regarding SOPs. Equipment manuals and other relevant information To sum up, cloud technology allows manufacturers to attain visibility throughout their end to end supply chain and develop innovative business models by utilizing secure and scalable manufacturing cloud based technology, **while** empowering organizations to be more resilient. To the country is expected to reach. Organizations are planning to increase their investments in emerging network technologies, big data analytics, central, and remote controlled monitoring. Meanwhile, the Indian manufacturing clusters or industrial corridor policy will contribute to building smaller hubs for focused investment and innovation. Amidst rising operational costs, scalability challenges, supply chain issues, and many other problems, manufacturers need innovative solutions that will drive efficiency and build more resilience. Cloud technology helps them do more with less, innovate, and reduce costs while scaling up productivity. You know that India entrepreneurial energy is next level and blowing up big time. New playbook in the making. Historically, one knew of venture as an asset class for the semi-retired post operator life. However, it is fun to see the unshackling them from the old narrative and breaking out to find new blue skies and possibly love of founders, partners and the country. This is Indian venture Jab Simian; jeep le any indigo moment In the tapestry of life, retirement represents a vibrant thread that weaves dreams, aspirations, and newfound freedom. As we bid adieu to our working years, we are presented with a unique opportunity to embark on new journeys, indulge in dream vacations, and pursue hobbies that were once deferred. However, to truly savor the fruits of retirement, meticulous planning is indispensable. In this article, we explore the profound significance of early retirement planning. By ensuring that our financial resources endure, we can unleash a realm of possibilities, discovering the art of retirement and the beauty of fulfilling our dreams. The Gift of Early Planning. The beauty of retirement lies not only in the liberation from work but also in the realization of long held dreams and passions. Early retirement planning serves as the catalyst that enables us to transition smoothly into this fulfilling phase of life. By setting aside financial resources and meticulously mapping out our goals, we can embark on a journey that transcends mere sustenance and touches the realm of true fulfillment. A crucial aspect of early retirement planning is acknowledging the shifting landscape of life **expectancy** in India. Thanks to advancements in healthcare and a growing awareness of wellness, we are blessed with the gift of prolonged lives. However, it is essential to ensure that we do not outlast our financial resources. Instead, by planning early and making astute investments, we can ensure that our **finances** endure, allowing us to embrace the fullness of life in our retirement years. Unleashing the Power of Dreams hold an ethereal power within them, beckoning us to explore uncharted territories, revel in breath-taking landscapes, and immerse ourselves in the passions we hold dear. Retirement, with its gift of time and freedom, offers the ideal canvas to bring these dreams to life. Imagine traversing the picturesque countryside of Tuscany, relishing the flavours of sumptuous cuisine, or sailing across crystal clear waters to visit exotic islands. Picture yourself delving into the world of art, music, or literature, cultivating talents that were **previously** eclipsed by the demands of a career. Retirement, when planned meticulously, breathes life into these dreams, transforming them into vivid realities. By investing wisely and nurturing our financial resources, we open the doors to extraordinary experiences.

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-21-TEST NO.-26072

He also wrote several fictive books on Hindu antecedents of medieval monuments, and we owe the imagination of Taj Mahal being a Shiva temple to him. The Andamans and its residents are simply a ruse and, at best, a quarry of the hyper nationalist discourse. It is the vision of world conquest that brings the Islands into focus for public glorification, which otherwise struggle for their basic needs. How uncannily similar it is to the way the British saw and treated the Islands, as a pawn in their ocean conquest. The renaming is an act of epistemic colonisation masquerading as decolonisation. What is the difference between the name Port Blair and Sri Vijaya Puram? It is simply more of the same. Vaidik is professor of history, Ashoka University. Views are personal. The American presidency is often described as the most powerful office in the world. That is indisputably true. The US president is often called the leader of the free world. By free world is meant the white Western world. Some would dispute that characterization. For example, Angela Merkel while she was in office as chancellor of Germany was often called the leader of the free world. Still, the honorific rests with the US president more often than not. The white non-Hispanic population of the US is 65% of the overall population. 46% of the overall population is firmly in Donald Trump corner, which constitutes the MAGA (Make America Great Again) crowd. The MAGA crowd is almost invariably white. That means that two out of every three white American is a MAGA supporter. Nonwhite immigration is rending apart the US and many a European country. The people in these countries just don want any more nonwhites to come to their shores. Donald Trump is the chief architect of the hate nonwhite crowd, although many a European leader has taken up the cudgels as well. In France, it is Marine Le Pen. In Germany, it is Alice Weidel. In the Netherlands, it is Geert Wilders. Across Europe there are many more such nonwhite immigrant haters. The rules based international order **is** often cited as the mechanism to run the world. Indian officials claim this to be the way without hesitation. There are 8 billion people on the planet less than a billion are white. The rules based international order can often be interpreted as a white supremacy international order. For **example,** if Donald Trump comes to power in the US, and bans nonwhite immigration, will India be able to do anything about it? The global order would have changed in favour of whites, but Third World countries like India will be forced to go along with it. How are less than one billion people allowed to dictate terms to more than 7 billion people? This is minorityism at its very worst. If Donald Trump becomes the most powerful man in the world, in effect the pharaoh of the world, he should take care of all 8 billion people on the **planet.** But he is concerned first with the 200 million white population in the US, then the several hundred more million whites in Europe, and to the rest of the world, it is nah, I have no time. But time he does have. If he was a sincere pharaoh of the world, he would allow nonwhite immigrants into his country and force Europe to do the same for its countries. Nonwhite immigration is one of the two hottest topics in the US presidential election (the other being the economy). Trump talks endlessly about immigration. Yes, he has ample time to address the issue. Trump is just using racism to get elected, and then he wi

Muir wrote Matapariksha (1839), a critique of Hindu beliefs in Sanskrit, which prompted responses from Hindu scholars. Robert Caldwell promoted the Dravidian theory, distinguishing South Indian culture from Sanskrit-based traditions and portraying the latter as an imposed system. Some missionaries believed that weakening Sanskrit and Brahmin-led learning would make religious conversion easier. During the Goan Inquisition, Hindu texts were condemned or destroyed, Sanskrit teaching was restricted, and conversions were enforced. Amid these developments, B. R. Ambedkar is known to have suggested Sanskrit as a potential national language, though the proposal was not accepted. However, Sanskrit was included among the 22 scheduled languages in the Constitution of India. Efforts to revive and promote Sanskrit continued in independent India. Organizations such as Samskrita Bharati, founded in 1981, have worked to popularize spoken Sanskrit and make it accessible in everyday life. Today, there are villages where Sanskrit is used in daily communication, and the organization operates thousands of centres across India and in several other countries. Sanskrit education has expanded significantly. It is taught as an optional subject from primary to higher secondary levels. There are thousands of traditional pathshalas and Vedic schools, as well as many universities offering Sanskrit at undergraduate and postgraduate levels, including 18 dedicated Sanskrit universities. States such as Uttarakhand and Himachal Pradesh have declared Sanskrit as a second official language, and public places like the airport in Dehradun display signage in Sanskrit alongside Hindi and English. According to various estimates, millions of students study Sanskrit at the school level across India. Odisha has emerged as a significant center for Sanskrit education, with institutions such as Shree Jagannath Sanskrit Vishvavidyalaya contributing to its growth. The expansion of Sanskrit education has been supported by both government initiatives and voluntary organizations, along with increased funding and institutional development in recent years. The inauguration of a new headquarters named Pranava (Omkar) by Mohan Bhagwat on the occasion of Akshaya Tritiya symbolizes a continued effort to promote Sanskrit and its cultural significance. As he remarked, learning Sanskrit can deepen one's connection to Bharat. A 'dead language' reviving a Nation: The breeze from **Indus,** a Shiva mantra at Kailas, a trek in Chushul and a chadar walk on frozen Zanskar. All this put together describes Tarun Vijay. He is a former BJP member of Rajya Sabha. The blog revolves around everything that is Mother India and her concerns. Through Sanskrit, Bharatvarsha descends into **your** heart. Mohan Bhagwat, Sarsanghchalak, RSS Since the days of invasions, the first attacks by enemies have often been directed at the pillars that sustained the nation and its people: libraries, books, authors, and gurus followed by common men, women, and children. The motive was to dismantle belief systems, erode society's confidence, and destroy the institutions that gave strength to the people. There was also an attempt to diminish respect for Brahmins, who were the custodians of the Vedic system. They wrote, memorized, and disseminated knowledge, ran gurukuls, and intellectually sustained a society that was being targeted for destruction and **conversion.** Sanskrit was one of the first targets. Islamic invasions and the forced conversions of Hindus. All Muslim invasions resulted in the destruction of temples and the burning of ancient manuscripts. The forced exodus of Kashmiri Hindus by Islamic terrorists in 1990 led to a massive loss of the traditional keepers of this linguistic and cultural heritage, resulting in the closure of remaining local educational spaces for Sanskrit. Under Modi govt Lt Governor Manoj Sinha has initiated efforts to revive Sanskrit in schools. It is an Islamic extremist position that India's one state rejected its original, mother language Kashmiri to be its state language and imposed Urdu as its official language in favour of its so-called Muslim identity. During British colonial rule, particularly through the English Education Act of 1835 led by Thomas Babington Macaulay, Sanskrit education and the traditional gurukul system were further marginalized. By withdrawing state funding and making English the medium of instruction for higher education, the British replaced vernacular and Sanskrit-based learning with a Westernized curriculum. Over time, the claim that Sanskrit is a dead language gained traction. Missionaries and those educated in colonial institutions often promoted this idea, which was later echoed by sections of Indian society. This characterization ignored the fact that Sanskrit has long been embedded in cultural and social practices from birth rituals to marriage and death ceremonies. It has played a key role in India's intellectual traditions, including early developments in mathematics, astronomy, and philosophy. In the early 19th century, some missionaries portrayed Sanskrit literature as pagan, superstitious, and corrupting. John Muir wrote Matapariksha (1839), a critique of Hindu beliefs in Sanskrit, which prompted responses from Hindu scholars. Robert Caldwell promoted the Dravidian theory, distinguishing South Indian culture from Sanskrit-based traditions and portraying the latter as an imposed system. Some missionaries believed that weakening Sanskrit and Brahmin-led learning would make religious conversion easier. ## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-22-TEST NO.-26077

Should India blindly follow America? It may not be a very powerful country but it is an extremely large country. A white pharaoh like Trump is not going to take care of the interests of 1.4 billion nonwhite Indians. Our leaders have to do this. One way to do this is to carve out a new axis with China and Russia, and become an equal counterweight to the West. But India will have no truck with China. Both claim leadership of the global south. China is economically much stronger than India and will win that race. The problem is that nonwhite India is willing to play a secondary role to a white America, but refuses to do so to a nonwhite China. India future rests with China and Russia. Why is it part of the QUAD alliance to contain China? The is a way for the US to impose its terms in our region. We should have no intention to battle China. A crippled China does not help us it only helps the West. It is high time our leaders realize that India China Russia versus the West is the optimal way to set up a new global order. Our cultural practices, festivals, and symbols have deep significance, with layers of our traditions, history, and philosophy embedded in them. Recently, I asked my students, What would be your first reaction if you accidentally stepped on a book, pencil, or pen? Their immediate response was to bow their heads to any object they touched with their foot. When I asked who taught them to do this, they could not point to a single person. In a foreign country, I once saw a student making a ladder out of books to climb up and down stepping on books is not a taboo in other cultures. In India, we cannot even imagine touching anything or anyone by our feet elders, stationery items, money we have regarded everybody and everything as divine. Today, Indian children born in the 21st century follow such practices instinctively, although they are intrigued by who taught **them** such habits. Our ancestors, who practiced similar habits, have passed them on to us, creating a sense of continuity and connection with our past. The Indian word for ancestors is Pitṛ cognate with the English word paternal. Fortnight dedicated to our ancestors, is a sacred period. It is an **opportunity** and a festival to express our gratitude and reverence for them. Our culture has placed these two weeks between the festivals for immersing symbolizing dissolution, and the festival of Durga and derived from Garbha, i.e., womb), symbolizing evolution and birth. Between the dissolution of the past and the evolution of the new, we should pay tribute to our ancestors. These fifteen days of the year are for pausing and not launching any new venture or traveling, thus labeling them erroneously inauspicious. However, the purpose of such a taboo is to gratefully acknowledge our ancestors who brought us to this **world** to pursue and enjoy various bounties Instead of planning for the future, take a break from the present and be grateful for our past in this fortnight for ancestors. Their influence on our personalities stays with us forever, physically, mentally, culturally, and socially. The second reminder from is to be aware that whatever happened to our ancestors will happen to us also. This means we must leave the way they went, leaving worldly materialistic pursuits behind us. This is the time to understand our existence. It is time to think about the goal of this life. So, we must do t rather to those who embody the qualities and actions of a true Brahmin, as defined in the B

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-22-TEST NO.-26078

Be clearly defined and accountability established as soon as a team member joins. At times, different team members have a discreet and unique responsibility, and they work in isolation. Despite this structure, each individual contributor should be aware of the impact they will have on achieving the common goal. Teams have a shared scorecard, and members must be aware of their contribution to it. The most relevant example would be that of a football team wherein each player is given a specific task akin to his her abilities, yet they all work together and are aligned to the central objective of making a goal. Celebrating success together the right travel partners make the journey more worthwhile than the actual destination. Team members work together and form a bond among them. They suffer through trials and tribulations, burn the midnight oil, and support each other on good days and bad. Hence, the euphoria of crossing a major milestone should also be experienced by all. The glory of a major achievement must be uniform across employees, and they must consider it their own personal success. This helps develop loyalty and establish a sense of belongingness. Using the power of communication Clear communication channels within the team is crucial in building a strong team. Encourage your members to speak up share their thoughts, ideas, grievances, aspirations, and change they would like to see. Effective communication leads to innovation, development, learning, and improvement. It helps leaders be mindful of how their team is faring and, more importantly, how they feel. Being aware of any resentment or unhappiness can help the company take necessary steps before it ends up losing good resources. Trust is the key while the above factors form the pillars of a successful team, trust is the very foundation that cannot be bought but has to be earned, and this can happen only when action meets words. Trust has to be earned by both team members and leaders within a team. If this foundation is weak, the entire team can easily collapse. Leaders must build trust by giving more opportunities to **team** members, highlighting their success, encouraging them in their initiatives, and leading by example. Building trust within the workplace is a key essential for higher productivity. Successful teams build successful organizations. An organization needs smart teams across departments to achieve its long term objectives. A company major resource is indeed **its** people, and their loss can hinder its growth. Therefore, having successful teams with empowered employees is an essential factor. Successful teams help create a vibrant and inclusive company culture and increase the happiness quotient of each and every employee. So, here I am with my five crazy beloved darlings on my seven day tour in Latah. After all the maniac shopping, over Google research and extra heaps of pickings, we landed in Lehn. We all were filled with a lot of inquisitiveness, enthusiasm, curiosity and yet a bit scared in the hindsight the evenings here are gloomy, lonely, still **yet.**

Improve your posture, body aches reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of motion of salt Iodine fortification is what most countries rely on to encourage adequate dietary intake. In more than seventy countries htat iodize salt generally serves as the major source of iodine intake. One fourth of a teaspoon of iodized salts has about hundred micrograms of iodine. Note that the salt used in processed foods, which is the major source of salt for most Americans typically, does not contain iodine. If salt used in a processed food contains iodine, it will be listed in the ingredients list of that food. Consumed from processed foods and get your sodium from iodized salt. Seaweed, saltwater fish and seafood are natural sources of dietary iodine. Dairy products also supply iodine in hte diet at varying levels. During lactation, the best concentrates iodine in milk so best milk tends be a good source of iodine as long as the iodine intake of a mother is adequate. Plants grown in iodine rich soil are also good sources. However, this is not a reliable source of iodine since there is no way of knowing whether produce purchased in grocery stores is grown in iodine rich soil or not. Iodized salt usually adds less than about three hundred micrograms iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit of daily iodine intake for adults set at. According to the studies, proprioceptive neuromuscular facilitation or PNF type of stretching is more effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain **by** reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare your muscles. Not the only gym, but it can also help **you** improve your performance in dance or an athletic event. It is only natural that your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the body towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, shoulders, etc. and stretch those parts of your body. Focus on decreasing the amount micrograms by the IOM it is unlikely to hit an excess amount when including a multivitamin and including natural sources of dietary **iodine.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-22-TEST NO.-26080

India is now facing a dual problem of low growth and high inflation. The recovery has proved much weaker than expected, with growth amounting to a meager 4.1% in the fourth quarter of 2021 22. At the same time, inflation has been surging so much so that over the past few weeks the government has taken a wide range of measures to deal with it. Unfortunately, this strategy is misplaced. The government actions will have only a marginal effect on inflation, while they may do significant damage to the incipient recovery. The government needs to step back from the inflation fight, and instead encourage RBI to tighten monetary policy. Three months into Western sanctions against Russia following its invasion of Ukraine, two outcomes are apparent. Initial expectations of the US and EU were over the top. In addition, it is getting harder for the EU to keep its own flock together in its aim to cripple Russia energy sector. For example, EU leaders this week agreed after protracted negotiations to stop imports of Russian crude by the end of 2022. However, they were forced to grant Hungary an exemption from it. Even Bulgaria timeline is likely to be extended. And as for Russian gas, there no deadline at all. A step back will make it clear why Western sanctions and the subsequent sermonizing aimed at countries such as India were unwise. Let start with Iran, a country subject to US sanctions soon after the Islamic Revolution in 1979. Into its fifth decade, the conversation is still about changing Iran behavior. For sure, when the world largest economy imposes sanctions, it limits the economic potential of the victim. But evidence shows that it does achieve its core aim. Also, the collateral damage on unrelated countries cannot be justified by convenient references to a rules based order. Another reason why sanctions don really work is that both sovereign nations and private firms have a powerful economic incentive to bypass them. US media reports on Iran clandestine finance system straddling the globe is an example. In the current context, IEA data showed **that** even in March, Russia remained the OPEC+ grouping second largest crude oil supplier with 9.10 million barrels a day. A look at the predicament of Germany, EU economic powerhouse, provides an insight on this issue. Russia is the source for about 55% of Germany natural gas, which is harder **to** substitute than oil. A scenario analysis by the German Bundesbank on the outcome of an immediate halt of Russian energy imports estimated the economy would shrink by 2%. Moreover, Germany current inflation level of over 7% is a four decade record. There no case to support Russian actions in Ukraine. However, Western response smacks of both double standards and unsophistication. The proof for it is the exemptions within its ranks and growing a cases of sanctions bypass. India was right to say, more than once, that Western lectures on buying Russian oil don square with Western purchase of Russian **gas.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-22-TEST NO.-26081

The sudden surge of Covid infections in Maharashtra Kerala, too, is seeing a jump in the past few days over 1,000 cases being logged and positivity rate in Mumbai touching 8% on Wednesday seems to have jolted the Maharashtra government out of its complacency. Since April masks have not been mandatory in the state, and that was an unwise move. Even when enforcement may or may not be stringent, this effectively sent a signal down rating Covid public health threat potential, even as more variants were being detected. Now state ministers are revising their position on masks. Not just masks, Maharashtra vaccination drive has also slowed down and a staggering 1.7 core people who got their first doses are yet to get their second doses. With an average of 35,000 second doses administered daily in the state in the past week it will take at least 500 days to fully vaccinate these 1.7 core people. Such a slow pace defeats the purpose of vaccination, where full dosing and boosting must be done in the prescribed time period to ensure optimal efficacy. Last year, when vaccination was a high political priority, officials were going door to door to root out vaccine hesitancy and motivate people. States like Maharashtra, Bihar, UP and Tamil Nadu with a higher proportion of partially vaccinated people must embrace this strategy again. Around 15 core doses are lying unused because of the country 12 core cohort of partially vaccinated citizens. The precaution dose programmer needs a boost too. Over 15 core adults are eligible nationally, but just 15 lakh in the 45 59 age group have been jabbed. The discovery of BA.4 and BA.5 Omicron sub variants and many re infections require intensive disease surveillance. Experts still don know what to expect in the months ahead. Even the mild third wave scarred the economy: January March quarter low 4.1% growth is a warning. A potential fourth Covid wave is an economically frightening prospect. Too many MSMEs are teetering on the edge, shocks from the Ukraine war and China lockdowns via inflation and supply bottlenecks will continue **for** a while. Governments must get smarter: Wearing masks and conducting neigbourhood vaccination are hardly burdens when compared with economic and healthcare costs. When India first commercial flight took off in 1911 within Allahabad, little had the world hoped for any remarkable uptake of this sector in a price sensitive, **nascent** market like India. However, over time, the rising Indian middle class embraced this mode of transport, and thus, with economies of scale kicking in, fares dipped. This defined the Indian civil aviation growth story until 2016. Air travel for aim admit In the year 2016, this sector saw a tectonic change. Small no frills airports sprouted in places like Darbhanga, Jharsuguda and Kishangarh that earlier did have a single trace on India aviation map. Darbhanga and Jharsuguda have catered to 5.75 lakh passengers and 2.4 lakh passengers respectively in the last one year.

The lit fit have been exulting **over.**

**350th: "for"** **400th: "nascent"** **500th: "over."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-22-TEST NO.-26082

Be clearly defined and accountability established as soon as a team member joins. At times, different team members have a discreet and unique responsibility, and they work in isolation. Despite this structure, each individual contributor should be aware of the impact they will have on achieving the common goal. Teams have a shared scorecard, and members must be aware of their contribution to it. The most relevant example would be that of a football team wherein each player is given a specific task akin to his her abilities, yet they all work together and are aligned to the central objective of making a goal. Celebrating success together the right travel partners make the journey more worthwhile than the actual destination. Team members work together and form a bond among them. They suffer through trials and tribulations, burn the midnight oil, and support each other on good days and bad. Hence, the euphoria of crossing a major milestone should also be experienced by all. The glory of a major achievement must be uniform across employees, and they must consider it their own personal success. This helps develop loyalty and establish a sense of belongingness. Using the power of communication Clear communication channels within the team is crucial in building a strong team. Encourage your members to speak up share their thoughts, ideas, grievances, aspirations, and change they would like to see. Effective communication leads to innovation, development, learning, and improvement. It helps leaders be mindful of how their team is faring and, more importantly, how they feel. Being aware of any resentment or unhappiness can help the company take necessary steps before it ends up losing good resources. Trust is the key while the above factors form the pillars of a successful team, trust is the very foundation that cannot be bought but has to be earned, and this can happen only when action meets words. Trust has to be earned by both team members and leaders within a team. If this foundation is weak, the entire team can easily collapse. Leaders must build trust by giving more opportunities to **team** members, highlighting their success, encouraging them in their initiatives, and leading by example. Building trust within the workplace is a key essential for higher productivity. Successful teams build successful organizations. An organization needs smart teams across departments to achieve its long term objectives. A company major resource is indeed **its** people, and their loss can hinder its growth. Therefore, having successful teams with empowered employees is an essential factor. Successful teams help create a vibrant and inclusive company culture and increase the happiness quotient of each and every employee. So, here I am with my five crazy beloved darlings on my seven day tour in Latah. After all the maniac shopping, over Google research and extra heaps of pickings, we landed in Lehn. We all were filled with a lot of inquisitiveness, enthusiasm, curiosity and yet a bit scared in the hindsight the evenings here are gloomy, lonely, still **yet.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-22-TEST NO.-26085

The garbha graha, sanctum sanctorum, which is the heart of the Divine, and deities are placed there. and saints could realise God through their meditations. They lived high in the Himalayas and in secluded forests. There were few distractions, and their lives were focused on one thing: attaining the Divine vision. They, therefore, did not need temples. Their world was their temple. However, today our lives are flooded with material desires, mundane tasks, and logistical concerns. We live in a world that indoctrinates us to crave only sensual pleasures and material wealth. It is difficult for this world to seem like a temple. Therefore, we must have a place which is sacred, a place which is holy, a place in which our sole purpose is becoming one with God, a place in which we hang up our daily concerns and troubles like coats at the door. We must have a place which focuses our mind on the true meaning in life. The temple serves this purpose. A university student may claim he does not need to go to the library to do his homework, may say his dorm room is a good place to study. Theoretically, that is true. The books are the same, the material to be learnt is the same. However, we know that in a dorm room he will be tempted constantly by ringing phones, knocks at the door, loud music, the desire to gossip with his friends in the hallway. However, the library is silent. It is a place devoted to academic studies. There, he will not be distracted. Similarly, we go to the temple for the sacred environment, for the holy energy in the building itself, for the divine presence of deities, as well as for the inspiration of others who are focused on God. Yet, a temple should not only be a place in which we worship. It should become the focal point of our lives, an extended family, a place where children come to learn about their heritage as well as to play with their peers; a place of celebration during times **of** joy, as well as a place of comfort and solace during times of grief. Your temple should feed every aspect of your being: your heart, your mind, your stomach, and your soul. Then, it will truly be a temple, not just a building. Online gaming has seen unprecedented growth **in** the number of users and time spent post covid. Gone are the days when gaming was restricted to consoles, video game centers or desktops that too in the top tier cities of the country. Today rapid democratization of video games is led by the adoption of gaming on affordable mobile phones and the internet. Mobile engagement in India is much ahead not just for the gaming industry but in other sectors as well. According to a recent report by BCG, the gaming industry in India is growing at a CAGR of 38% and is expected to triple to 5Bn **in.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-22-TEST NO.-26086

In India, as much as 40 of water are lost in transmission due to aging pipe networks. Today, pipes and fittings business play a key role in assuring safe and judicial use of water. There is a surge in the demand for plastic pipes across the irrigation, sanitation, and construction sector; these sectors have emerged as key drivers contributing to the accelerated growth of the Indian PVC pipes market. Growth Drivers The domestic plastic pipes industry size is estimated at Rest. 315 billion of which the organized players account for 60 of the market share. Although the pandemic caused most sectors to evaluate how they operate, the construction industry landed itself a unique opportunity to innovate and grow. Organized players have topped industry growth as they continue to gain market share from unorganized manufacturers. India is expected to witness high growth over the next few years on the back of rapid urbanization, increasing infrastructure development, and the government push for infrastructural growth. The pipes and plastic fittings industry are expected to clock a CAGR of 14 between FY 2018 26. Favorable policy landscape and citizen focused initiatives including the intent to increase farmer income via improved infrastructure and execution of Housing for All schemes are amongst top contributors to the growth of the sector. The discovery of newer applications for CPVC and further inroads made by UPVC pipes into other applications have also emerged as advantageous accelerators. Organized players have become one stop solution providers for plumbing applications owing to value added products and fittings, as well as product portfolio expansion offered to channel partners. Measures To Increase Efficiency and Address The Growing Demand The plumbing community is in dire need of trainings that can impart the right knowledge and contribute toward addressing the growing demand. A large percentage of the plumbing sector is highly unorganized and dependent on a contractual workforce. It diversified sub segments including contractors, manufacturers, and consultants who mostly work independently and hence, they lack access to proper trainings and safe tools. Industry body, Indian Plumbing Skills Council IPSC under National Skill Development Council, has **undertaken** initiatives like Prada Mantra Causal Visas Yojana PMKVY, DAY NULM Deendayal Anthodia Yojana National Urban Livelihoods Mission and State specific skill development scheme to train plumbers. IPSC training and its inclusivity have also provided an opportunity to women plumbers in India. Similarly, Brands including Truffle by Hardware, along with **Educational** Training Institutions such as the International Association of Plumbing and Mechanical Officials IAPMO, Indian Institute of Plumbing IIP, MKG Consultants, Northern Sanitations P. Ltd. among others are tying up with IPSC to launch relevant training modules. Recently, the All India Council of Technical Education AICTE has signed a Memorandum of Understanding Moue with Indian plumbing Education IPA to introduce plumbing education in Engineering and Architecture institutions across India. Over the past few years, TRUFLO by Hardware has actively supported numerous initiatives to skill and up skill the plumbing community. It has engaged with over 1,00,000 plumbers through an inclusive **approach.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-22-TEST NO.-26087

As per the recent data from the U.S. Bureau of Labor Statistics BLS, the demand for the plumbing industry services is expected to accelerate over the next 5 years. Training programs offered by TRUFLO to the plumbers focuses on around technical knowledge and product discovery has helped in creating a direct route, and the plumbers reach us directly. The brand offers a wide range of practical skills, graduate with strong foundational knowledge so the workers are ready to join the workforce as qualified plumbers. The Path Ahead With growing awareness about the durability of plastic pipes and BIS standards, residential consumers UPVC, CPVC and farmers UPVC are increasingly opting for better quality pipes to minimize potential wastage of water. Preference for PVC pipes has gone up drastically owing to factors including affordability, superior quality, and enhanced durability. Catering to the increased demand from agriculture, automotive, building and construction, electrical, and other end use industries, TRULFO by Hardware has enhanced its portfolio to offer 1,100 SKUs. To conclude, the pipe industry is likely to consolidate, and the pie of unorganized sector will continue to become smaller. Furthermore, the government is expected to increase its spending on pipe installations under a variety of programmers, including Nil Se Jal, a low cost housing scheme, among others. Furthermore, polymer price volatility will benefit cash rich companies, as they will be able to manage the additional working capital requirement. Parents are clearly no longer treated as the supporting character in a student study abroad journey. Identified as crucial stakeholders in the process, universities globally are tailoring their outreach to address the concerns of parents. Education is the greatest resource that parents bequeath to their children. They hold high hopes and expectations for their children education and carefully consider all educational decisions. The quest to provide the best education to their children is propelling many Indian parents to leap over their fears and concerns about higher education abroad. A few decades ago, the dream of pursuing higher education abroad was something reserved for economically privileged children in India. However, with upward economic mobility and the **rise** of the middle class in the nation, this emblem of privilege has turned into a common aspiration. Data have corroborated this uptick in the number of parents aspiring to send their children abroad for higher education. Before the pandemic, according to a 2017 HSBC report titled Value of Education, **Higher** and Higher, 55 of Indian parents were considering a university education abroad for their children. Parents play a decisive role in international student recruitment and retention. They assume a leading role in decision making, especially in Asian countries. Perhaps their instrumental role has been duly recognized by institutions after research confirms them as critical influencers at least three times more often than any other person. The concerns of parents are unique. Financial details and the opportunity to receive assistance, safety, security, and return on investment is something that a parent mind orbits when thinking of higher education abroad for **their.**

We can safeguard our dreams from the impact of time and inflation. Such foresight affords us the freedom to explore the vast landscapes of our desires, granting wings to our aspirations. Pursuing New Horizons Retirement is not merely a time for rest; it is a period of self-discovery, growth, and the pursuit of new horizons. As we bid farewell to the confines of a career, we have the opportunity to embrace hobbies and passions that fuel our souls. Whether it is cultivating a flourishing garden, capturing moments through the lens of photography, or immersing ourselves in the pages of classic literature, retirement opens avenues for personal enrichment. By planning early, we can dedicate time and resources to explore these uncharted territories, unearthing hidden talents and fostering a sense of fulfillment that transcends the mundane. Conclusion In the symphony of life, retirement represents a crescendo that calls for meticulous preparation. Early retirement planning, in light of the increasing life expectancy in India, empowers us to fulfill our dreams and pursue new horizons. By ensuring the endurance of our financial resources, we can craft a retirement filled with extraordinary experiences, breathtaking adventures, and the pursuit of passions. As we embark on this journey, let us embrace the art of retirement, savoring the sweet fruits of our labor while indulging in the symphony of a life well lived. Following India recent inclusion in the United States-led Minerals Security Partnership Mumbai-based Epsilon Advanced Materials EAM has achieved a significant milestone by becoming the first Indian company to establish a battery material unit in the United States. This groundbreaking development comes shortly after Prime Minister Narendra Modi state visit to the US, and EAM plans to invest a substantial 650 million in setting up a synthetic graphite anode manufacturing facility. Anticipated to be operational by 2026, the proposed plant aims to produce high-capacity anode materials using cutting-edge green technologies, playing a crucial role in supplying critical battery materials to power over one million electric vehicles. Step Towards Renewable Energy Transition India recent entry into the Minerals Security Partnership led by the United States, holds **immense** significance for the country transition to renewable energy. The announcement was made during Prime Minister Narendra Modi visit to the United States and was part of a joint statement with US President Joe Biden. The MSP, comprising 13 member states including Australia, Canada, Japan, and the United Kingdom, serves **as** a strategic alliance aimed at catalyzing public and private investment in global critical mineral supply chains. Secure Supply Chain India inclusion in the MSP is crucial for realizing the country ambition of embracing sustainable mobility through the widespread adoption of electric vehicles and reliable fleets. By securing the critical mineral supply chain, India can ensure a steady and sustainable flow of raw materials for electric vehicle production. Additionally, establishing a robust supply chain for critical minerals will play a pivotal role in supporting India efforts to develop indigenous electronics and semiconductor manufacturing capacities. Equitable Resource Sharing and Diplomatic Strength **India** entry into the MSP also paves the way for equitable sharing of resources across the globe. The formation of the MSP reflects an exclusive approach, as countries l

ask Iranians who've been pounding at Trump with jokes and memes on X. It won't win them the war, but it's certainly winning them fans worldwide. How ironic! A potato crowns Bengal's biryani, squished some, it's ubiquitous in political rallies, in greasy foil packets. Meanwhile, biryani makers are finding workarounds for fuel shortages. Netas, of course, spar on fish, like fish bones stuck painfully; India's food is way too big and different to fit into just one box called Indian cuisine. Think about this: in some places in Bengal, people even put potatoes in biryani! You might see it. Earth Day explorations reflected in art Uma Nair has been writing for the past 36 years on art and culture She has written as critic for Times of India and Economic Times. She believes that art is a progressive sojourn. She learnt by looking at the best shows in Washington DC and New York. As author her most important books are Reverie with Raza, Dhanraj Bhagat at 100 Years, and Upendra Maharathi at 100 Years for NGMA. Earth Day is a reminder of the beauty of the earth and all that there is within. In terms of art and its myriad hues and branches, materials play an integral role in the creation of works that define contemporary character and techniques. Ankon Mitra known as the oritecture genius in India curates an exhibition at Lexicon Art Gallery in Delhi with 12 artists and this curation draws our attention to the vitality and intensity of materials that can turn into avant garde art in the hands of artists. Dvaita /Dualities asserts that the diversity of the universe is entirely real. Curating is a platform that brings together diverse projects under a shared narrative, guided by specific curatorial principles focused on variety. This exhibition is an example of an encounter that is open ended, yet amazingly coherent. With this premise, the materials of three articulate artists naturally followed into its own dynamics and respected the identity of each space. Ankon Mitra's aluminium sheets powder coated with silver and brass finish, Keshari Nandan Prasad's **stoneware** platters as well as Prakash Chandra Chakraborty's oil on canvas paintings born of organic roots in botanical bravura define a medley of artistic sensibilities. Stretched across the ceiling at the Lexicon is curator Ankon's folded installation that catches your gaze as well as breath. The oritecture genius has with **his** team created a work that dwells on dualities, on process, experimentation and sustainability. This immersive installation marries material with metal and looks like a coiled form of the intangible. The circular folded work on the wall calls for conversations that cut across the ages. This installation of intuitive intensity creates a compact yet concentric connotation that commands its own kinetics of forms in dualities. While the work is dominated by a dramatic symbolism of geometry in its cool grey/glistening tenor it has its own character in contemporary design. Intimate yet imposing, the architectural notes become a sublimation of an **emotional** encounter that emanates earth's subconscious energies. Together, Ankon's artistic strands articulate a shared ambition: to foster a more interconnected design dynamic within the global discourse of earth's stories. Prakash Chandra Chakraborty's pair of magical monochromes sit like a meditative mooring of the interconnectivity between man and nature wrapped in the notes of divinity. The naturality of form, the meandering loops of natu

Potentially create opportunities for other nations to join the partnership, reducing their dependence on China by establishing a robust and reliable supply chain for raw materials crucial to the clean energy transition. Addressing Geopolitical Uncertainties The demand for critical minerals has surged, but global mineral markets have been plagued by supply chain disruptions due to factors such as geopolitical uncertainties, price fluctuations, the pandemic, and ongoing conflicts like the Russia-Ukraine war. To ensure a reliable and secure supply chain, major players have initiated strategic alliances and international agreements. The MSP is part of these efforts, with and member countries, including the European Union, Canada, and Australia, actively engaging in bilateral, plurilateral, and multilateral agreements to govern the strategic importance of critical minerals. Growing Demand As India focuses on indigenous development and scaling up manufacturing capacities for emerging clean energy technologies, the demand for various minerals will significantly increase. This demand will establish a lasting dependence on their supply as India strives to become a global manufacturing hub for solar panels, wind turbines, batteries, and electric vehicles. India partnership with Australia through the Critical Minerals Investment Partnership further supports the development of supply chains and investment in critical minerals projects, aiding the country efforts to reduce emissions from its electricity network. Parting Thoughts India entry into the not only enhances the country influence in shaping the renewable energy landscape but also underscores its commitment to sustainable and green technologies. The strategic move by to establish a battery material unit in the US aligns with India renewable energy goals and will contribute to the reliable supply of critical battery materials for the growing electric vehicle market. Together, these developments mark a significant step forward in India renewable energy transition and its efforts to build a sustainable and greener future. The world of agriculture has been undergoing a tech makeover in the past decade, and the adoption of open-source technology into the mix has further accelerated this transformation. From cost-saving advantages to flexible applications, stakeholders in the supply chain are reaping the benefits of this innovative approach to software and hardware development. **According** to a report, the smart agriculture market is set to grow at a remarkable CAGR of 9.4 from 2023 to 2028, with open-source technology playing a crucial role in this anticipated expansion. It is helping Aristech companies enhance and propagate precision farming, making it more accessible to a wider **pool** of consumers than ever before. How Open-Source Tech Aids Agriculture? Due to the accessible nature of open source, different dev. communities within the Aristech sector can take existing source code and tweak edit it as per their needs or improve upon it. This results in accelerated problem-solving and makes open-source much more accessible and flexible than proprietary alternatives. Open source impact can be seen across: Education and training: Open-source technology offers farmers easy access to information, online platforms for self-paced learning, virtual training programs, and collaboration opportunities. Organizations can use open-source technology to offer free online courses, videos, and **other** training materia

It would be wrong to state that it became an earth song in memory. Vadehras has also taken Chameli Ramachandran works of the same period, in a collaborative exhibition curated by Sidharth Siva Kumar at Gallery Rasa in Santiniketan if a woman of the appropriate caste was available for a given task. Such segregation of superior and inferior, decided at birth, reinforces caste hierarchy so OBCs berate lower OBCs, Dalits would attack Mahadalits, as we recently saw in Bihar. Such graded inequality remains ruinous, yet has been impossible to root out. It has to happen SC has instituted a compliance mechanism, but can expect reluctance in implementation. SC has empowered the progressive-minded in prison administration. This is not about Dalits or Brahmins. It about constitutional principles that govt-run prisons must abide by. Period. Dismantling such structure has to be swift. States can be allowed excuses of law and order problems to stall implementation. One has lost count of how many deadlines India has missed on eliminating manual scavenging, despite having a special law. We live in a world where Alexa plays the music in the living room, and Siri sets the alarm on the phone. Not far is the day when most of us will have robots in our homes, loading the dishwasher and assembling our furniture. We already have drones, and experiments on driverless cars are going on. Computers are vital in the communication and transportation industries. They control our satellites and traffic signals. Through Big data and analytics, companies make business decisions. Technologies like Artificial Intelligence, Machine Learning, and IoT (Internet of Things) could bring a sea of changes in our daily lives. A range of industries right from agriculture, textiles to our defense field is highly dependent on computer technology. There does not exist a sector, which is untouched by the magic of computers. Computers, smart phones, and cheap internet data packs have revolutionized the field of education. A data-enabled mobile phone opens the door to vast resources. Online learning and distance education have changed the fortunes of many. The software programs are better than print **media** in presenting the subject to the students. In this way, they are more interested in learning and take initiatives to know further. It increases the quality of education that people receive. Moreover, computers have vast storage spaces, and the durability of the study material is also high. In specific **fields** like architecture and mechanical engineering, there is a paradigm shift in pedagogy. They learn and use software technologies like CAD and CAM. We know that the word computer comes from compute and thus, they were mostly computing devices. The first computer was for the military, and the U.S. army used it for calculating artillery firing tables. Today, computers are used in tanks, planes, and ships to target enemy forces. They play a vital role in providing training and simulations to soldiers. They are essential to safeguard the confidential activities of the defense forces In early second millennium BCE persistent **drought** caused the population of the Indus Valley to scatter from large urban centres to villages. Around the same time, Indo-Aryan tribes moved into the Punjab from regions further northwest in several waves of migration. The resulting Vedic period was marked by the composition of the Vedas, large collections of hymns of these tribes whose postulated religious culture,

Towards the end of the period, around 600 BCE, after the pastoral and nomadic Indo-Aryans spread from the Punjab into the Gangetic plain, large swaths of which they deforested to pave way for agriculture, a second urbanisation took place. The numerous Indo-Aryan realms, or janapadas, were consolidated into larger states, or mahajanapadas. This urbanisation was accompanied by the rise of new ascetic movements, including Jainism and Buddhism, which challenged the primacy of rituals, presided by Brahmin priests, that had come to be associated with Vedic religion, and gave rise to new religious concepts. Most of the Indian subcontinent was conquered by the Maurya Empire during the 4th and 3rd centuries BCE. From the 3rd century BCE onwards Prakrit and Pali literature in the north and the Tamil Sangam literature in southern India started to flourish. Wootzsteel originated in south India in the 3rd century BCE and was exported to foreign countries. During the Classical period, various parts of India were ruled by numerous dynasties for the next 1,500 years, among which the Gupta Empire stands out. This period, witnessing a Hindu religious and intellectual resurgence, is known as the classical or Golden Age of India. During this period, aspects of Indian civilisation, administration, culture, and religion spread too much of Asia, while kingdoms in southern India had maritime business links with the Middle East and the Mediterranean. Sports in School for Kids a student, who is good in sports as well as in academics, develops an overall personality which is reflected in his or her life. It gives him strength, a sense of discipline and how to associate with other players. School sports make school life more interesting also. Now-a-days all the colleges and schools have sports as a parts of compulsory curriculum. So for this purpose schools have big playgrounds. They have big playgrounds to accommodate games like football, hockey and cricket. Some schools also provide their students games like basketball, volleyball, table tennis, lawn tennis and badminton. School sports play a very important role in teaching a student team spirit. They teach a student to play the **game** for the sake of playing and not for the sake of winning. So spirit of healthy competition and discipline is taught to the students. Some schools even have gymnasium to develop a child physique and mind. A student can apply the sportsman spirit in his everyday life also and **learn** to accept defeats with a smile. Sports also teach us that practice makes a man perfect and hard work really pays in the end. School and college sports also help the student to choose career in sports itself. They can become professional sportsman. Sports also help students in careers in Armed Forces. So school sports should be encouraged and concerned authorities should see to it that schools make proper provision for this. A House on Fire for Kids It was a dry day and it was night. The clock on the tower had struck twelve. I was sleeping on **the** roof of my house. Suddenly I heard shouts of Fire, Fire! I woke up at once and looked out in the street. I saw a house on fire. It was at some distance away from my house. I ran downstairs and reached the place. Many people had collected there. They were trying to put out the fire. They were throwing water and sand on it. But it did not prove of much help. A strong wind was blowing. Some cries were heard from inside the house. The house belonged to a shopkeeper It wo

Working spaces transforms mundane and monotonous workplaces into smart and futuristic office spaces, spurring the demand in the market. Mobile gaming revenue by the year 2025 this will be possible through a strong device ecosystem growth in favor of the industry and tapping into new customer segments that are willing to explore and adopt gaming as a form of entertainment. But what leading to this boom in the industry Here are the 6 reasons that are predominantly responsible for this stupendous growth Demographic Shift in Customer Profile The exponential increase in the proportion of technologically aware citizens leading to early adoption, the need to socialize FOMO during the lockdown, to spend leisure time or pursue a gaming related career are all an elemental shift in users and their behavior toward online gaming. While lockdown accelerated the adoption of gaming, users have continued to spend higher time on gaming apps and have now considered them as a new avenue for entertainment and socialising. Seismic Shift in Technology Ecosystem Access to affordable & high performance smartphones & high speed internet on the go has been a blessing for all, be it users or businesses. Evolving technologies have accentuated the viewing and gaming experience on mobile devices. Smartphones are not only coming with bigger screen sizes & resolutions but also enhanced computing ability to give the users an optimum gaming experience. It is expected that India will touch more than 70 Smartphone penetration by 2023. Hence, the gaming industry is on everyone radar for the huge potential and business growth it has to offer in the recent future. Ease of Secure Digital payment With the advent and increased adoption of UPI and other finch innovations in the country, it is not only easier for customers to transact easily but also safer. Features like two and three factor authentication, biometric security and parental controls have made real money gaming more secure than ever. The inception of block chain tech is also raising the bar for in app payments across sectors. This has widened the reach of gaming to the interiors of the country **by** building trust via secure payments within the more reserved user base. The monetisation of games and content has become easier with easier payment options and pricing innovations. A plethora of Options Win for users Increased competition in the industry with larger purses and diverse offerings has led to a **much** faster adoption rate of standalone & platform games in the country. This is achieved organically and through engaging advertising that ropes in new customers towards high value offerings. While the strategy genre continues to top the charts, sports and board games are on the rise and this helps the industry in getting access to newer user segments. In any case, a competitive market is always lucrative for the user as it offers a variety of functions at generous pricing. These are exciting times for the industry as well as gamers wherein we are witnessing breakthrough innovations in the already **dynamic.**

Here we go again. It is that time for India when another Hindu Muslim, temple mosque issue, this time the Gyanvapi mosque in Varanasi, pops up and catches national attention. The good news is that if this is the worst of the Hindu Muslim conflict in the country today, with the biggest issue being a few ancient sites of worship, then we have come a long way in Hindu Muslim relations. Sure, not everyone shares this optimistic interpretation. Some people get highly charged by all this; and you can see them for yourself if you have the courage to watch some noisy TV debates on the Gyanvapi issue. To them, all I would say is this: Relax, breathe. It just a place of worship. And you can worship and pray to God from anywhere in this world created by God. Surely, decisions on providing special security and bar closing times are best left to the executive. Punjab and Haryana high court poser following an opposition net petition to explain security cover withdrawals saw Punjab government claiming the Operation Blue Star anniversary temporarily required extra personnel. Meanwhile, Delhi HC is examining Delhi government decision to allow restorers to stay open till 3am mind you NCR cities follow similar policies. Granting and withdrawal of security are executive decisions that should be solely based on threat perceptions. In 2019 Go took the Gandhi family out of SPG protection by amending the law. Many states also grant undeserving people security cover based on political preferences. Every contentious decision is potential litigation but HCs, with 59 lakh pending cases, must be selective about what they hear. Without compelling reasons, the constitutional separation of powers should be adhered to. Courts can say they have to hear such matters they should say it not their job. The result of such hearings is often farcical. Taken to court, the Punjab government came up with the excuse of the Blue Star anniversary. The fact is it was a decision made by a newly elected government. And while the death of a singer with reduced security cover made headlines **and** enthused the state opposition, the remit remains the state government and nothing useful will come out of court hearings but sweeping orders may have perverse consequences. Take the Delhi bars matter. In neighboring Gurgaon restorers can be open till 8am and in Noida till 4am. In Delhi, the closing **time** extension to 3am from 1am faced police objections. But that between the Delhi police and the Delhi government. Courts should play arbiter. Delhi governance is already wound up in state government versus Centre and LG disputes. It does need another player to compound matters. Shame Bind will be the cynosure of all eyes next week. She plans to marry herself. Solo gamy, as it called, does have legal standing but and this is wonderful it attracted more attention than most celebrity weddings. Solo gamy is not new. Children thus, institutions and studies deem it imperative to chalk out a proper parent focused outreach program, especially for parents of international students. This emphasis is warranted because the risks and rewards of higher education are greater for the parents of international students due to a variety of reasons such as expense, distance, and, in many cases, a principal purpose of seeing studying abroad leads to a good job. While researchers and institutions have acknowledged parents as crucial stakeholders in the study abroad journey of aspirants, the pandemic has amplified the need to reach out to parents. The pandemic wrath has affected families in a variety of ways. People are less financially secure, and their anxieties about how well institutions, government, and other students will care for their children have intensified. Taking cognizance of all this, institutions are now developing parent focused marketing strategies. They maintain a comprehensive list of essential information pertinent to COVID times when governments and institutions policies have significantly affected the lives of international students. Institutions know how one shoe does fit all. Thus, acknowledging the heterogeneity of the parent population, they are developing multiple students and personas for their top student source countries, allowing for customized communications based on the parents culture, language, priorities, and circumstances. If you are a parent weaving elaborate dreams for your child overseas education, you are no more on the sidelines of this journey. Institutions worldwide are devising strategies to have meaningful communication with the parents and make parents feel deeply valued, respected, and an integral part of their child overseas education. It is time that parents acknowledge themselves as key navigators in this journey and figures out what best for their children. After subsequent lockdowns, the managed office and flexible workspace industry has been more resilient than ever before. The sentiments are fairly inclined towards the entrepreneurship wave fuelled by the emergence of game changing startups. From recording its first ever unicorn in 2011, the Indian startup ecosystem has witnessed its 100 the unicorn in 2022. This has opened new avenues for co working spaces to expand their **business** and meet the resurging demand for a flexible workplace for corporates and startups. With life returning to normalcy, COVID curbs have become almost Zero, employees are thriving to return to work. Unlike traditional offices, new age workspaces offering flexibility have emerged to provide an enhanced employee experience. Be it **a** dedicated corner for social conversations, quirky interiors or a fitness area, the millennial and young workforce look for facilities that match their zeal, and mood and bring mindfulness. Key factors driving the demand There is no denial of the fact that startups are driving the growth of flexible workspaces. However, post the outbreak of the COVID 19 pandemic, big corporations are also reassessing their real estate requirements and shifting to flexible workspaces. Although the trend existed even before the pandemic, accelerated adoption of technology and hybrid work mode boosted its demand. More than just an office space, modern co **working.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-23-TEST NO.-26102

Spaces provide an experience to corporations for smart investment, resource management and geographic expansion. On the other hand, startups are pushing the co working industry towards exponential growth due to financial viability, quick setup and go facility, easy expansions and contractions, sound networking opportunities and utilization network ecosystem. According to a study, around 29 million sq. ft. area is predicted to be leased by startups between 2022 and 2024 which is 1.3 times higher than the 2019 2021 period. The positive numbers are pushing flexible workspaces to launch more centers in or around business hubs and metropolitan areas generating sales. Hybrid work model As part of the new normal, organizations are gradually shifting to new work models for long term managed office solutions and plug and play offices to help them better target their resources. They are exploring the tangible benefits of leasing out flexible workspace that befits their new styles and models of working. Notably, large corporations require agility and opportunities for collaboration while staying focused on improving employee experience. On the contrary, startups look for cost cutting growth, connections with likeminded professionals and sharing a sense of community and values. To meet the diverse working requirements, flexible workspaces are providing a blend of offerings including on demand workstations, virtual offices, dedicated cabins, etc. Looking at the merits of flexible workspaces, startups and corporates are getting into long term deals for shared workspaces. Employee engagement Flexible workspaces accommodate diverse business needs under one roof. Thus, it impacts the way employees work, interact and progress in different work environments. Many offices embrace co working spaces for stimulating social professional bonds that are beneficial for the organization. This creates a thriving work culture and positively influences employees productivity levels. Though there are dynamic areas offering privacy to work, free from distraction. However, the dedicated zones for social interactions spark employee interaction and collaboration. Apart from this, flexible workspaces are designed to offer healthy work life balance to employees. As a result, employees appreciate organizations understanding their needs and priorities for good. Meaningful work culture Flexible workspaces strive to fulfill the **demands** of dynamic professionals whether solopreneurs, freelancers or startups. People at the initial stage of starting a business can believe in the fact that their work is meaningful. Unlike traditional office space, freelancers or startups are not alone in working towards a vision. Flexible workspaces consist of members working at **several** positions to solve a problem while achieving the desired business goals. This impacts the performance and mindset of people and helps in making one own identity. Furthermore, flexible workspaces automatically create a norm to help out each other. The coworkers with unique skill sets help each other, giving birth to new growth opportunities. Bottom line Led by flexibility, demand for flexible spaces is continuing to move on an exponential growth trajectory. With the Indian economy becoming resilient, the business organizations and office segment are announcing expansion sprees, soaring the demand for more workstations. Moreover, the integration of technology in **designing.**

May have been more examples that were in the media glare in less obtrusive times. Regardless, the novelty of it will not disappear for it challenges the conventional building block of society, the institution of marriage. A commitment to oneself, and the joy of the wedding day without having to deal with what follows are among Bind reasons for choosing solo gamy. Conservatives obviously don like it. Humorists will note that divorce is far easier in solo gamy indeed, a Brazilian woman who married herself was reported to have divorced herself after she found love in another person. But, seriously, solo gamy may represent yet another aspect of modern society economic transformation. Most monogamists seem to be women. As chances of being economically independent on one own terms go up, opportunities to question orthodoxy and its prescriptions go up, too. Men don marry themselves perhaps because even now the social hierarchy favors them. In a country where being a good wife is a sermon read to daughters of even wealthy families, solo gamy can be seen as self contained, peaceful rebellion. Group affiliations make up the scaffolding upon which we build our lives, writes linguist Amanda Montel in her 2021 book Cultish. She also cohosts the Sounds like a Cult podcast with Isabella Medina, a standup comedian and documentary filmmaker. They see cults as thriving in periods of sociopolitical tumult. So when a pandemic has pulled us away from traditional sources of community, seeking to fill the void by stunning Leon Musk or marathons or astrology or veganism or 12 step programmers is understandable and zeitgeist y. The podcast is appreciative of a lot of this cultish behavior but also attentive to red flags for when it tips over into dangerous brainwashing. On June 2, a lone gunman rushed into the Ellaquai Dehati Bank in Kulgam and shot dead the bank manager, Vijay Beniwal, who was from Rajasthan. A few hours later, two Hindu brick kiln workers were attacked by gunmen in Budgam, of whom Dilkhush Kumar from Bihar succumbed to his injuries. These two killings are a part **of** a series of recent attacks targeting civilians and off duty policemen, in particular those from the Kashmiri Pandit and Hindu community. While all innocent deaths need to be equally mourned, minority killings have a larger ramification as they create a sense of panic and fear that is contagious. We **are** already seeing protests by Pandits demanding to be relocated outside Kashmir. Anger in the Jammu region over the killings of Hindus could also ignite communal tensions in the area. Turning away from God, we only wander from distraction to distraction. Therefore, this must be the first step in any value based system of education: Turn back to God! Love God and love your fellow men. Let us bring God back into our schools and colleges. The state in our country has, in several ways, repressed dharma in our system of education. How true are the words of an American **philosopher.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26108

Over the past decade, the fields of medicine and healthcare management have witnessed several technology led breakthroughs. Chief among them are changes brought on by Artificial Intelligence and Machine Learning. Hospital administrators, medical researchers, and healthcare professionals around the world stand to benefit from progress in the areas of robotic surgery, heart sound analysis, patient safety, real time risk assessment, drug manufacture etc. Most importantly, AI and ML have presented the opportunity to collect, track, mine and manage data about patients medical history. However, one of the biggest barriers to leveraging the full potential of AI and ML in healthcare management is a full fledged transition to digitised systems; this is especially true for India. Currently, even some of the biggest hospitals in the country are lagging behind when it comes to implementing basic systems for digital health records to be maintained. It is estimated that less health records through either a HIS or an EMR. There is an urgent need for a single integrated technology solution that is accurate and dependable. Such a system can eventually help to streamline patient care and management and bring the healthcare ecosystem into the 21st century. In order to bridge these gaps, the following measures are required: Digitising the data: Digitising data is an important aspect of healthcare management. There is a need for a proper software setup that allows the healthcare system to store every patient details with respect to all categories, i.e. types of disease, prescriptions, treatments and every other minute note about their health. Most importantly, this should extend to physicians prescriptions since handwriting is often hard to comprehend. Structure the unstructured data: Most of the data entered in hospitals or at labs is unstructured. A patient age, gender and other demographic information are generally written as part of sentences and paragraphs. Unfortunately, the classical statistical methods are developed assuming that the data is structured in the form of rows and columns and, hence, statistical methods cannot be run on unstructured data. In order to convert the unstructured data to structured data, one needs to use Natural Language Processing. **This** process is being adopted more frequently in healthcare across the world due to its increased potential for searching, analysing and interpreting huge patient database sets. Disconnected nature of healthcare data: The current healthcare system is a disjointed one with healthcare providers, payers and patients operating in silos. For example, **when** a patient is in the hospital, there are thorough medical records that are in place, however, post visit, there is no standard data collection mechanism to track patient health. Ideally, whenever a patient walks into a hospital or a healthcare center, all of their medical records, medication information, scans etc. should be available in one single place. In essence, doctors and patients should be able to take off from right where they left. However, due to the inefficiencies of the current system, this is the case. With patients visiting a cohort of different diagnostic labs, different imaging centers and **various.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26109

Specialty doctors, medical history and records remain offline, decentralised and scattered. And even though there are scores of apps in the market that function in the healthcare space, most of them focus on delivering and pushing for higher utilization of services. We are, thus, in need of holistic or comprehensive care management pathways that can help connect all this disjointed data and create a fully integrated digitised system to maintain healthcare data. Once these gaps are addressed, Artificial intelligence and Machine learning have immense potential to positively impact the healthcare management ecosystem at large. In several developed countries, technology is already helping hospitals to seamlessly manage their operations, manage patient records, schedule and deploy medical staff, and make the best use of facilities. Real time systems are even being used by the healthcare industry to better administer operations. In India, we have to lay the groundwork and ensure the digitization of data, as there can be no revolution in adapting AI & ML until this is solved. AI and ML have the power to allow healthcare professionals to gain a better understanding of their patient needs so that they can provide better feedback, guidance, and support for maintaining good health we must leverage this to the fullest extent. Humanity story is of adaptability and tenacity. These characteristics propel us to exceptional levels. They motivate us to do everything we can to overcome misfortune. It how we vet gotten this far as a culture, surviving even the darkest of times. This circumstance did not happen by chance. Technological innovations, the growing need for new competencies, changing labor demographics and inclusion/diversity policies, new workforce models, and the dynamic business environment with all of its policy measures have all contributed to changes in the nature of work. The Covid 19 pandemic has lately prompted a rethinking of the importance of learning and development L&D in the workplace, as well as how training might be administered in the short term. Many chief learning officers have identified agility and up skilling as solutions to these issues. Up skilling has become the new normal Up **skilling** employees entails providing them with training that will enable them to perform better in their existing role. This might assist a company in remaining competitive and adaptive as the industry evolves. Furthermore, talent necessitates the development of new skills that complement and reinforce existing ones. According to McKinsey analysts, **there** has never been a greater need for businesses to be agile and up skill their employees. Companies who want to recover from the Covid 19 outbreak as quickly as possible will need to retrain their employees. Furthermore, the World Economic Forum predicts that by 2025, more than half of all employees globally would need to up skill in order to compete effectively. Almost every industry is experiencing a labor shortage, and the problem is unlikely to improve anytime soon. The days of employing new employees who may have been knowledgeable and prepared to take on new responsibilities are long **gone.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26110

India ambition to become a global hub for semiconductor design and manufacturing has found a strong foundation in the Design Linked Incentive (DLI) scheme. Launched in December 2021, the scheme aims to foster innovation, boost self-reliance, and position India as a leader in semiconductor design by providing financial incentives and infrastructure support. India recently secured the 39th position among 133 global economies in the Global Innovation Index 2024, improving from its 40th rank out of 132 economies in 2023. Insights from the report provide valuable guidance on how India can further enhance the impact of the DLI initiative. The GII parameters reveal key areas where India excels, where it lags, and how it can leverage its strengths to overcome challenges in the global semiconductor landscape. India semiconductor landscape India has already made strides in Information and Communication Technology (ICT) related sectors, ranking 1st globally in ICT services exports. However, the country faces challenges in other critical areas like ICT access, use, and innovation linkages, which are essential for building a robust semiconductor ecosystem. The DLI scheme, with its focus on encouraging domestic semiconductor design companies and fostering innovation, can benefit from aligning with insights derived from the GII report. Several parameters from the GII report shed light on opportunities for the DLI scheme to build a more competitive semiconductor design sector. These indicators ranging from knowledge and technology outputs to business sophistication offer a blueprint for where India should focus its efforts to make the DLI scheme a success. One of the most relevant GII indicators is Knowledge & Technology Outputs, which measures the generation and commercialization of innovation. India has seen a rise in patent filings and is becoming a strong player in high-tech exports, particularly in the ICT services sector. However, the country continues to lag in IP receipts, ranking 47th, with only 0.2% of its total trade attributed to IP receipts, indicating that India is not yet fully monetizing its innovations. IP receipts refer to the income that a country generates from licensing its intellectual property (IP) to foreign entities. This includes royalties, licensing fees, and **payments** for the use of patents, copyrights, trademarks, and other proprietary assets. A higher percentage of IP receipts in relation to total trade signifies that a country is successfully capitalizing on its innovations and exporting its intellectual property to generate revenue. The DLI scheme can directly contribute to closing this **gap.** By encouraging semiconductor design companies to develop proprietary technologies, the scheme can help generate more intellectual property that stays within the country, ultimately boosting India IP receipts. This would not only improve India position in the global innovation landscape but also foster greater self-reliance in high-tech sectors. Moreover, the focus on high-tech exports under the DLI scheme aligns well with India existing strengths in technology. By fostering a domestic semiconductor design ecosystem, the DLI scheme could contribute to enhancing India high-tech export portfolio, especially in sectors like AI, IoT, and 5G technologies. Infrastructure: Strengthening ICT access and use one **area** where India faces significant challenges is in ICT access and use, where it ranks 110th and 79th respectively, according to the GI

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26111

The GII indicator on Knowledge Diffusion which assesses how well a country spreads its innovations also presents an opportunity for the DLI scheme. By providing financial and infrastructural support to semiconductor companies, India can improve the dissemination of its technological advancements. This would enable the country to not only meet domestic demands but also service global markets more effectively. Fostering innovation linkages Business sophistication is another critical parameter in the GII, and it reflects how well businesses collaborate with universities and research institutions. India has significant potential to improve in this area, particularly in university-industry collaboration. By promoting partnerships between semiconductor firms and academic institutions, the DLI scheme can foster cutting-edge research, enhance product development, and ensure that India talent pool is effectively utilized. The GII also highlights the importance of innovation linkages the networks between businesses, research institutions, and government bodies that drive innovation. The DLI scheme focus on incentivizing start-ups and MSMEs can help strengthen these linkages. By supporting innovation at different stages from ideation to commercialization the scheme can nurture a more integrated and dynamic innovation ecosystem in India. Capital and research R&D expenditure is a crucial driver of innovation, and while India has made progress, it still lags behind global leaders like South Korea and Singapore. The GII emphasizes the importance of increasing investments in research and development to foster technological breakthroughs. The DLI scheme can directly address this by providing financial incentives for semiconductor companies to invest more in R&D. This would not only lead to better innovation outcomes but also help India catch up with other leading Asian economies. Furthermore, India vast pool of knowledge workers particularly in the semiconductor design space remains a strong asset. The GII highlights India talent in ICT and related fields, and the DLI scheme can capitalize on this by supporting the semiconductor design start-ups that will create the innovations of tomorrow. By enhancing R&D support, the DLI scheme can ensure that India skilled workforce is fully leveraged to drive the next wave of semiconductor innovations. Roadmap for the future India Design Linked Incentive (DLI) scheme holds the **potential** to transform the country into a global leader in semiconductor design and manufacturing. However, for the scheme to realize its full potential, it must align with the insights provided by the Global Innovation Index 2024. By focusing on key areas like intellectual property generation, ICT infrastructure, university-industry collaboration, and **R&D** investments, India can build a more competitive semiconductor ecosystem. The GII parameters underscore the need for stronger commercialization of innovations, better business linkages, and enhanced infrastructure to support the semiconductor industry. If India can bridge these gaps, the DLI scheme could not only help the country become self-reliant in semiconductor design but also position it as a global leader in high-tech exports and IP generation. The path to success lies in strategic investment, collaboration, and a commitment to fostering innovation at every stage of the semiconductor value chain. With the right focus, the DLI scheme can help India turn **its** innovation aspirations into

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26112

To ensure that every candidate or employee is evaluated on the principles of equal opportunity sans prejudice of any kind. Thereafter, employers need to invest in creating work cultures and policies that are embracing of such diversity, especially for talent that has very often faced social ostracism and prejudice in our workspaces. In recent years though, diversity and inclusion has become increasingly important for organizations in India. With over 1.4 billion people speaking more than 450 languages in our nation, diversity and its acceptance should come naturally to us. However, even a center-stage diversity genre like gender has taken a painstakingly slow path to find its due consideration in the bastions of our country talent landscape. Corporate India may be taking baby steps towards understanding and accepting that diversity extends beyond gender representation, encompassing employees from various cultural, linguistic, and socioeconomic backgrounds, different age groups, and individuals with diverse physical abilities. That said, except perhaps in some new age companies, many employers are still to even begin to educate themselves on biases that talent identifying on the spectrum faces in India while trying to gain employment or when employed. Employers will need to take proactive measures by emulating the best practices of some early winners in this very sensitive area. These best practices could include the launching of dedicated hiring platforms, organizing job fairs, implementing equal benefits and policies, and creating awareness and ally networks. A Balance of Various Diversity Parameters Achieving genuine diversity and inclusion requires more than numbers or quotas. Companies need to adopt various strategies and practices to become a supportive workplace, which includes communication, policies, and even infrastructure. Training Recruiters must undergo training to identify and mitigate biases while embracing inclusive hiring practices, such as using gender-neutral language in job descriptions, conducting structured interviews, and seeking diverse perspectives. Inclusive communication is essential for creating a welcoming environment for interviewees and promoting the company as a supportive workplace. Effective communication at every stage of the hiring process plays a significant role in encouraging diversity. Employers can explicitly express their openness to the community in job postings **and** incentivize referrals within the community. Companies can also utilize Artificial Intelligence AI and reduce unconscious bias in recruitment and evaluation processes with transparent, fair, and ethical algorithms. Partnering with Diversity-friendly Communities A great way to foster diversity and inclusion while demonstrating social responsibility is to partner with organizations and **communities** to hire talent. These partnerships can grant companies access to a diverse talent pool and help overcome barriers such as stigma and discrimination. By learning from successful inclusion initiatives, companies can implement best practices in policies, training programs, benefits such as access to health insurance, and infrastructure such as gender-neutral washrooms. These initiatives increase organizational value and positively impact society. Inclusive policies and practices, such as providing same-sex partner benefits and anti-discrimination clauses, create a supportive environment for all employees regardless of their gender identity or exp

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26115

According to the SHRM skills gap analysis, 83% of HR professionals reported difficulty finding qualified candidates. According to the report, 75% of those polled said there was a shortage of qualified candidates for employment positions. Corporations must search within to cultivate talent, since they cannot get it outside. Furthermore, employing an individual is a necessary duty for any firm. From the expense of employing to training and onboarding, it is a significant expenditure. It only makes sense to continue optimizing that expenditure by up skilling existing employees. Even if the organization can find a good applicant, it will almost certainly cost less than employing and training someone fresh. Work culture in a new era Most corporate leaders acknowledge the importance of up skilling in the modern world of work. However, there is still great debate over the optimal way to develop abilities. The most effective skill tactics are reserved for a small group of people. Instead, they ensure that everyone has an equal opportunity to advance in their careers by selecting and engaging in learning activities that align with both personal and corporate objectives. This is where career preparation comes into play. The strategy exposes employees to relevant prospects within the company. The most effective tools show more than one possible path for individual professions; they show people multiple different options for where their careers could go, enabling them to choose the one which best meets their needs. Ideally, these technologies would assist employees in discovering new opportunities within the company that they were entirely unaware of, providing them fresh reasons to stay. Employee up skilling is no longer a trend, but rather a survival tactic that feeds or supports a company growth. Combining up skilling and agility can prove to be efficient for an individual. Luxury real estate has emerged as a hot favorite among the new and young home buyers post pandemic. As per the recent trends discerned in the home buying patterns of property buyers, there is an upward swing in the number of millennial age bracket of 25 to 35 years purchasing luxury homes in **recent** times. The millennial are tech savvy, appreciative of fine living, high income individuals who have a predilection for a lux concoction of grandeur house designs and modern facilities. The market is also witnessing change of mindset from splitting property investment at several locations to opting for a good one **time** investment that assures lifetime luxury and settlement. Millennial have been known to be famously commitment shy the world over. A trait that was most evident in their real estate investing preferences. Till a couple of years ago, millennial were rushing to buy homes as they professed undying love for their on the move lifestyles, chasing jobs across the globe. But the pandemic has now queered the pitch for good and millennial are now racing ahead, buying multimillion dollar homes across the globe. Reasons why millennial are opting for luxury housing The pandemic has emphasised the value of living in **a.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26116

The armed forces in general and the Indian Army in particular, have been in the news for three recent reformative initiatives. One, cross posting to promote integration and jointers, purportedly to expedite setting up of theatre commands. Two, Supreme Court mandated reforms in women cadre. Three, introduction of common uniforms for senior officers. As the services have been in a publicised, ongoing transformation, it is appropriate to analyses these changes, especially in the light of long term objectives. Theatre commands losing steam The August 15, 2019, announcement of having a chief of defence staff was a landmark and bold initiative. It promised overcoming hesitation and opposition too much promised reforms, originally announced in 2000, as part of the Cargill Review Committee. Nearly four years down the line, the process seems to have once again hit a roadblock. The setting up of theatre commands is mistakenly described on social media, as some kind of personal agenda of the first CDS. It is now being advocated that it will be good to adopt a bottom up approach, starting with joint organisational structures. It really aims to build consensus, which will be tedious and long drawn, if not impossible. It is equally important to review basic processes, especially protocols for communication and information sharing. The slew of recent cross posting orders of officers between the services has been projected as new and historic, a beginning to achieve integration. In fact, it amounts to serving old wine in a new bottle as the same thing had been attempted earlier. I even attended a staff course with the Indian Navy as part of such an exchange in 1989. The initiative was started by Admiral Jay ant Nadkarni, with the Army deputing two officers each for Naval and Air Force staff courses and vice versa. Some officers were even cross posted to establishments of other services. Though well intentioned, this measure needs to be pushed through in a time bound manner and should not be allowed to lose traction like the previous tranche. The world over, such transformative reforms have been literally rammed through by **the** Goldwater Nichols Act type of instruments, as applied in the United States. Women cadre The women cadre has been growing despite a lukewarm response within the armed forces, especially Indian Army and combat arms. The Supreme Court seems to have taken over as the catalyst to push for reforms, **like** entering the NDA, permanent commissioning, opening up of avenues in more branches, and command assignments. There is a growing perception that the court is going a bit overboard, especially as pace and methodology should have been left to the forces. In this, a large part of the blame rests upon the services, who seem to be resisting the inevitability of reforms. It would be appropriate if the court now allows domain experts to take over. It bears reiteration that ultimate accountability rests with the services. Having been in the hot seat, I feel cadre management is serious and specialized, **with** long term ramifications. Ideally, systemic reforms should be formulated by institutions like the College of Defence Management after extensive interaction. These should be bottom up, based on extensive in house consultations and opinion surveys. If required, they should be validated through a peer review, by proven external institutions like IIMs and XLRI. Reforms can be introduced in a knee jerk manner and should be prospective, with due notice

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26117

Worrisome situation has developed in J&K because of the targeted killings of Hindu Pundits and police officials reminding the period of 1989 1990. Unfortunately, due to the fear factor, a number of persons belonging to minorities have either migrated or are in process of leaving the Kashmir Valley. This is a highly negative development, which is planned by our adversaries as a long term design to change the demography of the region. There are clear indications that some political leaders are gleefully trying to exploit the situation for garnering the vote banks by blaming the removal of Article 370 for this situation and inept handling of the situation by the current government. The situation needs to clearly understood by our citizens, particularly by Hindu Pundits in the Kashmir Valley, who are under attack. First, this has nothing to do with the revocation of Article 370. It happened in a massive manner in 1989 90 when the Article 370 existed. Second, the objective is to change the demographic composition of the region in favor of the majority. Third, this plan has been hatched by the Pak Establishment to achieve their unfinished agenda of acquiring the remaining part of J&K. Crucially, there is Chinese support for this which is hoping to keep Indian forces away from the CPEC and to extend its border at the LAC as far as possible. Fourth, over the period Pak ISI has created a sleeper cells in the region to provide shelter and assistance to the terrorists operating at the behest of ISI. Fifth, some local political leaders are clearly operating as the over ground supporters of the terrorists to garner their support in the next elections. Sixth, the modus operandi of adversaries includes elimination of Hindus that includes the migrants from other states. This takes place along with efforts to break their will to stay in J&K by creating a fear psychosis through the influence operations. Verbal threats and graffiti on walls are quite common. Both the targeted killings and influence operations are aimed at manipulating their perceptions to achieve the pre determined objective of **changing** the demographic pattern in the region. What we are witnessing in the Kashmir Valley is obviously the proxy war of Pakistan. The use of terrorists provides a cover to the Pak Army with a nation of its noninvolvement. This is a case of external threat with internal involvement a **separate** category of Chaney four categories of threats to a nation. And therefore, it has to be treated as such and nothing else. It must be understood that this is not a case of insurgency where winning of hearts and minds of the population is needed. The culprits are externally motivated and trained. They are the oldies of an unofficial army of a rogue nation. It is now in a better position to maintain deniability with Afghanistan under the control of Taliban. The recent UN report has revealed how the number of Pak based terrorist outfits has grown in that **country.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-24-TEST NO.-26118

Requirements Common uniform for senior officers Of the three reforms, this is the most emotive, raising the hackles of those steeped in regimental traditions. The proposed changeover is going back to the original dress code, till it was replaced four decades ago in favour of regimental trappings. A common dress for senior ranks would reduce parochialism to some extent at least. It would also be pragmatic to review the colonel commandant colonel of regiment system, which can work only in manageable, regimental cadres. A vibrant regimental center system, backed by responsive command hierarchy and supplemented by cadre redress mechanisms, is a better alternative. In the long term, the issue of common uniform in integrated headquarters and simplification of insignia of CDS, also merits consideration. Social media has been abuzz with visuals of ceremonial drills with gravity defying swinging and goose stepping. It has also spawned the copycat race to overdress ceremonial soldiers with accoutrements like cross straps, spats, hackles etc. The trend originated with the Delhi Police contingent winning the best marching contingent trophy in the Republic Day Parade, with such props and ploys. It soon proliferated to CAPFs and even armed forces. The drill, described as the bedrock of discipline, has been simple, solid and graceful. The amahs spectacle put out at the Atari border serves no real, meaningful purpose, except temporarily boosting patriotic fervour and increasing footfall. We can have a standard retreat ceremony, after a separate josh concert. Conceptual issues Contrary to the age old maxim that the Indian Army is resistant to change, it seems to be on an unending transformation roller coaster. Most such endeavors lack government backing, and commitment to restructuring the connected environment and providing budgetary support. Piecemeal and in house implementation leads to tinkering. Unimplemented AV Singh Committee recommendations, like assured absorption of released officers, is the root cause of repeated cadre turbulence. Transformation is a heady term, but many such studies lie buried in lockers. It is axiomatic that we initiate reforms only after securing government backing in India. All this said, it is my firm belief though, that change, **and** acceptance are behaviors that need to be driven right from the top leadership, whether it is in context of our nation, or in an organization. That singular push, to my mind, can make all the difference in making our world truly a coat of many colours. PM Narendra Modi **state** visit to the US is being hailed as a defining step in India strategic relationship with it. Both countries are headed for elections next year and would like to leverage this visit for domestic constituencies. Major deals and promises of partnership in defence and space technology seem to be the key highlights. It is, however, appropriate to look beyond the hype and examine critical issues. Strategic convergence America prefers a relationship that is compliant, even if India is not a client. The asymmetry between two prospective partners, especially in critical defence technology, drives such expectations. Conversely, India would like **to** be seen as the ultimate balancer, promoting multi polarity and as the voice of the Global South. Delhi insists on a partnership even when it is likely to remain a net recipient. Terminologies apart, India is categorised as a reluctant ally, fiercely safeguarding her strategic autonomy and n

Darwinian delights that twirl and find their own concentric charisma. The flower that blooms is a testimony to time. The dialogue is a lilting unveiling between the translation of explorations that time the tension between classical measure and expressive freedom into the vignettes and vistas of amorphous creations that stir our inner recesses. Prakash has a penchant for creating through silent monochromes, a novel perception of space and biomorphic forms that transcend the two-dimensionality of the canvas. His voracious reading habits, his poetic utterances all create a kingdom of dreams in which he creates his own conversations in solitude. We sense a silent quest for spirituality central to his work, finding expression in the unknowable, the nameless, and the transcendent qualities of form. In one of his notes on social media he writes: The realm of natural laws and forms perpetually witnesses the unfolding of our devotion. As nature exercises control over us, we can, in turn, exert control over society. Everything and everyone is indebted to nature. In reality, all my achievements were, in fact, the result of nature's influence. Therefore, synchronise yourself with nature and allow nature to synchronise with you. If you are in a state of slumber, awaken; if you are awake, take action silently. Much like our inherent nature. Come, cultivate the character and essence of love. Keshari Nandan Prasad, considered one of India's finest ceramic artists by ace sculptor Himmat Shah and sent for two international Biennales by veteran curator and Guru Kristine Michael has a large wall mural and 3 stoneware platters that elevate the position of pottery to that of fine arts in sculptural format. These platters resemble botanical reefs that line seashores all over the world. The colour, the grains and the gravitas of the odyssey of formation all create an uncanny alchemy. Keshari has been a practitioner as well as mentor and has created for himself a ceramic legacy within the Indian art scene with his quiet proficiency. Porosity is the hallmark of his platters, its rough hewn textures make us realise that firing stoneware at certain temperatures in **accuracy** results in surfaces, textures and colours that appear more robust and alive. Keshari's practice is defined by clarity and simple, rustic forms. His sculptural platters are unique ceramics, characterised by paradoxical dualities: neither functional nor decorative; they blend depth and darkness; their perspective being that which is porous and **precious.** In describing his affinity with stoneware, Keshari has always noted that there is nothing sensational about his works, only a silent symbolism of earth's tones and quietude. His ability to incorporate subtle irregularities and variations that reveal their organic character in his works is what drew sculptor Himmat Shah to him in a relationship that lasted 20 years. Tamils, who vote today, are used to a political culture that sees welfare as a right (urimai), not beneficence. Understand that well. But, its governance deficit is what gives an opening. Problem? It hits Iran where it hurts most its economy **and** chokes off Iranian oil. It also helps White House evade US Congressional approval for Op Epic Fury. But, Iran could retaliate and spread By Jug Suraiya In the glow of a new-born day, poet priest Gerard Manley Hopkins saw a bird soaring high above the Earth, a vision that inspired him to write one of the most joyous poems Although a second round

In today hi tech featured homes. These are some features that will provide you comfort and ease of living, with a touch of a button, or with a single click. The emergence of green building concepts most luxury home buyers have grown interested in environmentally friendly initiatives and green buildings. Using natural resources such as light, earth, and wind in the development of sustainable homes that aim to reduce their carbon footprint contributes to the reduction of power and heat an owner consumes over time. Green building have become an industry standard to protect the environment since its inception. Energy efficient technologies are being installed in all new developments. Air purification, lighting, thermostat control, greenhouse monitoring systems, humidity control sensors, and many more gadgets are utilized to make your home environmentally friendly. Modern homes are outfitted with energy saving devices as well as rainwater harvesting and management procedures, resulting in decreased greenhouse gas emissions. International design and decor the real estate developers are coming up with phenomenal designs and are mesmerizing buyers from across the world. The definition of luxury differs from person to person, as people have unique aspirations and ideas in terms of their house décor, taste, and goals. By the influence of international lifestyle standards and interior styles, penthouses, and contemporary villas, are majorly under user demand in this luxury housing segment. Safety and security Luxury homes are more than living in comfort it is about living in total security. Safety has become a key aspect and thus electronic monitoring and 24 hour surveillance facilities are offered by premium luxury project. Conclusion There is a rising millennial population that is planning to settle in luxury properties in suburbs. They want to settle in luxury homes where there is quietude, peace, and serenity. Millennial also have a high value for privacy and security. These are some of the factors that are guiding their choices when they are looking for luxury real estate properties. There is seemingly clarity of thought and also expressing it directly among them. Perhaps, this is the reason why they are disposed to choose **high** quality homes over other options. The disruption caused to nature and its resources has consequences such as climate change, global warming, and deforestation. Individuals must be responsible for the consequences of intruding on nature and its resources and take corrective action through raising awareness and promoting natural resource conservation, **as** well as rehabilitating degraded ecosystems. The first approach to repairing the damage we vex already done is to raise awareness and encourage climate literacy. Only by truly comprehending the scope of the problem will we be able to devise novel solutions. We will be able to resist climate change if we have adequate knowledge and resources at our disposal. As the world population and economies have expanded, so have the world energy requirements. The increased emission of air pollutants from these energy generating systems is increasing pollution, which is damaging our ecosystem. Given the scenario, India set an ambitious **objective.**

350th: "high" | 400th: "as" | 500th: "objective."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26124

Worrisome situation has developed in J&K because of the targeted killings of Hindu Pundits and police officials reminding the period of 1989 1990. Unfortunately, due to the fear factor, a number of persons belonging to minorities have either migrated or are in process of leaving the Kashmir Valley. This is a highly negative development, which is planned by our adversaries as a long term design to change the demography of the region. There are clear indications that some political leaders are gleefully trying to exploit the situation for garnering the vote banks by blaming the removal of Article 370 for this situation and inept handling of the situation by the current government. The situation needs to clearly understood by our citizens, particularly by Hindu Pundits in the Kashmir Valley, who are under attack. First, this has nothing to do with the revocation of Article 370. It happened in a massive manner in 1989 90 when the Article 370 existed. Second, the objective is to change the demographic composition of the region in favor of the majority. Third, this plan has been hatched by the Pak Establishment to achieve their unfinished agenda of acquiring the remaining part of J&K. Crucially, there is Chinese support for this which is hoping to keep Indian forces away from the CPEC and to extend its border at the LAC as far as possible. Fourth, over the period Pak ISI has created a sleeper cells in the region to provide shelter and assistance to the terrorists operating at the behest of ISI. Fifth, some local political leaders are clearly operating as the over ground supporters of the terrorists to garner their support in the next elections. Sixth, the modus operandi of adversaries includes elimination of Hindus that includes the migrants from other states. This takes place along with efforts to break their will to stay in J&K by creating a fear psychosis through the influence operations. Verbal threats and graffiti on walls are quite common. Both the targeted killings and influence operations are aimed at manipulating their perceptions to achieve the pre determined objective of **changing** the demographic pattern in the region. What we are witnessing in the Kashmir Valley is obviously the proxy war of Pakistan. The use of terrorists provides a cover to the Pak Army with a nation of its noninvolvement. This is a case of external threat with internal involvement a **separate** category of Chaney four categories of threats to a nation. And therefore, it has to be treated as such and nothing else. It must be understood that this is not a case of insurgency where winning of hearts and minds of the population is needed. The culprits are externally motivated and trained. They are the oldies of an unofficial army of a rogue nation. It is now in a better position to maintain deniability with Afghanistan under the control of Taliban. The recent UN report has revealed how the number of Pak based terrorist outfits has grown in that **country.**

**350th: "changing"** **400th: "separate"** **500th: "country."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26125

To cut carbon emissions and a strong commitment to reaching the Net Zero target by 2070 at the United Nations Climate Change Conference COP26. This implies that we are aware of the seriousness and scope of future climate change challenges. India steps are hoped to motivate other high polluting, prosperous countries to take more proactive measures. Our Prime Minister also invited Indian and global businesses to invest in Net Zero initiatives and develop skills. Cutting emissions from existing energy infrastructure, such as steel plants, coal plants, and other factories, is one of the most challenging problems in this area. As a result, organizations must adopt clean technology and make significant investments in the transition to sustainable technologies. Manufacturing businesses are rapidly developing novel ways to utilize renewable energy and reduce the greenhouse emissions created during production. To address environmental crises, it is critical to transit to a more sustainable business structure. One of the most expensive and energy intensive operations in manufacturing is converting raw materials into useable goods. By reorganizing the energy supply and reducing reliance on imported resources and greenhouse gas emissions, the manufacturing sector can enhance efficiency and minimize energy consumption. The manufacturing sector is increasingly achieving new tools, and breakthroughs in delivering energy efficiency in production across the globe, owing to the ongoing application of efficient techniques. Even small modifications in their strategy, such as employing clean energy to power their workplaces, plants, and warehouses, acquiring raw materials locally, implementing smart and automated energy saving devices, and so on, can have a big impact. Companies should adopt suitable systems to monitor and control carbon emissions as a top priority, as well as set ambitious mitigation targets. Energy efficiency is a persuasive strategy for reducing the earth carbon footprint. Because our homes contribute to national greenhouse gas emissions, adopting energy conservation methods in your home can drastically reduce your emissions output. In addition to financial benefits, switching to energy efficient products such as LED lighting may cut a family CO2 footprint as LED lights are environmentally friendly and use far less energy than standard incandescent bulbs. **Consumers** can purchase electrical devices that save energy and so conserve natural resources responsibly. It is important that brands focus on delivering products based on changing needs, with a focus on embracing technology for a more sustainable environment. For instance, using LED lights save up to 70% energy, and using **wires** are incorporated with Indo European technology, saves up to 3% energy. Furthermore, using fans with BLDC technology saves up to 50% on energy. Every small contribution from every one of us will help in improving the environment and restoring our planet. It is never too late to take responsibility and action to protect our Mother Earth. We must priorities the environment as responsible residents of this country and do our part to restore our planet. Let us continue exploring innovative technologies that lead to more ecologically friendly practices and more careful resource stewardship on this World Environment Day. A **highly.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26126

Since August 2021 The Afghan Taliban are supporting their training Jams three training camps in Nangarhar are directly under the Afghan Taliban and the Afghan Taliban leaders are openly meeting the Let terrorists under training in that country. The Taliban leaders had openly stated that Kashmir was in their focus. On air television show, a leader of the then ruling PTI, Neel am Rishi Sheikh had said, The Taliban are saying that they are with us and they will help us in Kashmir. Taliban U turn on Kashmir reflects the extent of Pak Army hold on this outfit. In addition, these groups are having close links with not only the Haqqani network but also with more fearsome outfit of IS K. The Al Qaeda core is also supporting and instigating its India specific arm the Al Qaeda in the Indian Subcontinent AQIS to take more interest in the Kashmir affairs. The above facts indicate the deadly nature of the threat. It has to be countered at each level to ensure that the adversaries are not able to achieve their goal. The following steps are needed I. To send a stern message to the perpetrators of the crimes, their immediate neutralisation is a must. While infiltrators have to be neutralised at the border, others as soon as possible. The intelligence agencies along with the designated security forces should ensure successes in such operations. The pre emptive operations should be on priority. The ability to do this would instill confidence among the Hindu Pundits and others from different states. II. The supporters need to be given deterrent punishment. Their properties should be destroyed or confiscated like in UP besides sending them behind the bars. Special courts should be established to deal with such cases urgently. The political leaders trying to exploit the situation should also be placed in the category of supporters. III. The minorities should be kept in special zones with adequate security arrangement. The Centre under the Home Minister has taken the right approach to create 8 such zones for minorities in the Valley. LG has ordered that secured **accommodation** be provided to all migrant government officials. Even if they are required to work from such zones that should be permitted till such time the situation improves. IV. Over the last several years, the number of minorities has significantly declined in the Valley. The skewed demography towards the minorities **Incentives** should be given to those from minorities who may be willing to work there. Initially they should also be kept in secured zones. V. The fear psychosis has to be neutralised through systematic use of different communication channels and these campaigns should be designed by specialists. The influence operations are in fact more devastating than physical intrusions like that of Cargill. However, counter campaigns can only succeed if the security forces can display successes in the neutralisation of the terrorists responsible for such heinous acts. Without the visibility of deterrent punishment to the culprits, the fear of minorities cannot **be.**

**350th:** "accommodation" | **400th:** "Incentives" | **500th:** "be."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26127

Countered finally, the communal situation in the country must be kept under control. The hate speeches must come to an end, which are exploited by our adversaries through the local politicians. RSS chief has rightly stated that no other religious issues be taken up and all the current issues be amicably resolved through negotiations. This must be pushed up further. Sustainability has gained a place at the forefront of business strategy. Climate concerns are pushing businesses to revamp their sustainable business models to keep pace with the evolving work environments and innovation. As a result, organizations are becoming increasingly conscious about how to conduct business to make the most negligible impact on our climate. According to the Ministry of Environment and Forests, electronic waste e waste generation has been increasing faster than plastic waste, with e junk witnessing 31% annual growth in 2019 2020. The e waste was 7.71 lakh tones in 2018 19 and 10.14 lakh tones in 2019 20. India collected just 10 percent of the e waste generated in the country 2018 19, as per a report by the Central Pollution Control Board. The data demands will grow when enterprises start conducting business in the met averse, which can potentially heighten the electronic waste problem. As the met averse becomes more integrated with the real world, organizations will have to prepare for the next stage of digitization and storage demands, while prioritizing sustainability. This presents an opportunity to examine the sustainability of advanced electronics manufacturing from the perspective of a data storage provider. Step Climate Goals There is a possibility of sustainability goals being undermined with the massive amount of data created and, therefore, data storage needed in the met averse. A sustainable augmented or virtual reality is fraught and hindered by the high consumption of nonrenewable energy, waste production, and CO2 emissions. Enterprises must set climate goals and commit to sustainable initiatives and agreements that hold their operations accountable and ensure they operate responsibly. For example, the Science Based Targets Initiative Sty is an alliance between nonprofit CDP, the UN Global Compact, World Resources Institute, **and** the World Wide Fund for Nature. Participants in this initiative are committed to combating climate change in alignment with the latest climate science. Step Physical Facilities The subsequent question is where to store this massive amount of data. More local data centers may look at moving their data into **the** cloud minimizing the amount of physical data centers. Additionally, large cloud service providers are investing heavily in sustainable energy sources. For example, Google is aiming to run data centers on completely carbon free energy by 2030, and Microsoft has pledged to do so by 2025. This all leads to hyper awareness among enterprises around the sustainability of their manufacturing practices. Enterprises can generate their own power onsite by investing in solar facilities, drawing less traditional energy away from the grid, and reducing their carbon footprint. Step Product Manufacturing Every part of a product life cycle extraction of materials from **the.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26128

Money stashed abroad is not always the money, which has been evaded from payment of taxes. Drug lords, terrorists groups, gangsters all over the world, along with International Syndicate's also keep their money in safe heavens, where they can lay their hands on it in times of need for their operational purposes. There is no mechanism with the Government to determine and say with cent per cent surety that the money hoarded abroad is only the one that has been evaded from payment of taxes and not the other crime linked cash. The Revenue Department and other agencies of the Government like the "RAW" and State Trading Organisation's have their offices abroad. There is no common mandate to them to report any suspicious transactions by the Indians either visiting or staying abroad. The stark truth is that the black money is the result of high level corruption prevailing in our country. The schemes meant for the poor, even as per the Government reports, are not implemented and the money siphoned off. Even laws permit every criminal whether in jail or on bail to hide their names and crimes and create false alibis. But, here the Government is creating alibis for those people whose names have been received and disclosed as the persons who are having cash, which is got illegally and is not from any known legal sources. They have stashed this "cash" in safe tax heavens abroad. Even the Supreme Court, the Apex Court of India, says that nothing moves without bribery in India. A good and alert cop even on a tourist visa can spot Indians roaming about and visiting these safe tax heavens on Swiss banks. The rest of the job of tracing the flight of black money from India can be done locally provided the Government has the will. So far, the Government has been making excuses, some tenable and some untenable. Monastery in the 5th century CE under the patronage of the Gupta emperors, particularly Kumaragupta's I, Nalanda was one of the greatest centre's of learning in the Ancient and early medieval world. Hailed **often** as the world first residential university, Nalanda predates the likes of Oxford and Cambridge by several centuries. The University was inaugurated this year by Prime Minister Narendra Modi in the presence of ambassadors from ASEAN nations and partner countries who had agreed to establish the university on 25 October **2009** at the Fourth East Asia Summit. Nalanda inception was rooted in a vision of an intellectual utopia, where knowledge transcended borders and disciplines. It thrived under the benevolence of Indian rulers, including Harshavardhana's of Kannauj's and the Pala kings of Bengal. It also received patronage from kings of Java present day Indonesia and from at least one king of Ceylon, too. Royal patrons provided both material and moral support to ensure Nalanda continued prominence as a centre's of learning for nearly seven centuries. The university was a marvel of architectural and educational grandeur. It boasted a sprawling campus with **magnificent** stupas, temples, monasteries viharas and lecture halls. The library, known as Dharmaganja's comprised three large buildings and housed handwritten, palm leaf manuscripts nearing a staggering nine million in number. Nalanda was home to over 10,000 students and 2,000 teachers from all over India as well as far off China, Korea, Japan, Tibet, Mongolia, Sri Lanka, Turkey, and Southeast Asia. Even though the technologies of travel and communication in the ancient world were rudimentary compare

The west in this case, being India, especially the university at Nalanda! The cosmopolitan atmosphere at Nalanda fostered a unique exchange of ideas and cultures and facilitated the dissemination of Indian knowledge, and especially the religious and spiritual traditions of Mahayana Buddhism, all over Asia. The curriculum at Nalanda was comprehensive, encompassing a wide array of subjects such as logic, grammar, rhetoric, metaphysics, Ayurveda medicine, mathematics, astronomy, and most importantly, Buddhist scriptures. Renowned scholars like Aryabhata the astronomer and mathematician, Dharma Pala the Buddhist philosopher, and Shantarakshita the Indian Buddhist monk who helped establish Tibetan Buddhism, were among the luminaries who taught here. The Intellectual climate at Nalanda was vibrant and dynamic, characterized by rigorous debate and scholarly discourse. Knowledge was pursued with a scientific rigor, underscored by a spirit of inquiry, rational analysis, and empirical evidence. Is positive thinking an inherent characteristic of a person or can it 69 be developed in one psyche? The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance theory, since positive attitude is not a physical feature but a mental faculty, it cannot be purely hereditary. It can be developed. Moreover, parents play a major role in developing this quality of a child. A child, who watches his parents working hard, having faith in success through their **words,** behaviour and body language, is likely to develop a similar attitude. The children of short-tempered, over-cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parents behaviour in front of their children. They must exude confidence, self-belief and hope, **especially** in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. While renowned as a centre of Buddhist studies, the pursuit of religious and secular learning appears to have coexisted harmoniously at Nalanda. Chinese scholars, such as Xuanzang and Yijing, provide invaluable accounts of Nalanda grandeur and academic excellence. Xuanzang detailed descriptions of the curriculum, faculty, and vibrant campus life underscore the university significance as a global centre of learning. Yijing records further attest to the high standards of education and the **rigorous** nature of scholarly pursuits at Nalanda where every student had to undergo a tough oral interview before she he could gain admission to the university. Walking through the ancient ruins of Naland

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26132

To perform the economic activities. Additionally, women can also add value to the economy through revenue generating activities. Educated women understand the value of education and hence encourage their children to be educated in turn. This brings society out of the vicious cycle of poverty. The challenge is that work places are not designed to accommodate women at various life stages. A young lady about to be married or a married woman about to become a mother or a woman coming back from maternity, these are the life stages I am talking about. Organizations fear that a young lady may move to a different state post marriage, so don hire her. Woman who is pregnant, don hire her or someone who comes back from a sabbatical, negotiate a lesser salary with her on the pretext of her being away from work. In a way she is penalized for nurturing and creating life. Women also face discrimination when it comes to the salaries they are paid lesser than men for same roles. Lesser women move up the hierarchy to occupy the top level positions, they are not promoted. Women who become entrepreneurs are taken less seriously by investors compared to men. Fund raising is not impossible but it is tougher. So, in a nut shell, women have to prove themselves much more for the same output compared to men. Women nurture the basic unit of a society which we call a family. There is a famous shola by Manu, Yarty pujyante pariah, tetra ram ante detach. This is quite significant because when a woman looks after the family and kids with a happy heart, feeling empowered, being treated with dignity as one of the decision makers in the family it brings positive energy into the family. This happiness becomes a source of motivation for everyone especially children. Children learn what they observe more than what they are taught. For a child mother is someone who nurtures them to become adults. She is basically a source of their existence which must be very much rooted, stable, comfortable and dignified. When a **child** sees his/ her mother being disrespected, those young minds are shocked to see that in spite of being a major actor in life why does a human not get credit for that. This is where their value system gets formed at the early stages of life. They start to **comprehend** the good and bad. The rewards for actions determine the behavior of the society as a whole. Therefore anyone, irrespective of gender who makes great contribution to make others lives better, should be rewarded accordingly because this serves as a reinforcement for a positive behavior, which children observe. That makes them good human beings To me empowerment means being able to make a positive difference to the world that we live in. Being useful to others makes me feel empowered. It is something as simple as looking after family and friends so that my existence adds value to their **life.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26134

Environment, the production of the product, the use phase, and what happens to the product after it is no longer used can have an impact on the environment in unique ways. Many businesses are developing product life cycle assessments to evaluate the overall environmental impact. The goal is to follow a product timeline production, distribution, use and end of life phases and ensure full accountability and transparency. Step Circular Economy Unfortunately, large amounts of electronic waste end up in landfills and contaminate soil and groundwater, putting food supply systems and water sources at risk. The proper disposal of products can be resolved by implementing recycling programs or giving consumers the option to recycle their old products. For example, Western Digital has started the Easy Recycle program in the United States to make it easier for consumers to help reduce the impact on our planet. Customers can ship old products back to the company for free or drop them off at local shipping stores to allow for an easy, environmentally friendly disposal, diverting many tons of waste from landfills. Step Supplier Network a sustainability strategy focused solely on internal operations can miss very significant upstream impacts. That why supplier engagement on sustainability issues is crucial to an effective sustainability program. It is important to educate and train supplies on sustainable business practices. Participate in joint sustainability initiatives can strengthen relationships and amplify sustainability progress at the same time. While it is exciting to consider shifting work, life, and play online into the met averse, this process will create huge demand for data storage. Enterprises getting ready for web 3.0 and experimenting with how to do business at the convergence of emerging technologies will potentially create a massive online footprint. This will invariably generate an incredible need for data storage, and if not done thoughtfully, this may lead to more products and more waste. The met averse may be virtual, but if we don find ways to reduce our collective footprints, its environmental impacts could be real. The financial inclusion of women is not really a favor to individual women but **the** act makes a huge contribution to the GDP of the country. From pure economics point of view, imagine how much money is spent on the education of women, I am talking about only educated women as of now. How many of these educated women contribute proportionately to the economy, **vis** a vis the resources that have been spent on them? Does it make economic sense for the country as a whole to make workplaces more accommodative towards the various life stages of women Organizations certainly benefit from diversity as a whole and the country benefits from the growth brought about by the entrepreneurial pursuits of women. Development is all about harnessing the available resources to the fullest potential. Women make a huge contribution indirectly by looking after the household which also supports the value creation in the society because stable and well managed family and home is essential for **people.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26135

has a passion for painting, acting, singing & photography. India's foreign policy has always been deeply shaped by geography; its borders are not merely lines on a map but dynamic corridors of culture, commerce, migration, and shared history. From the Himalayas to the Indian Ocean, India's immediate neighbours Pakistan, Nepal, Bangladesh, Sri Lanka, Bhutan, Maldives, Myanmar and Afghanistan, have always been central to its strategic imagination. What is changing today, however, is not geography but politics. Across the region, a new generation of leadership is emerging, often shaped by grassroots mandates, economic anxieties, and digital-age public opinion. The rise of figures such as Balen Shah in Nepal, symbolising a break from traditional political elites, and evolving leadership currents in Bangladesh, Afghanistan and the Maldives reflect a broader churn. These leaders are less burdened by history, more responsive to domestic pressures, and more open to multi-alignment in foreign policy. At the same time, two key neighbours Pakistan and Myanmar remain structural exceptions, where the military/communism continues to dominate decision-making, limiting the scope for democratic engagement. For India, this moment presents both an opportunity and a strategic test. The older reliance on cultural affinity and political goodwill is no longer sufficient. India must now engage a neighbourhood that is more assertive, more fluid, and more susceptible to external influence. What is required is a confident, pragmatic, and forward-looking policy that aligns India's interests with the aspirations of these new regimes. In the decades following independence, India's approach to its neighbours was guided by moral political non-interference, sovereign equality, and regional solidarity. While this approach built trust, it often proved inadequate in securing long-term strategic outcomes. The articulation of the 'Neighbourhood First Policy' marked a shift toward prioritising regional engagement through connectivity, economic integration, and security cooperation. Yet, recent developments show that India is moving further, toward 'pragmatic realism'. This transition is visible in three key ways: A defining feature of contemporary South Asia is the emergence of a political class shaped not by Cold War legacies, but by present-day challenges employment, inflation, governance, and global integration. This creates a paradox for **India:** these regimes are economically pragmatic but politically unpredictable. Their openness to engagement is matched by their readiness to recalibrate positions based on domestic pressures. In Nepal, the rise of leaders like Balen Shah reflects public fatigue with traditional politics. Governance is becoming more accountability-driven, while foreign policy reflects a **stronger** assertion of sovereignty. Residual perceptions of interference and Nepal's balancing between India and China. Key Insight: India's influence must now be earned through economic relevance and respect. Bangladesh remains a cornerstone of India's neighbourhood policy. Yet, internal political churn and emerging leadership dynamics are introducing new variables. Key insight: Bangladesh is central to India's eastern strategy and regional integration. Sri Lanka's economic collapse reshaped its political landscape and opened space for India to step in as a reliable partner. Balancing immediate support with long-term strategic competition, especially with China. Key insig

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-25-TEST NO.-26138

India's neighbourhood is undergoing a profound transformation. The rise of new-generation leadership, from local disruptors like Balen Shah to shifting political currents across South Asia, signals a break from the past and the emergence of a more fluid regional order. For India, this is a moment to recalibrate not by abandoning its principles, but by adapting them to new realities. The focus must shift from influence to partnership, from rhetoric to results, and from legacy thinking to strategic clarity. At the same time, structural challenges in countries like Pakistan and Myanmar remind us that not all parts of the neighbourhood will evolve uniformly. Ultimately, India's success will depend on its ability to combine strength with sensitivity, leadership with restraint, and ambition with realism. If managed well, this changing neighbourhood can become not a source of uncertainty, but a foundation for a more integrated, stable, and prosperous regional future. The cost of being easy to live with: How people-pleasing becomes slow self-harm Dr Krishna Athal is a renowned life and executive coach. He is currently the Executive Director of the International Coaching Institute (ICI). He writes and talks about leadership, coaching, strategy, entrepreneurship, management, and decision-making. He is a recipient of numerous national and international leadership and innovation awards. People-pleasing is one of the most socially rewarded forms of self-erasure. It is praised as maturity, flexibility, and grace, especially when it makes other people comfortable. But people-pleasing often comes with a hidden bill: resentment, exhaustion, confusion, and a shrinking sense of self. I have seen it in coaching rooms, in marriages, in workplaces, and in families where the good one is quietly disappearing. What looks like kindness on the outside can become slow self-harm on the inside. People-pleasers rarely introduce themselves with that label. They say, I am just being practical. Or, There is no point creating drama. Or the old classic, I understand how everyone feels. Admirable, yes. Sustainable, not always. I have sat with clients who were loved, respected, and considered easy to live with. They were also tired in a way sleep could not fix. Their calendars **were** full. Their tone was polite. Their bodies, however, told the truth. Tight jaw. Shallow breath. Stomach in knots. A nervous laugh that arrived half a second too early. The soul knows when it is being edited for public comfort. That is the first cost of people-pleasing. You become pleasant **company** for others and unfamiliar company for yourself. People-pleasing is clever. It rarely arrives wearing a badge saying, I am afraid. It dresses itself as reason, diplomacy, and emotional intelligence. It can even masquerade as spirituality. I have let go. I do not want an ego. I choose peace. Sometimes peace is wisdom. Sometimes it is simply conflict-avoidance wearing linen trousers. Psychologically, people-pleasing is often linked to self-abandonment. That means repeatedly leaving your own feelings, limits, and truth in order to preserve attachment, approval, or safety. Many learned this early. If love felt conditional, if anger in the home was **dangerous,** if affection depended on being convenient, then being easy to live with became a survival strategy. Neuroscience offers a useful lens here. The brain learns patterns that reduce threat. One such pattern is the fawn response. This is a trauma-response in wh

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-26-TEST NO.-26139

Telis, a strategic expert, recently highlighted the limitations of this promised relationship, blaming India for diffidence. Notwithstanding nay Sayers, altered geo political realities drive convergence. China has forced India to lean towards the Quad to bolster dissuasive balance. Self-reliance and de coupling are now part of the altered strategic discourse. While America may have failed to shape India as per its expectations, Xi Jinxing has created a formidable, strategic gulf between the two neighbours. Irritants like CPEC, BRI and Chinese aggressive zero sum forays in neighbourhood will only amplify this hiatus. Washington cannot have a fully compliant ally, but it can certainly bank on a rising India, competing with and countering Beijing. USSR has been a dependable ally, but its capacity, in the post Ukraine scenario, is likely to be limited besides the fact that US technology is of the cutting edge genre. Ideal tested India deploys probably the largest inventory of equipment in challenging terrain and combat scenarios, including proxy war with Pakistan and combat ready deployment to ward off China. Unlike many others, India has not only displayed the nerve to stand up to China but has undertaken quid pro quo operations like pre emotive deployment in Kailas and debunking the hype of Chinese invincibility. India needs to be utilised as a co-production and development hub, leveraging its experience and combat validated data. Indian crews have innate quality to master equipment and improvise, better known as jugged. One is reminded of a reputed horse breeder who mandated compulsory riding tests for his customers. The reputation of many weapons has been destroyed by inept handling in the Ukrainian conflict. There can surely be vested interest of manufacturers to sell equipment and technology to capable users like India. Technology transfer the first deal is the purchase of 31 MQ 9B Reaper also referred to as Predator B armed drones produced by General Atomics, worth 3 billion. This acquisition has been in the pipeline since 2011 and was held up on account of prohibitive costs and issues connected with life cycle support. The Indian Navy is already using two unarmed **naval** variants of Sea Guardian drones, leased in December 2020. These have also been used to monitor PLA activities in Tibet. These combat proven drones can operate up to 40,000 ft. with a 1,200 km range, 40 hour endurance and payload capability of 5,670 kg. The Air Force operates Israeli **Harpy** and Harpo armed drones loitering munitions. These operate up to 15,000 ft., with 600 1,000 km range, 23 32 kg payload and endurance of two nine hours. Any comparison with the famed Turkish Bayraktar TB2 is avoidable; it has a range of 150 km and payload of 650 kg only. The acquisition of Predator is a significant move into the next generation of drone technology. The critical issue is life cycle support US equipment is imported through foreign military sales route, which is complex and entails maintaining dollar deposits for repairs and spares. Hopefully, these issues would be sorted **out** as the lifespan of equipment in India is long. It will be ideal if users are empowered to undertake basic repairs and regional servicing and an overhaul hub is created. The second pact is joint production of engines for Teas Mk 2 fighters by General Electric and Hindustan Aeronautics Limited. USA has also reportedly agreed to execute Tot to the extent of 80. Government sources claim that it is both i

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-26-TEST NO.-26140

In any case, is at least 25 years old, but reliable. It is hoped that the whole exercise does follow the Russian Tot model, where India got screwdriver technology transfer with assembly of kits, in print to design format. Much touted myth of Tot stands exposed with continued dependency of Indian manufacturers for critical components on Russia. It really amounted to licensed production as numbers of critical components like core penetrators for tank ammunition were capped. The need is to include know why besides know how to enable limited designing and modification capability. There is accompanied buzz on joint space missions to the International Space Station in 2024. India has also agreed to sign the Artemis accord. Micron and Applied Materials have committed to making substantial investments in chip manufacturing and semiconductors. Initiative on Critical and Emerging Technologies which replaced Defence Technology and Trade Initiative is now being rebounded as India US Defence Acceleration Ecosystem. It will require a sustained, committed effort to kick start an indigenous innovation eco system. In sum, the challenge lies in optimally operationalizing these agreements and arrangements. Generative AI has taken the world by storm; every business and sector is rushing to integrate it into their systems and make maximum use of the technology. Innovators in the US have pioneered their way through a race among cutthroat competition to come out on top. In the midst of America Generative AI frenzy, a misconception that other countries like India are falling behind has emerged. It is important to take a step back and view this from a global perspective- it is less about who can build better Generative AI models but more about who can achieve commercial viability and succes. India AI journey has seen stable growth over the years, with rapidly increasing number of AI startups in every sector like fintech, communications, AgriTech, healthcare, retail, etc. In her Union Budget 2023 speech, Finance Minister Nirmala Sitharaman introduced the mission to not only Make AI in India but Make AI work for India. The near future of the country AI story looks bright, with investments **in** India AI capabilities expected to reach USD 881 million in 2023. India secret sauce: Regulatory ecosystem, tech talent, and a robust test bed The dynamic duo: Agility and flexibility fueling growth India regulatory authorities know how to keep businesses on their toes, with compliance and regulation rules updating daily **to** stay lock-step with emerging trends while simultaneously cornering businesses to play fair and square. This has caused India business ecosystem to be equipped in adapting to new norms, market trends and laws at a fast pace. The success of new programmes like Digital India, Make in India, etc. being adopted by the country tech sector are examples supporting the same. With India groundwork already set in terms of regulation, privacy, etc., the country has potential to uplift the benefits that Generative AI offers. While other countries react to mould themselves to accommodate new technologies, India is proactively steering certain **business** industries towards Generative AI For instance, NASSCOM recently released guidelines for Generative AI, helping prepare the sectors. This points to the agility and flexibility that makes India one of the most exciting markets for the deployment and experimentation of Generative AI. Tech talent poised to steer AI growth and i

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-26-TEST NO.-26143

Experimentation. With the abundance of talent, audience, businesses and, therefore, end consumers, India possesses the ability to help advance this technology to new levels without having to build from scratch. Decoding the necessity of AI: How much is required? The rush to make AI part of operations has blindsided businesses from evaluating the spaces that require it. It is an important point that gets missed in most discussions how much AI do we really need? Brands should first evaluate the relevant needs for Generative AI in their internal operations and product offerings. For example, Large Language Models LLMs like ChatGPT and PaLM2 are being used to power in-app chat APIs and to humanize chatbot experiences. Static and repetitive data or functions can be enhanced and tailored to fit users better with the help of AI-powered automation. On the other hand, dynamic data like financial histories which change not only from person to person but also over a period of time, must be monitored by engineering teams to ensure safety, data privacy, and seamlessness. Jumping on the bandwagon to make the business more relevant to tech trends without thoroughly examining its uses will only complicate functions and confuse users. Conclusion We have to consider the implications of competing to advance a technology like Generative AI when there is so much uncertainty around data privacy, accuracy, and overall commercial viability. It is essential to pace not only the integration of Generative AI into businesses but also the creation of newer models. Considering the state of AI development itself, it is safe to say that building LLMs and other Generative AI models is not even a race in the first place. We have seen with the likes of Apple, and many other tech leaders of the world, that rushing forward during a frenzy to claim a piece of market share is necessary to lead; taking a methodical, steady approach can still bring you out on top. Similarly, India position in the Generative AI race will end with success better than a mere rank. The use of word panthnirpeksh in the Constitution brings **out** the difference in the terms Dharmanirpeksh and Panthnirpeksh. Pant, or sect, symbolizes devotion towards any specific belief, way of worship or form of God, but Dharma symbolizes absolute and eternal values which can never change, like the laws of nature. Dharma is what upholds, sustains and results in the **well-being** and upliftment of the Praja citizens and the society as a whole. when dharma is used in the context of duties of the individuals and powers of the King the State, it means constitutional law Rajadharma. Likewise, when it is said that Dharmarajya is necessary for the peace and prosperity of the people and for establishing an egalitarian society, the word dharma in the context of the word Rajya only means law, and Dharmarajya means rule of law and not rule of religion or a theocratic State. Any action, big or small, that is free from selfishness, is part **of** dharma. Thus, having love for all human beings is dharma. This Court held as under The word ecular after being added in the Preamble was also considered by a three-Judge Bench judgment of this Court reported as Ziyauddin Burhanuddin Bukhari v. Brijmohan Ramdass Mehra & Ors. This Court was considering an appeal against the setting aside of election of the appellant under the Representation of the People Act, 1951 to the Maharashtra State Assembly on the ground of speeches made by him in the course

Been used to create disaster maps and assess damage after events like hurricanes and earthquakes. Armed with technology such as infrared cameras, and AR technology, it can also be used to create heat maps that can help firefighters locate hotspots. These can also help locate people that need rescue, and can survey a building to find where flames are spreading. Environment Day June 5th, 2022 sets my mind rolling into works of art that emanate the rhythms of earth songs in their moments of creation. Think India greatest artists and many portraits and segments come to mind canvas paper in bronze and born of history memory and experience these images are like seven earthly echoes that celebrate the beauty of the earth. Souza landscape Perhaps one must begin with the great Francis Newton Souza who captured the landscape in its beauty of cubist articulations and its augmentation of rich greens and browns contrasted with flashes of bright white and blue giving the painting the sense of dappled light flickering through the autumnal foliage. This Untitled 1961, work was sold at Christies in 2018. A young lady told me that her boyfriend had broken off with her. She blames herself for all her broken relationships. She feels depressed and lonely. She constantly yearns for the acceptance of those who abandoned her. She says if they apologize to her or accept her, she will feel happy. However, her wishes are futile since she cannot control what they say or do. A young man is unhappy because he did not get the promotion, another man is anxious because he wants a large fan base on his social media The whole world today is in search for happiness. There are happiness clubs, and classes and books on happiness. It is as if the whole world has become such an unhappy place that everyone is searching for this elusive state called happiness. There are thousands of reasons we can be unhappy. It could be for the want of love, money, job, house, car, prestige, fame or even food or shelter. Competition and culture feed **the** need to win, need to get following on social media, need for instant gratification, and a myriad of other needs that are causing people to be unhappy a state that can have different hues of negative emotions like sadness, anger, jealousy, guilt and so on. When we get what **we** want, we are happy. When a desire is met, we experience an emotion that is happiness by bursts of the happiness hormones. But happiness is transitory. We can be happy one moment and soon that emotion passes. We move on to something else! When one need is satisfied another need takes its place a different need, or a craving of the same need in greater quantity! One way of ensuring we are not unhappy is to be satisfied. Satisfaction is also a resultant emotion after a need is fulfilled. You may be satisfied with your job, or with the **food.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-26-TEST NO.-26147

Being a woman if my views are valued and I am a part of decision making in personal and professional life, that empowers me because I know that this is something that women cannot take for granted. The progress made in robotics and AI have led to cutting edge digital technology such as commercial drone technology, which is altering the fundamental mode enterprises interact with the world. In fact, Drones have by far been one of the most looked up to and promising technologies emerging from the Fourth Industrial Revolution. And the pace and scale of adoption of the drone technology could determine success for businesses in the age of digital revolution. Those who fail to adapt will lose relevance. Primarily, drones help bridge the physical and digital worlds. They empower companies to combine the power of scalable computing resources with pervasive, affordable sensors that can go anywhere. Businesses across all verticals have started realising the upsides of the which are the cost efficiency, time saving and technological advancements that drones can weave into a business. This has led to a significant increase in usage, experiments and trials of UAVs by the government and enterprises across sectors. Consequently, market and the regulatory approach to the industry are becoming more and more closely linked, as authorities come to appreciate the vital role of drones in a fully functioning digital economy. The faster adoption of UAVs is therefore critical to realise the potential of this technology. Drones can help revolutionise different sectors In a report on the digital led recovery from COVID 19 McKinley March 2020 claims that A digital future lies ahead. The use of drone technology and drones for delivery is unavoidable. Soon, many industries will leverage drone technology to add innovation to their business areas, including surveillance, research, last mile delivery, etc. E commerce giants have long been invested in this space and are focused on cutting down the cost of operations in last mile delivery, improving delivery time, and integrating drone technology with mobile phone applications to offer better user experiences. Drone delivery services will only grow **in** the coming years, and companies will need to stay invested in drone delivery programs and technology enhancements before realizing operational growth and cost benefits. On this front, even the government has said that it wants to make India a global drone hub by 2030. Promoting the drone as a **service** model is one of the ways to achieve this target. During the pandemic, many countries have taken to drone technology and proved that drones are the safest way to deliver medical supplies and transport samples from hospitals to laboratories. Drones can also be used in delivering groceries, surveillance, broadcast, disinfectant spraying, temperature checks, and so on. Even the future of retail delivery is likely to be dependent on drones. Drones offer faster delivery, with no physical interactions, and cost savings. Major industry players like Amazon, UPS, DHL, Waymart etc., have already introduced drone delivery services on their platforms. Besides, **drones.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-26-TEST NO.-26148

Ratan Tata passing is an incredibly sad moment not just for the Indian business community, but for our country. Ratan Tata was a beacon of integrity, ethical leadership and philanthropy, who left an indelible mark on the world of business and beyond. An outstanding man of vision and principles, he set lofty standards for business practices that emphasised the importance of good corporate governance. His life is a testament to the belief that business can and should be conducted with honour and dignity while nurturing value-based relationships. Reflecting on his remarkable life, I can help but appreciate his wisdom, compassion and the simplicity with which he lived. For a billionaire who could have had everything, he instead chose to stay in a one-storeyed home, leading a very grounded, down-to-earth life. From 1991 to 2012, Ratan Tata served as Chairman of the Tata Group, transforming it into a global powerhouse while upholding the highest standards of corporate governance. Through strategic planning and bold moves, he made significant acquisitions worldwide. Acquiring iconic brands such as Jaguar Land Rover, Tetley, and Corus Steel not only expanded the Tata empire overseas, but also made India a force to reckon with and gave courage to other Indian entrepreneurs to venture Westwards. In an era where shortcuts seem tempting and are often taken, Tata insisted that having integrity while conducting business was not an option but essential for sustainable growth. Perhaps, it was this quality that left a lasting impression on me when we were trying to exit a mobile telecom business several years ago. We had entered an informal agreement with the Tata. During this period, before a formal agreement could be drawn, another bidder offered us a higher price. However, we declined because we had given our word to the Tata. I do know how Ratan Tata got to hear about this, but he called me to thank me for keeping my word and not backing down from the deal and doing things the Tata way. Tata leadership style fostered an environment where employees felt valued and empowered. He understood that at the **heart** of any successful business were its people and he had an immense sense of responsibility towards them. This was evident in how he treated his employees, especially during crises like the 2008 Mumbai terror attacks, where he personally ensured that the affected families of staff at The Taj Mahal **Palace** Hotel received support and assistance. He even went so far as to pay for the hospitalization of all the victims who were injured in the terror attack at the Hotel. Another sterling quality was his humbleness, and I got to see this up close once at a party. We were deep in conversation when a shareholder interrupted us and was adamant that Tata address his queries. He excused himself to respond to the shareholder. Later in the evening, he made it a point to track me down and profusely apologised for leaving our conversation midway. This humility and respect **for** others impacted me greatly. The bedrock of his beliefs was that business should not merely be about profit margins, but also about making lasting changes to the community. His search for empowering the common man led to the creation of the Tata Nano the world most affordable family car. Mentoring young entrepreneurs and investing in startups was another way he ensured that the new crop of future business leaders imbibed correct values in their journey towards creating successful businesses. At t

Who shared his vision for innovation and a people-oriented value system. He has passed on the baton, ensuring that the legacy will continue without a compromise. Ratan Tata was passionate about giving back to society, as were all the Tata before him. The House of Tata for generations has stood tall as an institution led by visionary leaders of industry, nation building and philanthropy. Some of the finest hospitals and educational institutions in our country owe their existence to them. Ratan Tata has carried on this great legacy with aplomb being personally involved with creating hospitals to fight cancer across the country as well as a state-of-the-art medical centre for small animals in Mumbai. His philanthropic endeavors have set a high standard for corporate responsibility. As we bid farewell to Tata, we celebrate a Titan of India Inc, who taught us that true success is measured not by wealth but by the positive impact we leave behind. He believed in the nation potential and showed us how the simplest of values can lead to profound change. Ratan Tata leaves behind a legacy that will not be easy to match. In 1615 the English King, James I, sent Sir Thomas Roe, to the Mughal Court of Emperor Jehangir to successfully negotiate a commercial treaty that allowed the East India Company(EIC) exclusive rights to reside and establish factories in Surat and other areas. In return, the company provided the Emperor with goods and rarities from the European market. It was the basis for a highly lucrative trade deal that lasted for over seventy years, till in the late 1600s in its yearning for greater profits, it fell afoul of the Mughal Governor of Bengal while attempting to renegotiate trade terms. Threats and gunboat diplomacy, using an English Fleet especially sent for this very purpose, led to the Anglo-Mughal War of 1686-90. After initial setbacks Emperor Aurangzeb captured the Company factories and personnel spread over the realm and blockaded their forces in Bombay and Madras till they sued for peace. After paying a sizeable fine of Rupees 1.5 Lakhs, equivalent Pound Sterling **4.5** Million at the time, the EIC received a full pardon and was granted permission to continue with its trade. Emperor Aurangzeb death in 1707 put paid to this reciprocity, as anarchy and large scale rebellions in the provinces rendered his successors increasingly powerless. The EIC took full advantage of **the** ensuing chaos, and using a combination of diplomacy, skulduggery and force, went on to become the dominant player in the subcontinent by 1805. In the next century and a half the EIC and subsequently the English State, stripped the country of its wealth, an action Dalrymple called the single largest transfer of wealth until the Nazis, an amount some assess to be £ 45 Trillion at today rates. This little historical excerpt is a stark reminder as to the reasons why we remained enslaved for the better part of half a millennium. Our leaders had always put their own **well-being** and self-interest above everything else, and preferred to fight amongst themselves instead of unitedly against a common enemy. Their actions not only stripped us of our wealth but also our common cultural and civilisational heritage that had made the Sub Continent the envy of the world. What was indeed was most galling was that neither the Mughals nor the British could have ever succeeded without the connivance of our own kith and kin, who sold their loyalty for power, trinkets and a few pieces

Been used to create disaster maps and assess damage after events like hurricanes and earthquakes. Armed with technology such as infrared cameras, and AR technology, it can also be used to create heat maps that can help firefighters locate hotspots. These can also help locate people that need rescue, and can survey a building to find where flames are spreading. Environment Day June 5th, 2022 sets my mind rolling into works of art that emanate the rhythms of earth songs in their moments of creation. Think India greatest artists and many portraits and segments come to mind canvas paper in bronze and born of history memory and experience these images are like seven earthly echoes that celebrate the beauty of the earth. Souza landscape Perhaps one must begin with the great Francis Newton Souza who captured the landscape in its beauty of cubist articulations and its augmentation of rich greens and browns contrasted with flashes of bright white and blue giving the painting the sense of dappled light flickering through the autumnal foliage. This Untitled 1961, work was sold at Christies in 2018. A young lady told me that her boyfriend had broken off with her. She blames herself for all her broken relationships. She feels depressed and lonely. She constantly yearns for the acceptance of those who abandoned her. She says if they apologize to her or accept her, she will feel happy. However, her wishes are futile since she cannot control what they say or do. A young man is unhappy because he did not get the promotion, another man is anxious because he wants a large fan base on his social media The whole world today is in search for happiness. There are happiness clubs, and classes and books on happiness. It is as if the whole world has become such an unhappy place that everyone is searching for this elusive state called happiness. There are thousands of reasons we can be unhappy. It could be for the want of love, money, job, house, car, prestige, fame or even food or shelter. Competition and culture feed **the** need to win, need to get following on social media, need for instant gratification, and a myriad of other needs that are causing people to be unhappy a state that can have different hues of negative emotions like sadness, anger, jealousy, guilt and so on. When we get what **we** want, we are happy. When a desire is met, we experience an emotion that is happiness by bursts of the happiness hormones. But happiness is transitory. We can be happy one moment and soon that emotion passes. We move on to something else! When one need is satisfied another need takes its place a different need, or a craving of the same need in greater quantity! One way of ensuring we are not unhappy is to be satisfied. Satisfaction is also a resultant emotion after a need is fulfilled. You may be satisfied with your job, or with the **food.**

Is fear managing the room. I say this with compassion, not accusation. Many people-pleasers are not manipulative. They are frightened. Frightened of conflict. Frightened of being misunderstood. Frightened that one honest sentence may cost them connection. So they swallow the sentence and call it maturity. This is where resentment grows. Resentment is often a protest from the self that has been repeatedly overruled. You say yes when you mean no. You adjust again. You absorb another slight. You let it go for the fifth time this week. Eventually, your warmth develops teeth. You begin doing loving things with an unloved heart. Society does not help. We praise agreeable women, emotionally low-maintenance partners, endlessly available employees, and adult children who never cause trouble. We reward self-silencing, then act surprised when depression, burnout, and emotional numbness follow. Strange civilization, really. We tell people to be honest, but only in tones that do not inconvenience anybody. People-pleasing is not only psychological. It is physiological. The body registers chronic self-suppression as stress. When you repeatedly override your own internal signals, the nervous system can stay in a low-grade state of threat. Cortisol, the body's primary stress hormone, does not care whether you are fighting a tiger or swallowing your anger at dinner. The body still pays. Emotional exhaustion sets in. Sleep becomes lighter. Irritability increases. You become fine in public and strangely brittle in private. This is also where cognitive dissonance appears. Cognitive dissonance is the mental strain that occurs when your behaviour and your inner truth do not match. You smile while feeling hurt. You say, No worries, while worrying quite a lot. You perform calmly while your chest feels like a locked room. Over time, this split can make a person feel unreal. I once worked with someone who prided herself on never asking for much. She thought that made her lovable. By the time we met, she was having headaches, snapping at people she adored, and fantasising about disappearing for a week without telling anyone. She did not need a better planner. She needed permission to exist as a full **human** being. This part is rarely discussed. People-pleasing is not only about avoiding conflict. It can also be a way of avoiding real intimacy. Why? Because intimacy requires being known. Not the edited version. Not the efficient, understanding, low-friction version. The real one. The one with needs, limits, moods, opinions, **and** inconvenient truths. A person who is always agreeable may be liked, but not deeply known. If I only show you what keeps you comfortable, I have not actually let you meet me. I have let you see my adaptation. That is why many people-pleasers feel lonely even when surrounded by appreciation. They receive affection, but not always for who they truly are. Some of them suspect this. Part of them wonders, Would you still love me if I stopped being so easy? Calling people-pleasing a form of slow self-harm may sound severe. I use the phrase carefully. I do **not** mean dramatic destruction. I mean gradual injury. The repeated turning away from one's own reality. The tiny betrayals that accumulate into a life. Every time you laugh off what hurts you, mute what matters to you, or make your needs look smaller than they are, something in you learns a bleak lesson: my truth is negotiable. My discomfort is inconvenient. My role is to make life easier for other

recognition. After years of people-pleasing, many cannot answer a simple question without scanning the room first: What do I actually want? Healing does not mean becoming harsh, reactive, or self-absorbed. It means becoming honest enough to remain kind without abandoning yourself. That begins with noticing the moment before the automatic yes. The pause matters. In neuroscience, this is the space where regulation becomes possible. Regulation means helping the nervous system settle enough that you can respond consciously instead of repeating an old survival pattern. I often tell clients to stop asking, What is the nicest thing to say? and start asking, What is the truest kind thing to say? That one shift can change a life. People-pleasing heals through practice. Through tolerating the discomfort of disappointing others without collapsing into guilt. Through setting a boundary before resentment writes the speech. Through letting you not be clean. Through understanding that conflict is not always a sign of relational failure. Sometimes it is the first honest thing that has happened in years. You do not become difficult by becoming real. You simply stop volunteering for quiet forms of self-erasure. Being easy to live with is not the highest virtue. Being honest, self-respecting, and emotionally present is far more valuable. I do not want a life built on my own constant disappearance. I do not want relationships that require my self-abandonment as an entry fee. And I do not think you do either. People-pleasing may win approval in the short term. But in the long run, it often costs identity, vitality, and psychological health. There is nothing noble about becoming smaller so that others never have to adjust. Sometimes the most loving thing a person can do is stop being so endlessly manageable. From intent to impact- India's nationally determined contributions, pathways for development Rajeev Kumar Jha is a development professional with over 18 years of extensive experience in Disaster Risk Reduction (DRR) and Climate Change Adaptation (CCA) across the South Asia region. He currently serves as the Director of DRR and CCA at the esteemed Humanitarian Aid International (HAI). ## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26156

On a remote patch of celestial wilderness near the moon south pole lies the wreck of the Chandrayaan-2 lander, a testament to the soaring ambitions of India lunar programmer and the difficulties of achieving them. Its predecessor, the Chandrayaan-1 orbiter, made history in 2008 by confirming the presence of water ice on the moon. The more audacious Chandrayaan-2 in 2019 was to deploy a lander called Vikram. However, Vikram crash landed in a spray of lunar dust, leaving it, and the small rover inside, inoperable. Tamil Nadu governor RN Ravi is back in the news. On Thursday evening he unilaterally dismissed a minister, V Senthilbalaji, who in judicial custody. Late in the night, he put his decision on hold. By Friday afternoon, the state government announced it would disregard his communication on the dismissal. There no room for doubt as the constitutional position is clear. Ravi was wrong to unilaterally dismiss the minister. The Constitution makes it clear that the governor is to act on the advice of the CM when it comes to the composition of the council of ministers. The period till 1967 was largely uneventful in the history of engagement between governors and states. Subsequently, when the incidence of opposition coming to power in states rose, decisions of governors often led to judicial disputes. Consequently, the apex court has a body of verdicts that gives a clear picture of the limits of a governor power. An important verdict almost 50 years ago Shams her Singh vs. State of Punjab said that the Constitution does not envisage the governor running a parallel administration. The discretionary powers of a governor are limited. Governors sometimes seem to yearn for the British Raj 1935 legislation that gave them discretionary power and even allowed them to chair a meeting of the council of ministers. That era is over. Sitting on bills cleared by the assembly or trying to unilaterally change the council of ministers disrupts a state governance. As most such cases end up as judicial disputes, it further clogs the system. Ravi conduct in this matter and a tendency to **sit** on bills has left a lot to be desired. It undermines the integrity of the constitutional office that an important link between GOI and states. GOI should talk to him. India has recently joined NASA Artemis Accords for lunar exploration. But what, exactly, are the US government and American **billionaires** planning to do in outer space? Astrotopia: The Dangerous Religion of the Corporate Space Race by Mary-Jane Rubenstein takes apart the mindset that wants to establish outposts on the moon, mine water and metals, and colonise Mars. Rather than curiosity about the mysteries of interstellar blackness and our place in it, this pursuit has been driven by a conquer and extract mentality that had created imperialism and ecological ruin, the book argues. Elon Musk and Jeff Bezos are the biggest billionaire astropreneurs duking it out for space supremacy. Space and Blue Origin have different visions Musk is the **hare** to,

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26157

Bezos tortoise but both promise deliverance and see earth as a ticking time bomb. Musk aims to make humanity into a multiplanetary species and colonise Mars. His plan is to err form the inhospitable planet by warming it up with nukes. He wants a society of homesteaders, starting with a million people by 2050. Bezos, meanwhile, is attached to the earth, but it has finite resources, and infinite growth demands more. He wants to ship out the mines and factories and give earth a break. He envisions bases on the moon with solar panels, water to be split and recombined into rocket fuel and mini missions to mine asteroids for heavy and rare earth metals. While neither of these dizzying plans has made visible progress and the last time someone went to the moon was still half a century ago, these companies send up thousands of satellites, as do others offering low-orbital joyrides. One person paid for his ashes to be blasted into space. Today, earth is ringed by a halo of space trash, with dead satellites, shrapnel, paint chips, tools, the junk of the International Space Station, and so on. We keep producing this litter, travelling at furious speeds. There is no way to clean it yet a harpooning method has been proposed, but it unclear who pays for this cosmic janitorial service, without return on investment. Is anyone in charge? Well, not quite. Space has seen massive deregulation and privatisation, with NASA now relying on private contractors to send up cargo and astronauts. An Obama initiated bipartisan bill in 2015 launched this commercial space age, stating that extraterrestrial minerals belong to the entities that extract it. Companies are going full speed into a gold and platinum rush. The book critiques the assumption of humanity dominion over everything else, and the religious rhetoric that has long provided cover for colonialism and violent extraction. Republicans like Mike Pence invoke American ingenuity and divine sanction for boots on the moon. No wonder these ventures are called missions, says the book. The jockeying for military supremacy during the Cold **War** was dressed up in language about the final frontier, man ceaseless need to explore, and the conquest of space. Should we study and explore space? Yes, but not if science means heedless exploitation, argues the book. Ethical exploration would avoid damage and violence and prioritise knowledge over profit. It **would** keep earth own needs first, like using technology to better track weather and disaster, or deploying billionaire surpluses on this planet before remaking others. Otherwise, what we do to the earth, we will do outside earth. In March this year, Delhi environment department informed the assembly that about Rs 6856.91 Cr was spent in the five years between 2017 and 2021 to clean the Delhi stretch of Yamuna. This amount translates into Rs 3.76 cr per day. Contract workers like Sub ash who is 63 years old and Keel who is 49 would be unable to even comprehend the **mammoth** scale of.

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26158

This amount. They are hired for Rs 300 a day and clean the river manually by entering the toxic foam with literally no protection. The sexagenarian who is from Shimla complains of frequent bouts of illness caused by the toxic foam. For Keel who is from Pasha, there are hardly any other employment options. Another pathetic part is dirty and damaged marshal jackets were provided to them. The boy was depressed because he lost his class topper spot. Friends, one must always remember that not all days are the same. No individual can give their best performance 24 x7 x365. Not just in your profession but also in your relationships, there can be low moments. Observe the performance of our sportspersons, and get the secret to success and happiness. Be it Viral Kohl or Sauna Newhall, no one can consistently perform their best. A streak of bad performance must never be a reason for disappointment. Never be sorry if you face a low day. Do not consider occasional non-productiveness as a setback. Rather sit back and introspect. Feeling dejected or not being able to give your best is a part of everyone routine. Human life is like the ECG report of your heart it goes up and down both simultaneously. One would worry when it does go down because a straight line would mean you are dead!! Hence when you are on your low vibes, you must plan to re-energies yourself. A day full of downward trends must be considered an indication to refuel your mind-body energy. Rest assured, an opportunity to grow further, lies ahead. It is always wise to measure our productivity over a long-term range. This helps us shield ourselves from the frustration arising out of routine failures. Never rate or judge yourself based on your current day performance. We must learn a lesson from the stock market traders. They know perfectly well that not all days could be their best return days. These people are always mentally prepared to accept a loss or a no-return day. They believe in their chances to bounce back **and** create wonders. Once, I went to a friend, Ladd Pinto. He was an expert in making. Usually, he was a very jolly man. However, that day I could find him to be very serious. I asked him the reason behind this behavior. I checked. Are you sad? He replied, **No** way, but these are bad days for my profession. I am using this opportunity to draft a new business proposal. You will be happy to know we are inaugurating a new venture soon. This short interaction was highly enlightening for me. A lesson learned: Whatever the result, however high or low might be the fruitfulness of the day, you must keep working with your own pace of enthusiasm. Remember, tomorrow will be a better day. Postscript: The ideas shared in this column are inspired by the wisdom I received from my mentor, an 86 years young Sheri Krishnamachari Varadachari **from** Bangalore.

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26159

With an apology for appropriating the most famous opening lines from a different classic It was the best of times. It was the worst of times. Oh, what a ride it has been. Historically low interest rates globally spurring a flight to equities that previously only preceded recessions. Home bound idle investors binging on stimulus checks, fueling a stampeding bull run with unprecedented retail participation. New instruments that few have been bearish on and fewer still have understood. And as if this were enough, a major conflict in a European nation, supply chain disruptions, energy prices shocks and global uncertainty just as inflation hits record highs, forcing central banks to start raising rates and reining in the free money. The music has stopped. If I told you a decade ago that an image of a Jack Dorsey tweet was converted to a non fungible token, sold for $2.9mn, auctioned on Open Sea for a reserve price of $48mn and received a top bid of $7, you had dismiss this as gibberish and me as drunk, delusional or both. Today, it is an apt summary of the craziness that ensued, and the mayhem that may follow. The bust bugle has sounded before when Softbank faced issues, or later when Covid kicked in, there was a fear of tech valuation corrections. Instead, the realization that the billion souls cooped indoors for extended lockdowns would binge on tech games, e commerce, home delivery, OTT and more led to a spectacular tech rally. Zoom became the darling of the era, for users and investors alike. Crypto popped like no asset has since Tulips in 17th century Amsterdam. And unicorns today are fast becoming as ubiquitous as the cattle on our roads. But unicorn balloons have begun popping, and will continue to pop for a while. Astronomical ratios are coming undone in the light of public market scrutiny, and the contagion is spreading to private markets. Late stage private capital which became the norm around the middle of the last decade with rising Series letter sizes, check sizes and valuations is growing scarce as **the** Tigers and Softbank of the world re assess their private valuations. The Indian startup ecosystem is bracing itself for a year, at least, of drought in funding with valuations dearer than anyone has seen for nearly a decade. A lot of our VC capital has produced returns that in **public** markets might have been classified as beta a rising tide lifting all boats. Very few have delivered pure alpha, where portfolio companies massively outperform their peers, and deliver an actual exit that can be returned to LPs, with fewer still generating free cash flows FCF of any note. In an environment where you could make a large return simply through a second Aries sale to Tiger Softbank, that was okay, but as corrections kick in, FCF is back in vogue, particularly as the pandemic fueled tech high wears off. Zoom has lost market cap, while IBM has been steady **we.**

# RKC NAWADA TYPING TEST RESULT

**Software Link: https://rkcnawada.online/best-typing-software-rkc.php**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26160

Will doubtless see more of this on Indian shores as well, where the most touted tech IPOs have taken a battering. This battering has repercussion not just for the companies that got them, but for those who were hoping to list soon. And for their investors, who will experience an even greater pressure to deliver real returns. This pressure could be good it could bring valuations back in check, and it could reorient investee companies to focus on their business model with rigor. It could force investors to look at companies that build deep moats in deep tech that can provide sustained, long term income and returns. Scale matters, but revenue matters more, and if one is optimistic, one could wager the current shock will serve as a major correction towards the latter. But it could also fuel a flight to safety, where VCs double down on more of the same, betting on even more of the kinds of companies umber of x, marketplace of y that we frankly are choking on in India. Every TAM total addressable market analysis that seeks to divvy up the consumer wallet fails to account for every other VC funded juggernaut that is going after that same, limited pie, and that will fail to convert attention to dollar. This is the Gatsby Epoch the gala that enthralled participants and onlookers alike, is running out of bubbly, and it remains to be seen how VCs react. Will they roll up their sleeves, get creative with who they back and what they demand of them, or will they tap another source of easy capital to drum up promises that are always just over the horizon, to create more unicorns that, on closer inspection, turn out to be rainbow colored horned rhinoceroses. I guess we will know in a year or so. The Covid 19 pandemic in India has brought entirety of resources together from various sectors. The medical, financial, and technological infrastructure have contributed together to fight against the spread of coronavirus and assure the treatment of patients at all levels. With all the efforts, **India** has achieved a phenomenal recovery rate with the successful vaccine drive. According to the recent data shared by Ministry of Health and Family Welfare India, 1,92,97,74,973 vaccine doses have been administered as of 30th May 2022. Simultaneously, the number of survivors has also increased. However, the new concern now **has** been that long Covid is emerging in the country and worldwide. People may have recovered from the disease but are still experiencing some post Covid syndrome also known as the long Covid condition. Talking about the threat posed by the recent variants, the fast spreading Omicron variant, and its sub variants BA.4 and BA.5 are less dangerous than its predecessor Delta. Several laboratory studies offer a tantalizing explanation for the difference that Omicron does not infect cells deep in the lungs as Delta variant. Hence, it is a sign that the lungs are where the coronavirus delta variant does **much.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26163

Of its damage, forcing inflammatory immune response leading to tissue damage and oxygen deprivation that further caused deaths or if not death, then long Covid. The most common symptoms that people have been experiencing are tiredness or fatigue, difficulty in breathing, cough, difficulty in concentrating, headache, anxiety, joint or muscle pain and many more. The reason why Omicron could not do much damage as other variants is because the number of people who have gained immune protection against Covid 19 through vaccination have contributed to the concept of herd immunity. This makes it difficult for Omicron variant to inherently cause severe condition than earlier variants. Currently, in India, we have booster shots for Coaxing, Covishield & Sputnik. The Coaxing booster dose capability to neutralize the coronavirus highly contagious Omicron and Delta variants showed promising results in its booster dose trials with more than 90% of all individuals boosted with Coaxing. For Covishield, positive results were observed from a preliminary analysis of an ongoing safety and immunogenicity trial. It showed that Vaxzevria Covidshield in India , when given as a third dose booster, increased the immune response to Beta, Delta, Alpha and Gamma SARS CoV 2 variants. A separate analysis of samples from the trial showed increased antibody response to the Omicron variant. A unique comparative study conducted at the Italian Spallanzani Institute with Italian Russian team of researchers shows that the Sputnik V coronavirus vaccine demonstrates higher virus neutralizing antibodies to Omicron B.1.1.529 variant than 2 doses of Pfizer vaccine. Sputnik V develops a wider pool of antibodies to different epitopes which utilizes the spike protein in a proline stabilized form directed mainly to the specific epitopes, which were highly affected by the mutations in the Omicron variant. Sputnik V has been authorized in 71 countries with a total population of over 4 billion people. As labs and scientists still conduct tests for mixing and matching over the country, we hope we have enough ways to protect ourselves before a new wave hits. Everyone should always adhere to COVID 19 safety regulations. Promoting vaccination drives within communities will help **us** create a better herd immunity. While this pandemic looks far from over, we need to make sure that we stay safe and keep others safe as well. Whenever you work on the computer, it is necessary to have your computer with you and after working, you save your file **and** store it in the hard disk. Now think that you are home and something has to be changed or added to the same file. How will you had it Because if you had not have your computer in which that file is, how will it work There is only one solution, that is cloud computing. Cloud means that all your work can be done on the internet. If you have to edit the document then your document will be on the internet and it can be downloaded from anywhere. You can work only by connecting to the internet. Definition **Just.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26164

Like you need to have related software installed in your computer to do any work, software is installed in cloud computing and you can do your work from any web browser. Not only that, in cloud computing you can also work from mobile because it requires only a web browser. As I try to explain by taking an example, you must have an e mail ID, that too is a part of cloud computing because many things are stored on your email like someone sends a photo or sends a file. It remains on email, you just have to open any web browser whether it is computer or mobile and after that you can use it. In the same way, there is web hosting in which if people make their own server and run the website, then it will cost a lot and it will not run properly, but using cloud computing, the website remains operational for 24 hours. Advantages of Cloud Computing The advantage of this is that you can do more work at less cost. Secondly, you get more speed because all these software or files live in the cloud and on a good server, it is fast. The biggest advantage of cloud computing is that you can increase the resources according to your work and use, so that you pay money for only what you use. Cloud computing provides advanced computing resources available on demand, that scale as needed, with regular updates and without the need to buy and maintain an on premise infrastructure. Speculations in stock markets are not new. Many speculate where markets will go in the future and base their investment decisions on it. If you can speculate correctly, options trading can turn out to be quite rewarding. So, what is it and its various aspects Let find out. Understanding Options trading involves options. Options are tradable contracts that allow you to trade in instruments at a pre decided rate in the future. However, it does necessitate you actually to buy the instrument in question. To put it otherwise, in an option, the **seller** gives you the right to buy or sell an asset at a specific price in the future in lieu of a payment called premium. Key terms related to Options Trading Before going ahead, let us understand a few key terms related to Options Trading. Strike Price Strike price is **the** predetermined price mentioned in the option contract. It is also known as the exercise price. Expiry Date Expiry date is the date specified in the contract until which it is valid. Call Option Call option gives you the right but not obligation to buy an asset at the strike price. Put Option Put option gives you the right but not obligation to sell an asset at the strike price. Understanding Options Trading with an example Suppose the share of a company is trading at Rest. 600 per share, and you feel that its price will go up in the **future.**

350th: "seller" | 400th: "the" | 500th: "future."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26165

You can monetize your prediction through options trading. You enter into an options contract with the seller specifying the strike price say Rest. 650, and the expiry date. The options contract gives you the right to buy the stock from the seller anytime at the strike price before the expiry date. Now suppose the price of the stock has gone up to Rest. 750, you can immediately exercise your options contract, buy the share from the seller at Rest. 650 and sell it in the market at Rest. 750. You will make a profit of Rest. 100 per share. However, if the stock price remains constant or falls, your loss will be equal to the upfront premium paid. Thus, with options, your loss has an upper limit which is the premium paid up front. However, your profits have no upper limit. In other words, the potential is unlimited. Options Trading How to do it Now that you have an idea of options trading, let us understand how you can do it. To involve in it Open a trading account If you hadron have a trading account, open one with a broker. However, if you have an existing equity trading account, you hadron need to open a separate account. To trade in Futures & Options, you might need to submit some additional documents such as income proof, tax returns, etc. You can get information about the additional documents from your broker. Once submitted, the broker will activate the Futures & Options F&O trading facility. Pick Options to buy or sell Once the F&O option is enabled, you need to pick the options to buy or sell. As said, the call option gives you the right to buy a stock at the strike price, while the put option gives you the right to sell stocks. Predict the strike price The next step involves predicting the strike price. For example, if you feel that a company share trading at Rest. 150 will go up to Rest. 200 in the future buy a call option with a strike price of less than Rest. **200.** However, if you feel that the price will dip to Rest. 100, buy a put option of the strike price of above Rest. 100. Determine the expiry date Monthly options contract expires on the last Thursday of the month. On the other hand, weekly options contract expires on the **last** Thursday of the week. If Thursday is a trading holiday, then Wednesday is considered to be the expiry date. A long expiry date gives a stock more time to move up, and hence you must determine the expiry date correctly. Advantages of Options Trading No obligation to execute a trade Options trading requires you to set a strike price and an expiry date based on your speculation of where a stock price is heading. You get the desired flexibility to see how things are working during that period and if things don go as you have thought, there is **no.**

350th: "200." | 400th: "last" | 500th: "no."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26166

In the Mahabharata, Arjuna felt intense anxiety before the battle, and Yudhishthira sank into depression after winning because of the losses he endured. Siddhartha, son of a king who later became the Buddha, left home to seek answers to his emotional struggles. Similarly, Lord Rama also needed the guidance of sages when he seemed to lose his zest for life. If such gods and heroic figures dealt with emotional struggles, it only natural for regular people to face them too. Emotional well-being and moral dilemmas become more noticeable when societies become more prosperous, as prosperity leads to more choices and tougher decision-making. For millennials, however, mental health is a tricky issue. They are caught between two generations with very different views on emotional well-being. On one hand, the older generation may see talking about mental health as a sign of weakness, while the Gen Z gives paramount importance to mental health issues. The older generation in India grew up focused primarily on financial security in an economy with few career options. Their lives were driven by the need for stability, and they did dwell on mental health issues. Their strong sense of purpose came from ensuring financial safety for their family, and since they had limited choices, they also developed resilience. Terms like anxiety and depression were even part of the conversation. They simply did have the time or headspace to focus on emotional well-being. In contrast, Generation Z places a high value on mental health. For them, it a priority in every aspect of life—from their homes to their workplaces to their relationships. They expect their feelings to be validated and even get days off from work for emotional well-being. Millennials are at a crossroads. The younger generation does listen to them and the older generation does approve of them. Their struggles are just as real as the financial hardships faced by the previous generation. While their parents may have lived paycheck to paycheck, financially; millennials are living weekend to weekend, emotionally. They barely have enough emotional reserves to get through the week and often look forward to **the** weekend to recharge. The gap in understanding between the two generations makes things even harder. Millennials constantly question themselves: Are they being true to themselves, or are they avoiding their responsibilities? They fear disappointing their parents. Millennials grew up with a lot of attention, with parents catering to their **needs** and emotions. They turned out to be emotionally more sensitive than the previous generation. As the economy diversified, they were offered career choices and enjoyed financial safety thanks to their parents. The society also opened up especially in cities, allowing them more freedom in choosing their partners. Consequently, their values revolve around finding a balance between wearing the traditional hat, doing what is expected of them and living a meaningful life and pursuing what they love. Every generation holds firm beliefs in its own value system, shaped by the unique experiences that define their lives. The question is about **which** values are superior. However, this generational friction does affect mental health, especially for millennials. While millennials are aware of the importance of mental health, they often struggle to express these concerns openly, particularly in front of older generations. They worry about being perceived as weak or overly sensit

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-27-TEST NO.-26167

NDCs are essential in addressing the challenges posed by climate change. It is a widely accepted notion that the totality of these efforts carries significant weight in determining the future of our planet's climate. Consequently, the declaration of an NDC transcends a mere formality or expression of intent; it represents a strategic framework for the country's approach to economic growth and environmental stewardship. This announcement not only outlines specific targets for reducing greenhouse gas emissions but also serves as a roadmap that influences the development of policies and initiatives aimed at sustainable growth. In this way, the NDC sets the course for a nation's efforts in balancing economic aspirations with the urgent necessity of protecting our environment for future generations. India has announced its third National Determined Contribution for (2031-35) as an understanding for the Paris Climate Change Agreement 2016 submitted to United Nations Framework of Climate Change). Article 4 and paragraph 9 of the agreement provide that each party shall communicate the nationally determined contributions and that they do so every five years. India submitted it for the first time in October 2015 for the period of 2030. The current Nationally Determined Contribution that India has presented is an extension and updated version of its previously submitted to the United Nations Framework Convention on Climate Change. Over the years, India has encountered various programming challenges; however, it has consistently demonstrated impressive progress in meeting and exceeding its climate goals. For example, India's original targets included achieving a 33-35% reduction in emissions intensity by 2030 and increasing the share of non-fossil fuel power capacity to 40%(Emissions intensity measures the amount of Green House Gas released per unit of activity or output). Remarkably, these targets were not only met ahead of schedule but are also expected to be surpassed, showcasing India's commitment to sustainable development. In addition to these achievements, India has made significant strides in enhancing its forest cover and increasing the number of trees. As reported through India's status of Forest Report 2023, the country's Forest and Tree cover now spans 827,357 square kilometres, covering 25. 17% of **the** nation's total land area. This includes 715,343 square kilometres (21. 76%) of forest cover and 112,014 square kilometers (3. 41%) of tree cover. This effort has contributed to creating a substantial carbon sink estimated to absorb between 2. 5 and 3 billion tonnes of $CO_2$. Such initiatives play a **critical** role in both climate change adaptation and mitigation, highlighting India's proactive approach to environmental sustainability and its dedication to combating climate change. Overall, the accomplishments achieved by India in recent years emphasise the nation's commitment to pursuing sustainable economic growth while being environmentally responsible. However, it is essential to address important questions regarding climate change targets, which involve not only the attainment of these targets but also the crucial objective of limiting global temperature rise to 1. 5 degrees Celsius above the pre-industrial levels. The Paris Agreement, which aims to unite global efforts in combating climate change, does not **specify** what baseline should be used for measuring this temperature target. In contrast, the Intergovernmental Panel on Climate Chan

leads to a rise in emission intensity. As industries scale up operations and new sectors develop, the absolute volume of greenhouse gas emissions is likely to increase, even if India achieves its Nationally Determined Contributions (NDC) targets. Thus, while India strives to meet its climate commitments, the ongoing economic growth creates challenges in controlling emissions. It emphasises the need for the country to explore innovative ways to decouple economic growth from carbon emissions, ensuring that development does not compromise its ecological obligations. While observing the government's past interventions to mitigate the challenge of climate change in the last two years. Various plans and policies have been implemented at national and regional levels to combat the pressing issue of climate change. Among the key initiatives is the National Action Plan on Climate Change, which was launched in 2008. This plan outlines eight national missions aimed at promoting sustainable development while addressing the challenges posed by climate change. One of the prominent missions stemming from the NAPCC is the National Solar Mission, which was initiated in 2010 and underwent revisions in 2015. This mission sets ambitious targets for expanding solar energy's contribution to India's overall energy mix, promoting the transition to clean energy sources. Another significant initiative is the National Green Hydrogen Mission, introduced in 2023, which aims to position India as a leader in the production and utilisation of green hydrogen, a critical component of future sustainable energy systems. Additionally, the Scheme, launched in 2015, focuses on enhancing domestic lighting through the distribution of energy-efficient bulbs, significantly reducing electricity consumption and greenhouse gas emissions. The Energy Conservation Amendment Act of 2022 further supports these efforts by establishing a regulatory framework for energy conservation and promoting energy-efficient practices across various sectors. The E-Drive Scheme (formerly known as Faster Adoption and Manufacturing of Hybrid and Electric Vehicles) is another crucial initiative aimed at accelerating the adoption of electric vehicles. This scheme promotes the development and manufacture of hybrid and electric vehicles, contributing to the reduction of air pollution and dependence on fossil fuels. Moreover, the Green India Mission (GIM) focuses on enhancing **ecosystem** services and restoring degraded landscapes, while the Mangrove Initiative for Shoreline Habitats & Tangible Incomes, launched in 2023, targets the restoration of mangroves to protect coastlines and ensure the livelihoods of coastal communities. Despite these comprehensive efforts at the domestic level, the challenge of climate change is becoming increasingly **daunting.** This situation arises not only from internal factors but also external influences that shape the efficacy of climate change targets. One of the primary challenges is facilitating technology transfer, which is essential for deploying climate-friendly interventions effectively, such as solar energy technologies. Additionally, the production of green hydrogen necessitates substantial financial investments and subsidies at the implementation level to be viable. Furthermore, the full transition from coal-based power generation to alternative energy sources, such as natural gas or renewables, remains a significant hurdle. The current reliance on coal continues to create

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-28-TEST NO.-26171

Movies like 3 Idiots and Tamasha, and web series such as Kota Factory, illustrate this conflict. In Tamasha, Ranbir Kapoor character struggles between his own desires and his father expectations. In 3 Idiots, R. Madhavan character wants to follow his passion for wildlife photography instead of becoming an engineer. Kota Factory shows the pressures faced by young students preparing for engineering exams under harsh conditions. The fact that millennials have more choices regarding education, career, and relationships is both a blessing and a curse. In the past, there were fewer options, so there was little to regret or reflect on. Today, with so many options at every stage of life, the millennials tend to over-analyse everything. They constantly wonder if they are making the right decisions. Should they make their families happy or take an unconventional path? Fear of missing out (FOMO) on the best college, job, or partner adds to their anxiety. The previous generation had fewer choices in the most important areas of life, making their path more linear and leaving them little time for second-guessing. It crucial that we recognize the importance of mental health in today world. While the stigma surrounding mental health still exists, especially among older generations, Gen Z are more likely to seek help and advocate for mental well-being. Millennials are slowly becoming comfortable talking about it. Addressing mental health is about shirking responsibility. In an ideal world, everyone would be brave, hardworking, and committed to their goals. But each generation is shaped by its unique circumstances. We can change reality by denying it. Mental health can be dismissed merely as a first world problem. Discussions about mental health, whether in the family or workplace, must happen. The older generation has much to offer millennials and Gen Z, but that exchange can only happen when they see the younger generations for who they really are. They were able to instill in them the belief that Partition was the only workable solution to deal with communal tensions they had encouraged, regardless of the carnage that was bound to follow. We cannot set back **the** clock, but surely, we can ask ourselves a very simple question- do our present set of leaders give us any reason to believe they are any different from the earlier ones? Are they being manipulated, by forces we may be unaware of, to act in total disregard for our **national** interest? It happened in 1948, when Prime Minister Nehru approached the United Nations just when the tables had turned in our favor and we were in the position to liberate those areas of Jammu and Kashmir that had fallen to the Pakistan Army and the Raiders. Success then would have nipped the British experiment in the bud, thus given Nehru proximity to the Mountbatten, our national interest suffered and we continue to face Pakistan depredations there even to this day. Events leading up to the Sino-Indian Conflict 1962, suggest the same. Who advised Nehru to recognise Chinese sovereignty over **Tibet** post haste after the Dalai Lama had accepted the Agreement of 1953 between his representatives and Beijing? Why did we de-recognise that sovereignty after the Dalai Lama repudiated the Agreement in 1959, given all our troubles with China? One fails to understand the motivation of the Prime Minister to thump the table, when Field Marshal (then General) Cariappa raised the issue of deploying forces along the McMahon Line and state It i

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-28-TEST NO.-26172

Need to secure our food and planet for generations to come! The task of feeding all is indeed daunting. India is also no exception though our farmers have ensured that our granaries are abundant year after year even in extreme circumstances. Much advancement in the public and private sector have also helped our farmers to adopt best and diversified farm practices! However, the quantum and pace of efforts need to be revisited as the challenge of food security has acquired a new dimension in view of Covid 19 pandemic and challenges posed by climate change. The United Nations estimates that the pandemic plunged 77 million more people into extreme poverty last year and many developing countries can recover because of the crippling cost of debt repayments and that was before the added impact of the war in Ukraine. The food security and nutritional status of the most vulnerable population groups is likely to deteriorate further due to the health and socio economic impacts of Covid 19 pandemic, according to the State of Food Security and Nutrition in the World 2021 report. High costs and low affordability also mean billions will not be able to eat healthy or nutritious food. The continuous environmental degradation also does not augur well for the agro food systems, creating a likelihood of severe recurring food crises. The writing on the wall is clear that agro food systems which are environmentally sustainable is the only way out. Learning from past mistakes is definitely important, but it is also equally important to adopt a collaborative approach among stakeholders to reduce uncertainty and allow producers, consumers, traders and processors to make informed decisions, which not only have the least environmental impact but are also remunerative for the multitude of small farmers in the country. No doubt prevention costs less but solidarity is not a charity anymore, rather it is a collective responsibility. An ever growing population estimated at around 8.5 billion in 2030, 9.7 billion in 2050, and 10.9 billion in 2100 will be driven largely by increasing numbers of people surviving to reproductive age, increased fertility **rates,** urbanization and accelerated migration having far reaching implications for generations to come. One does need a crystal ball to see where we are headed with the pressure on the earth to feed many billion mouths, threats to biodiversity and imminent climate crisis that leaves no scope for any kind **of** complacency at all. And the most important stakeholder our farmers need to be at the center of all that we do and to encourage them to adopt more sustainable farm practices which start with applying quality seeds, fertilizers, crop protection chemicals at the right time, right dose and the right way. India took the lead towards combating climate woes at the recently held 26th session of the Conference of the Parties COP26 to the United Nations Framework Convention on Climate Change UNFCCC in Glasgow, United Kingdom. India not only articulated and put across the concerns of developing countries but **also.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-28-TEST NO.-26173

He shared a message with me Your best performance can vary every day, and not all days could be the same for you. Thus, this blog took birth. In the dynamic landscape of modern business, characterised by rapid change and technological advancements, digital transformation has emerged as the key driver for change across industries. As organizations increasingly adopt technology-driven processes and automation, the cultivation of a skilled workforce capable of adapting and thriving in this new environment has become imperative. Within this context, human resource specialists play an indispensable role in the development and implementation of comprehensive training and retraining programs that can ensure the sustained competitiveness of employees. The pursuit of reskilling and up skilling can be implemented in various ways, depending on the organization size and objectives. Foreseeing Future Skills To craft a successful development and retraining plan, the initial step entails the identification of crucial skills required in the future. HR professionals must engage in close collaboration with business leaders, subject matter experts, and stakeholders to comprehend the evolving demands of the organization and the broader industry. Such an evaluation should encompass not only technical proficiencies like data analytics, artificial intelligence, and cyber security, but also soft skills such as critical thinking, creativity, and adaptability. Cultivating a Culture of Continuous Learning The cultivation of a culture that embraces lifelong learning is paramount to enhancing skills and ensuring the effectiveness of up skilling and reskilling initiatives. HR professionals must actively foster a growth mindset within the workplace, accentuating the intrinsic value of acquiring new skills and knowledge. This can be achieved through various means, such as promoting internal mobility, facilitating employee-led learning endeavors, and fostering a safe environment that encourages learning from failures. Such a culture of learning, when instilled systematically, can bolster employee engagement, retention, and resilience. Tailored Development Strategies Personalisation is the key. Each employee possesses a unique skill set, limitations, and professional aspirations. Having a clear understanding of these key areas becomes crucial to tailor productive development strategies. Aligning the strategies with both the organization objectives and the employee career goals will enhance employee **engagement** and motivation, resulting in more effective outcomes. Regular evaluations and feedback sessions further ensure these strategies remain adaptable for continuous improvement. Harnessing Technology and Digital Learning Platforms The digital revolution has bestowed HR professionals with access to a plethora of tools and platforms that support up skilling and retraining. **Through** mediums like digital learning platforms, online courses, and virtual simulations, customizable and accessible employee training opportunities can be provided. HR professionals should leverage these resources to create interactive learning experiences that cater to diverse learning needs. Additionally, technologies like augmented reality and virtual reality can be harnessed to create immersive learning environments. Fostering Collaborative Partnerships Collaborative relationships with external organizations and educational institutions can be highly lucrative. These partnerships can manifest in t

Leading to the gigantic problem of mental stress. This is a common phenomenon these days. The troubled residents are less aware of the related laws, and their rights and therefore are not able to do much about it except talk to a neighborhood residents association or a social worker, without any results. Most even don know that sound pollution comes within the definition of air pollution under Indian laws and that there are appropriate provisions in the law to deal with such a problem. Historically it used to be only the loudspeakers at marriage, and religious or political events used to be the main villain. These days even the construction sites on every residential corner are a headache for the entire neighborhood for several years. It is not out of place to state here that the Indian laws, the enforcement agencies, the society at large, the religious communities, the business communities, everything, and everybody have failed to sensibly deal with the simple subject of sound pollution which has attained alarming proportions and dimensions across India. The gross immaturity and lack of sense of social, community and environmental responsibility are starkly evident from the above. Urban green spaces, forests and the climate change It has become evident that it is difficult to awaken humans who appear to be in deep sleep when it comes to the Forests and urban green spaces. Urban green spaces are being destroyed at an alarming rate with brutality. There is a general lack of awareness about the laws protecting the trees in urban spaces and complete insensitivity on behalf of the local bodies at the metro level towards the subject. Green spaces in urban areas are being rampantly snatched away for construction activity. The development plans of municipal corporations and other local bodies are tailor made, the rules twisted to suit the interests of the construction industry. Forest and wildlife are also at receiving end An increase in air pollution and rampant deforestation for commercial purposes has led to tremendous climate change including reduced rainfall which in turn has led to cities like Pune, Indore, **Gurugram,** Gwalior, Prayagraj etc. witnessing historic high temperatures in 2022. Delhi which had witnessed the highest ever temperature of 46.5 in 1941, witnessed a record high temperature of 49 Degrees in 2022 speaks a lot about the environmental crisis we are witnessing. Hope this rings some alarm bells in the **power** circles and a new National Green Revolution campaign is launched which is made one of the top 3 national agendas for decades to come. Challenges of implementation Although India has a plethora of laws related to the protection of environmental subjects, these wide numbers of laws have been ineffective in curbing pollution. The gaps, especially in implementation, are existent and visible to the naked eyes. There is a lack of progressiveness from the legislature and existing environmental protection laws are quickly getting outdated with the advent of new and more dangerous acts of humans. Equally pathetic are the efforts **to.**

Program and access specialized resources that may not be available internally. A continuous Evaluation and Adaptation Sustaining skill development initiative necessitates their ongoing implementation, which in turn demands constant evaluation and modification. HR professionals must regularly assess the effectiveness of training initiatives, seek employee feedback, and analyze how newly acquired skills translate into business outcomes. This iterative approach enables organizations to identify areas for improvement, modify training strategies, and align improvement initiatives with emerging market trends. In the digital transformation age, HR professional role remains pivotal to organizational success. By establishing robust training and retraining initiatives, HR departments can empower employees with the necessary skills to navigate the evolving digital landscape. The tactics elucidated above serve to cultivate a culture of learning within organizations, enabling them to harness technology, innovate, and maintain a competitive advantage in the digital age. Yashoda Mendadkar lives in GP Vashi Haveli of Tala block, and volunteers as a wades Mitra a primary health worker for her village. Yashoda is thrilled to recount how she has had the privilege to ensure three young pregnant women in her village had safe, on-time deliveries in July 2022, right in the middle of the rainy season. She steadily supported the young women from the time of their ANC check-ups, through the 9 months until the delivery. She took the initiative to call 108, for each of them, escorted and stayed with them at the hospital until they safely delivered healthy babies in Mhasla RH. She made arrangements for ambulances for the travel back home for the mothers and the infants post-delivery. One of the new mothers says, We could have been able to arrange all of it so quickly. Thanks to Yashoda-tai, things happened so smoothly. I could have been happier! However, not all women are as fortunate as these 3 young women. Rural India still struggles with health care, especially for women. Multiple factors contribute to the issue low literacy, poverty, poor nutrition, lack of awareness, and limited access to quality healthcare services. Though there has been an improvement in several women health related indicators between National **Health** Family Survey 4 & 5, including ANC check-up in the first trimester, institutional deliveries etc., some indicators such as use of family planning methods, iron folic acid consumption for expectant mothers, cancer screening etc. continue to be areas of concern. These gaps can broadly be addressed by focusing on **Access** and Awareness in the following ways. Last mile delivery The presence of a robust three tier public healthcare infrastructure notwithstanding, the vastness of the Indian rural landscape makes the 30 minutes time to care norm difficult to meet. This is where the NRHM ASHA Programmer Accredited Social Health Activist has been rightly lauded for effectively identifying and training a network of local female frontline workers, whom The World Health Organization has deservedly honoured as Global Health Leaders. However, there are currently 10.4 lakh ASHA workers serving rural India a number grossly disproportionate to the population of our villages the **need.**

Leading to the gigantic problem of mental stress. This is a common phenomenon these days. The troubled residents are less aware of the related laws, and their rights and therefore are not able to do much about it except talk to a neighborhood residents association or a social worker, without any results. Most even don know that sound pollution comes within the definition of air pollution under Indian laws and that there are appropriate provisions in the law to deal with such a problem. Historically it used to be only the loudspeakers at marriage, and religious or political events used to be the main villain. These days even the construction sites on every residential corner are a headache for the entire neighborhood for several years. It is not out of place to state here that the Indian laws, the enforcement agencies, the society at large, the religious communities, the business communities, everything, and everybody have failed to sensibly deal with the simple subject of sound pollution which has attained alarming proportions and dimensions across India. The gross immaturity and lack of sense of social, community and environmental responsibility are starkly evident from the above. Urban green spaces, forests and the climate change It has become evident that it is difficult to awaken humans who appear to be in deep sleep when it comes to the Forests and urban green spaces. Urban green spaces are being destroyed at an alarming rate with brutality. There is a general lack of awareness about the laws protecting the trees in urban spaces and complete insensitivity on behalf of the local bodies at the metro level towards the subject. Green spaces in urban areas are being rampantly snatched away for construction activity. The development plans of municipal corporations and other local bodies are tailor made, the rules twisted to suit the interests of the construction industry. Forest and wildlife are also at receiving end An increase in air pollution and rampant deforestation for commercial purposes has led to tremendous climate change including reduced rainfall which in turn has led to cities like Pune, Indore, **Gurugram,** Gwalior, Prayagraj etc. witnessing historic high temperatures in 2022. Offered five nectar elements of its climate action. These included reaching 500GW non fossil energy capacity tapping 50 per cent of its energy requirements from renewable energy reduction of total projected carbon emissions by one billion tones from present levels reduction of the carbon intensity of the economy by 45 per cent by 2030, over 2005 levels, and achieving the target of net zero emissions by 2070. Our agriculture is already facing the brunt of climate change, extreme weather patterns, unprecedented flooding, drought and new complex pests and diseases. Innovation, integrity, responsibility and collaboration have been the cornerstone of our multifaceted pursuits. There is an urgent need to adopt sustainable practices. We must provide farmers with modern tools and equip them with know how so that smallholding farmers carry out agro practices responsibly that protects our environment. We must walk the talk about seed treatments, biological products that protect crops from pests without harming the environment, bio stimulants that enhance plant health and digital interventions that ensure that seeds are sown at the right moment and inputs are applied in the minimum necessary quantity. Climate smart practices will help farmers mitigate and adapt to climate change by a growing more from less through input optimization b reducing soil based carbon emissions through conservation agriculture and c building crop resilience through the right technology use. We must continue to make ambitious new global commitments to reduce agriculture carbon footprint and to help farmers deal with the extreme weather patterns caused by climate change. We must work towards creating an enabling environment to help farmers and society sustainably recover from the ongoing effects of the coronavirus pandemic and possible repercussions of climate change, which is affecting agriculture and environment alike. The triumvirate of technology, service and training will go a long way in helping farming become carbon neutral and reducing the climate footprint of our operations in line with the Paris Climate Agreement. More public private partnerships would be key. Many crusaders of capitalism and development have completely ignored and forgotten the concept of sustainable development. Cities such as Mumbai, Pune, **Bangalore,** and New Delhi, all are growing at a breakneck speed. The greed for benefits from residential and commercial construction in urban, semi urban, and rural areas alike is resulting in the tremendous growth of concrete jungle, contributing to an upsurge in problems such as an increase in temperatures, drastic **reduction** in recharging the sources of groundwater, encroachment on natural river paths, neglect to ponds and lakes, the alarming increase in the volume of domestic and industrial hazardous waste being generated. Air pollution is probably at its all time high in most metros across India. Trees are merely looked upon by the contractor fraternity, the local bodies, and similar entities as a hurdle in their agenda of business and development. Air Pollution Blaring sounds beyond permissible limits and time are often heard from Bars and Restaurants, located within residential zones across India, disturbing public peace, and the calm of common **people,**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-28-TEST NO.-26181

Last week Union home minister Amit Shah said, in these very columns, that for the Modi government national security is not a matter of politics. It is about putting Nation First. Our government cannot compromise with national security and integrity. The Making of New India, May 30, 2022. Yes, national security and integrity cannot be compromised with. Yet the government and BJP do not seem to recognise that religious intolerance and bigotry remain the biggest challenge to India national security and integrity. That it took diplomatic censure from strategically and economically important Gulf countries for BJP to take action against two spokespersons, whose appalling comments on TV and Twitter have been known for days, says everything about how much political discourse has coarsened in this country. That the MEA chose to describe these well known BJP figures as fringe elements adds an element of farce that nonetheless instructive, because it shows the bind GoI finds itself in. You cannot distance yourself from a mess by stretching the truth. And it a mess that did just happen over one fervid news TV debate or one unacceptable tweet. It a mess that been building for some time. Dangerously divisive rhetoric and state police actions and responses that would have been rare even a few years ago have become so frequent as to almost lose their power to shock. Shrill identity politics of all variety is not new in India. What is new is the relentless aggressiveness of the Hindu Right and what has been absent is any critique from central BJP or government leadership, even when some of this aggression turned particularly nasty. That lack of intervention has been the oxygen for right wing rhetorical fire, as well as an implicit green light for various official agencies to lose even the presence of neutrality. Bulldozing houses, slapping sedition charges on history professors and university students, evicting hawkers selling non vegetarian food, creating controversies out of halal meat and names venues, not to mention strange lower court receptions to this mosque is a temple petitions all of these institutional responses have been **encouraging** signs for TV and Twitter right wing loudmouths. Nippur Sharma and Naveen Jindal comments are products of this ecosystem. Therefore, if BJP and its government are serious about course correcting, just actions against these two won suffice. There will have to be firm signals from the top, and firm **and** quick actions if those signals are ignored by overzealous leaders and associated figures. Cynics will point out that pushing this particular envelope is a vote winning strategy and, therefore, BJP won seriously push back. There are two counterpoints. First, BJP electoral successes owe at least as much, if not more, to clever caste politics and very left wing welfare politics. Where caste politics does quite work and a rival is good at welfare messaging, BJP has failed Bengal being an example. Second, if BJP wants to be the party of governance, there a limit to how much rabble rousing **it.**

**350th: "encouraging"** **400th: "and"** **500th: "it."** **Total Words: 500 | Total Keystrokes (with space): 3062**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-28-TEST NO.-26182

Educate the masses about the importance of the environment. We still continue to use plastic and thermocol this speaks a lot about how much we care about our environment. With some glamour and publicity attached to the recycling projects, environment related CSR projects are seen to be doing their bit but still at a very small scale. Effective regulatory institutions, appropriate compliance mechanisms, transparency in formulating laws, and stringent enforcement of such laws are the key needs of the hour. It is a tremendous task, and we don even know how we are going to achieve it! The past Till now, India has witnessed several landmark cases which laid down great principles for the protection of environmental subjects. In The famous Ganga Water Pollution case, the Hon blew Supreme Court of India stated the importance of certain provisions which protect our environment. Article 48 A also made sure that the State will take the right steps to protect and safeguard the wildlife of the country. The Hon blew Supreme Court stated the importance of the Water Prevention and Control of Pollution Act, 1974 which helps maintain water quality. In this historic judgment of 1987, the Court said that Just like an industry which cannot pay minimum wages to its workers should not be allowed to exist, an industry which cannot set up a primary treatment plant should not be allowed to continue its existence. The above and several other landmark cases have upheld the principles of Polluter Pays and Absolute liability on the polluters and infringers of environmental laws. The Indian judiciary has till now attached extreme importance to environmental issues which are very heartening. However, there is an urgent need to completely revamp the umbrella law that is the Environment Protection Act and make the enabling and enforcement provisions sharper. In this context in 2014, the Subramanian Committee set up by the Ministry of Environment submitted its report with key recommendations including enacting a completely new umbrella law for the protection of the environment. The then national government rejected the report and recommendations. Some behind the curtains action **is** currently happening to revamp the laws related to Air, Water and Environment Protection, albeit without much public participation. Fingers crossed! The future and intergenerational responsibility New and unprecedented climate disasters that are unfolding around the world tell us that our existing emergency, disaster, risk and reduction responses are no **longer** enough to tackle the climate crisis. Throughout 2021 22 alone, India and the world have witnessed calamitous floods, extremely high temperatures, reduction in rainfall and change in climate patterns. Article 21 of the Constitution of India and almost all the nations across the globe recognize the Right to Life as a Guaranteed Fundamental Right which includes the Right to enjoyment of pollution free water, air and living environment, for full enjoyment of life. While the State must act swiftly in its actions, as previously discussed, each of us also must understand and accept that we all shoulder a common **intergenerational.**

Plants, 56 retired power plants, and 44 plants that are in development. A few of the recommendations to attain the NDC in more meaningful ways could be as follows: Overall, achieving meaningful progress in combating climate change will require a coordinated approach that combines policy initiatives, international collaboration, and innovative financing solutions. Bhay to Bharosa: 49 years in the making & perhaps Bengal's most consequential election ever Dr Navneet Anand is a communications professional with a rich tapestry of experience spanning 25 years across media, academia, and the corporate sector. A graduate of Hindu College in Delhi University, Anand went on to complete his MA, MPhil and PhD in Sociology (communications) from Jawaharlal Nehru University, he has been a journalist previously with The Times of India, The Indian Express, and The Pioneer. As the founder-director of GreyMatters Communications & Consulting, Navneet has lent his expertise to a myriad of projects, including serving as a Public Communication Expert for a World Bank initiative, International Labour Organization, many Government and private agencies in India. His corporate journey includes a notable tenure as General Manager of Corporate Affairs & Communication at Fortune 500 company, Reliance Industries Limited. Navneet seamlessly integrates his extensive professional background with his rigorous academic training. He is the author of two acclaimed books, including 'The Media Effect' (2003), and regularly contributes to esteemed national and international journals and publications. A distinguished educator, Navneet imparts knowledge on journalism, social media, marketing & strategic communication, and public relations at esteemed institutions such as Indian Institute of Mass Communication, IIMs, IP University, Delhi University and JNU. With a passion for training and development, Navneet has empowered over 2,500 officials from government, police, and PSUs, while delivering over 500 lectures and training sessions. For insights on social and political issues, reach out to him at navneet@thegreymatters. in. The first phase of polling in the West Bengal Assembly elections has recorded a staggering turnout of over 93 percent. Such participation is never incidental. It signals churn. It reflects anxiety, aspiration, and a deep urge to be heard. Some interpret this as a vote **against** the incumbent government led by Mamata Banerjee. Others see it as voters asserting their rights amid fears of losing their voice. The truth lies in a combination of both. But beyond interpretation, one thing is clear. Bengal is in the middle of a decisive moment. For the first time **in** nearly five decades, the political equilibrium of the state faces a serious disruption. After 34 uninterrupted years of Left rule and 15 years of Trinamool Congress dominance, the Bharatiya Janata Party stands on the brink of power. This is not a sudden surge. It is the outcome of a carefully crafted, long-term political strategy led by Amit Shah, with consistent backing and aggressive campaigning by Narendra Modi. The Shah playbook in Bengal has been methodical. The rise has neither been accidental nor overnight. When Amit Shah took charge as BJP president, the party was a minor footnote in Bengal **politics.** In 2016, it won just three of 291 seats on a vote share of 10. 3 percent. Three years later, the 2019 Lok Sabha elections were a turning point; the party jumped to 40. 6 percent of the vote and w

percent with 12 seats. The trajectory is clear, patient, and deliberate. This was not just electoral arithmetic. It was a psychological capture, based on a sharp strategy deployed by Shah. The BJP positioned itself as the only viable alternative, pushing both Congress and the Left to the margins. At the heart of the 2026 campaign lies a sharp narrative contrast. The BJP has framed the election as a choice between bhay and bharosa. Fear versus trust. This directly counters the long-standing Trinamool slogan of ma, manush, mati. The shift is deliberate. It seeks to move the discourse from emotional identity to lived experience. Law and order, corruption, and everyday intimidation have been brought to the centre of the political conversation. The messaging has been blunt. The Prime Minister has repeatedly attacked what he describes as bhrashtachar and bhay. The Home Minister has reinforced this with strong warnings against political violence and entrenched local power networks. This language, unusually direct even by current political standards, appears to be resonating. The BJP's campaign is not limited to rhetoric. It is anchored in a powerful economic argument. Bengal, once among India's most prosperous and industrially vibrant states, has seen a steady decline over decades. The party has sharpened this narrative by focusing on what can be called a sustained anti-enterprise mindset that took root first under the Left and continued, in different form, under the Trinamool. The data backs this claim. From being among the top states in per capita income in the 1960s, Bengal has slipped significantly in rankings. Its share in India's GDP has nearly halved over the decades. Growth rates have lagged behind the national average. Despite its coastline and strategic location, it has failed to emerge as a major industrial hub. One episode has come to symbolise this decline more than any other. The exit of Tata Motors from Singur in 2008. The Nano plant could have marked the beginning of industrial revival. Instead, prolonged protests and political mobilisation forced the project out of the state. The factory moved to Gujarat. The message to investors was unmistakable. The **BJP** has repeatedly invoked Singur as a metaphor for missed opportunity. It has promised a different approach. Industrialisation without coercion. Investment without conflict. Jobs without migration. This pitch is aimed directly at Bengal's youth, many of whom have had to leave the state in search of employment. The political framing **goes** even further. The BJP has drawn parallels between the Trinamool Congress and parties like the Rashtriya Janata Dal in Bihar and the Samajwadi Party in Uttar Pradesh. The comparison is pointed. It suggests a model of governance marked by patronage networks, local strongmen, and what is often described as syndicate raj. By invoking these examples, the BJP is attempting to tap into a broader national memory of governance failures associated with such systems. This is where the election becomes more than a state contest. It turns into a referendum on a style of politics. One that relies on identity **and** control versus one that promises development and opportunity. If the BJP succeeds, the implications will be far-reaching. It would complete a significant political arc in eastern India, adding Bengal to a list of states where it has already expanded its footprint. It would further marginalise the Congress and the Left, both of which have struggled to r

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-29-TEST NO.-26187

Can engender or wink at. Costs can outweigh benefits both domestically and internationally. Cold calculations, if not good sense, should force a BJP rethink. Recent political developments in Karnataka and Tamil Nadu offer insights on the complexities of coalition politics. In TN, C Ponnaiyan, organisation secretary of AIADMK, said that political ally BJP is trying to grow at the expense of his party. Soon after, leaders in both parties tried to paper over the cracks but the cracks will likely show again. In Karnataka, former chief minister HD Kumaraswamy of JD S claimed that he allowed his 14 month coalition government with Congress to crumble in 2019 on account of the mounting frustration in trying to manage the partnership. Durable political coalitions are infrequent in India. Among types of coalitions, ones between national parties and regional outfits are perhaps the hardest to manage. Take the case of the AIADMK and BJP. There a reasonable degree of congruence on key political issues, but that inevitably leads to at least partial overlap in terms of the social coalition they wish to stitch. An ambitious national party trying to expand its footprint will lead to frayed ties. The acrimonious fallout between BJP and Shiv Sena, long standing allies, was partly caused by clashing ambitions. The seemingly unwieldy coalition governments at the Centre between 1998 and 2014 were perhaps an aberration. Successful coalitions are also about partners reining in ambitions, something the Congress JD S in Karnataka did not do. The experience of political parties in these two states provides a sense of the scale of the challenge opposition parties have in trying to create a common platform to take on BJP in 2024 general election. However, if accommodation is hard to realise, Maharashtra provides an example of another kind of trigger to coalesce. The fear of being overrun by a juggernaut is the glue that binds the constituents of the improbable Maha Vikas Aghadi. The system of providing security to select public figures and VIPs is widely misunderstood and public scrutiny of it has been reignited by the tragic killing of the **talented** young singer Sidhu Moose Wala. Earlier, the Punjab government had withdrawn the security cover of 424 persons and this decision was hailed by some for putting an end to the VIP culture, while others accused the government of political gimmicks and endangering the lives of public figures. What appalled **many** onlookers was the leaking of the names of persons whose security was withdrawn to social media, as such decisions are usually kept confidential. How was the system born While the practice of providing a gunman to escort important personalities existed for a long time, specific threats to individuals grew from the multiple forms of ethno nationalist insurgencies, left wing extremism and cross border terrorism, with extensive kidnappings and targeted killings of political leaders, elected representatives, civil servants, police personnel and security forces, apart from non combatant civilians. Thus individual security cover began, in modest scales in the early to **1980.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-29-TEST NO.-26188

There are many commendable things to be said about Ratan Tata. There are also many things he is supposed to have said but has not. The media legacy and social, and whatever else exists in the space in between and beyond has been killing it for decades with catchy quips, each snappier than the other, all supposedly made by Ratan Tata. Except that they were not, On October 9, the day he passed, and the days after, we were treated to several of these quotes on print and on television channels which should have known better. A leading national newspaper had an article on Friday, October 11, by N K Singh reminiscing about the icon and quoting him saying, Leadership is not about being in charge. It is about taking care of those in your charge. Anybody who really knows Ratan Tata would know he was not given to pithy or quotable quotes. This quote belongs to Simon Sinek, an American author. During the Covid-19 pandemic, Tata demonstrated exemplary magnanimity by donating Rs 500 crore to the fight. The pandemic was also witness to a motivational quote about the impact of the virus on the economy. A rather lengthy one that illustratively invoked the bumble bee As per the rules of aerodynamics, the bumble bee cannot fly. But it flies because it does not know the rules of aerodynamics ! Tata had to take to Twitter now X to declare that he was not responsible for this quote or for so many others floating in the cyber bandwidth. This post has neither been said nor written by me. I urge you to verify media circulated on WhatsApp and social platforms. If I have something to say, I will say it on my official channels. Hope you are safe and do take care. It speaks volumes for his popularity in a value-starved world that motivational inspirational and reassuring quotes pop up all the time with his name. And each has been obligingly sent forward by an impressed surfer or thumb-pusher audience. Time and again, Tata has had to take to **social** media to disown a quote and plead with people to verify the information they receive with his picture or his name. Even in their fakeness, these quotes seem to help. One of these viral quotes was responsible for making Mayank Yadav a cricketer. Uncertain of his career choice, Yadav **came** across a Ratan Tata quote, I do believe in taking right decisions; I take decisions, then I make them right. His mind settled with this inspirational statement from India foremost industrialist, Yadav went on to become a bowler with Lucknow Super Giants. Tata called out the mischief on a television interview during which the host asked him to share more about this quote. He, with his mild smile, denied any ownership of the quote, rendering the host red-faced. All the same, it is probably appropriate that a person of his towering stature who gave millions for national causes and **to** charity has been doing good even when he did not intend it. They do not make them like him anymore. of national security, a situation that prevails even to this day. Incidentally, as preposterous as it may sound, Nehru was foolish enough to reject Field Marshal Ayub Khan proposed joint defence pact against the Chinese made in 1959. Surely these examples hardly show national interest being guarded, in fact quite the opposite and cannot have been mere coincidence? The same could be said of the Indo-Pak Wars of 1965 and 1971. What motivated Prime Minister Lal Bahadur Shastri to return back Haji Pir and other territories that we had liberated? Why did we repatriate

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-29-TEST NO.-26189

One is therefore quite cynical of this government sudden interest in playing down Chinese depredations and doing everything we can, other than lying down in supplication, to lure the Chinese, with promises of trade and economic cooperation, in return for a fig leaf of peace that would allow this government to obfuscate and cover up the shame and embarrassment of losing control of sq. kms of territory in Eastern Ladakh. For that matter why are we openly supporting Israel genocidal actions against the Palestinians and Lebanese despite a nuanced policy that was in place for the past few decades? So, whose interest is this government trying to protect, surely not our national interest? From all the information available on the internet, is it really that difficult to surmise Well, this has to be the most thrilling election experience of my life if by thrilling you mean quiet, peaceful, and completely devoid of excitement. Honestly, it felt more like an election for a class representative than a showdown between political titans. I mean, when two supposedly heavyweight candidates can even be bothered to ask for votes, you start wondering if they ve confused constituency with vacation spot. Both parties, in a surprising show of unity, decided not to grace us with their presence. No door-knocking, no speeches, not even a flyer tossed in our general direction. It like they collectively agreed to play hide-and-seek with the voters, and spoiler alert we did find them. So here we are, left twiddling our thumbs, feeling like we ve been stood up for the prom. We could even vent our frustrations at their disappearing acts, nor could we pledge support to anyone who might actually care. Turns out, both parties seemed more interested in ghosting us than representing us. Now, imagine our predicament: all geared up to make an informed decision that would shape the next five years, only to realize the candidates were probably too busy- doing nothing, I guess? Maybe they are saving all their energy for a Netflix binge post-election. On D-day, we decided to don our smartest outfits for **what** we expected would be an epic final showdown. With all the seriousness of a military operation, we huddled up for a last-minute strategy session, deliberating over who deserved the prestigious honor of our vote. Then, feeling pretty good about our decision, we took the safest, most hassle-free route to **the** polling booth because nothing says democracy like avoiding potholes. Upon arrival, we thought we had check in at the volunteer stations for some good old-fashioned last-minute campaigning. You know, the kind where someone passionately reminds you why their candidate is clearly the best choice. But alas! Both stations were a ghost town, save for a few volunteers who, in their infinite enthusiasm, were half-heartedly slouched on mismatched chairs, deeply engrossed in the intense strategy of a game of Ludo on their phones. Now, there we stood, bewildered voters hoping for a final nudge maybe some persuasion, a flyer, a **half-baked** promise anything to make us feel like we mattered. But nope. It was as if both parties had collectively decided, Nah, we all just leave it to luck. And there we were, staring at these digital gladiators, wondering if we were supposed to cast a vote or join in for the next round. Rejected, dejected, and unceremoniously abandoned by both the candidates and their lethargic, smartphone-obsessed volunteers, we made a solemn vow as responsible citizens:

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-29-TEST NO.-26190

Roadmap to self realisation is uncomplicated as it lays emphasis on performing one duties with sincerity and honesty while remembering God as the manifestation of the Mahanaam, divine name. There is no need to renounce worldly ties. One is only required to follow the path of moderation neither abstinence nor over indulgence as one anchors one life to God in the form of Mahanaam. It is the crystallisation of truth as it arises from the depth of each individual consciousness and has a pristine quality like sources of holy rivers. As one performs duties in the reverberating aura of the Mahanaam, the ego is swept away by its overpowering force. In such a state of surrender to a Divine drama that is enacted on the stage of human consciousness, desires, disappointments, sadness, attachments and human bondages, that are all subsets of the human ego, are washed away as one experiences the effects of Satchidanand. According to Dadaji, many of the rituals, rites and ceremonies that have become entrenched in life as part of customary religious practices are ostentatious and have nothing to do with human salvation. They propagate a culture that promotes a few and thrives on the weaknesses of many. To Dadaji, human suffering is directly connected with karma, action and prarabdh, destiny. Such sufferings cannot be diminished through rituals and one has to go through them with fortitude. However, we can insulate ourselves from the pain and anguish through the overpowering effect of Mahanaam on the aham, ego, which is the root cause of suffering. When you do your deeds in the name of God through the Mahanaam, you are automatically absolving yourself of the consequences of such deeds, according to Dadaji. You are so immersed in the Mahanaam that it, in a sense, anaesthetises the effects of joy, sorrow, pain, agony and ecstasy and attributes of pride, vanity, arrogance, despair and depression that stem from them. In that state, you are in the world and yet out of it as an instrument of Divine will and experience the bliss of surrender and Oneness with God as **part** of the larger picture. The path advocated by Dadaji then does not pass through restraint, fasting and austerity of body and mind. Nor does it have its milestones in Guruvad and ashrams in line with the logic that no mortal can be another mortal guru. The prescription is to **follow** your wabhav and be in consonance with your own innate self and let the magic of Mahanaam do the rest. In such a state, Prakriti, synonymous with nature, both of the individual and the universe, is the Maya that is a manifestation of the Divine and we must surrender to its ebb and flow while performing our part in the divine drama with love and attachment to the Mahanaam only. Over the past month the Kashmir Valley has seen a spate of targeted killings of minorities and those seen as government collaborators, the latest victim being a banker from **Rajasthan.**

I am rather struck by Qatar demand for an apology from India on what Nupur Sharma said in a debate. Perhaps Qatar does not watch Indian TV debates where two sides can get quite heated when opinions are expressed. Qatar s one English TV channel is pretty one sided no heated debates there. Even though it can be seen in India, I bet it cannot by Chinese in China. This brings me to my point of the stunning hypocrisy of some Arab States. China is countries that not only abuses Muslims but have taken away their right to pray, to honor the Prophet, or even say Names. It is a well known fact that nearly all Muslim states including Pakistan do business with China and happily consume their products. There have been no Twitter storms on putting millions of Muslims in reeducation camps to take the Islamic teachings out of them, or forcing them to eat pork and drink alcohol. It is even recorded that children are taken away from parents to become good communists. In short, China has blasphemed enough for the two plus billion Muslims to get really angry but not a word is said against it. Bilal Bhutto and Imran Khan can attack one Nippur Sharma and radical preachers can say Off with her head but no Muslim world leader I know of has demanded that China must give its Muslim population human rights and the right to follow Islam or they will stop doing business with it. In fact, China brings down mosques by the hundreds and builds malls, toilets and whatever they want on the sites, yet Qatar stays silent, but lectures India, where a Muslim political leader has openly said that if India would just remove its police force for 15 minutes, Muslims would kill thousands of Hindus. Last I heard he was still free to spew his hatred and try and divide Hindus and Muslims. There have been several hurtful and denigrating things said about Hindu Gods and Goddesses in India and abroad but I don t see Hindus reacting in violent **ways** or anyone having to get Z security because of it. As I write this thousands of people, some who I know off are being protected for life in various countries because of death threats received by radical Islamists, yet I don t see Al Jazeera reporting on it or **even** giving it much attention apart from a one sided view that only talks about Blasphemy against one religion. Is this fair Should not every human being and their faith be treated equally Should not every nation introspect and can they complain against India, the most diverse democracy, with hundreds of thousands of mosques and over 200 million Muslims, in every walk of life, who are very much a part of the fabric of India. As Arid Mohammed Khan, the governor of Kerala said, it is not important to apologies to Qatar. And added that PM Mode and his team **are.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-29-TEST NO.-26192

Vijay Kumar, murdered in broad daylight by a lone pistol packing gunman. To suggest that this has the Central Government worried and under pressure, and rightly so, would be an understatement, especially as the annual Amarnath Yatra is set to commence at the end of the month after a gap of two years thanks to the pandemic. As per the Union Territory Chief Secretary between 6 8 Lakh yatris are expected to make the pilgrimage this year, double the numbers of 2019. Given the numbers, duration and distances involved, their protection has always been a source of concern, which is likely to be further elevated this year, given the change in tactics adopted by the terrorists. As was to be expected mainstream media has already commenced pointing fingers at Pakistan Inter Services Intelligence and the jihadi groups that it supports and finances, for this uptick in violence, especially the targeting of minorities. That has how the Pakistani state has operated over the past three decades and expecting them to behave any differently may be just wishful thinking. This, despite the fact that the ceasefire on the LOC has been holding out as Pakistan finds itself in very difficult circumstances politically and economically. However, the truth of the matter is that this present situation is something that our security establishment, especially the army, have brought upon themselves. All theoretical teachings on the conduct of counter insurgency emphasise the point that insurgencies, unlike terrorism, are purely political movements. They can only be resolved through political solutions aimed at not just destroying the insurgent narrative, but more importantly, meeting the aspirations of the people. The task of the Security Forces is thus clearly cut out, requiring them to dominate and neutralise insurgent forces so that the violence perpetrated by them is reduced to levels that allow civil administration to carry out their routine functions. The incontrovertible fact is that insurgencies fade when they lose support of the people. Studies of the Jammu & Kashmir insurgency will reveal that despite the Security Forces having, on numerous occasions, effectively reduced violence to manageable levels, **the** political establishment has invariably failed in taking the requisite initiative needed to resolve the insurgency and bring it to its logical conclusion. The reason for this is not difficult to ascertain, as whenever politicians find themselves in a position of control, they revert to playing their usual games of **one** upmanship and use further their own private agendas. This invariably adds to rising frustrations among the masses that finds its outlet in another cycle of violence, aided and abetted by Pakistan, that results in loss of lives on all sides. It is therefore ironic that when the Modi dispensation did finally take the political initiative to transform the moribund geo political environment, it was the Security Forces, primarily the Army, that created hurdles, bringing to the fore apprehensions that these measures would result in enhanced levels of violence and put at risk the existing lines of communication necessary for **the.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-29-TEST NO.-26195

As compared to men women are diagnosed with cervical cancer every year, and 60,078 of them die of this disease in the country, followed by breast cancer Global Burden of Disease Stud. These are worrying numbers more so as these are preventable. Digital technology and AI have the potential to bring a much-needed paradigm shift. Non-invasive screening tools for anemia and cancer can be used at community and primary health center level for mass screening. Mobile medical vans improve access to health care by bringing services to the doorstep. While the pandemic demonstrated the resilience of India public healthcare infrastructure, it highlighted existing gaps. Lessons from the recent past can be effectively leveraged to create a robust system, which can empower the women in our villages to live healthy and fulfilling lives. Indian agriculture stands as a pillar of the nation economy, supporting the livelihoods of millions. Reports suggest that, as of 2023, the sector employs almost 42 percent of people in the country. However, it faces formidable challenges that impede its progress and hinder the farmers prosperity. One of the greatest hurdles lies in the extensive harvest and post-harvest phases of India agricultural landscape. This is largely owing to inadequate access to reliable market information, absence of supply and demand forecasting, fragmented supply chains, scarcity of proper storage facilities, and the overwhelming presence of intermediaries who devour the farmers profits. However, solutions are on the horizon. While the lack of equipment and infrastructure undoubtedly hampers progress, we must not underestimate the critical importance of awareness and capacity-building among smallholder farmers. Empowering them with knowledge and training on post-harvest handling and storage techniques will prove pivotal in curbing food losses. Equipping farmers with skills in precise harvest timing, effective crop drying methods, moisture management, and safe storage practices will arm them with the tools needed to mitigate losses and protect their hard-earned yields. How are agriculture companies helping to make it more organized? Agriculture companies have emerged as champions of change, working tirelessly to reshape the landscape and bring organization and efficiency to farming. Their contributions are nothing short **of** transformative, touching the lives of countless farmers and propelling the sector toward a brighter future. Encouraging ownership of resources One of the key ways in which agriculture companies are driving positive change is by actively promoting, financing, and supporting producer-owned and controlled organizations. By empowering farmers to take ownership **of** their enterprises, these companies foster a sense of pride and autonomy among agricultural communities. They provide the necessary resources, guidance, and financial assistance to establish and strengthen these organizations, ensuring that farmers have a collective voice and the power to make informed decisions. This empowerment paves the way for improved bargaining power, fairer prices, and greater control over the entire value chain, resulting in increased farmer profitability. The amalgamation of technology and traditional farming practices Moreover, agriculture companies are at the forefront of a revolutionary shift, guiding the transformation of traditional farming systems into commercial and technology-based sustainable enterprises. **Recognizing.**

The immense potential for growth and profitability, they facilitate adopting modern practices, cutting-edge technologies, and innovative techniques. By integrating technology into farming practices, farmers can access advanced tools and methodologies that enhance productivity, optimize resource utilization, and reduce environmental impact. This transformation empowers farmers to maximize their farm income, expand their market reach, and secure a sustainable future for future generations. Building infrastructure Agriculture companies understand that farmers require more than just financial assistance they need access to knowledge, technology, credit, inputs, marketing channels, and value-addition opportunities. To address these needs, these companies forge strategic partnerships and business models that prioritize collaboration and mutual growth. Bringing together a network of experts, offers farmers valuable insights, training programs, and access to cutting-edge technologies. They facilitate credit and financial services, ensuring farmers have the necessary capital to invest in their operations. Furthermore, they connect farmers with reliable markets, enabling them to showcase their produce, negotiate fair prices, and engage in value addition activities that enhance the profitability of their products. Additionally these companies provide them scientific storage techniques and facilities which at times become the cornerstone for enhancing farmers credit profile as most of the Banks backed by such Collateral management companies extend healthy liability lines to such produce owners. These holistic services help empower farmers, foster sustainability, and create a thriving ecosystem that benefits all stakeholders. What does the future of agriculture look like? The possibilities are awe-inspiring. Despite its contribution to the gross domestic product GDP diminishing slightly, agriculture and allied sectors continue to exert influence, accounting for 20.2 percent of India gross value added GVA in 2020-21. The industry remains a reliable source of livelihood for a staggering 58 percent of the population directly or indirectly, underscoring its crucial role in driving rural development and social upliftment. As we gaze into the crystal ball, we envision a future where agriculture flourishes, armed with enhanced storage and supply-chain facilities. We will no longer witness the distressing spectacle of 20 percent of our fruits and vegetables succumbing to waste due to the inadequacies of our current systems. Instead, a wave **of** change will sweep the nation, ushering in transparent and observable supply chains that minimize food losses and optimize resource utilization. Cold storage facilities will multiply, acting as gateways to preserving the freshness and quality of produce. Public-private collaborations will thrive, fostering a seamless connection between government and private warehouses **and** ensuring the efficient distribution of agricultural output. Through these advancements, the age-old challenge of balancing supply with demand will be met head-on, bringing stability to prices and alleviating the burdens farmers and consumers bear. Bottom-line The future of Indian agriculture is rife with possibilities. It beckons us to forge ahead with determination, embracing innovation, and reimagining possibilities. By collectively addressing the challenges of harvest and post-harvest losses, fostering farmer education and capacity-building, and ad

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-29-TEST NO.-26197

Working towards an inclusive and prosperous India. Our tradition is not tolerance, but respect and acceptance for all traditions. We respect and we accept all traditions as true. India s culture does not consider anybody as others. Arid Mohammed Khan also said, We should pay more attention to what the Prime Minister is repeatedly saying and what the RSS chief is repeatedly saying that we want our tradition of inclusiveness to be strengthened. Nobody is to be excluded. That is our cultural heritage. We need to strengthen that. Perhaps instead of criticising India, the Gulf Nations should learn from India. As for their hypocritical handling of China, I can only add The World is neither blind or deaf. Their silence on China is deafening, and it is certainly not helping the Uighurs, but then it seems their criticism is only for democracies. Autocratic nations love their mirror image, even when it goes against their faith. Army to sustain itself along the this put the Government in a spot as it was then unable to follow through fully on the steps that it had initiated. Is positive thinking an inherent characteristic of a person or can it 69 be developed in one psyche. The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance theory, since **positive** attitude is not a physical feature but a mental faculty, it cannot be purely hereditary. It can be developed. Moreover, parents play a major role in developing this quality of a child. A child, who watches his parents working hard, having faith in success through their words, behavior and **body** language, is likely to develop a similar attitude. The children of short tempered, over cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parents behavior in front of their children. They must exude confidence, self belief and hope, especially in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. There is no better education for a child than watching his parents come out of a tough situation by means of **earnest.**

Such success not only gives more joy but also increases self confidence. At the end of the day democracy can hardly be expected to flourish if the government is fearful of de notifying the territory as a Disturbed Area, which would have led to withdrawal of the Armed Forces Special Powers Act, and its natural corollary, the withdrawal of the army from internal security duties. This was an extremely critical step that needed to have been taken as the insurgency had lost support of the masses that had, had enough and were focused on receiving the fruits of development and seeing a drastic improvement in their quality of life. While there was still some truth to the apprehensions expressed by the army, they were certainly not to the extent made out. Stretching s specific tendon or muscle can improve the elasticity of muscles, which in turn helps in achieving a comfortable muscle tone. There are several benefits of regular stretching, and it should be an integral part of every workout program. It not only helps increase your flexibility, which is an important part of fitness, but it can also improve your posture, body aches, reduce stress, and much more. One of the benefits of regular stretching is that it enhances flexibility. Being flexible has its own advantages, as it not only improves your day to day activities, but can also help delay the reduced mobility that comes with aging. Stretching 9on a regular basis can help increase your range of motion. You can either go for static or dynamic stretching as they both are effective when it comes to the increasing range of motion. According to the studies, proprioceptive neuromuscular facilitation or PNF type of stretching is more effective for immediate results. Regular stretching can not only help heal an existing back injury but can also prevent future back pain by reducing your risk for muscle strain and strengthening your back muscles. All the people who regularly go to the gym know how helpful stretching can be. Performing dynamic stretches prior to exercise in the gym can help prepare **your** muscles. Not the only gym, but it can also help you improve your performance in dance or an athletic event. It is only natural that your muscles get tense when you experience physical or emotional stress. This is because the tightening of your muscles is the response of the **body** towards stress. All you need to do is focus on the areas of your body where you feel the stress, such as your neck, shoulders, etc. and stretch those parts of your body. This is borne out by the fact that the number of active insurgents in Jammu and Kashmir has, as per the security and intelligence establishments themselves, declined by a factor of over 100 from the heydays of the Mid 90, to just about 200 presently. Interestingly, while militant numbers have steadily declined, the Security Forces, especially the Army and its Rashtriya Rifles, have correspondingly increased in **numbers.**

And more focused on tangible outcomes. Jobs, infrastructure, safety, and economic mobility are becoming decisive factors. The high turnout in the first phase reflects this shift. People are not just voting. They are signalling. They are demanding change, or at the very least, accountability. There is a deeper prize here too. Bengal was once the intellectual and cultural heartland of India. Its writers, reformers, scientists, and thinkers shaped the nation's consciousness. Gopal Krishna Gokhale's famous observation What Bengal thinks today, India thinks tomorrow once captured something real. Over the past five decades, that leadership quietly inverted. Bengal began thinking, metaphorically, a day after the rest of India. A change of government will not, on its own, restore that glory. But it may begin the process of removing the political conditions that have suppressed it. Ma, Maati, Manush was a powerful slogan once. Whether it still holds, Bengal's voters are now deciding. In many ways, the state is being forced to answer a fundamental question. Does it continue with a model built on control and continuity, or does it take a leap towards change driven by aspiration and enterprise? The answer will not just decide a government. It may well decide whether Bengal can once again hold its head high, without fear, and reclaim a future that once seemed inevitable. May 4 is not too far, when we shall get to know Bengal's destiny. The second phase of Bengal election, on April 29, closer to Kolkata and its surrounding urban belt, is the harder test for BJP. Anger against Trinamool's 15 years in office is no longer scattered, BJP Wars are discussed in terms of geopolitics, economic loss, and tragic human toll. What rarely enters public debate is another profound consequence of modern warfare its massive contribution to environmental destruction and accelerated global Sunday will go down in history like May 6, 1954, when Roger Bannister broke the 4-minute-mile barrier, or July 13, 1985, when Sergey Bubka pole-vaulted over 6m. It's one of those rare days when humans have been called the 'forbidden experiment'. The kind we could never, ever **be** justified in purposely initiating. Forty years ago, the worst nuclear disaster in history sent a radioactive cloud billowing from Chernobyl across King Donald-I was a very worried man. His decisions for the day depended on which side of the bed he had got up from, but it was almost **noon,** his favourite Field Marshal was sweating. By Swami Sukhabodhananda We know so much today yet we are more confused than ever. We attend courses, read books, watch videos, and collect endless information. Still, when life presents a small challenge, we feel disturbed. Post-shooting, Trump will get a ratings bump. The question is whether he will squander it by doubling down on the Iran war, misreading the public mood again. Only one thing is guaranteed, after the attempted shooting of We should not view the state through a 'Khalistan' prism. This is a diaspora obsession, which does complicate India's international **relations,** but has little to do with improving livelihoods locally The recent resurgence of debate Thankfully, the gunman couldn't get to Trump. Worryingly, political violence is getting to America. From Republican Abraham Lincoln (1865) to Democrat John F Kennedy (1963), four US presidents have been assassinated while in office. But Govts are recognising newspapers can nourish young minds. But parents have to do their

Hormuz Strait and IPL scores. The ladies were in a cluster, in another corner of the living room, chatting. By Meena Om Renunciation is required to be centered in the inner, true being, detached from all expectations, desires and aspirations, which can culminate in a feeling of separation. To experience oneness, consciousness needs to A year after Operation Sindoor, the contours of India's response in May 2025 appear less as a moment of rupture and more as a confident consolidation of an evolving strategic outlook. Triggered by the Pahalgam With Lok Sabha seats frozen to 1971 Census numbers, India has moved far from the principle of one person, one vote. Today, an MP in Bihar represents 3. 1 million people, a Kerala MP only 1. 75 By Hansaji Yogendra When troubled by uncertainty owing to worldly events, our tendency is to seek reassurance externally in leaders, policies, or outcomes. The yogic way is that when the outer world trembles, the As philosopher Alain de Botton explains, modern lovers should redraw their expectations from relationships they should value any satisfaction they get, as the norm really is sexual rejection Advait Kamath It's bad enough how Protests were at inflection point then US-Israel attacked With negotiations to end the Iran war in limbo, there is much speculation about the status of the Iranian regime. Are there cracks or is the regime a warning from Western Ghats. But who's listening? In India's monsoon folklore, dragonflies arrive like whispered promises, tiny aviators that signal rain, renewal, and a farmer's cautious hope. Their flicker over fields has long Voters' SIR anxiety raises questions on the exercise. A turnout of almost 93%, in the first phase of Bengal polls, sounds like a win for democracy. It's a record for any poll, ever, in India. Sceptics Mamata manages to not get tainted by excesses of Trinamool's strongmen, pitching herself as both a provider and a 'victim'. So, her supporters can vote for her while dissing her party First phase of one TOI News - April 29, 2026 The 93% moment: What West Bengal's record turnout really **signals** Dr Suvrokamal Dutta is an International Conservative Political Economic and Foreign Policy Expert. A turnout of 93. 19% is hard to ignore. In the first phase of West Bengal's assembly elections, covering 152 constituencies, 3. 35 crore out of 3. 61 crore registered voters cast their ballots. That is **the** highest participation the state has seen since Independence. The figure has drawn attention across the political spectrum. The Supreme Court has taken note of the unusually high participation, while the Election Commission and the opposition Bharatiya Janata Party have both welcomed it. For the BJP, widely seen as the principal challenger to the Trinamool Congress, the numbers point to a closely fought contest one that could even produce an unexpected result. West Bengal has always voted in large numbers. In 2021, turnout was about 83% across eight phases. This time, the jump is striking. It suggests something more than **routine** participation. High turnout is often linked to political change. In 2011, when the Trinamool Congress ended the Left Front's long rule, turnout rose to 84. 33%, higher than in 2006. That election reflected a clear public mood. But turnout on its own does not point in one direction. People vote in large numbers when they feel their vote matters. That sense comes from a mix of close contests, visible campaigning, and trust in the voting process. On

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26204

Interestingly, this phenomenon is not just restricted to Jammu and Kashmir, but just as applicable in the North East. There is no denying the fact that vested interests, within the political bureaucratic security establishment utilise AFSPA to keep the Army in situ, thereby ensuring that the status quo remains, with all the perks and privileges that it provides due to the prevailing lack of accountability. As to whether the military leadership is complicit or has had wool pulled over its eyes, is another matter. Indeed, while the situation has taken a turn for the worse, there is still an opportunity for the Central Government to take corrective measures. For a start it needs to remove AFSPA from the hinterland and keep it only along five odd kilometers of the IB LOC. Leaving aside a few Rashtriya Rifles units for dealing with contingencies that may be beyond the capabilities of the Police and CAPF, remainder Rashtriya Rifles must be rationalised and employed in the Counter Infiltration role along the IB LOC, as was done in Punjab. Iodine fortification is what most countries rely on to encourage adequate dietary intake. In more than seventy countries that iodize salt generally serves as the major source of iodine intake. One fourth of a teaspoon of iodized salts has about hundred micrograms of iodine. Note that the salt used in processed foods, which is the major source of salt for most Americans typically does not contain iodine. If salt used in a processed food contains iodine, it will be listed in the ingredients list of that food. Focus on decreasing the amount of salt consumed from processed foods and get your sodium from iodized salt. Seaweed, saltwater fish and seafood are natural sources of dietary iodine. Dairy products also supply iodine in the diet at varying levels. During lactation, the breast concentrates iodine in milk so breastmilk tends be a good source of iodine as long as the iodine intake of a mother is adequate. Plants grown in iodine rich soil are also good sources. However, this is not a reliable source of iodine **since** there is no way of knowing whether produce purchased in grocery stores is grown in iodine rich soil or not. Iodized salt usually adds less than about three hundred micrograms iodine daily to the diet. Most multivitamin mineral supplements contain 150 micrograms of iodine. With the safe upper limit **of** daily iodine intake for adults set at 1,100 micrograms by the IOM it is unlikely to hit an excess amount when including a multivitamin and including natural sources of dietary iodine. The trend of eating less table salt, dairy and bread has some experts concerned that iodine deficiency could be on the rise again. Eating a healthy, balanced diet that includes iodine rich foods and iodized salt is key to good health. This will have a salutary role on limiting infiltration and leaving the Police free to deal with the prevailing law and order situation. While sledgehammers do have **their.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26205

Use it is time for Mr. Mode to consider other avenues as well or all that was gained by his fearless and well thought out action will be lost as the region once again descends into paroxysm of violence. We live in an increasingly dangerous world. Old power structures are waning and new ones emerging. Countries are jockeying for influence. As suggested by the number of foreign dignitaries visiting New Delhi to seek its support, India, with its large population, will inevitably be a player in this new Great Game. In this fraught external environment, national unity is immensely important as outside powers will be looking for internal divisions to exploit. Unfortunately, our ever present divisions based on religion, caste and language are re asserting themselves today. In part, the causes of this divisiveness are economic. When the overall economic pie is not growing fast enough according to JP Morgan, our real GDP is still 6 7 below the pre pandemic path and jobs are scarce, positive sum games that grow the pie turn into zero sum adversarial games where every leader strives for a bigger share of the pie for their community. This can already be seen in the increasing job reservations for locals in various states. And, of course, governing party politicians seek to deflect from their economic underperformance by raising issues of identity that distract people from their lived reality. The biennial 2022 Environmental Performance Index EPI recently released its cross country ranking of 180 countries using 40 performance indicators. India ranks last. However, the report methodology has found complete acceptance in India as it uses data from multiple sources, including government data, but does not generally accept information directly from governments. Notwithstanding the peculiarities associated with the report, it does have useful insights. The most important ones are that the ranking does not accurately reflect India performance, and in indicators such as air quality it a reminder of the need for urgent action. Reports such as EPI need to be seen in the light of two aspects. One, almost one in six humans live in **India.** Two, India cumulative CO2 emissions till 2019 were a mere 3 as against 47 of the US and EU combined. In other words, the earliest to industrialist have emitted most of the greenhouse gases GHG and some of them also happen to be the best EPI performers. Given this **context,** India fares quite well in per capita terms. To illustrate, GHG intensity of growth rate is a measure of progress in decoupling emissions from economic growth. India ranks 34, while the US and Germany are at 44 and 48 respectively. Similarly, in terms of per capita GHG emission, India is at 53 and ahead of Norway. EPI data set shows India economic rise has come with a smaller environmental footprint. If this is to continue, access to cutting edge technology is essential. Therefore, it in everyone interest to craft a mechanism to make technology widely accessible. India per capita **energy.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26206

Emerge both on how the controversy broke and what impact it may have. What does the Nupur Naveen episode tell BJP in Congress, a Mani Shankar Aiyar can make remarks that cost the party? But BJP is not like Congress. It a highly structured organisation. It brainstorms information and arguments spokespersons should present. So, how did a national spokesperson and the head of the BJP Delhi media cell say what they did Which came first, the chicken or the egg Which came first, India as a nation, or India as a Constitution, India as an ageless civilisation or India as a political invention That was the crux of the debate that Congress leader Rahul Gandhi had at a recent event in London with an Indian civil service officer, Siddhartha Verma, who is on a Cambridge scholarship. Taking exception to Rahul statement that India is not a nation but a Union of States, a political construct, which was formed 75 years ago, Verma retorted that it is not a Constitution which makes a nation, but a nation which frames a Constitution, and cited ancient scriptural texts as evidence that a civilisational India existed much before a political India. The verbal sparring match was another bout in the ongoing contention between a political opposition which espouses a secular, pluralist state as guaranteed by the Constitution, and those who champion the concept of a cultural nationalism, bed rocked on age old religious precept and practice, which is the shibboleth of right wing Hindustan. Far from being the last word on the subject, the argument between Rahul and Verma will further fuel the ongoing contestation about India true identity, whether it a modern republic founded on a secular Constitution, or a cultural continuum born in the womb of untold millennia. India is often likened to an elephant, large, patiently lumbering, long lived and unique unto itself. It is also the elephant in the old parable of the blindfolded men who tried to describe the animal through the sense of touch and could come to no agreement, because one of them felt the trunk, **another** the tail, and another the four legs. India is like that anecdotal elephant, too big, too old and too singular to be encapsulated in any one definition that seeks to contain and circumscribe it. It is the elephant trunk, its tail, its four legs, and it more than the **sum** of these individual constituents. Is India a question to which there can be many answers Or an answer to which there are many questions The Buddha used to ask his disciples to do a certain meditation Go to the street and watch everybody passing by, coming and going on the street. See exactly what is happening. Don listen to their words because they are very cunning, they have become very deceptive. Listen to the meaning. It is hard to believe that these words are as applicable to today modern, intellectual, word drunken humanity as they must have been **back** then.

**350th: "another"** **400th: "sum"** **500th: "back"**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26207

Consumption in 2019 for air conditioning was just 25 of the world average of 272 kWh. This gap will narrow with growth and its environmental impact can be disproportionately smaller with the newest technology. EPI also shows that India performance on air quality is abysmal. That why Go promulgated an ordinance in 2020 as it needed immediate attention. Pollution Control Board data shows that poor air quality is mainly on account of post harvest practices in agriculture and natural causes. Their solutions lie within. For instance, not all farmers burn stubble to clear fields. Where stubble has an economic value and hence a market, it is not burnt. Governments can compress coordination timelines to link farmers to a relevant market. Cost effective solutions to reduce the impact of natural causes such as dust need attention right away. Finally, rethinking the role of public transport is indispensable. In another step towards indigenisation of military platforms, the defence ministry has given the initial approval to projects worth Rs 76,390 crore. This includes the construction of eight next generation corvettes for the navy, procurement of wheeled armored fighting vehicles, and the manufacture of Dornier aircraft and Sukhoi 30 MKI aero engines by Hindustan Aeronautics Limited. All the proposed capital acquisition will be under the Buy and Make Indian rubric. The thrust on indigenisation was overdue. The war in Ukraine has starkly brought home the reality that India is too dependent on foreign defence imports, particularly from Russia. With at least over 50 of India overall military assets of Russian make, New Delhi has been forced to walk a diplomatic tightrope on the conflict. Plus, the performance of Russian military platforms in the war has been poor, with a large number of armored fighting vehicles breaking down. Thus, India has to get out of this position where its foreign policy is constricted and a large part of its military arsenal may not deliver desired results. That said, indigenisation has to be done smartly. For the proposed construction of the eight indigenous corvettes, an Indian shipyard will be selected through competitive bidding. Unless tightly **controlled,** the bidding process could throw up controversies that defeat long term objectives. Additionally, while India has achieved 90 indigenisation in the float hull and superstructure component of warship building, the move propulsion and fight weapons components lag behind at 60 and 50 indigenisation respectively. Similarly, we are still far **off** from developing a fully indigenous aero engine for military aircraft with the old Kaveri project having failed to meet standards. Overall, most of our indigenisation success has been in auxiliary and spares. But to take indigenisation to the next level we need to significantly up our investment in R D and create a cutting edge military industrial ecosystem with universities, private sector and defence PSUs working in tandem. That in turn requires the Indian economy to grow at a high, sustained rate. Now that the first act of the Nupur Sharma Naveen Jindal controversy has played out, interesting political **questions.**

**350th:** "controlled," **400th:** "off" **500th:** "questions."

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26208

So the point is, look deeper into things. People may use the same words, but they don use them with the same meaning. Listen to the meaning rather than only listening to the words. If all you listen to is the words you will never understand people. Our words come from the intellect, from the personality, which has often become so fake that we don mean what we say. Communication has become a social etiquette it does really come from our heart or our being. Scientists tell us that words carry bio electric energy, so the depth of meaning is proportionate to the depth of the speaker. If the speaker is a sincere and heart oriented person, he will speak few words with profound meaning, and convey everything through his body language, his eyes, his warmth and through facial expressions. You will be naturally drawn to this person. And how that will be helpful in your own inner growth, one may ask. The next step, which makes this meditation complete, is supplied by Oslo this will be very helpful for your own inner growth and observing your own change of gears. Just watch people. It is easier to watch people than to watch yourself, in the beginning, because people are more objective, and there is a little distance between you and them. And you can be more objective about people because you are not involved in them. Just watch. When somebody is saying something, listen to his face, to his eyes, to his being, to the gestures, and you will be simply surprised how, up to now, you have lived only with words. A person may be saying, I love you and his eyes may be simply denying it. A person may be smiling with his lips and his eyes may be ridiculing you, rejecting you. A person may be saying Hello and holding your hand, and his whole being may be condemning you. This is the language behind the language. Let everybody who comes to you be an experiment in awareness. Then, by and by, you will be **able** to watch yourself. Direct the entire flood of your own life energy upon yourself and try the same technique when you say to somebody I love you, listen to what you really are saying, not just to these words. Words are almost always fake. Language is very tricky **and** can clothe things so beautifully that the container becomes very important and you lose sight of the content. People have become very sophisticated as far as their surface is concerned, yet their innermost core remains primitive. Listen to the center of the circumference. If you are silent within, you can go into the words like an X ray, and suddenly you feel a deep wellbeing arising in you, a deep joy for no apparent reason. Abridged from Oslo Times, courtesy Oslo Mumbai recently won two wooden spoons. Cricket as they say is religion in India. There should not be **any** politics.

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26211

In religion though religion plays a great role in Politics. Definitely, there is politics in Cricket as we see politicians managing cricket matters. Cricketers have turned into politicians, and politics is prevalent in cricketing matters. There are politics like camps within cricket. IPL introduced Bollywood influence in Cricket through franchise owners. Cricket is a big business so business houses entered cricket just as Bollywood is big business. Politicians and Businessmen go in cohorts historically. So you end up in Cocktail of Cricket which is a religion, Politics, Business, and Bollywood. And there is eternal underworld nexus to all this cocktail. Mumbai is the capital of everything except Politics. Delhi is the political capital. Ironically, a win by Mumbai Franchise versus Delhi Franchise ousted Delhi from playoffs in the 2022 IPL. Mumbai team won a wooden spoon in IPL 2022. Things went wrong right at the auction. There was no valid strategy to retain the core which had won titles in past. For the most successful franchise, it was a management failure. Even within the retention the huge amounts spent on nonperforming assets like Ishan, Pollard, and to an extent the captain really backfired. Joffra Archer was known to be unavailable for 22 but the plan was for the next seasons. It is still a gamble. Non availability of SKY and Mills were additional disadvantages introduced midway. There was no support for Bumrah in the bowling. They should have retained Boult. There was no dreaded spinner in the lineup. Sums did well towards the end when there was no hope for qualification. They also did not support David after two failed outings. When he was reintroduced in playing eleven it was late. They found some good talent for the future in Tikal Varna, Bevis, Shaken, and Kartikeya. Everything that could have gone wrong went wrong for Mumbai. The past glory and aura took a dent in 2022. It a very steep road ahead for 2023. Hope they do some good trading or talent scouting for uncapped players which rebuild the core for the future. That needs a transition plan for **leadership** by 2024. Unless that happens, the fear of consecutive wooden spoons looms large. The state of Maharashtra with its capital of Mumbai was known for being a pioneer and leader in commerce, industry, entertainment, cricket, fashion, trading, and exports. Maharashtra is philosophically driven by saints right from Dynaneshwar and **Tulare** to the Warfare leaders of today. Maharashtra in past had a legacy of political and social leaders right from Chatrapati Shiva Maharaja, Chatrapati Sam haji Maharaja, Beira, and Madhavrao Peshwas, Ahilyabai Honker, Rani Lamiae, Lokmanya Tikal, Veer Savarkar. Maharashtra is driven by thoughts of visionary thought leaders like Dr. B R Ambedkar, Mahatma Phule, Shahu Maharaja, and Agarkar. On the social front, we have a legacy of the likes of Dr. Baba Amte, Dr. Prakash Amte, Dr. Bung, and Sindhutai Sepal. We still have generations growing up on the literary genius of Zachary Tare, Pu La Deshpande, Vinda Karandikar **Shirwadkar.**

**350th: "leadership"** **400th: "Tulare"** **500th: "Shirwadkar."**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26212

G A Kulkarni, V P Kale, and many more in this list. We had musical geniuses like Put Bison Joshi, Late Mangeshkar, and Asha Bhosale just to name a very few. In fact, the entire business, media, films, music, and creativity reside in Mumbai. Marathi theatre had many luminaries and drama has impacted thought propagation and solutions to social issues. We had great journalists and media personalities. Maharashtra cultural movement has bases right from main cities till remotest villages and recently it has spilled over in foreign lands like US, UK, Europe, Australia, Middle East, Southeast, and Far East Asia through well spread NRI population. But these are past glories. The level of the current political slugfest in Maharashtra politics has handed another wooden spoon to the state along with IPL 2022 wooden spoon. The kind of personal vendetta, caste based equations slurs, and polarizations have really damaged the basic culture of the state which at one stage was the most civilized state in India. The language used by party functionaries, the accusations, threats, unconstitutional language used, violence and mobocracy have dented the image of Maharashtra. There is a chronology to the things that went south. First is the betrayal of the electoral mandate. Votes garnered through the pre poll alliance led to comfortable numbers for that alliance. The verdict of people in a democracy is the basic foundation of a party is forming a government. This verdict was violated by politicians to betray the trust of voters. Then we saw the notorious morning swearing in ceremony and proposed an unholy alliance to counter the wrong done in the first place. Then we saw this alliance breaking due to some unknown pressure. The parties which had no common ground concurred only for obvious reasons. There was no apparent thought process. Then there was the notorious chain of events that rocked the state. There was an alleged involvement of corrupt police officers to collect revenues from businesses and hand them over to the politicians. There were scandals involving celebrities, film stars, their kids, and drugs. Many ministers were accused of **crimes** like corruption, and terror links. The ruling dispensation lacked an agenda. During Covid, Maharashtra registered maximum cases, the highest number of deaths, and the highest number of infections. There were accusations of corruption in the covid relief center funds. The only policy was to blame the center. Opposition in **the** state was also involved in some strange non issues being highlighted in the narrative. The noises on both sides have added to the cacophony. The media has stooped to new lows. There were cases where people were arrested for their criticism. I think it the time for leaders across the parties to draw some basics and revive the culture and civil behavior across the board. Otherwise, the wooden spoon looms for the next few years. A predictable charade of political parties moving their MLAs to resorts and hotels has begun ahead of hotly contested Raja Sabah elections in Rajasthan, **Maharashtra.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26213

Haryana and Karnataka congress has moved its MLAs in Rajasthan to lodgings in Udaipur and its Haryana legislators all the way to Chhattisgarh. In Maharashtra, both Shiv Sean and Maharashtra have done the same. Not to be left behind the factionalism plagued BJP in Rajasthan has also followed suit. Read also Shiv Sean MLAs check into Malady resort ahead of RS elections despite legislative devices like whips and the Raja Sabah vote not held by secret ballot, a party not being able to trust their legislators is evidence of the depths plumbed by Indian politics. Legislators being herded like cattle to prevent them from slipping out does do justice to the exalted position they enjoy in India constitutional scheme. The prevalence of horse trading despite writing the Tenth Schedule into the Constitution began asking a question what purpose has it served. Or does the converse hold true would things have been much worse without it. There also no paucity of nets demanding a scrapping of the anti defection provisions which have reduced MPs and MLAs to figureheads, unable to voice opinions different from the party position. The MLAs may be lodged in luxury resorts but the reality is that their liberties have been restricted. The independence that India judiciary benefits from should be more meaningfully granted to the legislature wing. It will give us better laws and stronger accountability against executive overreach. The pandemic years, 2020 and 2021, accelerated climate action and the world rallied around Net Zero. Corporates and nations competed to announce their Net Zero pledges. This rush of eco consciousness has now left us with over 700 companies, including a fifth of the world largest 2000 public companies, and over 120 nations representing nearly 50 of global GDP with Net Zero pledges ranging in timeline from 2025 to 2070. At COP26, India has announced its commitment to become net zero by 2070. Large Indian companies, nearly 30 of them, were quick to join the net zero movement with varying timelines. So far so good. Now, how are we going to get there we need to understand **what** net zero means before we look at the ways and means of getting there. Net Zero, as the word implies, means net zero carbon emissions. The accepted norm today is that you reduce or avoid carbon emissions to the atmosphere to the best possible extent you can. That which **you** cannot avoid must be matched by an equal quantity of carbon removed from the atmosphere. If you did that, then the result, technically, is equivalent to having no carbon emitted at all. Now we can look at pathways to achieve this. At a national level, most of the carbon emissions come from one large category use of fossil fuels. For corporations, carbon emissions come from their activities, and therefore from many sources although the original source of most of it is fossil fuel. For example, use of fuels directly in a fleet of trucks or in a boiler or **a.**

## RKC TEST NAME: DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26214

Possible in traditional settings and can therefore enhance the overall religious experience for individuals across age-groups and segments Over the past few years, there has been a significant evolution in the way religion is practiced in India, with a growing number of people turning to online platforms to connect with their faith. This shift has been driven by a number of factors, including technological advancements, changing societal attitudes, and the sheer convenience of online platforms. The growing acceptance and adoption of faith-tech platforms for religious practices have transformed the way people perceive and engage with religion in India, thereby creating new avenues for spiritual exploration and growth. In recent years, the concept of green and sustainable living has gained significant attention worldwide, and India is no exception. As one of the fastest-growing economies and the most populous country in the world, India faces unique challenges in terms of environmental sustainability. Rapid urbanization, increasing energy demands, and the need for affordable housing have led to a re-evaluation of traditional real estate practices. Consequently, the real estate industry in India is witnessing a paradigm shift towards green and sustainable homes, making them the future of real estate in the country. Green buildings may save up to 30% of energy and 50% of water, according to studies. With a focus on reducing greenhouse gas emissions, improving energy efficiency, and adopting renewable energy sources, the country is actively working towards a greener and more sustainable future. In line with this vision, the real estate sector has embraced the concept of green homes as a key driver of change. Green and sustainable homes in India go beyond mere energy efficiency. They incorporate innovative design elements, sustainable materials, and advanced technologies to reduce environmental impact and enhance the quality of life for residents. These homes prioritize the use of renewable energy sources such as solar power and wind energy, reducing dependence on fossil fuels and lowering carbon emissions. Let us explore how the real estate industry in India is witnessing a paradigm shift towards green and sustainable homes, making them the future of real estate **in** the country: 1 Reducing Carbon Footprint One of the primary goals of green and sustainable homes is to reduce the carbon footprint. Such homes incorporate innovative design elements and utilize renewable energy sources like solar power and wind energy. They also focus on energy-efficient appliances and lighting systems, which **significantly** reduce the consumption of electricity and minimize greenhouse gas emissions. By promoting a low-carbon lifestyle, these homes actively contribute to mitigating climate change. 2 Energy Efficiency and Cost Savings Green homes in India emphasize energy efficiency through the integration of advanced technologies. Features such as smart thermostats, energy-efficient appliances, and proper insulation reduce energy consumption and utility bills. Homeowners can experience significant cost savings in the long run, as the operational costs of these houses are considerably lower compared to traditional homes. The incorporation of rainwater harvesting systems and wastewater treatment plants further leads to water conservation and reduced **water.**

## RKC TEST NAME: SPL-DELHI_POLICE_TYPING-DATED-2026-04-30-TEST NO.-26215

India, where women are voting in equal or greater numbers than men. In Bengal, it shows that women are not just participating, but helping drive the outcome. Their voting choices often reflect everyday concerns welfare schemes, household finances, safety, access to services. These are issues that cut across party lines and can influence close contests. This election saw a large security deployment. There were 2,407 companies of Central Armed Police Forces along with about 40,000 state police personnel. In 2021, the number of central force companies was much lower across all phases. The difference shows in the data. Fewer than 30 injuries were reported during polling, compared to over 1,200 in 2016 and more than 1,600 in 2021. When violence drops, more people are willing to step out and vote. That does not change political preferences, but it does bring more voters into the process. For the BJP, this election reflects years of organisational work in the state. Under Amit Shah, the party has focused on booth-level planning. The panna pramukh system assigns each worker a small group of voters to manage and mobilise. In tight races, margins can be a few thousand votes. Small gains at the booth level can make a difference. Shah's target of winning 110 of the 152 seats in this phase shows the party's confidence in this approach. His time on the ground and efforts to bring different factions together have also been part of this push. Amit Shah has also worked to align the state unit and keep the focus on booth-level execution. At the same time, the Trinamool Congress is grappling to hold on to its political ground. Under Mamata Banerjee, the party still leans on the grassroots network it has built over the years, but this election is unfolding under a cloud. Allegations of corruption, concerns around women's safety, and questions on law and order have become part of the political conversation. These issues have cut into the party's earlier advantage, especially among sections of voters who once saw welfare delivery as enough. Schemes targeted at women, rural households, and marginal **groups** continue to give the Trinamool a base, but it may not be enough to push it through the winning line. The scale of turnout suggests that many voters are reassessing their choices. For the party, the challenge is no longer just mobilisation, but retention. While the BJP is trying **to** expand through structured organisation and micro-targeting, the Trinamool is fighting to keep its support intact in the face of growing scrutiny. In an election with this level of participation, the question is whether its existing networks will hold or whether the issues raised during the campaign will outweigh them. The BJP has framed the election around governance, law and order, and corruption. It has also made welfare promises, including monthly financial support for women and unemployed youth, and broader economic plans. The Trinamool Congress continues to rely on its existing welfare programmes and local networks, presenting itself as a **party** that has already delivered on key schemes. It is tempting to see a number like this as a clear signal of change. Leaders have already described it in those terms, with Narendra Modi calling it a storm of change. But turnout does not always tell a single story. It can reflect dissatisfaction, but it can also show strong support. Often, it reflects a mix of both. What is clear is that voters are engaged. They are turning up in large numb

to a more competitive political environment. The final result will decide who forms the government. But the turnout itself already says something important: voters in West Bengal are not stepping back from politics. They are stepping in, in greater numbers than before. TOI News - April 30, 2026 Holding company corporate structure Homeyar Jal Tavaria is a professional accountant with interest in the science of accounts and audit, observer and commentator on macro economic commercial, financial and economic events, occasional blogger'. The reality of Promoter driven Business Group concept as operative in India is that the ownership shares of companies that are managed by the Group within its Corporate umbrella will finally report to the Holding Company. There can be step down subsidiaries but finally there is enough shareholding % in any entity to qualify that company as belonging to that specific promoter group. India private sector business groups manage businesses through what is called 'conglomerate business' concept. The businesses looked after by the Business Group can be varied and very distinct with very little commonality of business. This concept of 'conglomerate business' has advantages and disadvantages. The main advantage is that the Business Group has experience of setting up and managing business. The term 'ease of business' is not really as alive as one would like it to be. However, the major dis-advantage of managing conglomerates is the inadequate Central Group management attention to the businesses. Often, the multiple conglomerate businesses are run by individuals who are members of different family branches. This leads to a shortfall in management performance and the dangers of 'related party' transactions. One of the key issues that emerges in all Holding companies of Business Groups is that the performance of entities under the Group umbrella is varied. There are some star companies performing exceedingly well and there are laggards who weigh down the performance of the Holding Company when consolidated financial statements are prepared. It is due to this reason of varied performance achievement that most Business Group Promoters are not happy getting the Holding Company shares listed on the Financial / **Capital** markets (NSE / BSE, etc). For those Business Groups whose Holding Company is listed, the share price gets weighed down by what is called 'conglomerate discount' or 'holding company discount'. The perception of the Promoter Group Family Office and the market pricing given to the holding company shares can **be** very significant. Also, the market can be harsh on substantial 'related party' transactions valuations. The Promoter Business Group office often takes a view that the capital markets are taking an excessively cautious view on Business Risks that the Businesses carry while the Capital market takes a view that the Business promoter Group is unwilling to face the harsh business environment reality and is having a 'head in the sand' business approach. This is the reason why many business groups don't like the Holding company shares being listed. Capital markets can shatter illusions of grandeur. In my view, if the **holding** company has a listed subsidiary company, the Holding Company must also be a listed entity. One cannot have the child being subject to the rigours of the Capital market regulator (SEBI) and Company Law in terms of disclosures and compliance requirements, while the parent (holding company) has

**350th: "Capital"** **400th: "be"** **500th: "holding"**
