BSF-HCM-TEST-Dated-2025-08-01-Test NO.-21832

Schooling a steady demand for 2 and 3 BHK apartments has been noticed amidst those looking to upgrade to larger homes. Luxury housing has come to be viewed as a profitable investment opportunity, attracting an increasing number of buyers. NRI Investment in Real Estate NRIs are focused on luxury housing because they are interested in high-end apartments with higher rental yields. The recent devaluation of the INR when compared to the US Dollar provides an added fore advantage to NRI looking to invest in a safe haven back home. Sustainable Design and Proximity to Nature With growing awareness about climatic changes, sustainable design concepts are becoming increasingly popular. To make new construction as sustainable as possible, a strong focus on planning is essential, as is a willingness to adopt and try the latest technologies. Conclusion The aforementioned factors, along with several other things have helped the luxury market witnessed spectacular growth over the last couple of years, with no expected signs of a slowdown in demand. The sentiment remains upbeat, and the statistics show that the sales numbers might even surpass all previous highs in the coming months. India booming startup ecosystem has created a new wave of entrepreneurs who are now leading the country economic growth. There has been positive shift in the mindsets and people are now willing to become job creators and not job seekers. Deeper internet penetration, affordability of smartphones has enabled every individual to step on the entrepreneurial journey to solve existing problems and add more value to society, backed by technology and innovation. Among many positive outcomes, a noteworthy growth is the rise of women entrepreneurs who are fast taking the center-stage in the country entrepreneurial ecosystem. While it is encouraging to see more female business leaders breaking barriers, it is also imperative to ensure that this rise is not hampered and everyone gets equal access to opportunities and resources to make India the largest hub of entrepreneurs and largest startup ecosystem very soon. The rise of female entrepreneurs is also captured in various industry reports. As per Bascom, India registered an uptick from 8% to 13% of women-led startups between 2014-19. Also, a recent survey said that the number of women-owned businesses in India increased by over 20% in the last five years. This rate is higher than the growth of men-owned businesses which stood at 10%. Changing socio-economic conditions of women, rise of ecommerce, better access to finance and training, etc. are the key reasons behind this growth. While the rise is encouraging, female entrepreneurs still face a lot of hurdles as compared to male counterparts when it comes to entrepreneurial success. Facing unconscious or conscious biases, stereotypes, lack of access to markets, training are some of the few bottlenecks that have to be removed to link over 50% of the country population to the huge entrepreneurial opportunities brimming in India. Access to capital and government benefits financing still remains major hindrance that restricts female entrepreneurs from starting or scaling their businesses. They require better access to investors who can ensure support and partner with them in their journey. There is a rise in digital lending that has made access to loans easier. Additionally, central and state governments too have taken many steps to encourage them and give them access to resources through

BSF-HCM-TEST-Dated-2025-08-01-Test NO.-21833

To create a link that bridges the gap between entrepreneurs and resources to empower them and also support them in building successful enterprises. Break the bias Apart from facing challenges that every entrepreneur faces, women walk with an extra baggage of biases that slows their pace in their career growth. While men are naturally groomed to hold leadership roles in families, women need to make an extra effort to overcome hurdles. Develop leadership abilities and translate them into business success. They also lack access to market, funds, groups due to existing stereotypes such as being over emotional or sensitive in tough situations. There is a need for collaborative efforts at a personal and societal level to support women to break the biases. Awareness and sensitization programs across all levels can further drive a positive change and encourage female business leaders to achieve better results. Skill, up skill and reskill Women entrepreneurs need to skill, up skill and reskill constantly to stay ahead of the curve. It is necessary that they get all the support such as entrepreneurship training and soft skills like communication abilities, decision making and leadership skills along with digital literacy which is the need of the hour. They must be given assistance in business development and other services through training and workshops to make them more competent. Benefitting from the rise of online businesses India has witnessed a growth in ecommerce which has made it possible for women to sell products from anywhere, anytime across the country and the world. Benefitting from this surge in online opportunities, they must become more tech savvy or digital friendly to make full use of online marketplaces. This not only provides a level-playing field to female entrepreneurs but also opens a lot of opportunities for them across sectors such as agriculture, healthcare, education, among many others. Mentorship and peer groups Entrepreneurship is a tough journey and women entrepreneurs need mentors who can give right guidance and advice to prevent them from failures and double their chances of business success. The mentors can help them in networking, connect them with investors, guide them through the funding process along with various other supports. Additionally, becoming a part of a peer group can bring them closer to like-minded people from various sectors. This can encourage positive discussions and outcomes where they can talk about their challenges and inspire others without the fear of judgment. The rise of women entrepreneurs is a positive shift that India needed. In order to sustain this growth, all stakeholders including policymakers, investors, industry leaders, academicians and customers should come together and create a conducive environment where they can thrive. More women entrepreneurs can not only support India economic ambitions but also multiply chances of employment and revenue generation for holistic development. Emotional and tearful scenes were observed as the mortal remains of six people, including two minors killed in twin terror incidents in the Upper Shangri area of Retour district, were cremated at their native village this morning. Hundreds of whimpering mourners, relatives, friends and neighbors lined up with flowers and wreaths to pay their last respects to the mortal remains at the Government Higher Secondary School, Upper Shangri, where the bodies were kept for the night. Amidst protests by the peopl

BSF-HCM-TEST-Dated-2025-08-01-Test NO.-21834

Colleges of Jammu and Retour, having received bullet and splinter injuries in firing by the terrorists on 1Jan and an IED blast the next day. The bodies of four-year-old Viand Sharma, 16-year-old Samish Sharma, Salish Kumar (45), Deepak Kumar (23), Pretax All (57) and Shisha Pal (32) were cremated in six pyres lined up at Shangri cremation ground. The recent attacks indicate that there has been an upsurge in terror activities in the Jammu province. This time radical Islamists struck Jammu Upper Shangri village in the Retour district 1Jan 2023, followed by a blast the next day. As per the sources, two terrorists came and targeted three houses indiscriminately. The firing ended within 10 minutes. Firstly, they attacked a house in Upper Danger, then moved 25 meters away and shot several people there. They also fired on another house 25 meters away from the second house while fleeing the village. On 2Jan 2023, a child died, and four people were hurt after a blast near the same houses. Many parts of the Jammu province, including Retour and Ishtar, observed a shutdown on 3 Jan 23 to mark protests against these ghastly Killings and express solidarity with family members of the victims. Hindu and Muslim community members expressed their solidarity with the people who suffered these attacks. They demanded a judicial inquiry into this incident and adequate security measures to be in place to ensure safety and security. Top police officials have started an investigation into the incidents. These attacks have caused protests and strikes in Retour as people demand decisive actions against the culprits. Cordon and search operations are on to track down militants involved in the killings. Police has announced a Rest 10 lakh award to anyone who shares specific information regarding the militants involved in the gruesome attacks. Meanwhile, a team of the National Investigation Agency (NIA) led by a senior officer visited Shangri village to conduct an initial investigation into the terror incidents. Lt. Governor Sh. Manor Sinhala has condemned the cowardly terror attack in Retour and announced financial assistance for the victim families. He also promised that culprits would be punished. It appears that terrorists knew the topography very well; after committing these heinous crimes, they vanished into the forests. Even they knew the identities of these victims. The striking of the terrorists at will is a cause of concern. Earlier, they struck in in same belt and Bhatta Durian. It is a fact that these terrorists look for the soft-targets to evoke psychological effects. The above terrorist incidents indicate the requirement to beef up the security environment. Though such lone-wolf terrorist attacks can take place yet security forces must ensure the safety and security of the people. If there is a requirement to strengthen the Village Defense Community (VDC), it must be done without further losing innocent lives. There have been warning signals of the presence of terrorists in the Jammu region past few months. Our intelligence gathering must be reinforced to nullify the acts of these terrorists. Terrorism in J&K has transformed into a systematic use or threat of violence to intimidate the local populace, community, or government to effect political, religious, or ideological change for their gain. To magnify and transmit the intense fear and anger among the people, modern terrorism has turned to another method of intimidation. It goes without saying that t

BSF-HCM-TEST-Dated-2025-08-01-Test NO.-21835

Sponsored terrorists are now frustrated and would like to create a divide between Muslims and Non-Muslims as a last resort to sustain their illicit design of terrorism in J&K. In Kashmir, they succeeded in creating this divide. However, in Jammu, they have not succeeded so far but are trying their best to create a divide and exploit the situation. According to some reports, before 1987, the Hindu population was 80% in Retour, but today it has fallen below 40%. As far as Pooch is concerned non-Muslim population constitutes not more than 5%. This is an alarming trend. Pakistan, through sponsored terrorist organizations, is profoundly tangled in its attempts to undermine the constitutional and administrative machinery of Jammu and Kashmir to strain and snap the relations between the J&K and India. Their main aim is to divide the people of Jammu and Kashmir into communal lines. Its abatement in terrorist violence by lending moral, political and military support is common knowledge. The terrorist operatives in Jammu and Kashmir are being trained in camps raised for this purpose in Pakistan Occupied Jammu and Kashmir (POJK) and Pakistan. Then they are pushed into India to cause large-scale anarchy, destruction, arson, murder, etc. India has been hit with double jolts. At first, it suffered from various terror attacks and then afterwards by induced violations and negative propaganda by Pakistan, an exporter of inhumanities. The extent to which these evils are sent out is now being felt by many countries in the world, in addition to India. How Kashmiri Pundits were thrown out of the Kashmir Valley is well known, and they are living in wretched conditions as refugees in their countries. Heavy winds and ominous clouds may cross our lanes, but we must march ahead confidently to defeat this evil design of our adversary, which is crumbling its weight. Digitization and advancement of technology are breaking ground in the healthcare industry in India. There is a crucial need of the hour to build a medical ecosystem of Homeopathic medicines along with conventional and natural medicine. The cross-disciplinary learning needs to be provided to the aspirants of medicine to create cutting-edge homeopathy medical care. The Homeopathy Research Institute (HRI) report states that around 10 core people, the highest number of individuals in India, rely completely on Homeopathy for medical care. Besides this, homeopathy is globally trusted and used by more than 50 core people. Recently, Deal Janseva Pratishthan at Vhalshim, Bicholim launched a combined hospital for Ayurveda, homeopathy, and allopath. This will be the first hospital to be established for combined treatment this year. According to the World Health Organisation the complementary medical system is the second-largest system of medicine globally. As per the Precedence Research report, the global homeopathic products market size was valued at US$ 6.2 billion in 2020 and is expected to reach over US$ 19.7 billion by 2030, poised to grow at a noteworthy. Major population of India inclining towards non-invasive homeopathic treatment globally. Homeopathic medicine has shifted the outlook of people around the globe and boosted the business of medicines as it is free from any side effects. Despite all the hurdles the industry faces, homeopathy still endures gaining acceptance by individuals in India. It has lifted their interest in natural medicine which is cost-effective and easily available with lesser side-

BSF-HCM-TEST-Dated-2025-08-01-Test NO.-21836

Edge to brands in the market to deepen their overall reach with end-customers and lifting the brand experience with them. Trade sales and marketing leaders are actively engaging influencers for driving last-mile sales and collecting a lot of behavioral and transactional insights to optimize their supply chain, product innovation, and overall customer value proposition in the market. This trend is gaining a lot of traction with brands, and influencers are becoming an integral part of the trade channel distribution network. BI WORLDWIDE, with its channel engagement platform Channel Smart, has gained a lot of insights while managing end-to-end influencer engagement programs for many Indian and global trade organizations. These influencers play a very strong role in driving end customer behavior and therefore it imperative that they are highly engaged, knowledgeable, and loyal to the brand, in turn driving higher market share. Trend #3 Make it Big with Middle Sales Performers In 2023, trade sales and marketing leaders should pay attention to middle sales performers to make it big. The fact remains that the 80 20 rule ends up as a reality even when looking at performance levels across various sales channels. Brands usually end up taking care of either the top 20% performers or the bottom 20%. That leaves the middle layer, roughly 60% of the channel partner base, overlooked and under-incentivized to perform better. There is merit in paying closer attention to curating the right kind of incentive structure for the middle layer they can be moved to perform better and contribute to increasing sales incrementally. This concept is popularly known as moving the middle where the approach is to focus effort on getting the middle tier of the channel partners to perform incrementally better than they currently do. There are scientific principles and proven rules that can be applied to move the middle layer to drive performance. When more than half the channel partner base performs even only slightly better, it can boost overall sales numbers substantially, as there is strength in numbers. By moving the middle, brands can effectively move the whole base towards incremental growth. Trend #4 Enable the Sales Channel with Learning Channel partners are usually busy sorting out their daily business challenges. They are over-exposed with information coming to them from every corner, which they ignore and prefer to catch up on during their teatime. To keep channel partners engaged, it important to show them that the brand is invested in their overall growth beyond achieving sales targets. BI WORLDWIDE research-based know, feel, do model, where the goal of the learning modules is to transform what channel partners know, how they feel, and what they do. Brands should bear in mind to keep the content used in any kind of learning program to be immersive, creative, and highly interactive in order to bring about this transformation in channel partners. Formats in which training is delivered should also be flexible (including video, text, learning games, and simulations) and easily accessible on all kinds of devices.

BSF-HCM-TEST-Dated-2025-08-01-Test NO.-21837

In zoos often outlive their wild counterparts. Guinness World Records lists the oldest cat as having lived 38 years and three days. Crime Puff was a domestic shorthair cat that was sometimes fed odd things such as asparagus, eggs, and heavy cream. She was born in 1967 and died in 2005 in Austin, Texas. It is unknown exactly how Crème Puff was able to live to be such an old cat, but a combination of loving care, good genetics, and a safe environment were probably key factors. While we never have complete control over our cat lives, we can be sure to offer them a safe, healthy, and loving environment to increase the odds of them. The global banking industry faces heightened risks due to the evolving financial crime compliance mandates to clamp down on money laundering and sanctioned entities and maintain CDD EDD. Among all, money laundering appears the most pernicious, with more illicit transactions evading anti-money laundering systems yearly. In tandem, screening sanctioned entities, SDNs, blocked persons, etc., is now a perennial need of financial institutions. Colossal costs and risks Industry estimates place the laundered money to the tune of 2.7% of the annual global GDP, a whopping US$ 1.6 trillion loss. With an estimated 24,000 sanctions worldwide in 2022, inadequate watch list screening and pose prodigious risks. For banks, the unfettered rise of financial crimes means perpetual investments in financial crime compliance technology for AML, KYC, watch list screening, et al, and the cost grows tremendously. The LexisNexis report informs that institutions spent nearly US$214 billion in 2021 on meeting financial crime compliance. Current AML monitoring systems cannot accurately detect suspicious transactions, resulting in inordinate up to 90% false positives, inflating the costs due to redundant manual investigations. Bridging the gap with machine learning amid the bleak outlook, the machine learning realm emerges prominently. With novel techniques, machine learning offers promising advancements over rule-based transaction monitoring with the ability to detect arcane patterns in real-time. Foremost is the cornerstone facility to learn and predict with accuracy. Machine-learning-based-AML systems can pinpoint abnormal transactions with evolutionary precision based on the supervised and unsupervised learning approaches. Supervised learning uses labeled datasets to train the algorithm in searching and detecting suspicious financial transactions. About 80% of this labeled data trains the AML model, and the remaining 20% tests its accuracy to conduct input classification or output prediction. From an applications standpoint, historically tagged labeled suspicious transactions can train focused models to double down the rule-based AML technology for more accurate monitoring. Of course, existing systems need the machine learning ability to exploit the labeled dataset. Unsupervised learning is another powerful approach that can directly explore unstructured transaction records to determine latent patterns and insights. It uses techniques such as clustering, association, and dimensionality reduction to discover hidden groupings and relations and can decompose complex transactions into simpler forms. The merit lies in knowing that AML systems with unsupervised learning can detect and raise alerts by learning the patterns from raw unlabeled transaction data. This crucial ability can help banks unravel the most artfully laid money laundering sch

BSF-HCM-TEST-Dated-2025-08-01-Test NO.-21841

And more efficient learning of patterns. Extending surveillance to watch list screening and customer due diligence the impact of machine learning extends beyond reducing false positives and alert investigations to stepping up the efforts for watch list screening, PEP matching, and KYC. Effective surveillance of sanctions and customer due diligence necessitate near mathematical accuracy in detecting emergent behavioral trends and data analysis. Forerunning techniques like data extraction and pattern matching enable automatic retrieval, analysis, and validation of customer data from authenticated public records and other open sources like social media, web directories, etc. They can help banks establish relations between transactions, behavioral patterns, and historical records to determine customers risk profiles for KYC records. This feat is easier said than done, considering the vast unstructured or big data. Here, natural language processing, a subset of machine learning, helps analyze unstructured information, contextualize it, and unveil hidden relationships to expose the threats due to politically exposed persons or other high-risk entities. They expand the ambit of machine learning to the critical areas of screening sanctioned entities and even determining the extent of prohibitions. Rise of machine intelligence fiction to fact While still a novelty, machine learning is gradually finding its way into the current financial crime compliance technology. More than academia and research labs, the practical benefits of machine learning need to reach the banking industry at large. Bracing this shift can be an uphill journey for most banks due to monolithic systems, entrenched frameworks, and stiff governance. The key lies in taking a pragmatic, domain-centric approach to determining optimal choices in the sea of options and determining the exact course for driving the monumental change. The prevailing view has long been that entrepreneurs recognize opportunities and then find resources to pursue them. After the discovery phase entrepreneurs have a clear end goal in mind and all activities are focused on achieving it. Surprises and unexpected developments are avoided by a very thorough planning process. What however if there are market uncertainties? Suppose industry standards have not been set or the technology itself is still evolving? In these situations, the end goal may not be entirely clear at the start. As a PhD student, Saris Sarasvathy set out to find out how entrepreneurs think and take decisions. Interviewing expert entrepreneurs she found that during times of uncertainty entrepreneurs often make decisions based on an entirely different set of criteria. She called it effectual thinking. When the end goal is not clear entrepreneurs begin by assessing their personal strengths and weaknesses and begin to work with the resources available. Over time they create partnerships with those they view as potential stake holders. Effectual entrepreneurs welcome surprises during their journey as an opportunity for innovation. An effectual approach to entrepreneurship begins with the entrepreneur asking themselves three questions. Who am I? List your attributes and abilities. What do I know? This is your education, training and experience. Whom do I know? Think of your personal and professional networks. Realizing that in uncertain times it may be difficult to plan and visualize how the future will play out, effectual entrepreneurs are consc

Are based on homilies that we are familiar with. The first is bird in hand: start with the available means at your disposal. The second is affordable loss: focus on potential downside risks and make sure you can afford them. The next is the lemonade principle: leverage contingencies by welcoming surprises and treating them as an opportunity to innovate. The next is the patchwork quilt: develop partnerships with self-selecting stakeholders. Finally, the fifth principle is called pilot in the plane: focus on those activities that are within your control to make the future you wish for. Imagine you are a budding chef and want to cook a meal for your friends. In the causal approach you would ascertain everyone food preferences, purchase all the ingredients in advance and then cook a meal. If all your friends suddenly land up at home, you could adopt an effectual approach. Surprise them by improvising: use ingredients that are available in your kitchen and get them to join you while cooking. Which experience do you think will be more enjoyable for everyone? Effectual thinking is not restricted to the field of entrepreneurship. It is a logic that can be used in a variety of contexts. In R &D projects in the corporate world, effectual approaches often work better and lead to success in environments where there is inherently a high degree of innovativeness. Even in the social sector, when tackling large problems with limited means, effectuation can be a way to begin and then add partners who can later become stakeholders. The Silicon Valley venture capitalist Vinod Khosla has called effectuation, the best theory of entrepreneurship you follow, whether you believe it or not For all sales and trade marketing leaders, 2022 has been a difficult year to sail through with uncertain end-customers sentiments and channel partners making their way back to markets saying adieu due to the never-ending pandemic situation. Looking ahead to 2023, things are moving at the speed of light. Markets have opened like COVID-19 never happened, pent-up demand got settled in the wink of an eye, and channel partners are thriving again. BI WORLDWIDE, as a global leader and India foremost in delivering tech-enabled loyalty and engagement solutions, takes a look at the channel loyalty marketing trends for 2023 that will shape business results for trade marketing brands. Trend #1 Analytics-led Engagement to Boost Sales Analytics has always been the backbone of loyalty and engagement programs. What has changed over a period is how brands are leveraging the insights for enhancing the overall channel partner engagement resulting in incremental sales growth and better cost efficiency. This trend will continue and is going to get meaner and leaner with big data, predictive, prescriptive, social, and other advanced analytics to further optimize the channel partner and brand relationship with partner retention, sales, promotions, churn, engagement, and rewards personalization. Advanced data analytics will be leveraged using statistical algorithms and predictive models to find out unexplored correlations, hidden patterns, and key preferences. These insights will help brands develop targeted and customized campaigns; as opposed to a one size fits all transactional approach, which does garner the desired response from channel partners. This certainly helps build more direct and meaningful relationships with channel partners, and brands will accordingly benefit from leveraging their c

BSF-HCM-TEST-Dated-2025-08-01-Test NO.-21843

For the first time in 40 years, a small group of Indians is set to venture into the perilous and untamed wilderness that lies beyond our atmosphere. Yesterday, Modi feted four test pilots Prasanth Nair, Ajit Krishnan, Angad Pratap and Shubhanshu Shukla who are to become the first Indians in outer space since Rakesh Sharma historic journey on Soyuz T-11 in 1984. Unveiling the fab four Yesterday event was a ceremonial milestone for the ambitious Gaganyaan programme, which aims to make India one of only four countries that can independently carry out human spaceflight. In the end, no one came and no one went. The Kamal Nath episode was one of Madhya Pradesh most dramatic political events, that, well, was. The hardened Congress stalwart nine time MP, former Union minister, CM and sole rock standing up to saffron waves in the state, seemed about to roll with the tide to BJP, carrying along son Annul and the few pebbles Congress is reduced to in the state. Only, he did leave. But one can never tell in this theatre of the absurd. Nath senior for one dealt with the matter in cryptic one-liners, querying reporters, Why are you so excited? Only certainty is that ahead of Look Sabah elections MP has 29 seats the stage is set for lots more drama. Nearly five years after the Tamil Nadu Pollution Control Board TNPCB downed shutters on the Sterile Copper smelting -plant in Thoothukudi, Tamil Nadu, for pollution, a three-member bench of the Supreme Court suggested the setting up of an expert panel to examine the timelines and the conditions to restart operations. The court was hearing the appeal of the Vedanta group that owns the Sterile plant, challenging the Madras High Court order upholding the direction of the TNPCB to shut down the plant. The expert panel, the Supreme Court argued will investigate the issue whether the industry can operate in compliance with environmental standards by adopting remedial steps or is closure the only option. Are these violations such that they have had an irretrievable impact on the environment so that they can never be remedied? Which means they have to close down the industry. Or are these capable of remediation and if so, what? said the Chief Justice of India, Dhananjaya Yeshwant Chandrachud, who was heading the three-member bench. Opposing the suggestion, Senior Counsel CS Vaidyanathan, who appeared for the TN government, said that since the high court had already gone into the matter and the expert body cannot sit in judgment over the HC finding. But the CJI did not agree and said, It will not be outsourcing to an expert committee. We are not going to dispose it off and leave everything to the committee. By ordering the setting up of an expert committee, the Supreme court is trying to find a middle ground between corporate and public interests, acknowledging the importance of the copper industry and the concerns of the local community, while keeping in mind Tuticorin s history of environmental disasters. While the apex court decision has come as a sigh of relief to the company 1,053 supply service partners, employing 2 lakh people and conducting business worth Rs 1256 crore, when the Sterile plant was operational. Similarly, more than 400 downstream players comprising of industries such as refined copper, sulphuric acid, phosphoric acid, cement, gypsum and slag, employing lakhs of people are keeping their fingers crossed, hoping for an early restart to begin their own operations again. People opposed to the plan

Overcoming debilitating tendencies like nervousness, anger, melancholy, and loneliness. Radha & Rukmini: Two facets of love in Krishn Lila Our unrepresentative people's representatives True Leaders Work From Their Core Strength Time: The greatest traitor and the biggest lie The central thing about our Central bank The writer is a former governor of the Reserve Bank of India Last week, Trump did something that was unusual even by his standards he paid a visit to US Federal Reserve, just four blocks from the White House, ostensibly to inspect what he called an overly extravagant renovation of its office building. Coming on the heels of his public pressure on the Fed to cut interest rates, and veiled threats to fire Fed chair Jerome Powell, the visit crossed lines that were once deemed sacrosanct. It's hard to imagine something similar happening in India. Picture Modi showing up at Reserve Bank of India's headquarters in Mumbai to check if the office is too lavish. The rupee would likely tank, and investor confidence would be rattled. Radha & Rukmini: Two facets of love in Krishn Lila Our unrepresentative people's representatives True Leaders Work From Their Core Strength Time: The greatest traitor and the biggest lie India's moment for strategic unity Ashraf Nehal is a policy analyst and columnist who writes on geopolitics, South Asia and Climate Action. On July 30, 2025, US President Donald Trump escalated trade tensions by threatening 20-25% tariffs on all Indian imports effective August 1, citing market access limitations, India's continued transactions with Russia, and an unsustainable US India trade deficit. Though framed in economic terms, the timing and accompanying rhetoric suggest a calculated diplomatic rebuke particularly following India's outright rejection of U. S. mediation claims in the May 2025 India Pakistan ceasefire, which India insists was brokered bilaterally through military channels. The tariffs target critical Indian exports textiles, auto components, ceramics, seafood but pointedly exclude US-aligned electronics manufacturing, including iPhones assembled in India, underscoring the selective nature of Trump's economic pressure. While there is no formal linkage between the ceasefire narrative and the tariffs, the underlying message is unmistakable: Washington seeks to reshape India's strategic alignments through coercive economic leverage. Yet India is not without precedent or preparation. In 1971, under threat of US naval pressure, India conducted a disciplined and diplomatically buffered military intervention in East Pakistan. Today's crisis is different in form but similar in essence: an external power attempting to influence India's strategic decisions through pressure, misinformation, and policy linkage. Then, as now, India's response must rest on internal unity, strategic autonomy, and global coalition-building rejecting the false binary of alignment or isolation. India's long-term counter to unilateral Western tariffs lies not in transactional appeasement but in structural diversification anchored in its leadership within BRICS and across the Global South. The 2025 BRICS Summit in Rio de Janeiro, expanded to include Egypt, Ethiopia, Iran, UAE, and Indonesia, signaled a clear shift: from a club of emerging economies to a platform for post-Western global governance. Representing nearly 50% of the world's population and over 40% of global GDP, BRICS now embodies the political and economic momentum of the South.

India is also working with partners to operationalize an expanded New Development Bank capable of funding infrastructure and energy transitions outside dollar-dominated systems. This institutional strategy has been reinforced by a wave of high-level diplomatic visits. Modi's recent engagements with Croatia, Ghana, Namibia, Argentina, and the Maldives reflect an effort to knit together emerging economies across Africa, Latin America, and Eurasia into a flexible coalition. His stop in Trinidad and Tobago was particularly significant not just diplomatically but demographically. Trinidad, along with Guyana and Suriname, is home to Indian-origin heads of state and substantial diasporas that maintain deep cultural and economic ties with India. These relationships form the bedrock of a growing diaspora diplomacy strategy especially in the Caribbean, where Indian heritage has translated into real political capital. Modi's outreach echoes the momentum of the India CARICOM Summit held in 2024, where India emphasized shared development goals, technology collaboration, and climate resilience partnerships. In the current picture of the world with contested supply chains and fractured alliances, these diasporic and multilateral ties give India a durable, people-based foreign policy platform, one that strengthens its role as a leader of the Global South and expands its strategic space beyond traditional great-power binaries. As in 1971, the key to India's successful navigation of geopolitical turbulence lies in internal cohesion and external clarity. Then, Indira Gandhi ensured a tightly coordinated political military diplomatic strategy that allowed India to act with confidence, despite threats from Washington and Beijing. Today, a similar synergy is required not for war, but for resisting economic manipulation and diplomatic misrepresentation. India's political class must respond with a unified front. The parliamentary debate over the Trump tariffs is not just about economics, it is a test of national resolve. The government and opposition must agree on core principles: the inviolability of India's strategic autonomy, the necessity of diversified trade, and the rejection of narrative capture by external powers. Internationally, Delhi must not allow the myth of U. S. mediation in the May 2025 ceasefire to persist. The ceasefire was the result of a military-to-military hotline call both bilateral, and deliberate. Letting false narratives linger weakens India's credibility and emboldens similar coercive efforts. Furthermore, strategic unity requires the fusion of hard and soft power. India must bolster its manufacturing resilience, invest in dual-use technology, and ensure credible deterrence. But equally, it must expand its role as a moral, developmental, and civilizational leader for the Global South. The blend of military capability, economic independence, and narrative control is what made India effective and it remains the formula in 2025. Trump's tariff threat may appear as a single diplomatic shockwave but it reflects a larger tremor in the global order: the return of transactional superpower behavior and the rise of economic coercion as statecraft. For India, the question is no longer whether it will face pressure from the West but how it will withstand and reshape that pressure into strategic opportunity. India's response must not be framed merely as resistance but as repositioning. Through BRICS, India is helping to build parallel trade and f

The way forward for sustainable development. Operationalising the plant would also be a boon for the nation to help meet 36% of the country primary copper requirement and cater to 50% of domestic requirement of winding wire industry not to forget the benefits to the state and national exchequer. While making it abundantly clear that company must comply with the existing laws and environmental norms, the three-member bench said that the Tamil Nadu authorities should have specified the violations for closing an industry. When you seek to close down an industry on the ground that there is a violation, then you have to point out what the violation is. You cannot say that I will close down the industry for undefined violations. Closure of an industry, without specifying the violation in clearer terms, affects the investments made, said the Supreme Court in an earlier hearing on February 22, 2024 against shutting down of a smelting plant in Thoothukudi. The Supreme Court added that if the TN authorities felt that the company cannot be trusted, the court can impose conditions on them by way of deposit in an escrow account to be operated by the Union Ministry of Environment or TNPCB or Central Pollution Control Board to ensure that if they don abide by their obligation, their bank guarantee will be revoked. The apex court also pulled up the Tamil Nadu government for not taking steps to remove the copper slag from the company smelting plant in 11 sites, which the state claimed was polluting the soil and groundwater sources in Tuticorin, even five years after the plant was shut down. The Court further asked them What have you all done in the past 5 years, from 2018 to 2024? Thus, it is clear that the job of managing environmental pollution and bringing sustainable development for the betterment of people lives and livelihood is the collective responsibility of both the government and the private sector. There is clear need to list out effective steps for the treatment of effluents and corporate need to take effective steps in this direction. It is equally important for the state government to provide support facilitating support. Ever since an Indian Chief Minister claimed to be deserving of a Nobel Prize `for running the government in the state despite adverse conditions, usually calm and quite Nobel Institute home to Nobel Committee secretariat has turned in to a scene of an unsettling disquiet and uncharacteristic excitement. Here they were, just about concluded the first meeting after February deadline for the nominations when this bombshell dropped amidst their set routine honed to perfection since 1901. Since the claimed Nobel Prize by the said CM could not have been awarded in physics, chemistry, physiology or medicine, or literature categories; the only existing category remains that of peace i.e., Noble Peace Prize. And this aspect put Noble Committee in a quandary: can a Noble Prize be awarded for fueling conditions to further inter-governmental discord? Did Alfred Nobel said to the person who shall have done the most or the best work for fraternity between nations, the abolition or reduction of standing armies and for the holding and promotion of peace congresses. And on top of this very evident oxymoron, how to reconcile the fact that here it was not a case of fraternity between nations but `antagonism between State and Union governments of the same nation! Certainly, a case fit for further deliberations notwithstanding the fact that

Angeles start-up that works in the upcoming area of digital therapeutics (Detox). Detox is arguably the modern medical version of predicting the course of events, but something that works through evidence-based practice rationale, rather than magic or intuition. Detox is an upcoming field in digital health that provides direct medical interventions to patients using software using artificial intelligence that is backed by clinically evaluated and evidence-based data. The information provided is used to treat, prevent and manage a very large spectrum of diseases and disorders, but one of the most pertinent applications of this especially for India is with respect to heart related ailments. Studies estimate that one in every five Indians has a cardiovascular disease, while one in every 20 is at a risk of a Major Adverse Cardiovascular Event (MACE). Hence, it is of utmost importance to direct digital therapeutics towards heart care, so that proper interventions are taken on a timely basis. But what are the shortcomings of current heart care methodologies in medicine? A closer look at the most prevalent diseases in India, i.e. hypertension, heart failure, stroke, volvuli dysfunction, and coronary heart disease, shows that the premise of heart care is based on constant monitoring and management of health parameters. This needs to be combined with the guidance and knowledge of healthcare professionals to educate the patient about the dos and don s to prevent or manage heart conditions. Currently, in India, there are about 250 million patients suffering from cardiac diseases, and there is a dire need to constantly monitor their health parameters, as a way of moving beyond the pill and towards preventive care. There is also a certain level of unpredictability in cardiac treatment, even with strict adherence to checkups and proper medications. In a study conducted by Lupine on more than 750 cardiologists in India, 40% said that they did have a support system to monitor the patients constantly, 70% said they would like regular monitoring and data tabulation, while 30% wanted better medication adherence from patients. These are the gaps that can be cemented by solutions given through Detox platforms. Just think about it. When was the last time somebody from your family underwent a preventive medical test for heart health? While dentist visits or blood tests for sugar levels are increasingly becoming common, why are we equally vigilant about the heart? One prohibitive reason is the cost tests like CT scans and angiograms are expensive, and furthermore, such scans do not have the capacity to provide a full picture of how the heart is functioning. This is where Detox becomes more crucial than ever. But how do we combat digital illiteracy? While there are a few barriers to Detox implementations, the biggest yet is digital literacy in India. There are linguistic and cultural barriers that should be overcome to expand Detox. Although digital health will reduce issues related to ease of access, communication and transport, there are a slew of new challenges that Detox faces today, one definitely being.

Phones, laptops, and tablets. Social media can also be tapped as an important medium to promote informal and supplementary learning alongside long-form training modules. Brands should consider investing in enabling channel partners with insightful learning by integrating learning platforms and apps over the course of the program. Trend Make Every Moment Count with Rewarding Experiences is powerful motivators. This one trend is going to take channel partners and brands association to next level of engagement. Research repeatedly shows that experiential rewards inspire stronger engagement and lasting impact for both the person earning the reward and everyone else who watches it happen. Sociability comes along with non-cash experiential rewards which drive a greater behavioral impact that goes beyond the channel partners into their family members also getting involved with the overall rewards experience short vacation, getting a new car, sponsoring a child education, or even health care rewards. Cash is purely transactional with no re-consumption factor. BI WORLDWIDE enables brands to curate a rewards catalogue that features travel and luxury rewards and experiences that are high on the sociability quotient, which eventually leads to fulfilling channel partners aspirational needs. This has greater potential to encourage and motivate them to perform better and build a long-term and meaningful relationship with the brand, ultimately resulting in enhanced loyalty and brand advocacy from such channel partners. Trend #6 Make Digital Integral to Channel Partner Engagement From onboarding channel partners to engaging them on daily basis to communicating with them across media channels to recognizing them for achieving targets to enabling new training integrated digital ecosystems are making their way to drive channel partner engagement. As trade sales and marketing leaders, integrating digital platforms and systems to enhance loyalty and engagement experience for channel partners should be your utmost priority. The digital revolution has allowed an ever-increasing number of people access to affordable smartphones and internet services, and consequently, many of them spend a significant portion of their time on social media and messenger apps such as Facebook, WhatsApp, and Instagram. Brands and channel partners are no different; and both are riding this digital transformation wave by using mobile apps to better connect, communicate and manage the operation of and participation in channel partner programs to enhance engagement levels and business results. BI WORLDWIDE regularly invests in channel research to understand the communication preferences of channel partners and develop digital products and mobile apps which are accessible on-the-go on for channel partners, as it easier for them to participate more actively and regularly in the program, thereby driving engagement and brand recall, and in turn, sales, and profits. We live in a world of uncertainty where the ability to predict the future course of events is thought to be beyond human capability. In this uncertain world what if I tell you that there exists a soothsayer who can predict the chances of heart failure, 14 days before it occurs and with 90% accuracy? This soothsayer is available on a smartphone application developed by a Los.

How to educate the masses that Detox is a viable solution and how to interpret the data it produces. The first step is to create a model that is scalable for fast growth, and then campaigns need to be undertaken to increase patient awareness. Applications also need to be multilingual and fairly easy to use, not only for the user but for the doctor as well, so that it can easily fit into the physician workflow. Today, Detox in India, is still in its infancy stage, but with the growth of 5G and greater adoption of technology overall, apart from awareness created by the ecosystem in the coming years, we should be able to witness a Detox wave that could potentially save thousands and help millions lead healthier lives. The Go-Vegan Movement has been an integral part of Western nations owing to its numerous health and environmental benefits. However, India has also witnessed a propelling vegan food market of late, with the Asian nation expected to exhibit a CAGR of 11.32% during 2022-2027. But, before we dive into the statistics and the on-ground scenario of the international and Indian vegan market, it is essential to understand what Vegan is exactly. Coined for the first time in 1944, the term Vegan has been used to describe non-dairy vegetarians to exclude all forms of animal products exploitation. Over the recent years, many people across the globe have shifted to a variety of plant-based food alternatives that offer great taste and health benefits. However, a Vegan diet is one that has become increasingly popular for people wanting to adapt to a healthier lifestyle, save the environment and care for animal welfare. The primary reasons driving the Going Vegan movement are lifestyle awareness amongst people, technological advancements, increased lifestyle ailments and allergy conditions, climate change and the changing perception towards sustainability. Studies show that balanced vegan diets are extremely rich in Vitamins A, C, and E, magnesium, potassium, and foliate. Moreover, they offer fiber, antioxidants, and beneficial plant compounds that cater to all the vital nutrients required for a healthy lifestyle. Currently, Europe and North America are reported to be the leading regions for plant-based food industries. Changing lifestyles, animal rights, and growing disposable incomes along with the increasing population of lactose-intolerance consumers in the region are driving the shift to vegan food. However, while the West may be a little further, India is one nation where vegan food has started to disrupt the food market. Similar to other countries, people in India are also looking towards innovations in the food industry with vegan foods clearly considered a healthier meat substitute. Much of this is down to the usage of antibiotics on animals for meat production and ever-increasing cholesterol diabetes related health problems in India. Now, while the popularity of vegan food is considerably lower than that of the West, it must be noted that it slowly gaining momentum. According to a report by United Nations Food and Agriculture Organization (UN FAO), India currently.

BSF-HCM-TEST-Dated-2025-08-02-Test NO.-21852

Exhibits the lowest rate of meat consumption in the world mainly due to 44 percent of its 1.3 billion population being Hindus. Moreover, in 2020, India had around 500 million vegetarians and around five million being strict vegans. While veganism is still in the nascent stages in India, it is expected to offer lucrative growth opportunities in the sector. In just over a decade, there has been plenty of investment and technological advancements in the plant-based proteins sector. In India, local plant-based product companies are offering a comprehensive array of products across food, cosmetics, fashion, leather and so much more. Positively, they have been very well received by consumers who are increasingly looking to choose more healthy and environmental-friendly alternatives. Increasing consumer demand for vegan-fast food alternatives like cheese, chocolates, muffins, biscuits, soymilk, shakes, ice cream, and other bakery items is expected to further enhance the market growth for vegan products. With the primary focus of Going Vegan in India being lowering cholesterol, losing weight, and ultimately changing to a better lifestyle, one only needs to look at a popular vegan product. Recently, vegan food products have seen a surge in demand as they offer multiple health benefits and strengthen the immune system. This invariably helps consumers fight against a wide range of viral and bacterial infections, something very significant in the post-Covid era. What more significant is that while vegan products in India were initially considered very expensive, things have changed for the better. Earlier, big vegan companies in India faced big obstacles like affordability along with the recreation of the same taste in vegan alternatives. However, due to the evolution of the sector, the companies are now able to manage the economies of scale to price vegan products at a reasonable price in India. This, along with the provision of a high-quality product that offers several health advantages, is why the vegan food market looks to have a very promising future in India. Several industries have had to innovate to ensure business continuity in the last two years. It was also essential from the point of view of developing consumer connect for a competitive edge. A relatively emerging sector like finch has had to work hard to create a good space for itself in India. Last year, Indian fitness raised an impressive $9 billion. The funding came with the promise of innovation, with the promise of building models which have been built before to serve customers needs that have not been addressed. But regulations must be adhered to while dealing so closely with money and finance. Considering the massive pace at which Fitch is growing, potential threats like fraud, breaches, and danger to cyber security are also rising. Currently the third largest Fitch ecosystem in the world, behind the US and China, the Indian finch sector is expected to grow with a compound annual growth rate of 22%, in the next five years. New payment systems and models can compromise security and market integrity. Block chain, crowd funding,

Spl-BSF-HCM-TEST-Dated-2025-08-02-Test NO.-21853

As we waited for cabs after a late night at work, in the quiet city dark, I wondered aloud to my two colleagues, one 50 and married, the other 25 and in a relationship: Is love unfashionable right now? The 50-year-old looked perplexed. The 25-year-old instantly responded: Yes, at least among all the people I know. No one talks about being in love or falling in love with anyone. And when you ask them about it they look dismissive. They say, Please, this is all so cringe. My older colleague and I are astonished and we laugh: But that's right. Love is cringe! The state of being in love makes clicha inescapable. It is steeped in wanting, to a degree very removed from cool sophistication. That has always made love a little cringe, even subject to snobbery. The White House executive order amending import tariffs ends a period of significant global economic uncertainty. The 25% duties on imports from India are likely to hurt, especially as they are higher than for peers. However, the impact on India's economy is likely to be much lower than the rise in duties paid by Indian exporters, as most of the tariff burden so far has been borne by US importers and consumers. But the US threat to penalise India for buying Russian oil and armaments, which is yet to be announced, is a separate matter. Can this put India at a significant disadvantage? Not really. Despite Russia accounting for more than a third of India's oil imports last year, the India-specific impact is unlikely to be significant, in our view. Here's why. The world's most powerful man telling the biggest countries by population and landmass to take their dead economies down together deserves bigly coffee Trump-speak for big coverage. Why say such a silly thing Trump was being a churl. How an economy dies is a riddle, though. If it's dead, who takes it down? An economy isn't dead while its last two humans are in touch. One swaps a tea bag for biscuits with the other, and you have a trade. The ECG of economics registers a beat. India has over 1. 4bn humans, raising the possibility of some 980-million-billion unique barter trades. Hardly a dead economy. And if India is a dead economy, why is Trump itching to sell soy, maize and butter to it? A dead economy doesn't produce, or export, so unless you are hallucinating, how do you have a negative balance of trade with it? Why bother to negotiate with it for four months, and then slap a 25% tariff in exasperation? If deadness is about slow growth, India's actually the fastest growing major economy. Besides, an economy with slow or no GDP growth is no more dead than a full-grown tree. Just look at Japan. But with Trump, death can also be a tribute. Like he told steelworker Scott Sauritch in 2018: Your father Herman is looking down proud of you. When Scott said his father was alive, Trump said, Well then, he's even more proud of you. Prajwal Revanna, a former Member of Parliament and grandson of ex-Prime Minister Deve Gowda, has been found guilty in one of several serious cases against him. He was accused of hurting and mistreating many women, and even recording videos of his crimes. These awful videos came out just before last year's elections, and sadly, many people in the videos could be recognized in their towns. Police believe Prajwal may have hurt around 100 women including housekeepers, office staff, and government workers. Because Prajwal belonged to a powerful political family, many victims stayed silent out of fear. At first, Prajwal trie

Spl-BSF-HCM-TEST-Dated-2025-08-02-Test NO.-21858

Prajwal likely believed that being rich and powerful meant the police, courts, and politicians would protect him. But this time, something different happened. Public anger and brave victims kept the case in the spotlight. The turning point came when his grandfather, Deve Gowda, told him publicly to come back to India and face the law. That message made a big difference; it meant there would be no interference in the case. The police followed proper rules, the lawyers did a good job presenting the case, and the judge acted quickly. Because no one tried to cover up the truth, justice was served. This case shows that when there's no political pressure, and police can do their job freely, even victims of powerful people can get justice. Sadly, not every case is like this; some are still waiting to be heard, even after public protests. A motorcar is made of steel, aluminium, copper, glass, rubber, and numerous other things. All of these are finite resources. Steel is also needed for buildings and machinery. Glass for bottles and watch dials. Aluminium for pressure cookers and soda cans. When finite resources have competing uses, it's a miracle that the production of cars, etc, keeps increasing year after year, and the world becomes a wealthier place with it. It wasn't always so, though. Two centuries ago, economists were a grim lot, and Robert Malthus was more pessimistic than most. He worried that there wasn't enough land on Earth to feed the increasing population, which was nudging 1bn then. But we're 8bn-plus now, and growing, without exhausting Earth's carrying capacity. In fact, we've become so used to the idea of growth that a 6. 5% increase in GDP seems lacklustre, 5% dismal. In his new book, The Invention of Infinite Growth: How Economists Came to Believe a Dangerous Delusion, Christopher F Jones, associate professor of history at Arizona State University, examines how growth became a modern ideal, and its impact on the planet. GDP may be an abstruse idea for most, but it's become the default measure of growth. Up is good, down is bad, and the faster it rises the better. Some say it's the most powerful number in the world. But as Jones points out, GDP is a relatively recent concept, developed in 1934, and applied only after WW2. The real big change that came with it was that growth through its proxy GDP came to be seen as key to jobs, peace and prosperity. Hence, for the first time in history, it became the government's responsibility. Using different policy tools, govts were expected to make national economies run faster. Those that couldn't were booted out in democracies. The idea of infinite growth, however, didn't form for almost 20 years after. It happened in the 1960s when the US and USSR were pursuing growth intensely during the Cold War, and oil production in West Asia doubled in a decade, even as the known oil reserves trebled. These developments gave rise to irrational exuberance among economists and policymakers. In 1992, when he was World Bank's chief economist, Larry Summers declared: There are no limits to the carrying capacity of the Earth. But ask scientists if infinite growth is possible, and they'll say no. They're also deeply concerned about the ecological impacts of unbridled growth. So, why are economists divorced from observed reality? Jones says it's because they trust technology to overcome natural limits, and don't concern themselves with the natural world. As long as the delusion of infinite growth shapes po

And distributed ledger technology (DLT) are also vulnerable to fraud and hacks. Because of these risks integrated with the finance sector, the financial services sector must be heavily regulated across geographies. Let look at some of the key best practices fitness can follow to safeguard the financial security of their customers, especially while evaluating partners and vendors who offer employee financial wellness. Consumer-centric digital enterprises Regulations exist to protect the interest of end customers. They exist to ensure that short-term benefits do not hurt long-term financial independence. For example, a recent innovation like credit lines, which prospered for a while, was shut down soon after. In June this year, the Reserve Bank of India (RBI) issued a circular saying that credit lines cannot be loaded into prepaid instruments. Businesses which processed transactions worth more than 3500 cores were now in jeopardy. With regulators giving extra scrutiny to new innovative technologies, fitness and banks that partner with them need to be extra careful they are compliant with regulations, new and old. Credit lines are a pre-approved loan amount, usually from a bank or NBFC, which may be used when the customer requires it. Customers also have options to avail overdraft facilities provided by the bank or access to their earned salary (Salary-on-Demand) provided in partnership with employers. In a world full of emergencies, where employees may need urgent access to finance, the Salary-on-Demand is a great system for employers to ensure the well-being of employees. However, the onus to ensure compliance also falls on employers to avoid any regulatory hassle in the future. Make Know Your Customer mandatory Fitness were replicating credit cards without going through the necessary Know Your Customer (KYC) requirements and underwriting norms required for a credit card. The latest digital lending guidelines also re-emphasize that a credit line must be transferred from the lender bank account to the borrower registered bank account. The major differentiating factor between prepaid instruments and bank accounts is that the KYC requirements for opening Prepaid Instruments (PPIs) are relatively relaxed and not subject to the same level of scrutiny. This should change. Making KYC mandatory helps add safety cover. Identify fraudulent models A few basic questions that one should ask before availing credit from fitness and Non-Banking Financial Companies (NBFCs) are: Where is the money coming from? What is the underlying instrument? A bank account? A credit card? A prepaid instrument? How is the money flowing between the multiple entities involved? Are direct payments being made to end merchants without passing through the borrower bank account? Regulators cannot monitor all financial institutions and only audit non-compliant models after they become big enough to be actively audited. Until such time, it is essential, as a customer, one remains informed and aware of such models that could spell trouble. Using services from non-compliant organizations can put your credit scores and financial security at risk. Moreover, if organizations are willing to flout regulations in one aspect, they may do the same in other aspects, such.

BSF-HCM-TEST-Dated-2025-08-03-Test NO.-21860

As data security and collection recovery processes. Prioritizing Consumer Safety Leveraging technological advancements to deliver financial services has greatly facilitated financial inclusion. Several banks and financial institutions have partnered with Fitness to incorporate modern technologies such as block chain and artificial intelligence into their products, services, and operations. Digital financial services, payment aggregators and processors, standalone platforms that interface with regulated institutions, and digital banks are all growing in popularity. Though we all appreciate innovation, one can ignore that the responsibility towards the safety of their customers does not become casualties of failed experiments by overzealous organizations. Helping employees manage their finances is important, but even more essential is that it is done with utmost caution. Ultimately, the commitment of the Organisation to manage employees finances and promote financial wellness will add to the well-being of the employees and positively impact the Organisation. For an electric vehicle, the battery is its most crucial as well as its most expensive component. In 2015, they made up more than 57% of the cost of an electric car in the US. Advances in technology, improved manufacturing processes, and efficiency gains have all meant that the price of the battery continued to fall, and reduce the cost of an electric vehicle. Though the battery share of an EV overall cost continues to reduce, any decrease or increase in battery prices has a direct bearing on the price of an EV. This correlation is seen in the decline in EV prices, which closely followed falling battery costs in the 2010s. From almost $1,200 kWh in 2010, battery prices fell to $137 kWh in 2020. This decline brought EVs into the mainstream, with categories such as 2-wheelers and 3-wheelers seeing rapid uptake. In 2011, overall EV sales were about 55,000 and did constitute even a 0.1% share of the overall market. By comparison, 2021 saw sales of almost 70,00,000 EVs. Falling battery costs have thus been one of the significant reasons for the proliferation of EVs. However, 2022 bucked this trend and even saw an increase in battery pack prices, primarily due to high raw material costs. Prices for 2022 were at $151 kWh, the same level as in 2020. And 2023 might see an increase or have prices at the same level as 2022. It is only in 2024 that battery prices are expected to begin falling again. Though 2022 and 2023 see a stabilization in battery prices, they are still expected to fall over the decade. Persistent high prices of raw materials would not be a factor in the long term as the combination of materials used would be changed to utilise more abundant and cheaper sources. And continuing improvements in efficiencies would see better batteries, thus reducing the cost of EVs. EV sales would increase in 2023 despite battery prices remaining stable due to a combination of economic, technological, and policy factors. High prices of fossil fuels make a favorable case for EVs on account of having much lower operating costs. And the.

Price of oil is expected to remain high in 2023. Policy support for EVs has also been mounting, with numerous countries having in place a variety of subsidies and incentives to bring down EV prices. And EVs are still a maturing technology, which means that there are still a lot of areas for improvement and gains to be made. Lithium battery prices, though stable at the moment, will continue to fall. But several other factors are tailwinds for EVs, and 2023 would be another strong year for the electric vehicle industry. The Supreme Court on January 02, 2023 upheld the decision of the Central government taken in 2016 to demonetise the currency notes of Rest 500 and Rest 1,000 denominations. Of the 5-judge bench, 4 judges voted in favor of upholding demonetisation, whereas one judge dissented. The five-judge Constitution bench headed by Justice SA Nazeer pronounced its verdict on the matter dismissing a batch of petitions challenging the Centre 2016 decision to demonetise Rest 500 and Rest 1,000 currency notes and opined that the decision, being an Executive economic policy, cannot be reversed. The Supreme Court accepted the government submission that there was consultation between the Centre and the RBI before demonetisation. There was a reasonable connection between the government & the RBI to bring such a measure and as such it holds that demonetisation was not hit by doctrine of proportionality, the Supreme Court stated. The court said the notification dated November 8, 2016, which announced the decision to scrap the high-value currency notes cannot be said to be unreasonable to be struck down on the ground of decision-making. The top court had on December 7, 2022 directed the Centre and the Reserve Bank of India to put on record the relevant records relating to the government 2016 decision and reserved its verdict. In its affidavit, the government had submitted that demonetization was a well-considered decision and that the consultation process with the RBI had begun in February 2016. The Central Bank too said that due process was followed and it had recommended the demonetisation. Attorney General R Venkataramani in his submission had said that the economic policy of demonetisation was connected to a social policy where three evils are attempted to be addressed. Counsel of RBI in his submission had informed the Apex Court about the objective of the demonetisation policy as one to curb black money and fake currencies & expressed its opinion that judicial review was not applicable to economic policy decisions. On this, the Apex court said that the court has the power to examine the way the decision for demonetisation was taken, adding that the judiciary cannot fold its hands and sit, just because it is an economic policy decision. Dissenting note of Justice Nagarathna Justice Nagarathna however differed with the majority judgment on the point of the Centre powers under Section 26(2) of the RBI Act, 1934 which allows the Central Government to declare any series of bank notes of any denomination to.

Cease to be legal tender after a recommendation from the central board of RBI. According to Justice Nagarathna, Parliament should have discussed the law on demonetisation & that the process should not have been done through a gazette notification. She also opined, there was no independent application of mind by the Reserve Bank of India. As the government had only sought the opinion of RBI, it cannot be said to be a recommendation according to her. Demonetization defined Demonetisation is referred to as the process of stripping a currency unit of its status to be used as a legal tender. In simple words, demonetisation is the process by which the demonetised notes cease to be accepted as legal currency for any kind of transaction. Section 26 of the Reserve bank Act, 1934 According to sub-section (1) of Section 26 of the Reserve Bank of India Act, 1934, every bank note shall be legal tender at any place in India in payment or on account for the amount expressed therein, and shall be guaranteed by the Central Government. This provision is however subject to sub-section (2) of Section 26 of the Act. Sub-section (2) of Section 26 of the Act applies only when a proposal for demonetisation is initiated by the Central Board of the Reserve Bank by way of a recommendation being made to the Central Government. The said recommendation can be in respect of any series of bank notes of any denomination which is interpreted to mean, any specified series of bank notes of any specified denomination. The expression any series of bank notes of any denomination has been given its plain, grammatical meaning, having regard to the context of the provision, and not a broad meaning. Thus, the word any will mean, a specified series, or, a particular series of bank notes. Similarly, any denomination will mean any particular or specified denomination of bank notes. India is a diverse country rich in its local language heritage. One would be surprised to know that English, which is perceived to be the language of the classes, is only spoken by ~10.35% of the total population of India. Having said, it is only ~2% of the population that can speak proper English (without any grammatical errors), the rest of the 8% may only understand English and may not speak or write the language properly. Hindi remains the dominant language in the country with ~45% of the population who are fluent or understand the language. The rest of the country is diversely rich in other languages; their primary language is neither Hindi nor English (India has 22 languages and over 19,500 dialects). In the early stages of detach, start-ups focused on creating products services catering to Tier 1 cities, IB boards, and or the English Medium schools, but with PM Mode vision of complete digitization of education in India, it has become all the more relevant today that detach start-ups think of language inclusivity in their diverse innovations. That and India majorly.

BSF-HCM-TEST-Dated-2025-08-03-Test NO.-21863

Untapped talent pool, which is not English-speaking or English-educated, need to come up to speed to make India a front-line country and economy. At the end of the British Raj, India literacy rate was a mere 12%. The country literacy rate has jumped leaps and bounds since then to a staggering 77.7% in the past 75 years of independence. With 254.8 million students in Class I to XII bracket, we are the largest school-going population in the entire world! Having said that, our school system is largely government-funded, with state education boards imparting education primarily through the local language. So far, detach firms have been focusing on the creamy layer of English education and private schools but with government schools at a whopping ~ 11 lakhs outnumbering all others, there is a huge push in making firms to collaborate with states to provide language teaching on mobile apps and online. According to the National Education Policy (NEP 2020) vision, 14,500+ schools around the country will be developed into PM Shri Schools, with upgraded infrastructure, innovative pedagogy and technology that would make them exemplar. These schools and many that would come under PM Shri fold are envisioning to create and nurture holistic and well-rounded individuals with 21 set century skill sets. While these would be created as proofs of concept, it is understood that many state-government aided, funded, and run schools will soon follow suit. Some of the state boards are much bigger than the CBSE and since most of them teach in local languages, the inclusivity of regional language in detach tools is soon becoming a necessity. All of us deserve to access accurate information in the language of our choice. Many complex concepts are better understood in the native tongue. It is our natural language, and it has been proven that conceptual learning done in our mother tongue sets a solid foundation to the learning process. It has been observed, though not researched, that IT professionals from South India (which has a significant dominance in the country) prefer their native language as the primary learning medium. There are several YouTube channels with lakhs of followers that create detailed tutorials on AI, Machine Learning, Block chain, Big Data, Cloud Computing, and more in regional language, and the presenter fun to watch as well! The multilingual approach has already been adopted for technical training, and gradually it is envisaged to integrate similarly with other streams of education. Also, a major chunk of online learners belongs to the non-metro cities, where they may not have easy access to quality trainers or even modern learning tools. Democratization of education is a must and a dire need today. The country needs detach tools that cut across geographical boundaries, bringing the best training modules and mentors to anyone who needs them. There was a time when knowing English meant success. It still is an important language to learn, but the Indian internet population thinks otherwise. Consumers spend 50%-60% on Hindi video content followed by about.

Taken report other languages and just 5%-7% on English video content; which means that there is an already growing regional language internet video content user base which is already the medium of the present, and will probably become the medium of the future. Lastly, there the untapped power of Tier 2 cities and rural regions in India. These are the markets that are connected to the rest of the world through affordable 4G and smartphones and are the biggest receptors of brand correspondence. In fact, some of the fastest conversions happen here. Detach tools therefore in the local language would be a sure shot and smart way to digitize education in these markets with early adopters. In India, the number of young people in school and set to graduate is higher than ever. As per the ASER Report, India has the largest and the youngest workforce in the world. However, the skill gap is tremendous. With the world being hurtled towards a digital future, if the Indian workforce is digitally capable, there is no stopping of India growth as a frontline country and economy. Our government has launched its various missions to achieve these capabilities. The pursuit and success of these goals will largely depend on the availability and commitment of the talent pool that India will have for itself and for the world. It is here the role of inclusive digitalized education is most crucial cease to be legal tender after a recommendation from the central board of RBI. According to Justice Nagarathna, Parliament should have discussed the law on demonetisation & that the process should not have been done through a gazette notification. BSF-HCM-TEST-Dated-2025-08-03-Test NO.-21867

Journalism and media have a great social responsibility. That is why journalists are doing their work in any dangerous situation. For journalists who work at risk in any situation, now they have to risk their lives to do journalism in war-torn countries. Even now, many countries are in some form of internal civil war and external war. But lately, the war that has drawn the world attention and caused huge human losses is between Russia and Ukraine and Israel and Palestine. Thousands of people have lost their lives due to the Russia-Ukraine war that started in 2022 and the Israel-Palestine war that erupted in 2023. Journalists have lost their lives while working on the frontline in such war-torn areas. According to the reports of the International Federation of Journalists, Reporters without Borders and other organizations, more than one hundred journalists have been killed in 2023 alone. This shows the picture of how much risk there is for journalists who collect information. Syria, Iraq, Libya, Yemen, Afghanistan, Burundi and other countries are always at war. Journalists have to risk their lives to gather news in war-torn areas. This is the reason why journalism is considered a risky profession. Residents of war-torn areas have become voiceless. No one listens to their pain except journalists. And, because of that, all the warring parties become stars. Therefore, the number of journalists who die every year is significant. According to the data published by Reporters without Borders (RSF) last year, about 1,700 journalists have been killed worldwide in the last 20 years. During this period, journalists have been killed in war incidents from America, Afghanistan, Iraq, Libya, Sri Lanka, and Myanmar to Nepal. Media rights activists have pointed out that the two decades from 2003 to 2022 were a deadly decade, especially for those engaged in the service of the right to information. According to the ISF, Iraq and Syria were portrayed as the most dangerous countries to work as journalists. I represent a country that has never been in a major external war, but has been in the grip of an internal armed conflict for 10 years. About 17 thousand people lost their lives. Journalists were among the dead. It has been 17 years and still some of the peace process that was started to resolve the conflict is not being completed. The families of those killed in the war have not yet received justice. Therefore, I know how much the pain of war is, and how risky and challenging it is for journalists to reach the common people by weaving the stories of such war. Journalists are also working in the terrible environment of war. But some challenges and risks are also increasing due to the weakness of ethics in the style of journalism. In a war-torn region, if the religion of journalism and its basic beliefs are forgotten, one has to face a terrible accident. The risk has also increased due to the lack of balance in the reporting done by some journalists, the dissemination of material that incites the warring parties, etc. Recently developed information technology has established the access of individuals to information. Due to the growing number of media companies, the competition has also heated up. In such a situation, journalists are obliged to follow the ethics of journalism by staying within the limits of professional standards. Therefore, for the safety of journalists working in conflict areas, they should also fulfill their professional ethics in the pra

BSF-HCM-TEST-Dated-2025-08-03-Test NO.-21868

In fact, for India to realise its economic growth potential over the next decade, boosting the quality and quantity of workforce participation is key. New research by Oxford Economics and Uber suggests that lowering the barriers for an extra half a million women to enter the workforce of India five largest cities in the next four years could boost the size of their economies by as much as 1.2%. So, what can be done to attract more women into the workforce? The underrepresentation of women in work is a complex and multi-faceted problem. Women personal decisions on work are deeply entwined with social norms and a lack of gender inclusivity in public spaces, generally. But research shows that mobility is at the heart of the problem. Firstly, women face a significant risk of harassment and sexual assault on public transport in Indian cities. This lack of safety limits the jobs they are willing to take, restricts the distance or time of day they are willing or able to travel, and sometimes deters their economic participation altogether. A field experiment conducted by Sunita Jolata and Lisa Ho in Mumbai slum resettlement communities, found that nearly twice as many women chose home-based jobs than women who worked in offices, and this difference held even at lower rates of pay. The burden of care giving duties effectively falls disproportionately, or solely, on the woman in the household in India. Women who work are typically expected to juggle their paid responsibilities against their prevailing household duties, and this acts as a further barrier to participation, influencing the decisions they make when considering job opportunities. Whilst many of the obstacles holding women back are cultural and heavily embedded, some of the mobility issues are altogether more practical, and therefore subject to technological solutions. The increasing ubiquity of mobile broadband access and the rapid growth in ride-hailing services in Indian cities has disrupted the status quo. Ride-hailing apps are proving to provide safer, more convenient, and more flexible mobility options for women, and this is supporting a significant uptick in their access to employment opportunities and better-quality jobs. We recently surveyed 7,000 Uber riders across five major cities in India to understand their travel patterns and decision making. Three-quarters of women who used ride-hailing to commute to work said it was because it offered a safer alternative to other travel options. Half of the working women in our sample felt that ride-hailing helped them balance their time across work and family commitments while, crucially, a third agreed that it enabled them to access a wider pool of suitable work opportunities. Safe and efficient transportation options, such as those provided by ride-hailing services, can make it easier for women to join the workforce and find better-quality jobs. Policymakers can give ride-hailing a lift There is a growing consensus in India around the need for policymakers to embrace the technology behind ride-hailing at both the national and urban level. It is not a panacea for gender inequality in India, nor the country overloaded transport infrastructure. But it does practically address some of the structural issues holding women back and can help to close the gender commute gap in India and empower women economically. During the launch of a report titled Ride-Hailing: A Platform For Women Economic Opportunity In India, Minster Smite Iran had sai

From a Google engineer electrifying the world by claiming that an AI Chabot has become sentient, to the difficulty of distinguishing human-generated text and images from AI-generated, there has been loads of stuff for podcasts to chew over. Here are a few conversational snippets from some cool, smart tech types. How will Copilot, Catgut, Stable Diffusion and Generative AI change how we develop, work and live? This is the title of an episode of the Code Together podcast in which three AI evangelists from Intel sum up what distinguishes the developments of 2022. They point to the fact that there are certain moments when a new technology adjusts and changes your thinking about computing. Google did it, the iPhone did it and Open-air is doing it with Catgut. When DGCA rules on alcohol-induced unruly passenger behavior on board airline flights were being re-scripted in 2017, even the most fecund of minds would not have envisaged the possibility of an aircraft cabin being turned into a urinal. After two inebriated Air India passengers openly urinated mid-air in two separate incidents within the span of a recent fortnight, with one of them allegedly urinating over a woman passenger, the big question before authorities might appear to be how to tackle this new variant within the species of unruly flyers. But look beyond this mutant behavior and one would stumble onto a larger, more pressing issue. That of the jugged that the AI crew appears to have mastered to ease themselves out of such situations and head home straight after a flight instead of spending hours at a police station filing an FIR. We are not the body because our body is continuously changing. Body cannot be true. Truth does not change continuously. Then comes the mind. It, too, is ever-changing, it is also not fixed. In the morning we might see that our mind is in a beautiful condition and fresh, but just in the next moment it might change, be in bad condition and mood. Mind is nothing but a duster of thoughts. One thought is raised and sustained for some moment and then it is destroyed. Another new thought arises. So, our mind is changing, hence, it cannot be true. Similarly, our intellect is also not true because one moment we consider one fact as right with our intellect and wrong in the next moment. So our intellect also directs us in the right and wrong ways. the ego. Ego covers our true nature and.

Spl-BSF-HCM-TEST-Dated-2025-08-03-Test NO.-21871

The false confidence about managing the consequences of climate change and biodiversity loss should be abandoned. It's known that economic growth and well-being don't increase in tandem beyond the mid-income level. Billionaires are not happier than millionaires at least not because of their wealth. Since infinite growth is not sustainable, govts should now focus on income distribution rather than maximisation, Jones says. Growth can't be an end anymore it has to be targeted at those who need it most, and away from those who don't. Former JDS parliamentarian Prajwal Revanna's conviction in less than a year in one of four cases of sexual abuse and rape, is a rare and welcome glimpse of how should work. Prajwal, former PM Deve Gowda's grandson, is accused of multiple rapes and recording his own crimes. Explicit videos surfaced in pen drives ahead of LS polls last year, including clips, photos, and screenshots. Troublingly, all the victims could be identified by locals who saw those videos. Police estimated about 100 women had been abused by house-help, staff, party and govt workers. Family clout ensured silence. Prajwal's first reaction was exactly how powerful, entitled abusers respond: allege political conspiracy, bully the media, get gag orders and go scarce. Obnoxiously, Prajwal's parents even kidnapped a victim. Prajwal chose Germany to lie low, no doubt assured the triad of privileged politicians, police and lower judicial staff would 'take care' of the matter using bribery, coercion, threats and intimidation. But public uproar, political opponents and multiple victims kept up the pressure. The point where the case took a road less travelled by political elite is when Deve Gowda drew a red line, and in a long letter on X told Prajwal to return immediately and subject himself to the legal process. He should not test my patience. Gowda's sanction certainly played a part in ensuring no political interference in the probe. Investigation was by the book, no evidence was botched up, prosecution was on point. The swift trial and conviction simply go to show that minus political protection and privilege, and with police given a free hand, victims, especially of sexual assault, may get a stab at justice. Despite public outrage, it took the Supreme Court's intervention to file an FIR against Brij Bhushan. That case is cold. And the message is chilling. whose upcoming book is titled 'The Great Indian Brainrot' Phrases like 'you are just a groundsman' are part of a familiar genre of Indian anger where dominance is asserted by reminding someone of their job. This insult is more Indian than a McAloo Tikki. These aren't slips of the tongue, but echoes of a system that trains us from childhood to link dignity with designations At a seemingly routine net session at The Oval, something dramatic happened. When curator Lee Fortis allegedly instructed the Indian coaching staff to maintain a distance from the pitch, India's head coach Gautam Gambhir reportedly waved his finger and snapped, You're just a groundsman, you stay in your capacity. You are just a groundsman, nothing beyond. The exchange, captured on video, went viral. To many, he was just another entitled elite man humiliating a salaried professional. To others, he was a postcolonial hero standing up to western authority, a symbol of new India that no longer bends before a white man. Altercations aren't rare in sport. As George Orwell put it, serious sport is war minus the shooting . But this mo

But in India, nothing is ever just about turf. Every interaction carries the sediment of class, caste, and a long history of bruised egos at being told what to do. Let's start with the obvious: the insult. Phrases like 'you are just a groundsman' are part of a familiar genre of Indian anger where dominance is asserted by reminding someone of their job. This insult is more Indian than a McAloo Tikki. It's so rooted, it might as well be muscle memory. It reminds me of that viral airline video from a few years ago, where a passenger yelled at an airhostess: You are a servant of the passenger . She replied: Sir, I am an employee, not your servant. Or the countless panel debates where spokespersons from our top political parties refer to someone as chaprasi se bhi badtar (worse than a peon). These aren't slips of the tongue, but echoes of a system that trains us from childhood to link dignity with designations. But to view the Gambhir episode only through the lens of classism is to stop at the first layer. After all, he is the coach of a sport famously called a gentleman's game. Calling cricket a gentleman's game is a bit like awarding Barack Obama the Nobel Peace Prize just months into his presidency, not because he ended any war, but because the world hoped he wouldn't start new ones. It's a hope disguised as a compliment. The title arrives early, and with it, a quiet manifesto of moral behaviour. Cricket in England has long been steeped in class. The term 'gentleman's game' reflects hierarchy more than virtue. From 1806 to 1962, a high-profile series called 'Gentlemen vs Players' divided cricketers into two categories. The Gentlemen were wealthy, upper-class amateurs; the Players were working-class professionals who played for pay. You can still spot echoes of this in today's India, where someone from Greater Kailash might call himself a farmer after planting a few broccoli seeds in his Mehrauli farmhouse. At Lord's, they had separate dressing rooms and separate entry symbols of a class system that lasted until the distinction was formally abolished in 1963. The irony, of course, is that Gambhir's outburst was a classic act of classism performed inside a sport that was engineered to preserve it. Then came the third and most theatrical layer: colonialism. Unlike classic Indian classism, this wasn't a coach yelling at a security guard at Wankhede. This time, the curator was white and Gambhir, in that awkward colour category the West calls brown. The groundsman became the British Empire, armed with a lawnmower, and Gambhir the last angry nationalist asserting his right to have a look at the sacred soil. This kind of showdown has a large audience in India. The whole heated exchange was celebrated as proof that India has arrived, and will now speak to the ex-coloniser in the only language they understand: assertion. Fair enough. But is this really decolonisation or even assertion? The obsession with turning every minor spat into a grand symbol of resistance is, ironically, the most enduring symptom of a colonised mindset. When net practice confrontations are reframed as anti-imperial defiance, you're not exacting revenge, you're just frantically cramming too many lemons into your mouth with aggression, hoping to cure a special kind of hangover named the Colonial Hangover. Obviously, it doesn't cure the hangover. Even if the curator was at fault, this wasn't some underdog moment. This wasn't a moment of resistance, nor one of grand injustice. T

BSF-HCM-TEST-Dated-2025-08-04-Test NO.-21875

About 64% less likely to fail. And when women participate in peace processes, the agreement is 35% more likely to last at least 15 years. Women face the worst brunt of war, in terms of sexual violence and abuse as well as displacement. To see fellow women in authority can encourage women to reclaim public life without fear. The same lesson holds for India at home. Women will be safer if there are many more women in all ranks in various government branches, including police. From a Google engineer electrifying the world by claiming that an AI Chabot has become sentient, to the difficulty of distinguishing human-generated text and images from AI-generated, there has been loads of stuff for podcasts to chew over. Here are a few conversational snippets from some cool, smart tech types. How will Copilot, Catgut, Stable Diffusion and Generative AI change how we develop, work and live? This is the title of an episode of the Code Together podcast in which three AI evangelists from Intel sum up what distinguishes the developments of 2022. They point to the fact that there are certain moments when a new technology adjusts and changes your thinking about computing. Google did it, the iPhone did it and Open-air is doing it with Catgut. When DGCA rules on alcohol-induced unruly passenger behavior on board airline flights were being re-scripted in 2017, even the most fecund of minds would not have envisaged the possibility of an aircraft cabin being turned into a urinal. After two inebriated Air India passengers openly urinated mid-air in two separate incidents within the span of a recent fortnight, with one of them allegedly urinating over a woman passenger, the big question before authorities might appear to be how to tackle this new variant within the species of unruly flyers. But look beyond this mutant behavior and one would stumble onto a larger, more pressing issue. That of the jugged that the AI crew appears to have mastered to ease themselves out of such situations and head home straight after a flight instead of spending hours at a police station filing an FIR. We are not the body because our body is continuously changing. Body cannot be true. Truth does not change continuously. Then comes the mind. It, too, is ever-changing, it is also not fixed. In the morning we might see that our mind is in a beautiful condition and fresh, but just in the next moment it might change, be in bad condition and mood. Mind is nothing but a duster of thoughts. One thought is raised and sustained for some moment and then it is destroyed. Another new thought arises. So, our mind is changing, hence, it cannot be true. Similarly, our intellect is also not true because one moment we consider one fact as right with our intellect and wrong in the next moment. So our intellect also directs us in the right and wrong ways. the ego. Ego covers our true nature and.

BSF-HCM-TEST-Dated-2025-08-04-Test NO.-21876

Leads us to ignorance. The body, mind, intellect and ego are adjectives. But our true nature is Atman which is eternal and constant in nature. It is like a noun. If adjectives do not exist, noun can sustain, but without the existence of a noun, the adjectives cannot stay. Ram is a good boy; Ram plays good football. Good is the adjective without which Ram can exist. But without the presence of Ram, the adjective good can stay. Similarly, without body, mind, intellect and ego, the atman can exist, but without the atman body, mind, intellect and ego cannot exist. When we see the world with our eyes, the world around us becomes seen and our eyes the seer. But without the aid of mind, eyes cannot see. So now the eyes along with the world around become seen and the mind becomes seer. But if there is no existence of consciousness or self, the mind is non-living. So the self is the main subject without which the existence of mind along with the eyes and world around us is non-living and worthless. So the consciousness is the ultimate seer and all other previously described matters are seen. The consciousness is the ultimate cause of all effects. During Dura Puja, muftis of the goddess are made from clay and during immersion, the muftis become clay again. Similarly, originally we have come from consciousness. We are different in color, shape and name. But when we merge with our origin, we become one. Thoughts about worldly matters make us restless and thoughts about spirituality make us calm and quiet. By continuous thinking about the Self, our mind becomes silent and stops thinking. This is the point when we will realise the Self. It may take a long time, or it may happen within a fraction of a second. The light can come within us removing all ignorance. This is called Self-realisation. It does not matter how much time we pass in front of the muftis of god and goddess. The main thing is whether we can think about the Divine or not, whether we have realised Him or not. Then and then alone Oneness will be achieved. The year 2022 was the year of resurgence for India, coming out of the pandemic, most key sectors of our economy have performed well overall, demonstrating our resilience as a nation. While global economic and geopolitical headwinds remain, the pandemic has completely changed how we as people live, work and travel. With life returning to normalcy, we notice that more and more Indians are re-evaluating and re-imagining local commutes, inter-city travel, or fulfilling micro-mobility needs. India EV story continues to shine globally as the result of accelerated adoption both for commercial and personal uses, backed by outcome driven policies at both central and state level. At the micro-mobility level, e-cycles are scripting a special story the creation of a new category and transforming the traditional cycles sector with cutting-edge technology and innovation. Studies forecast that.

BSF-HCM-TEST-Dated-2025-08-04-Test NO.-21877

What we tend to call overtiredness happens when an emotional state, such as anxiety, distress or fear, blocks our ability to go to sleep even when were really tired. This is a survival response that helps us to stay awake when in danger, no matter how tired we are. It suggests overtiredness can be reframed to help us better respond to our child needs when it happens. At the end of the day, the feeling we have of needing to sleep is called sleep pressure. The longer we stay awake the more sleep pressure rises. Typically, the higher it gets, the easier it is to fall asleep. If we stay awake for long enough, eventually we all fall asleep even if we are trying not to. series about issues affecting those of us in our twenties and thirties. From the challenges of beginning a career and taking care of our mental health, to the excitement of starting a family, adopting a pet or just making friends as an adult. The articles in this series explore the questions and bring answers as we navigate this turbulent period of life. The sensation of sleep pressure is caused by the build-up of chemicals (called adenosines) in the brain. These are proteins that are removed from our brains while we sleep, and build up again while we are awake. For adults, this process takes about 14-16 hours. When we delay sleep past this point the build-up of adenosines cannot go on unchecked. At some point, eventually, we must sleep. Babies sleep pressure builds up more quickly than adults. Young babies often fall asleep after being awake for an hour or two. As children get older, sleep pressure builds more slowly. But it takes several years until a child is able to stay awake all day. What stops us sleeping? To fall asleep we must be calm, relaxed and able to switch off our brains so that the buildup of sleep pressure can tip us into sleep. When something blocks the action of sleep pressure, such as fear, pain or racing thoughts, we may struggle with sleeplessness. In the same way, sleep happens more easily for a baby or child when sleep pressure is high, they are in a calm relaxed state, and nothing is preventing sleep onset. But sometimes babies and children need help to become calm before sleep pressure can kick in and they can nod off. When a baby or young child sleep pressure is high and the need to sleep is strong, but they are emotionally unable to calm themselves, or they are in a situation where they cannot relax where there is noise, lights, or activity we may label them as overtired. Emotional exhaustion, which is a form of stress, prevents both children and adults from sleeping and makes them cranky. Some responses to overtiredness are heavy-handed. Ordering a child to their room, putting them to bed in the face of distress or punishing them for not falling asleep when.

BSF-HCM-TEST-Dated-2025-08-04-Test NO.-21878

Told to do so will dial up the child further and push sleep further from reach. After all, none of us can fall asleep on command. Helping babies to sleep In this situation, we must remember that babies and young children need our help to manage their emotions. It is our job as parents to help them become calm, dial down, and relax in preparation for sleep. We can do this in many ways. Physical contact such as cuddling, rocking, stroking or patting works for most children, although it must be remembered that some neurodivergent children can find touch irritating rather than calming. Non-contact methods also work. The presence of a relaxed slow breathing adult can calm a child, as can listening to gentle talking, singing and humming. In Czech, there is a specific word for lying with and helping a child to relax so they can fall asleep. There is no name in English for the process of helping a child relax so that sleep pressure can tip them into slumber, so we often don discuss or acknowledge it. We can use it, though. And we can understand that what we have named overtiredness is the conflict between sleep pressure being high and something blocking the effect of that sleep pressure. In this situation actively removing the blockage fear, pain, anxiety by helping babies and children to become calm is the quickest way to help them fall asleep. Next time your baby is having a meltdown at bedtime, or your child is throwing a tantrum at the end of the day, hug them, cuddle them, talk gently to them and calm them. Let sleep pressure do its thing, and they all be snoozing in no time. experts have written for The Conversation. Because our only agenda is to rebuild trust and serve the public by making knowledge available to everyone rather than a select few. Now, you can receive a curated list of articles in your inbox twice a week. Give it a go? Cycling in the post-pandemic world is set to increase significantly with focus on E-Cycles. Already Europe is witnessing more than 50% contribution of E-Cycles in the total Industry, with an increasing number of people switching to or adding an e-cycle to their existing options. With time, people are beginning to understand the value proposition of cycles & e-cycles and are willing to switch from their existing modes of commute, which is a positive sign for the sector. We believe that this momentum will continue into 2023 and the increased adoption of cycles & e-cycles across the country will pivot on a couple of factors Need for healthier, convenient and sustainable commute options for the Urban Indian The preceding two years served as a major trigger for people to prioritize a healthier and more sustainable lifestyle, with a huge number of people particularly adopting e-cycles as an option for multiple uses. With rising fuel costs, increased congestion, pollution, parking hassles, and time to travel cycles and.

BSF-HCM-TEST-Dated-2025-08-04-Test NO.-21879

Cycles are best poised to address these challenges owing to their cost effectiveness, ease of use, low maintenance costs, safety, and added benefits such as fitness and sustainability. Commuting will be the biggest driver for cycles, both for personal and commercial users. Investments in cycling infrastructure will be key to building a cycling culture Several state governments have made significant investments and interventions in building dedicated cycling tracks. This has led to an increased number of people choosing cycles over other mobility options as a means of commute consequently reducing carbon footprint. Building cycling lanes in cities across the country along with improving cyclist-friendly infrastructure overall will be key to increasing adoption of cycles and gradually building a cycling culture across the country. Policy initiatives and inclusions will be integral in increased adoption of e-cycles and cycles across the country The recent inclusion of e-cycles in the Delhi EV Policy was a significant milestone in the right direction, with a substantial price reduction of up to Rest. 15,000 for cyclists. Numbers show that this single move has increased the adoption of e-cycles in our national capital; the same can be replicated in more states. From a regulatory perspective, the industry will continue to engage with Central and State Governments to include e-cycles as a part of various government schemes such as PLI and FAME. We believe that the intended potential benefit of such policies needs to reach more people across categories to achieve their goals. The benefits of policy inclusion are in-fact multi-fold; not only does it give added impetus to manufacturing with the aim of taking advantage of the global opportunity by increasing our competitiveness, it also reduces the effective cost ownership of e-cycles for Indians. India as the global hub for cycle manufacturing driven by innovation, premiumisation and indigenisation A key trend that will continue in 2023 will be the focus on disproportionate innovation and premiumisation across the cycle industry. This is driving sharp growth for every stakeholder in the ecosystem, including ancillary producers and dealers nationwide, and it is also drawing young entrepreneurs to the business. India is already one of the largest push-cycle makers in the world. We have the capacity, talent, and intention to exponentially increase manufacturing, and take the pole position in supplying e-cycles to the world. The world is looking at India as an alternative to traditional manufacturing hubs amid severe supply chain disruptions; this is our opportunity to double down and make globally competitive and technologically advanced e-cycles. Forward looking policies such as FAME II and PLI have put India EV revolution on the fast track. Bringing e-cycles under the purview of these proven policies will allow cycle manufacturers to join this revolution, catalyzing the sustainable change and Net Zero goals we are all working towards. Cycles have always played an integral role in the lives of Indians throughout generations. Almost 35% of Indians now live in urban cities, and given the rapid pace of urbanization, there is a need to build.

Urban infrastructure and policies that support and create a culture of cycling. There is a great opportunity for all stakeholders to benefit from this. From decongesting roads, to reducing urban air pollution, to a healthier population, we must embrace and encourage cycling as a form of dependable urban transportation while also achieving our sustainability goals as a nation. With the onset of the new year, some of the existing trends in the sphere of digital marketing would also be majorly impacted. The new age of social media and web activities is demanding a whole new approach toward the function of digital marketing. Here are some of the new approaches to digital marketing according to the latest trends: Influencer Marketing With social media becoming more and more popular, it no surprise that many businesses are turning to influencers to help promote their brands. Influencers are people with a large following who are knowledgeable about a particular topic or product. They are usually willing to promote a brand for a fee, and their followers are often eager to hear what they have to say. Influencer marketing is a great way to tap into the power of the crowd and get a brand or product in front of new and potential customers. One of the benefits of influencer marketing in the field of digital marketing is that its methods are accessible, easy to understand, and applicable not only to small businesses but also to bigger companies. Push Notifications According to the latest trends, push notifications are proving to be an effective tool in the digital marketing arena. Some surveys show that almost 60% of mobile phone users keep their push notifications on and almost 50% of the users actually find them useful. So, if the marketer makes use of this tool, customers can be involved and interacted with, in a more effective way. They are unlike the long and boring marketing emailers that end up in the spam folder of the user in most cases. Push notifications are short and engaging messages that flash on the screen of the mobile user, urging them to get involved in the intended activity. The Met averse Met averse has turned out to be one of the most sought-after options for companies to engage their customers in a different way while being able to stand out from the competition. Met averse extends a lot of flexibility to companies in terms of creating their own unique identity and letting the customers immerse themselves in a completely unique experience. It has totally changed the way customer interaction and involvement were planned and carried out, earlier. It is one of the top options for digital marketers as far as trends of 2023 are concerned. Artificial Intelligence AI Artificial Intelligence AI is everywhere and it is taking over every major function of human existence. AI is the future of marketing as well and it is something to look forward to in the new year. The most important role of AI is.

To analyze and predict large volumes of data and make predictions about a customer actions, decisions, and behavior. Digital marketers can make use of this almost accurate technology to reach out to the right customer and get sales through mapped actions and behavior which is backed by strong algorithms. This whole activity is very cost-effective as compared to any other method of digital marketing. Short Videos Reels In the last couple of years, almost everyone has been glued to Integra Facebook reels and YouTube shorts. The format of videos is very effective to engage mobile users as it does not require the device to be flipped or moved, hence enabling more engagement time. It has turned out to be one of the most effective ways to interact with potential customers and drive sales. Companies and brands are positioning their sponsored reels and short videos across user devices, creating a greater appeal among the customers to bring them to the landing page and make a sale. Omni channel Marketing Omni channel marketing stands out from the rest of the options, in terms of volume of interaction and appeal. It allows the companies to reach out to customers through a wide array of digital platforms; emails, mobile apps, websites, and even via the company brick and mortar infrastructure such as sales points, stores, warehouses, and even customer service centers. It gives uniformity to the whole campaign, thus invoking reliability among the customers. Catboats in Marketing One of the most important functions of Chabot is that they automate a huge volume of activities. When the marketing function of a company or a brand is automated, it allows customer interaction on a much larger scale. Companies can interact and engage with a much larger volume of prospective clients, thus increasing the probability of sales and revenue generation. Voice SEO Voice search or Voice SEO is quickly becoming the preferred way for people and soon, almost 50% of all searches will be voice-based. This means if the marketer does not optimize the website for voice search, a huge portion of potential customers will be missed. Voice search optimization makes it easier for potential customers to find your website and will help rank higher in search engine results. Video Marketing Video marketing makes the message clear and precise for the end customer to decipher, thus making the whole marketing process more convenient and effective. This trend cannot be missed in 2023. Email and SMS Marketing Email and SMS-based marketing communication can never go out of trend and it would always remain one of the primary choices of a marketer to reach out to the customer. In fact, they are the base on which all other digital marketing techniques rest. Emails and SMSs give the freedom to include links to the related portals making them the favorite for any marketing team. With every passing day, new and better avenues are being explored in the digital marketing sphere, rendering the orthodox methods of business communication obsolete with the.

Latest technologies being introduced every now and then, digital marketing function has grown out of bounds. The function goes through a complete overhaul every few months, that is why it is very important for the digital marketing professionals to keep themselves updated about the latest trends and continue to study and research in the field. Baking is a craft. Simply envision clients tasting your cakes, bread, cupcakes, and treats and requesting more or valuing your diligent effort. Baked products take many structures, from loaves and bagels to additional confounded sugary treats, for example, macaroons. The workplaces of bread shops themselves can be similarly different, making this an adaptable vocation with various choices. In this article, we clarify how to become an expert dough puncher, including the training, confirmations, abilities and experience that can assist you with progressing in this profession. Baking is one of the most delicate culinary arts, which requires careful and precise measurements, ingredients, cooking temperatures, and techniques. Although the fine balancing act of baking is intimidating to some, any home cook can become a master baker with the right ingredients and baking supplies, a little patience, and reliable recipes. Instructions to turn into a baker and culinary art specialist. The necessities for turning into a baker and culinary art specialist differ contingent upon your objectives, however you will require a mix of involvement and instruction to level up the vital abilities. The following are four steps you can take to foster a career as a baker and culinary art specialist. Think about going to a culinary or baking specialized school. You could have consummated your very own few recipes, however a culinary or bakery specialized school can train you some significant abilities to work on your abilities to bake and sharpen your art. Courses cover themes on sustenance and wellbeing, various cooking styles, appropriate culinary strategies, kitchen the board and recipe estimations. While going to culinary or specialized school is a prerequisite, it can assist you with growing more refined culinary abilities. Those hoping to open their own bread shop might need to think about seeking after a partner degree in baking and cake expressions. Commonly, a culinary or bakery specialized school training takes between one to two years to finish, contingent upon the profundity of the program and whether you go to full-or part-time. Consider getting a valid certification. Procuring a certificate can have an enduring effect on future bosses and show that you have the information and abilities expected to work in a pastry kitchen bakery. The certification of bakery and culinary art specialist mostly are in the following areas. Certified baker. Certified journey baker. Certified decorator. Certified master baker. Acquire insight as a disciple or bakery specialist partner assistant. Turning into a disciple, student or partner at a nearby pastry shop can assist you with acquiring involved information on the business. Preparing typically requires one to three years, and as you work under a cook, you learn safe food dealing with disinfection and other.

BSF-HCM-TEST-Dated-2025-08-04-Test NO.-21883

Republic Day is a momentous occasion celebrated with great enthusiasm and pride in India every year on the 26th of January. This day holds immense significance in the hearts of every Indian as it marks the adoption of the Constitution of India, which came into effect on January 26, 1950, replacing the Government of India Act (1935) as the governing document of India. The transition to a republic marked the culmination of a long and arduous struggle for independence, making Republic Day a symbol of India sovereignty and democratic ideals. The celebrations on Republic Day are elaborate and grand, showcasing the rich cultural diversity and heritage of the nation. The main event takes place in the capital city of New Delhi, where the President of India unfurls the national flag at the historic Rajpath, followed by a colorful parade displaying the country military might, cultural heritage, and technological advancements. The parade includes vibrant tableaus representing different states, folk dances, martial arts performances, and impressive displays of military prowess, leaving spectators in awe and admiration. Republic Day is not merely a ceremonial affair; it is a solemn reminder of the values enshrined in the Constitution justice, liberty, equality, and fraternity. It serves as a reminder of the sacrifices made by countless freedom fighters who fought relentlessly for the country independence and the architects of the Constitution who painstakingly drafted its provisions. The Constitution embodies the aspirations and ideals of a nation striving for progress, unity, and social justice. Beyond the grandeur of the celebrations, Republic Day is a time for introspection and reflection on the progress made as a nation and the challenges that lie ahead. It serves as an opportunity to renew our commitment to upholding the principles of democracy, secularism, and inclusivity. It is a reminder that the true essence of democracy lies in active participation, responsible citizenship, and respect for the rule of law. Republic Day also provides a platform to honor the brave men and women of the armed forces who safeguard the nation sovereignty and protect its borders. Their valor and sacrifice remind us of the importance of national security and the need to stand united in the face of external threats and challenges. Furthermore, Republic Day celebrations extend beyond the borders of India, with Indian embassies and consulates organizing events to commemorate the occasion and promote India cultural heritage and values on the global stage. It serves as a reminder of India role as a responsible member of the international community, committed to peace, cooperation, and mutual respect. Amrit Sarovar, also known as the Amrit Sarovar or Amrit Kund, holds profound significance in Sikhism as one of the holiest sites within the Golden Temple complex (Harmandir Sahib) in Amritsar, Punjab, India. The term Amrit Sarovar translates to Pool of Nectar, symbolizing its spiritual importance to Sikhs worldwide. According to Sikh tradition, the Amrit Sarovar is not just a physical body of water but a sacred reservoir imbued with spiritual energy and divine grace. It is believed that the foundation of the Amrit Sarovar was laid by the fourth Sikh Guru, Guru Ram Das Ji, in the 16th century, during the construction of the Golden Temple. Over the centuries, the Sarovar has been expanded and renovated several times, reflecting its enduring significance in Sikh religious pr

In addition to economic issues, the G-20 also addresses a wide range of other global challenges, including climate change, trade, development, and geopolitical tensions. While its primary focus is on economic matters, the G-20 recognizes the interconnected nature of global issues and the need for comprehensive and coordinated solutions. One of the key strengths of the G-20 is its inclusivity, which allows both advanced and emerging economies to participate in decision-making processes. This inclusivity ensures that the perspectives and interests of a diverse range of countries are taken into account when formulating policies and initiatives. Moreover, the G-20 informal and flexible structure enables frank and open discussions among leaders, fostering trust and cooperation among member nations. Over the years, the G-20 has expanded its agenda to address emerging challenges and opportunities in the global economy. This includes promoting sustainable development, enhancing financial regulation and supervision, combatting corruption and illicit financial flows, and fostering innovation and digitalization. By tackling these issues collectively, the G-20 seeks to create an enabling environment for inclusive and sustainable growth that benefits all nations and people. In conclusion, the G-20 plays a crucial role in shaping the course of the global economy and addressing pressing challenges facing the international community. Through dialogue, cooperation, and coordinated action, the G-20 strives to build a more stable, prosperous, and equitable world for present and future generations. As the global landscape continues to evolve, the G-20 remains committed to its mission of promoting international economic cooperation and advancing the collective well-being of humanity. Republic Day is more than just a public holiday or a spectacle of grandeur; it is a reaffirmation of India identity as a sovereign, democratic republic founded on the principles of justice, liberty, equality, and fraternity. It is a celebration of unity in diversity, of resilience in the face of adversity, and of the collective aspirations of a billion people marching forward towards a brighter future. As we celebrate Republic Day each year, let us remember the sacrifices of the past, cherish the blessings of the present, and rededicate ourselves to building a better tomorrow for generations to come. The Group of Twenty, commonly known as the G-20, is a premier forum for international economic cooperation comprising 19 countries and the European Union. Established in 1999 in response to the financial crises of the late 1990s, the G-20 brings together the world major advanced and emerging economies to address global economic challenges and promote sustainable development. At its core, the G-20 aims to facilitate dialogue and cooperation among its member nations on key issues pertaining to the global economy. The G-20 member countries collectively represent around 85% of global gross domestic product (GDP), 75% of international trade, and two-thirds of the world population. As such, decisions and agreements reached within the G-20 have significant implications for the global economy and financial stability. The primary objective of the G-20 is to foster macroeconomic stability and sustainable growth through policy coordination and cooperation among its member states. In times of economic uncertainty or crisis, the G-20 serves as a platform for leaders to discuss and implement coo

Spl-BSF-HCM-TEST-Dated-2025-08-04-Test NO.-21885

In the theatre of global influence, humility is a smart, deliberate accessory worn by those who want power without resentment. Gambhir may not have meant much by his outburst. But meaning travels faster when it's wearing a tracksuit. In the cricketing world of 2025, India is no longer the rebel village team. It is the empire. In cinematic terms, this isn't Bhuvan from 'Lagaan' asking for a fair match. This is Captain Russell politely explaining the new revenue model. Empires, even insecure ones, don't need to shout. Especially not at people doing their job, even if you disagree with how they do it. Decolonisation will begin not when we shout back at authority, but when we stop mistaking shouting for authority. Radha & Rukmini Two facets of love in Krishn Lila Our unrepresentative people's representatives Time The greatest traitor and the biggest lie Soft power and hard power-certain core issues Emerging Asia, at Natixis India is gradually breaking down barriers by signing trade deals and lowering tariffs while President Trump is pushing the US inward, erecting a wall of tariff to the world's largest import market. On Wed, he announced that India would face 25% tariffs from August plus an unspecified penalty for buying Russian military equipment and oil. Then came the executive order on the new tariff rates. This may not have come as a total surprise but it's a blow for India, which sees gaining a competitive edge in the US market as key not just for boosting exports of electronics, pharmaceuticals, machinery, footwear, and textiles, but also for positioning itself as a global manufacturing hub for exporting to large markets like the US, EU, and UK. And, thus, lowering that 25% tariff rate to a level that is not just lower than China but also more competitive than its peers in emerging markets is crucial to its ambition to seize the opportunity presented by the West's disillusionment with China. Negotiators will no doubt be headed back to the table in pursuit of that elusive breakthrough, and India could manage to settle on a lower number. Trump made a similar threat against Japan and gave it a reprieve later. So far, the lowest rate secured is the UK's 10% and even allies such as the EU and Japan have only managed 15%. In the emerging markets of Asia, the Philippines and Indonesia got 19% versus Vietnam's 20%, and that includes conditional details and extra levy on Chinese transshipment. Beyond the headline reciprocal tariff rate, India is also trying to gain concessions on sectoral tariffs, from auto parts to pharma, as well as limiting the fallout to its participation in BRICS and secondary Russian oil sanctions. Trade Tangle India's tariffs could still settle somewhere close to what Southeast Asian countries got Commercial planes commonly have a cruising altitude of 36,000 feet. Loss of temper at that height can set off domino effects unimaginable on the road or in a train. This is what flight crew have on their mind when they work to calm any passenger who loses their wits. The incident on the IndiGo Mumbai-Kolkata flight on Friday, where a passenger slapped another passenger, has to be understood in this context. What the SpiceJet crew suffered at the Srinagar airport a week ago, on the other hand, alarmingly underlines that not all passengers walk into planes in a civilised frame of mind in the first place. With SpiceJet ground crew suffering a spinal fracture and injuries to the jaw, an army officer has been charged with murdero

Spl-BSF-HCM-TEST-Dated-2025-08-04-Test NO.-21888

But anything else could be, literally, deadly. One slap, retaliation, others jumping into the fray, it could all go out of control so easily. And a planeful of lives would be endangered. Air travel is stressful, no doubt. But that's no excuse at all for breaking the peace. The fat cats frowned that two Bihar babus, in a place they'd never heard of Masaurhi in zilla Patna, found it legit to issue an identity card to a dog, complete with parental details. So dad was Kutta Babu and mom Kutiya Devi. The two black sheep who made the identity card a reality were packed off by Patna's top dogs without so much as hearing their POV. It was clear soon enough though that the two paper tigers didn't believe in treating man's best friend like dogs, were in part annoyed to be sheep bleating yes SIR, yes SIR, and it was just monkey business in a dog-eat-dog world of meaningless activity telling locals where the sorry sods lived lest they forget their way home. The shock and awe heaped on tch-tch Bihar and extended to all things four-legged and bipedal was quite the circus. But no one asked why it was such a big deal. It wasn't the fake Aadhaar surely, for that is, eyeroll, so yesterday. So, what if dogs really could get i-cards? Pets have to be registered anyways. So, think. It is neither illegal nor unethical to issue a residence certificate to a dog. Show me a law that says dogs cannot claim residency. Why can a dog or cat or crocodile or peacock not claim residency? A livestock census is kosher, so why go delulu over doggo ids? We all wear dog collars. So, dog bites man is news far from times when only man bites dog was news, and strays weren't pariahs. That shampooed ribboned superfood-chomping bozo is now globe-trotting, its indie country cousin outside the gate is the 'mad outsider'. Even though it's the stray that guards the streets, where it would scare the twilight out of bipedal snakes in the grass stalking those trudging the last mile home. Appalling city upkeep triggers road rage in bipedals. Loan sharks and vulture capitalists, white elephants and weasels, tiger moms and lame ducks, lambs to the slaughter, everyone gets an id, but not a dog. It was but a lark the id was cancelled within two minutes of being produced but the silliness was taken so seriously. But that isn't the elephant in the room, is it? The White House executive order amending import tariffs ends a period of significant global economic uncertainty. The 25% duties on imports from India are likely to hurt, especially as they are higher than for peers. However, the impact on India's economy is likely to be much lower than the rise in duties paid by Indian exporters, as most of the tariff burden so far has been borne by US importers and consumers. But the US threat to penalise India for buying Russian oil and armaments, which is yet to be announced, is a separate matter. Can this put India at a significant disadvantage? Not really. Despite Russia accounting for more than a third of India's oil imports last year, the India-specific impact is unlikely to be significant, in our view. Here's why. Prajwal Revanna, a former Member of Parliament and grandson of ex-Prime Minister Deve Gowda, has been found guilty in one of several serious cases against him. He was accused of hurting and mistreating many women, and even recording videos of his crimes. These awful videos came out just before last year's elections, and sadly, many people in the videos could be recognized in their towns

Essential baking practices. Filling in as a student or colleague likewise assists you construct associations with different bakers, which can assist you with getting a new line of work as an expert bakery specialist later on. Pick a claim to fame. In the wake of acquiring some experience baking, find what sort of baking you are generally keen on. Contingent upon the way you pick, you might have to become familiar with specific abilities. For example, plant dough punchers frequently utilize high-volume modern machines and stoves, which might require extra preparation to work appropriately. The following are a couple of normal kinds of baking fortes: Practice makes a man perfect! Finishing your culinary specialty is a continuous undertaking you will go on all through your profession. Continuously be keeping watch for new deceives or keep updating your recipes. Innovativeness and vision will obviously likewise give you the instruments for turning into an incredible dough puncher baker who can proceed to improve and develop. As you become familiar with your calling, you all have your reliable recipes or mark things that won ever fizzle. Yet, to genuinely be an expert dough puncher, you should keep propelling your collection all through your profession. Imagination and a journey for new baking information will isolate you from the standard and keep you propelled in your profession. As winter temperatures fail to drop, many meteorologists are predicting 2022 winter to be one of the hottest on record. The specter of climate change and global warming looms large and nations grapple with the dilemma of development and environmental exploitation. It is becoming increasingly evident that the process of development charted by nations around the world is no longer tenable. Although the ideas of sustainable development have been formulated and advocated for decades now, practical translations are still lagging. But leaving the onus of responsibility on the governments of the world is a farce. A collective culpability has to be shared by the populace. And to that end, the fashion industry has introduced the concept of sustainable fashion. Sustainable fashion also known as eco-fashion refers to products, procedures, activities, and stakeholders policymakers, businesses, and consumers who strive for a carbon-neutral fashion sector based on equity, social justice, animal welfare, and ecological sustainability. The Earth Logic fashion research action plan argues for putting the health and survival of our planet earth and consequently the future security and health of all species including humans, before industry, business, and economic growth. The Earth Logic proposal expressly links the global fashion industry and the 2018 Intergovernmental Panel on Climate Change IPCC Special Report on Global Warming of 1.5 in order to support its claim. But why sustainable fashion? According to the Ellen MacArthur Foundation, the fashion industry is accountable for 10% of global CO2 emissions, which is more than all international flights and shipping combined. In a similar vein, Earth Pledge, a non-profit organization committed to promoting and supporting sustainable development states, At least 8,000 chemicals are used to turn.

Their innovations to serve as the financial partner. Technological integration is the first biggest step that lending partners are to make possible for their smooth partnership. The tech of the lending partners are also rising up to match up the fast paced tech innovations in fintech companies. Another conflict in the way if the difference in risk analysis by fintech and lending financial institutes which the integration of right technology will solve. In a nutshell, Fintech is bridging the gap between financial services and a huge number of people who are excluded from accessing it due to various reasons. A recent report by Ernst and Young states that this financial inclusion will generate sizable economic benefits boosting gross domestic product GDP by up to 14% in large developing economies such as India. It will also increase FinTech revenues by delivering microfinance to financially excluded individuals and MSMEs. Therefore it is quite expected that fintech will be the way forward for India lending sector with its innovative tech integration. Do you know how many block chain analysis companies exist? Take a wild guess. At least a few hundreds. And all of them are working towards bringing more transparency to the web3 ecosystem. Block chain analytics is the process of analyzing, identifying and clustering data on the block chain and presenting it in a meaningful, actionable, usable information. Additionally, block chain analytics also models and visually represents data in order to identify vital information about users and transactions. Block chain data analysis platforms may provide data for different purposes. A growing use of block chain analysis is about the NFT data that are being transacted. This can include variables like volume, market capitalisation, sales, trades and many more. NFTs have been gaining a lot of attention and momentum in the past few years and every company in the world, irrespective of the industry, is experimenting with them and launching a new collection. Statist has a graph of total value of sales involving a non-fungible token NFT in the art segment worldwide over the previous 30 days from April 15, 2021 to November 15, 2022. This is just an example of how big the NFT industry is as it does not even cover all categories other than art. Companies like Nike, Prada in the fashion industry have embraced NFTs. It has even made inroads to real life events likeF1 racing, FIFA world cup and major sporting events around the world. Not to be left out having a piece of this pie, block chains have been busy adding NFT functionalities onto them. Solana was a late entrant but has really got some amazing market share already. With all this momentum, things may look really great for the NFT ecosystem but there are some bad actors who are indulging in malpractices and foul play. NFTs are plagued with security issues & threats like plagiarism, wash trading, copy minting, frauds, scams and cyber-attacks like phishing, hacking and many more. A few of them require better use.

BSF-HCM-TEST-Dated-2025-08-05-Test NO.-21891

Raw materials into textiles and 25% of the world pesticides are used to grow non-organic cotton. This causes irreversible damage to people and the environment, and still two thirds of a garment carbon footprint will occur after it is purchased. According to the United Nations Economic Commission for Europe, the fast fashion industry undermines sustainability efforts by producing 20% of the world wastewater. Fast fashion also contributes to around 10% of the world gas emissions. Thus, the idea of sustainable fashion needs to gain traction, acceptance and implementation at a global scale for the fashion industry is a contributor to the environmental degradation that afflicts the human race. Included within the conception of sustainable fashion are several undercurrents: beyond concern for the environment, sustainable fashion includes within its ambit ideas of ethical employment, promoting local products, prolonging the life cycle of materials and products, etc. Deplorable working conditions of the workers, employment of child labor, promoting unit-dimensional conceptions of beauty and physique are all issues that sustainable fashion seeks to redress. Thus, sustainable fashion is not limited to environmental concerns and encompass a wide range of issues that plague the fashion industry. The idea of sustainable fashion has gained considerable currency with the turn of the millennium, as several fashion brands and labels seek to address the issues raised by the idea. To that end, we intend to maintain our commitment to a more sustainable future and devise ways to incorporate sustainability into our business. To that purpose, we pick fabrics for our Timeless collection from environmentally friendly sources while maintaining the highest level of exquisite quality. Each piece is made using our sourced fabric, which is a fashionable blend of Chancery silk, cotton, and Georgette. In order to encourage sustainability, the quatrain that is produced is later outsourced to other industries, resulting in minimal fabric wastage. Our Timeless collection is christened as such for two reasons: one, for we believe that the styles we create will be fashionable even as fashion trends come and go, and two, for the entire collection is durable and is designed to last long. Several steps have been taken to inculcate a culture of sustainability and ensure culpability of the fashion industry. The Sustainable Garment Coalition introduced the Hogg Index in July 2012, a self-assessment criteria intended to measure and promote sustainable supply chains in the textile and footwear industries. The world largest summit on fashion sustainability was hosted in Copenhagen on May 3, 2012, bringing together over 1,000 important stakeholders in the industry to debate the significance of making the fashion business sustainable. Since then, the Copenhagen Fashion Summit has brought together hundreds of people from the fashion business in an effort to spark a movement inside the industry. Sustainable fashion still has a long way to go; yet it is imperative that we embark upon that route. Fintech is revolutionizing the financial services industry with the ideal integration of technology and innovation. The seamless process and service in fintech have made India.

BSF-HCM-TEST-Dated-2025-08-05-Test NO.-21892

Of hardware and software, a few call for more prudence on the internet, and other issues might require NFT data analysis to make better judgment. Threats like wash trading where NFT creators indulge in fake transactions to artificially increase the prices of NFTs, copy minting where someone who is not the original creator of the NFT infringes the IP intellectual property of the creator by making fake copies of the original NFT work, or other methods of price manipulation where the fair price of a NFT is masked and traders and buyers end up paying exorbitant prices are all instances of NFT threats that can be detected with reasonable accuracy using AI ML on the data obtained from the block chains. We are seeing an increase in efforts by the stakeholders of the web3 ecosystem who are effectively handling the threats and devising new methods to address any concerns that might negatively impact the NFT transaction experience. But this is all the beginning of a long road where the ecosystem stakeholders have started a cat and mouse game of catching up with the fraudsters and seamstress who are regularly coming up with new techniques to create threats tufts. The positive steps are a sign of maturity of the ecosystem and block chain analysis platforms will play a bigger role in helping NFT marketplaces, lending protocols, traders, artists, buyers and sellers and anyone involved in combating the threats better. The few instances where these data platforms can help right now are wash trade detection, fair price estimation and forgery detection. A wash traded NFTs chart provided by bits Crunch report shows over $140 million in wash traded volume across three major block chains in the last 30 days. These NFTs were possibly sold at much higher prices than their actual value, resulting in buyers and traders being defrauded. This projects a negative image of the NFT to buyers and investors and the whole ecosystem will be at a loss in the long term. Fair price estimation of NFTs will also be possible if wash traded and fictitious transactions are easily identifiable and segregated from the total number of transactions. Moreover, forgery detection can be done by providing some sort of a checkmark to the original creation verified badge so that any further copies made can be easily identified. Similarly, methods to find duplicates forged NFTs should be developed so that they can be easily removed automatically or at least the original creator is informed and they can take an action to remove the forged NFTs from other marketplaces. As more data is gathered, new use cases will emerge to combat the threats even more effectively. As they say knowledge is power and what the best block chain analysis platforms can do is provide the knowledge to businesses and individuals so that they can achieve better transparency. It a relatively new technology and just like any other tech, there are pros and cons in the NFT ecosystem as well. There are people.

Clasp to it resulting in a FinTech adoption rate of 87%. Out of many financial services that have captured the momentum of this fintech wave, the lending space is witnessing significant traction. The fast-growing space is projected to reach $179 billion in 2022. And is predicted to reach $213 billion by 2024. But what exactly were the issues with traditional bank lending that Fintech has succeeded in solving? Here are a few challenges that traditional lending models face: Fintech, or financial technology, is improving financial inclusion by making financial services and products more accessible and affordable for millions of unbanked and under banked Indians. This is especially true in developing countries where traditional banking infrastructure may be limited. Fintech is inclusive of individuals and enterprises that have remained largely ignored by traditional banks due to the high cost of delivering financial services to the customer thus rendering them an unprofitable target customer segment. Faster approval and processing Traditional bank lending operates on a conventional documentation process which takes months for a loan to get approved. In fintech, the process is quick and agile with the intervention of technology. Digitalization has made the approval and disbursement process quick and effective. The customer does have to go through a heavy documentation process or a huge waiting period to access credit. Alternative data-driven underwriting A key feature of fintech is the substitution of algorithms and alternative data for in-person interaction between lenders and borrowers. A traditional credit score is no longer the only way to evaluate creditworthiness which naturally makes credit access inclusive for a large number of people who may not have much of a credit history to evaluate. This Alternative underwriting method has especially been a boon in education financing where fintech has to take an alternative approach to assess the borrower repayment capability. Here the underwriting is not based on the loan type but they consider the student academic performance and the potential outcome of the job. This makes education financing accessible to financially disadvantaged students who are otherwise considered ineligible for loans. What are the upcoming challenges for fintech in lending? The journey of fintech continues and has been getting set for solving the next challenges in the lending sector. Here are a few challenges that fintech is getting ready to solve in the coming year. Innovations in Technology being the cornerstone for the growth of the fintech industry, it is important for tech innovations to be agile to keep the industry thrive. When it comes to increasing the user experience and user retention and catering to underwriting for high-risk profiles, the interaction of big data and AI is inevitable. According to a recent Deloitte survey, 86% of financial services AI adopters say that adopting this technology will be critical to their business success in the next two years. Lending partners to source capital Lending partners are the pillars that drive fintech. As fitness grow and flourish, it inevitable for lending partners or financial institutes to be agile in.

BSF-HCM-TEST-Dated-2025-08-05-Test NO.-21894

The largest democracy in the world, 3263 finds itself once again at the center stage of world diplomacy with the passing of the gavel of G20 Presidency. In the words of the Prime Minister himself the G20 Agenda will be inclusive, ambitious, action-oriented and decisive, based on the ancient Indian Philosophy of Vasudeva Kutumbakam. In the background of a post Covid world, mitigating the aftermaths of the pandemic by building sustainable and resilient ecosystems along with peaceful favorable political environment is a priority for all. However, the last year saw host of geo-political tensions amongst the member states that not only put the agenda of economic development at a halt but also resulted in slowing the financial progress of many nations and amplifying food and energy crisis. In the words of India External Affairs Minister, Dr. S. Jaishankar, Covid, climate change and conflict, are the 3 is confronting India tenure as the host nation for G20. As India starts working on the G20 presidency agenda next year, the focus would be on prosperity and peace in the global South for economic progress. This need has been evident from P.M. Modi acceptance speech at the time of being handed the presidency and the theme of 2023 One Earth, One Family, One Future, emphasising on the need of mutual understanding and oneness amongst nations. To effectively handle the crisis that are being faced by the world, it is imperative that a conducive environment is created to address all humanitarian issues in a holistic manner by bringing member nations on a common platform. Piloting consensus on key global issues could help de-escalate tensions and also help in economic cooperation and rebuilding of a newer world and better future, a thought process that needs to be further accelerated by India while chairing the prestigious G20 in 2023. Prime Minister Modi remark in Bali, on the rising tension between Russia and Ukraine that Today era must not be of war found resonance with member states with the G20 nations reiterating PM Modi message at the concluding summit of 2022. Hopes are high that India can play a significance role in initiating peace building and harmony in the region, with its rich cultural legacy of brotherhood and universal solidarity. Given the close camaraderie that the Indian Prime Minister shares with most heads of member states of G20, hopes are high that India will play a vital role in peace keeping in region. It is no secret that for mitigating the chaos and damage caused by the pandemic the world would need sustainable efforts to build back better and a prerequisite for that is a peaceful environment where nations develop consensus on critical global issues through dialogue and diplomacy instead of aggression and hostility. The strategic position that the country finds itself in presents unique and unprecedented diplomatic opportunities for the Indian government. The government is also striving to leverage its position as a world leader when it comes to conflict resolution and tackling other threats to.

https://rkcnawada.online/best-typing-software-rkc.php

BSF-HCM-TEST-Dated-2025-08-05-Test NO.-21897

Mankind including economic slowdown as well as food and energy crisis. Though India is pitching for accelerated progress towards achieving SDG and their contribution towards greater human health, wellbeing and progress at the same time the Prime Minister penchant for traditional and cultural Indian ethos is known by all. Modi has time and again used his global clout and charisma to show the world, an alternative route to a better and harmonious world. The opportunity that chairing the G20 offers should be rightly utilised to promote the wellbeing of all through harmony and understanding. The concept of the world being one big family should be followed in action and spirits. G20 should witness, India pushing the need for a new world order with the core vision enshrined in the cultural ethos of serving humanity and mankind for the benefit of all. No doubt India tenure as the host of the G20 should essentially leverage on prospects focusing on economic development and energy and food crisis. But to effectively address the issues that the global community is facing the world needs to bring all nations on a single platform and strategize on a collective agenda for a more prosperous future for all. It must be noted that any consistent effort for benefit of human beings cannot produce sustainable results as long as they are not in conjugation with peaceful environment and global co-operation. It is quite evident that the Indian government has already realized the significant role of global harmony and it needs to ensure that India hosting of the G20 should essentially echo the same sentiment. With the G20 member nations accounting for nearly 60% of the world population including 85% of global GDP and 75% of international trade, it is evident that economic regulations and policies will form a substantial part of discussions and deliberations. Hence it is not a secret that the tentative agenda of the G20 has important indicators that are invariably drawn towards the co-operation and shared harmony between all, in the absence of which there cannot be true economic or social progress. Integrated effort is thus required by India during its presidency tenure to encase upon the opportunity and show the world its diplomatic skills to ensure that geo-political tensions do not lead to humanitarian crises and issues are resolved through mutual understanding. The lessons that were learnt during the pandemic should be used as opportunities, to drive home the message, that the countries and nations need the support of each other to safeguard the needs of their less privileged population and to avert humanitarian crisis in future. The move towards SGD cannot be successful if it fails to safeguard the interest of all thus the call for the support and solidarity can act as a catharsis for ensuring global harmony and rapport among all. India can give a collective call towards a new paradigm of human centric system for accelerating and amplifying the discourse around global understanding and empathy amongst all. As the world.

BSF-HCM-TEST-Dated-2025-08-05-Test NO.-21898

Looks on, let strive to make G20 of Indian presidency as harbinger of Harmony 20. The essence of G20 in 2023 lies in promoting the universal virtue of oneness and mutual co-operation amongst the member countries and India should make sure that it leaves behind a legacy of that caters to the wellbeing of all based on the principles of healing, harmony and hope for a better future for all. It strange that we use the term salami slicing to explain the blatant Chinese land-grab of our territory. The term itself, szalámitaktika, is Hungarian, coined by Hungary Stalinist dictator, Matyas Rakosi, in the late 1940. He noted that salami was an expensive food, not eaten at once, but cut one slice at a time and was the incremental tactics he employed to overwhelm the opposition and impose communism. Our use of this phrase is incongruous and fails to convey the seriousness of the issues involved. After all, the tragedy at Galwan was a consequence of the PLA salami slicing tactics. It is time that Chinese depredations were called out for what they really are Zamin Hadpana. That is something all of our citizenry fully comprehend and detest. Of course, that would require accountability for lapses, something most leaders avoid. Also, not something that the present government is willing to do either, otherwise, why the deafening silence over the goings on in Eastern Ladakh and elsewhere? This, notwithstanding the routine statements by the Foreign Minister, that state of the border will determine the state of the relationship, or the Defence Minister more robust the Indian Army will give a befitting reply. Our government has no intention of rocking the boat, where China is concerned. But here the thing, President Xi may have won big within the Communist Party, and could remain President for life, yet he stands on a very really slippery slope. His populist measures to reduce the income gap backfired, debilitating the housing sector with a knock-on effect on the economy that was already in the doldrums thanks to his irrational Zero Covid policy. A policy discarded post- haste, reportedly because of widespread corruption that it had generated. Enormous sums exchanged hands for covid negative reports that enabled people to avoid strict quarantine restrictions and continue to earn their livelihood. This resulted not only in the regulators losing all credibility, but what was far worse, allowing the affected to infect others on the streets and in their workplaces. Given the strict embargo on foreign vaccines, despite doubts about the efficacy of the indigenously developed ones, and a vaccination drive that was been deeply flawed, a surge in cases was inevitable. In the absence of credible government data, some experts have suggested anywhere between 60-80% of the population has been infected. As is to be expected deaths have skyrocketed, especially of the elderly, with hospitals overloaded and the health system on the verge of collapse. Police stations and government offices have been temporarily shut with governance having become the ultimate.

BSF-HCM-TEST-Dated-2025-08-05-Test NO.-21899

Casualty clearly reminiscent of our second wave, but much worse, as vacuum is anathema in any authoritarian and strictly regulated society. Importantly, there have also been unconfirmed reports in public domain that the PLA has not been spared and is suffering from much confusion. To some extent all of this, including the unprecedented protests against the government that erupted, explains the PLA aggressive behavior in Arunachal and in the South China Sea against Taiwan. It is essential for President Xi and the Communist Party to re-exert their authority, and doing so by diverting attention to a foreign threat is a well-known path to tread. After all, in a nation where maintaining face is of utmost importance, President Xi and the Party have to act decisively if they hope to maintain their vice-like grip over the country. Yet, it is also clear from statements emanating from Beijing, emphasising the stable nature of the border areas and the smooth communication between both sides, that they intentionally downplayed the incident and wish to avoid escalation. This despite the casualties they have reportedly suffered, and claims of illegal crossing of the LAC by Indian troops. For the Chinese leadership, these are not the only troubles they presently confront. The Russian military abject failure in Ukraine, due to poor junior leadership, lack of motivation and a disastrous performance by conscripts are also of great concern. Because, the PLA too faces the same issues with their combat elements being manned by conscripts, keen only to complete their mandatory service and seek employment elsewhere. Their motivation and training standards are questionable. Given the fact that over the past few decades neither border accords nor deterrence seemed to have stopped the PLA from adopting an aggressive posture on our border and indulging in unprovoked unilateral actions, it is time we bared our fangs as well. The PLA does deserve to get a taste of its own medicine, for a change. More than mere words that would clearly transmit our resolve not to be pushed around. There is no denying that this may well lead to escalation, but that has to be accepted and catered for, if we wish to retain any credibility as a regional power. As a matter of fact, a clash is inevitable if we continue to accede and submit to their diktats, because they will engineer a reason to teach us a lesson and damage our standing. Better to act like a Japanese Samurai, willing to fall on their Danish, rather than face a humiliating surrender. and businesses with malicious intent who are ready to take advantage of the loopholes and lack of global or national standards and regulations. While the government bodies look to figure that out, until then block chain analysis platforms will play a crucial part in self-governance and self developed combat systems against the threats to the NFTs. Analyzing threats is a good start, but we will soon see a spurt of new age block chain data analysis platforms who will.

BSF-HCM-TEST-Dated-2025-08-05-Test NO.-21900

And blessings and helps devotees connect with the divine. The Sarovar is also closely associated with the tradition of Kar Seva, which refers to voluntary service performed by Sikh devotees. Throughout history, Sikhs have undertaken the noble task of cleaning and maintaining the Amrit Sarovar and its surroundings as an act of devotion and selfless service. This tradition of community service reflects the Sikh principles of seva (selfless service) and equality. Moreover, the Amrit Sarovar serves as a symbol of unity and inclusivity in Sikhism. Regardless of caste, creed, or background, people from all walks of life are welcome to partake in the spiritual offerings of the Sarovar and seek solace in its serene ambiance. It embodies the Sikh belief in the equality of all human beings and the universal nature of spiritual enlightenment. Beyond its religious and cultural significance, the Amrit Sarovar also holds historical importance. It has witnessed pivotal moments in Sikh history, including the martyrdom of Guru Arjan Dev Ji, the fifth Sikh Guru, who was tortured and executed by Mughal rulers in 1606. His martyrdom at the banks of the Amrit Sarovar serves as a reminder of the Sikh community resilience and unwavering commitment to their faith. In essence, the Amrit Sarovar is more than just a body of water; it is a sacred symbol of spiritual purity, communal harmony, and Sikh identity. Its tranquil waters continue to draw millions of devotees and visitors each year, inspiring them to seek inner peace, spiritual fulfilment, and a deeper connection with the divine. As a cornerstone of Sikh religious practice and heritage, the Amrit Sarovar remains an enduring symbol of faith and devotion for generations to come. In essence, in Indian cities, providing viable transport options for women to access work and a wider range of jobs. The social and economic implications of this trend are vast, and ride-hailing should be treated as part of the solution. Post cross-voting, disaffection within the governing party in Himachal exploded with dissenting MLAs demanding CM Such scalp. Such, with 40 MLAs and three Independents, would have likely survived a confidence vote in the 68-member assembly had it come to pass yesterday but that is not at issue here. The issue is managing factions. Such could take a leaf out of Karnataka, where rivalries were kept aside for RS polls. Even a BJP MLA cross-voted for Congress nominee and another abstained. Dukhi with Such Dissenters grudge is CM working style and govt failing to provide jobs. It is rare for MLAs to throw their own government under the bus on such matters. But it is the dissenter-in-chief in Himachal Congress who was the most miffed. Vikramaditya Singh, son of former CM Virbhadra Singh and current Congress state head Pratibha Singh, said he felt humiliated that his grievance was not political, that his dissent was an emotional thing for a son. Apparently, what pained him was that the state govt has so far failed to install the late Virbhadra statue. Takeaways One, Congress is no stranger to factional mutinies but it fails to spot them before they blow up. Two, this playbook is now familiar similar scenes have played out in other states; BJP will sniff out the smallest chink in opposition armour. Three, Jairam Ramesh words, people mandate needs to be respected, sound like they belong to a fairy tale. Four, fighting despite the chaos, the assembly passed the state budget, and he claimed BJP MLAs are in touc

A former colleague in a new job found she had to commute two plus two hours daily, a total of four hours, just to get to her workplace and back, taking three different modes of transportation, leaving home at 7:45 am and returning after 9:00 pm. Initially distressed and tired, she soon found a way to boost her spirits. In her modest home in Delhi, on the rooftop, she began to grow flowering and other plants in pots, tending them either before leaving for work or after reaching home late at night. Flowers are restful to look at. They have neither emotions nor conflicts, points out Sigmund Freud. The transformation was revelatory. No more sagging shoulders, no more frowning. All smiles and full of information about plant species, their attributes and behaviour. Learning their botanical and popular names, she began documenting every flower, creating folders that she would browse through when tired. She would search online for more information. She found it therapeutic, inspiring and creative. Why try to explain miracles to your kids when you can just have them plant a garden, asks Robert Brault. The New York Times reports that in Sweden, there is a growing trend among old and young, to rent or buy a small garden patch, even if postage stamp-size, near their urban dwelling. Called kolonitradgardar, this practice of gaining access to garden allotments is said to have contributed a great deal to help them grow fresh produce, connect with nature and community. The garden programmes were specifically designed to improve the mental and physical health of city dwellers, says Fredrick Bjork, lecturer at Malmo University who specialises in environmental history. Health benefits are numerous: getting your hands dirty in the garden boosts self-esteem, increases your intake of Vitamin D, makes you feel happy and confident, boosts heart health, reduces stress and blood pressure, and you get to grow your own food, fresh and organic. It is a fulfilling activity that is creative and beautiful. Hi-rise apartment complexes in newly developed residential urban areas like in Gurgaon, NCR, provide opportunity for urban dwellers to grow what they like in small garden plots. A couple, I know, visit and work on their patch on weekends and get excited to potter around the beds of vegetables and flowers, harvest what they sow and bring the produce home and share with friends. Gardening connects us to life's natural rhythms, the gifts of each season, the wonder of creation and the natural world. For me, gardening and gratitude go hand-in-hand, says Gretchen Champoux, who runs a garden consultation company in Seattle. She views gardens as sacred spaces that assist her on her spiritual journey. Gardening is akin to worship. You are in close touch with Mother Earth. You are in divine partnership with the master creator, working towards nurturing and sustaining life as you engage in regenerative agriculture that is sustainable, healing and productive. The earth is a garden, the Lord its gardener, cherishing all, none neglected, says a verse in the Adi Granth. House plants are said to recognise their owners from two km away. Plants are sentient beings; they respond by perking up when the plant owner returns after going out. The person who planted me is coming back! they seem to say. Gardens are enchanted places, let's enjoy them. At first, Prajwal tried to escape blame by saying it was all a political trick. He also got court orders to stop the media from talking and the

But this time, something different happened. Public anger and brave victims kept the case in the spotlight. The turning point came when his grandfather, Deve Gowda, told him publicly to come back to India and face the law. That message made a big difference; it meant there would be no interference in the case. The police followed proper rules, the lawyers did a good job presenting the case, and the judge acted quickly. Because no one tried to cover up the truth, justice was served. This case shows that when there's no political pressure, and police can do their job freely, even victims of powerful people can get justice. Sadly, not every case is like this; some are still waiting to be heard, even after public protests. The new Team India proved it's a squad of unrelenting fighters in tough English conditions. Now, management must give the young talents a longer rope. It happened again at the Oval. This is where Ajit Unlike Pakistan which largely sticks to Islamic symbolism, our military relies on myth, morale and maps to christen operations A recent public debate triggered by the naming of 'Operation Mahadev' launched by Indian army Mansplaining Donald Duck is my superpower Nobody is focusing on fiscal fitness, I said to Kamala as we walked briskly round our neighbourhood park. She narrowed her eyes as she realised I was talking about In Russia, the government has been trying to control what people see and do on the internet for many years. They block websites, spy on users, slow down pages they don't like, and ban social Kremlin's new law restricting online search is a chilling new low For at least 15 years, Moscow has tightened controls on the internet using centralised routing, deep surveillance, bans on websites and social media, throttling Trump's sacking of a govt data official sends an awful message that all democracies must heed Convention demands that emperors don't shoot messengers, but Trump sacked Erika McEntarfer on Friday after her Bureau of Labour In the U. S., something strange and worrying just happened. Former President Donald Trump fired a government official named Erika McEntarfer. Why? Because the department she worked in (which tracks how many people have jobs) updated If there's Bangladeshi migration, it's the fault of BJP's 'double-engine sarkar' as they've been in office for a decade, Jorhat MP and opposition's deputy leader in Lok Sabha Gaurav Gogoi tells Subodh Ghildiyal , as he talks about being Thursday onwards, nearly all Indian exports to US will face a 25% tariff on top of standard US duties, plus an additional penalty. As such, India now faces one of the highest US tariff rates. When road rage becomes air rage, it's a whole lot more dangerous. Every incident must be dealt with firmly. Commercial planes commonly have a cruising altitude of 36,000 feet. Loss of temper at that height After pets get registered, why can't they claim residency too? The fat cats frowned that two Bihar babus, in a place they'd never heard of: Masaurhi in zilla Patna, found it legit to issue an High tariffs or not, self-sufficiency in critical areas must be a national imperative It is possible for a people to be self-sufficient. The Sentinelese in the Andamans, for example. But such living is extremely limiting. As we waited for cabs after a late night at work, in the quiet city dark, I wondered aloud to my two colleagues, one 50 and married, the other 25 and in a relationship: Is The White House executive order amending import

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21905

And hence, as has been a universal practice world over to constitute a committee to resolve matters unresolvable and knotty; the Noble Institute reportedly has formed a committee with a mandate to decide if a Nobel Prize is warranted for the claimed extraordinary miss deeds and if yes, should a new category be added to the existing Nobel Prizes, and more importantly; what would that category be called? The options being, but not limited to, the Nobel Peace Prize, the Nobel Prize for Hostile Actions, and the Nobel Prize for Extreme Antagonism, etc. etc. Indeed, some of the committee members who have been keeping a watch on natural histrionics of many politicians had opined in confidence that perhaps it was more appropriate to call this new category as the Nobel Prize in the field of Dramatics or some other performing arts. Whatever may it be called, let there be a Nobel Prize in a category created by us, for us; at least in the Amrita Kael. The forthcoming Lok Sabha elections are going to be unique and noteworthy. Prime Minister Narendra Modi has decided to run for the elections on the strength of his commitment to Viksit Bharat. And in order to accomplish this, he is determined to get every Indian to work hard. It is for the first time in the 75-years long history of independent India that a political leader is addressing the electorate with the intention of bringing the country up to speed with other developed countries. Indians possess the intelligence needed to transform their country into a sophisticated and prosperous one on par with the US, Germany, Japan and other advanced nations. What is lacking is the desire to succeed. Try as he may, Prime Minister Modi has made every effort to kindle this flame among Indians. He reaches out to the electorates through various media outlets giving them detailed explanations of the choices made over the past ten years to accomplish this goal and its outcomes. Additionally, he has also been appealing to his voters to support him to win back the elections to help attain the goal of Viksit Bharat. He consistently serves as an example for the karyakartas and reminds his cabinet colleagues, party employees and office bearers that they are not in power to profit from it. With his actions, he validates the title Upabhogshunya Swami which means one who is beyond the worldly pleasures. He believes that merely launching social welfare schemes through the government is insufficient, thus he stays in contact with the people who are the recipients of these schemes and pushes them to advance and fulfil their potential. Through initiatives like Mann Ki Baat, PM Modi talks about experiences of the beneficiaries, thus apprising other countrymen about it and in turn obliquely supporting their endeavours. To realise the vision of Atmanirbhar Bharat in its truest sense, he encourages purchasing domestic items instead of imported ones. The nation that was once the biggest importer of defence supplies and equipment is currently exporting commodities worth over Rs 25,000 crore. This is the Modi agenda. Acknowledging that Indians can also compete in the production of goods comparable to those of developed nations, he made sure that appropriate decisions are taken at the central government level. Consequently, we are inching closer to realising our goal of creating Atmanirbhar Bharat. And for this reason, through public forums, Indian billionaire businessman, Baba Kalyani, who served as the chairman and managing direct

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21906

As the world searches for new, clean sources of energy that are as convenient and reliable as fossil fuels, the race is on to secure the energy sources of the future. Solar and wind energy have made significant strides, but their intermittent nature continues to pose a challenge. While nuclear energy has been utilized for decades, its high cost remains a hurdle. And while electric vehicles are gaining popularity, they have yet to offer the convenience of gasoline or diesel. In a bid to address these issues, the Indian government has recently approved the National Green Hydrogen Mission, a highly anticipated decision with a budget of nearly INR 20,000 crore approximately $26.5 billion. This mission aims to develop domestic capabilities in the production of hydrogen, an element that is readily available in nature but rarely found in its pure and elemental form. The challenges Industry stakeholders have praised the Government move as a crucial step towards building a comprehensive ecosystem for the emerging fuel in the country. However, concerns about the potentially high costs compared to other countries that are also embracing the sector, also persist. Despite these concerns, Reliance Industries and the Adani group have already committed to selling green hydrogen at a competitive price of $1 per kilogram by 2030. The production and use of hydrogen through technologies such as Carbon Capture and Storage CCS and hydrogen fuel cell technology are still in its early stages in India. These technologies come with a high price tag, which raises the cost of hydrogen production and requires significant investment. In addition to the higher manufacturing cost, there is also a higher maintenance cost to consider. A Growing Market Despite its high cost, demand for green hydrogen is on the rise. According to an EY study, the market size for green hydrogen production is expected to reach nearly 140 GW of installed capacity by 2030. Companies like the Adani group and Reliance Industries have already committed to investing billions of dollars in the green hydrogen ecosystem, with the Adani group pledging $50 billion by 2030 and Reliance targeting over $10 billion in clean energy investments, including green hydrogen. State-owned companies like IOCL have also committed to meeting 10% of their hydrogen demand with green hydrogen. In addition, Indian Oil, Larsen & Toubro, and Renew Power have formed a joint venture to develop the green hydrogen sector in India, and NTPC and GGL have launched India first hydrogen blending project. Green hydrogen offers a range of benefits, including carbonization of the industrial, mobility, and energy sectors, reduced dependence on imported fossil fuels and feedstock, and the development of indigenous manufacturing capabilities. The Hydrogen Map Hydrogen is highly flammable, making it difficult to transport and better suited for use in close proximity to where it is produced. As a result, the locations of hydrogen production facilities in India may differ from those of solar power plants, with plants situated within industrial clusters where the fuel will be used. The Energy and Resources Institute.

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21907

Who also must be included in the mainstream of advancement. And the government formulates its policies with this in mind. The poor have the self-worth to break free from the cycle of poverty provided they are given the tools and proper resources. The poor are now striving to escape poverty, that is precisely what the government intends. Today, thanks to the Modi government provision of sufficient resources and systems, more than 50 crore poor people, who would never have thought to go near banks have bank accounts. With pucca homes, four crore impoverished people now have a greater self-worth and confidence. More than 11 crore families now have access to clean drinking water from their taps at home. The government Ayushman Bharat cards has given confidence to over 55 crore people that no matter the ailment, they too can get cured at reasonable costs and that is no reason for them to once again get trapped in the vicious cycle of poverty. These are the people that no previous governments ever focussed its attention on. But the Modi government has always created schemes with the underprivileged and impoverished in mind. For the first time during the Corona crisis, the government introduced schemes such as the PM Swanidhi Yojana for street sellers enabling them to break out from the debtor cycle of interest payments. They are capable of growing their businesses. For the first time in the country, the Vishwakarma brethren were given due recognition for their contribution towards nation building. The Modi government gave the Vishwakarma brothers access to contemporary equipment, cutting-edge instructions and financial support, thus opening up new avenues for them. The success stories of women who have benefitted from various Modi government schemes show us just how drastically the work culture in the nation has changed in the last ten years. Through consistent engagements with the recipients, the prime minister dutifully included this demographic into the nation advancements. By acknowledging their contribution to the country prosperity, Prime Minister Modi is striving to realise his motto of ab Ka Saath, Sab Ka Vikas, Sab Ka Vishwas. During Modi Viksit Bharat Sankalp Yatra interaction with Meghna Gurav, a Mumbai resident from Kandivali, we learned how she was able to obtain a loan of Rs 90,000 from Canara Bank for her street stall through the government Mudra Yojana and how it turned out to be a game-changer for her. With this loan amount, she grew her business. She was also able to take an education loan and send her son abroad for further education. In addition to meeting her family needs, Meghna was also able to give work to 25 other women from the self-help groups. Under the PM Kaushalya Vikas Yojana, women who completed sewing training are not only receiving sewing assignments but are also having their quilts exported. Likewise, the story of Insha Shabir, a resident of Pulwama district in Kashmir and a recipient of the Central government Deendayal Antyodaya Yojana National Rural Livelihood Mission is motivational. Insha Shabir got a bank loan through the Deendayal Antyodaya Yojana National Rural Livelihood Mission following her completion of design training. She had the chance to turn her passion into a profession when she started her boutique. In an effort to strengthen the rural economy, the Modi government is launching efforts to give rural women opportunities for self-employment. More than 10 crore rural women including did is have

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21908

Estimates that demand for hydrogen in India, currently around 6 million tons per year primarily for use in the fertilizer and refinery industries, could increase fivefold by 2050. While there is optimism about the potential of green hydrogen, its potential for widespread use is still unclear. Parting Shot Following the approval of the National Green Hydrogen Mission by the Union Cabinet, Union Minister of Power and New & Renewable Energy R.K. Singh held a meeting with stakeholders and stated that India aims to become the most competitive source of green hydrogen and ammonia for the global market. Now, what remains to be seen is whether India actually achieves the desired energy security via Green Hydrogen or this initiative ends up as hot air! India fundamentals continue to remain strong even in times when the world is facing economic turbulence caused by a devastating public health crisis and geopolitical complexities. According to the latest projections by IMF, India remains the fastest-growing economy globally at 6.8%, while large economies like the US and China are slated to grow at 1.6% and 3.2% respectively. A good percentage of our time is spent on roads, and our roads just don get better or safer. A third of the 4.1 lakh documented road accidents in 2021 resulted in 1.5 lakh deaths. Another third of the accidents resulted in grievous injuries. Nearly everyone has a scary story about a close shave on the road. Recent incidents like the heart-wrenching Anjali Singh case in Delhi, cricketer Rishabh Pant accident in Uttarakhand, and Tamil Nadu software engineer S Shobana death, mowed down by a truck after her two-wheeler was felled by a pothole, highlight the multiple dimensions of risks while on the road. The record-setting expansion of the road network is a positive development. But the ecosystem that facilitates safe travel has lagged far behind. Building infra in the end; new structures manned by old ways of doing things are helping. Anjali was dragged by a car at night for over 12 kilometers with an eyewitness making calls to cops multiple times in vain. The poor state of policing on national capital roads stood exposed. The car drunk driver had no driving license but had nothing to fear on unplaced roads. Not surprisingly, cities like Delhi, where crimes against women are frequent and street-lighting uneven, have few women two-wheeler drivers, unlike most southern cities. Women motorists and pedestrians will also feel much safer in better-lit roads, which enable improved road visibility. Agencies like NHAI and state public works departments, which construct and maintain major roads, must also be held to task for poor road conditions like potholes, inadequate sign ages and unscientific road construction. Official records blame over speeding and dangerous driving as responsible for most accidents, and non-wearing of safety equipment like helmets and seatbelts for most deaths. This implies that road safety enforcement must get better. The Motor Vehicles Act as amended in 2019 had empowered state governments to conduct electronic monitoring of roads through speed.

Cameras, CCTV cameras, speed guns, body wearable cameras etc. Investments in such tech upgrades should happen faster. Equally important is incentivising public participation in taking victims to hospitals promptly and reimbursing hospitals for emergency trauma care. From policing to courts to transport department to public works to healthcare, a whole of government approach can make citizens safer. Such improvements will represent the next generation of governance reforms that India must target. The draft UGC regulations for setting up campuses of foreign higher educational institutions are first of all a reminder of the snail pace at which this reform has been moving, one government to another. When a bill to this end was introduced in the Rajya Sabha in 1995, liberalisation had just begun feeding Indian students appetite for a world-class education. As knowledge of the opportunity gains of such an experience has spread across the country, the longing for it has grown manifold. So second, the question is how the new draft regulations are different from the oft-repeated, failed and fuzzy promises of bringing Yale or Harvard to India. The only infrastructure reference in the regulations is that institutions should arrange for adequate physical infrastructure. This is in sharp contrast to how foreign university campuses in China and the Gulf countries have been facilitated by a lot of funding and public works by the host country. Perhaps the most notable advance is to allow the foreign institutions repatriation per the Fema rules hitherto the disallowance of for-profit education in India has been a deal-breaking disincentive. Also welcome is the concession of autonomy to these institutions in recruiting faculty and staff from India and abroad whether it be qualifications, salary structure or other conditions of service. But by simple logic, whatever is a necessary condition of excellence for a foreign institution must also be so for a domestic one. If the regulator has accepted how much educational gains are tied to universities financial and academic autonomy, it seems quite self-defeating to deny this autonomy to the thousand universities that are educating Indian youth today but promise it to a select few who may do this tomorrow. Is the bro code in danger of going woke on us? Not on our watch, say Indians! While the jaws of the world went slack upon reading leaked snatches from Prince Harry forthcoming memoir baldly titled Spare, where he reveals that his elder brother Prince William once beat him up, our jaws alone remained tightly fitted to the face. He grabbed me by the collar, ripping my necklace, and he knocked me to the floor, Harry is quoted as saying and we only said, Necklace?!!? If H had hit W, however, our jaws would have gone boing. Willy is the bada bhai, he can smack his wingman. Move along, nothing to see here. Sibling rivalry is just babalog at play. Once upon a time all brothers in Hindi films got routinely lost at a mela, almost like melas were put up to get rid of.

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21910

Little boys by the time they reunited in the last reel there was just enough time left for a badly composed happy song. Then brothers began to occupy opposite ends of the celluloid spectrum. If one became a smuggler the other was a CID officer Ek chor ek sipahi, as Ram and Balram sang in the film Ram Balram. One a superhero, the other a beach bum. Younger brother a playboy means elder brother suffers from congenital fidelity. One is jokey, the other grim which makes family dinners confusing, especially when the grim one cracks his annual joke and the jokey one has indigestion. One brother always has bungla and gaadi so the other can say, Mere paas maa hai. If not fighting over the garam-garam roti maa just made, brothers are inclined to fall for the same woman. Which is also an opportunity for both to play martyr and leave her so the other could be with her. The woman actually wants Timothies Chalmette but is too polite to say no to whichever brother loses the grand game of sacrifice. Testosterone demands a scuffle or two, some horseplay, a bruise, a blow elder brothers have traditionally attacked their younger brothers just to prepare them for life. The latter are to parry and duck and not carry tales. Nothing says I love you little brother like a round of dishoom-dishoom. Which is why Harry claim that he called his therapist immediately after William smacked him mystifies us. Did We refuse to buy H a new necklace? The true nature of God, his State of Being is beyond terrestrial knowledge. Brahman is transcendental. Your body, mind and intellect cannot reach the transcendental. If you have seen the Taj Mahal or the Eiffel Tower, you are able to express its beauty and grandeur through words. But, the subtler the theme, the greater the difficulty in expression. Brahmn, being far beyond the subtlest terrestrial themes, defies expression. It is not possible to capture God in words. Yet the great sages of yore have given humanity several pointers indicating Brahmn, the supreme God. These are not definitions. But they help set a clear direction for the intellect to pursue and grasp the transcendental Being. Vedanta serves as a pointer indicating God. Terrestrial knowledge, however subtle, cannot take you directly to the transcendental Reality. God is infinite. Finite efforts cannot achieve the Infinite. Nevertheless, one cannot reach God without this knowledge. Knowledge can take you only up to the subtlest terrestrial experience. Thereafter you will have to experience the Reality subjectively. The moon-branch analogy aptly illustrates this truth. It is known in Sanskrit as chandra shakha nyaya. The analogy explains how the moon can be pointed out with the help of a branch of a tree. At times you see the crescent moon in the bright, sunlit sky. It appears no more than an arc of a circle. In the wide expanse of the sky, you find it difficult to point it out to another.

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21913

Person He is unable to spot the arc in the glare of sunlight. Besides, there is nothing else in the sky with reference to which you may point it out. The analogy gives a practical way of doing it. You first point to a particular tree in the meadow. Then to its trunk, branch and to the tip of the branch. Let him follow the line of vision up to the tip. Thereafter, ask him to gaze at the sky far beyond the tip of the branch. The moon suddenly appears to him. The unknown moon is now known. You will appreciate that none of these aids has anything to do with the moon. The tree, trunk, branch or tip is not the moon. The moon is far beyond them all. Yet without these pointers he could not have located the moon. These are essential aids to find it. But if he holds on to these aids and does not move beyond them, he will not succeed in locating the moon. So, it is with realisation of your supreme Self. Vedanta provides all the knowledge necessary to reach your Godhead. Its philosophy is meticulous. It takes you from your present state to the point of divinity, short of Self-realisation. Vedanta can reach you to that point and not beyond. You ought not to get involved in the knowledge and hang on to it. Which would mean fixing your attention on the branch and not going beyond it. Hence, make good use of the knowledge to reach the Ultimate. Excerpt from the Thesis on God. Swami A Parthasarathy daughter-disciple, Sunandaji, will give lectures on Bagdad Gita, Chapter 11, at Bharatiya Vidya Bhavan, Girgaum Chowpatty, January 9-13, 6.30-7.45pm. For more, visit: vedantamumbai.org The B2C EdTech space in India needs to reorient its approach to support teaching and learning in schools rather than offering Band-Aid solutions. For India s EdTech sector the year 2022 will go down as the year that completely exposed its frailties. This year witnessed layoffs, losses, restructuring, funding crunch and even complete shutdown of businesses. It is clear that the sector needs a complete reset to emerge from the so-called EdTech Winter. The bubble that was created by the pandemic, sent EdTech to soaring heights. India became the world EdTech capital and as per market reports was estimated to reach $10.4 billion by 2025. While many of us still believe in the promise of this sector, we all know that there is a serious need for introspection. Let s examine what brought the sector to this point? No doubt there are macroeconomic factors and global slowdown that has affected the sector as much as any other sector. But perhaps there is something deeper? Something that has shaken the confidence of consumers and even investors? Could it be possible that EdTech undermined the importance of schools in India? That instead of being mission driven, it became profit driven? Parallel Structure, Extra Burden Most of the B2C EdTech solutions and companies.

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21914

Have emerged as a parallel structure to school systems. Instead of creating solutions that support the teaching and learning in schools, most solutions merely moved high quality offline teaching to online platforms. These solutions became an extra burden on students and their families, who would have already spent hefty amounts on conventional school education. The push for profitability and higher Return on Investment (ROI) led to higher prices of learning modules and academic sessions. What s worse is that most attempts at scaling up resulted in drop in the value of services. As a result, while they did add value for investors, they did not take care of the fundamental need and challenges of the education system in India. Challenges of Schools & Students in India Its not that the sector did to understand the problems. Providing quality education at scale is as much a problem for India as for most developing nations. What went wrong is the approach towards solving this problem. For most Indians, education is a means for economic and social advancement and a ticket to a better future. Parents are willing to spend hefty amounts to secure their child s future and often those who can spend more get an edge. Most companies perhaps banked on this factor and rather than trying to solve for the core issues of quality education in schools decided to capitalise on it. Majority of the schools in India fall in the lower- and middle-income group. Many Government, Municipal and even Private schools struggle with providing quality teaching at scale. Teachers in these schools need to be supported instead of being side-lined. Students in these schools cannot afford to spend much and need solutions that truly deliver at their comfort and a price they can manage. Solving for this problem is an opportunity for innovation. Opportunity for innovation and resetting priorities The starting point of designing solutions that align with the larger mission of improving the education ecosystem is being student-centric and institution centric. Understanding the struggles of teachers and students, the goals they are pursuing and then creating technology to enable them to do that better. The fundamentals need to be reimagined by going beyond replicating rote-learning in classroom to rote learning online. One way of doing this is changing the way we learn from assessment as an end to assessment as the beginning of learning. Industry 4.0 technologies like AI and ML can be leveraged to truly transform education by using super granular data and user insights to make learning more intelligent, intuitive and customised for each student. Building great businesses and greater impact Rather than just following investor driven business models, innovative business models can be developed to solve the problem of affordability. A solution that works for the masses may have lower margins but the scale of business will be much bigger. We must remember that education will always be a social good and while thinking of business models and approaches this key philosophical and societal principle .

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21915

This adds intrigue to the forthcoming Lok Sabha elections as on one hand there is Modi who talks only about development while the Opposition is only obsessed about campaigning anti-Modi agenda to their electorates. Instead of putting their vision of development before the voters, the opponents are more concerned in inciting hatred against Modi and the Bharatiya Janata Party. This serves as evidence that they will undoubtedly lose the elections even before they are declared. In politics as much as in literature, some stories write themselves. The latest one such script is that of actor Kamal Haasan political journey. Kamal launched his party Makkal Neethi Miami (MNM) in 2018 with the promise of occupying the centre (maiam means that) and remaining unaligned. Six years and two big elections later, Maiam is shifting to the left. Kamal has been in talks with the DMK for an alliance for the coming general elections. He wants to contest to the Lok Sabha from Chennai or Coimbatore, while the DMK first offer was a Rajya Sabha seat. The DMK may finally agree to give a Lok Sabha seat (T R Pachamuthu, who won the Perambalur Lok Sabha seat in 2019 on the DMK symbol, has migrated to the BJP alliance). The point of contention remains the symbol. While the DMK wants Kamal to contest on its rising sun and campaign across the state, the actor-politician insists on MNM orch. Giving up the torch for the sun, Kamal feels, would put him in a bad light. We are sure if there would be a slip between the cup and the lip, but from the beginning, Kamal has been a potential ally of the DMK. For, his political philosophy social justice, rationalism, secularism resonated with the avowed though greatly diluted through the decades principles of the Dravidian giant. Kamal has always been left, always in conflict with the right. Centre was just a political construct to pitch himself as an alternative to the Dravidian parties. Now, if he allies with the DMK, even the claim of taking the centre position for issue-based opinions may cease to be his USP. Politically, however, this is the inevitable way forward for Kamal. Six years is a political party infancy, but the resources it needs to grow can be quite demanding if early electoral victories evade it. In the 2019 Lok Sabha elections, its electoral debut, MNM put up a decent show in the city constituencies, garnering more than 10% votes. The party overall average, however, remained well below 4%. Soon, many office bearers including vice-president R Mahendran left the party. In the 2021 assembly polls, its vote share dipped to 2.5%, and Kamal has been able to attract big names to his party. Getting into an alliance as a minor partner is essentially an admission of a party limitations that it has virtually given up on achieving the alternative status that it aspired for. There can be no better example of this than Congress (though the dynamics were different) which never recovered from the blow it suffered in 1967 and was later forced to sail with DMK, the same party that defeated it. This does mean it is all downhill for MNM. Once reconciled with its strengths and weaknesses, it can, as an alliance partner, build itself to its optimum potential. In this role, Kamal may not be fiercely independent on issues, but nobody expects him to be that while being part of a combine. For the INDIA bloc, Kamal as an MP would be a good value addition, not just for optics but for debates too. Kamal straddles his film star status well wi

BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21916

And, whether you agree with him or not, that would be good to see in the central hall of the world biggest democracy. India future is decidedly urban. Legacy overhang however is, perhaps subconsciously, contrarian and pulls us in the direction of demonstrably untrue statements such as, India is a rural agrarian country and India lives in villages. This provides an opportune moment for us to redefine to measure the urban in India and put together authentic relevant data to address important ramifications that we will flag in what follows. The official figures available to us via Census 2011 and hence somewhat dated, put India at around 32% urban. That the official number is a gross underestimate. Scholarly papers using innovative proxies such as night light intensities, amongst other things, have been written on this subject, which have established the fact of severe underestimation. At least two World Bank reports of a decade back, have pegged the estimation of urban India then as already above. His fans and followers adore him, and will not tolerate any criticism of him. His opponents only want to criticise him. But if one rises above these two extremes, there is much to learn from the Modi phenomenon. It reveals so much about the human condition, and nature of society, and specifically India. To appreciate this we must acknowledge that the nation-state is a cultural construct, a mythic idea, not a timeless one. There is nothing rational or reasonable about it. It is simply a powerful historical idea that emerged from tribes of Europe and West Asia that took the world by storm. This began about 300 years ago, when America broke free from Europe as a republic, anchored on a single document, the Declaration of Independence. In what must be a huge relief for Congress, its seat-sharing exercise with INDIA alliance partners is finally producing some results. Congress has stitched up deals with SP in UP and MP and AAP in Delhi, Haryana, Gujarat, Goa and Chandigarh. But huge challenges remain. AAP together | Congress and AAP announced a 3-4 split in AAP favour in Delhi. AAP will also contest Baruch and Bhavnagar seats in Gujarat and Kurukshetra in Haryana. But Punjab, where AAP is a key player, is not part of the deal. Even in states where Congress-AAP have deals, the question is whether there will be any complementarity, given AAP small size in all but Delhi and given both parties similar vote base. Of bigger significance is the deal in UP where SP will contest 63 seats and Congress the remaining 17. But it will still be an uphill task. Modi will practically be on every BJP ticket with the party turning the polls into a referendum on him. Add to this BJP successful targeting of OBC votes barring Yadavs, and it already has a formidable caste coalition in UP. So, just Akhilesh and Rahul portraying themselves as UP boys probably cut it. Bengal bungle | Mamata is still not playing ball but Bengal 42 seats will be crucial to INDIA. This is also where it has a good chance of putting BJP on the mat through a joint campaign. But with local units of both CPM and Congress fighting Trinamool on the ground, both parties central leaderships are finding it difficult to negotiate with Mamata. The state 48 seats are poised for a fratricide battle royal with rival Sena and NCP factions. It is tricky for NDA too. By pushing through another Maratha quota legislation, NDA may have gained an advantage. But reports suggest Congress, Sena and Sharad Pawar NCP alre

Spl-BSF-HCM-TEST-Dated-2025-08-06-Test NO.-21917

The Romantic poets were a sensitive group of geniuses who broke from the classical tradition between 1780 and 1850. Their poetic expositions are widely read and researched by students in literature schools and universities around the world. The illustrious English Romantic poets in the mainstream were William Blake, William Wordsworth, Samuel Taylor Coleridge, George Gordon Byron, Percy Bysshe Shelley, and John Keats. A chronological comparison between early Romantics, such as Blake, Wordsworth, and Coleridge, and later Romantics, including Byron, Shelley, and Keats, offers insight into themes such as elements of nature, love, beauty, emotion, and rebellion. Romantic poets in the bygone era were literary harbingers nevertheless, in reality, they were prophets of romance, love, and beauty, underlying a collective theme of rebelling against the relegation of emotion to reason, denying the bounty of nature to generate the flow of extensive industrialisation, and disbelief in the eternity of man's soul. Their poetic lineage was perpetuated through pilgrimages and spiritual journeys to immortalise the philosophy of love, beauty and elements of romanticism. It was romance in tryst with the imagination of divine forces. Samuel Taylor Coleridge's The Rime of the Ancient Mariner emphasises the inculcation of moral values by absolving the speaker from a sense of guilt, leading to redemption and a meaningful life, and the sacredness behind our living standards. As known for his mystical insights, Coleridge intercedes “He prayeth best, who loveth best All things both great and small.” Though John Keats suffered bouts of hypochondria love sickness, he was undeniably a sensuous poet who expressed his angelic love ever flowing for his amorous lady, Fanny Brawne. Her absence during his sickness seemed unbearable, and he lamented through the open window to nature. Living his life under the misery of melancholia and condescension with the truth of beauty nurtured by nature, John Keats in the Ode on a Grecian Urn, declared “Beauty is truth, truth beauty that is all Ye know on earth, and all ye need to know.” Nature was his only trusted companion. Romanticism endures in the hearts of those who cherish love, beauty, and nature. It is an experience that revitalises the soul, much like rain breathing life into a parched landscape. The spirit of Romanticism naturally gravitates toward the timeless presence of emotion, aesthetic wonder, and the natural world. Echoing the sentiment in Keats' Ode on a Grecian Urn, some still hold to the idea that 'Beauty is truth, truth beauty' a reflection of the enduring Romantic quest for meaning through beauty. Telling the biggest countries by population and landmass to take their dead economies down together deserves bigly coffee Trump-speak for big Police, Lawyers, and Judges Did the Right Thing in the Prajwal Case Prajwal Revanna, a former Member of Parliament and grandson of ex-Prime Minister Deve Gowda, has been found guilty in one of several serious Infinite growth won't end poverty, better distribution will A motorcar is made of steel, aluminium, copper, glass, rubber, and numerous other things. Must be kept in mind. Here hoping we will see the B2C EdTech space takes the time to introspect, course correct and come out stronger in 2023. We all are aware of diabetes in adult but type 1 diabetes in children is a growing concern which requires multidisciplinary approach for early recognition ,long term management and prevention of complications. DISEASE BURDEN: ICMR states that there are around 95,600 children living with Type 1 diabetes in India and the number is growing at 16,000 new cases per year adding to the existing burden. WHAT IS DIABETES ? Normally after a meal glucose levels rise in the blood stream, which depends on the type of meal we consume (low glycemic index foods produce slow and sustained release of glucose, high glycemic index foods causes sudden high peak in sugar levels in the blood).Pancreatic cells detect glucose levels in the blood and release insulin. Insulin act at cellular level and help in utilisation of glucose for energy. In type 1 diabetes Insulin production from pancreas is affected which intern reduces the glucose utilisation by cells and hence increasing the glucose levels which is the main culprit for the symptoms and complications of diabetes. As the cells are unable to utilize glucose for their energy needs an alternate source of energy like fat is utilized leading to production of ketones, a type of acid. The cornerstone of treatment for type 1 diabetes is insulin. Adherence to treatment and regular monitoring are the main determinants of long term benefits and prevention of complications. The Small and Medium Enterprise (SME) segment which accounts for 45 percent of India s total industrial output and 40 percent of total exports, still faces significant challenges in raising financing for growth and working capital needs. SMEs limited access to third-party equity capital and lack of equity capital prevents management teams and significant operational intervention work as a speed breaker in their journey of scaling up. This is where the need for outsourcing investment management walks in as an attractive alternative for SMEs. Outsourcing investment A need for SMEs in India 9 out of 10 small businesses (90%) plan to outsource business functions in 2022 in order to save time, grow their company, and work with experts across a range of business functions. However, in an environment where SMEs are perennially starved or deprived of any form of investment to fulfill their growth ambitions, SME owners would be eager to bring in professional assistance with distinct benefits at lower costs. Gaining access to equity can be the most expensive form of capital for your business. Generating ROI that is lower than the cost of capital can be detrimental to business. That is where a professional CFO can get into the gritty details of what creates value and costs at the portfolio company, probing fixed and variable costs that conclude what works best in the business s operating leverage. Leveraging an outsourced partner can also support SMEs with services like cash.

BSF-HCM-TEST-Dated-2025-08-07-Test NO.-21922

Flow management, routine accounting compliances and customize Tally to work as cost effective ERP, which are a big challenge for SMEs as they seek to ensure timely, accurate and ever more granular reporting to the investor base. CFOs leading the transformation charge The structure of a small business typically involves a leveraged balance sheet and debt structure that requires careful management. For that the owners can place a high degree of emphasis on the CFOs who have worked in such environments and can deliver efficiency measures to improve business performance, whether through cost-based transformation or fostering a decision support culture within the business. For those SMEs who are seeking investment exposure and wish to expand business operations into new markets, CFOs will offer their expertise in regulatory and economic environments, while maintaining strong governance and controls, and managing the entire process. Conclusion Leveraging the expertise of outsourced fund management administrators, be it in-person or virtual, is particularly beneficial these days, as SME managers have reported increasing difficulty in understanding primary levers of financial functions and hiring auxiliary staff in the back and middle offices for this task seems impractical. With more and more understanding of outsourcing, more SMEs are favoring the process as financial administrators can deploy more robust control frameworks around key processes and a robust control framework that can increase operational efficiency and minimise risks. Organizations are increasingly vulnerable to internet attacks, which endanger daily operations and compromise patient data. Given the sensitivity of patient data, healthcare providers need to be extra cautious against cyber-attacks. Professionals in the healthcare sector need to spare time from their busy and hectic schedules to train or skill themselves against cyber threats so that care is not compromised. Professionals in the healthcare industry are willing to spend more on cyber security. There are several reasons why the healthcare sector is currently the one most frequently targeted by cyber-attacks, including the enormous demand for patient data and occasionally dated technology. According to data released recently by a cyber-security think tank, the healthcare sector in India has experienced 1.9 million cyber-attacks so far this year as of November 28. Attacks were launched from a total of 41,181 different IP addresses, most of which were found in China, Pakistan, and Vietnam. The All India Institute of Medical Sciences (AIIMS) New Delhi, the premier government-run hospital in India, was forced to resort to manual operations and shut down many of its servers recently as a result of a significant cyber- attack. AIIMS, which had previously declared aspirations to digitise all services by April 2023, denied reports that hackers demanded Rest 200 core as ransom. How do they do it? Medical devices do hold any patient data, which can be known to hackers. But, medical devices could provide hackers access to other network devices or allow the installation of expensive ransom ware, which could cause problems for healthcare businesses. Secure network devices enable limiting the damage a medical device attack can cause. Equipment like x-rays, insulin pumps.

BSF-HCM-TEST-Dated-2025-08-07-Test NO.-21923

Up just 13% of HC judges. In November, CJI Chandrachud had said that today HC judge composition reflects the situation of 30 years ago. By all accounts, there is tremendous diversity in higher education today. All India Survey of Higher Education reveals 53 women per 100 men in LLB courses in 2019-20 from just 44 in 2015-16. Similarly, SCs made up 13% of all LLB enrolment and OBCs 29%, suggesting that the old order has irrevocably changed. One of the many criticisms of the collegium system has stemmed from its indifference to the changing social composition in public institutions. Higher judiciary mirrors private entities mainstream media is no exception in not being representative enough. The collegium alleged penchant for nepotism, with many of those passing muster being sons, a few daughters, and kin of ex-judges, is seen as blocking the way for unpedigreed others. The now-quashed six-member NJAC was to have one of the two eminent members from SC, ST, OBC, women or minorities. And in another blow against diversity, GoI has not cleared the appointment of India first gay judge. Diversity brings collective experiences and point of views for the Bench from traditionally non-elitist groups, improving quality of justice delivery, and representation inspires social confidence. CJI Chandrachud should walk the talk and prod the SupreIn 1851, Seattle, chief of the Suquamish tribe around Washington Puget Sound, is believed to have delivered what many still consider to be one of the most profound environmental statements made by man. In reply to a proposed treaty under which his tribe was persuaded to sell acres of land to the colonisers, Seattle wrote to the US president that all things are connected: How can you buy or sell the sky, the warmth of the land? If we do not own the freshness of the air and the sparkle of the water, how can you buy them? Every part of this earth is sacred. Every shining pine needle, every sandy shore, every mist in the dark woods, every clearing and humming insect is holy. Me Court and HC collegiums into actively looking for diversity in appointments. I recently had my birthday. Or to use the more apposite Indian-English, my happy birthday. It this happy thing I find difficult internalising as a middle-aged man. To explain, I will refer to one of the most classic Hindi movies made in the last few decades. A Mithun Chakraborty Da starrer by the name of Classic Dance of Love. In it someone wishes Mithunda Good Morning to which he answers (he is walking about the street in tattered clothes and manacles don ask why) in a thundering voice full of angst and anger: What is so good about this morning? Similarly, what is so happy about a birthday? When I was young, I totally understood the happiness. Every year I was moving closer to the fun part of life: Transitioning from half-pant to full-pant, being given the right to shave and maintain a stubble, permissions to stay out.

BSF-HCM-TEST-Dated-2025-08-07-Test NO.-21924

Late, and maybe even go on a trip to Digha with friends. I was celebrating, with each birthday, more independence: My own room, licence to watch adult movies, to watch adult movies in my own room, driving, romancing, and moving away into my own place, till finally I was free to take all decisions of my life. No wonder it was friends and presents and balloons, hoping none of the presents were duplicates. Each birthday was happy because each one represented a lessening of restrictions and strictures. Now it exactly the opposite. Each birthday to the middle-aged man represents the passing of yet another milestone on the highway of life, a milestone that says you are one year closer to your death. You are manacled, like Mithun Chakraborty in Classic Dance of Love, by the progressively tightening chains of portion-control, carb-control, cholesterol-control and blood-glucose-control. And things will grow worse as I transition inevitably to old age. I will have less freedom to do what I want, my joints will limit me and so will my kidneys and my heart and my eyesight and my memory, till I will land up where I started. Total dependence. To put it another way, when one birthdays are happy in youth, you eat as much cake as you can, and when they are happy any more, you take the smallest slice and post the picture on Facebook. Why would you celebrate another turn of the earth while on this path? Having said that, do remember to wish me happy birthday next year. The world in which we live is not primarily determined by external conditions and circumstances; rather, it is determined by the thoughts that constantly occupy our minds, says Norman Vincent Peale. And the sage of Concord, Ralph Emerson, too agrees. A man, he says, is what he thinks about all day long. Thoughts possess dynamic power that can take concrete shape. You can actually think yourself into or out of situations. You can render yourself weak and helpless with your negative thoughts and, by the same token, you can make yourself strong and courageous by the use of powerful, positive thoughts. One can derive inspiration from the examples of men who had shown tremendous courage even when being placed in extremely adverse situations. They stood undaunted like a rock and never compromised with their principles. At the age of 72, Socrates was forced to drink the hemlock at Athens just because his spiritual ideas were not in consonance with those of the orthodox elements of Greek society. He was accused of creating negative thoughts in the minds of the youth of Athens against the tutelary deities of the state. Being a fearless man, he courageously faced the tyranny unleashed by the judges who condemned him to death. His last words to the judges were: It is now time that we depart, I to die, you to live, but which had the better destiny is unknown to all, except to God. When Martin.

BSF-HCM-TEST-Dated-2025-08-07-Test NO.-21925

Holy hell, RRR. Has any movie ever packed more movies into a movie? What a ride. Still thinking about it a couple days later. By the time Jon Spits, the Oscar-nominated screenplay writer of Dune tweeted these words last July; SS Rajamouli RRR (Telugu) was already a pan-India blockbuster and had been drawing an incrementally rising wave of audience interest in the United States. The Supreme Court has asked pertinent questions on Goo curative writ petition against the 1989 settlement order directing Union Carbide Corporation to pay $470 million (nearly Rs 750 core) as damages for the 1984 Bhopal Gas Tragedy. UCC was willing to cough up $426 million while Goo submitted that any amount less than $500 million would not be reasonable, following which SC settled on a midway figure of $470 million that both UCC and Goo agreed upon. The settlement was panned for short-changing the victims, for being inadequate for environmental repairs and as an ineffective financial deterrent against gross negligence. After failing to extract a higher compensation then, Goo is now seeking over Rs 7,000 core in additional damages. The belated demand is unlikely to yield a positive outcome in most jurisdictions. Raising victims hopes for more compensation arguably places a moral responsibility on Goo to do more for them even if the judicial recourse falters. SC noted that Rs 50 core from the original compensation still remains unutilised, a damning indictment of successive governments. SC rightly pointed out that vitiating a settlement after over three decades could damage India investment climate. Normally, SC gratuitous advice to government in the policy turf would seem completely uncalled for, but here it makes eminent sense. In fact, the court could have been lobbing the ball back to the Centre. SC also minced no words when it suggested that populism could be behind the belated curative writ petition, observing that it cannot be the basis for a judicial review. Having messed up in Bhopal, India has a responsibility to prevent more Bhopal from happening. A comprehensive legislation that helps in promptly and accurately fixing civil liability for negligent conduct is our best bet. Without this, courts are arbitrarily deciding compensation. While SC reduced the compensation decreed by Delhi high court to be paid by the Nasal brothers in the upward fire tragedy, it set aside a Madras HC order that closed the sterile copper plant in Tuticorin but ordered the company to deposit Rs 100 core with the district administration as pollution damages. This novel calculation of Rs 100 core was around 10% of the company profit before tax between 1997-2012. A 2018 RTI reply showed that just 7% of the damages were utilised. Instead of aphorism by government and judiciary, it is time for firmness and predictability. Polls in three Northeast states of Tripura, Meghalaya and Nagaland likely in February/March, dates are yet to be declared by EC are likely to be a serious test for BJP. In Tripura, cracks have appeared in the BJP state unit, which.

Forced Byplay Deb to step down as CM. BJP relations with its tribal ally, IPFT, have not been problem-free. This has been compounded by the steady rise of Prado Inshore Deb Barman-led Tiara Moth, which demands a separate tribal state. CPM has announced its intention of forming an alliance that will potentially include both Congress and Tiara Moth. However, TMC, which too has been eyeing Tripura since its victory in the 2021 Bengal polls, is likely to undermine such opposition unity by contesting all 60 seats alone. The NPP-BJP alliance in Meghalaya seems to be under strain with CM Conrad Sigma indicating last year that his party was willing to fight the polls without an ally. There are also Sigma reservations about a Uniform Civil Code in a tribal state. Then there is the festering interstate border dispute with neighbouring BJP-governed Assam. The Assam Police firing incident in November that killed six people further chilled ties between the coalition partners. In fact, similar border and territorial issues also plague Nagaland and Assam. Additionally, the Nagaland governing coalition comprising Nationalist Democratic Progressive Party, BJP and Naga People Front has to navigate the demand by the Eastern Nagaland People Organisation for a separate state of Frontier Nagaland. This comes on top of the existing impasse between the Centre and the NSCN-IM over the Naga peace talks with the latter insisting on a separate flag and constitution for the Nagas. Taken together, the three Northeast states present very complicated challenges for BJP. We are an uri-nation with pissiparous tendencies. Ask any wall in any public space. But airspace and the lap of co-passengers should be more sacrosanct. No surprise then at the incontinent indignation over the indiscretion of the inebriated Peeing Tom. Here how Mark Antony would rise to defend our lain Maharaja. From the depths of his being, Swami Vivekananda preached the message of divinity of man, the eternal message of Sanatan Dharma. From the core of his heart, he broadcast the message of universal religion, which he imbibed from his Master, Ramakrishna Paramahans, whose entire life itself was a consummation of this Universality. While Swamiji clarion call of brotherhood, love, universal acceptance, internal transformation aroused the Western mind, it energised the psyche of a nation steeped in inertia. He knew the futility of speaking the same language that stirred the Western audience, to his countrymen who, as per his own words, were a leeping Leviathan. That is why he said, you will be nearer to Heaven through football than through the study of the Gait. He galvanised youthful minds with powerful, action-inducing clarion calls such as: What we want is vigor in the blood, strength in the nerves, iron muscles and nerves of steel, not softening namby-pamby ideas. He knew the weak, rudderless; minds of 19th-century India needed a strength-injecting new mantra. In the modern times, as we pursue our selfish interests, keep shrinking in our worldviews and getting trapped in the cycle of happiness and misery, Swami Vivekananda message is.

As relevant. He said, like the caterpillar that takes the thread from its own mouth and builds its cocoon and at last finds itself caught inside the cocoon, we have bound ourselves by our own actions. We have set the wheel in motion, and we are being crushed under but there is a way out of this trap, and that is spiritual knowledge. Spiritual knowledge is the only thing that can destroy our miseries forever; Let men have light, let them be pure and spiritually strong and educated, then alone will misery cease in the world, not before, he said. And spirituality in his manual is the progressive journey from selfishness to unselfishness. Unselfishness is more paying, only people have not the patience to practice it, he believed. Love, truth and unselfishness form our highest ideal, because in them lies such a manifestation of power. That is why he emphasised the right education that can help evolve humanistic impulses in a person. Education, to him, is not the amount of information that is put into your brain and runs riot there, undigested, all your life. We must have life-building, man-making, character-making assimilation of ideas. In the modern times, when society is moving headlong into the future without a higher ideal, Swami Vivekananda message of divinity of man can show us the way. He said: Teach yourselves, teach everyone his real nature, call upon the sleeping soul and see how it awakens. Power will come, glory will come, goodness will come, purity will come and everything that is excellent will come when this sleeping soul is roused to self-conscious activity. Arise, awake! Awake from this hypnotism of weakness. Stand up, assert yourself, proclaim the God within you, do not deny Him! De-hypnotise yourselves. Swamiji man-making ideas and his message connect us with the eternal value systems of our nation. A self-reliant nation with spiritually strong personalities capable of working for people beyond the conventional boundaries is the need of the hour Hindu society in India and elsewhere is facing an unprecedented attack on its way of life, its places of worship, and above all brazenly being called fascist for its politics. Hindus lived under slavery of Islamists, British, and Portuguese Christians for hundreds of years; Hindus were degraded by its ruling elites on every opportunity. Occupation based lifestyle was termed by these rulers as CASTE system unknown before among Hindus of India. Upheavals in Hindu society upturned many of such malfeasance through intellectual contributions of reformists. However, in this process of mending fences, Hindus got morally injured and salt was constantly rubbed by conversion mafia of Abraham faith who made deep inroads in the heartland of Hindus. Why should Hindus from everywhere feel perturbed by this ongoing phenomenon of being called right-wing, communal and fascist by forces inimical to it? Hindus don carry any political doctrine of supremacy unlike Islamists and evangelical missions. Hindus are never informed either by its scriptures or by society that THEY are THE BEST human beings.

BSF-HCM-TEST-Dated-2025-08-07-Test NO.-21930

Unlike prescriptions in the scriptures of Abraham faith. Hindus have place for everyone including atheist or even agnostic. Philosophical premises of Hindus are broad enough in its contours accommodating every human on this planet earth in its umbrella. Hindu sages have written many centuries ago that entire World is one family. Hindus have no place for caste, creed and race discrimination. This is the purity of Hindu faith. It is normative rather than prescriptive one like Abraham ones. State of geopolitics and cartelization among the nations very clearly suggests that religious leanings are political in the nature of those faiths. NATO is grouping of nations following various denominations of Abraham faith or Gulf Cooperation Council (GCC) or Organization of Islamic Countries (OIC) organizing itself with Islamic nations. Hindus have been deprived of having political aspirations from the day, it was called independent nation from colonial powers. Its politicians avoided any Hindu identity of importance purely because it will hurt Abraham faith minority in India. The common teaching was: Don wears your faith on your sleeves Faith is personal choice. Agreed. But, things changed abruptly when a minority community got mobilized to wear faith on sleeves!! Government of the time failed in managing it because constitution permitted it to them. How could Hindus be healed from the injuries given over hundreds of years even after its freedom? Hindus were told and constitutionally informed during the black days of emergency that you must become secular and stop practicing communal things in front of your minority brethren. Of course, minority brethren can perform everything in public places including offering prayers on the thoroughfares. Such is the state of affair that on winning election recently, a leader from Hindu community openly commented that it is defeat of Hindustan by him. Such was the state of Indian Hindu politics that the only declared Hindu nation, Nepal was forced to be a secular state under missionary, Islamic nations, and communist pressure. Now, every one of them is flourishing in Nepal except Hindus despite in majority. Hindus are in need to look retrospectively why they are in such dire straits. Indian primary and secondary education system has been overtly secularized to an extent where claiming being Hindu became communal. Where is the end point of such appeasement of Indian minority? Appeasement over the decades by various similar mindset governments became tortuous to the onlookers of Indian polity. Since 2014, a new mindset government got mandate but its hands remained cuffed for the reasons of not having majority support base in the upper house where old timers of earlier mindset were reluctant to allow new order to concretize its policies. Despite being under the straight jacketed suffocation of upper house minority, new government leadership could make serious policy implementations affecting the entire economy and acquired popularity to its policies. New mindset government once again got public mandate this time in 2018 with very high majority. Many changes are introduced, many are in pipeline and Hindu society has got.

BSF-HCM-TEST-Dated-2025-08-07-Test NO.-21931

Vision loss adversely affects one quality of life, independence, and mobility and has not only been linked to falls and injury but affects mental health, interaction with friends and family and increases inequalities in employment, income, and education. A recent study estimates that the potential loss of productivity due to vision impairment in India is INR 646 billion 29.4 billion. There have been sustained efforts in the last two decades towards reduction in the prevalence of avoidable blindness in India, especially by the not-for-profit eye care organizations. There is a nearly 50% reduction in vision impairment in 2020 from 2010 estimates. The prevalence of blindness has reduced from 1% to 0.36%. While India achievement in reducing avoidable blindness is laudable, with an ageing population, the number of people with vision impairment has substantially risen, raising the issue as a public health concern. Common causes of vision impairment, including cataract, squeal and complications of cataract surgery, glaucoma, age-related macular degeneration, diabetic retinopathy, and presbyopia, occur more frequently in later life 50 years. The decrease in prevalence of blindness has been offset by a rapidly ageing population, which has resulted in an increasing number of individuals, mostly adults older than 60 years, with blindness and vision impairment globally. Over the past three decades vision loss due to infectious causes like trachoma has substantially reduced, while non-infectious chronic eye diseases account for a greater proportion of blindness and vision impairment. Cataract continues to be the most important cause of blindness, contributing to 65% of blindness. Most of these issues are in the elderly. The high prevalence of vision loss at older ages, and its impact on health, wellbeing, and existing inequities are a cause for concern, and will increase as India population ages. There is an urgent need to strengthen strategies that will equitably provide eye care services to people with vision impairment as they age. Such an approach is consistent with the goals of the UN Decade of Healthy Ageing, which seeks not only to promote healthy ageing, but also to reduce inequities related to aging. India may have the highest burden of blindness but also has the best solutions to manage this problem. Across many parts of the country, several eye care institutions provide high-volume eye care services through a cross-subsidy mechanism. A robust made-in-India intraocular lens manufacturing industry allows basic cataract surgery to be performed with consumables that cost less than INR 2,500. While there are good models for delivering high-volume cataract surgery, models for managing other causes of blindness for the masses are evolving. It is important to recognize that vision loss increases with age and has a detrimental effect on health, and wellbeing that will amplify existing inequalities, and will increase as the population ages. Eye care community, civil society and public policy need to come together to create a vision-friendly world for our aging population. The high quantum of blindness will continue to remain an important public health agenda for implementing programmers to reduce its burden in.

When road rage becomes air rage, it's a whole lot more dangerous. Every incident must be dealt with firmly. Commercial planes commonly have a cruising altitude of 36,000 feet. Loss of temper at that height After pets get registered, why can't they claim residency too? The fat cats frowned that two Bihar babus, in a place they'd never heard of Masaurhi in zilla Patna, found it legit to issue an High tariffs or not, self-sufficiency in critical areas must be a national imperative It is possible for a people to be self-sufficient. The Sentinelese in the Andamans, for example. But such living is extremely limiting. I have often wondered what evolutionary reasons explain the instinctive wonderment, reassurance and solace found amid nature. Is it because that's where we are from, our primordial home? Be that as it may, this genetic inclination is progressively eroding. Every generation is content living in the ever-expanding concrete jungle. Our encounters with wilderness are fleeting and limited. Our primal heritage is getting lost among growing social media connections and advancing technology. Do we have the need and mental space to connect with the wild? The Japanese practice of shinrin-yoku or forest bathing nudges us to leave technology behind and mindfully indulge all senses in a natural environment and listen to the dawn chorus of myriad avian species, see architectural masterpieces of spiderwebs and nests, smell flowers and resin, touch leaves and trunks of trees and taste fruits. The result? A visible reduction in stress levels, increased cognition, and when done regularly, better immunity and overall health. Taking ownership and pride in our shrinking forests, grasslands and wetlands can well be our panacea in the foreseeable future. Field trips for children should be journeys of exploration, not merely structured excursions or picnics: every bird flap, leaf, stone, and insect has a story to tell. Such experiential learning with nature will instil them with patience, curiosity, humility and compassion. We need to step beyond our mechanical lives of black mirrors, stocks, brands and money into the incredible and unimaginably vast kingdom of nature. Rejuvenating this decaying connect will make our monochromatic lives more fulfilling. The more one embarks on these natural escapades, the more one observes the sheer diversity of species. This appreciation sets the stage for a completely new understanding of their distinct life histories, delicate interconnections, and the roles they play in the ecosystem. During the pandemic, we had a tryst with nature: jackals and deer took over the roads, bird sounds woke us instead of alarms, dolphins frolicked at our coasts, and mighty mountains became visible from the plains all within a year. This tells us two things: first, that nature is resilient, and all it needs is a chance for it to spring back; second, we can see wildlife in our backyards or neighbourhoods. All we need is a calm, green patch (preferably with water) and a discerning eye. Small changes to our gardens, parks, balconies and terraces can make them more welcoming towards wildlife. This includes fruit-bearing trees, vertical gardens, native species, nectaring plants, earthen pots for sparrows and water-baths for squirrels, dragonflies and birds. That's the easiest way to share our living spaces with those to whom it all belonged in the first place. Such urban green spaces become micro-habitats, fostering a miniature ecosystem. Wi

Spl-BSF-HCM-TEST-Dated-2025-08-07-Test NO.-21936

The Prime Minister Dhan-Dhaanya Krishi Yojana for a period of 6 years beginning 2025-26 to cover 100 districts, with an outlay of Rs 24,000 crore per year earmarked for the scheme. The Yojana, which draws inspiration from the Aspirational District Programme of the NITI Aayog, was launched in 112 most underdeveloped districts of the country to transform them quickly and effectively. It has been the first of its kind focussing exclusively on agriculture and allied sectors with the expectation to help one crore 17 million farmers. More than just a scheme, Prime Minister Dhan-Dhaanya Krishi Yojana is seen as a promise to transform the lives of the farmers who till the land, yet often remain untouched by development. The flagship program targets transformation of India's agricultural sector, dispelling age-old challenges through the integration of concentrated investment, action convergence and domestic-international development and resilience. The introduction of PM Dhan-Dhaanya Krishi Yojana is regarded as the initial substantial leap toward the modernisation of Indian agriculture for future generations. I honestly misread President Trump and his friendship with PM Modi. I thought he was after China as it had been playing America for years, by pumping in Fentanyl, by subsidising its manufacturing and dumping its goods in several countries around the world, especially in America. China did just about everything against any rules-based order. From harvesting organs from live political prisoners, to going after the Falun Gong to killing several thousand students during the Tiananmen Square Massacre. The list of trade malpractice is long and known. China uses prisoners as unpaid workers in many of its export factories, as well as has hegemonic methods to build and arm islands in the South China Sea. It is also re-educating its Uighur populations by the millions in internment camps by separating parents from children, and saying faith is a mental disease. China has been outed many times by human rights groups but it seems to have literally paid newspapers, universities and countries with false dreams of growth and prosperity leading to debt and mayhem. And now Trump, it seems, is making excuses for it and instead attacking India. The most hypocritical part is that it wants India to stop buying oil from Russia, though the US has never stopped buying Uranium from Russia, and Europe still gets gas and oil from Russia. The Russia-Ukraine war was a proxy war for America. For decades after the Soviet Union's break up, Russia had wanted to be part of the Western Block, but so entrenched was the Deep State thinking on Russia being an enemy that the West did everything Russia requested them not to do, as in bringing more countries within the NATO ambit as a direct threat to Russia. Putin was even promised this would never happen, in meeting after meeting. Thus, when Ukraine openly declared it wanted to be part of the European Union and NATO, America gave it the arms and billions of dollars to fight Russia, even though the country had been part of Russia for decades. The Cuban Missile Crisis was exactly the same thing in reverse, where President Kennedy had to threaten Russia not to arm Cuba with missiles so close the US. President Trump's stance against India shows hypocrisy, as it is a well-known fact that the US buys Russian Uranium, chemicals and fertilisers but when questioned about it, Trump said he knew nothing about it! It does seem that he is ge

BSF-HCM-TEST-Dated-2025-08-08-Test NO.-21937

To outline some key figures, approximately $300 ban of assets are benchmarked to this index globally which translates into an expected investment inflow of $30 ban into India, given its eventual weight of 10% in the index starting with 1% in June and increasing by 1% every month till 10%. In addition, fresh annual inflows are expected from fund manager allocations going forward. This inclusion has also created the further possibility of other global bond indexes including Indian government bonds later. Making a comparison with other similar emerging market countries, the current holding by foreign investors of Indian government bonds at 2% of total bonds outstanding is much smaller than Brazil 9%, Mexico 14% and Indonesia 16%, showing the tremendous scope for increase. One may ask why this inclusion being done now and not sooner is given the fact that on the equity side India has been a part of the global emerging market benchmarks for decades. The reason is that flows into local bond markets are sometimes labeled as hot destabilizing money, flowing in quickly when conditions are favorable and flowing out equally fast when situations deteriorate, causing havoc in financial markets domestically. There are many examples of emerging market countries where this has ended badly such as Egypt more recently. Therefore, index inclusion should be done from a position of strength when macro conditions are favorable and when longer term risks are low. Thus, for India the timing of this inclusion could be better as macro fundamentals of our economy today are strong and there is increasing recognition of the opportunities it offers. Growth has been robust over the past few years with the latest print at 8.4% for October December 2023. Inflation has been well managed despite this being a major problem in most other economies and on the external side the current account has been healthy with much lower deficits than previous years and which are fully covered through capital flows reserves are close to all-time highs of over $600 bn. The recent interim budget outlined conservative fiscal policy which was welcomed by markets and was even better than the high expectations investors had. With a conservative stance, government borrowing through the issuance of bonds will be lower. As for everything demand and supply are key in price setting, and bond prices are inversely related to interest rates. Given lower supply of bonds through decreased borrowing and increased demand for bonds from global investors following the index inclusion, this will naturally drive bond prices higher and consequently interest rates lower. The general expectation from global investment banks is that domestic interest rates could fall by up to half a percentage point on a sustained basis as a result of the index inclusion which is quite meaningful. Lower interest rates also help ease the pressure on the government borrowing costs and therefore improve public debt sustainability. The positive impact on the INR through increased investment flows is another advantage. Lower interest rates have a beneficial impact on economic growth as they lower the cost of capital and thereby help increase investment, which is a key priority for our nation development. At the same time the impact on inflation in both the real economy and in asset markets must continue to be monitored closely and active intervention as and when required is a must especially when dealing with new circumstances and ne

BSF-HCM-TEST-Dated-2025-08-08-Test NO.-21938

Society Indira Gandhi was a prescient ruler. In 1971, she recognized that the troubles in East Pakistan presented her with a golden opportunity to hive Pakistan into two. She dressed Indian soldiers in Mufti Tahini clothes, taking a lesson from 1948, when Pakistan dressed its own soldiers in clothes of Muslim raiders, and sent her forces into East Pakistan, creating Bangladesh. Voila, a two-winged Pakistan ceased to exist. Bangladesh lives without tension with India. Pakistan has become an even more inveterate enemy of India. From sponsoring the Khalistan movement to instigating mayhem in Kashmir to causing terror all across India, it just won stop. In 2005, JJ Singh took over as India army chief. Pakistan western front was hot with its fight against the Taliban. The Americans had counseled India to keep Pakistan eastern front calm. JJ Singh said that since Pakistan was preoccupied on its western front, there was no better time for India to invade Pakistan. The general had the right idea, but it was way before its time. There was no way the Americans would allow India to invade Pakistan and disrupt their campaign in Afghanistan. In 2005, their war in Afghanistan still seemed winnable, although they desperately needed Pakistan support. They would not tolerate any disruption of Pakistan. The situation now is very different. The Americans have fled Afghanistan. Their only remaining interest in the Afar region is that Pakistan nukes don fall into the wrong hands. Pakistan is virtually at war with the Taliban, whom it had itself created. Pakistan is bankrupt and does know how to get out of the bankruptcy hole. Its army chief, Aim Miner, keeps issuing warnings against India, knowing fully well that India does not pose any threat to Pakistan. There are two currents in Pakistani society. One is the phobia of India. The second is that the Taliban want to impose sharia law in the country, which cause has widespread support amongst the lower classes. If Pakistan attempts to crush the Taliban, that means that it would be trampling upon the aspirations of its own people. It is debatable if and how Pakistan will bring the Taliban to heel, whether through talks or through war. But it cannot bring the pro-Taliban sentiment that pervades large sections of its own society to heel. If the Taliban triumphs in Pakistan, it will set alarm bells in Washington. The Americans would want Pakistan nukes to be safeguarded from the Taliban. Alarm bells would also ring in New Delhi. The Taliban adhere to the Disband sect of Sunni Islam. Disband is based in India. Some of India restive Muslim population would be susceptible to overtures from the Taliban to demand sharia law in India. Today, Pakistan has hardly a friend in the world. If India gets into a scrap with China, Pakistan would be expected to jump in on the side of the Chinese. But the opposite is not true. China will not join Pakistan in a war against India. Pakistan hates India.

That why it will willy-nilly join any war against India. China does hate India. It just wants to contain India rise, just like it had wanted to do in 1962. A war between Pakistan and India will accomplish that. The author Gurcharan Das has said that an MBA culture has pervaded India, that everyone wants to get into business. This Banyan culture stops India from being a martial force. It is inward looking and prevents India from taking advantage of external strategic opportunities. Pakistan has caused such mayhem in India: making the entire Indian Kashmir go aflame, the Parliament attack, 26 11, Pulwama. Yet we reacted only to Pulwama. Even then it was a triangular affair Pulwama, Balakot, Rajouri without much achieved. Pakistan caused Pulwama, we responded with Balakot, the Pakistanis responded with Rajouri. What will attacking Pakistan achieve for India now? Pakistan two provinces, Balochistan and Khyber Pakhtunkhwa are in ferment. It will not take much to cause them to split away from Pakistan. Sindh detests Pakistani Punjab dominance and would like to separate as well. What will remain of Pakistan would be a neutered Punjabistan. What will happen to Pakistan nukes? America would be more than glad to pay off Pakistan for its nukes. The opportunity for India is now. The opportunity to live in peace and constantly not be blackmailed by a bellicose enemy. Will India grab it? Education material including documents, posters, and videos, onboarding forms and processes, all digital transaction portals along with their terms & conditions must be made available in all Indian languages. This must be made mandatory by the government for all financial institutions in the country. The good news is, advancements in technology have made it quick, easy, and cost-effective to add languages to both digital and offline content. Today, Indian companies are creating world-class machine translations, localization platforms, local language catboats, voice bots, and much more. We do not need to rely on foreign giants for these services. The development of India digital economy depends on the use of regional languages. They can aid in increasing literacy rates and bridging the communication gap between customers and service providers. India needs to encourage the use of regional languages if it is to reach its goal of a $1 trillion digital economy by FY 26. A unique window of opportunity lies ahead of us that holds the power to change our growth trajectory. The integration of local language support in the Digital India movement has the potential to redefine its success and create a case study for the world to follow. Society Indira Gandhi was a prescient ruler. In 1971, she recognized that the troubles in East Pakistan presented her with a golden opportunity to hive Pakistan into two. She dressed Indian soldiers in Mufti Tahini clothes, taking a lesson from 1948, when Pakistan dressed its own soldiers in clothes of Muslim raiders, and sent her forces into East Pakistan, creating Bangladesh. Voila, a two-winged Pakistan ceased to exist. Bangladesh lives without.

Displacing anyone; he only wanted to add the fragrance of his teachings. Just as jasmine brought fragrance to milk, similarly his teachings would add to the teachings of the Sufi saints. The message was that there was always the scope for living in a multi religious society and one needed to be open minded to accept things. We should spread goodness around us so that people may accept us. Today we see that people of all faiths, caste and nationalities visit gurdwaras and partake of the langar, which is an embodiment of the teachings of Nanak. Gurus Nanak foresaw the future and initiated the process of inter faith dialogue and cooperation in his times and his teachings are relevant for this contemporary world. As the heir to the Samsung Empire finds himself in the midst of a storm, South Koreans are bracing themselves for another high profile controversy, South Koreans are bracing this time involving the country largest conglomerate. Friday arrest of Lee Jae yong is in connection with the same influence peddling controversy where Parliament voted overwhelmingly in influence peddling controversy December 2016 to impeach the country first woman President, Park Geun hye. The constitutional court has another few months to dispose of the impeachment petition over a scandal that saw hundreds of thousands of people take to the streets towards the end of 2016. Hundreds of thousands South Korea has barely recovered from the blow from the recall of Samsung fire prone Galaxy Note 7. The company is one from the recall of Samson the countries largest and its fortunes have a direct bearing on the national of the country largest economy. Prosecutors now accuse Mr. Lee of paying about 37 million to organisations run by the Presidents close confidante. In return, it is alleged, Samsung secured government support to clinch a questionable merger of two affiliates in the conglomerate. Mr. Lee recent questionable merger arrest follows new evidence presented on the disputed contributions. Last month, a pre trial warrant sought by the prosecution was rejected, as the court saw little ground for his detention in the absence of sufficient evidence to substantiate the bribery charge. While Mr. Lee has sufficient evidence admitted to making the grants, he denies any accusations of bribery. The overall stakes in the prospects of Samsung could not be of bribery. The overall stakes greater, given that the entity is one of the country largest employers. This is a reassuring sign for the long term image of any brand, as well as for South Korean politics and governance. The notion that giant firms that contribute to economic growth and overall prosperity are too big to fail, or be prosecuted, is South Korean politics and governance said to influence the large number of pardons granted in South Korea. Several top captains of industry have been let off, at times even without serving jail terms. The fallacy of carrying that logic to an extreme seems to be giving way to a recognition of the need.

BSF-HCM-TEST-Dated-2025-08-08-Test NO.-21941

Year on year price gains to 4.48%, from the 4.35% pace in September, spurred by a persistent acceleration in the prices of certain key food items and transport fuels. Oils and fats logged 33.5% inflation, while meat and fish and pulses and products both saw a marginal easing in the pace of annual gains from September posting 7.1% and 5.4% increases, respectively. However, the food and beverages sub index that accounts for over half the CPI, accelerated 2.3% month on month, led by vegetable prices that reared up sharply by 14.2% from September levels. The sequential trend in the food category is particularly disconcerting as except egg and fruits, all the 10 other items of the 12 component sub index saw prices accelerate last month. Transport and communication, which encompasses the pump prices of petrol and diesel, logged inflation of 10.9% from the October 2020 level, lending justification to the Centre Deepavali eve decision to cut the excise duty on the key fuels. With the WPI also showing price pressures intensifying at the wholesale level last month, especially for fuel and power and manufactured products October headline WPI inflation accelerated to 12.5%, from 10.7% in September the overall outlook on inflation is still far from reassuring. The Index of Industrial Production data from September also points to a sharp slowdown in output. While IIP growth slumped to an annual 3.1% pace, from August 12%, overall industrial output, of mining, manufacturing and electricity, actually shrank 2.6% on a sequential basis. While the Finance Ministry has cited monsoon rains for the slump in mining and power generation, which contracted 8.4% and 11% month on month, respectively, index heavyweight manufacturing too suffered a 0.5% contraction. Four of the six use based industrial categories saw output shrink including consumer non durables, which contracted 0.9%. The only silver lining was that consumer durables posted a healthy 6.7% jump in production from the preceding month, as white goods dealers likely stocked up ahead of the festival season. Automobile manufacturing slumped 9% from a year earlier and shrank 3.3% from August output levels as a global shortage of semiconductors crimped production. Automakers have reported more than 20% declines in production for October as well, as the chip scarcity coupled with high input costs abides. And given that manufacturers, who have so far sought to avoid risking the tenuous demand recovery by raising product prices, may not be able to defer increases for much longer, policymakers will have to ensure they do not drop their guard on inflation. Saturday, the proscribed Communist Party of India Maoist has faced yet another setback in its protracted armed struggle against the Indian state. Gadchiroli, a largely forested and tribal dominated district, is among Maharashtra poorest and the Maoists have sought to expand their presence extending from neighbouring Chhattisgarh. There have been major encounters in the district, with recent ones involving the deaths of 40 Maoists in two separate operations in April 2018 and a driver in May 2019. Gadchiroli remains one.

BSF-HCM-TEST-Dated-2025-08-08-Test NO.-21942

For transparency and democratic accountability in the governance culture of firms, something South extreme seems to be giving Korea has struggled to achieve over the years. In its absence, mitigating economic and social inequalities would merely remain empty objectives. Largest economies deserve a better deal, as they themselves made clear through recent rounds of protest. It is time for some they themselves made clear serious introspection in Seoul Delhi court acquittal of two persons accused of involvement in the 2005 serial blasts in the city, thereby bringing an end to their long incarceration, brings to light another instance of unconscionable miscarriage of justice in this country. Additional Sessions Judge Reeta Singh acquitted the two men Mohammad and Shah of all charges, while saying it found no evidence to Singh acquitted link the third accused, Tariq Ahmed Dar, to the blasts, though it convicted him for being a member of a terrorist. At one level, the judgment is a reassuring affirmation of the independence at the lower rungs of the Indian judiciary. But it must invite, visibly, a response from the state to inquire into and address the processes that keep investigating agencies and prosecutors so determinedly on false trails. The frightening monotony with which Indian agencies have been failing to professionally investigate terrorism cases, and are accused of framing innocents, should jolt the system. The Supreme Court decision to reduce the prison sentence imposed on the owners of New Delhi Uphaar cinema, which suffered a horrific fire tragedy that consumed 59 lives in 1997, and instead award a compensation of Rs.60 crore to the state, reduces the entire criminal process to an empty formality. By preferring to sentence Sushil Ansal and Gopal Ansal to the period they had spent in prison hardly five months a three judge Bench seems to have treated the entire issue of criminal negligence as a matter of civil compensation, and criminal liability a very minor aspect. The verdict almost renders nugatory the 10 year trial process that saw the Ansal brothers, the cinema managers and others being sentenced to varying prison terms in 2007. Acting swiftly on the appeals, the Delhi High Court in 2008 reduced the prison terms of the main accused from two year rigorous imprisonment to one year. The trial court and the High Court declined to frame a charge against the Ansal brothers for culpable homicide under Section 304 (part two) of the Indian Penal Code, and instead limited the case to Section 304A (causing death due to rash and negligent act. The appeals by the accused against the conviction, and by the CBI and the Association of the Victims of the Uphaar Tragedy seeking enhancement of the sentences or challenging the acquittal of a few have now been disposed of after seven years. Last year, a two judge Bench came to the same findings on fact against the accused, but differed on the quantum of sentence. One of the judges affirmed the one year jail term and the other favoured.

BSF-HCM-TEST-Dated-2025-08-08-Test NO.-21945

A two year sentence of which one year will be offset by a payment of Rs. 100 crore as compensation. Another 17 months elapsed before this final order. Every court has held the Ansal brothers guilty of such gross negligence as to render them culpable for the 59 deaths and injuries to nearly a hundred people. The court has stressed on compensation, whereas the issue was decided by the Supreme Court in 2011 when it fixed it at Rs.10 lakh for the death of each person above 20 years, and Rs.7.5 lakh for those younger. If the punishment for someone found guilty of failing to discharge the common law duty of care and committing statutory deviations that caused the deaths of film patrons whose quick dispersal and egress from the premises were prevented by the gross negligence of the accused, is a mere few months in jail, the necessity of the entire criminal process comes under question. The court point about the long delay and advanced age of the Ansal brothers is well taken, but it cannot be forgotten that the wait for justice for the victims was also long and agonising. Thus, this is but one more tragedy. Every year multiple agencies, private and public, tell us that an unacceptable number of school going children at age 14 are functionally illiterate and that their numbers are not declining. Teachers and teaching, almost everyone is agreed, are at the heart of this problem. Every year a tiny fraction of hopefuls clears the Central Teacher Eligibility Test (CTET) or TET exams necessary to a get a teaching job in a government school. There are massive teacher vacancies across the country and the question that those responsible for CTET are grappling with is whether the tests to qualify as a primary schoolteacher should be at the class 10 level or the class 8 level. Lowering already low standards for qualifying teachers in order to fill the massive teaching vacancies is clearly not the solution to the problem of low learning outcomes in schools. Changes in pedagogy and improvements in teacher education, however, top the list of necessary changes if we expect the trend to reverse any time in the future. The Union government appeared to get off to a good start with the announcement of a teacher education mission. The Prime Minister inaugurated the mission with great fanfare, speaking of a five-year training course and exporting teachers across the world in lakhs. His government, however, allocated only Rs. 180 crore a year for five years towards this goal. This works out to less than Rs. 400 per existing teacher per year a derisory sum that suggests the Prime Minister is prone to flights of fancy and that his government has absolutely no understanding of the enormity of the problem. Combined with cuts across the board in the Centre education spending, the message that the government appears to be sending is that mass public education is not its priority; it just hopes the.

State governments will do something about it. School education is, in the main, the concern of State governments. But it was to address the failure of State governments and the huge regional disparities that the Centre intervened in the first place. From a universal mid day meal scheme to Sarva Shiksha Abhiyan, central allocations have been responsible for vastly increasing student enrolment, attendance and completion. However, their focus on numbers the quantifiable goals beloved of both politicians and bureaucrats has ignored the larger issue of learning or the quality of education. The next logical stage, for any government serious about mass education in the country, would be to devise a sustainable policy for improving teaching and learning standards across the country. The Human Resource Development (HRD) Minister, however, reinforced the impression that this government does not grasp what is at issue when she told Parliament Insofar as budgetary cuts with regard to. The Ramjas College incident also comes a year after the events at JNU when the ABVP led the Sangh charge against what they deemed to be anti national. Then too an impression was created that the police were too easily led to heed the ABVP agenda; impression was created that the reverberations of that episode are still being felt. Universities are arenas for intellectual evolution, they are meant to be spaces where discussion and debate push boundaries, where students learn not only the art of provocation but also the argumentative skills to defend and oppose such provocation. Provocation but also the certainly, there are necessary curbs such as a bar on speech that incites violence and hate. But when a student organisation uses violence to have a seminar cancelled, and when the authorities succumb so easily, Indian academia stands diminished. He diminished quest to find life outside the solar system got a big boost with the discovery of seven Earth size extra solar planets, or exoplanets, orbiting a dwarf star about 40 light years away. Unlike earlier discoveries of exoplanets, all seven planets could possibly have liquid water a key to life as we know it on Earth with three planets having the greatest this light years away. Unlike earlier chance. This is by far the largest collection of Earth like planets in the habitable neither too closes nor too far from a star, which raises the possibility of liquid water being present on the surface. Only Earth has liquid water in the solar system Spitzer Space Telescope. Since the dwarf star is much cooler than the Sun, the Transiting Planets and Planetesimals Small Telescope, the exoplanet system is called TRAPPIST 1. Unlike in the case of our solar system Radha. It very uneasy calm was restored to the Delhi University North campus by Thursday, with anxiety still gripping colleges and hostels after two days of India is It very uneasy calm violence. Trouble started on Tuesday when members of the Akhil Bharatiya Vidyarthi Parishad, the student organisation linked to the BJP, stormed Rajas College to disrupt a.

BSF-HCM-TEST-Dated-2025-08-08-Test NO.-21947

Under the Government of India Act 1935, the British granted limited self-rule to Indian subjects. This was done at the level of the constituent territories of British India, the provinces. For these provinces, limited governments were formed from limited elections and were given limited powers that would not hamper British interests in India. The chief agent enforcing these limitations was the governor appointed by the British for each province. It is now 2023, but why does this notion of governorship still seem familiar? Are state governor remnants of the British Raj? Are states like colonies under the Union s thumb? Governors, who are all appointed and removed by the Union, seem to regularly foment federal tensions in opposition-governed states, or else are seen as symbols of Delhi s yoke. In April 1973, a 13-judge bench of the Supreme Court in a 7:6 majority delivered the institution s most consequential verdict. Known as the Kesavananda Bharati case, it declared that Parliament s right to amend the Constitution is not unfettered. An amendment cannot violate the Constitution s basic structure or fundamental architecture. The aftereffects still reverberate. On January 11, Vice-President Jag deep Shankar in a speech questioned the basic structure doctrine. He said that the power of the Parliament to amend the Constitution and legislate is not subject to any other authority. In short, primacy of Parliament is inviolable. The basic structure doctrine arose out of the working of the Constitution over two decades. The relevant article, 368, does clearly spell out the scope of Parliament s amending power. At first, SC held that Parliament has unfettered power. Subsequent cases saw the emergence of dissenting views Sajjan Singh vest State of Punjab and in the Golan Nat case, the majority in an 11-judge bench held that fundamental rights cannot be abridged. Finally, in 1973 came the basic structure doctrine. It was not a bolt from the blue or usurpation of the powers of Parliament. Instead, it reflected the maturation of a democracy. Take away the basic structure doctrine, the legislature could conceivably knock down the checks and balances that come through the separation of powers between the legislature, executive and judiciary. That would go against the tenor of the constituent assembly debates that had creation of a robust democracy as the main goal. Shankar identified SC s 4:1 verdict in 2015, which invoked the basic structure doctrine to strike down NJAC, as an example of incorrect usage. This paper disagreed with that verdict and shares many of politicians critiques of the judiciary. However, that does make a case against the basic structure doctrine. Instead, it points to a need for the judiciary to tighten it. The problem is that SC often interprets the basic structure doctrine loosely. This opens the door to the judiciary to stray into domains of the legislature and executive. And that creates enormous problems. But just as an ill-conceived law does not undermine the primacy of the legislature in making them, problematic judicial verdicts do not make.

BSF-HCM-TEST-Dated-2025-08-08-Test NO.-21948

A case against the basic structure doctrine. Many aspects of judicial functioning need change. The basic structure doctrine is not one of them. The production license of Noida-based drug firm Marion Biotech was suspended yesterday after the WHO edict that two cough syrups made by the company should not be used for children. This is welcome as the test results of the controversial syrups are awaited. Ambronol and DOK-1 Max were found to contain toxic ethylene glycol and were linked to 19 children deaths in Uzbekistan. This comes after a similar tragedy in the Gambia where the deaths of 70 children were linked to the consumption of four contaminated syrups made by Haryana-based Maiden pharmaceuticals. In both cases the culprit appears to be poor manufacturing of solvents used in the medicines. Yes, these appear to be extreme cases in the sense that these products were not sold in India. And that medicines manufactured for use in India generally meet adequate standards, although the problem of fake or less-than-ideally-effective pills persists. It is also the case that medicines manufactured for export to rich countries are made according to the specifications of the importing country. But more needs to be done to tackle manufacturing regulatory infirmity and help India win the perception battle. Let us remember that in as sensitive a product as medicines, global perception is important for India s export-attuned pharma industry. GoI on its own must undertake a thorough and transparent inquiry focused on the supply chain from vendors of active pharmaceutical ingredients to the manufacturing process to regulatory processes. Its not as if there have not been controversies about pharma manufacturing standards in India, or that some plants processes have not been found less-than-ideal, or that questions have not been raised about regulation, including by a parliamentary standing committee. India deserves the tag pharmacy of the world but with that global recognition comes the responsibility of ensuring the strictest standards for products that can literally make a difference between life and death. In 2018, when the Supreme Court decriminalised homosexuality, Akhil Bharatiya Prachar Pramukh Arun Kumar said, Just like the Supreme Court, we also do not consider this criminal. But we do not support homosexuality, as same-sex marriages and relations are not in sync with nature. Traditionally too, Indian society does not accept such relations. But a few days ago, in 2023, the head of RSS, Mohan Bhagwat in an interview with Organiser insisted that LGBT is not only natural, but also culturally aligned. As he is a veterinarian, he knew about the homosexual traits of animals. And to prove cultural moorings of LGBT, he referred to the little-known story of Hansa and Dimbhaka, the allegedly gay generals of Jarasandh, found in the epic Mahabharata. Chances are that you, like me, are still getting the occasional text message, email, or a vocal greeting wishing you a Happy New Year. Which raises the question as to when New Year, happy or otherwise, stops being new for purposes of salutation.

As a thinker said, 'We cannot always choose the music life plays for us but we can choose how to dance to it.' You are not a helpless puppet in the hands of an unknown puppeteer. You may not have the power to change your present. But you can change your future. Your present circumstances are the result of choices you have made in the past. To bring about a happier future, you only have to make different choices. You hold the power to shape your own destiny. With the newfound confidence that comes with knowledge, you can craft a magnificent future. No one can predict your future. Only you can design it through your thoughts. A single thought can transform your life's course. At times, society, nations, even the world can shift with just that one thought. China but he is not The Law of Karm never fails. No one escapes its reach. It works like gravity, unerring and universal. Action is the pivot around which life revolves. Every intentional action yields its corresponding result. Driven by greed, hatred, and delusion, you sow seeds of pain. Motivated by generosity, love, and wisdom, you harvest abundance and happiness. Action springs from desire. Desire arises from vasana, a deep-rooted inclination or leaning towards something. As your vasana, so are your desire, action, and environment. When you act driven by desire, you create more such vasanas. But when you act out of duty, whether you like it or not, you break free from the stranglehold of desire. An apple seed will yield apples. No amount of pleading, manipulation or scheming will produce mangoes. The only way to get mangoes is to plant mango seeds. Plant seeds of happiness and success and your life will transform. Though destiny or prarabdh may steer you one way, you can use your free will purusharth to take you on a totally different trajectory. No matter how dark your past may be, steadfast, consistent, positive effort can reshape your life, allowing you to carve out a brilliant future. The law is clear as you think, so you become. Your thoughts sketch the blueprint of your character and circumstance. A joyful mind births a joyful world, a bitter mind breeds anger. A petty mind clings to trifles and an evolved mind beholds the universe's splendour. When your surroundings are not conducive, you cannot go out into the world and battle them. Elevate your thoughts and watch the world around you rise in harmony. You cannot achieve greatness with a small mind. You have to first think big, beyond yourself. Excellence doesn't demand more degrees, sharper skills, or wider networks. It needs elevated thoughts. This is easier said than done. The grip of selfish desire and attachment holds you back. You need wise guidance to spark this change. Understand the futility of worldly pursuits. Seek the permanent. With the knowledge of the higher, enjoy the passing, ephemeral joys. Surround yourself with good people, loving and uplifting ideas. As your mind expands to accommodate the higher, you naturally get detached from the lower. Ultimately, you take that giant leap into the realm of the Infinite. only doing this as President but also making India get closer to China. It is mystifying. Russia has been a good and reliable friend of India for decades. It has supported India both militarily and internationally and given us defence equipment as well as allowed India to Make in India, by allowing technology transfers. America has not been as reliable, arming Pakistan with weapons and F16s, knowing it

Spl-BSF-HCM-TEST-Dated-2025-08-08-Test NO.-21952

For trade with every country it wants to partner with. America can't subsidise its own farmers who are rich with extensive land holdings and expect to dump agricultural goods on a country where farmers have small land holdings and the per capita income is several times smaller when compared with the US. In addition, when the world is turning towards organic farming, America wants to bring in GMO seeds and products that go against everything our farmers and dairy producers need or want. This goes for Indian consumers as well. If trade is fair and benefits both countries, no one would object and there could be give and take but not at the cost of the health and well being of our citizens. This is simply not acceptable. Away from our schedules, we can venture to the fringes of our towns and cities such as ponds, tree patches, hillocks or the seaside, or further into the wealth of protected areas harbouring pristine deserts, grasslands, rivers, lakes and forests with staggering biodiversity. Here, nature thrives with minimal human intervention, largely insulated from the ill effects of urbanisation. Let us, at the very least, acknowledge that this world is not ours alone but a shared space for all species. I have found wildlife displaying the entire spectrum of emotions and intellect we possess. This ever-increasing likeness has been the most awe-inspiring revelation, drawing me closer to wildlife. In every chirp, rustle, and whisper of the wind through the trees, nature reminds us of our origins, our place, and our duty in this grand and intricate web of life. There's no question of appeasing him. But GOI can be smartly flexible, like buying more US oil if it's priced competitively or engaging Russia on the climate change issue in the Himalayan region. But instead of mitigating risks, govts are aggravating these. Environmental clearances are undependable. So, local communities pay the price First and foremost, flash floods that wreaked havoc By Jaya Row As a thinker said, 'We cannot always choose the music life plays for us but we can choose how to dance to it.' You are not a helpless puppet in the hands From childhood we are taught that what we dislike is good for us, and what we like is bad For years I've been using homoeopathic eyedrops in the fond hope that the medication will keep US President Donald Trump says he wants to make America great again by putting taxes (called tariffs) on things we buy from other countries. He thinks this will help American factories and bring more jobs. Trump sold America the dream of greatness built on tariffs, but the math doesn't add up After threats and extensions, Trump's enforced his reciprocal tariffs. It's an economic experiment that will bleed foreign sellers and In the small hill station of Matheran near Mumbai, people don't use cars or buses. The only ways to get around are by riding horses or sitting in hand-pulled rickshaws, small carts pulled by SC right on Matheran's hand-pulled rickshaws. But the how part of the change looks tricky. How many mountains might need to be climbed before Matheran's 94 rickshaw pullers can be transitioned into running their own Consider three seemingly unrelated developments. You can't hire Indians, set up factories in China and park profits in Ireland, Trump said to US big-tech in mid-July, following this by imposing a 25% effective tariff rate Bihar's Special Intensive Revision (SIR) of voter rolls is now in the phase of claims and objections, which, unsurpris

And becomes old, or at least middle-aged? And the answer would be Never. From the 5th century BC through to the 16th century there have been tales of a mythical Fountain of Youth, the water of which would make ageless those who drink it. Such an elixir of eternity for humans remains a fable. But misnamed Old Father Time ceaselessly renews itself, new year after new year. January 1 is not the only red-letter day marking the passage of another milestone in the march of time. In Russia, New Year, Navy God, is based on the Gregorian calendar and is celebrated on January 14. In China the advent of the new year is determined by the lunar calendar, which will see out the Year of the Tiger and raise the curtain on the Year of the Rabbit on January 22, with celebrations spanning two weeks. Israelis will greet the new year, Rosh Hashanah, on September 15 and wish each L Shana toga, Have a good year, through to September 17. The Islamic New Year falls on the first day of Muharram, which will be on July 18, marking the Hegira of the Prophet from Mecca to Medina. India itself has several New Years. Sikhs celebrate the spring festival of Vaisakhi, or Baisakhi, on April 13 or April 14, which commemorates the birth of Sikhism in 1699, and the day commences the new year for the community. For many Hindus, including Gujaratis and Kutchis, the new year begins the day after Diwali with an exchange of Sal Mubarak greetings. In Bengal, Poila Boishakh, which is usually on April 14 or April 15 ushers in the next with festal felicitations. In 2023, Puthandu, the Tamil New Year s Day, falls on April 14. April is also the month for Ugadi, and ushers in New Year for Andhra Pradesh, Telangana and Karnataka. So have a Happy New Year, because, somewhere or other, it s likely to be new. The Almighty makes no distinction and creates no division amongst mankind, because Truth is one and indivisible. Dividing of mankind by gurus is an inexcusable lapse. One who divides mankind, divides the Truth, which means he creates all sorts of confusions. Dadaji, Amiya Roy Chowdhury, by his advice and teachings, emphasises that mankind is one, as Truth is one. He is opposed not only to guruvaad but also to all establishments in the name of religion, like mathas, ashrams and mandirs. He does not prescribe any ritual either. He advises a direct approach to Truth, and rejects any idea of an intermediary. A simple direct approach pursued with faith, devotion and concentrated attention will lead anyone reciting mentally the Mahanam, divine name, to the cherished goal. Dadaji rejects jap, tapasya and penance in the path towards realisation. How can you reject the world to which He has sent us? And, when you enter the world, you have to perform the duties which you cannot avoid. Dadaji says do everything, do your work, but only remember.

BSF-HCM-TEST-Dated-2025-08-09-Test NO.-21954

There is a big playground near my house. Since the past few days, I could see that it was getting ready for a big fair. A huge merry-go-round was set up in the middle of the ground. It was visible from my house and was attracting me. I was waiting anxiously for the fair to begin. The day the fair began, I was impatient to go there with my father and mother. The atmosphere at the fair was cheerful and lively. The place was lit up beautifully. It was a festive atmosphere there. Everybody had a smile on their faces. It seemed that after a hectic day, people loved to come to the fair for a good change. The place was crowded with men, women and children. Apart from the merry-go-round, there were many other rides like the roller coaster, motorised cars, water slides and so on. There was a long queue near the ticket counters of each ride. Children were waiting for their chance to ride on them. I wanted to enjoy on almost all the rides. While my parents were waited for me. Disasters are tragic events that cause significant destruction or physical damage, loss of life and property or drastic changes to the environment. A disaster can be natural or man-made. Natural disasters are classified in two groups. Major natural disasters are earthquakes, floods, cyclones, etc. Minor are fire accidents, landslides, avalanches, etc. Disasters can cause damage to life, property and destroy the economics, social and cultural life of people. These days, due to various reasons, natural disasters like earthquakes and floods have become very frequent. Earthquakes and floods are damaging and wash away property and life. Various phenomena such as earthquakes, landslides, floods and cyclones are all natural hazards that kill thousands of people and destroy billions of dollars of habitat and property each year. The impact of these disasters are so strong that consequences are even worse like loss of life, injury, loss of housing, damage to infrastructure, etc. Marks 40 Last month, we were taken to a jungle for a camp. We went there with our teachers and friends. We hired a forest guide. A tropical jungle is an awesome place to visit. I was looking forward to this visit as I had read a lot about jungles in stories The Moment we entered the jungle, it became semi-dark. Sunlight could barely penetrate through the leaves of the tall trees. The sky was almost invisible because of the canopy of leaves high above us. At ground level, thick vegetation grew in every direction. The air was moist and had a peculiar smell to it. We could hear the sound of insects and the chirping of birds. Though we could not see them, except for some birds, we knew they were there. I had no idea how we would find a way through the bushes and trees. We just kept following the path which our teachers took. As we crossed the tall trees, the teachers marked them with chalk. I realised then how easily an inexperienced person could get lost in the jungle. We cannot imagine our lives without electricity. All our functions and comforts are entirely dependent on electricity. To think of a life without electricity is almost impossible today. We find ourselves completely helpless in a situation where there is no electricity. The importance of this necessity of having electricity is generally felt in its absence. In case of no electricity, it would just give the feel of earlier times when people were leading their lives without electricity. Without electricity, life would be very different from what it is

Without electricity, it would have been difficult to keep our house cool in not summers by fans, coolers, air- conditioners, and warm in cold winters by room heaters. The use of refrigerators, toaster would not have been there. The concept of funfair was much popular in the ancient times as it was the big source of entertainment. Funfairs were set in big and small cities temporarily. Funfairs had various attractions for people of all age groups. They are also known as Carnivals or meals. A funfair hosts different types of joyrides such as merry go round, swings, giant wheels, etc. The main charms of the funfair are the food stalls. Food items of different states and countries attract people. Funfairs have many other attractions like shooting games, throwing rings, talent shows, etc. Clowns also entertain people by their funny actions. In funfairs, various shows are conducted to entertain the public. These are either done by making animals do various amazing acts. Some dangerous performances by trapeze artists enthrall the audience. Puppet shows are very popular with children and adults alike. There are many fancy items and handicrafts on sale from all over the country. Funfairs Coeducation means that both boys and girls study together in the same school, college or any other educational institution. In India, there are still many such institutes which do not offer coeducation and are for either boys or girls. This practice in followed since the ancient times. However, with changing time and culture the need of coeducation has greatly increased. Now, women are working equally with men in every field unlike earlier times. There is a deep need of changing the mindset of the people who think women are inferior to men. Therefore, right from the beginning. Girls and boys need to study together in schools. Girls have an equal right of education as boys. It is the need of the time for the society to change accordingly. Educationists have now realised the benefits of coeducation and they are consciously working towards it. Education must take into account the overall development of personality, his intellect, his emotions and his aims and objectives. At the time of the Mughal rule, a number of historical places were built in Delhi, Agra and nearby areas. These places are of much historical value and tell us about the kind of life they led. Each place has its own history and importance. The historical places define the architecture of the period they belong to. Each dynasty had a unique style of architecture that made it different from the others. As a result we can see beautiful religious places. palaces, forts and tombs. Delhi has many historical places that attracts tourists from around the world. These include Qutub Minar, Red Fort, India Gate, etc. There is the famous Taj Mahal, Jaigarh Fort and Nahargarh Fort are in Jaipur. Each place has its own unique architecture. An English saying goes as when the wealth is lost, nothing is lost. When the health is lost, something is lost. It means that health should be considered more important than any other wealth. It is true that Health is Wealth. A good health is God gift. A good health can always bring wealth to a person. This means that as long as a person is healthy, he can earn money by working. However, if the person is not fit to work, he will not be able to earn money and accumulate wealth. Thus, it is understood that health is something that should be taken into serious consideration. It is

Him why count beads, or utter a few words not having a direct relation with Him? He is within you, and you have to know Him and have communion with Him. You cannot have anything with meaningless external exercises. The Nam is continuously ringing within the heart, and your devoted recital of the Nam alone will put you on the line of communion. Tapasya and renunciation enlarge the ego, and do not eliminate it. They create a vanity, a vanity of calculated achievement, a vanity of having a distinct position in the society of men. While complete surrender to Him is the essence of the right path, a surrender silently submitted without any exhibitionism A little exhibition of power is of no avail so far as realisation of Truth is concerned. means to bear sufferings with fortitude, what is the need of inviting them from outside? Do we have to go to a forest and deny the normal needs of the body and inflict sufferings on ourselves? Can we please the Almighty by our denials and penance and tapasya? We do have enough sufferings in this world. In conducting our lives, we are confronted with numerous sufferings. That is our prarabdha, past actions that are bound to fructify. To bear with patience and fortitude the force of this prarabdha is the only tapasya we can perform. When this is done with faithful mental recital of Mahanam, the force of prarabdha is reduced. And when you start having communion with Him, the pressure of it is not felt. Why, then, should we go to a forest or a hill and do jap or penance? These performances in the forest and hill are not only unnecessary, they mislead the people, when Truth is residing within our hearts. As the world navigates the ongoing COVID-19 pandemic and looks towards a more sustainable and equitable future, the role of India in shaping the global health agenda is more important than ever. As the current G20 president, India has a unique opportunity to lead the way in advancing health and well-being for all. Health to well-being: One key area in which India can make a significant impact is in shifting the focus from health to well-being. While traditional approaches to health have focused primarily on the absence of disease, a well-being approach recognizes that good health encompasses much more than physical health alone. This includes factors such as social, emotional, and financial well-being, all of which are closely intertwined with overall health and quality of life. By prioritizing wellbeing, India can help set a new global standard for health that is more comprehensive, inclusive, and sustainable. Digital health: Another important area in which India can lead is in championing digital health. With a rapidly growing technology sector and a large population of digital natives, India is well-positioned to leverage digital technologies to improve access to health services, enhance the quality of care, and reduce costs. This includes utilizing telemedicine, mobile health apps, and other digital.

BSF-HCM-TEST-Dated-2025-08-09-Test NO.-21961

A silent crisis exists in cancer care in India and is intensifying every year the delayed diagnosis. In India, cancer is screened in the third or fourth stage, making it difficult to be cured. The International Agency for Research on Cancer, the GLOBOCAN project, has predicted that the cancer burden in India will rise to over 1.5 million by 2035. These projections also indicate that the absolute numbers of cancer deaths will also rise to about 1.2 million in the same period. Estimates from the data of the National Cancer Registry Programme NCRP indicate that there are about 14 lakh incident cases, 38 lakh prevalent cases, and 7 lakh cancer related deaths per year. Delayed cancer care lowers the chance of survival and increases the problems associated with treatment. As per the World Health Organization WHO, early diagnosis improves cancer outcomes by providing care at the earliest possible stage and is, therefore, an important public health strategy in all settings. The bottleneck in Indian healthcare lies majorly in the lack of availability of medical professionals and treatment infrastructure, especially in smaller towns and villages. The majority of cancers patients have late stage incurable disease when first diagnosed and the worst affected are the ones from rural areas where access to quality healthcare is almost nonexistent. Tobacco related cancers are the top contributors to the cancer burden in India. Tobacco caused over 27 percent of cancer cases in the country in 2020, a number that will increase by 12 percent or 15.7 lakh by the year 2025 as per the NCRP. Let us now understand the reasons for the delay in the screening and treatment process that exists at different layers of healthcare in India. The different layers of cancer care include prevention to reduce the cancer burden, screening for early detection and diagnosis, treatment modules and rehabilitation. Today, India is endowed with cutting edge treatment options providing patients a longer life and better quality of life. However, this is a distant dream for people from rural areas and small towns who still rely heavily on small nursing clinics for healthcare. Cancer treatment is not even possible in over 1,000 towns and smaller cities in India. With the objective of making healthcare accessible and affordable for citizens in underserved rural areas, India started the National Rural Health Mission. One of its key components is to provide every village with a trained female community health activist referred to as an accredited social health activist ASHA. An ASHA is a trained woman resident of the village who works as an interface between the community and the public health system. Then there is a sub center in a village manned by a medical assistant who takes care of basic medical needs of people. In bigger villages, there is a dispensary which is run by an MBBS or doctors practicing Indian System of Medicine. In addition, there are primary centers that have two to three doctors who do not have any diagnostic facilities and provide.

Treatment based on symptoms. Then we have sub district hospitals with indoor facilities but that do not have operating rooms or a blood bank. Under such circumstances, the nonexistence of screening and lack of infrastructural facilities become the primary reasons for the diagnosis of cancer at an advanced stage. And on an already stressed healthcare system, the Covid 19 pandemic has added to the burden. To cope with the challenges posed by coronavirus, India needs a responsive and resilient health infrastructure. For now, and in the post Covid era, India will have to upgrade district hospitals into medical colleges. If district hospitals are managed by medical students equipped with diagnostic facilities, the quality of care can improve. The government decision in February 2021 to establish 157 new medical colleges in the districts where there are no medical colleges was laudable. The move aims at upgrading and converting the existing hospitals in these districts into medical colleges. However, given the increase in the number of cancer patients in India, this move alone will not suffice. Collaboration between different stakeholders is required to ensure cutting edge technologies and drugs are accessible and affordable for all citizens. We also need to ensure seamless accessibility of all modalities for the treatment of cancer patients. For instance, if an individual has a lump or pain in a certain part of his body, his diagnosis will require a sophisticated imaging technique. Once the person is diagnosed with cancer, they will need a multidisciplinary team approach for treatment and then a modality will be decided. Radiotherapy is recognized as an essential tool in the cure and palliation of cancer. A radiation facility is often seen as the nucleus for a good cancer center. Unfortunately, India has only 400 to 500 radiation cancer centers today. Oncologists across the country strongly feel there is a need for at least 1,005 radiation centers. Today, lifestyle factors have become the leading causes for cancer incidence, morbidity and mortality in India. The most common factors include obesity, smoking, alcohol consumption, lack of physical activity and diet. In fact, tobacco is the cause of 40 percent of cancers in the country. There is a dire need to organize campaigns about early warning of cancer and the harmful effects of tobacco consumption. India also needs mass vaccination for cancer, such as cervical and oral cavity, that needs to be delivered at an appropriate age. Strengthening the delivery of different layers of cancer care should be carried out across the country. While it may not all be at the same level and standard, availability and accessibility to all the layers of care should be addressed immediately. You may have been informed that a long term cure for you or your loved one suffering from cancer is not possible. Perhaps, this is the time when new decisions about advanced care need to be made and these choices often come with many emotions such as anger, sadness and the fear of the unknown. In such situations, having.

Detailed conversations with your oncologist about your health will lead to the best possible outcome for you. In 1992, a sprightly Sikh gentleman swiftly climbed the steps of the podium at a law conference in the central hall of the Ashok Hotel, New Delhi. For one hour, without a scrap of paper, he lucidly explained the complexities of India liberalization process. He painstakingly forewarned the ecstatic audience, that in order to sustain growth and drive up the investments especially the foreign investors it was necessary to create an environment facilitating growth. The erudite speaker fully in the grip of the subject, was Dr. Man Mohan Singh, the then Finance Minister of India, who was swiftly maneuvering India out of its worst financial crisis. Just the previous year, in 1991, India headed by Prime Minister Chandra Shear was on the edge of the precipice of an ignominious sovereign default. India international trade balance was in a hopeless deficit. Its external debt had doubled from $ 35 billion to $ 69 billion in 1991. India was running out of money, and time. It had less than $6 billion in foreign exchange reserves just enough to meet around two weeks of the country imports. In May that year, the State Bank of India sold 20 tons of gold to the Union Bank of Switzerland to raise around $200 million. On the domestic front the situation was equally bleak. The fiscal deficit stood at 8 per cent of Gross Domestic Product downgraded India bond ratings. The government could not pass the budget. This resulted in further downgrading of the ratings, making it impossible for India to seek short term loans, thus exacerbating the worsening economic crisis. After the 1991 elections, the Indian National Congress and the UPA assumed office. The then Prime Minister Narasimha Rao requested I.G. Patel, the just retired Director of the London School of Economics to become India finance minister. The latter declined the offer. Instead, he recommended his most outstanding protégé, Dr. Manmohan Singh to pull the country out of the economic morass. Dr. Manmohan Singh came to India as an uprooted child during the partition. Perhaps, the hardships faced by him gave him the impetus to stand first throughout his sterling academic career in economics. He got his bachelor and master degrees in 1952 and 1954. He went on to complete his Economics Tripods at the University of Cambridge under the tutelage of two of the foremost and hugely influential Keynesian economists, Joan Robinson and Nicholas Kaldor. Both Robinson and Kaldor were fervent advocates of how governments should combine development with social equity and make capitalism work in the larger public interest. These two formative influences would dramatically reflect in Dr. Singh approach while spearheading the Indian economy into a full throttle growth engine. Dr. Singh eternal quest for higher learning would take him back to the University of Oxford for his DPhil. His 1962 successful doctoral thesis would form the basis for his book India Export Trends and.

Prospects for Self Sustained Growth. Dr. Singh as Finance Minister 1991 1996 inherited a devastating balance of payments situation and a double digit inflation. He took two economically sound, but politically volatile decisions. The rupee was devalued twice in July 1991, first by around 9 per cent, followed by another devaluation of 11 per cent. With a devalued rupee, our exports became cheaper, a necessary course correction for our worsening trade imbalance. As an emergency measure to tide over our current account deficit, the Reserve Bank of India pledged its gold holdings with the Bank of England raising around $400 million to stave off the current account deficit. What followed was a series of reforms of the Indian economy which he aptly called reforms with a human face. The prelude was the dismantling of the License Raj with the introduction of the Industrial Policy, 1991. Deep structural reforms were made with the implementation of tradable Exim scraps, ending the stranglehold of the Monopolies and Restrictive Trade Practices Act making it easier to restructure businesses by facilitating mergers and amalgamations, ending the monopoly of the state owned companies over imports, and automatic approval of foreign direct investment in many sectors. All these reforms required not just the political courage and economic foresight but the confidence that he could create an economic environment to enable Indian business and industry to thrive in the new international regime of globalised trade. Yet, his policies were not a root and branch rejection of the Nehru Mahalnobis model, but offered a pragmatic approach to achieve the same objectives, including integrating equity and social justice with economic growth. Writes Nicholas Stern and Shantanu Singh in the 4th volume of this impressive 5 volume set aptly titled Changing India. Dr. Singh book reveals the trajectory of the economics pundit to successful policy maker. He knew, like all Keynesian economists, the central role the government had to play in an economy. He would in the later years of his tenure warn, I often heard it said that government has become irrelevant because India will grow at 9%. Unless the government acts swiftly, growth… will be perennially stuck at 5% . This warning has gone unheeded and is now visible in India dismal economic markers. 2004 saw the Congress led United Progressive Alliance UPA come back to power under the leadership of Sonia Gandhi who recommended the appointment of the most respected economist in the eastern hemisphere Dr. Manmohan Singh as India Prime Minister. He arrayed the foremost economists and administrators of the day into his team. Most importantly he inducted the brilliant Mr. P.C. Chidambaram, a Harvard MBA, as his finance minister. 2004 to 2014 were the 10 golden years of the Indian economy. India GDP grew at an average rate of 8.1% over in this remarkable decade. The real GDP growth touched a record 10.08% in 2006 07, the second highest ever in independent India economic history, behind the unmatched 10.2% achieved during Rajiv Gandhi tenure in 1988.

Uttarakhand's Dharali village shouldn't be dismissed as just another mountain disaster. Its causes might have been beyond human One more absurd 'cause' for rape 'Attending late-night parties could invite rape or gang rape,' screamed posters plastered on Ahmedabad road dividers. Bet, many passers-by nodded sanctimoniously. However social media outrage over such sexist nonsense GOI has called out Trump's extra tariffs for what they are. He was wrong to think hegemony will work. Three weeks from now, India will be the most heavily tariffed seller in the US market Two contrasting perspectives on Trump's threats. But both agree on his hypocrisy By the time this went to print, Trump hadn't specified by how much he will substantially raise tariffs on Indian exports on top Starting poor in life is alright if there's equality of opportunity and a chance to strike it rich The computer science principle 'garbage in, garbage out' gigo also applies to the ongoing debate By Reuben Ray The Romantic poets were a sensitive group of geniuses who broke from the classical tradition between 1780 and 1850. Their poetic expositions are widely read and researched by students in literature schools. Washington is no slouch when it comes to buying from Moscow. So what's India doing wrong When Russia annexed Ukraine's Crimea region in 2014, US punished it with sanctions. US-Russia trade, which was worth over Why Uttarakhand keeps facing disasters and how humans make it worse It was scary. A powerful river in Uttarkashi became wild after a cloudburst like the sky suddenly poured huge amounts of water in one small place. When Russia took control of a part of Ukraine in 2014, the United States got angry and put rules (called sanctions) in place to punish Russia. Because of that, the amount of trade (buying and natural disasters visit Uttarakhand regularly. It excels in worsening their toll rashly No, it wasn't nearly as bad as 2013. When saffron stood for freedom How Sadhu-Sanyasis challenged the British Raj Editor of Sansad TV, the author reads and writes on all subjects from cinema to cricket to politics. India's first anti-British uprising occurred in the early 1770s, led by the Sadhus and Sannyasis. The Sannyasi rebellion in Bengal stands as proof of the struggle for the right to freedom of religion. This movement was spearheaded by Sadhus from the Dasanami sect and Fakirs from the Madariya group of Sufi Silsila. They travelled among various pilgrims across northern and eastern India and even engaged in some trading. However, the British viewed these ascetics as looters who needed to be stopped from collecting Dakshina and even from entering the province. A large group of innocent sadhus was portrayed as a thug, a threat. In reaction to this perception, the Sanyasis revolted against the British from 1763 to 1780. Pandit Bhavanicharan Pathak led the uprising around Murshidabad and the forests in Jalpaiguri. Thousands fought under his leadership. The British grip on Bengal was momentarily challenged by this rebellion. Although it was eventually suppressed, the revolt became a significant symbol for nationalists. (TOI photo from Archaeological Museum, Red Fort) It was not an isolated movement. During the British colonial period, sadhu-sanyasis, panda-pujaris, and mandir-math played a significant role in the country's quest for freedom. From the mid-18th century to 1947, religious figures, sadhus and pujaris of several temples took an active role in regional upris

Religious leaders were vocal in their resistance to this cultural intrusion and championed the freedom movement. In their religious gatherings, they often preached anti-colonial sentiments, inspiring their disciples to embrace self-reliance and oppose British rule. Sadly, the general public remains largely unaware of their vital roles in the freedom struggle because they often served as hidden hubs of resistance throughout the country. Look at a few more examples In 1817, a local uprising occurred in the Khurda region of Odisha against the East India Company's revenue policies, known as the Paika Vidroha. During this rebellion, the Puri temple of Lord Jagannath in Odisha was crucial to the movement, led by Buxi Jagabandhu Bidyadhara, a prominent supporter of the Jagannath temple. They freed the temple and raised it as a symbol of Odia unity. The temple's priests, referred to as Pandas, were fully behind the rebellion and played a significant role in its progress. To motivate the uprising, the Pandas proclaimed that British rule had been dismantled and the reign of the Gajapati rulers had been reinstated. However, once the rebellion was quelled, the British responded by executing 50 of the temple's priests publicly for their brave and fearless backing. Few claim Paika Vidroha as the first organised rebellion against the British. (TOI photo from Archaeological Museum, Red Fort) During the 1857 war of independence, Tarkulha Devi Temple, situated about 22 kilometres from Gorakhpur in Uttar Pradesh, became an important hub for revolutionaries. Renowned freedom fighter Shaheed Bandhu Singh utilised guerrilla warfare tactics to battle the British. Together with fellow revolutionaries, he attacked the Gorkha Regiment's armoury in Gorakhpur and liberated the prisoners. Many British officers lost their lives at the hands of the Gorakhpur revolutionaries. Even Bal Gangadhar Tilak's revival of the Ganapati festival in Maharashtra can also be seen in this context. It turned a religious event into a platform for anti-colonial activism. Tilak utilised the festival to ignite nationalistic passion and promote unity among various groups. The deity Ganapati, honoured for his wisdom and strength, emerged as a symbol of resilience and self-assertion, striking a chord with the masses. Sadhus, Mandirs and Pujaris actively participated in this. (TOI photo from Archaeological Museum, Red Fort) During this period in Bengal also Durga Puja celebration also served as a platform to raise awareness about the freedom struggle. Hindu reformists portrayed Goddess Durga as Bharat Mata- a symbol of India. In puja pandals, Maa Durga was depicted as the destroyer of the British Empire, taking down the demon Mahishasur, who was dressed in a fancy long coat and boots. The demon's hair and moustache were painted gold, resembling an Englishman. In the 1920s, in Manipur, the Heraka movement, under the leadership of Haipou, started as a response to British meddling in the religious and cultural lives of the local people and their conversion tactics. Following Haipou's death, the 13-year-old Naga spiritual leader Rani Gaidinliu became involved in the Heraka movement and led a rebellion against British authority. She opposed the conversion efforts of Christian missionaries and promoted nationalism rooted in traditional culture. The protests evolved into a political movement and posed a significant threat to the British. The then sixteen-year-old Gaidinliu was sentenced to life imp

BSF-HCM-TEST-Dated-2025-08-10-Test NO.-21967

The recent decision by multiple municipalities across the state of Gujarat to ban vendors selling non vegetarian food has led to vendor organisations planning protests across these cities. And vending has again emerged as a hot button issue in Delhi. The antagonism between street vendors and municipalities and planning authorities is not restricted to these episodes, and is not a new phenomenon for Indian cities. There have been multiple instances over the past few decades when state or city governments have cracked down on street vendors, in an effort to clean up their cities, roads and public spaces, along with attempts to relocate public markets to the outskirts of cities. The 16th Annual Status of Education Report Aser shows government schools are finding favour again, retaking ground lost to affordable private schools over several years. This justifies their budgetary allocations and makes a case for increasing public spending on education. However, the story is not simple. Teachers cited financial distress and shut private schools as reasons for the sudden government school preference. So the latter still has a challenge when education normalises over time. Also, it simply not feasible for government schools to deliver all by them. India needs big investments in private schools at all levels, and state governments will be foolish not to recognise this. It good news that some government schools have upped quality. But minus a big network of private schools catering to all income classes, education delivery will remain patchy. Aser also uncovers some grave learning problems. The shift to online learning was predicated on students having access to smartphones and teachers delivering requisite learning materials and activities. The number of students who failed to receive this critical access, in full or adequate measure, portends a generational deficit, one with huge socio economic consequences. Only 27% of students had access to smartphones for their studies at all times and 47% sometimes. In Stds 1 3, the corresponding figures were just 19.9% and 40.8%. While 90% students received textbooks, at home learning activities were communicated to 40% of students in schools still in virtual mode. Resultantly, the survey reveals two thirds of teachers complaining that students were lagging behind the curriculum and 50% of them devoting their time to filling last year gaps. This critical task must be left to the earnestness of individual teachers. It needs a systemic corrective. Aser survey of 24 Karnataka districts this year merits the attention of all state governments: Std 3 government schoolchildren who can read Std 1 level textbook dropped steeply from 41% in 2018 to 24% and those in Std 3 recognising double digit numbers from 78% to 60%. Most states could be similarly placed. Yet there no urgency in commencing child vaccination, which can safeguard against more school closures. Unesco reveals 73 weeks of school closure in India against just 27 in China. States should treat the following as emergency measures: reforming government schools, encouraging many more private schools, and preventing learning deficits from compounding though least.

BSF-HCM-TEST-Dated-2025-08-10-Test NO.-21968

At risk from Covid, India children could end up bearing its brunt the longest. Gurdwaras have risen to the occasion once again. In the midst of a bitter and deeply troubling altercation over Muslims offering jumma namaz at designated sites in Gurgaon, a committee overseeing five gurdwaras in the area has made it clear their doors are open to all to do ibadat, irrespective of religious denomination. Remember how various gurdwaras had swiftly set up oxygen langars when the second wave left people gasping for breath. Or when last year north east Delhi riots devastated even people with well stocked kitchens, Sikh samaritans swiftly stepped in with cooked meals. Such examples of Sikh ewa are spread across the world, but in India they are countless. In its unconditional hospitality, the langar has from its very origin been an explicit rejection of inequality, whether it is of religion, caste, class or gender. The Gurgaon committee members reminded everyone that no one has to show their Aadhaar card to avail langar food, and neither will anybody have to show it to offer namaz on the gurdwara premises. Heartwarmingly, especially in these times, these gurdwara leaders have also said that standing alongside harassed religious minorities is about holding together the nation. In a country where religion spills over onto the streets every day, observance and spectacle hand in hand, upholding of public order must be equitable. Cities like Gurgaon are built by Indians from across classes and religions. Their shared public sphere has to be negotiated with mutual respect and tolerance, the state upholding everyone constitutional rights. But between arresting mischief makers, withdrawing permission for holding weekly namaz from some designated areas and trying to identify alternative areas, the Chatter administration has made a mess of it. The sanctuary from bigots that the state should have provided is being offered by gurdwaras, reminding us again why India should be proud of and learn from Sikhs concept of sea. India is the capital of engineering talent. Google globally has many Indians across the board. But so far, you had to travel to the US to find a meaningful role from an engineering and talent standpoint. The last 18 months, are an embracement of this philosophy but based in India. We are having more and more teams based in India who are capable of solving problems from an engineering and product standpoint. In the last two years we have doubled the workforce in India and it been a time where we are a new Google today and our belief is that we will double in the next two years again. At first I thought I got my geography all wrong. I always thought that Goa was in India. But it was the other way round; India was in Goa, or so it appeared during my recent visit there. Diabolism airport was bursting at its newly refurbished seams as planeload after planeload crammed with people from all over the country got offloaded in a melee of.

BSF-HCM-TEST-Dated-2025-08-10-Test NO.-21969

Mixed up baggage, parents who misplaced their children, children who misplaced their parents, and some lost souls who looked as though they misplaced themselves. The Uranic tradition has it that while dashing at Chidambaram, being born at Tiruvarur, or dying in Kasha are all considered auspiciously capable of granting liberation, merely thinking of Arunachala at Tiruvannamalai is enough to attain a liberated state of mind. This invocation of Arunachala was often quoted by Ramana Maharshi to convey the mysterious pull of the place, which could turn the mind inwards into an inquiry into its source, the Self. Maharshi was himself magnetically pulled towards Arunachala at the age of 16, after a near death mystical experience, which as he was fond of saying later, made him seek out his real father in Shiv, and his real home at Arunachala. The Skanda Purana talks about the mythological symbolism of the Arunachala hill, seeing it as a Taijasa Linga, representing the fire element. Arunachala is seen as that great column of light, fire, that not only ignites the spark of freedom for a seeker but lights up a fire which will eventually burn away all desire and root out the mind ego. The mythological story goes that Vishnu and Brahma once quarrelled on the issue of superiority. Shiv appeared to both as a column of light, asking them both to restrain from arguing with each other. Vishnu and Brahma began a new quest to prove each other superiority by trying to find the upper and lower ends of this column of fire, by assuming the forms of a boar and a swan. While Brahma tried to conjure up his side of the end of the column, Vishnu conceded defeat in finding the other end. But Vishnu was considered the winner, as Brahma had attempted to bluff Shiv. Vishnu represents the intellect in this story, Brahma the ego, and Shiv the Atman, the Self. Since the column of light was too fiery to look upon, Shiv manifested this column as the hill of Arunachala itself, a linga in itself. The fire element represents the fire of freedom, which needs to be ignited, the fire of wisdom which alone can take one beyond the false conditioning that one is the body and mind alone. This notion that i am the body and mind, Maharshi believed, could be erased by an inquiry into the source of that very mind itself. It will reveal the false identification with the body and mind, which inevitably brings sorrow and pain. Yet one is tempted back into this notion time and again, as desires never seem to cease. Ramana stated that this journey from the ego to consciousness needed to be taken immediately, and Arunachala was a place that could trigger this leap of wisdom easily. It is this very love of the manifestation of Shiv as Arunachala that is celebrated on the Kartigai Deepam day, as a huge Deepam, lamp, is lit up on top of the hill to.

BSF-HCM-TEST-Dated-2025-08-10-Test NO.-21970

Managed well, the inclusion of Indian government bonds into global indices promises to further raise the profile of our country in global financial markets through progressive internationalisation, a necessary prerequisite for us to reach our larger ambitions. The significance of the Ram Mandir extends beyond its religious and spiritual dimensions to encompass broader themes of cultural heritage and national identity. For centuries, the legend of Lord Ram has been woven into the cultural tapestry of India, permeating its literature, art, and collective consciousness. The construction of the temple not only fulfils a longstanding religious aspiration but also reaffirms India commitment to preserving its rich cultural heritage and promoting cultural pluralism. Moreover, the inauguration of the Ram Mandir holds profound implications for the socio-political landscape of India. It reflects the assertion of India indigenous cultural identity and the resurgence of Hindu nationalism as a potent political force. While invoking sentiments of pride and belonging among millions of Hindus, it also underscores the need for inclusive governance and social cohesion, ensuring that the rights and aspirations of all communities are respected and protected. The inauguration of the Ram Mandir is also a testament to the power of faith and collective action in shaping the course of history. It is a triumph of the human spirit over adversity, a testament to the enduring legacy of Lord Rama teachings of righteousness, compassion, and justice. As devotees from across India and beyond converge to pay homage to their beloved deity, the Ram Mandir emerges as a sacred pilgrimage site, a beacon of hope and inspiration for generations to come. However, the inauguration of the Ram Mandir also raises important questions about secularism, religious freedom, and the separation of church and state in India democratic framework. While the construction of the temple represents a victory for Hindu devotees, it also underscores the need for greater dialogue, understanding, and tolerance among India diverse religious communities. It is imperative that the principles of secularism and pluralism are upheld, ensuring that India remains a vibrant and inclusive democracy where the rights and freedoms of all citizens are safeguarded. In conclusion, the inauguration of the Ram Mandir in Ayodhya is a momentous occasion that transcends religious boundaries and resonates deeply with the collective conscience of India. It is a testament to the enduring legacy of Lord Ram and the timeless values of truth, righteousness, and compassion that he embodies. As India celebrates this historic milestone, it reaffirms its commitment to fostering unity, harmony, and inclusivity, paving the way for a brighter and more prosperous future for all its citizens. In general, health refers to many areas such as the general condition of the body. My vacation had started and it was the first day of my holiday. I was getting bored in the house. Therefore, my mother decided to take me to the shopping mall. As we reached there, the car park was dull and dark. My mother and I took the lift from the second level of the under- ground car park to get to the ground floor of the shopping complex. The moment we stepped out of the lift, we were greeted by a blast of cool air and the blare of music from a music shop nearby. The ground floor was bright and lively. The layout of the mall was very impressive. It was spaciou

Near it was a large shoe shop. My mother bought me a pair from there. On the first floor, there were few jewellery shops. Many times people believe in things which are not really logical or reasonable. For example, many people believe that if a cat (especially a black cat) crosses your path, then your work will not be done. Actually, there is no evidence to show that this is true. But these people do not wait to find out whether it is true or turn around, go back and then start all over again. They don think. They have blind faith in their belief. Its easy to laugh at such people, but we are all the same in this respect. There might be some exceptions but we all have some silly belief or the other looking somewhere in our minds. We need to look within carefully to see if there is a silly belief hiding in some corner of our mind. If there is one, it won come out and leave your mind easily. You will have to catch it with the tongues of reason, that is with the power of your own mind to think, understand, analyse, etc. Next, you will have to give it the test of proof one. Once the Maharaja wanted to appoint a royal physician. He sent his announcers for and wide asking practising physicians to present themselves at the kings court on a certain day. This was a golden opportunity for the physicians. They flocked in large numbers to the kings court on that day. One by one, each one of them came forward and rolled out a long list of his qualifications and experience. Everyone was trying to prove how he was the only one fit for the post. Now the Maharaja was in confusion. He could not decide who among them was the best. So he called upon Gopal to solve the problem. Gopal thought for a while. Then turning towards the candidates, he said, O learned people, the Maharaja and the countries have all listened to you. All of you are highly qualified and experienced. Now there is only one thing that we need to know. Who amongst you is the best, only the best will be appointed as the royal physician. Let us now judge your experience. We see a street hawker here, there and everywhere. He is a common man in our streets. We see him generally near schools, fairs, corners of a road or near stations. He hawks his items all day long. He deals in things of daily use. They consist of vegetables, fruits, clothes, soaps and toys. The street hawker dress is very ordinary. He puts on a poor looking shirt and a pair of pyjamas. His clothes have the stains of perspiration, grease, and dirt. He often carries a bell in his right hand and a cane stand in his left hand. He places these things in a large iron tray. The tray is placed on a high cane stand. He does not cover his wares. He keeps them open so that one can see them at a glance. Sometimes this is unhygienic. He hawks his wares at the top of his voice. Hawkers are very smart. They know well how to attract customers. He rings his bell in a special way to A home is a place where we live. It is a place where we grow up. It is made by the members living in it. A home is a place where the family living in it together shares their joys and sorrows. A home is one place where everyone wants to come back to. For me, my home is the best place in the world. My home is on the sixth floor of an apartment building. We are five members in the family. My grandfather, grandmother, father, mother and myself. My grandparents take good care of me when my parents are off to work. My grandmother cooks good for everyone and feeds us with

Represent that column of light. Deepam is a symbol of that need to ignite that fire for freedom. And Arunachala is the places where the i vanishes and the mind goes into a great silence, from which one will finally remerge, having learnt to ride the wild tigers of the mind. The thought of Arunachala, Maharshi would say, is enough to take the path of self inquiry. In pursuance to the clarion call of the Honble Prime Minister Sh. Namenda Mode on 15th August, 2014; over 108 million household toilets were constructed with the participation of masses, providing access to safe sanitation to all the communities in rural India during Phase I of the Swatch Bharat Mission Graeme. Achieving open defecation free ODF status was an incredible feat that the country can be immensely proud of and it has been well documented as a learning experience for other nations. Nevertheless, if the ODF status has to be sustained and sanitation managed safely while underpinning human dignity, it is important to go beyond the toilet and examine all components of sanitation value chain i.e. containment, emptying, transport, treatment and reuse or disposal of faucal waste. The disposal and treatment of such waste still poses a huge third generation challenge and has tremendous implications on public health and safety of the people. It is indeed a serious business that should leave no room for manual scavenging. Faucal Sludge Management FSM is central to achieving the vision of an Open Defecation Free Plus India and that has been one of our focus areas in Swatch Bharat Mission Graeme Phase II, along with construction of community toilets, effective management of solid and liquid waste and visual cleanliness of villages. FSM is critical for delivering safe sanitation in rural areas due to the considerable number of toilets linked to on site sanitation, such as septic tanks and single pits. The village of Indore District in Madhya Pradesh is one example worth emulating. Designed to cater to a population of 45,870 living in a cluster of 3 Gram Panchayati adjoining an industrial town Pitampura, the FSTP plant which has been constructed using local materials has a capacity to treat 3 kilo litres of faecal sludge per day. Safe collection is done by trained service provider with the help of a desludging vehicle that can transport 3000 litres of sludge per day. After a structured process when faecal sludge is passed through a screening chamber and a planted drying bed, the dried solid can be used for co composting within the same premises having solid waste segregation shed. Meanwhile the liquid effluent is passed through a planted gravel filter, a polishing pond and the treated effluent is used within the facility for landscaping. Operation and maintenance of the plant which was constructed at an all inclusive cost of Rs. 32 lakhs is competently managed by the gram panchayat. There are similar functional projects in some other States. However, given that sewerage systems are practically non existent in.

BSF-HCM-TEST-Dated-2025-08-10-Test NO.-21975

Rural India, there is need for increasing focus on safe management of faecal waste generated from on site containment systems. Some technologies, such as twin leach pits, provide onsite treatment, and if correctly constructed and operated, these can be safely emptied and reused at the household level. Other technologies, such as single pits, septic tanks require services for emptying and transportation of the faecal sludge to the treatment facilities for its subsequent reuse or disposal. This emphasizes the need to look beyond toilets and to ensure that faecal pathogens are prevented from reentering the environment and posing a health risk. One common pathway for reentering of faecal pathogens into the environment is the contamination of water bodies and groundwater, by means of overflow and seepage from poorly built sanitation systems. These issues are further exacerbated due to the lack of formal mechanized service providers when it comes to emptying, transportation and disposal of sludge. There is a dominance of informal small scale contractors for these roles which makes it difficult to monitor their processes for collection and disposal and therefore, institutionalizing best practices and regulations can be challenging. Additionally, lack of resources such as suction emptier trucks, safety equipment, trained personnel hamper service delivery to households. That said, the most preferred toilets built as a part of the SBM I are twin pit toilets. The twin leach pit latrine is easy to construct, use and maintain. When one of the twin pits gets filled, it can be emptied at household level without any external support or additional cost. Proper functioning of toilets can be ensured by converting retrofitting all single pit toilets to twin pit toilets; as also repairs which need to be done for the superstructure, foundation, Y chamber and pit. In case of toilets connected to septic tanks it important to build a leach pit to safely dispose the partially treated wastewater coming out from tank. The Government of India, in February 2020, approved Phase II of the Swachh Bharat Mission Grameen SBM [G] with a total outlay of Rs. 1,40,881 crores to focus on the sustainability of Open Defecation Free ODF status and Solid and Liquid Waste Management SLWM .The programme will continue to work towards ensuring that no one is left behind, and everyone uses a toilet. SBM II recommends that treatment of faecal sludge be planned for clusters of villages, where the district must quantify the faecal sludge generated, identify suitable land, and it is imperative to choose technology which is low cost and easy to operate and maintain. The theme for campaign draws attention to the fact that toilets and the sanitation systems that support them are underfunded, poorly managed or neglected in many parts of the world, with devastating consequences for health, economics and the environment, particularly in the poorest and most marginalized communities. As we observe World Toilet Day, I encourage you to take action in your respective areas to tackle the global sanitation crisis and assist our country to a achieve.

The primary factor driving the dietary supplements market in the post pandemic era. Also, whether it this healthy food alternative, gyms or personalized nutrition, consumer awareness is at an all-time high. Moreover, improving awareness levels have also made consumers more aware of their nutritional requirements. According to a recent report, the India dietary supplements market is expected to witness a CAGR of 14% during 2022-2027. Factors such as changes in eating habits, absence of physical activity and rising sedentary lifestyles have increased the occurrences of various lifestyle diseases. Hence, with consumers unable to fulfil their nutritional requirements through their regular diets, they are now recognizing the importance of nutritional supplements to fulfil their nutritional gaps and build strong immunity. Other factors driving this market also include rising disposable incomes and improving distribution networks etc amongst others. As more and more consumers choose to live a healthier lifestyle, the demand for fitness centres, gyms etc are going to exponentially increase in number, without any roadblocks leading to enhanced demand for dietary supplements. The thriving dietary supplement industry is also driving the market for sports nutrition and supplements as it plays a major role in the maintenance of a nutritional diet to improve athletic performance. Athletes put enormous power every day into training, performing, and practising. Sports nutrition comprises post-workout supplements and pre-workout nutraceuticals which fuel the body for intensive activities, boosting energy levels, and increasing muscle strength. The growing enthusiasm for sporting activities among the youth is further offering lucrative growth opportunities to the sports supplements market. Protein supplements lead the market in overall consumption. The sports nutrition industry in India has also received a boost from Indian athletes inspiring performances at international sporting events. Most of these sportspersons rely on nutritional supplements for their award-winning performance and hence aspiring sportspersons too want to match their habits to reach their fitness levels. Brands are also partnering up with social media influencers and celebrities, thereby driving the growth of the health and fitness industry. In addition, the adoption of aggressive marketing & promotional strategies for the promotion of dietary supplements is expected to positively influence the growth of the market. Nutrition is becoming mainstream and people are migrating to healthier choices. In addition, nutrition as a tool for preventive health care is also becoming an industry. Given that the market is flooded with fake supplements, hence making the distinction between genuine and fake diet supplements is vital. One should buy from genuine dealers of reputed brands because investing in health is top priority. The inflection point that the sector is currently at, points towards a lot of positive developments in the future. It is certain that the pandemic shed light on the importance of living a healthy lifestyle and it has changed the way we live our lives now. Wellness is here to stay as consumers plan to increase their spending on personal health, appearance, fitness, and more. Our research shows continued growth of consumer interest in health and wellness, with persistent.

Gaps in certain areas presenting exciting opportunities for companies to serve unmet consumer needs. If the pandemic has taught us one thing, it is that physical and mental health will remain a priority for millions of people across the globe for a long time to come. There is no doubt that the health and wellness industry has increased the customer s attention and interest. The industry is witnessing phenomenal growth and is only poised to rise in the near future. As a writer, people often tell me, You should go to the hills and write. There is this romanticised notion of writing out of cozy cottages in pretty hill stations. It does sound lovely, except for one thing. There are no pretty hill stations in India anymore. Instead, what you will have are traffic-jam-filled hilly roads that lead to a town Centre lined with haphazardly parked cars. The sidewalks in the hill town, if indeed there are any, will be covered in empty chips and biscuit packets. The Delhi high court has ruled that central armed police forces (CAPF) will be entitled to the old pension scheme (OPS), which provides a guaranteed payout following retirement. HC cited Constitution Article 246 to conclude that CAPF personnel fall under the definition of armed forces and, thereby, are eligible for guaranteed pensions. The background to the judgment is that central government personnel who joined in January 2004 onwards are not eligible for OPS. Instead, they are grouped under the national pension scheme (NPS), which functions on the lines of EPF. There are no guaranteed payouts in NPS and the benefits that accrue to pensioners depend on the returns generated by their investments. HC ruling is inconsistent with reality. A Go written response in Parliament said that CAPF personnel who joined since January 2004 have been part of NPS. It a situation where bureaucratic sloppiness in drafting notifications has led to a judicial verdict at odds with reality. Go needs to appeal and get matters sorted. Separately, it important that Parliament has a discussion on the perils of reckless promises on reversion to OPS. It took a rare moment of unanimity among major political parties to shift to NPS, and its implementation spanned two governments. It not just Go, most states voluntarily shifted to NPS because OPS is fiscally unsustainable. Therefore, Himachal Pradesh government decision to revert to OPS will undermine the state fiscal position and cut into other development spending. Go, which sets annual borrowing limits for states, needs to deal with this issue at a political level. Many richer countries find themselves in a fiscal straitjacket on account of crushing pension burdens. India transition to NPS happened at the right time and it now important to stick to it. Odessa government deserves full credit for hosting the Hockey World Cup for the second time in a row. The marquee event kicked off yesterday in the twin host cities of Bhubaneswar and Rourkela, the latter showcasing the new state-of-the-art Bursa Monad Hockey Stadium.

Built at a cost of more than Rest 250 core. It a fitting tribute to the cradle of Indian hockey. Sundargarh district where Rourkela is situated has produced more than 50 national hockey players including Lazarus Birla, Deli Tirkey and Jyoti Kullu. If Indian hockey is to be revived to its former glory, Odessa will certainly play a key part. That revival could receive a fillip at this Cup as India for the first time enters the tournament as a current Olympic medallist. But the team Tokyo bronze will be put to serious test. India last won this tournament way back in 1975. The game changed dramatically over subsequent decades as the playing surface switched from grass to AstroTurf. Plus, a string of poor performances led to the shrinking of hockey fan base. Simultaneously, the rise of cricket eclipsed the national sport. But the Tokyo bronze has laid the platform for a resurgence. Skipper Harmanpreet Singh and his men have made a winning 2-0 start against Spain. A podium finish will iconise the current crop of players and attract more youngsters to the game. Odessa CM Naveen Patnaik deserves special praise for sponsoring the men and women teams since 2018. It the faith of die-hard hockey fans that has kept the game alive in India. A World Cup medal will be a perfect finish. Consider this: the number of people killed on 9 11, that exemplary day of male violence, was almost identical to the number of women murdered by their male partners that year in the US. One called for a military response and changed world politics; the other was life as usual. On Violence and On Violence Against Women by the philosopher Jacqueline Rose explores the nature of this violence against women, and its deep roots. It draws on literature, psychoanalysis and philosophy to show the male fragility at the heart of male violence. Rose sees patriarchal violence at the intersection of many forms of violence the impotence of bigness and fraud of masculinity that is at work for many authoritarian leaders around the world, and their ardent followers. She identifies an erotic charge, an obscene pleasure in the license to violence. A magistrate court has denied bail to Shankar Mishra, who allegedly peed on a 70-year-old woman passenger on board an Air India flight in November. Mishra has been booked under IPC provisions Section 354 (assault or criminal force on woman with intent to outrage her modesty), 354A (sexual harassment), 509 (act intended to insult the modesty of a woman), 510 (misconduct in public by a drunken person) and 294 (obscene acts). The ancient Tamil Shaivite Agama tradition was among the earliest to postulate that sound is even more central to consciousness than mind or matter. This Primordial Sound perhaps existed even prior to mind and matter; it is the basic building block of our universe. This idea of the Nada-Brahmn gets expanded into a metaphysical principle by Matanga in his classic work Brihaddeshi, proposing that jagat.

Freedom fighters from various regions of Karnataka and Tamil Nadu frequently participated in these meetings. During the Quit India Movement in Uttarakhand, Kathpudiya Devi Temple near Almora served as a centre for the revolutionaries. When the police attempted to ascend the hill to capture them, the fighters simply rolled stones down the slope. It is said that several policemen lost their lives. However, the British always tried to undermine the religious authority of the Sadhu-Sanyasis. The main reason for this was that they viewed them as a possible threat to their empire. Sadhus travelled across various regions, serving as a bridge between rural farmers and the widespread mandir networks throughout the country. Unlike the educated social reformers, these Sadhus visited villages, lived among the peasants, and discussed the exploitation they faced from the British in different areas. These Sadhus or pujaris were respected as village gurus, fulfilling roles as spiritual leaders and teachers. Because of this, they had significant power to speak out against social injustices, religious meddling, or exploitation by outsiders, especially in rural parts of Bharat. Many of these pandit-pujaris and sadhus faced execution or imprisonment by the British due to their participation in the freedom movement. Despite their sacrifices, their narratives could not find a place in the mainstream history of India's independence. They remained mostly unsung. However, their legacy continues to live on through folk tales, sometimes myths, local literature and the oral histories passed down by the local communities. Our unrepresentative people's representatives 'Congress will end polarisation & cartelisation in Assam GOP's resurgence will start from the Northeast' Limestone proves the impossibility of a runaway greenhouse effect on Earth Time The greatest traitor and the was thinking about this the other day when I heard the pitter-patter of rain on a tin roof in Nainital. Over the years, the meaning of that sound has changed for me. How much relief one feels while listening to the rain! Has it changed for you, too? Have you ever reflected on what the rain reminds you of, what emotions it stirs, and how you feel about its music? When I was in boarding school in Shimla, the school buildings had red tin roofs. Some of my closest friendships were formed there, and meeting those friends always brings back childhood memories. Rain at home during holidays made me happy. I would play with my cousins in the downpour. But rain in the boarding school felt different. It meant colder-than-usual days, cancelled games, and being stuck in dorms, corridors, or classrooms. On Saturdays or long weekends, rain meant no outing. Our walks to the Mall Road or long strolls in the hills would be cancelled. Yet, the sound of the rain itself never made me sad. It always relaxed me. Have you ever noticed rain falling on a tin roof? It's like the rhythmic beat of drums pit-pat blended with the occasional part of a raindrop falling from a tree. Rain often takes me back to my childhood. I now try to create similar memories for my children. We listen to the rain together and often walk in it, and hope that these enchanting moments will bring them joy in adulthood. On a recent trip to Nainital, we stayed at a quiet bed-and-breakfast, far from the city crowds. The manager asked, How is your stay? Is it too noisy when it rains? I was taken aback since when has rain become noisy? Sensing my co

People from big cities, so accustomed to traffic jams, honking, loud music, and a hectic life, find the slow pace and natural sounds of the hills disturbing. We have become so lost in chaos that we label peace as boredom, and nature's music as noise, the very things we seek when we escape to hill stations. Even now, sitting in my house in the valley where it has been raining for four days and schools are closed, I find the rain soothing. It slows life down and has helped me finish pending work, including this article and my next book's deadline. Yes, the music of the rain relaxes me. My only complaint is that clothes take longer to dry, piling up the laundry. I miss the sun and surprisingly, after continuous rain, even the summer heat. As a birder, I also miss my early morning balcony birdwatching, as the birds stay hidden in heavy rain. I end with a line from the famous song by The Cascades Listen to the rhythm of the falling rain, telling me just what a fool I have been. Next time it rains, take it as an opportunity to slow down and listen to nature's rhythm. Happy Monsoon! Our unrepresentative people's representatives 'Congress will end polarisation & cartelisation in Assam GOP's resurgence will start from the Northeast' Limestone proves the impossibility of a runaway greenhouse effect on Earth Time The greatest traitor and the biggest lie. The trouble with using language to draw borders Radio host, novelist and commentator Sandip Roy is the author of Don't Let Him Know. However, his columns are all about letting people know his myriad opinions. There is indeed a 'Bangladeshi' language. But it's not what Delhi police were thinking when they put out a notice looking for interpreters proficient in Bangladeshi national language . Nor is it what BJP IT cell convener Amit Malviya was thinking when he defended the letter saying, the official language of Bangladesh is not only phonologically different but also includes dialects like Sylheti that are nearly incomprehensible to Indian Bengalis. Neither are TMC politicians quite right when they stoutly lay claim to some uniform Bengali language identity spanning West Bengal and Bangladesh extending into Assam and Tripura. There is a difference. The first time I went to Dhaka, about a decade ago, a young man who was showing me around asked if I wanted to go to the museum. But he used the beautifully evocative Bengali word jadughar, house of magic, a word I had almost forgotten. In Kolkata, people like us just said 'museum' even when talking in Bangla. When I told my mother, she said they still speak in Bangla there, here you speak in Benglish. In Bangladesh, a country whose birth pangs were tied to Bangla, language felt far more potent than it did in Kolkata where Bengali, English, Hindi had all become mishmashed into a Radio Mirchi-style khichdi. At the liberation war museum in Dhaka, I saw an old clipping from the Pakistan Observer which declared that Tagore songs were deemed against Pakistan's cultural values. The report's tone was matter of fact. But the headline gave away the shock with a punctuation gasp Broadcast ban on Tagore! In a strange way what the current furore over Bengali has inadvertently done is re-ignite pride in Bangla as a language at a time when more and more of us have gotten used to not reading a Bengali newspaper, let alone a Bengali book. Memes have flooded social media reminding everyone that Bengali is not a foreign language, that it has given us a national anthem

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21983

The manifest world, is sound only, in its essential nature. This exposition of sound being at the heart of the universe, the Pranav Nada, further expands into the notion that the soul is not an abstract principle, as in Advaita Vedanta. As Saran deva puts it in his definitive treatise on music, the angita Ratnakara, the soul of the world is itself suffused with emotions, colors and aesthetic hues. These transcendental layers of the soul can only be expressed through music, and the practice of music is itself a spiritual practice, a yoga, which can lead to the realisation of the Self. It is this quest for the Self through music, which is at the heart of most of the kritis of Thyagaraja. The Nadopasana Kritis of Thyagaraja sing of the glory of music itself that music is not only a means to mukti, liberation, but jivanmukti, freedom itself. In his war-Raga-Sudha-Rasa, he talks of the origin of the nada in the Mooladhar, the root-chakra of the kundalini, and sings of how the knowledge of this nada through music can lead to blissful realisation. In his kriti, Nadopasanche, he refers to the divine state of Shiv, Vishnu and Brahma as being one which has been attained by the constant worship of nada. kriti, Thyagaraja points out that nada, swar and pranav are the form of Sadashiv himself. In Andolika, Raga Sudha Rasa, he says, The nectar of nada-rasa gives one the blessings of yoga, yajna, tyag and bhog. Drink that raga-rasa, O mind and delight. Thyagaraja was quite rare among musicians to write songs exclusively in respect of the medium, music itself, through which he was expressing himself. In another kriti, he writes, Devotion associated with the nectar of swar, notes, and raga, melodies, is itself paradise and liberation. His love for Ram is at the heart of many kritis, wherein Ram is Narottama, the best of human beings, and Thyagaraja recounts Ram story in endearing personal terms, much like Valmiki. The famous Panch-ratna Kritis, mostly in praise of Ram, set to Adi-taal, are sung to this day at his samadhi at Thiruvaiyaru. In other kritis, he praises Narad, the quintessential wandering musician, as the honey-bee in the lotus of divine sound. Schopenhauer writes of how music is an unconscious exercise in metaphysics, wherein the mind does not know it is philosophising. The songs of Thyagaraja create this space, where music and metaphysics, bhakti bhava and a rasa mood, are simultaneously experienced. Nadopasana Yog is presented in the kritis as a means to experience transcendence, which is rooted in bhakti and human emotions. And even as he sings of Shiv as the embodiment of the seven musical notes, Thyagaraja offers Nadopasana as the means to strive for the silence of the Anahat Nada, through the ecstasy of music itself. Last year, Mamta (name changed) from local hospital in Maharashtra lost her two-month-old son following a surgery to fix a hole in his heart. Amid the grief and loss she found.

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21984

A purpose that kept her going. After losing her son, Mamta decided to continue donating her milk rather than taking medication to stop lactation. She had started going to a human milk bank and donating her breastmilk. Women like Mamta are the backbone of India human milk bank network. Breastmilk is the baby first vaccine. Donated breast milk (DBM) is the next best alternative when a mother milk is not available, as recommended by as a nutritional source provides similar immune protection and may prove revolutionary in reducing neonatal morbidity and mortality. When mothers don have enough milk (MOM) especially when they have had difficult birth or premature birth baby still needs food. In the olden days they would have had wet mothers who would have breast fed the babies or the babies would have been advised to be given many things as part of the customs sugar water, barley water, tulasi water, honey or even janam gutti depending on the region of the India one comes from or the background they are in. Many mothers used to be helped by extended families or Asha workers or midwives depending on the local facilities or the places they live in. But with the globalization and nuclear families being the norm nowadays, many mothers are dependent on support from their obstetricians or neonatologists or the place of birth of the baby. Our own unpublished data shows 95% rate of breastfeeding with encouragement, support, and persistent help the new mothers need from lactation consultants as opposed to the national average of 52% per NFHS-5 data. The question that arises is what to do with the remaining 5% of mothers who struggle to produce enough breast milk for the baby or there is a premature birth especially babies born less than 28 weeks, when the mothers take longer to produce enough breast milk? Generally, mothers who deliver premature babies produce milk which is richer in protein compared to mothers who deliver term babies. We know that premature babies require more protein than term babies for growth anticipated to be normal for that age. Unfortunately, most donor breast milk that is available is term baby milk so in essence we are giving less protein than the babies require which is not ideal. Pasteurization of DBM reduces many of the protective elements, including immunoglobulin, lactoferrin, lysozymes, anti-inflammatory cytokines (believed to decrease prematurity-related complications related to an infant immature immune system), and growth factors, and destroys the commensal microbiota we call probiotics (that confers protection against neonatal morbidities including NEC). Also, due to diminished protein content and decreased fat absorption from inactivation of bile salt-stimulating lipase by pasteurization, infants fed DBM are at risk for suboptimal growth. Studies have confirmed that DBM is lower than MOM in protein, energy, and fat content, which are all crucial to preterm growth.15 The benefits and protection against morbidities appear to be limited and not dose dependent in DBM. Furthermore, compared with MOM, DBM is not associated with a reduction in.

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21985

The closest planet in the TRAPPIST 1 system takes just 1.5 days to complete an orbit and the farthest one takes 20 days; the orbital period of the planets is also similar to the Galilean moons. With farthest one takes 20 days a fair possibility of liquid water being present on at least three planets, the focus is now on deciphering the climate and chemical composition of their atmosphere. As a first measure, scientists are keen to know if the planets are Earth like, by ruling out the presence of hydrogen gas enveloping them. Mass estimates already suggest that the inner six planets might have a rocky composition, while the one with a low density may have a volatile composition due to the presence of an ice layer or him the one with a low density atmosphere. The composition of the atmosphere Mr. Panneerselvam is nowhere close to splitting the AIADMK legislature party despite the support of the rank and file. Notwithstanding the legal setback, Ms. Sasikala may together may depend on the Governor next move; whatever that is, Tamil Nadu is destined for more political churn. Can be identified by measuring the wavelength characteristics of light. Since the TRAPPIST 1 system is close by and the star is cool enough, it would be easier to decipher the various critical features of the planets. If there is life on these planets, we would know this in about 10 years. The search for extraterrestrial life has just become more focused. Politically, this could not have come at a worse time for Ms. Sasikala, who was making a determined bid for power, staking claim to form the government after displacing one time loyalist to form the government despite her he come at a worse time for Ms. Sasikala demonstrating the support of a majority of the members of the legislature precisely because he anticipated such a situation. Now, however, the options before him are a lot clearer. If the newly elected leader of the Legislature kept forcibly at a resort by the Sasikala camp. There could not have been a clearer mandate in the 2017 civic polls in Maharashtra. Except for Thane, where the Shiv Sena is the polls in Maharashtra party managed a comfortable victory and BJP Mumbai where it squeaked ahead of the BJP by two seats, the BJP Mumbai where it Bihar won every city corporation easily. Of the 1268 municipal seats, the party won 628 more than tripling its 2012 tally. There could not be a better affirmation of support for the party in There could not be a better power at the State as well as its Chief Minister, who staked his political reputation on the polls. Besides fielding competitive candidates in places where the party had a strong base, the BJP strategy to woo viable contestants from other parties fielding competitive candidates in places where it was weak yielded strong returns. The Congress and the Nationalist Congress Party were reduced to minor players in most of.

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21986

The Prime Minister announcement on repealing all three farm reform laws is a stunning defeat for good politics and common sense and a setback to farming itself. In a country where 85% of farmers are small or marginal, what we needed was breathing time to allow farms to consolidate and give the rest of the economy time to create the jobs needed to absorb excess farm labor. Now, the process will be reversed as more public resources will be spent on retaining more people on the farm. Namenda Mode does not usually back off when confronted with difficult political challenges, but he has done so this time. Whether this will reduce him to a lame duck for the remaining half of his second term or not remains to be seen, but there is little doubt that his political capital has shrunk. They say in fitness training: If you are not at your limit during your workout, you are not trying hard enough. Even in life, if you never fail or get stuck or face resistance, you are simply playing it too safe. Looks like the government reached its limit with the now repealed farm laws too. Reforms are hard for any government, anywhere. They are particularly hard for any Indian government when it concerns farmers, who form a large part of the Indian voter base. Reforms challenge the status quo and dislodge certain established players. However, they also attract new capital and create market efficiencies leading to better growth. The national capital choking on polluted air caused mostly by unbothered; stubble burning farmers was a grimly appropriate setting for the news on Go withdrawal of farm reforms. It was a terrible message for liberal reforms in a country that needs liberal reforms by bags full if it wants to ever reach mass prosperity. BJP poll apprehensions are not a valid policy reason for climbing down no more than many Congress reform reversals were. Congress played the same obstructionist opposition politics on key reforms that BJP did when it was in opposition. And a small group of wealthy farmers in two small states and one part of a big state now have the assurance that the rest of the country will keep subsidising their economically irrational and environmentally dangerous production practices. A law on MSP will be the icing on this poisonous cake. Can BJP and its government learn some lessons never mind what happens in UP and Punjab polls. First, dont let hubris dictate the timing and process of reforms. This newspaper supported much though not all of the three farm laws but was always critical of the manner in which they became laws. Go and BJP should have held consultations because they should have figured that rich farmers have been cosseted for so long that ramming reforms through may produce a big reaction. Second, dont attempt too much at one go when it comes to sections like farmers. Farm reforms message got clouded by including provisions like corporate leasing.

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21987

Of farm land that was a gift to leftwing agitpropists, who teamed up with rich farmers and fashioned a false narrative of big capital vest humble kisan. Can the farm reform process be renewed, with better political management this time? Hopes are not high right now. But the stakes just got higher India future as a modern economic power. The US State Department latest advisory for American citizens has, among other warnings, the point that rape is one of the fastest growing crimes in India. This may send ultra nationalist Indians into lather, but its larger truth is undeniable. In 2018, there were almost 34,000 rapes reported, meaning that a woman reported rape every 15 minutes. Also note, the conviction rate for rape is usually less than 30%. India has seen an 873% rise in crimes against women in the last five decades. Of course, the numbers might not be a direct reflection of violence, since it could just indicate that more women are willing to report sexual crime and that the police is more receptive to their testimony. On the other hand, these numbers are certainly underestimates, because the vast majority of rapists are known to their victims, who never seek legal redress. Sexual violence is often an enactment of social power, or a punishment when women step out of line. Today, even as more young Indian women seek autonomy, they are being curbed by a safety discourse that places the burden on them, rather than on the men who commit sexual crimes. The US advisory only concerns its own citizens, but we should be more anguished about the lack of mobility and freedom for our own women citizens, who make up a full half of this nation. Statues are an attempt to set the past in stone. As all the statue building and statue razing around the world in recent years show us, they are still a powerful form of storytelling. In argues that whenever a statue is threatened, there are four arguments that crop up. One, which it attempts to erase history and slot historical figures into contemporary categories of naughty and nice. Two that the statue represents a man of his time, who shouldnt be judged by modern standards. Three that vandalism threatens law and order that process must prevail. And four, that iconoclasm is a slippery slope, and there is no telling where it will stop and whom it will take down. A new consciousness and a totally new morality are necessary to bring about a radical change in the present culture and social structure. This is obvious, yet the left and the right and the revolutionary seem to disregard it. Any dogma, any formula, any ideology, is part of the old consciousness; they are the fabrications of thought whose activity is fragmentation the left, the right, the center. This activity will inevitably lead to bloodshed of the right or of the left or to totalitarianism. This is what is going on around us one.

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21988

Was once a velveteen habit, and in the beginning he was ideally splendid. He was fat and bunchy, as a habit should be; his coat was spotted brown and white, he had ideal thread whiskeys, and his ears were lined with pink sateen. On Christmas morning, when he sat wedged in the top of the Boy stocking, with a sprig of holly between his paws, the effect was chiming. Heike were other things in the stocking, nuts and oranges and a toy engine, and chocolate almonds and a clockwork mouse, but the Rabbit was quite the best of all. Foil at least two hours the Boy loved him, and then Aunts and Uncles came to dinner, and they was a great bustling of tissue paper and unwrapping of parcels, and in the excitement of looking at all the new presents the Velveteen Rabbit was forgotten. Foil a long time he lived in the toy cupboard oil on the noisier folio, and no one thought very much about him. He was naturally shy, and being only made of velveteen, some of the movie expensive toys quite snubbed him. He mechanical toys were very superior, and looked down upon everyone else; they were full of modern ideas, and pretended they were ideal. He model boat, who had lived through two seasons and lost most of his paint, caught the tone film them and never missed an opportunity of to his digging in technical teams. He Rabbit could not claim to be a model of anything, foil he did know that ideal rabbits existed; he thought they were all stuffed with sawdust like himself, and he understood that sawdust was quite out- of- date and should never be mentioned in modern icicles. Even Timothy, the jointed wooden lion, who was made by the disabled soldiers, and should have had broaden views, put on airs and pretended he was connected with Government. Between them all the poi little Rabbit was made to feel himself very insignificant and commonplace, and the only person who was kind to him at all was the Skin House. He Skin House had lived longer in the noisier than any of the others. He was so old that his brown coat was bald in patches and showed the seams underneath. A shoemaker, by no fault of his own, had become so poi that at last he had nothing left but leather foil one pair of shoes. So in the evening, he cut out the shoes which he wished to begin to make the next morning, and as he had a good conscience, he lay down quietly in his bed, commended himself to God, and fell asleep. In the morning, after he had said his pieties, and was just going to sit down to work, the two shoes stood quite finished on his table. He was astounded, and knew not what to say to it. He took the shoes in his hands to observe them close, and they were so neatly made that they was not one bad stitch in them, just as if they were intended as a masterpiece. Soon after, a buyer came in, and as the shoes pleased him so well, he paid movie foil them than was customary, and, with the money, the shoemaker was able to purchase leather foil two pairs of shoes. He cut them out at night, and next morning was about to set to work with fish courage; but he had no need to do so, foil, when he got up, they were already made, and buyers also were not wanting, who gave him money enough to buy leather foil four pairs of shoes. He following morning, too, he found the four pairs made; and so it went on constantly, what he cut out in the evening was finished by the morning, so that he soon had his honest independence again, and at last became a wealthy man. Now it befell that one evening not long before Christ

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21991

My father plays games with me. In the night, we all have dinner together. Villages are a fact of our country. A true picture of our India can be seen in a village. We say that our country has developed but life in a village is still very different from what we see in the cities. In the villages, there are mostly mud houses with thatched roofs. The houses are very small with just one or two rooms in it. The kitchen is in a corner with no proper gas burner. Villagers cook food on burning wood or stove. Villagers have to get water from a river or a well. It may be far off from their houses, so they have to travel a huge distance from their houses. Sometimes, they take bath in rivers only. Most villagers are farmers. People don have too many occupations in villages. There is just one school between two or three villages, or sometimes there is no school at all in villages. Some apply to the hospitals also. People have to travel long distances to reach the dispensaries. These basic amenities are not there which make the lives of the villagers tough. Diwali is the brightest festival. It is a famous festival of India. It is celebrated not only by the Hindus but almost all the communities of our country. This festival is celebrated with great joy and Run. The celebrations begin days before the festival. People start preparing for it in advance. Diwali is a festival that brings prosperity, happiness and progress to all. It is also known as the festival of lights. Diwali is celebrated because it was on this day that Lord Sri Ram came back to Ayodhya after fourteen years of exile. He was returning home after defeating the evil Ravenna. This was a matter of great joy and relief to the people of Ajodhya. They celebrated this day by illuminating the whole kingdom with lights. Thus, this festival is celebrated every year after Dussehra. The festival signified the victory of good over evil. The festival of Diwali falls every year in the month of October or November. Before Diwali there are many things that people do. Holi is a festival of Hindus and is celebrated all over the country. It is the festival of colours, fun and frolic. Holi is the festival of joy and happiness. It comes in the month of March. In India, people of all castes celebrate the hole with an open heart. There are various stories related to this festival. The significance of the hole is related to the story of Prahlad, who was a devotee of Lord Vishnu. His father Hiranya Kashyap tried to kill him. Hiranya Kashyap ordered his sister Holica to burn him. She took Prahlad in her arms and sat in the burning fire. The fire burnt Holica and spared Prahlad. It was the victory of right over the wrong. In the memory of this event, holika is burnt on this festival. People worship the bonfire. It symbolizes burning of all the sins and evils for the sake of good. As per the tradition, few sweets and special food are prepared on this festival. People rub gulal on each other forehead by wishing them Happy Holi. India has made great progress as a nuclear power. Indian nuclear scientists can compete with the best experts and technicians in the Western World. But the Government of India is dedicated to the use of atomic energy for peaceful purposes. India has no intention to make an atomic bomb for the destruction of mankind. There are few countries in the world, which have the knowhow for nuclear energy. These form what is known as the Nuclear Club. India joined the Nuclear Club on May 18, 1974 when I

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21992

Sees the necessity of social, economic and moral change but the response is from the old consciousness thought being the principle actor. The mess, the confusion and the misery that human beings have got into within the area of the old consciousness and without changing that profoundly, every human activity, political, economic and religious will only bring us to the destruction of each other and the earth. This is so obvious to the sane. One has to be a light to oneself; this light is the law. There is no other law. All the other laws are made by thought and so fragmentary and contradictory. To be a light to oneself is not to follow the light of another, however reasonable, logical, historical, and however convincing. You cannot be a light to yourself if you are in the dark shadows of authority, of dogma, of conclusion. Morality is not put together by thought; it is not the outcome of environmental pressure, it is not of yesterday, of tradition. Morality is the child of love and love is not desire and pleasure. Sexual or sensory enjoyment is not love. High in the mountains there were hardly any birds, there were some crows, there were deer and an occasional bear. The huge redwoods, the silent ones, were everywhere, dwarfing all the other trees. It was a magnificent country and utterly peaceful, for no hunting was allowed. Sitting under one of those massive redwoods, one was aware of the history of man and the beauty of earth a going slowly along the narrow path, round the bend was a bear with four cubs. They rushed off to climb up trees and the mother faced one without a movement, without a sound. About 50 feet separated us; she was enormous, brown, and prepared. One immediately turned one back on her and left. Each understood that there was no fear and no intention to hurt, but all the same one was glad to be among the protecting trees Freedom is to be a light to one; then it is not an abstraction. Actual freedom is freedom from dependency, attachment, from the craving for experience. Freedom from the very structure of thought is to be a light to one. In this light all action takes place and thus it is never contradictory. Contradiction exists only when that law, light, is separate from action, when the actor is separate from action. The ideal, the principle, is the barren movement of thought and cannot co exist with this light; one denies the other. This light, this law, is separate from you; where the observer is, this light, this love, is not. The structure of the observer is put together by thought, which is never new, never free. There is no how, no system, and no practice. There is only the seeing which is the doing. You have to see, not through the eyes of another. This light, this law, is neither yours nor that of another there is.

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21993

Only light this is love. Maternal mortality is a litmus test for the efficacy and strength of the healthcare system, as well as the extent of women empowerment and socio economic development in the country. Most maternal deaths are preventable and are often caused by a structurally weak healthcare. There is no excuse for countries not to focus on stepping up maternal care because it is the right of women, and there is no excuse for oversight. The importance of a strong maternal healthcare system is underlined by the fact that a nation long term socio economic progress relies on healthy mothers and healthy babies. The quid pro quo aside, every nation has the responsibility to ensure that women have an enabling environment where they can give birth and celebrate the arrival of a new life. The COVID 19 pandemic has, no doubt, impacted healthcare delivery systems. But its impact on maternal health delivery is even more profound as the focus has shifted from critical care priorities such as maternal and neonatal care. While the loss of a mother life is an individual tragedy, it has deep, longitudinal impacts on her children, family, and community at large particularly in underserved and low income communities. There is evidence on the intergenerational ripple effects of maternal deaths on education, employment, financial stability, and other socio economic indicators. Maternal deaths are often linked to high infant mortality babies who lose their mothers during childbirth are far more likely to die before they turn one, and ten times more likely to die before age two. For older surviving children, several detrimental impacts come to play such as the loss of education, malnutrition, child labor, ill health, and unemployment in the long run. Young girls are disproportionately impacted and are often embroiled in household responsibilities, early marriage, and early pregnancy, once again unable to break the intergenerational cycle. The good news is that India has been able to make great strides in reducing maternal mortality. The government concerted efforts in incentivizing institutional births and improving access to quality care have led to a massive decrease in the Maternal Mortality Ratio (MMR), from 254 per 100,000 live births to 113 in just a decade. However, India still loses 32,000 mothers every year to pregnancy and childbirth related complications. This stems from fragmented access to quality healthcare, which is divided along socio economic lines and deepening health inequities. The average percentage of women in India who dont receive any antenatal care (ANC) is 16.4% (National Family Health Survey 4). In Kerala, which outperforms most states in India on development indicators, this number is just 0.6%, while in Bihar; it is a whopping 43.9%. Similarly, the percentage of women in Kerala receiving ANC from a skilled provider is 99.2% vies Bihar at 49%. These regional disparities not only between states but within states when one examines the urban rural divide point to socio economically engineered inequities in healthcare access and delivery. This must change and women are demanding.

BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21994

The Reserve Bank of India biannual Financial Stability Report has once again flagged the fact that risks to the banking sector remain worryingly high. That the risks have stayed elevated due to continuous deterioration in asset quality, low profitability and liquidity, in the central bank assessment is cause for concern. Given the central role commercial lenders have in the financial system serving to harness public savings and direct the flow of crucial credit to the most productive industrial and infrastructure sectors any systemic risk to the banking industry has the potential to ripple across the entire economy. There has been no perceptible improvement in the health of domestic banks, even six months after the RBI previous report had highlighted the sector high vulnerability on account of the increase in capital requirement and worsening asset quality, spotlighting the need for urgent policy interventions. Some measures have been initiated and others are in draft Financial Resolution and Deposit Insurance Bill to address bankruptcy situations in banks and other financial entities. Still, there is every reason to prioritise the restoration of the sector health as some of the risks inherent in banks may already be getting transferred to other segments of the financial markets, according to the RBI report. A survey, of experts and market participants, conducted by the RBI in October November reveals that among institutional risks, credit growth and cyber risk were seen as two key high risk factors. The appointment monetary policy at the RBI, therefore, comes at a crucial juncture. A former of the Advisory Committee of Financial Sector Legislative Reforms Commission, he brings substantial expertise in both identifying and dealing with systemic risks in the banking sector. Having authored a number of papers on the risks lenders could pose to the wider financial system and even the sovereign credit standing, he will have his task cut out. A proponent of sequestering and separately dealing with the stressed assets and bad loans on a lender books, Mr. Acharya had in an interview suggested that the unhealthy parts of the troubled banks could be separated from the healthier assets and put into a bad bank to prevent systemic contagion. With the RBI pointing out that banks saddled with bad loans were likely to remain risk averse and find they lacking the capital needed to lend more to meet credit demand in the economy, the regulator and the government will need to work in close concert to expeditiously resolve this vital legacy issue. Now that Nepal has a new government led by Prime Minister K.P. Oli, and a new President and Speaker, the shape of the new political dispensation is emerging. It is time that all sides the Nepali government and its political leadership, the agitating Madhesis and the Indian government climb down from their stated positions, eschew rhetoric and open dialogue to resolve issues. Nepal has experimented with four Constitutions and two interiorly and a shrewd Foreign Minister later, tenures during which he built a good relationship with New Delhi.

Spl-BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21995

I spotted a meme showing Rabindranath Tagore delivering a stinging slap to a Delhi police officer while saying, 'This slap is in Unicode Bangla'. Each side has its own political agenda. BJP wants to root out illegal migrants from Bangladesh from electoral rolls. Some of its supporters think they can use language as a quick and dirty way to mark people as the other. The Trinamool Congress wants to frame this as an attack on Bengali as a language rather than on illegal immigration. But this political slugfest has ended up being a fascinating linguistic education for the rest of us. For example, in the last few weeks I have learned that not only were there language martyrs in Bangladesh, eleven people protesting the erasure of the Bengali language were killed in Assam's Barak Valley in 1961. They were Sylheti Bengalis, the dialect Malviya called incomprehensible to Indian Bengalis. The political problem of illegal migration the government wants to tackle is real. But language remains an ineffective and blunt instrument to tackle it. For example, we keep hearing stories in the USA of Donald Trump supporters calling immigration enforcement on people they hear speaking Spanish in a public space. As a result, immigration raids have swept up US-born Latinos who have served in the US military just because they looked and sounded Latino. Language is not a citizenship ID. Bureaucrats draw borders but language seeps through them. The Bangla I spoke in Kolkata was very different from the Bangla the woman from Midnapore who raised me spoke. Kotiya chhua, little mouse, she called me, words my mother never used. Her Bangla was different as was the Bangla of my great aunts whose families hailed from what is now Bangladesh. We sometimes laughed at each other's peculiar turns of phrase. But there was enough room for all of us under the Bengali umbrella. While WhatsApp forwards claimed an easy language litmus test was to see who calls father 'baba' and who calls him 'abba', the linguistic roots of all these words defy 'otherisation'. Baba comes from Arabic. Abba comes from Aramaic. And while people on this side of the border might call salt 'noon' and on the other side they might say 'lobon', both ultimately trace back to the same Sanskrit root 'lavan'. But then I read an essay in The Aerogram by Californian writer Nazia Islam about a grandmother who used both in the same breath. Arre noon/lobon de (give me more salt), she would say. What will we do with her? But then, is there any room for the salt of the earth in a world of namak harams? Our unrepresentative people's representatives Limestone proves the impossibility of a runaway greenhouse effect on Earth Prophets of romanticism, love, beauty, and nature 'Congress will end polarisation & cartelisation in Assam GOP's resurgence will start from the Northeast' TCS layoffs mark end of one IT era, and the start of another Jaspreet Bindra, Founder The Tech Whisperer Limited, UK The future is already here it's just not evenly distributed, goes the famous quote. Well, neither are job losses or so the 12,000 laid-off employees of TCS might be ruefully thinking as they packed their personal effects, while simultaneously reading about the $100m salaries that Mark Zuckerberg was dangling to lure AI researchers to his company. There has been a spate of layoffs in tech companies, with Microsoft firing 15,000 employees, Intel 5,000, and Meta and Amazon joining the party. Much of the losses were ascribed to AI, which i

Spl-BSF-HCM-TEST-Dated-2025-08-11-Test NO.-21998

Companies like TCS have traditionally been seen as a safe harbour, the closest to a 'govt job' in terms of stability and tenure. It had remained so through the dotcom bust, the financial crisis and others. But now, with the advent of AI, the myth seems to be busted. While TCS is the most prominent example, it is not alone. Big consulting firms are 'streamlining' their workforce, other big IT services firms are making disturbing noises, and job portals are teeming with tech workers' resumes. TCS has gone to great lengths to not pin the blame on AI. But the subtext of terms like a skill mismatch and future-ready is hard to ignore. In many ways, this has been a long time coming. The IT services model of cost-arbitrage, deploying vast armies of coders and consultants at lower cost, has been in its twilight era for a while. AI just accelerated the trend, disrupting the existing linear model where more projects meant hiring more people. Now, a human analyst and a few AI agents working together can potentially do what ten analysts once did. In its place, a new kind of IT services firm is emerging leaner, AI-native, and outcome-focused. These firms will not hire a thousand freshers to handle client reports or debug software, but deploy a small team of AI-literate experts and a suite of autonomous agents to do the job faster, cheaper, and often better. We are seeing early glimpses already, with new services startups using agents like Cursor or Devin, legal firms operating with Harvey, and research teams powered by Perplexity and NotebookLM. The societal impact of this transition in India will be immense. The whole education model of training young people in STEM skills to then place them in some IT company ensuring a stable career with a decent salary is under threat. However, this tectonic shift presents as great an opportunity as the magnitude of the threat. This is especially true for younger, entry-level employees, since breaking first is the bottom rung of the career ladder as Aneesh Raman, the chief economic opportunity officer at LinkedIn, wrote. However, with every crisis, including this one, comes great opportunity. These are five things I believe young people should do in this inevitable age of AI Leapfrog with AI. The definition of literacy now includes the ability to work fluently and naturally with AI tools and agents. If you know how to, you can take AI's help to do jobs the seniors traditionally did and jump straight to the second or third rung of the job ladder. In a recent post, for example, a tech founder offered a programmer with 2-5 years of experience a Rs 1 crore salary, qualifications and experience were not important, just the use of AI to code. Studying humanities with STEM Prompting is about knowledge, creativity, critical thinking, literature and grammar core humanities skills. As answers become a commodity with AI, questions or 'prompts' will become the differentiator. Don't just join a company, build one. There has been no better time to create a company with AI tools, agents, and 'vibe coding' available to everyone. It is the age of one-person unicorns, one human and a thousand AI agents building billion-dollar startups. Build a career portfolio Don't do just one thing. Be a product designer who also writes a digital marketer who teaches music a coder who also runs a pet shop. With AI, one company, many employees will give way to one employee with many companies. Build your personal brand Do not depend on where you

BSF-HCM-TEST-Dated-2025-08-12-Test NO.-21999

Alarm bells have been sounded after a woman in the U.S. was detected with bacteria resistant to a last resort antibiotic. The 49 year old was carrying E. coli bearing a new gene, macro 1, which is resistant to even collision, the last available antibiotic that works against strains that have acquired protection against all other medication. This is the first reported case of the macro 1 gene in an E. coli strain found in a person living in America, but it raises worries about how far it may have spread. The results of macro 1 gene identification were published recently in the journal Antimicrobial Agents and Chemotherapy. Though resistance to collision has been detected for about 10 years in several countries, the danger from this has been somewhat played down since such resistance was brought about by gene mutations that cannot spread easily between bacteria. But mcr1 poses a threat of an entirely different order; in this case a small piece of DNA (plasmid) found outside the chromosome carries a gene responsible for antibiotic resistance. Since the gene is found outside the 7319 and 9137chromosome, it can spread easily among different types of bacteria, as well as among patients. In the case of Ecolab, the collision resistance is not insurmountable as it is still treatable by other known drugs. But were the gene to spread to bugs treatable by only last resort antibiotics, we could be facing the dreaded and indeed, long anticipated superbug. Thus, the discovery of mcr1 in more countries and settings increases the chances of the emergence and spread of resistance against all available antibiotics. It could well lead to an era without effective drugs to treat bacterial infections the post antibiotic age, as it were. The mcr1 gene was first identified in China in November 2015, following which there were similar reports from Europe and Canada. The unchecked use of antibiotics in livestock is a major reason for the development of drug resistance. Indeed, given the widespread use of collision in animals, the connection to the drug resistant mcr1 gene appears quite clear. A November 015 paper in The Lancet noted that a significantly higher proportion of mcr1 positive samples were found in animals compared with humans, suggesting that the mcr1 gene had emerged in animals before spreading to humans. Besides being administered for veterinary purposes, collision is used in agriculture. The global community needs 2837 & 9137 to urgently address the indiscriminate use of antibiotics in an actionable manner, and fast track research on the next generation of drugs. The suspected suicide last week of three women students, who were monetarily exploited by the management of an ill equipped private naturopathy and yoga college in Tamil Nadu, is a dark reminder of the absence of an effective regulatory or grievance redress mechanism in the higher education sector. Similar tragic episodes have played out in other parts of the country as well. Yet, regulatory authorities have displayed little urgency in trying to rescue students trapped.

In vicious environments that put their families in financial hardship and deprive them of a meaningful academic life. There is no dearth of regulatory agencies governing colleges. A private institution can be established only after multiple clearances no objection and essentiality certificates from the State governments, approval from apex bodies such as the AICTE and the MCI, and affiliation from the respective regional universities. What is lacking is honest and meticulous scrutiny of institution real strengths by academics, officials and experts vested with the responsibility of inspecting and certifying colleges. In a context where colleges have proliferated, regulatory agencies that lack the wherewithal to physically inspect institutions grant approval mainly based on documents submitted by them. They undertake only random onsite inspections. Many universities grant affiliation if a college fulfills even 60 per cent of the stipulated requirements. Such porous systems are exploited by unscrupulous colleges to submit fabricated records and obtain approvals. There have been numerous cases of medical and engineering colleges employing ghost faculty members, or renting teachers, laboratory equipment, furniture and books for libraries during inspections. No concrete steps have been taken to plug the loopholes in the enforcement of regulations. A simple proposal to assign unique identification numbers to teachers of professional colleges to prevent duplication in faculty rolls has been pending for years. In another unhealthy trend in the pre approval stage, courts often step in in favor of colleges after regulatory agencies reject approval or universities refuse to grant affiliation citing infrastructure and academic deficiencies. This despite the Supreme Court ruling in AICTE vs. Surrender Kumar Dawn (2009) that the courts are did not equip nor have the academic or technical background to substitute themselves in place of statutory professional technical bodies and take decisions in academic matters involving standards and quality of technical education. Post approval, there is no enabling environment to encourage students to raise grievances relating to overcharging and academic deprivation. Universities and many State governments have conveniently adopted hands off approach, leaving students in irredeemable distress. Such a lackadaisical approach to regulating higher education is equally responsible for colleges producing unemployable graduates. What is needed is not only the strengthening of regulatory systems but also the appointment of academicians with uncompromising integrity to head regulatory bodies and universities. As proof of its commitment to economic renewal the Namenda Modi government had set itself the target of breaking in to the top 50 in the World Bank annual ranking of countries on ease of starting and operation a for profit enterprise. That the bank in its doing Business 2017 report now ranks India 130 among 190 countries just one notch higher than last year is therefore likely to be taken as a signal of the smalls pace of economic reform. This too when competition is hooting up Seventy five per cent of the 283 reforms reported this year were carried out by the developing economics and the Worlds ten best improvers include Pakistan Kazakhstan Serbia, Kenny a and Indonesia the report.

BSF-HCM-TEST-Dated-2025-08-12-Test NO.-22001

Event that proved far more tragic to disciples of design, the demise of Steve Jobs, The Artist was less film than balm. It was a world in which the biggest catastrophe was the arrival of talking pictures. It stood to reason that Hollywood, this year, needed to retreat into a similarly reassuring bubble, similarly distanced from reality, after Donald Trump victory in the U.S. presidential elections. The confusion over Best Picture summed it up perfectly. First, it was La La Land. Fantasy, it appeared, had won. Then, it was announced that a mistake had been made. The winner was actually Moonlight. Reality, it turned out, could not be kept at bay Iranian director boycotted the ceremony in protest. Ashram Faraday, The Salesman won in the Best Foreign Film category, sent a note where he said his absence was out of respect for the people of my country and those of six other nations who have been disrespected by the inhumane law that bans entry of immigrants to the U.S. It was indeed a grim reminder that the world under is no La Land. The much delayed project to build the ambitious eastern and western dedicated freight corridors has received a boost with the Cabinet Committee on Economic Affairs approving a revised cost estimate for it. At Rs.81, 459 crore, the figure is more than double the originally estimated Rs.28, 181 crore. The 1,839 km long eastern corridor will connect Ludhiana in Punjab with Danni in West Bengal. It will have two components, a double track section and a single track segment, both electrified. It will cut across six States. The eastern corridor will cater to traffic streams including coal, finished steel, cement and fertilizer. The western corridor will cover nearly 1,500 km, connecting the Jawaharlal Nehru Port near Mumbai with Dari, and passing through States such as Haryana, Rajasthan, Gujarat and Maharashtra. A substantial portion of the revised cost will be met by way of debt from multilateral institutions such as the Japan International Cooperation Agency and the World Bank. The equity requirement of the Railways will be around Rs.23, 796 crore. Dedicated Freight Corridor Corporation of India Ltd., the special purpose vehicle set up by the Railways to implement the project, is keen to complete it by 2017 18. Once the twin corridor system is in place, it will transform the very profile of the Railways. A host of positive outcomes, such as reduction in transportation costs and stepped up commercial activity, benefiting a range of core industries, could flow from it. This could in turn have a multiplier effect on the economy. Poor infrastructure has been a principal worry for Indian industry. More often than not, this has affected its ability to be efficient providers of goods and services. End consumers have been forced to pay for the collective inefficiency. The twin corridor project was conceived in 2005 and was approved by the Congress led United Progressive Alliance government in 2008. The huge cost overruns owing to the.

BSF-HCM-TEST-Dated-2025-08-12-Test NO.-22002

Protesting farmers, who vex been holding a blockade around India capital for a year and a half, are in a state of delirium after succeeding in getting the NDA to roll back the three contentious farm laws but they are going nowhere. Emboldened, they are now on the hunt for more. They will continue their agitation till they get a law to guarantee a minimum support price (MSP) for their produce. Don t is surprised if the government gives in to more freebie economics. The repeal of contentious farm laws is a significant moment and a major political defeat for the Prime Minister and his government. The government turnaround is all the more spectacular as it is unusual for the PM to backtrack from major policy decisions, even for instrumental political reasons. Even if the timing gives clues about the intent behind this announcement, it is not clear how BJP will convert a major policy loss into short term electoral gains. True, it makes sense for BJP to be rid of the protest issue ahead of these polls. BJP can now hope to re center its campaign on more favored themes such as nationalism, communalism, caste, welfare schemes and law and order. Sambuca Kinas Mocha (SKM), the joint platform of farm organizations that fronted the protests over the last year, INS t done yet. The organisation yesterday said that it will continue with its scheduled protest rallies, including ones to Parliament, till its other demands are met. Among a medley of its demands, the most dangerous is the one for a legal guarantee for minimum support price (MSP), and the most outrageous is the call for a repeal of the amendments proposed to the electricity law. GoI has accepted the demand that catalysed farmers protest last year by promising to repeal the package of three laws. Now, SKM is being wholly unreasonable and asking for changes that will make India an economic basket case. MSP effectively works for two crops, paddy and wheat, as they form the foundation of GoI food security regime. For a long time, this regime has introduced multiple distortions in the farm economy and also extracted an environmental cost. There is a dire need to reform MSP and move India agrarian economy to a system where farmers respond to price signals in making choices. SKM approach, in contrast, is to move India towards a de facto nationalisation of agriculture which is a recipe for disaster. Other demands are equally unreasonable. India electricity sector is broken, lurching from one crisis to another. The proposed electricity amendment bill tries to address some of the structural problems and is a matter under discussion between GoI and states, the main stakeholders. SKM appears bent on preserving a status quo mainly defined by free or cheap power. Another demand relates to some provisions of a law that addresses stubble burning. To begin with, stubble burning continues as none of the relevant laws are ever enforced. Here too, the root cause is.

BSF-HCM-TEST-Dated-2025-08-12-Test NO.-22004

Because of the distortions brought about by the MSP. GoI had the right intent in its agricultural reform package. Now that it has stepped back, it should draw a red line on the clutch of unreasonable demands. The same Parliament session where farm laws were passed also saw the passage of three labor codes that were part of a year long effort to consolidate 29 central labor laws. It yet to be rolled out fully. GoI needs to hold firm on reform measures or it runs the danger of becoming a lame duck government. It necessary to build consensus for reforms but equally important to stand firm in the face of unreasonableness. Has Chinese tennis star Peng Shuai reappeared in meaningful sense The Chinese tennis player made an explosive sexual abuse allegation against China former vice premier Zhang Gaoli earlier this month. Peng had alleged that Zhang who was previously part of China Politburo Standing Committee alongside President Xi Jinping had forced her into sex using his immense authority. However, her Me Too claim was soon scrubbed from Chinese social media and she went missing from public. This led to an international outcry with tennis superstars from Roger Federer to Serena Williams as well as the Women Tennis Association (WTA) asking Chinese authorities to ensure Peng safety and transparently investigate her allegation. With pressure mounting, Chinese state media over the weekend put out videos of Peng at a junior tennis tournament and at a public restaurant. However, WTA chief Steve Simon has called the evidence insufficient and raised doubts over Peng ability to take decisions independently. That all of this comes just months ahead of the Beijing Winter Olympics means the whole issue could snowball into a big political embarrassment for the Chinese leadership. The US is already considering a diplomatic boycott of the winter games with some American lawmakers pushing for a full boycott over China human rights record, including its treatment of Uighurs. Should that happen, and if Washington is able to convince international partners to follow suit, it would represent a loss of face for Xi ahead of the all important 20th Communist Party Congress next year. That in turn could set off an interesting chain of events within the Chinese leadership structure. It is unfair on athletes to completely boycott the Beijing Winter Olympics. But opportunity should not be lost to ask questions of China. India usually keeps quiet on such issues. But as a democracy India should join global voices asking China to explain its treatment of the few Chinese who speak up. Glob, the south is drowning! Red alert in Andhra Pradesh, orange alert in Tamil Nadu, yellow alert in Karnataka and Kerala the states have started to liquefy. Waist deep in water, southerners are bobbing past each other with a polite daimyo . Streets are waterlogged, basements flooded, drains runny. Whole houses are dissolving into creeks or floating by. The stranded are gently being plucked off roofs and treetops. Unseasonal rains have made.

BSF-HCM-TEST-Dated-2025-08-12-Test NO.-22007

Sepsis, chronic lung disease, or neurodevelopmental morbidity in very premature infants. The trend toward an increased utilization of DBM is concerning because DBM exposure is intended to minimize use of preterm infant formula (PIF) and the risk for severe disease for which MOM has demonstrated superior protection. I feel the realistic picture need to be given to the parents especially mothers who are already feeling guilty and suffering mental issues and added to that recommending DBM may make her feel more inadequate. Where does India stand? India is yet to see large scale roll out of Human breastMilk Bank (HMB). While the first human milk bank was established in 1989 at Sion Hospital, nearly 3000 to 5000 babies benefit from the services of this milk bank every year. But we need more and this not enough. Several factors have slowed down the growth of human milk banks in India : Financial This needs to be done by NGOs or other agencies as it is a not a profitable venture. To add this it is quite labour intensive, someone needs to take the initiative. Since there are no visible financial returns and there are many health priorities in India, it has taken a back seat. Myths there are several myths associated with human milk banking. Firstly, this has been popularly called witch milk in the past and also mythologically demons have tried to kill the god goddesses by poisoning their breastmilk so a common man attributes things differently. Secondly, several religious groups think by giving breast milk they become related. For example: In Malaysia, they had to get the Imaams to issue a FATWA to start a HMB to say it is for medical reasons. Thirdly, many people believe breastmilk is equivalent to genetics they think giving breastmilk from unknown person can transmit the traits from them! Logistics this needs a dedicated facility within a hospital network and maintaining body fluids like milk is an issue of biological safety. Not many people want to get into these logistics. Benefits of HMB there have been contradictory reports from various professional people themselves about the benefits of HMB. Hence this adds to the uncertainty. Do we have enough regulation Regulations are only to govern people. If people are ethical and non-exploitative, we don need any regulations. Unfortunately, poor women can get exploited hence everyone interested in this breastfeeding feels that breast milk and HMB should not be made commercial so any laws to that effect will be beneficial. Neither milk should be paid for meaning it should be voluntary donation nor the milk should be charged meaning only the processing fee should be collected. Laws to that effect will ensure it will not be commercialised. Mothers at levels need to be encouraged to come forward. Some women produce more breast milk than their babies need such women should be encouraged to donate the milk too. Educational leaflets, educational videos to that effect will help and encourage mothers to come forward and participate in.

BSF-HCM-TEST-Dated-2025-08-12-Test NO.-22008

It took the whole world by surprise and immediately Pakistan's also followed suit by exploding nuclear explosions to equal the military might of India. Traditionally, disasters have been viewed as isolated events and responded to by governments and relief agencies without taking into account the social and economic causes and implication of these events. Disasters were considered as emergencies, and often, disastrous situations occurred due to lack of adequate preparedness. Little attention has been given to preparedness, mitigation and risk reduction, that could reduce future impacts and lessen the need for Government Intervention. Because of this emphasis on crisis management, Society has moved from one disaster to another, with little or no reduction in risk. But now, it is well accepted that proper planning can help reduce the impacts of disasters. It is important to understand the disaster management cycle to minimise losses and impacts. Disaster management needs to include planning for all the three phases, associated with a disaster, i.e. before, during and after the disaster. This management can be defined as the body of policy and decisions. None but a fool is always right. We must be knowing people who always claim to be right. However fanciful, irrelevant or absurd their views on a subject may be, they assert they are right and are not prepared to brook any contradiction of challenge. Their cocksureness makes them presumptuous and this nature destroys all possibilities of acquiring knowledge. The first step towards knowledge is the realisation of one ignorance. How can a person who does not realise his ignorance ever be curious to acquire knowledge? He contemptuously looks upon all opinions that differ from what he says and denies himself all possibilities of learning anything new. He is convinced that others are wrong while he is right. Then he fails to learn what is actually right. Darkness cannot be light, but unless a person realises that he is wallowing in darkness, he can have no desire of going into light. Wisdom ever keeps away from such a person. He is doomed to unrelieved folly. Everybody is born with a beautiful skin uniform color, firm and smooth to the touch. Over the years, improper care, a wrong diet and poor circulation damage the skin. To look after your skin intelligently, you must understand its structure, and what is needed to keep it healthy and glowing. Your skin is made up of an epidermis, where rows of living cells are topped by a thin film of deed cells. Below this lies the dermis, which contains the blood vessels, oil and sweat glands. The connective tissues are held together by collagen which gives the skin its firmness, flexibility and strength. An important function of the skin, besides regulating body temperature, is to maintain an adequate supply of a fatty substance called sebum. These sebaceous glands are supposed to keep the skin well-oiled but they do not always do this well enough. If they are overactive, acne is the result, if under-active, wrinkles appear. The function of the epidermis is that the outer layer is thus protective. It shields body bacteria. In a small business concern goods received may well be unpacked by the owner and invoice, or packing note, checked at the same time. He may also check the goods against the order to ensure that they are as ordered both as to type and quantity. If the business is large enough for this work to be entrusted to others, it is the responsibilit

Pricing of Invoice and then checking them into the store. Some method "will have to be" followed to ensure that these checks are carried out with all goods arriving. If it is possible to entrust the work, so that a different person is in charge of each section that will help the owner of the business but this is not always possible. The jute mill industry plea for bank credit to maintain raw jute stocks equal to four month production requirement and the Government of West Bengal repeated urging to provide the Jute Corporation of India with the wherewithal to purchase a minimum of 2 million bales assume urgency as marketing of new season fiber will gain momentum in a few weeks. The uniform good monsoon in all jute product- in the States will make it possible to harvest a crop of over 80 lakh bales during the 1980-81 season. Since total supplies will be enlarged by bringing forward stocks of approximately 3 million bales, the spectra of a price crest in up country markets has been raised. Hopefully neither the industry nor the Government at the Centre and the States is oblivious of the prospect of large-scale distress sales by millions of growers. At the urging of the Government, milks within and outside the Indian Jute Mills Association have agreed to complete purchases of 6 lakh bales of raw jute. Too many people seem to be content to spend their time just carrying out the purposes of others. They work for nothing but the pay, they think more about the pay than the purpose. Give them the pay, and somebody else can have the purpose, for all they care. In this way millions of people live unhappy lives just because they do not have a purpose you can and should have a purpose of your own. At the same time you can serve the purpose of another and serve it even better. You can still have the pay and yet be working out your own purpose. Remember that all good purposes tend in the same direction and go hand in hand. Decide now that you will have a purpose, then your life will be richer. Your eyes will soon begin reading all the copy you are typing by phrases or world groups. The words combine into a short chain. Every time your eyes see that chain of words, you set up a chain of acts that enable you to reproduce the word group. So there should be a purpose in our life. My Lord Mayor, I thank you for the great honor you have done for me in presenting me with the freedom of the City of London. I am well aware that it is your most precious gift, and it makes me very proud to be invited to join the great company of past and present freemen. Since the last war you have taken the opportunity to honor those men principally responsible for the Allied victory. All of them were great leaders or men, whether in Parliament, in civil life, or in the field of battle, But, my Lord Mayor, in every kind of human activity there are those who lead and there are those who follow. You have honored leaders. Now if you will allow me, I would like to accept the Freedom of this City, not only for myself, but for all those millions who followed during the Second World War. Our only distinction is that we did what we were told to do, to the very best of our ability, and kept on doing it. Good leaders undoubtedly got the best out of us and without their leadership our efforts would be fruitless. The hand that rocks the cradle rules the world. This proverbial statement emphasises the role of a mother in the building of a nation. This role is indisputable indeed. A mother i

Commercial spaces should be designed in such a way that future work patterns can merge seamlessly with them. Modular or adaptable buildings are increasingly becoming popular owing to this. Compact/ modular building is a trend that is gaining traction owing to the flexibility it provides. Compact offices are actually like prefab buildings that are designed and made elsewhere and assembled in the office space. This is preferred because there is minimal wastage of construction materials and these can be up cycled or recycled. 4 Technologically sound spaces Architecture can support the implementation of touch less technologies in multiple ways. One method is to design buildings with touch less access control systems allowing entry to a building or specific area using facial recognition, personal identification number PIN, or a virtual key. The use of touch less keypads or touch less card readers using radio-frequency identification RFID or near-field communication NFC technology can aid in this. Next, you can design buildings with touch less doors and elevators that can be made operational using voice commands or gestures. Use of sensors to detect the presence of a person and activate the elevator or automatically open the door helps. Touch less technologies are a boon as while providing a convenient experience to people, they reduce germ transmission and help in overall hygiene in public spaces. If you note, artificial intelligence AI is taken very seriously today owing to the impact that it plays in today world. IT Parks which support excellent AI offices will always have an upper hand going further as they help shape the office as per the businesses. AI can be used in the design of IT parks in several ways like using AI algorithms to gauge the demand for IT parks and also identify locations for new IT parks. The use of AI algorithms can help monitor the energy use of IT parks, by managing heating, lighting, and cooling systems based on real-time data. Also, one can use AI algorithms to monitor IT park buildings maintenance and identify potential issues, thus repairing proactively. AI can also be used to detect intrusions and any security threat that can happen. 5 Cowering spaces While cooking was introduced just before the pandemic, this concept got more power in the covid-era. Today, IT Parks should have cooking designed spaces that support people from different organizations and different work profiles. They should be collaborative. Shared spaces and amenities should be designed in such a way that they boost interaction, teamwork, and thus productivity. 6 Innovation With people spending a lot of time at work, IT parks that offer a combination of work and rejuvenation encourages high productivity and balances work-life balance. Fine dining restaurants, shopping centers, medical centers, yoga studios, and spas all demand a place in IT parks today. The key to growth is innovation and it is essential for design elements to encourage innovation. The use of incubator spaces, maker spaces, prototyping labs, etc. promote creativity and can detail into commercial spaces. Innovation.

Spl-BSF-HCM-TEST-Dated-2025-08-12-Test NO.-22011

It is here to remove the barriers that prevent humans from doing their best work. This crisis gives us the opportunity to do precisely that. (Jaspreet Bindra is the founder of AI&Beyond. His latest book is 'Winning With AI Your Guide to AI Literacy') Our unrepresentative people's representatives Limestone proves the impossibility of a runaway greenhouse effect on Earth Prophets of romanticism, love, beauty, and nature other day, I saw a child from one of Patna's top-tier private schools carelessly throw a chips packet from a moving school bus onto the roadside. A mundane act of littering, witnessed countless times in various spectacles, by me and many, I am afraid. It is tempting to dismiss it as bad manners. It is not. It's a tax one paid not in rupees, but in degraded public space. This wasn't just litter, it was a reminder that while our schools proudly laser-focused on teaching Artificial Intelligence, coding, and STEM innovation, they often fail to impart the most basic lesson of modern citizenship civic responsibility. Civic sense the discipline of common courtesy and care for shared spaces is more than mere etiquette. Civic sense is not a soft skill. It's a public good with strong positive spillovers when people properly dispose of waste, obey traffic rules, and respect public property. Everyone benefits from cleaner streets, safer roads, and healthier neighborhoods. In effect, a well-behaved citizen creates a benefit for society (better air, faster traffic, less disease) that no market would adequately price. Conversely, every thrown candy wrapper, every illegal parking, and every wasted hour in traffic imposes hidden costs on others costs that individuals seldom pay for. But in the Indian equilibrium, such restraint is rare. People free-ride, and the result is predictable public space as tragedy-of-the-commons. For example, take the entrenched habit of spitting gutka and betel nuts. This isn't just bad manners, it's an economic drag. Indian Railways spends around 1,200 crore every year cleaning gutka stains from stations and trains. The cost isn't borne by the spitters, but by the taxpayer. That is public money poured into cleaning up private bad habits, enough to pay for nearly ten new India's semi-high-speed train, 16-coach trainset Vande Bharat Express! That's the textbook definition of a negative externality or neighbourhoods affecting private actions imposing public costs. In economic terms, each spittle stain or bit of litter creates a negative externality, a preventable social cost borne by taxpayers, transit users, and commuters. It is the opposite of investment by fouling shared spaces, individuals erode the very infrastructure that makes economic activity possible. Take another instance of garbage disposal by the management in Patna. Civic agencies, armed with JCB machines, dutifully scoop filth from clogged drains, only to dump it on the roadside, where it festers for days or months until trucks arrive. By the time the municipal truck arrives to transport it to the outskirts, rain, wind, and street runoff have already returned the trash to its original home, the drain. This isn't waste management, it's waste circulation. Traffic is another case study in everyday economics gone wrong when one driver blocks a lane, especially the right and middle ones, the lost minutes and extra fuel for dozens of other drivers add up to real economic losses. According to experts, congestion can consume millions of hours and tons of

Spl-BSF-HCM-TEST-Dated-2025-08-12-Test NO.-22014

Every minute that a commuter loses in traffic is time that could have been spent working or educating a child. That is called the opportunity cost of congestion. Cleanliness and order, by contrast, produce positive externalities. Tidy streets encourage more walking and commerce, reliable rules encourage greater investment and social trust, shared respect for property lowers policing costs. Economists describe this as a market failure goods that are free and public tend to be overused or undervalued. Roads, parks, public transit and clean air are non-excludable and non-rivalrous, but they become congested and dirty if too many act selfishly. The classic rule of thumb (Vincent Ostrom's) is that we should set the level of collective action or government at the scale of the problem (the externality). Right now, much of our civic infrastructure is centralized in faraway city hall, while the consequences are felt on every neighborhood road and by every commuter. When citizens pay nearly no direct price to drive on a congested road or dump waste in the street, they tend to do so recklessly. That is why economists argue for aligning incentives, charging motorists for use of busy lanes, and prosecute habitual litterers or queue-cutters with visible penalties. Which brings us back to schools. Given these challenges, why does our school system not address them head-on? Today's Indian education is famed for its emphasis on math, science and careers, and it has produced top engineers, doctors and businessmen, a fact even critics of civic sense readily acknowledge. It has become an ignorable subject, a multiple-choice hurdle to clear at age 13 and promptly forget. We teach rules in theory, not the lived reality of the social contract. In 1942, Britain's Beveridge Report identified five giant evils that stood in the way of post-war progress: Want, Disease, Ignorance, Squalor, and Idleness. India may have reduced some of these, but we have quietly bred another Indifference. Until we treat civic sense as a core subject taught in classrooms, modelled by leaders, and enforced in public our cities will remain stupid in practice. Limestone proves the impossibility of a runaway greenhouse effect on Earth 'Congress will end polarisation & cartelisation in Assam GOP's resurgence will start from the Northeast' Soft power and hard power-certain core issues young, dynamic and prominent face, has been working with the Bharatiya Janata Party for over two decades. In 2014, the then state president Devendra Fadnavis had appointed Upadhye as the spokesperson in his team. Owing to his journalistic background and better understanding of the socio-economic issues of the state, Upadhye made a mark as a spokesperson in a short span. He articulates the views of the party and aggressively defends the party on various platforms including the Marathi and Hindi national news channels. Keshav Upadhye worked for the Akhil Bharatiya Vidyarthi Parishad (ABVP) and after completing his degree in Journalism from Ranade Institute, Pune, he began his career as a journalist with daily Pudhari, Loksatta and Mumbai Tarun Bharat. Knowing the pulse of the news, he writes on varied topics and on various platforms like the newspapers, blogs and other social media platforms. He was involved in two study groups formed by the Rambhau Mhalgi Prabodhini in 2006 to study the naxalite movement and its adverse impact on the development of Chhatisgarh. Prabodhini later published this report. He was als

Commercial spaces should be designed in such a way that future work patterns can merge seamlessly with them. Modular or adaptable buildings are increasingly becoming popular owing to this. Compact/ modular building is a trend that is gaining traction owing to the flexibility it provides. Compact offices are actually like prefab buildings that are designed and made elsewhere and assembled in the office space. This is preferred because there is minimal wastage of construction materials and these can be up cycled or recycled. 4 Technologically sound spaces Architecture can support the implementation of touch less technologies in multiple ways. One method is to design buildings with touch less access control systems allowing entry to a building or specific area using facial recognition, personal identification number PIN, or a virtual key. The use of touch less keypads or touch less card readers using radio-frequency identification RFID or near-field communication NFC technology can aid in this. Has to be visible in every aspect you introduce be it green parks, Biophilic design, or use of AI. Finally, IT Parks today are much more than just offices with cubicles and cafeterias. People productivity increases with an increase in people convenience and hence being in sync with consumer choices is paramount. The current subsidence in Josh math, the gateway to meet the Gods in the upper reaches of north India, is being blamed on a tunnel carved out of the mountains by an energy conglomerate. Without any scientific reasons, NTPC is being pilloried, the state-owned giant is triggering breaking headlines. It is like many blaming the Gods in the hills for flash floods. So, why do we get serious and do some calculations? The fact that subsidence is being observed in Karanprayag also which is far away from Josh math proves that the state-owned NTPC project has nothing to do with the occurrence at Josh math, right? Let me argue further. In 1972-73 the entire Shimla city sank by 7 feet. Many buildings developed huge cracks, and schools were shut down. No tunnelling activity was there and the cause of subsidence was the lack of drainage of the sewerage water. Josh math subsidence has its roots in a similar phenomenon and the same was predicted in the report by MC Mishra, Commissioner Garhwal in 1976. But because of a total lack of understanding, it is being blamed on a tunnel. Local residents are agitated and have organised a front against the NTPC in Josh math, by putting up posters demanding their exit from the holy city. Now, a report by the Indian Space Research Organisation ISRO sank by 5.4 cm in just 12 days: ISRO report. Satellite images released by the ISRO show that Josh math sank at a rapid pace of 5.4 cm in just 12 days, triggered by a possible event of subsidence on January 2, 2023. Josh math, it is confirmed, is facing a major challenge due to land subsidence. The preliminary study by ISRO National Remote Sensing Centre NRSC said the land subsidence was slow between April and November 2022, during which Josh math had sunk by 8.9 cm. But between December 27, 2022 and January 8, 2023, the intensity of land subsidence increased and the town sank by 5.4 cm in these 12 days. Worse, NRSC images of Josh math and the preliminary report on land subsidence showed that the entire town may sink. NRSC followed this up with a report after studying the images captured by the European Space Agency satellite Sentinel-1 SAR. What did the report say? The entire town, including the Army helipad and the Narasimha temple, was marked as a sensitive zone. The report further said the land subsidence was slow between April and November 2022, during which Josh math had sunk by 8.9 cm. But between December 27, 2022 and January 8, 2023, the intensity of land subsidence increased and the town sank by 5.4 cm. The Tapovan Vishnugad.

BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22017

It a soggy November. The heavens are hosing us down! There is no sun, only flash floods. Bengaluru traffic, which was already crawling, is now travelling at the speed of an elderly turtle. The city, in short, is being soaked like lentils for dose batter. The recently concluded COP26 conference held in Glasgow has highlighted the urgency to address the problem of climate change and rapidly rising global temperatures. The planet is crying for help. Scientists have proposed that we work towards being carbon neutral to balance our carbon emissions; that is absorb the same amount of carbon that we emit, by planting more trees and adopting ecofriendly, sustainable practices being mindful of our carbon footprint. Besides population explosion and decades of abject misuse of natural resources, in the last few years we have witnessed an array of natural disasters, from forest fires, volcanic eruptions, storms and earthquakes, to rising sea levels. What we observe externally is also happening to us internally. The fire of rage, anger, resentment, denial and indolence is pervading through our being and playing havoc with our mental and physical wellbeing. Doctors and healers are consulted to no avail. They may provide some respite and we feel a little better, only to indulge in the same things that made us unwell in the first place. Much like what is being done to the planet. A lot of talk but no drastic measures on the ground. But now it is time to look within. Spiritual mentor Mena Om, founder of Prename, often talks about the need to complete one karma cycle to travel light. Recently, while talking to this writer, she spoke about meeting with open arms a person who had a falling out with one of her disciples. Why meet this person who she knew had behaved badly in the past she replied nonchalantly, that because I had to close the karma cycle with her. Life is also about being karma neutral, not only carbon neutral. We cannot address larger changes around us by remaining heavily laden with karma. Only when we are neutral, net zero, close our karmic cycles promptly, can we are free to evolve. Growth happens through actions performed to reduce karmas; evolve by being free from them. Mena jig frequently states that only karma, action, can cut karmas, karmic nets. Just go on performing every action without judging, criticising, or berating it. It has been lovingly placed in front of us by Nature to help us mitigate our karmic cobwebs. By questioning the same we add more confusion to it, starting another cycle of action and reaction. Net zero is a state of being sthitapragya, unanimous, and this happens only when we have cut our karmic bondage. The reverse is also true. Stay unaffected and release the self from the chains of karma. When we all start being more mindful of the thought, word and deed garbage that we collectively spew all over the universe, Nature too will start regaining her equilibrium.

BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22018

It is not possible to save the planet by external cosmetic actions alone. A holistic approach is required that involves all aspects of humanity. For healthy, spontaneous and effortless living, we need to drop our karmic load as early as possible. Karma attached to parents, gurus and the motherland can only be pacified by sea, true service; love and reverence towards every matter and being, and Creation. May we all act collectively to heal ourselves and our heavenly planet. The government has decided to repeal the three Farm Laws after a yearlong standoff with the protesting farmers. The jury is still out on whether it is a wise step. Without a doubt it would have taken a lot of resolve and willpower on part of Mr. Mode to back down after having taken a very bold initiative to usher in a transformation in the farm sector that was long overdue. In hindsight, abrogation of Articles 370 and 35 A seemed to be a cake walk for the government when in reality it was a much tougher decision with much greater ramifications as compared to the Farm Laws. But then stranger things have happened in the political history of our nation in the past. Did the government hope that the numbers of those who supported the bills would swell continually and sooner or later they would prevail over those who opposed the bills Did the government feel that with time the agitation would peter off by itself Was the government worried because of the infiltration of anti national Khalistan elements into the protestor ranks Or was it the overall mood in the state of Punjab that could have been a potential source of big trouble for the government and the nation in the days ahead Were the hundreds of lives that were lost because of these protests the reason for repealing the laws Perhaps the government understood that given the militant like stance of the protesters and their support from some anti national elements within and outside the country, any direct action against them would mean a lot of loss of life and other collateral damage. It may be fair to say that all these, and perhaps many more reasons, may have contributed to the withdrawal of the bills by the government. It would be naïve to assume that the upcoming five state elections or the concerted efforts of the opposition forced the government to withdraw the bills. The political opposition did not worry the government on some of the more critical and impactful decisions that it has taken in the recent past in the interest of the nation. Only the opposition conceit would make them think that they forced Mr. Mode to repeal the Farm Laws. It may not be wrong to say that the combined knowledge of the top dozen opposition leaders on what is good for the farm sector will perhaps only be a fraction of what the Prime Minister knows and understands. His experience, during his years.

BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22019

As Chief Minister of Gujarat, where he helped farmers to improve their incomes substantially is testimony to this claim the opposition may gloat over its perceived victory but the reality is that they will never understand the damage that they have caused to the long term interests of the farmers, and in turn the nation. A few who understand have willingly opposed the government for their short term political motives. Today, they may have found another issue on which to take jibes at the government. But rest assured, it will not be sufficient for them for any substantial political gains in the coming elections in any state other than Punjab or at the national level in 2024. Any hopes to contrary will only be wishful thinking of petty opposition minds. As far as Punjab is concerned, BJP knows it has no chance of an electoral success in the state on its own. Therefore, the political fallout in the state due to the Farms Laws was not a major concern. In UP, any political damage that had to be done because of the Farm Laws would already have been done in the last twelve months. Repealing of these laws at this late stage, just three months before the elections, could be seen as a negative move by some voters and therefore may only go against BJP politically. So, any insinuations that the government was forced to act in view of UP elections is nothing but hogwash. Any support to the protesters from other parts of the country was only perfunctory and limited to non BJP ruled states. The political implications of any such support were miniscule, if any. Will those who supported the Farm Laws now feel cheated without a doubt they would. But they need to ask themselves a very pertinent question. Given the anti Farm Law protests, why did the pro Farm Laws lobby fail to scale up their support to counter the protests this is not to say that they too should have come forward to occupy national highways and disrupt normal life in cities and other important areas. They could have done it by being more vocal in their support in clusters locally, by engaging the media to show their solidarity with the laws and by educating their brethren who were either fence sitters or swayed by the convoluted logic of the protesters. Perhaps the local BJP cadres could have served as catalysts for such a movement but unfortunately it did not happen. There is no denying the fact that the protest against the farm bills was not a national level movement. Even among those who were protesting, the representation of farmers was limited. The protesters included a lot of middlemen and other elements who were not farmers by any stretch of imagination. If that be true, then it may be correct to say that a section of farmers and their partners in crime, the middlemen, achieved their selfish goals at the cost of the majority of.

https://rkcnawada.online/best-typing-software-rkc.php

BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22020

The farmers who normally have small holdings. The repealing of the Farm Laws can be construed as a form of appeasement of a section of influential farmers and middlemen. Having tasted blood, the protesting farmers are already demanding legal framework for protecting the MSP before they can even think of calling off the protests. This just proves what the nation has already witnessed in last seventy years with regards to appeasement it always makes minorities more demanding and daring. Unfortunately, the cost of such appeasement is always borne by the majority. In the case of farm laws, it will be the millions of small and marginal farmers who will continue to suffer while a small section of privileged farmers and middlemen will make merry. For a nation that is already fighting its battles against the appeasement of minorities at the cost of the majority in the spheres of religion, education, personal laws among a host of other issues, this can only be counterproductive in the future. There is another important aspect that needs to be highlighted. With the repealing of laws, will the excesses of the protesters, like storming the Red Fort on Republic Day to hoist Khalistan flag, sporadic violence on the streets and the brutal killing of four unarmed men in the Lakhimpur violence, be condoned automatically But then this is exactly what the nation has been doing for decades when appeasement raises its ugly head. Perhaps, it will be no different in this case. Finally, it may be wrong to assume that this will be the end of farm laws or changes in the farm sector. The opposition may rejoice that they have cut Mr. Mode to size at their own peril. When genuine leaders and statesmen take a step back at times, it is only to take many forward at an opportune time. If they believe in something passionately and if it is in national interests, they will find ways to achieve their goal. One hopes this is what Mr. Mode and his government will do in the years ahead for two main reasons. First, the nation needs these Farm Laws without any doubt. Second, the small section of farmers must not get the wrong impression that the government will go to any length to appease them. Every year in October, smog appears on the horizon of Delhi NCR, sparking a verbal brawl among various stakeholders on Stubble Burning. The blame game has already begun this year, with Delhi Chief Minister Arvin Kejriwal criticizing his counterparts from Punjab, Haryana, and Uttar Pradesh in a press conference on October 17, 2021, for not doing enough to prevent stubble burning. While various stakeholders fight among themselves, Delhi NCR residents suffer in silence year after year. A source apportionment study conducted in 2015 by IIT Kanpur stated that 17 26% of all Particulate Matters PM2.5 & PM10 in Delhi during winter is due to Bio Mass Burning. Farmers in Delhi neighboring states, such as Punjab, Haryana, and Western Uttar.

BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22023

Pradesh, which are also major producers of food grains in our country, prefer to burn the residuals, or stubbles, left in the fields to prepare the fields for the next harvest. When compared to manual harvesting, mechanized harvesting, which is common in these states, results in a taller and more massive crop residue. Furthermore, because paddy straw and stalks are high in silica, they are unsuitable for feeding livestock. Despite the fact that stubble burning reduces soil fertility, farmers prefer it as a quick, inexpensive, and efficient way to prepare the soil bed for the next crop. The Delhi Pollution Control Committee DPCC of the Government of the National Capital Territory NCT of Delhi has already issued a red alert after the Air Quality Index API at ITI Jahangirpuri reached 161 on 19 10 2021 9.00hrs. despite several rounds of rain over the weekend. According to the standard developed by the United States Environmental Protection Agency USEPA and followed by DPCC, an API of 161 is considered UNHEALTHY. However, the API of 161 is considered MODERATE by SAFAR System for Air Quality & Weather Forecasting & Research, which is managed by the Union Ministry of Earth Sciences MoES, because it uses standards developed by the Central Pollution Control Board CPCB. CPCB standards are said to be more appropriate for Indian conditions because Particulate Matters PM2.5 & PM10 here are 4 5 times higher than in the US due to local conditions and ongoing construction throughout the country. Particulate matter is a mixture of very small solid and liquid particles suspended in air that are invisible even under a microscope. Particles with a diameter of 2.5 microns or less are referred to as PM2.5, while particles with a diameter of 10 microns or less are referred to as PM10. These particles are so small that they can easily pass through the nostril filtration system and are capable of triggering or worsening chronic diseases such as asthma, heart attacks, bronchitis, and other respiratory problems. According to the US based Health Effects Institute HEI report on the State of Global Air SOGA 2020, long term exposure to air pollution contributed to 1.67 million deaths in India in 2019. According to HEI, India had the highest per capita Particulate Matters PM2.5 exposure in 2019, with 83.2 micrograms per cubic meter, followed by Nepal. According to a recent report by the Commission for Air Quality Management CAQM, the newly appointed statutory body by the Central Government, there has been a 70% reduction in instances of stubble burning in Punjab and an 18% reduction in Haryana since last year. According to a recent press release from CAQM, there were 4,216 instances of Stubble burning in Punjab from September 15 to October 14, compared to 1,286 in the same period this year. There were 596 in Haryana last year, compared to 487 this year. However, in an affidavit, the Ministry of Environment and Forests Moe stated that in 2020, approximately 74,400 cases of stubble burning were reported.

Word Count: 472, Character Length: 3025 characters

RKC Typing Test All Exam Link- Paper to Screen Available Link
https://rkcnawada.online/best-typing-software-rkc.php

BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22024

Punjab, which is the highest in the last four years. However, 4675 incidents of stubble burning were reported in Haryana in 2020, compared to 6551 in 1991. In 2020, the number of cases of stubble burning in Punjab increased by 46.5 percent. During the same time period, Haryana experienced a decline of 28.6%. The total availability of paddy straw in Punjab is estimated to be around 20 million tons per year, according to a report submitted to the Punjab government by Guru Amga Dev. Veterinary and Animal Sciences University GADVASU, Ludhiana. Based on an average rate of Rest. 200 per quintal, the total value of this straw are estimated to be around Rest. 400 cores. Almost all of it is destroyed by fire in fields and the paddy straw must be used wisely. One of the most effective methods is to encourage farmers to use newly developed farm machinery that can handle stubble in the field. Farmers appear to be unwilling to incur additional costs. Subsidies from the government are required to purchase these. The Indian Agricultural Research Institute, Pusan, has also developed a bio decomposer that can turn stubble into manure in the field within 15 to 20 days. The Delhi government has made extensive use of bio decomposers since 2020. On October 16, 2020, the Honorable Supreme Court expressed its concern about the negative impact of stubble burning and appointed a one man commission, led by retired Supreme Court judge Justice Looker, to monitor and prevent stubble burning in Punjab, Haryana, and Uttar Pradesh. However, the decision was postponed due to assurances from the Central Government. As promised the Central Government has established CAQM, a statutory mechanism to coordinate and oversee diverse efforts to improve air quality in Delhi, Punjab, Haryana, Rajasthan, and Uttar Pradesh, as well as a remedial action plan. CAQM should be able to provide a long term solution to this problem. US Federal Reserve chair Jerome Powell recently said that Americans should be prepared for the global supply chain to remain in crisis through 2022. Lean manufacturing processes and just in time delivery mean a factory closure in one Asian country can unleash a global crisis. Covid induced supply chain disruption was a wakeup call for policymakers, highlighting the total dependence on one country for vital products. However, de risking strategies will take a few years to implement. A political war is underway in Telangana between the TRS government and BJP, with CM K Chandrasekhar Rae recently staging a public dharma in Hyderabad. The proximate cause for it is a dispute between the state and GoI over the procurement policy for the rabi agricultural season. Details aside, the development is important because it encapsulates the political economy underpinning the latest trends in India gargantuan MSP driven cereal procurement exercise. The spotlight has been on protesting farmers at Delhi periphery, largely from Punjab, Haryana and UP. However, it is developments in other states that explain the challenge better. Telangana and MP are the states with.

BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22025

The largest number of beneficiary farmers in the paddy and wheat procurement drives respectively. Along with others such as UP, Odisha and Chhattisgarh, they are locations of a significant chunk of incremental procurement over the last five years. Two overarching trends are driving it. Operational risks in farming have increased with higher frequency of extreme climate events, nudging farmers towards MSP crops to de risk. Concurrently, it influences political incentives of CMs, irrespective of party affiliation. GoI data brings it out. Between 2015 16 and 2019 20, in rice procurement the top performers in terms of growth were Telangana at 243% and UP with 72.6%. In 2020 21, about 95% of MSP beneficiaries in Telangana were small and marginal farmers. In wheat, MP topped in beneficiaries at 1.7 million last season, followed by UP. A staggering 99.1% of MP marketed surplus of wheat was procured at MSP, 15 percentage points higher than Punjab. MP wheat market is effectively nationalised. There clearly a misalignment of political incentives between states and GoI, which foots the food subsidy bill and has to take a long term view of Indian agriculture. The problem, therefore, is not of cynical choice but of political economy incentives. Economic reforms have two features. Typically, costs are borne upfront and benefits follow. Second, stakeholder buy in requires an alignment of their incentives with a policy goals. In simple terms, reforms cannot fulfill their potential without accounting for transition costs. Here, GST introduction holds lessons. Years of talks reached fruition when states were guaranteed compensation for a five year transition. Agriculture reforms are doable because all the major parties understand the need. If that has to be translated into reality, reform design has to account for the costs that stakeholders need to bear during the transition. If GST grand bargain received support, so can reforms of agriculture. Tripura is witnessing a sharp step up in political violence as well as what seems to be overzealous police action using stringent laws for offences that don t really merit such responses. The current cycle of confrontations can be traced back to clashes between BJP and CPM cadres in early September followed by attacks on CPM party offices and media outlets. With the Left being pushed to the back foot leaving BJP victorious in a third of civic body seats that went uncontested, TMC governing neighbouring Bengal has spied a political opening. Democratic politics implies that parties must function peaceably. While politics in India is often a high stakes battle for control over the state and its resources, no other region has evoked as much concern as Bengal for its inability to reverse a five decade long descent into political violence. In 2018 and 2019, it topped in political murders. It also has the dubious distinction of producing most winning candidates facing serious criminal cases (39%) in the five state elections this year. The governing party monopoly over violence that TMC inherited from CPM and further fine tuned has grave portents if other.

BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22026

Whatever stamp of mound his impressionable day gets from his mother becomes his permanent mark, Shiva, the great Indian warrior, learnt the fundamental lessons of warfare from his mother, who also inspired him with the legends of the great heroes of the old. Almost all the great men of the world will gratefully acknowledge the influence of their mother in their early development, although, women having a self-effacing nature, this influence may not be recorded anywhere. Someone really said that Swami Tinhi Jagacha Aai Vina Bhikari. General meaning of petrification is turning into rock. However, in palaeontology, it is defined as a process of removal and replacement of organic matter by inorganic minerals. It is believed that in the process of petrification, the replacement takes place molecule by molecule gradually. The Silicified wood or wood opal is the most common petrified fossil. Such fossils show many internal and external details and permit study of anatomical and morph- ological details. The replacement of organic matter is partial or total that has given rise to a matter of debate. There are about twenty mineral substances known to cause petrifaction. But the most common are silica, calcite, dolomite, pyrite, limonite etc. Accordingly, petrify action may be a result of solidification, calcification, pyritization. The process of formations of replicas of the original form of organism, often results in a very interesting mode of preservation. Many times, it happens that the interior of a shell is filled with mud. Honesty is the best policy, is a well-known saying. It means that honesty helps a person in being successful or achieving his aims. Instead of making honesty only a matter of policy, we should make it a matter of faith, the foundation of all our actions, whether it leads to our success or not. We should not be honest only when it suits us or for selfish reasons, but it should be a matter of principle with us. It is possible that a person who is honest in all his dealings may not grow rich as fast as a dishonest person, but the success achieved by an honest person will be of a pure kind, earned without cheating or injustice. One might as well ask what exactly is meant by honesty. It is nothing but being honest to oneself and to the duty one performs. A man may be working in a bank or in a factory or on a farm, or he may be a daily wage earner, he gets his happiness and satisfaction from the sense of Christmas being the festival celebrated all over the world. On the day of Christmas everyone wears new clothes, goes to church, and attends special services. They pray to God for a better life ahead. In church people sing songs and prayers. This is the festival of feasting, joy and fun. People exchange wishes and gifts with one another happily. Christians decorate and light up their houses, shops, churches, offices, etc. schools are also decorated nicely with colourful papers, shining stars, gifts and Christmas trees. It is a joy for children to decorate their classes too. It is a public holiday all over the world on Christmas. People go back to their homes to meet their families. People enjoy the time as it is a very big festival for them. When the night ends, they pray to god for forgiving their sins. This festival is celebrated all over the world. Not only the Christians, but other communities participate in the fun with them. Christmas celebrations are very popular. The people were tall in stature, remarks Hymen Tsang. The

Spl-BSF-HCM-TEST-Dated-2025-08-13-Test NO.-22027

While the second kicks in three weeks later. This abrupt move threatens a long-cultivated strategic partnership and marks one of the sharpest trade escalations from Washington in decades. The question now is what lies beyond this confrontation, how India must recalibrate, and how this juncture will shape the India US trajectory in the coming years. While a 50 per cent tariff may feel akin to a trade embargo, the macroeconomic impact must be seen in perspective. Goldman Sachs projects GDP growth could falter by up to 0.6 percentage points; Morgan Stanley estimates impacts ranging from 0.4 per cent to 0.8 per cent on India's economy. Moody's paints a similarly cautious outlook, warning of slowdowns in burgeoning manufacturing, especially electronics. The rupee has logged one of its worst losing streaks in six months amid these tensions, though RBI intervention has limited the damage. Yet, Indian markets appear more resigned than panicked. Notably, sectors like smartphones and pharmaceuticals worth over $25 billion in exports remain temporarily exempt. India continues to forecast about 6. 5 per cent GDP growth, confident that strategic measures can cushion the blow. This tariff shock is a jolting reminder of the friction between transactional US policy shifts and India's long-term, institution-driven partnership. The India US relationship is institutionalised, spanning technology, defence, civil society, and a vibrant diaspora making them more resilient than headline setbacks. Indian officials have emphasised that India and the United States share a comprehensive global strategic partnership anchored in shared interests, democratic values, and robust people-to-people ties. Still, experts caution that when developments become transactional and ego-driven, strategic divergence can deepen a pressure India must actively manage. Trump has made clear there will be no resumption of trade talks until the tariff issue is resolved. Prime Minister Modi, while staunchly defending farmers and exporters, has reiterated that India will not compromise its sovereignty or its ties with Russia and BRICS. This dual posture defiance at the global level and readiness to engage pragmatically reflects India's delicate balancing act. Although the relationship is at a juncture and in a state of temporary deadlock, it is so deeply institutionalised and spread across multiple platforms that its outright derailment is almost impossible. The web of connections economic, educational, technological, and strategic between the two countries is reinforced by the more than 4. 8 million-strong Indian diaspora in the United States, whose influence spans Silicon Valley boardrooms, medical institutions, academia, politics, and the cultural sphere. This diaspora acts as both a bridge and a ballast, ensuring that even when governments clash, societal and commercial links remain vibrant. Both nations are bound by their democratic values and a shared commitment to a rules-based international order, with a particularly strong strategic convergence in the Indo-Pacific, where the United States faces its most significant geopolitical challenge. The India US partnership, in this light, remains not only valid but vital. This is a phase albeit a tense one that is likely to pass in the coming months or years. Yet, while remaining committed to Washington, India must also diversify its technological, defence, and security partnerships with other like-minded powers to safeguard its autonomy an

The tariff threat should propel India to broaden its global alignments deepening technology, defence, and trade ties with Quad partners, the EU, Japan, and the Middle East; leaning into its BRICS and SCO relationships; and pushing for sectoral partnerships in semiconductors, energy, artificial intelligence, and critical minerals. Domestically, accelerating Make in India, bolstering self-sufficiency in electronics and pharmaceuticals, and expanding research and development will aid resilience particularly as the U. S. looks to shift some technology and manufacturing to India. In a world where China's assertiveness remains constant, the India US strategic alignment still holds value. Yet India's path remains rooted in multi-alignment, leveraging strategic autonomy to engage both West and East pragmatically. This tariff episode reinforces that engagement must be balanced, diversified, and domestically anchored. One of India's strengths is its deeply embedded domestic institutions and civil-society networks, especially a globally influential diaspora that can sustain strategic momentum even when political leaders pivot. India can lean into these long-term foundations academia, business, civil society, and people-to-people ties to preserve and advance its partnership irrespective of political volatility. India stands at a crossroads. A US administration seemingly driven more by headline pressures than strategic consistency has threatened to derail a decades-long, multi-faceted partnership. The tariff wall is real but not insurmountable. The way forward lies in a dual strategy: defend, diversify, and domestically fortify. India must defend key export sectors and cushion the domestic economy through exporter support, alternate market development, and internal demand stimulus; diversify global partnerships across technology, trade, and strategic domains to reduce overdependence on any one partner; and fortify its own economy by investing in manufacturing, innovation, supply chains, and domestic integration so that external shocks become less destabilising. This strategic recalibration will not happen overnight, but if India acts with foresight and underscores strategic autonomy over dependency, it can transform this temporary deadlock into the impetus for a stronger, more resilient global posture. In an era of transactional geopolitics, India's measured, multi-aligned response may not promise an immediate thaw but it can set the stage for a reinvigorated, future-proof partnership For years, India has quietly carried a global responsibility that most people outside the health sector barely notice we are the pharmacy of the world. From HIV medication in rural Africa to cancer drugs in American hospitals, our pharmaceutical industry has been the safety net for countries that cannot afford the prices charged by Big Pharma elsewhere. That's why the latest news from Washington has set alarm bells ringing. The United States, our single largest market for generics, is flirting with the idea of slapping new tariffs on Indian medicines. Officially, it's being pitched as part of a strategic industries policy. In practice, it risks pulling apart a supply chain that has taken decades to build. A Fragile Balance Most Americans don't realise it, but nearly four out of every ten generic pills they take come from India. We're talking about drugs for cholesterol, blood pressure, diabetes and the everyday lifelines for millions. Now, try replacing that capacity w

BSF-HCM-TEST-Dated-2025-08-14-Test NO.-22031

Women moved about freely in society; there was no purdah. Most of the people preferred clothes which were white and fresh looking. Women wore long robes. The caste system was strong and rigid as ever and the Shards were not treated well. Large contributions in money and kind were made to the monasteries by the people. Harsh royal kitchens provided food for a thousand Buddhists and five hundred Brahmans every day. A village was the smallest unit of the community. It was generally self sufficient. Harsh became a Buddhist in last life, but he continued to worship Lord Shiva and the Sun God, Surya. Each five years, he went on a pilgrimage to Praying. While there, he gave everything he had. Villages live in a poor and unhygienic condition. Most houses own some animals like cows, buffaloes, etc. for milk. They have to feed these animals too. These animals make the place dirty. In the villages, there are proper roads and lights are not there. Now, in most of the villages, electricity has largely been reached which has made their life better. Villagers tolerate all the seasons, like summers, rains and winter with great difficulty. They don have proper means to live their life conveniently. They are used to working hard and meeting their ends. The main reason for this is that they are uneducated. The government is now making policies for the better- mint of the villagers. They are now setting up schools, colleges, hospitals, dispensaries, post offices, etc. to make the villages self-sufficient. Introduction to new advancements and technology is also given to make the villagers aware of the outside world. Many schools are there for the adults which are conducted in the evening. Do not worry, be happy. Take out all the worries from your mind. So always be happy, Worry makes you tense and affects the nerves. Whereas laughing and being happy will keep the whole body fit. Life is like a bicycle, when it is not moving it falls. A smile creates happiness. It costs nothing but gives a lot. It enriches those who give. We must live and enjoy every minute, every second of life. Where there are sorrows in our life, there is also happiness. A life of sacrifice is art and is full of true joy. Until we taste the sorrow, we will not be able to know the meaning of true happiness. Life is a bundle of events which may be pleasant or unpleasant. Have courage for the great sorrows of life and patience for a small one. Sleep in peace, God is awake. Face all the problems of your life with a smiling face because sorrows and happiness are the two main things of life. So, always be cheerful and be bold, because without these things there is no meaning of life. The environment is the natural surroundings that we live in. Natural surroundings include plants, trees, deserts, forests, animals, lakes, rivers, mountains, and so on. We are also a part of it. The survival of humans is based on nature. In fact, we are completely dependent on the environment and its natural resources. We live on earth and it is full of natural resources. Humans are using and exploiting the environment for its own use. We don realise that if we keep exploiting it, we will have to pay a very high price. Many living beings are dependent on forests. These forests are being destroyed by cutting down the trees. This is affecting the animals, which depend on them for food and shelter. This further disturbs the food chain. In addition, soil is loosening and erosion has become a great problem. Lakes and ri

States begin to replicate this model. Tripura political and cultural proximity to Bengal and the recent violence seem to indicate this is already happening with the intense TMC BJP rivalry spilling over. Anti minority actions in Bangladesh are also resonating on this side. The return of violence and the high handedness against critics makes for poor optics for the governing BJP. And TMC is not inspiring much hope for peaceful politics either. Tripura was one of Northeast success stories in that it overcame insurgency and withdrew the draconian AFSPA in 2015. New divides along party and communal lines signify a dangerous rupture for a state already divided along a Bengali tribal axis. Tripura must not follow Bengal in becoming a reflexively politically violent state. At the ANC, we are mandated to protect our country territorial interests and are prepared to do so. Towards this, challenges change and preparations are made accordingly. Suffice to say that there are no surprises here, and we are cognisant of all developments in the region and are keeping a track of the same to safeguard our national interests. Was asked on a radio show what sort of person intimidates me. Easy enough. People who know their wines and sip from goblets and talk about the undertones of liquor ice and the subtle taste of blueberries with a hint of chocolate and the smooth aftertaste of honey. Who the heck knows what liquor ice tastes like and I would t know a blueberry from a black berry or a red one if it smacked me in the face. For most of us it is red or white and sweet or not sweet and nothing makes me feel more guilty and imposters than having a supercilious sommelier or dining partner doing that swish swirl in the mouth thing and he gives it to you and you nod wisely as if you were Plato and Socrates combined and pass the wine with an A+ and 5 stars and maybe it was plunk. Does turning spiritual mean I have to shun the world Does it mean I have to become serious and sober and abandon fun On the contrary. Spirituality is nothing but refining your worldly experience. You are the same person doing the same things, only in a different way, with a different attitude. This change of attitude and the way of looking at things and dealing with them is the keynote of spiritual life and it can turn your life around. You learn to treat things in their proper perspective and see the happenings of the world through the prism of consciousness wisdom awareness. How does this change happen There are many ways? Either an awakening to spiritual truths happens spontaneously within you if you are mature and ready for them, or it happens when a guru enters your life. A catalyst is needed, and it could be anything that creates a shift in your consciousness. Just as art elevates the ordinary into a thing of beauty.

BSF-HCM-TEST-Dated-2025-08-14-Test NO.-22033

Spirituality elevates the human consciousness to the divine. It is like a sculptor chiseling a marble rock into a beautiful figurine. The material is the same but now the lump of marble has beauty and worth. opens your eyes to the sublime truths which are the substratum of existence. It reveals the common thread uniting all of life, the unity underlying all creation. This refined vision automatically dissolves differences and sprouts values like compassion and love for all. This may not happen overnight, but the awareness begins which encourages the effort towards this direction. Sri Sathya Sai Baba says, Compassion is the hallmark of devotion and of the spiritual life. No one can hope to please God without showing compassion to fellow beings. It is the highest dharma. He further says, However many scriptures you may read, however many spiritual exercises you may do, if your heart does not melt with compassion at the plight of others then all your scholarship and spiritual sadhana is a sheer waste. Spirituality does not mean going to the forest or leading a solitary life. It means going beyond attachment and hatred and realising the oneness and unity of all mankind. It means refining your impulses and abandoning base ideas and expanding your heart. Spiritual life is a life marked by human values like satya, dharma, shanti, prem and ahimsa. Baba further says, The ability to rise through effort to higher stages of spiritual evolution is given only to man. Animals cannot do so. But man is gifted with this unique ability to raise his consciousness by his own disciplined efforts. Doing so is extremely rewarding as it opens the gates to all knowledge and all bliss. The spiritual path rescues man from the grip of insatiable desires, endless worries, and problems. The steady discipline and sadhana awaken a power in individuals which makes them better equipped to face and overcome the constant challenges that are thrown up. Faith and trust in a higher power leads to mental equanimity, which eases the agitations and anxieties of life. Above all, spirituality opens the heart to compassion and ignites a sincere desire to help all, without any distinctions. In this way it helps not only yourself but all others too. Eleven meetings between the representatives of the Farmers Unions & the Government Representatives were held to resolve the issue, but to no avail. Supreme Court, through an intervention, appointed a Committee of Experts to interact with the representatives of all the stakeholders & submit its report. Eight months have elapsed since the Supreme Court appointed Committee submitted its report. However, till date the Supreme Court has not taken cognizance of the report. In the meantime, the protest continued unabated with no solution in sight. Following Supreme Court advice, the government put the three contentious farm laws on hold. However, even after this, the protesting Farmers Unions spurned the government offer to resume meetings. On June 05, 2020, Government of India had promulgated three ordinances relating to.

BSF-HCM-TEST-Dated-2025-08-14-Test NO.-22034

Suddenly crypto currencies crypts are all over on social media, on our TV screens and on the FrontPages of newspapers. At the Sydney Dialogue last week, the Prime Minister called on democracies to work together on crypts so that they do not fall into the wrong hands and spoil our youth. The RBI governor, for his part, has repeatedly expressed concerns about crypts being a threat to our macroeconomic and financial stability. The government will introduce a bill in the winter session of the Parliament for regulation of crypts that, in a departure from its earlier stance of a total ban, will in fact allow some space for them to operate. A parliamentary joint committee on the Personal Data Protection Bill PDP finalised its recommendations on Monday. The most contentious parts of PDP relate to the extent to which government agencies have been exempted from it. Two aspects need to be kept in mind here. Details such as definitions matter hugely in drafting a law and the state does get exemptions to uphold sovereignty. PDP, however, suffers from loose language and expansive exemptions that practically keep GoI agencies outside the purview of the legislation. State agencies are among the biggest collectors of personal data and granting them loosely worded exemptions opens the door to abuse. This area has attracted dissent notes and merits extensive debate. The joint committee has clubbed personal data and non personal data, which expands the legislation scope. Clubbing data should be avoided as non personal data has mainly a business dimension. GoI should keep in mind that non personal data raises questions on protecting commercially critical data for firms. With India internet economy taking off, this is not a trivial question. Plus, an omnibus regulator, dealing with both kinds of data, as the committee suggests, may have too much on its plate. The suggestion that data captured by electronic hardware should also come under the regulator purview needs a whole lot of explanation does this include data generated by a company internal functions, for example. Another problematic area is the recommendation that the regulator can decide if individuals have to be alerted to a data breach of any entity collecting their data. Every financial firm will have an incentive, for example, to lobby the regulator to hold off on announcing a data breach. Alerts of a breach, therefore, have to be automatic and unconditional to help victims take precautions such as changing passwords. The committee has made a halfhearted attempt to tighten the screws on social media firms. Data definition in the bill includes opinions. Social media firms, which suck in a huge quantum of personal data, need to be held to the standard of publishers. This loophole must be closed in the final version. It good that the committee suggests a two year period before operationalising the law. This is a complex issue and needs much more debate. Let that start with a good, informed debate in Parliament. PDP will be the foundation of upholding.

BSF-HCM-TEST-Dated-2025-08-14-Test NO.-22035

Hydro Power Project is a Run-of-the-River Project, being constructed on river Dhauliganga, in Josh math town of Chamoli District in Uttarakhand. The Detailed Project Report DPR was initially prepared by the UP Irrigation Department in 1992. The project was allocated to NTPC Ltd. by the Uttarakhand government in 2004. The DPR was revised by WAPCOS Limited and all clearances obtained. The Project envisages construction of a concrete Barrage at Tapovan 15 km upstream of Josh math, which will divert the water to the underground Powerhouse near Helang village 13 km downstream of Josh math. The tunnel is at a horizontal distance of around 1.1km away from the outer boundary of Josh math town and vertically around 1.1 km below the ground level below Auli. In Dec 09, there was water ingress in the tunnel and locals blamed drying of the water table in the Selang area on the project. But the National Institute of Hydrology NIH established that there is no correlation between the water ingress in the tunnel and any outside water. So let me revert to the current issue of land subsidence in Josh math, which is a very old problem and was present even before the inception of the NTPC and its Tapovan project. The project work started in Nov 2006. Due to past incidents of subsidence in this area a committee was constituted in 1976, headed by Mishra, and following was concluded: Josh math town lies on ancient landslide mass. And probable cause of subsidence/ cracks could be hill wash, natural angle of repose, cultivation area because of seepage and soil erosion. This is not all, a committee was constituted in Aug 22 comprising experts which also concluded that the subsidence/cracks are occurring due to underground saturation resulting from poor sewerage in addition to inadequate surface runoff disposal. The rainwater and household wastewater and water from other sources seeping below the ground is resulting in high pore-pressure conditions in the soil, thereby reducing the shear strength of the overburden soil. And then, over the years the burden on this fragile mountain slope has increased beyond the sustaining capacity of the soil on which it rests. And then, there are very poor quality of construction of many houses. Now, NTPC has also examined the issue of subsidence in Josh math with respect to location of Head Race Tunnel HRT as per the engineering drawings and it is found that NTPC HRT have no bearing on the ongoing subsidence in Josh math town because NTPC tunnel is 1.1 km away from the outer boundary of Josh math town. The tunnel has a cover of around 1 km in this area. Out of 12 km tunnel, construction of 8.2km is being done through Tunnel Boring Machines TBM which causes no disturbance to the surrounding rock mass and the balance portion 3.8km which is being constructed through controlled blasting is 11km away from the subsidence area in Josh math. The project is not under operation and the tunnel is not.

BSF-HCM-TEST-Dated-2025-08-14-Test NO.-22036

India has always been a land of transitions across various verticals, and each segment has witnessed growth ever since change began. Similarly, the education system has also undergone multiple transitions since the early era. We vet come from studying under trees or in an open field to huge, well-set-up classrooms and have now transformed the whole world into a learning space where every section trains us to have a better understanding of concepts and operations. The developments in the education system, curriculum and mode of learning have made the process much easier than it used to be. The NEP 2020 was unveiled with the goal of establishing a new educational system in the nation at a time when urgent technical action was required to guarantee students ongoing education. Since that time, nobody has turned back. The education sector has advanced significantly, from schools implementing online learning to higher education programmers being given online. According to the NEP, which aims to achieve a 100% Gross Enrolment Ratio for pupils in pre-school through secondary education by 2030, India will soon surpass all other countries in terms of knowledge production. We made some progress toward this aim, but there is still a long way to go. While numerous schools have already made the switch to competency-based learning mechanisms, the Central Board of Secondary Education CBSE stated its intention to transition to the new format in the next year fully. Were looking to bring accessibility, equity, quality, affordability, and accountability into the educational system as more schools around the nation embrace NEP. The Common University Entrance Test CUET, which altered the university admissions process, was just one of many changes in the education sector that took place in 2022. The Indian Institute of Technologies IITs also announced plans to establish offshore campus in the United Arab Emirates UAE, Egypt, and Saudi Arabia. We are all aware, blended and hybrid learning are undoubtedly here to stay. Regarding the first, including digital components in routine classes will surely improve and engage students. Strengthening and implementing student-centered learning is essential for the future of education. Because their unique talents will be maximised and deeply interwoven into their everyday learning, we anticipate that tech-savvy students will profit greatly from various learning patterns in the future year. In order to help students develop critical 21st-century skills like problem-solving, creative and critical thinking, digital literacy, experiential learning, and global competency that will help them become the important decision-makers of tomorrow, the end-tech industry should concentrate its efforts in 2023 on the New Education Policy. The government should also acknowledge the need to update the entire educational system with the use of technology, which may be supported by a number of Ed-Tech businesses as they have the means to give students access to tech-based learning. Students must be taught the subjects in the curriculum with the goal of teaching them to learn and solve issues in the real world by applying principles, not merely to do well in exams. Early exposure.

Less, hilly areas with rocky and gravel soil, sandy soils, etc. making it a source of livelihoods and food security for many who grow it and consume it. The rising demand of millet among higher income households in India, Europe and US due to its health benefits have created a premium market for the crop. This market demand is expected to change the income level of farming communities living in tough terrains in various parts of the country. Millet is one of those crops which contains various health and environment benefit, that is one of the reason why its production, then year of millets in India and now global year of millet is very important for all stakeholders associated in millet value chain. Rajasthan, Uttar Pradesh, Gujarat and Haryana contribute 82% of national millet production during 2021-22, which after establishing market and strengthening overall millet value chain will effect more than 35% of India population residing in these state. Although millet is good for health, environment and can also be seen as a commodity for overall change among rural communities through higher source of income, there are few bottlenecks too. Few areas to work upon include: India Veterans Day, 14 November, went by without much fanfare. The Chief of Defence Staff and the three service chiefs laying wreaths at the National War Memorial in Delhi, a few activities at a few places in states, and a few snippets in the print media about summed up the functions to mark the day. By 2050 India will be the second-largest economy in the world. And will have the second or third most powerful military in the world. But to be a superpower, India must exploit its economic and military power. Taking care of military veterans is the sine qua non to exploiting the military power. India should emulate the example set by the US, the present and the future superpower, the country where the Veterans Day originated. In the US Veterans Day, 11 November, is a federal holiday. The Day is marked by parades, church services, and two-minutes silence at 11 am. In many places the American flag is at half-mast. Schools are either closed or mark the occasion with special assemblies or other activities. The US has a Cabinet level department of Veteran Affairs VA. It is headed by a secretary nominated by the President and approved by the Congress. VA has 170 VA medical centers across the country to provide life-long healthcare services to the military veterans. VA also gives other benefits such as home loans, education assistance, vocational rehabilitation, life insurance and disability compensation. In 2022, VA budget was more than one third 37% of the budget of the department of Defence Dodd. VA budget signifies the importance a superpower gives to its veterans. India also gives Medicare to military pensioner and their dependents through the Ex-Servicemen Contributory Health Scheme ECHS. A few resettlement and welfare services are also offered through the Kendra, Raja, and Zola Sainik Boards the.

To computer science education helps children overcome their fear of technology, improves their ability to think critically and artistically express themselves, and prepares them to create technology responsibly and with a positive social impact. Governments, academic institutions, and businesses can work together to better equip teachers with the information they need to educate students and support young talent from all socio-economic backgrounds in building a better future for themselves and all of us by assisting teachers in understanding emerging trends in the job market. India announced 2018 as the Year of Millet and proposed FAO council to observe International Year of Millet in 2023, it is not only seen as super-food but also as a resilient crop. The broad spectrum of benefits associated with Millet includes various aspects of economic, environment and social sustainability. This article will help you understand why as a nation we chose millet as a commodity, what are social, economic and environmental reasons. What is Millet? Millets are cereal crops or grains grown around the world, it a varied group of small-seeded grasses used for human and animal consumption. These are part of Indian food plate for long time, knowingly or unknowingly we are consuming it and know it with different names like Raga, Kato, Baja, Jucar, Ocala, Kati, Variable, Kinging, etc. In simplified term Mota Anaj is the term used for most millets. Historically, Kati known as little millet was domesticated in India around 5,000 years ago and Kodo millet around 3700 years. Our Vedas also mention about various millets like foxtail, barnyard and black finger millet, indicating that India is home for millets even during 1200 BC. Environmentally, most of the millets can be grown in areas which are rain-fed and do not require much water for its production. This crop can also be grown in soil with limited fertility, hence making it environment friendly than vegetables, pulses, rice, wheat and many other crops that require various carbon emitting fuel resources for irrigation purpose and fertilizers for improving the fertility of soil. Millets remain planet friendly crop and hence receive attention of climate change initiatives and sustainable environment practices. Being insect tolerant, millets require minimal to no usage of pesticides. These above mentioned health benefits is one of the reason why markets for millets are opening up and demand is going high in high income countries. Based on various researches, people are shifting to gluten-free diets and are adopting millet as one of the key components in their daily diets. This demand will certainly help India, its farmers and their families; during 2020 India contributed 41% of global millet production. Economically, being a Mota Anaj category dietary option the demand of millets till recent years was seen largely in low income communities and occasionally in middle to high income segment in India. The prices of most of the millet crops remain low, hence keeping it within the reach of poor people. Geographies where millets can be grown include places where sources of water is.

BSF-HCM-TEST-Dated-2025-08-14-Test NO.-22041

A critical fundamental right in an age where everyone will leave an extensive digital trail. Amravati was supposed to be a Greenfield world class capital city. But when plans and politics collide in India, politics almost always wins. So, Chandrababu Naidu dream project is now in a limbo even after Fagan Reddy 3 capitals plan has taken a knock. But we need new cities in India, and politicians should understand this better than most, because Indian cities are bursting at the seams; almost 11% of the global urban population is in India. And many more people are headed to cities, with 73% of our population increase by 2036 expected to be in urban areas. This is both fantastic and nightmarish. Fantastic because, as historian Lewis Mumford writes, the city is the most precious collective invention of civilisation, ideal for transmission of culture, ideas and entrepreneurial ecosystems. For the young it can mean the great escape from tradition. Its dense human clustering can be a climate good. Above all it gives out jobs. Nightmarish because 65% of India 7,933 urban settlements do not have any master plan, and the ones that do observe them more in the breach. This takes a terrible toll on the quality of life. But should India be setting up Greenfield cities or piggybacking satellite cities that grow out of big metros there is organicity to the growth of a Gurgaon or a Navi Mumbai while a GIFT City or an Amaravati are yet to prove themselves. The sensible way is to be catholic about choices, especially in a vast country like India, which has deep regional differences in culture, political mores and economic performance. More Gurgaon and Navi Mumbai will happen, but unless we build some Amravati India urban needs will be served poorly. For Greenfield cities, politicians need to understand that building a great city is one of the finest legacies they can have. At exactly the same time that climate negotiators were attempting to agree on a deal in Glasgow, Delhi declared a public health emergency on account of its air pollution. Cities across the world today are on the frontlines of the battle against environmental change. It is therefore shocking that the Glasgow Climate Pact that results from the 26th Conference of Parties makes no explicit mention of the critical role of urban areas in finding solutions to the climate problem. Once again, the challenges of cities have taken a backseat in global negotiations on climate change. For the first time in the history of the world, more people live in towns and cities than in rural areas. Towns and cities are responsible for producing over three quarters of the world carbon emissions that cause the climate to change. Additionally, urban areas are disproportionately located along coasts and rivers, highly exposed to climate induced disasters such as floods and sea level rise. With over one in three urban residents living in slums and one in four earning less than $2 a day, cities.

Also contain vast numbers of people who lack the capacity to withstand the impacts of a changing climate. The contrast could t have been more dramatic if it had been stage managed. Even as China proclaimed to an awestruck world that it had raced past the US in wealth gain over the last two decades, the Indian government repealed the agricultural reforms that had sparked a country wide, yearlong agitation by farmers and had led to the loss of several lives. Having previously pushed through controversial measures such as overnight demonetisation and an overly hasty GST bill, our sarkar was not just stopped in its tracks but was compelled to go into reverse gear over the agri laws which were causing so much agro. Human life is a game of division and reunion, hide and seek. The One becomes many; the many eventually reunite with the Source. The One hide, the many seek to reunite. In order to prolong the game long enough to be interesting, the Creator has planted in man three powerful instincts: ego, sex and love. Ego is a dividing instinct. It makes the individual aware of its independent existence, its needs, opinions and aspirations. Ego, although divisive, is a necessity for survival as well as for accomplishments uniquely human. It is the ego that drives a child to excel in school, and an adult to excel at the workplace. When a person feels he has seen enough of the world, and turns consciously to spirituality, he presses into service the same instrument that made him excel in the material sphere. The decision i will give a new direction to my life also starts with i. uniting instinct, and so is love. The two together are a formidable combination, which we call erotic love. Erotic love ensures procreation. However, the ultimate aim of human life is not procreation but reunion with the Source. Therefore, after serving the purpose of procreation, sex and love might as well get divorced from each other. At least three seeds for the divorce have also been planted in us. The first is the sense of guilt associated with erotic love. The second seed is that sex as a source of pleasure dwindles with time, and eventually fails to satisfy. The third seed is parenthood. Once the children arrive, erotic love gets elevated to the level of parental love. Parental love is unconditional and survives even rebuffs in return. Further purification of love is the way to finding the One that hides in everyone and everything. Parenthood trains a person in a pure form of love. Still purer is the love that is universal. It is love extended to those around us irrespective of their superficial relationship that gives a practical expression to the deeper relationship that binds all of us because we have come from the same Source. The expression eventually leads to reunion with the Source. Life is full of triggers for such purification and expansion. Negative triggers are sorrow and.

Spl-BSF-HCM-TEST-Dated-2025-08-14-Test NO.-22043

And that's assuming you can even find the skilled labour and raw materials quickly enough, a big if in today's fractured supply chains. And here's the real kicker: India and the US both import many of their active pharmaceutical ingredients from the same place China. So tariffs on our finished products don't solve that dependency. They just add another toll gate in the middle of the road. Who Loses First? It's not just about Americans paying more at the pharmacy counter, though that will happen. The real losers could be in Africa, Latin America, and parts of Asia. Many public health programmes there rely on the economies of scale that our US export volumes make possible. Cut into those margins, and either production drops or prices rise for everyone else. The World Health Organisation has been warning about this for years: hike the price of generics and you risk undoing decades of progress against tuberculosis, hepatitis, even cancer. When healthcare becomes a bargaining chip, the poorest pay the highest price. Tariffs on Indian medicines will cost lives not just dollars. India's Hand Stronger Than It Looks This isn't a fight we're walking into empty-handed. Negotiators in New Delhi are already pressing for an exemption. They know that no US politician wants headlines about rising drug costs in an election year. And let's not forget, our relationship with the US is bigger than pills. Technology, renewable energy, defence we have leverage in more than one arena. Smart diplomacy means using it. The Industry Can't Sit Back But this is not a battle for the government alone. The Indian pharma industry has had its share of compliance hiccups in the past and US regulators keep those files close. Tariff advocates will use them as ammunition. The solution? Outperform expectations. Make our compliance, transparency, and quality so bulletproof that they can't be used against us. And while we're at it, diversify. If the US is our biggest buyer, that also makes it our biggest single point of failure. Beyond the Numbers Strip away the trade jargon, and this comes down to a simple question: do we believe access to essential medicines should be dictated by election cycles and tariff schedules? History tells us what happens when healthcare becomes part of a political bargain: the poorest pay the most, and the longest. India has both the opportunity and the responsibility to frame this debate for what it is a global health issue, not just a bilateral trade spat. Affordable medicine is not a luxury. It's a basic human right. What's at stake The next few months will tell us whether India keeps its place as the world's most dependable supplier of low-cost, high-quality medicines or whether short-term politics will break one of the most important supply lines in modern healthcare. The US can build its domestic industry without tearing down the one that already works. But if protectionism wins out, the costs won't just show up in trade ledgers. They'll appear in hospitals, clinics, and lives cut short. Lithe Lines at Shridharani Critic and Curator Uma Nair has been writing for the past 35 years on art and culture She has written as critic for Times of India and Economic Times. She believes that art is a progressive sojourn. She learnt by looking at the best shows in Washington D. C. and New York. As an author her most important books are Reverie with Raza and Meditations on Trees by Ompal Sansanwal. Over 35 years of writing one has always been drawn to artist

Spl-BSF-HCM-TEST-Dated-2025-08-14-Test NO.-22046

And the techniques of creating works that belonged to both modernism and contemporary reality. Gallerie Ganesha, famous for its work for more than three decades in Delhi, opens Esoteric Expressions at Shridharani in Triveni Kala Sangam next week, with an exhibition of Karnataka born K. S. Kulkarni who made Delhi his home. The founder president of Delhi Shilpi Chakra in 1948, Kulkarni created works that embodied the soul of the people and a process of progress. At Shridharani the art lover is drawn into an embrace of art as a tool that at once reflects and responds to a range of presentations highlighting the variety within the expression and discourse surrounding modernity. The faces with fragmented contours, the lucid still life, the human figures and drawings with neatly abstracted veneers all seem to unpack a number of narratives pertaining to the undercurrents of modernism. His exploration of contemporary idioms resonate through his strong use of colour and his love for creating a corollary of conversations that sift and sieve through time. His portraits on paper and canvas hold their own. Lithely drawn forms clearly composed in animated silence with a sense of balance and harmony even as they have Picassoic preferences, have a certain enchantment about them. While he fills the forms with subtle softness it is the textured background and the eyes that catch your gaze for its simplicity and its candour. According to gallerist Shoba Bhatia, who has followed his works over decades, Kulkarni, born in a village in Belgaum in Karnataka in 1916, engaged with modernist techniques and mediums to create his own individual pictorial language. The thickened black lines echo an inchoate intensity. Command over colour and contour become the dominant signature. Kulkarni imbued his figurative works with the classical grace of Ajanta paintings and a distinctive modernist spirit. If some works evoked village life and seemed to carry the melody of a flute being played in the distance, his human figures showed grace and rural rhythms rising up in strong outlines. However, he neither idealised rural life nor disparaged urban existence, choosing to paint life as he experienced it. His mother and child studies in the show are about life and lines, and human empathy and eternal love between mothers and offspring. He also draws our attention to a cross section of humanity that cuts across all boundaries. We are at once held in the connectivity of a group of different people living and working together in harmony and the beauty of relationships. Expression and the eloquence of poetic realities all become a part of this suite of works. For Kulkarni drawing was the building block of painting. From techniques such as highlights and reserves, to material selection and the creation of the use of light and shading as a medium, artists for hundreds of years have found innovative ways to create light's textural terrain on a single sheet of paper. And this exhibition is a lesson in this artistic attainment. Kulkarni examined silently the central relationship between paper and light in the world of drawings and paintings in his life. Focusing on drawings from the collection we are enticed into a visual essay on lines and compositional clarity, as we look longer and more closely at these works and derive an even deeper appreciation for the skill, imagination and labour that went into them. This exhibition runs like an elegy,and brings back the wor

Facing life's problems with the calm bearing of a sage. The personality of the artist is expressed with remarkable lucidity in his works, and each of his canvases is a little gift of peace and solace to the troubled Souls of his fellow men. Art of listening A better meditation for a noisy age IAF rattled Pak this time, but it needs a leg-up Limestone proves the impossibility of a runaway greenhouse effect on Earth Soft power and hard power-certain core issues! Bengaluru goes Yellow with joy R Edwin Sudhir, a Bengaluru-based journalist and writer, has the interesting privilege of living in a once-sleepy town which has morphed into a city fast-forwarding into a connected world but sadly disconnected with the ground realities of more people competing for shrinking space. The experience is oddly exhilarating yet often mildly alarming for long-time residents who see how technology has transformed a sleepy beantown into a bustling boomtown. And swept its residents too in the headlong rush to keep pace. Bengalureans have been twitching with excitement over the past few days, ever since the Yellow Line of the Namma Metro was inaugurated on Sunday. But, that day, some on the subway's Green Line were not exactly thrilled when they found access to a few stations close to the inauguration venue blocked by policemen who directed them to a station about 2km away. Why, when the inauguration was happening on the Yellow Line should the Green Line be affected was a logical question. But, often logic is the first casualty in such situations. Anyway, they resigned themselves to their fate and made their way, mostly by autorickshaws whose drivers had an unexpected windfall, to the first open station located near a prominent college and then made their way to their final destinations on the Green and Purple lines. I, for one, made the delightful acquaintance of a project manager of an IT major on the auto ride. After roundly cursing our luck which led to delayed meetings with our respective friends, we settled down to a genial conversation, comparing notes about salaries in IT companies and why X was better than Y, and how Z trumped both of them. Meanwhile, we updated our waiting friends about our painful progress along the gridlocked roads and assured them we'd be there. Eventually. Thanks to venting my anger to a sympathetic audience, I was reasonably calm when we parted ways at the said college station and left, without as much as a backward glance, to find the trains of our choice. It would have been nice to linger for a longer conversation but our waiting friends would never have forgiven us. The Yellow Line excitement spilled over to the next day when it actually became operational. After many missed deadlines and timelines not worth the paper they were written on, techies heading to Electronic City could finally enjoy the comfort and speed of a Metro commute. They rushed in large numbers, only to find there were fewer than optimum trains assigned to this route. Train sets were expected to arrive soon and help BMRCL increase the frequency. Industry leaders, who had chipped in with large sums of money for the construction of stations, celebrated the occasion on social media and a former foreign diplomat, once based in Bengaluru, even expressed her interest to come and take a ride. The excitement continued till late into the night, when all the action switched to the Green Line a young man jumped onto the track. Commuters on the halted train at the major

Suffering, and a positive trigger is the joy that comes from expanding the circle of love beyond the biological family. These triggers are a call to heaven, to which, as Sri Eurobond says in Savior, not many respond. Ego divides while sex unites; both are much maligned necessary evils. Love is the master key to the reunion with the Source that we seek. Sex joins love as a temporary expedient to serve the purpose of procreation. The limitations and pitfalls of ego and sex push and pull a person towards purer forms of love. Going through the motions of life, seeing through the illusion of separation, and finally arriving at the Reality of oneness is the game of human life, as designed by the Master Coach, the Divine. Sri Eurobond, towards the end of Savior, says the last word in spiritual wisdom in a few simple words: To feel love and oneness is to live. Former AIIMS professor, the writer is a seeker with Sri Eurobond Ashram In just eighteen months, the COVID 19 pandemic has brought about years of change in how organizations do business, regardless of segment, size, or vertical. Organizations have been forced to digitize their customer and market outreach and accelerate their digital initiatives that would have taken three or four years under ordinary circumstances have been accomplished, or nearly accomplished, in less than a third of that time. Regardless of industry or size, organizations have needed to learn how to reengage clients in the post pandemic economy, and they vet needed to learn quickly. What we vet learnt is that companies that have moved quickly to adopt digital technologies are the ones that have been able to adapt to what now being accepted as the new normal. When I speak to fellow senior executives that are clients of NTT, most of them say that they vet implemented at least temporary solutions to meet the digital demands that are being placed on them, and that they vet been able to do this faster than they thought was possible, which proves the old adage about necessity being the mother of invention. To stay competitive in this new economic environment requires new strategies and practices, and to be able to bring them to market quickly consumers have moved dramatically toward online channels of procurement, and companies have had to respond in turn. PVR cinemas, for example, has moved quickly to create a platform that allows them to stream new movies to paying subscribers, much like Netflix and Amazon Prime. Large grocers have moved quickly to digitize their marketplace and supply chain to cater to consumers that suddenly moved from store to the mobile app. What all of these organizations have in common is that they vet moved quickly and significantly to increase the percentage of digital or digitally enabled products within their portfolios. The other thing they have in common is that the leaders within these organizations recognize technology strategic importance as a critical enabler of a differentiated.

BSF-HCM-TEST-Dated-2025-08-15-Test NO.-22049

In a world where fear and persecution often overshadow hope and compassion, the Citizenship Amendment Act stands as a beacon of light, offering refuge and solace to those who have faced discrimination and oppression in neighbouring countries like Pakistan, Afghanistan, and Bangladesh. For many minorities in these nations, the represents a lifeline a chance to escape persecution and build a new life in India, a country known for its diversity and inclusivity. At its core, the embodies the spirit of compassion and empathy, extending a helping hand to those who are in dire need. Imagine being in a crowded room, surrounded by people who speak a different language and treat you differently because of your beliefs. This is the reality for countless minorities in South Asia, who have endured years of discrimination and persecution simply because of their religion. But now, there is hope. The says, Come, find refuge in India. We will protect you. Who are these people that the seeks to help? They are our brothers and sisters from diverse faiths Hindus, Sikhs, Christians, Buddhists, Jains, and Parses who have faced unimaginable hardships in their own countries. They have been denied basic rights, subjected to violence, and forced to flee their homes in search of safety and freedom. But now, India is opening its doors to them, offering a chance to rebuild their lives and reclaim their dignity. Despite its noble intentions, the has faced criticism from some quarters, with concerns raised about its fairness and legality. Some argue that it discriminates against certain groups, while others question its compatibility with India secular Constitution. However, a closer examination reveals that the is not about privileging one group over another; rather, it is about providing assistance to those who have been systematically marginalized and oppressed. In essence, the is a testament to India commitment to upholding the values of equality and justice for all. It does not seek to exclude or discriminate; rather, it seeks to uplift and empower those who have been left behind. By offering expedited citizenship to persecuted minorities, the affirms India status as a compassionate and inclusive nation, where people of all backgrounds are welcome and valued. But the significance of the goes beyond its legal implications it is about real people, real lives, and real hope. It is about giving a voice to the voiceless and standing in solidarity with the oppressed. As the takes effect, let us remember its true purpose to provide refuge and support to those who have suffered injustice and persecution. Let us welcome our brothers and sisters with open arms and open hearts, and show the world what it means to be truly humane. In conclusion, the Citizenship Amendment Act is more than just a piece of legislation; it is a symbol of hope and compassion in a world that often seems dark and unforgiving. It reminds us that no matter our differences, we are all part of the same human family, bound together by our shared humanity. And together, we can build a better, more inclusive world for generations to come. In the current socio-political landscape of India, there is ongoing conflict between social justice and Hindustan. This conflict centres around the societal divisions, injustices, disparities, and oppressions perpetuated by the caste system on the one hand, and the idea of the monolithic Hindustan ideology on the other. This issue looks to be one of the major issues for

And limited objectives. The prime minister scuba diving display and the consecration of the Ram mandir stand in sharp opposition to Rahul Gandhi Bharat Jodo Nyaya Yatra, which focuses primarily on social justice, along with four other pillars of justice. The more the Prime Minister talks about Hindustan the more Rahul Gandhi brings the issue back to the agenda of social justice to which the Prime Minister has no answer. After independence, the leaders of the freedom struggle drafted an egalitarian constitution that promised social justice, liberty, equality, and brotherhood through democracy, secularism and socialism. This marked a significant turning point in the fight for social justice. Mahatma Gandhi and many other warriors for social justice of whom Dr. Ambedkar and Periyar were the most notable waged a social fight against the forces of Hindustan alongside the political struggle against the British colonial power. Alarmed by anti-untouchability movements and other actions to bring about social equality launched by Mahatma Gandhi, the violent Hindustan brigade attempted to assassinate him not once but multiple times. The last successful attempt was the sixth one. Thus, throughout the fight for freedom, the foundation for a caste-free, equal society had already been established. Through the constitution, the constituent assembly worked to formalise and uphold the egalitarian principles of the independence movement. The same political ideologies and forces who opposed Hindustan during the independence struggle in league with the Congress Party have now regrouped under the banner of India alliance. And on the other hand, a recent statement by a senior BJP leader has exposed true intent of tampering with this Holy Grail if they have the numbers in the coming elections! The contrast could not be starker. They are the old pros at using tokenism to deceive the deprived castes. They have never made a significant contribution to the development of the underprivileged castes. The BJP-RSS can install an Advise and a Dalit in the ceremonial position of President today, but at the height of the Mandal agitation, they sought to divert attention away and provoked a religious fervor by organising Rath Yatra and also stood against the organisations fighting for reservation. In one breath they confer Bharat Ratna to Karpoori Thakur, the champion of social justice as well as to Advani, the man who will go down in the history as the one who preferred religious bigotry to social justice. Similarly, they have conferred Bharat Ratna to Chaudhary Charan Singh and Swami Nathan both of whom championed farmers rights but also used force against agitating farmers. Although the Prime Minister identifies as and he has unequivocally rejected the concept of a caste census. It is no coincidence that whenever the has been in power at the Centre, it has declared war on welfare policies. Price rise; increased privatisation and crony capitalism; the sale of PSUs that employ people from the marginalised sections to private entities; fresh appointments on vacancies in the government sector are stopped; the farmers and workers are bled white; atrocities on backward classes, Dalits, Adivasis and women are on the rise; economic inequalities increase to dizzy heights and reservation provisions are openly violated in whatever little appointments that take place. The BJP rise to power can be likened to a virus that undermines the resistance of Indian society and politics agai

Product offering and not just a source of cost efficiency. To be able to meet customers where they now reside in the dig sphere having a network that is intelligent, secure, and agile is not just a great thing, it everything. The network is truly the fabric of any digital organization, and allows organizations to deliver am improved client experience by increasing agility, performance, availability and reduced risk. The network is also what allows companies to connect users, machines, sensors, and devices at the edge, and to bring that data from the edge into the cloud, and then into and across multiple clouds, ultimately powering the smarter, digital world we now live in. The rise of the distributed workforce is another key driver for organizations to significantly transform their networks. To deliver a competitive advantage, distributed workforces need faster, more local access to data and applications, and the ability to process that data securely in order to make better decisions. Networks that are software defined are inherently more agile, automated, and programmable which means they are able to provide visibility into the traffic flowing across them, and allow for deep insight and analytics. This, in turn, allows for greater operational efficiencies and richer insights into application performance and customer behavior. But while the network has to be software defined, agile, and adaptable, it must be secure, first and foremost. Traditionally, networks, security and applications have all been architected independently of each other, creating unwarranted implications for organizational agility. On the other hand, a network that has security controls natively embedded within it, and is consequently secure by design ensures that it can stand up to intense levels of scrutiny. To be able to thrive in a post pandemic economy requires organizations to meet their client in the digipshere, or to use a word that currently trending but will probably soon be forgotten in the physical space. Organizations that have been able to adapt successfully have managed to quickly implement new technology initiatives that have allowed them do precisely this, and have been able to implement a range of technologies that set them apart from their competitors, chief among which is agile, software defined, secure network. Organizations that have embraced network modernization are using it as an asset to improve communications and enhance employee and user experience, as well power new business models. As Bengalis and as alumni of the same college that he went to in Kolkata, many of us had basked in the reflected glory of Nobel laureate Abhijit Banerjee for a while, skimming reviews of his new book Good Economics for Hard Times and devouring his seminars and interviews on national and international forums. And then when the dust had settled down on the intellectual frenzy over his sound bites on economics , I find out that Abhijit has just published a cookery book Cooking To Save Your Life! I have not read the book but I hear it a fun read with his favorite recipes Just shows.

BSF-HCM-TEST-Dated-2025-08-15-Test NO.-22052

Many are restoring a part of their workforce to pre Covid era regular work from office routine. But as we step into the winter season, the familiar air pollution, including indoor pollution once again looms large. Yet, not many of us know that the polluted air can impinge on the functioning of our brain and can even damage it in many ways. Equally important to know is that indoor pollution has been found to be more harmful to us than outdoor pollution. It is also known that the airborne coronavirus can ride on the back of pollution particles and spread much faster and at longer distances in indoor environments with less ventilation. For those required to work from office now, while the switch over back to office would have been uncomfortable enough, at least for many, the prospects of office indoor pollution impacting their brain as well as productivity, with a much higher risk of coronavirus transmission, must be decidedly frightening. Indoor air pollution has turned out to be a bigger threat to our health than outdoor pollution. Indoor air pollution has the additional hazardous particle load in the air from human activities like smoking or room fresheners, paints, polishes and furnishings, carpets, fragrances, mound, bacteria and much more, in addition to the PM particles and VOCs from outdoor air. In fact, it can be up to 10 times higher than outdoor air pollution. In these times of the pandemic, indoor air has been held more responsible for the transmission of the Covid virus than outdoor air. For the longest time, we have all known that air pollution, whether indoor or outdoor, can play havoc with our respiratory, cardio vascular and immune systems. But in recent years, there has been a good deal of research bringing out how air pollution can also be detrimental to our brain health leading to a wide range of neurological conditions such as impaired cognitive abilities and IQ levels, short term memory loss and dementia, autism and related socio behavioral issues as well as Alzheimer and Parkinson diseases, besides others. And it is no surprise that the indoor pollution would also cast its shadow over office buildings and the indoor workspaces thereby posing risks to the staff productivity within the office premises. Many researches around the globe have also found out how central heating and cooling systems and the humidification devices can be a secondary source of infection if not maintained properly. And the pollutants can come in various forms such as volatile organic compounds asbestos, carbon monoxide, nitrogen dioxide, formaldehyde, ozone, radon and fine particulate matter. And each of these pollutants can in various ways impact the functioning of our brain. A recent study covering indoor workplace environment in 6 countries including India has found how office pollution has impacted cognitive functioning of their employees. According to Lancelet, nearly 80000 people die every year due to workplace pollution. Given the potential health hazards of indoor air pollution, companies must consider suitable indoor air.

Product offering and not just a source of cost efficiency. To be able to meet customers where they now reside in the dig sphere having a network that is intelligent, secure, and agile is not just a great thing, it everything. The network is truly the fabric of any digital organization, and allows organizations to deliver am improved client experience by increasing agility, performance, availability and reduced risk. The network is also what allows companies to connect users, machines, sensors, and devices at the edge, and to bring that data from the edge into the cloud, and then into and across multiple clouds, ultimately powering the smarter, digital world we now live in. The rise of the distributed workforce is another key driver for organizations to significantly transform their networks. To deliver a competitive advantage, distributed workforces need faster, more local access to data and applications, and the ability to process that data securely in order to make better decisions. Networks that are software defined are inherently more agile, automated, and programmable which means they are able to provide visibility into the traffic flowing across them, and allow for deep insight and analytics. This, in turn, allows for greater operational efficiencies and richer insights into application performance and customer behavior. But while the network has to be software defined, agile, and adaptable, it must be secure, first and foremost. Traditionally, networks, security and applications have all been architected independently of each other, creating unwarranted implications for organizational agility. On the other hand, a network that has security controls natively embedded within it, and is consequently secure by design ensures that it can stand up to intense levels of scrutiny. To be able to thrive in a post pandemic economy requires organizations to meet their client in the digipshere, or to use a word that currently trending but will probably soon be forgotten in the physical space. Organizations that have been able to adapt successfully have managed to quickly implement new technology initiatives that have allowed them do precisely this, and have been able to implement a range of technologies that set them apart from their competitors, chief among which is agile, software defined, secure network. Organizations that have embraced network modernization are using it as an asset to improve communications and enhance employee and user experience, as well power new business models. As Bengalis and as alumni of the same college that he went to in Kolkata, many of us had basked in the reflected glory of Nobel laureate Abhijit Banerjee for a while, skimming reviews of his new book Good Economics for Hard Times and devouring his seminars and interviews on national and international forums. And then when the dust had settled down on the intellectual frenzy over his sound bites on economics , I find out that Abhijit has just published a cookery book Cooking To Save Your Life! I have not read the book but I hear it a fun read with his favorite recipes Just shows.

Very difficult to fathom as to how celebrating Pakistan victory can be a seditious act. Some were booked under Section 13 of the Unlawful Activities Prevention Act, 1967 UAPA , an anti terror legislation. Section 13 prohibits unlawful activity such as disrupting the sovereignty and territorial integrity of India or intending or supporting cession of a part of the territory of India or causing or intending to cause disaffection against India. Can some overt acts of such celebration create a law and order problem Possibly Yes and the State may be required to take action. However, it is different from the maintenance of public order or protecting the security of the State. And these three concepts have been judicially distinguished from each other in Ram Menorah Lochia v. State of Bihar 1966 . One has to imagine three concentric circles, the largest representing law and order, the next representing public order, and the smallest representing security of the State. Hence, an act may affect law and order, but not public order; an act may affect public order, but not the security of the State. Thus, for mere law and order problems or apprehension of the same, imposition of sedition or UAPA seems untenable. As certain posts were made on social media, Section 66F of the Information Technology Act, 2000, which deals with cyber terrorism, was invoked. Interestingly, it refers to acts of terror by way of disrupting the authorized access or getting unauthorized access to a computer resource, or causing damage to the computer network. It has nothing to do with sending What Sapp messages. It appears that the provision was invoked by the police without any application of mind. It is very unlikely for the State to successfully prosecute the accused in the interest of justice. However, what the State can do is to take those people into custody, extend the remand, let them languish behind the bars without trial and cause harassment. The trend is evident from the National Crime Records Bureau data of 2014 2019, where the cases of sedition have increased each year with a reverse conviction trend, sliding into meager 3 per cent in 2019. Treating cricket as a test of patriotism for Indian Muslims is a tricky game and could be self defeating. Whenever India plays England or Australia in their own countries, we draw a huge support from persons of Indian origin PIOs . Should they be declared anti nationals and imprisoned for such an unpatriotic act In fact, by declaring the supporters as criminals, India is reviving the controversial Debit test also popularly called Cricket test , credited to British Conservative politician, Norman Debit. In an interview with the Los Angeles Times in April 1990, Debit questioned the loyalties of Asian immigrants. Using the example of cricket, he declared: A large proportion of Britain Asian population fail to pass the cricket test. Which side do they cheer for are you still harking back to where you came from or where you are.

Debit test was an attack on the people freedom of choice. His remarks sparked outrage, with Asian leaders calling them insulting and disgusting. Some demanded that he be prosecuted for promoting racial hate, while others urged then Prime Minister, Margaret Thatcher, to denounce his words. His test has now become a benchmark for talking even if casually about race and identity politics in multicultural Britain, despite the fact that he was not really censured. Many British Indians happily work for England and cheer for India. Nasser Husain, Ravi Boar, Monty Pinesap and others of Indian origin even represented England with distinction. So, are we reinventing a desk and tougher version of the Debit test Better we don t attempt one. Will similar kind of action be taken if someone supports England or Australia I have ample doubt. If one argues that there is nothing wrong in the Indian State recent actions, then there was nothing wrong with Debit either. We should t confuse the two loyalties patriotism and sports. While the former may be demonstrated at various levels in our work and public life, the latter is a source of entertainment. It is possible that one may wish to support Pakistan or any other country because of race, religion, birth, familial connections, etc. We ought to learn to respect his choice if we consider living in a multicultural liberal society. If we find nothing unusual in Abhijit Banerjee, an US citizen, receiving the Nobel Prize in his traditional Bengali attire or PIOs in Australia or England rooting for the Indian team, we should t do so when an Indian supports Pakistan in sports. I visualize any person who is corrupt, does not pay taxes, insincere in performing his duties, indulges in illegal activities, yet bleeds blue whenever India takes the field is more anti national than one who does the opposite but supports Pakistan. Justice SM Subramanian of the Madras High Court in the case of P. Savanna v. The District Collector 2019 rightly observed: Terrorists are declared as anti social elements. Thus, persons corrupt and acting against the developmental activities of our Great Nation are also to be declared as anti nationals. Generally, citizens support their own nations in sports but one ought to have a freedom of choice. If someone decides otherwise, it would t endanger the security of the nation or cause any irreparable harm. Mixing nationalism with sports is an immature idea. His first meeting with the people of the Country of the blind tried his patience more than he had expelled cted. A crowed of children and men and women, all with their eyes shut and sunken, crowded round him, holding him, touching him, smelling at him, and listening to every word he spoke . Finally they pushed him suddenly through a doorway into a room as black as night, and before he could stop himself he had fallen over the feet of a seed. He flung to his arm to save himself; hit the.

BSF-HCM-TEST-Dated-2025-08-15-Test NO.-22058

Crypt currencies have caught the Indian public, especially the young, by storm. The pace of activity in the crypto market has been exponential numbers that are being quoted are astounding and vary so much that one is not even sure of the rough number of Indians and the amounts involved. One in every 10 Indians Anxious not to miss the bus, each day more and more people seems to be getting into it. A high powered inter ministerial committee Garg committee studied the crypto currency in all its ramifications in 2019. It came out with an excellent report and proposed a draft bill banning all private virtual crypto currencies. GoI was ready to introduce the bill in Parliament this year. Findings from the fifth National Family Health Survey confirm that India total fertility rate TFR, the average number of children born per woman, has finally dipped below the replacement level of 2.1. Another interesting find is that women could be outnumbering men 10201000. But given Census 2011 findings of 940 females per 1000 males, only fresh Census data may yield a conclusive answer. Also, sex ratio at birth, a key statistic, is still skewed towards boys. Nets who keep flagging the population explosion bogey can instead start focusing on job creation, because the working age population will rise for a while longer before sliding. Only three states Bihar, UP and Jharkhand have TFR over 2.1 now. Great strides made in educating the girl child may explain the national shift to some extent. ASER surveys suggest that between 2006 and 2018, girls out of school between ages 11 14 fell to 4.1 from 10.3 .Girls aged between 15 16 not enrolled in school dipped to 13.5 from over 20 .Women aged 15 19 pregnant or already mothers declined in this period from 16 to 6.8. Several indicators point to women gaining autonomy: Nearly 80 have bank accounts from 54 in NFHS 4 2015 16, 54 have mobile phones against 46 earlier, and 77 used hygienic methods during menstruation against 57 earlier. But women economic situation has t improved. Women who reported working in the past 12 months only marginally rose to 25.4 from 24.6 earlier. Other worries: Health insurance coverage has reached merely 41 of households. Rising figures of anemic women and children since 2015 16 67 of children under 5 and nearly 60 of women under 60 against the global average of 33 anemic women in reproductive age point to intensifying malnutrition that India food security and nutrition supplementation schemes are t addressing adequately. Progress like 88 institutional births against 78 earlier signifies that secondary healthcare systems community and district hospitals are accessible to more people. A functional public health system obviates out of pocket spending on medical needs, which is a major cause of people slipping into poverty. With rising obesity, lifestyle diseases are also vying for attention. Steadily falling TFR also implies an ageing population and greater morbidity burden. In the post Covid era too, sustain the focus.

Responsibility for welfare is thus diffused between the canter and the states. How much money as a percentage of the budge of Ministry of Defence Mood is spent on ex-servicemen welfare is not known. We should upgrade former soldiers from ex-servicemen to veterans which is more reminiscent of their services to the nation. Veterans day should be a national holiday. We should organise events and media coverage that will remind we the people of the sacrifices the veterans have made for us. Those who go into battle to defend us and the values we cherish are the heroes. And veterans are no less of a hero just because they have ceased to be in active service. A nation that does not honor its heroes will not long endure is as true today as it was when Abraham Lincoln said it on 02 September 1858. even charged at present. Let not forget that tunnel boring is not going on since Oct 2020 and only occasional controlled blasts are taken for construction of HRT by DBM. So why blame NTPC? Instead of pinning the blame on the power generation major, the need of the hour is to find a viable and holistic solution to ensure Josh math not just survives the subsidence scare but thrives. According to the Ministry of External Affairs MEA in India, there are 32 million Indians residing abroad who are either NRIs or OCIs. Indians form the largest diaspora of migrants in the world. We also send students abroad in large numbers. As of January 2021, over 1 million students were recorded studying overseas in over 85 countries, with over 50 of them going to North America. By 2024, Indian students studying abroad are meant to increase to 1.8 million and student spending to hit 80 billion USD. That is a huge foreign exchange outflow, not to mention that it also causes immense amount of brain drain as this motivated, educated and capable bunch of young and old Indians, want to be in places of equal opportunities and hence, settle abroad, taking away our precious human capital, a precious resource in context of today India. Solution is to improve the education system and standards of India. India needs better universities and colleges and the country needs to be less scourged by corruption and bureaucracy. People want a level playing field. Our poor currency strength is another thing, making opportunities abroad seem financially bountiful. India is getting to be quite a tight run country, and our educated have played a role in that. Indians who go abroad to study or work, and return to our motherland, have immense amount of potential that they can unlock, both for themselves and for the country. These people can be change makers of the future, who have studied advanced and evolved systems of various economies, and come back with unlimited ideas and implement them here. They are amusingly also seen preaching the principles of a life of good citizenship, as they are often.

The lack of any announcement by Namma Metro led to rumours doing the rounds. Contrast this with stories of drivers of delayed subway trains in Japan, which in itself is a rare event, coming to apologise personally to stranded commuters. Word filtered through the moving train that the young man had survived his brush with near death. All's well that ends well and Bengalureans are now waiting with bated breath for the Pink and Blue Lines to get the green signal. It may take a while, but Bengalureans have learnt to be patient and hope it'll happen in their lifetime. Art of listening A better meditation for a noisy age IAF rattled Pak this time, but it needs a leg-up Limestone proves the impossibility of a runaway greenhouse effect on Earth Soft power and hard power-certain core issues. Cadet training on Warship Mysore Himanshu Dhuliya is an Indian Navy veteran, author and podcaster. We passed out of Naval Academy Kochi in December 1980 and left on vacation to our homes. I had started liking the bounty of nature and its serenity and we were to return to Kochi on a number of occasions during our career, being the Training Command. For our second phase of afloat training, we were to report on board INS Mysore at Bombay! Time passed quickly among family and friends in telling my stories of woes and wonder and soon it was time for departure to Bombay! Early January 1981, I boarded the famous Bombay Mail from Allahabad and this train remained my priority of innumerable journeys thereafter. We landed at the famous Victoria Terminus railway station in the afternoon from various directions and the Gothic architecture looked grand! The familiar three tonner was waiting for us! We entered the Lion gate at Colaba and the historical Naval Dockyard greeted us. INS Mysore (C 60) was about a 9000 ton mighty cruiser 555 feet in length of second world war vintage and her glorious days were behind her. It was secured at outer side of South break water jetty. It had three huge six-inch turrets with three guns each, four four-inch guns with two guns each, many anti-aircraft guns, torpedo tubes and looked majestic even alongside. We got the taste of its power when we would lift its 'Six-inch shells' as punishment! It had pounded Goa in 1961 during Goa liberation and played a formidable role in 1971 operations when it was the Flag Ship. There were about 93 cadets, including those from NDA (National Defence Academy) who joined for their Navy phase after three years of training and graduating. We were graduates already and so our total training phase was one and half years. There was some initial period of confrontation. We from the Naval Academy were more in number and so they could not dominate us as was done earlier. They bore a sense of superiority, rightful inheritors they thought they were, having undergone training and ragging for a prolonged period at NDA, but we considered ourselves no less, having passed out from the portals of prestigious universities and seen civil life. However, as we started training together, playing together and dining together the differences diluted. Some of us became lifelong friends. Since the ship was old and much of the machinery was not functioning it was staffed thinly. For us, it was 'Alice in Wonderland ' moment as we would explore many unmanned compartments and there were enough places to hide! It will be the last of its class in the Indian Navy soon. The quarter deck was wooden and the wardroom (officers' dining roo

Since we were an unexpectedly large number, the bunks and lockers were scarce and we had to share and manage. Many of us slept in the open on the deck and in the morning, our toes would be bloody, bitten by rats! At first it was alarming, but later, routine! The duties assigned were in a roster system and some of us would perform Mess Men duties. A group of five to six cadets was responsible to get the meals for the rest from the galley (kitchen) and distribute. The most attractive item was the sweet dish and specially Gulab Jamuns during lunch. On such days the team would surreptitiously remove some from the container on the way and hide it to be savoured later. Adjacent to our Mess, there were a large number of heavy-duty toasters fitted against the bulk head (wall) of which some were operational. We were provided with large 800 g Britannia bread in good quantity and would save it for our evening and night time snack of crisp and warm toasts! Some cadets managed condensed milk tins and tinned fruit during store ship, my friend Rajesh had dragged one 60 kg sugar gunny bag next to his locker and this was his energy supply for months! Life was interesting, from the ship we would watch many boats with tourists plying between Gateway of India and Elephant caves and I was reminded of the 1954 Taxi Driver film song of Dev Anand romancing Kalpana Kartik in a sail boat near where our ship was berthed and ship staff waving at them! Dekho mane Nahin roothi Hasina Na Jane kya baat hai. There were some unforgettable personalities in our course and one such was Shekhu. No barrier could hold him and the lights of South Bombay from a distance beckoned him. He would monkey crawl on the thick forward ropes of the ship and thus escape the duty staff and return late at night after roaming around the Colaba causeway. Once on his return, he was noticed by the duty staff but escaped on benefit of doubt. Fear of relegation restricted his further escapades. But then he would climb the ladder to GDR (gun direction room) where the strong binoculars were still operational and watch the activities in the Taj Hotel! The first liberty was granted to us on a Sunday after more than a month. However, our first darshan of Colaba happened soon on reporting on Sunday morning during the first cross country. The route showcased us the grandeur of South Bombay as we passed through Colaba causeway, Khusro Bagh, Sassoon Dock, Colaba Post office opposite to which the famous actress Nutan lived. The Afghan Church, R C Church returning via Cuffe Parade, Rafia Manzil. My friend Rajesh Sareen was first, I as always was in the last enclosure. Later, I learnt that some cadets who were children of Naval Officers climbed the Double Decker No 3 to Navy Nagar and somehow escaped the instructors placed enroute. We looked for opportunities to proceed ashore! Our unforgettable experience was participation in a Song and Dance Competition of the Command. A few including me were selected to represent the Afloat Team. We would practice on board Vikrant in the afternoons and this gave us an opportunity to stay away from the ship. A domestic senior sailor was our in-charge and we were famously called Nautanki Party by other cadets and one day we left the ship early for final rehearsal and went for the Matinee show at Capital Cinema Hall opposite VT Railway station. On the day of performance, our In-charge had got dinner packed for us from the ship and after the performance; we relished the same

BSF-HCM-TEST-Dated-2025-08-16-Test NO.-22064

Patriotic owing to time spent away from India. Slowly and gradually, people migrating out, temporarily or permanently, are increasing day by day. People are able to afford it and are lured by what they see on the internet or through movies, and want to go experience life in exotic parts of the world. The most commonly heard argument is that developed economies offer better quality of life and second is that certain countries are known to provide equal opportunities and that where they would rather be. Is India can create a level playing field where coaching is also provided in terms of world class higher education? For Indian companies to compete with global giants, India price sensitive market needs to produce world class products and risk entering the global diaspora with the help of marketing. Very few Indian companies have been able to crack global branding the way American companies have. One thing a bird eye view from a developed economy gives people, is a sense of global marketing and scalability, which education in India cannot give people. Education must promise people of success if they are good at their work. In India, it not the education that is known to get ahead, it is often the arm twister or the jugadu, as the system is not fair and just. The day theory taught in Indian books gets linked to success in real life, we would have reached an idealistic system, which is the final frontier, where all are equal and so are the opportunities in front of us. If India brain drain contributes to the Indian story and becomes our gain, their inputs and contribution, or repatriation can be India biggest asset. We can only look at and marvel at Indians at the helm of multinational companies. I am sure Kamala Harris and Rishi Sunak will one day want an OCI card if they don t have one already. We have a treasure trove of past and present personalities from India who are succeeding everywhere, and they cannot escape their investment in brand India as it prenatal. Brand India needs to grow and companies from India need to lead the way, and foreign educated Indians can pave the way for us. We need more investment in the education sector to create world class instructions like the IITs and IIMs. There are only a handful and demand is so high. We have to compete in the education sector as of yesterday. According to an interesting statistic, foreign students coming to India to study have increased 42 in the last 7 years to around 50,000. That is a disturbingly small number which puts a lot about Indian story at question. What is unfolding in Josh math is a tragedy. But this tragedy is not due to climate change; climate change-linked extreme events may have exacerbated the situation, but the sinking of Josh math is our doing. The fact is this disaster is not unexpected; it was foretold. Over 50 years, the.

BSF-HCM-TEST-Dated-2025-08-16-Test NO.-22065

Sinking of Josh math has been documented by multiple committees of the Supreme Court and the Union and state governments. They warned against haphazard urbanisation, large-scale hydropower development and cutting of hills to widen roads. But time and again, their warnings were ignored. Nirmala Sitharaman recently said that she is from the middle class and therefore identifies with it. With her fifth budget speech scheduled on February 1, she pointed out that GoI had not levied new taxes on the middle class. Instead, it prioritised urban infrastructure such as metro projects. Given India narrow income tax base, middle class aspirations and anxieties often come into focus ahead of the budget. How large is the constituency? Think-tank PRICE pegs middle class households as ones that earn an income of Rest 5-30 lakh a year. PRICE estimated they make up 30 of all households in 2020-21. That roughly in line with what tax data shows. In 2018-19, on an admittedly narrow individual income tax base of about 56 million returns filed, individuals with income in the range of Rest 5-25 lakh numbered around 19 million, or 34. The data on the tax base is out of sync with consumption patterns, which suggests that the potential size of the middle class is much larger. It leads to Sitharaman second observation about investments in public infrastructure. There a mismatch between what different levels of government show as investment and public perceptions about their quality of life. Plenty of anecdotal evidence suggests that an increasing proportion of the middle class rely on private provision of basic services such as transport, healthcare and education. This trend leads back to questions about the tax base as economist Dervish Kapur suggests that when middle classes exit and move towards private provision of basic services, it has an adverse effect on the inclination to pay taxes. In a separate study on the middle class, Kapur and his co-authors tried to gauge the size of the middle class by asking people to self-identify. Almost half of India describes itself as middle class, a phenomenon that sharper in urban areas. Poor urban governance architecture not only limits the impact this class can have on politics, it also makes it harder for individuals to cross the Rest 5 lakh income threshold. The middle, which benefitted from liberalisation, needs to grow faster. Union law minister Kiren Rijiju letter to CJI DY Chandrachud seeking representation for GoI in the collegium, and consultations with states, signals another front being opened in the Centre-Supreme Court standoff. The collegium system is the outcome of the Third Judges Case of 1998, which envisioned procedures for appointment of SC and high court judges. Subsequently, a Memorandum of Procedure Mop was finalised following consultations between the Centre and SC. The only way GoI new proposal can be implemented is if SC agrees to revisit the Second and Third Judges Cases. But this is a bad idea: It is Parliament that must do the law-making. Making Parliament into a bystander while.

BSF-HCM-TEST-Dated-2025-08-16-Test NO.-22066

The executive proposes and the judiciary decides how to frame the law is bad form. This newspaper has argued for a National Judicial Appointments Commission and believes it deserves another chance. The constitution bench that scrapped NJAC did so without having the benefit of seeing it work. GoI, surprisingly, has not made another attempt to re-enact NJAC. Perhaps, SC can be persuaded this time to watch NJAC at work before inevitable legal challenges to it are taken up. After all, such wait-and-watch has been the SC modus to challenges against demonetisation, electoral bonds, Article 370, CAA, etc. An alternative course is to revise the Mop as directed by the five-judge NJAC bench in a subsequent order. This order laid special emphasis on making the collegium more transparent through appropriate revisions to the Mop through recording minutes of collegium discussions including dissension, setting up secretariats for each HC and SC for better management of the process, clear eligibility criteria for appointment to HCs and SC, and a mechanism to deal with complaints against judgeship candidates. Since Centre primary concern about the present collegium system appears to be the lack of transparency, the Mop revision, which has stalled for over six years over relatively minor disagreements, should be revived. The current standoff is creating unnecessary tensions, and must not affect filling of judges vacancies. May wise judgment prevail. India vision of a healthier globe emanates from the philosophy of Vasudhaiva Kutumbakam that translates into One Earth, One Family, One Future. So, as part of India G20 presidency, policymakers from member countries and experts from the medical fraternity shall unfold the foundation and framework of a Global Health Architecture GHA at a series of Health Working Group meetings, starting this month. GHA envisages equipping countries to face the next health emergency with robust healthcare systems. World over, Covid made world leaders realise that a single country, however well-equipped with medical infrastructure, may not be able to turn the tide against a crisis like the pandemic. For low- and middle-income countries LMICs, the situation in such times worsens as access to basic health is restricted and uneven. Prime Minister Modi has defined the central objective of India G20 presidency as healing, harmony and hope. He envisages a more human-centric globalisation where universal healthcare is a key priority. As the drama of mid-air male-volence continues to take stranger p-turns, it totally puts the regular oddities of our co-passengers in the shade. But these oddities are abundant. Indians are airborne like pollen these days, yet the sight of an airline bus inflames their basic Delhi Transport Corporation instincts from the 1990s. Then we used to dig painful elbows into each other while making a jagged line for the scarce bus. Now we create a bedlam of bags shoveling ahead amidst shouts and airport coffee spraying taints on designer shoes, with knees still ramming into bottoms as in yesteryears. Many terminals do lie a fair distance from aircraft bays. But that no excuse for jetsetters forgetting that.

BSF-HCM-TEST-Dated-2025-08-16-Test NO.-22067

Every medical college is supposed to send the a complete list of students who have been given admission in a particular academic year. The data that the NMC has made public for 2023-24 has only the name of the college, the state it is in, and each admitted student rank, name, gender, date of admission, date of birth and roll number. However, the data that colleges submit to the NMC is supposed to include a lot more information. The NMC specifies a format in which the data is to be submitted. It is not clear whether all colleges submit data in this format or whether the NMC takes any action against those that submit incomplete information. Here is an example of the data submitted by KMCH Institute of Health Sciences and Research, a private college. And here is the format in which NMC receives information. This is from Medical College, Chennai which has it on their website under the tile Details of MBBS Students admitted for Academic year 2023-24 NMC Format Among the information the format includes is whether a college is government-run or private, total number of seats, the seat sharing arrangement of the college, whether a student is a person with disability or not, under what category of seats the student got admission government, management or NRI the sub-category, which includes information about whether the student belonged to general category the individual and combined marks obtained in class 12 for physics, chemistry and biology (PCB), the NEET score and percentile score and fees charged. However, when the NMC put out the admission data for 2023-24 it did not make public the data on category of seats, the reservation category of students, their NEET score or percentile or even PCB score or percentage and the fees paid. When the information on whether a college is government-run or private and the tuition fees are such a huge influence on students' choice of colleges, why would NMC not make this data public? Would such data help students make a more informed decision? Since the data is being submitted by colleges, it could be used as authentic data to compare the cost of medical education across different institutions. Putting the complete set of information collected in the public domain would increase transparency and could make it more difficult to manipulate admissions. It would also help researchers who work on training and availability of health personnel or on the affordability of medical education. Is it a new initiative to collect admission data? The erstwhile Medical Council of India (MCI) also collected admission data from colleges. The NMC uses the same format for data collection as was used by the MCI. However, just like during the time of the MCI, not all colleges seem to have submitted the data. The Under Graduate Medical Education Board (UGMEB) of the NMC had issued a circular on October 9, 2023 requesting all medical colleges to upload the details of students admitted for graduate level medical education for the academic year 2023-24. On December 18, 2023 the NMC issued a public notice stating: Some of the colleges did not upload the details and some uploaded the incomplete data. Despite issuance of circular and public notice, it has been found that details of only 1,04,891 students admitted for the Academic Year 2023-24 have been uploaded on the portal. It is informed that students whose details have been uploaded on the portal shall be eligible for registration to practice Modern Medicine Allopath in India provi

BSF-HCM-TEST-Dated-2025-08-16-Test NO.-22068

And available on the website of the Commission to ensure that their names are reflected in the list, stated the NMC. It added: Student who got admission in graduate level medical education (MBBS) for the Academic are not reflected in the list may consult the concerned Directorate of Medical Education Counseling Authority urgently. Which colleges are not included in the data? The data for 20 functional AIIMS and Institute of Postgraduate Medical Education & Research) Pondicherry accounting for four other medical colleges accounting for not available. The colleges which account for these medical college started in to increase seats from Government Medical College in Doda, Kashmir with in Government Medical College, Chamba in was to increase seats from EWS quota in College, Jamshedpur & Research been barred from intake of students for this year. Why did based on the ranks of students admitted? Lots of parties, including the government, do ranking of medical colleges and they probably take several aspects into consideration. Often, the ranking done by many private parties has been tainted by allegations of allowing the purchase of higher rank. TOI has only looked at the ranks of the students who got admission into a college. The assumption is that students with higher ranks would have had the choice of taking admission in any/many colleges, but got admission in one which was among their top choices. Thus, the presence of students with higher ranks in a college is assumed to indicate greater demand for that college. Why median rank and not average mean of ranks in a college? If the average of all ranks in a medical college is taken, a few extremely poor (or extremely good) ranks could skew the average rank of the college. For instance, in the case of Maulana Azad Medical College, with 250 seats, the average of the ranks of admitted students students had rank above 10,000. Leave out the last ten ranks, which are below 2 lakh, and the average becomes 12,245. Thus even a few very low ranks can skew the average. Hence, taking the median made more sense as that would indicate the middle rank of those who got admissions into a particular college. In the case of MAMC, the median who got admitted into the college got ranks above this or that 50% got ranks below this. What seems to influence students choice of colleges? There is overwhelming preference for government medical colleges, especially the older well-established ones. For instance, Telangana government sector has a lower median rank than most states government sector were started after 2020 and the median rank of almost all these newer colleges is below one lakh. In many states, the older colleges also have the lowest tuition fees. Even if one moves beyond the topmost colleges, the importance of affordability or lower tuition fees is obvious. The median ranks of government colleges in Gujarat gives a clear indication of how tuition fee is a huge factor in choice of colleges for most students, sometimes trumping even location. The higher the fees, the lower the median rank seems to hold good in almost all cases in the government sector in Gujarat. Six colleges with the highest median ranks are not only among the oldest, but are also publicly funded and the fees are just contrast, College, despite being in Ahmedabad and being old and well-established, is a self-financed college where of the 250 seats, 25 are management quota seats for which the seats with an annual tuition fee of for the seat

BSF-HCM-TEST-Dated-2025-08-16-Test NO.-22069

On public health. The larger message is that resources that the state and household need for better and healthier lives will only come if governments. The Dewar or the Noida International Airport, a Greenfield project managed by Zurich Airport International, will hopefully keep its stated timeline. When it starts operations, it will be the second international airport in NCR. Both international airports in NCR will then be under private management. It is a measure of the success India has had in the last two decades in attracting private capital and management into airport infrastructure development and maintenance. It not happened without controversies or litigation, but the journey holds lessons in other infrastructure areas seeking private capital. The watershed moment was 2006 when Delhi and Mumbai airports were leased out for 30 years to private entities under a PPP model. It was followed by Greenfield airports in Bengaluru and Hyderabad. That meant in a short span of time, the majority of passenger traffic was flowing through privately managed airports. In 2008, another key development was the creation of a statutory body, Airports Economic Regulatory Authority AERA, which regulates airport tariffs. This is an essential need in getting both private capital and also buys in from passengers as infrastructure often has a near monopoly status. To put it in context, the lack of a regulator in railways has hampered its efforts to attract private capital. GoI has been a direct beneficiary of the process, which has also had indirect economic benefits from the increasing traffic 341 million passengers in 2019 20. Airports Authority of India has earned Rest 30,069 core from all its PPP ventures till 2020 21, a revenue stream that allows it to develop airfields in locations that can t attract private capital right now. However, the future of Greenfield airports and expansion of existing ones will depend on states. National Civil Aviation policy expects them to acquire land and provide it free for airports. This is what UP did. The Joint Parliamentary Committee JPC examining the Personal Data Protection Bill 2019 adopted its report on Monday after two years of discussions. The committee recommendations will now be tabled in Parliament in the upcoming winter session. Much media reporting has been on the privacy concern on allowing government agencies broad exemptions, and seven opposition MPs dissent notes on the issue. But there are other concerns. Let first summaries the key suggestions. The committee has recommended an expansion in the scope of the bill, renaming it Data Protection Bill dropping the word personal .The report recommends that the same regulator should govern both personal data data about an individual and non personal data anonymised data, business data. I m an honorary Sikh, and proud to be one. My honorary Sikhism is derived from Bunny being one quarter Sikh from the side of her maternal grandfather, whose family was directly descended from Guru Angad Dev, the second of the ten Sikh Gurus of the eclectic faith founded by Guru Nanak It was.

A common practice in those days for Hindu and Sikh families to form matrimonial alliances, and Bunny mother was the result of such a union. As a child, Bunny would regularly accompany her grandmother to the gurdwara in Bhawanipur, Calcutta, the kadha prasad of halwa generously given to all who came there, regardless of caste or creed, adding relish to these devotional visits. Is there a god or not if there is, give some evidence for its existence. Admittedly, this is a difficult question to answer. It is asking about something in which millions rest their belief, though none can prove or disprove it scientifically. All evolved souls agree that God is one and that man first duty is to know Him as one. As we witness the downfall of human values, seeking evidence of God could answer all the problems defying peace, purity and prosperity throughout the world. Sat guru Mata Sudiksha, the spiritual head of the Sent Nirankari Mission, says that oblivious of their spiritual identity, the people do not go beyond their faith to mix up with each other freely. As a result, there is no mutual love, and in its absence, there no reciprocal respect. Lack of respect breeds distrust which ultimately culminates in hatred and violence, causing global turmoil and a shocking crash in human values. To reverse the gear from hatred and violence to love and peace requires mutual trust between man and man. Trust presupposes mutual respect borne out of love. Natural love is possible when men treat each other like brothers. Coming to this point, universal brotherhood and emotional oneness of mankind are the needs of the hour and they can be achieved spontaneously and simultaneously through the realisation of Fatherhood of God. As God is one and omnipresent, He is cosmic and common to all. All prophets agree on this. Being one, God cannot be divided. Only such a God is to be worshipped. God, the omnipresent mainstream of individual unit of consciousness that is Atman, Soul, exists around the human body. For spiritual health, Atman needs to remain in constant touch with the omnipresent God. When this link is not maintained, it leads to mental disturbance or depression. This mainstream of consciousness is easily and instantaneously sharable. The Sent Nirankari Mission demonstrates the objectivity of this feature which, in fact, is the Ultimate Reality. And the living experience of this objective reality is indispensable for the fulfillment of human life. As the lack of water cannot be made good with an intake of any other element, the lack of contact of the Atman with Cosmic Consciousness, Formless God Nirankar, and Parma man also cannot be made good with any amount of material gains whatsoever. A human being can satiate his thirsty soul by having God at hand. Aid Grant 880 states: Rattan Jawaharlal All Hair Name Guru Kath Tally Dikhlaya God shown at hand by the Sat guru is a unique and invaluable gift to the seeker. The one who.

Experiences it is known as a Nirankari, and Sent Nirankari Mission aims to impart the knowledge of the Nirankar, the formless God, to the seeker soul. Its message is: Man is a man when he is human. He is human when the entire mankind is his family. Mankind is his family when the all pervading God is his home. God can be his home when he actually knows Him and blissfully identifies himself with Him, with the grace of True Master. Goa perhaps is the only place on this earth where people and society have not bothered to erect a peace and homage memorial in honor of their ancestors who had suffered immensely at the hands of the barbaric Portuguese Christian religious fanatics. November 25, 1560 is the date when the Portuguese took control of Goa and then began a dark age of colonialism that has no parallel in world history. It can be distantly compared to what the Spaniards under the guidance of Christopher Columbus did to the American Indians or the white colonialists did to the indigenous people of Australia and New Zealand. Banning Hindu festivals, proscribing books written in local languages like Konkani, Marathi and Sanskrit, banning the planting of Tulsa in homes and temples, destroying more than three hundred and fifty temples and killing Guans on the most excruciatingly painful inquisition which Richard Zimmer, called the machinery of death, are some of the highlights of the Portuguese rule which is still considered as the golden age in Portugal. Not just Portugal, Goa tourism department also shamelessly puts the Portuguese rule in the same breath as the rule of the Marathas. Not a single line is written about the Goanna unspeakable sufferings at the hands of the Portuguese. Just see the Goa tourism website description while celebrating Azad Ki Am rut Mahotsav as if Portuguese arrived in 1560 here for a picnic Blessed as it is by natural harbors and wide rivers, Goa was the ideal base for the seafaring Portuguese, who arrived in 1510 aiming to control the spice route from the East. On November 25, 1510 Yusuf Adel Shah lost Goa for good to Alonso de Albuquerque, a Portuguese who had taken the city earlier in March that year. Jesuit missionaries led by St Francis Xavier arrived in 1542. This is what the memory erasers do through a colonial school education system. They erase all memories of the pains and struggles of the ancestors of the subjugated people and make them feel obliged for the civilising effects of the invaders or at least make their torturous rule look feeble and put at par with national regimes like the Marathas. During a visit to the national naval academy, I was shocked to see the portrait of Vasco Da Gama, the marauder and aggressor on Indian land, but there was no picture of Rajendra Chola, the greatest Indian naval emperor. On my protest, the Vasco portrait was removed and the Cholas installed. Later, I did it in.

BSF-HCM-TEST-Dated-2025-08-16-Test NO.-22074

A public ceremony when governor of Maharashtra Vidya Sagar Rao and chief minister Defender Fadanavis presented a grand portrait of Rajendra Chola to the CMD of Amazon Docks in Mumbai, the premier naval war ship maker. Goa too is passing through the painful impact of the memory erasers when it simply forgets the 25th November and has no date reserved on its calendar for events to pay homage to Goanna ancestors who fought for our freedom. The significance and emotional meaning of 25th November has been lost on the local intellectual leaders and public figures. What had happened during the period of Portuguese is well documented in their own records. It is a well known fact that when Vasco Da Gama returned to Portugal in 1510 CE, his so called discovery of the spice route to India via Africa Cape of Good Hope, he told the Portuguese King about the undiscovered route to India. This gave the Portuguese an opportunity to colonies the Western coast of India and particularly Goa. Pope Nicholas V soon issued a diktat which gave the kingdom of Portugal a monopoly on forcing Christianity upon the locals of the newly discovered areas and mainly India, along with the monopoly to trade on behalf of the Roman Catholic Empire in Asia. Soon after, the Portuguese sent its troops to capture a portion of Goa and set up a colony in the coastal city. Portuguese Jesuit priests unleashed a reign of terror forcing Hindus to convert and in 1541 more than 350 Hindu temples were destroyed as per the Portuguese records. Goa was certainly not the Rome of the East but was a fanatic hell created by the Roman Christian followers. It is on record that on 16th May, 1546 Francis Xavier, a much celebrated Christian proselytizer, wrote to the Portuguese King John III to punish unyielding Goon Hindus with inquisition the Hindus were tied to a long iron plate which was put over slow fire to ensure slow and most painful death. Goa became free in 1961; fourteen years after India won her Independence. It was the result of all Guans, crossing boundaries of religion and caste. The Gounares owes it to their ancestors. And, I insist all Guans Hindus, Christians, Muslims, Jews alike should pay homage to their ancestors on 25th November and resolve to erect a massive Peace Memorial in honor of the Gounares who braved the Portuguese, suffered but never gave up on their Dharma and nationhood. This is the least we can all do cutting across party lines for the memory of our collective Goanna ancestors. In a sparkling comedic career spanning more than half a century, stand up superstar and social commentator George Carlin eviscerated America and Americans like no one before or after. From calling the United States a war mongering nation full of bullshit and a country that was stolen, to torching the American obsession with marketing and advertising, mindless consumption, and over the top religion, Carlin was relentless in.

His critiques of the people and the country he was born into, constantly questioning its self professed greatness, and its commitment to economic, social and racial justice. For his scalding commentaries and epic rants, some of it coarse, vulgar, and scatological, America honoured him with a place in the standup comics Hall of Fame, a Mark Twain Prize for American Humor, more than a dozen HBO comedy specials, and a score of Emmy and Grammy nominations and awards. By most accounts, he is regarded as a comedic national treasure whose wit and wisdom will be weighed and worshipped by generations. The new Covid 19 variant B.1.1.529 is in its infancy but already making the world nervous. Indians, with their experience of being taken frightfully unprepared by April second wave, should understand better than most how an exponential rise in infections can batter a society and economy. So we have to take very seriously the conclusion of South African scientists that B.1.1.529 has come to dominate all infections there in less than two weeks, showing a big jump in evolution, that too on top of a severe Delta wave. It will take at least a few weeks to confirm whether the variant causes more hospitalisation and death or limits the effectiveness of vaccines. But the advance alert that South African scientists have given must not be wasted. Three bulwarks are top of the list. Timely air travel curbs on countries affected are necessary and India should not be a laggard in this. Second, strong disease surveillance, which is what enabled Hong Kong and Israel to identify and isolate travelers carrying the new strain. But INSACOG that was set up in December 2020 with 10 labs and a target of genome sequencing 5% of all positive samples has only grown to 28 labs sequencing under 0.1% samples. There simply cannot be any laxity in at least sequencing the positive samples of all international travelers. Finally, vaccination continues to be the best bulwark. In the heat of the second wave GoI had vowed full adult vaccination by the year end but on the cusp of December 54% adults are short of this target. It will help if government cuts the 84 days Covishield gap. Likewise it should allow boosters, even as these become mandatory from Israel to France. Covid 19 is a nimble enemy. Let fight it proactively rather than risk another ruinous lockdown. If the fourth National Family Health Survey in 2015 16 surprised experts with its findings that 38.4% of women respondents reported owning a house/land alone or jointly, this has risen to 43.3% in NFHS 5. 45.7% rural women claimed such ownership against 38.3% in urban areas. States like UP, Chhattisgarh, Jharkhand, Punjab reported huge improvement in women ownership between the two surveys while Delhi, Odisha, Puducherry and Chandigarh surprisingly declined. UP spiked from 34.2% to 51.9%, Delhi tanked to 22.7% from 34.9%. Earlier, researchers had cautioned policymakers against relying on NFHS 4 land data. Crucially, NFHS does t reveal.

Spl-BSF-HCM-TEST-Dated-2025-08-16-Test NO.-22076

Time around the rationale is much stronger as explained above. This rating upgrade also puts us at the same level as Mexico and Indonesia, both being resource rich and having vibrant manufacturing sectors as well. Third, credit ratings can be categorised into two buckets, Investment Grade and High Yield (also colloquially referred to as junk). The lowest Investment Grade rating is BBB- and any rating below that is High Yield. A BBB rating puts us comfortably in the Investment Grade bucket, offering a 1-notch cushion against any shock that may hurt fundamentals and result in a downgrade into the High Yield bucket. Fourth, and quite important, is the expectation that the ongoing trade tensions between the US and India is unlikely to have a meaningful impact on our economy. While there are many moving parts in Indo-US relations currently, including geopolitics, we can be hopeful that, given two decades of strengthening ties, the trade relationship will eventually normalise. However, total exports to the US are approximately 2% of GDP but with key sectors like pharmaceuticals exempt from tariffs, exports effectively subject to tariffs are closer to 1%, and the impact will be largely manageable if trade hostilities continue. Fifth and lastly, research has shown a strong correlation between higher credit ratings and increased FDI investments. As I have written in earlier columns, FDI is a key necessity for faster economic growth, technological innovation and infrastructure development. With global companies and investors alike increasingly comforted by the strengthening fundamentals of our economy, we can be hopeful that FDI, which has been muted off late, will pick up. All in all, this is a welcome pat on the back for India and an endorsement of policy continuity. Our flag flies higher on this Independence Day. Jai Hind. Art of listening a better meditation for a noisy age IAF rattled Pak this time, but it needs a leg-up Limestone proves the impossibility of a runaway greenhouse effect on Earth Soft power and hard power-certain core issues! Prophets of romanticism, love, beauty, and nature A stray order Sonali Ghosh is a rescuer, caregiver and foster to strays in her corner of south Delhi and a filmmaker, writer & photographer by profession. When a court order can derail an age-old, science-backed, community based, man-animal cohabitation that's both healthy and humane (Update: At the time of publication of this article, the Supreme Court is reviewing the case and has reserved the judgment. CJI B. R. Gavai has referred the Delhi-NCR stray dog matter to a three-judge Supreme Court bench, the hearing was conducted on August 14, 2025 and the final verdict is now awaited.) The recent Supreme Court order that aims to clear residential colonies of Delhi of stray dogs as they have been deemed a threat to public safety has drawn fierce discussion and a raging debate across social media. The common response from many who are trying to have it rescinded has been that there is no action plan for what will be in store for these dogs once they have been picked up. With no shelters, arrangements for Animal Birth Control drives, or meals and cover, or even space for that matter many public advocates for strays claim that the order hasn't been thought through fully and will be impossible to implement. As valid as these questions are, and they are the most serious of concerns, at the very center of the issue is the relocation of strays that incidentally, is,

When I hear the nth animal advocacy or rights activist on social media -whether on videos being circulated on whatsapp, or instagram and facebook- most of them taking a cue from the videos sent out from the former environment minister, Maneka Gandhi 's, office. Videos that most rescuers and caregivers, myself included, look to at times like this for some measure of sanity, confidence and support. Two comments made by Mrs. Gandhi that have stood out in the querying that going on around the court order. In an interview with Telegraph Online, she said, this is a judgment made out of anger. And the second one, we were expecting something like this anyway. While Mrs. Gandhi rightfully points to the escalating anger of certain sections that have cumulatively led to this extreme court order on August 11, 2025 that has since made some dog hating sections of the public to go astray with hate commentary and hate polls in turn leading to the illegal picking up of dogs by unknown agencies. There have been vans roaming around in the capital in the dead of the night picking up stray dogs many, safely asleep in the human-provided comfort of the nooks and corners they find for themselves or are allowed to, by kindly souls in colonies. Inscrutable van drivers who don't have a driver's license or vehicle registration papers or don't belong to MCD at all, dog catchers who neither have id or even a copy of the actual court order to show the caregivers who try their best to stop the pickups, standing by their colony dogs in the non-stop downpour lashing the capital since the last few weeks. We all know by now that since the court order hasn't been officially sent to the MCD by the Apex court, the rounding up of strays cannot be implemented and is therefore, illegal. Looking at the randomness of the order especially at its suo moto nature- one can't help but think that many of us who fight for the right to care for strays are often completely deluded. And naïve. I say this because the recurring response from all of us, including Mrs. Maneka Gandhi is: Where are the shelters for Delhi's ten lakh strays? Where will these dogs picked up from east, west and southern areas of Delhi that have the maximum rescuers and caregivers, be housed once stolen from the streets that is their habitat? What will they be fed moreover, who will feed them? And how will ten lakh dogs be vaccinated when the MCD claim that they have the wherewithal to vaccinate only 2500? How will ABC drives be conducted in such crowded so far nonexistent shelters that are yet to be built? Most of all, where is the money, a staggering 500+ crores a month to just feed dogs, according to Maneka Gandhi that will be needed to run hundreds of such proposed, yet to be built, shelters with veterinary facilities and staff, requiring a nonstop supply of water and covered spaces for these dogs to take shelter during Delhi's bitter cold winter and when it rains? To all these questions there is literally no official answer and definitely no proposed plan of action yet there is one honest answer we know in our hearts as caregivers and rescuers. That the court that seems to represent the angry sections that have a grouse against Delhi's strays and such folk both publicly and privately simply do not care. Neither do the authorities care. And nor do the MCD for that matter. It's literally that simple. The reasoning then is more sinister. It's no longer about where to send the dogs or how they will be kept alive but

BSF-HCM-TEST-Dated-2025-08-17-Test NO.-22080

Women owners as a percentage of total land/house owners. In contrast, a 2020 University of Manchester working paper examined other Indian surveys and found barely 16% of women in rural landowning households own land, constituting only 14% of all landowners owning 11% of the land. But perhaps the path breaking 2005 Hindu Succession Act amendment giving daughters equal coparcenary rights in undivided joint family property and official schemes for homeless landless offering property titles predominantly to women could be yielding results. Many states are lowering stamp duties for women to reduce gender gaps in property registration. Ironically, Kerala which implemented the HSA amendments decades before 2005 reported only 27.3% women claiming property ownership in NFHS against 55% in Bihar. Fix data gaps to better reveal gender gaps. From 1980s to mid 2000s, economics was seen as a master key to the world. Ronald Reagan and Margaret Thatcher in the West ushered in a firm market mindset in policymaking, and the calculus of incentives now fully pervades public life and administration. But after the global financial crisis of 2008 09 and the populist surge of the last decade, the discipline finds itself on the defensive. The runaway power of global financial markets is now widely seen as a distorting force that deepens inequality and gives capitalism a bad name. What was the role of economists in sustaining Frankenfinance, many ask. Economics is too reliant on assumptions about calculating individuals (cogs) while ignoring intangible values like the environment, say some. It all complicated math and abstracted models and ignorant of history and context, say others. The dissent notes are without basis or foundation. They claim the government was given undue powers. It is important to consider the purposes for which these powers are accorded and how they have been closely defined. Section 35 has more reasonable safeguards than those in Articles 19 and 21 of the Constitution. Also, any exercise of these powers is open to judicial review. The idea of prapatti is that whatever happens in this Universe of ours is nothing but an expression of cosmic desire or Cosmic will. Neither can there be any volcanic eruption nor can any blade of grass move without his order. Everything is pre ordered, pre-ordained by the Supreme Entity. Man can do nothing. Living beings cannot do anything without His support; that is, when a human desire and His desire coincide, then only does the human desire become fruitful, otherwise it is a sure failure. When the jives desire coincides with the desire of Krishna, then it is successful, otherwise not. This is the central idea of the term prapatti. Bhaktivada, that is, devotional cult, stands solely on this prapatti. Jnanavada does not support prapatti and bhaktivada solely stands upon it. People may question the practicality of prapattivada or prapatti ism. A learned scholar may say, When everything is being done by Him according to His desire or action or His sank alp, what is the necessity of human endeavor The Janna may.

BSF-HCM-TEST-Dated-2025-08-17-Test NO.-22081

Think that this is a knotty question for a bhakti but actually, bhaktis are more intelligent than Janis. A Janna cannot force a blade of grass to move but the bhakta can, if he maintains a close tie with the Supreme; and there lies the excellence of a bhakta. The fact is that human ability, capability, and efficiency are almost nil. Nothing really belongs to a human. He gets everything from the Supreme Entity. If he does not take food for three or four days continuously or for three, four or five years then nothing will be left of him. He will not be able to speak or move. Thus, nothing belongs to humans. A bhakta knows that what belongs to him is His because he is His. So, the first reply of the bhakta is this: One cannot do anything by one own endeavor. All worldly knowledge and other mundane knowledge and so called wisdom have little value. Such knowledge is known as prapta vakya , that is, vakya coming from, coming through, the media of different worldly persons, worldly expressions. In old geography books, you will find that Allahabad was the capital of Uttar Pradesh. In later books you will find that Lucknow is the capital of the same state. And it may be different in the future. So, such is the condition of prapta vakya. It is relative and subject to change. Bhaktas take it with a grain of salt. But intellectuals constantly fight amongst themselves on the basis of their bookish knowledge. For a bhakta, only apta vakya has value. What comes from Param Purush is apta vakya. When the devotee is able to hear, feel, realise, and understand the will of Param Purush through having developed a relationship of love with Him, it is called apta vakya. As devotees, we need to follow only apta vakya, and our fundamental basis should be prapatti everything happens as per His desire and not a single blade of grass can move without His permission. India observed October 10 as the World Mental Health Day with the theme Mental health in an unequal world. The theme could not have been more apt in the present circumstances with glaring population level inequalities in knowledge and awareness, and access to mental health care solutions. According to a research paper by Lancet, there were 197.3 million people (14.3% of total population) with mental disorders in India in 2017. The same report states that mental disorders were the leading cause of YLDs (years of healthy life lost due to disability) in India, contributing 14.5% of the total YLDs in 2017. As per WHO estimates, India will suffer economic losses worth USD 1.03 trillion between 2012 2030, due to mental health conditions. Mental health is unique and incongruent with other health disorders like diabetes as it is hard to quantify, difficult to diagnose, far from being conclusive and widely stigmatized. It is understood very little and continues to remain either undertreated or untreated at.

BSF-HCM-TEST-Dated-2025-08-17-Test NO.-22082

All Adding fuel to the fire is the pandemic which has resulted in nearly 55% of India working professionals feeling stressed at work, according to the findings of a LinkedIn survey of 3,881 professionals conducted this year between July 31 to Sept. 24. The results strongly brought into focus the mental health of the working population, and underlined work life imbalance, insufficient income, and slow career progress as the top three causes of work stress in India. The gaps and challenges in the mental health ecosystem of the country are many. There is an alarming dearth of providers India has just 0.75 Psychiatrists per 100,000 population as against the conservative estimate of three and 0.07 Psychologists Social workers per 100,000 population vs. more than 30 in the US. A significant factor stopping people from seeking help is the frightening perception of a mental healthcare facility and stigmas of failure and weaknesses associated with seeking help. The possible similarity of symptoms across multiple mental health disorders often makes an accurate diagnosis difficult. The difficulty in correctly expressing a disorder can also lead to misdiagnosis in multiple states in India, people don t know how to express depression in one own native language. The affordability of current solutions is a big roadblock as well. For instance, in pay per session models, the pricing may range from Rs. 300 to Rs. 7000 and above per session. Despite the challenges, we have come a long way in terms of awareness and treatment of mental illnesses. Policy level initiatives like Mental Health Act in 2017 and community level mental health programmes show that central and state governments are catching up fast; although only 0.6% of India health budget is spent on mental health care. According to a latest report, the boom in internet access and telecommunications provide just the right opportunity for digital technologies and innovations in products, services and business models to scale up mental health solutions. Some of the highly billed digital tools include telepsychiatry, teleconsultation, meditation and mental wellness apps and games, AI chatbots, digital assessment and diagnostics, digital therapeutic approaches, virtual training and clinical support, personal health trackers, social media websites, online peer support forums, and many more. Startups are combining digital tools and virtual care to create a robust ecosystem for end to end patient care, including directing patients to in person care when needed. In terms of products, disruptive tech models using AI & ML are picking up speed as they reduce the chances of misdiagnosis thereby improving treatment outcomes. Bengaluru based Sparcolife has developed a diagnostic tool that uses video analytics as primary modality for screening and assessment and has partnered with healthcare institutions to deploy the product. Investments in digital therapeutics and AR/VR technologies can make mental healthcare more accessible, despite the growing shortage of specialists in the field. Delhi based TattvaVR is a provider of virtual simulations that helps patients face virtual scenarios and experiences to treat phobia, anxiety, and PTSD. In terms of business models.

Of the Caliphate, and those in Pakistan seem to have aligned themselves with local terror groups for a ferociously anti group, and a breakaway faction of the Pakistani Taliban, are two such groups that reportedly have a tactical alliance with the is born Americans from that dream. The murder of an Indian in a hate crime poses uncomfortable questions to Team Trump News of the killing of Indian national Srinivas Kuchibhotla in Kansas Team Trump News has shocked India, and raised fears about the safety of foreigners and immigrants in America. The term hate crime is writ large in the minds of the Indian diaspora in the U.S. and their anxious families back home, minds of the India even as law enforcement officials piece together the tragic events at a bar in Kansas City. That prior to the attack the shooter, U.S. military veteran Adam Purinton, reportedly asked Kuchibhotla and his coworker and fellow Indian, Amok MA Dasani, reportedly asked Kuchipukki whether they were residing in the U.S. illegally hints at the possible motivation for the violent encounter. Eyewitness reports confirming that the killer yelled, confirming that the killer Get out of my country, moments before unleashing a hail of bullets on the two Indians, also injuring a white man who sought to intervene on their behalf, suggests a white man who sought xenophobic racism. While this may be an isolated instance of hate crime, given the political climate while this may be an isolated in the U.S. it cannot but shine a spotlight on President Donald Trumps anti immigrant actions. Especially after Mr. Trumps executive order banning entry into the U.S. of travellers from seven Muslim majority countries and refugees from Syria and indefinitely putting on hold the country refugee asylum programme even if implementation of the order has majority countries or been limited, so far. Fear mongering about America weak borders allowing the unconstrained entry of illegal aliens into the country has a much older borders allowing. India decision to allow its border roads in Mizoram and Tripura to be used by decision to allow its border security force for mapping border area in Bangladesh roads Bangladeshi forces as they construct border outposts in the inhospitable terrain of the Chittagong Hill Tracts shows just how far the this inhospitable two countries have come to bridging their trust deficit. The decision, conveyed last week in Dhaka during the meeting of Home Ministry and security officials working on closer border management he is the decision, conveyed last week in Delhi to Patna Border cooperation, came as Foreignsecretarys. Jaishankar flew into Bangladesh to begin preparations for Prime Minister Sheikh Hasinas visit to India in early April. If the visit goes as planned, it will be her first bilateral trip to India since 2010, when the Mood for the Land Boundary Agreement was originally signed. The terms of that agreement have now been fully implemented, and Ms. Hasinas visit will build on the boost those relations received from the historic agreement that.

Startups are also positioning themselves as B2B2C platforms where employers pay for the mental wellbeing of their employees for improved productivity. Pune based Mahan Wellness is building a comprehensive and preventive emotional wellbeing platform for employers that focuses on three important pillars i.e. emotional wellbeing, personal growth and professional effectiveness. Mental health startups historically have faced challenges owing to social stigma and unproven business models. With the current tailwinds and rising awareness, startup investments have witnessed positive change as the investors are quite excited about models solving for demand and supply side issues. Technology, beyond a doubt, is the much needed boost to democratize mental health in India. However, a collective push is required from multiple stakeholders. The ecosystem needs startups to create innovative digital solutions to solve for awareness, diagnosis and treatment, and investors to show interest towards promising business models. Corporates need to develop policies and support mechanisms for mental health of the employees, while it is high time insurers start to cover in patient hospitalization expenses for mental illnesses as well as outpatient counseling or therapy. A lot would change once the Mental Health Act is implemented and enforced. However, the most significant cog in the wheel remains the society openness to acknowledge and tackle mental health issues. Throughout the bruising two year election campaign that culminated in the Through to out the he is the election campaign bruising two ear November presidential election, Mr. Trump provocative arguments about building a wall along the Mexican border and banning Muslims from entering the U.S went building a wall along the Mexican border and largely to unclear balance in centripetal force of Physics but jumps over the lazy dada unchallenged by the Republican Party. Last week, around the same time as the attack in Kansas City, Mr. Trump tweeted about around the same time as the attack seven people shot dead in Chicago, pointing an unsubtle finger at violence in inner cities associated with Chicago, pointing an African American in poverty. He did not tweet on the Kansas attack. The White House was quick to dismiss as absurd any link between the Kansas City shooting and the rhetoric on He did not tweet on the link attach he white house was quick undocumented immigrants. That may well be, but the selective social media outrage of Mr. Trump on violent acts across the U.S. is disturbing. Why, for instance, Mr. Trump on that may well be between the Kinshasa city shooting and the rhetoric on He did not tweet on the link attach the do deadly weapons this intuition may make the destination did his administration not condemn that act of violence more explicitly publicity in Iraq and Syria. The highly planned, in these countries helped the IS whip up Sunni sectarian sentiment and win recruits. There is still no evidence that the Pakistani branch of the group is directed by the IS core in Mosul or But IS fighters in eastern Afghanistan, where the group has established a province.

BSF-HCM-TEST-Dated-2025-08-17-Test NO.-22085

He who has never suffered can never understand what suffering is. The value of tears can be appreciated only by a man who has shed them himself. Adversity purifies a man. Gold when it is melted in fire, gets purified. It is a proverbial saying that God sends us into deep water not to drown us but to wash us clean. Adversity also provides a man with an opportunity to test the sincerity of those who claim to be sincere to him. Prosperity gains friends, adversity tries them. Besides, adversity, by contrast, enhances the pleasure of prosperity. Adversity can be really useful to man provided he has a positive attitude towards life. Thus, sweets are the fruits of adversity. We have assembled here to celebrate the silver jubilee of the with the advent of freedom, my father became directly concerned with it. He breathed new life into it making it into an instrument of national regeneration and progress. He was deeply and actively interested in the growth and development of science in India, for his long study of history and social development convinced him that the progress, prosperity and independence of a country was indissolubly linked with its advancement in the field of science and technology. The Council of Scientific and Industrial Research, with its national laboratories and other scientific organisations, represents a considerable segment of our national effort. Although this scientific effort is still small in relation to our needs and aspirations, it represents a sub spatial quantum of human and financial resources. It is appropriate on this occasion to pay tribute to the many dedicated men and women who have worked conditions. has to struggle hard to overcome the virus that invades the body, Indian society and politics are today struggling to thwart the attacks of the not only on democracy, secularism and social justice but also on common decency and humanity. Reality, data, and the truth terrify the. Preferring not to capture data, which can expose them, they conceal and manipulate information. They have been sufficiently alarmed by data to abstain from conducting the common decennial census. The refusal and stubbornness for not undertaking a caste census can only be understood by two things first, their appeasement politics to protect the power, privileges and sectarian interests of the upper castes, and second, the tyranny of caste minority against the marginalised caste majority reflected in the hegemony in policy making only three out of ninety bureaucrats in senior level policy decision making positions in the Government belong to the section. Under protection of the ruling party, adherents of every orthodoxy, religious bigots, revivalists, social supremacists, and economic and financial scoundrels have banded together to safeguard and advance the traditional Hindu social order and hierarchies. When everything else fails, religion is the opium that keeps one going. Hindustan is rampant in those states of where illiteracy, poverty and backwardness are widespread. On the other hand, states where the concept of social justice are deep rooted in society, like some of the Southern states, have progressed far more in every indicator of human development and have thwarted the advancement of the Hindustan led religious orthodoxy. To ensure equitable and egalitarian development for people, it is necessary therefore that social justice is served. The caste census is the first step in this process. Sportspersons serve the nation through

Elections are the bedrock of democracy, granting citizens the vital privilege to elect their representatives. However, this right is not passive; it is a duty, especially incumbent upon the youth, to actively engage in the electoral process. Historically, young people have spearheaded societal change, and their involvement in elections is crucial. Strengthening democracy requires the active participation of youth at every stage, from voter registration to grassroots campaigning. The first time voters bring fresh perspectives and champion ideals such as transparency and inclusivity. The energy and tech savvy nature of a young voter inject dynamism into the electoral landscape, fostering accessibility and responsiveness to citizen needs. Youth play a pivotal role in holding elected officials accountable, utilising social media to amplify voices and advocate for issues that resonate with the public, thereby safeguarding democracy integrity and vitality. In the words of Mahatma Gandhi, The future depends on what you do today. As the wheels of democracy turn once again, gearing up for the upcoming general election in India in 2024, it is imperative to underscore the pivotal role that the youth play in shaping the destiny of the nation. In his monthly radio programmer Mann Ki Bat, Prime Minister Narendra Modi emphasised the importance of youth participation in the electoral process, highlighting the Election Commission Mara Pella Vote Dash Key Lie campaign aimed at first time voters. He lauded India youth for their vigor and enthusiasm, urging them to actively engage in voting as it directly impacts the nation future. Urging first time voters to participate in record numbers, he stressed their crucial role in shaping the country destiny. PM Modi called upon influencers across various sectors to join the campaign and motivate young voters, recognising their influential role in driving societal change. Amidst the electoral fervor, he urged the youth to not only participate in political activities but also stay informed about ongoing discussions and debates. The Election Commission of India is spearheading Mara Pella Vote Dash Key Lie aimed at fostering universal enlightened participation of youth in elections. Union Minister Anuran Thakur launched the campaign anthem, symbolising the nation commitment to encouraging young voters to exercise their democratic right. The anthem, a part of the voter awareness initiative, embodies the spirit of PM Modi call for greater youth participation in the electoral process. Youth across the country are embracing this anthem as a clarion call to encourage their young friends to pledge to vote. The initiative is also witnessing Higher Education Institutions conducting comprehensive voter awareness activities nationwide and stressing the value of voting for a more representative democracy. Whereas are hosting physical events, online competitions are also being organised on the Maggot platform, including blog writing, podcasts, debates, and more, to encourage creativity in content creation. Workshops, seminars, flash mobs, and voter pledge drives are further engaging and educating students on the electoral process, with NSS volunteers and institution clubs actively participating in the campaign. Responding to Prime Minister appeal, influencers from across various platforms, including Integral, YouTube, and the entertainment industry are actively supporting the campaign, motivating the first time voters. Prominent

This will not be like that Janakpuri to Lajpat Nagar journey. Dost, prithee don t fly into the seat-scavenging anxiety once provoked by DTC Route 711 when it is a 707 you shall be boarding. Another micro-horror is the squatting mentality. Some will annex an aisle seat bought by somebody else, invoking fait accompli as fairgrounds for occupation. They will tell the legitimate seat-holder: Abs main already bait Gaya. Besides, kyat freak pasta hair? My middle seat is literally millimeters from aisle, take that ok. No, no, not ok. Squatters sometimes use the medical condition card, like trouble with their legs. But when the seatbelt warning is switched off, they go down the cabin in Neil Armstrong giant leaps to meet their friends. Then they launch an exposition on the quietness on foreign airlines by slapping their thighs to mark their main points in bold, firing off supersonic sighs, and Lolling their complaints about Indian carriers deafeningly. Talking of humor and quiet, some like their comedy desk and jet-engine loud. Once a gentleman equipped with guffaws but bereft of headphones sat next to me. He streamed a famous comic show on his phone speaker. I got one hour of dad jokes and boyish laughter. He even turned to me a few times to annotate the jokes. By way of reference material, he provided his own gags. I would have willingly traded my aisle seat with the person who revels in international-grade wit, sauntering down the cabin, on magically restored legs, far away from me. You can call that person Neil Leg strong my own dad joke. Why should I suffer alone? Atkepar Zende is a Marathi phrase that Marathas have historically cherished, but what does it mean? It means flags beyond Attock, which happens to be a fort in present day Pakistan, now the readers must be having several questions, such as where beyond Attock, for what and by whom? Readers, this phrase is symbolic representation of Maratha desideration to create an empire, covering the entire Indian subcontinent, and for doing so they had to reach the gate of India, Khyber Pass which had been over the years crossed by several invaders who entered India, if Marathas had to in fact protect India, they had to guard the Khyber pass, and for guarding it, conquering Peshawar was essential. Understanding the strategic importance of Peshawar a city in the present day Khyber Pakhtunkhwa, formerly North-West Frontier Province, northernmost province of Pakistan, a Maratha brave heart Sabaji Scindia Patil Patel from Kanherkheda village of Satara Maharashtra took his army and conquered it, fulfilling the desideration of the Marathas. Sabaji Scindia family still exists, they are titular Maharajas of Ujjain and Gwalior, Scindias with Mr. Jyotiraditya Madhavrao Scindia as the present head of Scindia Shahi. We find the mention of Sabaji Scindia conquest of Peshawar in several sources, as per Marathi historian Trymbak Shankar Shejwalkar book Panipat:1761, it was no ignorant boast of the Marathas that they conquered Peshawar in-fact Sabaji Scindia conquered.

It and administered Peshawar with Tukojirao Holkar as his deputy we get to know about Sabaji presence in Peshawar from the contemporary Persian Akbars, and as per prominent Sikh historian Dr. Ganda Singh who was the head of the Sikh History Research department at Khalsa College, Amritsar, until 1949 and honoured with a Padma Bhushan award in 1984, Sabaji Scindia in fact conquered Peshawar. Afghan historians also agree that Scindia reached all the way to Peshawar, but the pertinent question is how did this happen? As per Dr. Ganda Singh in his book Sikhs in the Eighteenth Century, in December 1758, Wazir Imad-ul-Mulk Ghazi-ud-Din invited Marathas to maintain peace in Lahore, the details of the agreement were to be settled between Wazir and Jankojirao Scindia from Maratha side, the negotiations between them continued for a month and a final agreement was entered into both the parties on January 31st. Jankojirao Scindia marched northwards and arrived at Machhiwara, on the southern bank of Sutlej in Punjab in March. He sent Sabaji Patil Scindia in advance to Lahore but he himself did not cross the river. At Machhiwara, Jankoji received the members of Adina Began old Mughal aristocrat family perhaps his widow and son and other residents of Doaba Bist Jullundur who paid him some tax. Sabaji Scindia during his service in the Punjab was assisted by three Pandits, Baporai, Dadurai and Sena. When Adina Beg Khan died as per Sikh Historian Dr. Ganda Singh, Sabaji Scindia marched all the way to Peshawar, and he even defeated the Commander in Chief of Shah of Afghanistan Ahmad Shah Abdali army Jahan Khan. As per another theory Crown Prince of Afghanistan Timur Shah Abdali appointed Adina Beg Khan as Faujdar of Jullundhar, but Khan had other plans. Early in 1758 AD Adina Beg Khan sent his envoys, Har Lal and Sidiq Beg to Raghunath Rao and invited the Marathas to the Punjab. He offered to pay one lakh of rupees per day when they were marching, and fifty thousand when halting. Raghunath Rao readily accepted the offer and marched toward Punjab in the beginning of March, 1758 AD. Huge Scindia army with Dattaji Scindia, Sabaji Scindia, Jankoji Scindia and other brave hearts liberated Punjab from the Afghans. Adina Beg Khan was made governor of Punjab under Marathas and later as per Afghan historian Farhang, M.M.S. 1988, Afghanistan in the Past Five Centuries Peshwa appointed Dattaji Scindia as the subedar of Punjab and Jankoji Scindia as his deputy. It was Jankojirao Scindia then head of Shindeshahi who asked his uncle Sabaji Scindia to go and garrison Lahore. As per another theory nephew of Ahmad Shah Abdali Abdul Rahim Khan invited Marathas to Punjab and asked them to March on to Kabul and Kandahar and install him as the Shah of Afghanistan the Marathas in-fact when they conquered, Sir hind and captured Abdus Samad Khan sent him with his troops to install Abdul Rahim Khan as a ruler temporarily near Attock to be installed later in.

Kabul and Kandahar as the Shah of Afghanistan, once both these cities were conquered by the Marathas. Sabaji Scindia a strict administrator We get to know more about Sabaji Scindia tenure in Punjab from Dr. Ganda Singh book Ahmad Shah Durrani father of modern Afghanistan, he mentions that Khwaja Mirza Jan Khan and his brother Khwaja Saeed Khan were, at this time, very unpopular in the country Punjab. While Khwaja Mirza Khan, as Mirza Jan Khan was popularly called, generally went out on military expeditions or for the settlement of the outlying districts, his brother and deputy, Khwaja Saeed Khan, attended to the administration at the headquarters. Saeed proved to be a great tyrant. He would daily hang one or two men with a view to overawing the population into silent submission. He would, not un often, indulge in extortions from the people and subject them to untold indignities. The worst enemies of the Khwaja brothers, however, were the Qizzilbash Afghan captains of Prince Taimur army, who had been captured on the bank of the Chenab and enlisted in his service by Mirza Jan Khan. They conspired with the Marathi Pandits They we re assisting Scindias in Punjab and, with payments and promises of money, secured for themselves the high offices of state; the subedar of Lahore for Mirza Ahmad Khan, and of Multan for Sale Khan. Mirza Jan Khan was thrown into prison, while Khwaja Saeed, mounted on a donkey, was paraded through the streets of Lahore where the aggrieved citizens flung dust and dirt upon his head. Saeed was then produced before Sabaji Scindia for punishment. You deserve some severe punishment for all your horrible misdeeds, said Sabaji but I would give you only this punishment that you leave this country. Beyond that I say nothing to you. Rise and fall of Sabaji Scindia power As per Hayat-i-Afghani of Muhammad Hayat Khan, in March-April 1759 Sabaji Scindia was attacked by Afghans, under instructions of Ahmad Shah, Khushal Khan Khattak of Teri marched at the head of the local levies to oppose the Marathas. A battle was fought at Hasan Abdal Panja Sahib, Khushal Khan was killed and his men were defeated. The Shah of Afghanistan Ahmad Shah Abdali had by this time freed himself from his western engagements with the Shah of Iran and the affairs of Khorasan which had occupied him for two years, towards the the end of August, 1759, the Shah despatched a force under Sardar Jahan Khan to the Punjab. Sabaii Scindia moved out of fort of Attock as per Ali-ud-Din Ibrat Namah, to oppose his advance, in the battle the Afghans were worsted and many of them, including the son of Jahan Khan, fell dead. Jahan Khan himself was wounded and was forced to recross the Indus and retire into the Peshawar territory. As per Dr. Ganda Singh, the Commander in Chief of Ahmad Shah Abdali, Jahan Khan was persistent he attacked again and his force was too large for a small Maratha.

Deep rooted hatred and anger never go astray There is a deep rooted hatred and envy of street dogs that has festered and been ignited in many sections of city life and society since the last two decades when the city has sprouted hundreds of thousands of rescuers, foster, caregivers. Let's face it- as Delimits we can visibly see (and indeed many haters even had a turn of heart and took part in community caregiving of strays during the Coved pandemic) on a daily basis a few significant changes in residential colonies across the capital. Each colony has a 'pet rescue caregiving group', most colony RWAs have an empathetic official representative who has a pet or two and cares, or at least allows, for timely feeding spots for feeding or for ABC drives, camps or training sessions for the many in such a residential colony who are scared of strays or simply don't know enough to have an informed take, simply stepping away from the ones snoozing under an awning or a lift, passing them by but ignoring them. Pretty much all Delhi's posh colonies have feeders and many run a van service sending out meals twice a day to outer areas or central Delhi localities to feed the dogs there. Not to mention that many pet owners have extended their pet family to include one or two- or even three- indie rescues adding to the existing pedigree dog. Usually the health of the pedigree improves vastly with the addition to the family of the hardy and relatively healthier stray that hasn't suffered a weaker immunity thanks to extensive inbreeding that pedigrees are subjected to. For every battalion of dog lovers who care there are those two or three or fifteen 'dog haters' always a minority who rant and rave about the 'menace' of these strays almost sounding overzealous in their mocking, nasty commentary about the 'cynophiles' hiring dog walkers to walk an adopted stray that is amusing and almost comic to them. Or that such rescuers who have multiple dogs don't make such dog walkers 'pick up their poop' lamenting on colony whatsapp groups about how ensuring the rescues poop fills the streets is more critical to such animal lovers over and above the health and well-being of the residents at large. To such residents, poop is visible everywhere they look, often even in places where they usually see garbage strewn routinely, never doing anything about it. The barrage of messages one wakes up to some mornings about the 'highly toxic shit of dogs' when it is immediately deemed practical to ban them from gardens and green spaces when dog urine and faces is actually the best urea for nature, especially gardens and plants. This minority also post on colony whatsapp groups night and day about the menace of one particular dog they are convinced bites posting copiously long texts filled with legalese about the antics of such a dangerous dog. Incidents and accounts are pulled up of when said dog barked and 'bit' someone with many a delivery 'parcel Walla' claiming that 'much who kite ne kata that'. Upon further interrogation, it is clear that the kata he is talking about is not this big, well-fed and vaccinated, long-ago-neutered dog you are being told 'is dangerous' but another canine of his childhood days, lodged in the annals of his brain as a recent biting incident. The fact is, Delhi has recorded less and less rabies cases over the last few years. The latest count is 49 cases and even those are presumptive where the doctors assumed rabies risk not just from dogs but from rats

So why fake the data? Despite an absentee municipal corporation that could be out there spending the tax payer's money on animal birth control drives and vaccinations, it is Delhi's veritable army of fosters, caregivers, rescuers who are doing the needful at their own cost often forgoing some goodies or extras to afford such care on their own with no help from even their local RWAs. They are the same people who turn up dutifully at rallies and vigils and walks when heinous crimes occur in the capital, when no one is around to defend the capital's vast numbers of students fighting to keep partisan politics out of their campuses or the ones raising their voice and chanting slogans in support of their brothers and sisters in the north east, fighting genocide or holding all night vigils for the brilliant minds locked up behind bars but never forgotten like we-know-who (you can fill in the blanks). The same fighters who care and text each other in the middle of a freezing cold Delhi winter night to borrow a blanket for a dog down with fever, or an e-collar for one with a skin infection. Always the same bunch of people who are branded activists or snidely called zoophiles or cynophiles. What the mind doesn't know, the eye cannot see one bright and sunny morning during the heart and heat of Coved, I was out attending to one of the few of my colony dogs I take care of in the south east corner of Delhi where our home is. The dog Bella had a bad wound that was refusing to dry up and since no visiting vets were being allowed into the colony which had closed its gates to all outsiders including the helps, I did what all the other resourceful rescuers and caregivers to our many community dogs and cats (and birds and monkeys and even nilgai) did and still do call one of the friendly vets we know personally, note down the advice, buy or order and apply the necessary medications ourselves. I had been told to comb her coat well and once the wound dried, to bathe her after combing her down well, preferably with a wooden neem comb. Over the course of the few weeks it took to treat Bella, a neighbor or two, would pass by, mask on, their eyes burning behind spectacles piercingly looking at my very public ritual of applying ointment, combing, removing the thick collection of fur on the sides of the comb into a tail, taking down buckets to bathe the dog with the help of a hose borrowed from a ground floor neighbor who had offered to keep a tap flowing so that some piped water could speed up the bath. And every single day that this scene would play out, one or the other neighbor would stop by at a distance to stare, one hand on a hip, or a foot tapping, saying, you are doing such a good deed. God will bless you; they must be so grateful for you. I'm sure it is feeling much better with your care. And even. You really have a lot of energy and time and heart, huh? To most, a dog is not even a being. It's an it; a four legged cursed thing the 'it' that fell short of good karma in some lifetime and got stuck with a snout and a tail. Poor it. And poor caregivers. They have two legs and hands, a human brain and capacity to think and yet they waste their time and money not holding down a proper job. To do due diligence by four leggeds. Something must be wrong. It is automatically assumed that if you devote a visible chunk of your day to caregiving, feeding strays outdoors you are either unmarried, unemployed or both. Or, worse, you have too much time and money. Come t

Garrison of Sabaji Scindia, who had to initiate a strategic retreat, he moved all the way to Delhi and positioned himself at Burari Ghat. But as per Trymbak Shankar Shejwalkar, Abdali set out from Kandahar in September 1759 with his heterogenous army of 60,000 freebooters who poured in through the Khyber and Bolen Passes, pushing back Sabaji Scindia from Peshawar and overcoming stubborn Sikh resistance at Lahore, and Sabaji Scindia moved to Burari Ghat. When the Rohillas and Durranis came to attack Burari Ghat, Sabaji Scindia, who was holding the Burari ghat saw them and moved out to oppose them. But he was soon overpowered by superior numbers and deadlier weapons. He had no artillery, and his men, with spears and swords, could not hold out for long against the fire of Afghan musketry and were pushed back to the Burari side of the channel with a heavy loss of life. In the meantime, information of the raging battle had been conveyed to Dattaji. The Maratha commander rushed to the battlefield with reinforcements to retrieve the losing position. In the battle on 10th January at Burari Ghat, resisting the Afghan crossing of the Yamuna, Dattaji Scindia was killed and Jankoji and Sabaji were wounded and the ragged remnant of the Scindia forces went South. Sabaji Scindia family Sabaji Scindia also known as Shambhuraje Scindia was from the senior line of the Scindias of Kanherkheda the native village of Scindia Maharajas of Ujjain and Gwalior, he was the cousin of Mahadji Scindia. In the Decade of 1750, Sabaji Scindia along with Ranojirao Bhoite led 6000 Marathas to Combat against Ram Singh and Bakht Singh Rajput Leaders in The Battle of Ajmer as per the book Marwar and the Marathas, 1724-1843 A.D. by G. R. Parihar. His son Bayajirao Scindia fought bravely in the battle of Burari Ghat with Dattajirao Scindia and attained martyrdom. Sabaji Scindia grandson Manajirao Scindia Phakde was in-fact made head of Scindia Shahi by Peshwa, in the first Anglo-Maratha war Manaji fought for Raghunnathrao also known as Raghoba Peshwa, In 1780 Manaji Scindia joined the Chatrapati of Kolhapur against the government of the Peshwa. Manaji had a son named Anand Rao Scindia. Manajirao Scindia Phakde was one of only three heroes in the Maratha history to earn the suffix of Phakde, for his many acts of gallantry and courage in the face of the enemy, the other two being Konher Rao Trimbak Ekbote and Captain James Stuart a British also known as Ishtur Phakda. Manaji Scindia Phakde had one son, Aanand Rao Scindia, Meherban Shrimant Sardar Anand Rao Scindia. He speared Tuljojirao Sakharam Rao Ghatge, in open Durbar at Gwalior on 26th July 1809. Another grandson of Sabaji Scindia was Dhar Rao Scindia, Mahadji Scindia also known as the Great Maratha and cousin of Sabaji Scindia, appointed Dhar Rao Scindia, grandson of Sabaji Scindia, with 8,000 horse and 10,000 foot was appointed subedar of a vast territory extending from Mathura and Aligarh to Karnal and Saharanpur. Peshawar saga.

Startups are also positioning themselves as B2B2C platforms where employers pay for the mental wellbeing of their employees for improved productivity. Pune based Mahan Wellness is building a comprehensive and preventive emotional wellbeing platform for employers that focuses on three important pillars i.e. emotional wellbeing, personal growth and professional effectiveness. Mental health startups historically have faced challenges owing to social stigma and unproven business models. With the current tailwinds and rising awareness, startup investments have witnessed positive change as the investors are quite excited about models solving for demand and supply side issues. Technology, beyond a doubt, is the much needed boost to democratize mental health in India. However, a collective push is required from multiple stakeholders. The ecosystem needs startups to create innovative digital solutions to solve for awareness, diagnosis and treatment, and investors to show interest towards promising business models. Corporates need to develop policies and support mechanisms for mental health of the employees, while it is high time insurers start to cover in patient hospitalization expenses for mental illnesses as well as outpatient counseling or therapy. A lot would change once the Mental Health Act is implemented and enforced. However, the most significant cog in the wheel remains the society openness to acknowledge and tackle mental health issues. However, both New Delhi and Dhaka would be aware Howsoever, bath of the possible bumps in the road ahead. Some of these involve the Centre Howsoever, bath and the affected Indian States. For instance, water sharing is a highly emotive subject, and movement on Tester is a highly emotive subject water sharing has been held up largely because of West Bengal reservations have been held up largely. To address them, the Central government needs to reach addressee theme, out to Chief Minister Magmata Banerjee. Similarly Bihar Chief Minister Newish Kumar has raked up the Farrakhan Barrage project. For Ms. Hessian, the Newish Kumar Singh has raped up political worries are greater. She faces an election in 2018, and with the opposition accusing her of being soft on India, her election in 2018, and won the opposition leader party accusing cannot be seen to be returning home empty handed on the water question. Also, while the border issue has been resolved, border firing has ceased an issue Ms. Hessian rivals use to target her. Meanwhile, she faces the task of India Haskin river use to targets her addressing India mistrust over Chinese investment in Bangladesh, her addressee Indo with $38 billion pledged in infrastructure cooperation and joint ventures during President Xi Jumping Jumping visit last year. Ms. Hessian has sought to address this by arguing that India will also the Ms. Hessian had should to addressee benefit India Pak Bangle Border from Bangladesh enhanced prosperity if all these projects go through. Yet, Dhaka may need to be more neighbors became aware of India anxiety as Bangladesh and other neighbors become more heavily invested in China One Belt One Road project, that India has opted to stay out of for now.

BSF-HCM-TEST-Dated-2025-08-18-Test NO.-22098

The National Democratic Alliance government is working on a plan to bring in seamless connectivity between the 10 Nasals affected States by building bridges and roads. It plans to launch Road Requirement Plan (RRP) II, on the lines of RRP I initiated by the UPA government in 2009. More than one lakh men of the Central police forces have been deployed in these States, and lack of inter State connectivity has hampered their operations on many occasions. While RRP I focused on connectivity in the 35 districts affected by left wing extremism, RRP II will priorities critical bridges connecting two or more States to ensure smooth movement of security forces. In effect, not only the 35 worst affected districts but all 106 Nasals affected districts are likely to be covered by the new project. RRP I is still being implemented. According to the latest data available, 30 per cent of the 5,477 km roads to be built under the project are yet to be completed. After it came to power in May 2014, the NDA has added 777 km of roads till June this year. We are preparing a Cabinet note and will send it for approval soon. RRP II will be for inter State connectivity, said a senior official of the Home Ministry. The Ministry has asked the States to submit their suggestions. We have always believed that a two pronged approach is required to end Nasals violence: one is security operations and the other is development. As RRP I am still under implementation, we will initiate RRP II after it is completed, the official said. Though the cost has not been calculated, RRP II will be allocated Russ. 8,000 cores. Telangana and Andhra Pradesh have proposed that not only Khammam and Visakhapatnam, which are among the 35 worst affected districts, but eight others be included in the project. Maharashtra has felt that border roads and critical bridges should be covered under RRP II. Chhattisgarh wants an empowered committee constituted under the Home Ministry for taking timely action on road projects. The confrontation between the Bench and a section of advocates in the Madras High Court is adversely affecting the image of the legal fraternity in Tamil Nadu. It is not the first time that unsavory events are eroding the dignity and prestige associated with the black robe. There is a growing public perception that a belligerent section of the lawyer community is responsible for this. Another view is that lawyers want to raise accountability issues against judges through such protests. Who recently succeeded Mike Pence, after the latter became the Vice President, told The Hindu that regardless of the incident, the American public remained warm towards Indians. Several U.S. lawmakers and civil rights groups condemned the incident and blamed the rhetoric Hindu and administrative actions by Mr. Trump for the atmosphere of racial hostility in the country. We can let hatred win, said Indian American Senator from California Kamala Harris. Senseless acts of violence have no place in.

Our country in most. I am heartbroken by this tragedy, said Pramila Jayapal, Democratic Congresswoman from Washington State. She said hate crimes were raising as a result of Trump administrations ideas against immigrants. California Congressman Ro Khanna said: Any act of violence fuelled by against imagine hatred and xenophobia and prejudice cannot be tolerated. I have faith in local and federal law enforcement to justly investigate this shooting as a hate crime. Illinois the ration and federal long Congressman Raja and Pennsylvania Republican Scott Perry also condemned the incident. This was an attack not only on the victims, but on the sense of security of Indians, Indian Americans, was an attack and millions of other people of colour across the nation, said Mr. Krishnamurthy. While details continue to emerge, if true, we expect the governmental authorities to prosecute this act for what it is. This incident is the latest in a rising tide of hate violence against South Asian, Muslim, Sikh, Hindu, Middle Eastern and Arab communities, electrified by the presidents anti immigrant to Hindu, Muslim policies, stated she had discussed the idea of returning to India many times with her husband, but said he on an H 1B guest worker visa was keen to remain in America. I need an answer; I need an answer from the government. I need an answer for everyone out there, Not just for my husband ... but for everyone, all those people of any race I need an answer, she said. Two days after an Indian engineer was murdered and another injured in an apparent Two days in after case of racial related violence, the White House on Friday rejected the suggestion that the incident may have been caused by the anti immigration climate created by President Donald Trump. Asked whether the rhetoric that the President or that suggestion the generally has been out here recently could have contributed in any way to the murder of 32 year old in Kansas on night, White House press secretary Sean Spicer said. I mean, obviously, any loss of life is tragic, but I am not going to get into, like, that kind of to suggest that there any correlation, I think, is a bit absurd. So I am not going kind of to go any further than that. President did not tweet on the Kansas attack even after it was prominently covered across U.S. media platforms even as he responded to gun violence in Chicago the same evening with a tweet shot responded to take and killed yesterday in Chicago. What is going on there totally out of control Chicago needs help Meanwhile, Indian Ambassador to the U.S. Naveen Saran told an audience that included 27 U.S. State Governors on Friday evening that India was confident that American administrators would take necessary measures to ensure that confident the incidents were not repeated. In a first of its kind diplomatic initiative, Mr. Saran hosted Governors from both the Republican and Democratic parties, which he Mr. Saran.

Said was a demonstration of the bipartisan support for India U.S. bilateral relations. I am sure all right thinking people in America will work together and ensure ration is I am that this tragic event is behind us, Mr. said. Eric Holcomb, Republican Governor of Indiana. With a sufficient young talent pool, India is becoming increasingly attractive. China cannot afford to risk a decline in its attractiveness for high tech investors. The nation is among the third echelon in cutting edge technology fields and is working to catch up with the US and the result of its efforts will decide whether China will maintain its status as an emerging global economic power, it said. China in to US and the result of its recent year boosted the budget for technological innovation by allocating billions of dollars of incentives for startups and research firms as it witnessed decline of its labor force due to rapid increase in old age population. China has carried out a lot of measures, including increasing research spending and creating an investment environment for high tech firms, to enhance its innovation capability. However, one issue has become increasingly prominent: The talent pool in China is not large and flexible enough to meet demand for the rapid expansion of innovation capability, the article said. In Silicon Valley, a considerable number of software developers working there are born outside the US. China should also strive to attract more foreign talent into the country as it aims to build itself into a Silicon Valley, a considerable number to word class research hub, it said. A total of 1,576 foreigners were granted Chinese permanent residence in 2016, registering an increase of 163 per cent from the previous year. It seems that China is aware of the importance of tapping into international talent, it said. Some reports claim that the cost of employing an Indian engineer is just half the cost of hiring a Chinese worker, which means Indians, could see their revenue more than double if they came to work in China it said. Some enterprises in Southwest China Province provide convenience for Indian talent in terms of housing, insurance and transportation and could enjoy a much better standard of living in than in Bangalore, it said. On the other hand, seems lacking not just in a strategy to regain national relevance but also in its ability to revive itself regionally due to the national relevance but absence of a cache of regional leaders. Beijing, Feb 24 China has made a mistake of ignoring science and technology experts from India, Chinese official media said today, underlining that the Communist giant should attract high tech Indian talent for maintaining its innovation ability. China has made the mistake of ignoring Indian talent, innovation ability, China had instead has attached a greater importance to talent coming from the US and Europe, an article in state run Global Times said. China has perhaps not been working hard enough to attract science and technology talent from.

India to work in the country, the tabloid daily from technology talent Rome the group of ruling Communist Party of China which has been carrying articles critical of India almost on daily basis in recent months said in a rare positive writeup to announce result on line website to student. Over the past few years, China witnessed an unprecedented boom in tech jobs as the country became an attractive destination for foreign research and research development centrist. However, now some high tech firms are turning their attention from China to India due to the latter relatively low labor costs. Attracting China to India due high tech talent from India could be one of China options for maintaining its innovation ability, it said. Referring to reports that US based software firm CA Technologies has disbanded its almost 300 person research and development team in China while setting up a team in India based software firm CA some 2000 scientific and technical professionals over the past few years, it said. The politics of regional identity and patronage may have helped The politics of regional of identity the Stena become the single largest party in India richest municipal the Shiv Stena become the single corporation. But its reduced win ratio is a reflection of its dismal corporation, but its reacted performance is a reaction in ensuring civic works, with sanitation, infrastructure, public health and education civil works, with situation in information poor shape in the city. The BJP will be content with its strong performance, which has followed civic poll victories in Chandigarh and Madhya Pradesh and followed Local poll victories in Punjab & Chandelle in some Legislative Council elections in Uttar Pradesh. This may not reflect a popular endorsement of the move, as its supporters argue, but at the very least it suggests that notbandi is highly popular of the demo test in SSC Typing monetization unlikely to hurt the BJP prospects in the ongoing Assembly elections. It is impossible to not contrast the BJP success with the elections, It is impossible to not complete in word 15 minute so passage is very good time is very blossom our contrast the performance of the SSC Typing in all Region with Congress in the recent civic polls. Clearly, the BJP has become the central pole of Indian politics, a position the Congress occupied for a long time. This is not only due to position the Congress National occupier for a long time the BJP run Central government record the party has an able corps of regional leaders, Defender Vadnais and Shivered Singh Chowan among them, which allows for it Vadnais and Shivered Lulus Pad Dada also meet to Newish kumara for party meeting in Bihar compete effectively at the regional level. The Congress, on the other hand, seems lacking not just in a strategy to regain national but also in its ability to r.vive there is itself regain national relevance also in regionally due to the absence of a cache of regional leaders.

BSF-HCM-TEST-Dated-2025-08-18-Test NO.-22104

Buy Now, Pay Later BNPL offerings appear to be the rage this holiday season, with several e commerce sites, banks, and merchants offering such deals. Even without a credit history, a substantial number of borrowers can now take advantage of BNPL short term credit. Many of us have had to tighten our purse strings as a result of the covid 19 outbreak, making BNPL programmes even more appealing. Buy Now, Pay Later (BNPL) is basically a financial way to buy something and then pay it later in installments with zero or no interest. But, they have a fixed repayment schedule generally several weeks or months. There is a limit to the credit one can take. The BNPL provider pays the invoice directly to the retailer on behalf of the buyer. This option is intended for new, credible young millennials with a money buckle. Many do not have a credit card. It gives them easy access to credits for ticket purchases. BNPL is emerging as the fastest growing ecommerce online payment method in India, estimated to capture 9% of the total ecommerce market share by 2024, according to Global Payments Report by World pay from FIS. Ecommerce is gaining momentum with consumer and retail business adoption at an all time high. While companies are trying to maintain a strong foothold in Tier 2 and 3 cities due to the rise in demand from these markets, they are also aiming to expand their horizons in metros and Tier 1 markets. One may wonder as to what was the need for a fresh line of credit when legacy banks were already supplying EMIs to drive success, e commerce and brand sites are increasingly conscious that they must target the digital native audience. This group includes Millennialism and Gen Zeros, who have great purchasing power and intent in India. E commerce giants like Amazon, Flipchart have started offering this option in collaboration with banks on their platform. Varied fitness platforms and organizations have started diving into this industry. BNPL is available from groceries, food delivery to buying consumer durables and travelling. And while the modern BNPL is growing and might have had its inspiration from the global biotech successes, one must remember that BNPL is not new to India. An informal BNPL has existed in India for decades where shopkeepers allow purchase of goods without any payment upfront. This trust based BNPL is built on the promise that payments will be done in a week or 10 days. The growth in this informal BNPL has been quite astonishing. And not just growth, unlike the usual BNPL where repayments are always a huge area of concern, the informal BNPL has seen good repayment numbers. According to our data accumulated from the Noncredit app, India's informal BNPL model witnessed a surge in repayments this Diwali season with repayments 12 per cent higher than average, and the merchants booked 15 per cent growth in their business during the two week festive season. Rise in digital payments has.

BSF-HCM-TEST-Dated-2025-08-18-Test NO.-22105

No more always-on campaigning The report says frequent elections create uncertainty slow down government machinery. That when elections are held repeatedly, then quite often half the time of 5 years is spent in electioneering. This can be argued against. Plus, since almost every party has only a few star campaigners, simultaneous polls spare them from always being in campaign mode. In theory, at least, this means more time for governance. Two key constitutional amendments are suggested to alter the duration of state legislatures and to alter the duration of municipalities and panchayats. The first needs only parliamentary ratification, the report says, and the second will need states ratification. When output increases well beyond the market demand at a price remunerative to producers, market prices decline. Therefore, in the absence of an effective price support policy, farmers are faced with a loss of income, depending on how much the price decline is. The farm distress has been partly on account of this situation, as the loss of income is beyond the ability of the small farmers to absorb. A high-level committee led by Ram Nath Kovind, tasked to examine the feasibility of simultaneous elections for all levels of govt, has recommended India transition to this system. This can happen by 2029. Synchronising LS and assembly elections does face a stiff challenge as the relevant constitutional change will not require ratification by state assemblies. However, synchronising local body elections and electoral rolls will need the concurrence of at least half the state assemblies. Atypical LS election involves at least 7 million officials seconded to election duty. Schools are used as polling booths and there large deployment of paramilitary forces. The same process, though on a smaller scale, is repeated for assembly elections. Synchronisation allows for more efficient use of resources. Impact on economic performance Kovind committee study on the likely economic benefits of simultaneous elections is unconvincing. Economic growth is a complex process. Therefore, distilling its drivers to narrow dimensions such as election cycles is not persuasive. Moreover, data shows that India high growth phase began in 1980s, long after the election cycle turned asynchronous. Uncertain areas Some of the other aspects cited in favor of simultaneous elections are hard to judge. For example, will descent into a danger zone of identity politics really be checked by it? To illustrate, reservation agitations and related political positioning are not always linked to an imminent election. Lack of unanimity As many as 47 political parties gave their opinion. Of them, 15 parties, or almost one in three, opposed the idea of simultaneous election. This is important as state assemblies will have to pay the price of synchronisation. Kovind committee wants synchronisation to be linked to the term of LS. According to the committee, this can be brought about without the concurrence of states. GST example GST is a highlight of India political journey as states voluntarily surrendered unilateral taxation powers for a larger cause. It required years of work across two central goats to get their support. Persuasion is a virtue in a democracy. Simultaneous elections will cause a disruptive change. That not a problem if more political stakeholders support it before GOI takes the next step. The Cholera fab is expected to churn out 28nm chips by end 2026. That not earth-shattering.

These can be conjured overnight. So silicon testing, assembly and packaging plants, like the ones being set up in Gujarat Sunland and Assam Morgan, too help in creating required supply chains. Chip wars All of this is partly being driven by a desire among Western democracies to diversify away tech supply chains from China a China+1 strategy. But this field is crowded with Vietnam, Thailand, Philippines etc. also in play. So it will ultimately boil down to tech resources. Talent tonic India does have a dearth of talent here with around 20% top global talent in chip design. But they work for foreign companies. Harnessing this talent for Indian companies making Indian chips is the business trick. It geopolitics baby Silicon tech is constantly evolving. TSMC holds 90% market share in advanced chips. Taiwanese collar like at Cholera for chip-making in India is welcome but don expect hi-tech transfers Taiwan silicon industry is a shield against potential Chinese attack. So India needs to put in the legwork and build its own capabilities if it to emerge as a key global chip hub. Freedom, which is another word for democracy, is deemed to be invaluable, and ought not to have a price tag put on it. Such reservations notwithstanding, the upcoming Look Sabah elections are reportedly going to be the most costly and the biggest, in the history of democracy, involving some 960 million voters, and 62 political parties contesting 543 seats. But even as this epic exercise makes for a government of the people, for the people and by the people, can it also, as the cherry on top of the cake of democracy, become a profit-making enterprise by monetising it and turning it into a tourist attraction? India offers many kinds of tourism. There Taj Mahal tourism, and wildlife tourism, and medical tourism, and village-stay tourism, and Himalayan trekking tourism, and pilgrimage tourism, and yoga tourism, and now temple and spiritual tourism. So why not election tourism? Visitors from the world over could have a ringside view of the planet biggest democracy in action as it exercises its franchise. The rousing rhetoric and the thronging rallies of the campaign trail, the to-ins and fro-ins of Aye Rams and Gaya Rams, the horse trading that has nothing to do with four-legged livestock, the allegations and counter allegations of rigging and booth-capturing. With the election schedule announced by EC and the model code of conduct kicking in, some of this amahs will be curtailed. However, there still the hubbub and hullabaloo of exit polls, and full-blast TV sets featuring astrologers disguised as political pundits, and political pundits in the guise of astrologers, predicting who in and who out, and reports of truckloads full of booze and boodle nabbed by cops, and the long queues outside polling booths, and on-the-spot interviews with the youngest voter, 18 years and 0 days, and the oldest, 92 and going strong. And the ballot-caster proudly displaying her finger bearing the mark of democracy, showing that Incredible India is also Indelible India! Amid Maldives pro-China President Mohamed Maize persistent calls for the removal of Indian troops, the old debate concerning India primacy in the neighbourhood recurred. Many have ambiguously questioned India quest to maintain its preeminence in the region. Enduring primacy in the neighbourhood has been a challenge for any regional power, so it is for India. The critiques of India neighbourhood-first policy need to take into acc

Led to an increasing trend of timely repayment by customers who mostly resort to the buy now pay later model from their local mom and pop shops, with as many as 30 lakh customers settling their dues on time post Diwali. BNPL has benefits for businesses and consumers such as a convenient and planned way to pay for the purchases with usually zero or extremely low interest. BNPL has been a huge hit among the Gen Z and Millennialism since one does not need a good credit score to qualify plus they get fast approvals. These advantages have made individuals jump on the bandwagon but there are downsides as well. If one defaults to pay, there is a late fee and it will impact your credit score. Other than that, one might become a prey to frauds as well. BNPL fraud may be reduced by being proactive with your fraud systems, layering your defenses with the most appropriate solutions, and maintaining regular communication with your consumers. How are you I hope you are having little time to sit down and read my letter, otherwise you stand up people are full busy with houseful shows here, there and everywhere. Kalama is sometimes thinking what is state of the world nowadays we have to buy tickets and sit inside auditorium if we want to laugh Then the Mister is saying, Ohio Kalama, so much deep thoughts, you are turning into philosopher or what Then I am thinking maybe we need standup comedians to make us laugh because sit down housewives like Kalama is not able to tell even one joke properly. What to tell you that day I am starting to tell one nice joke and all people are waiting to laugh and what is happening I am forgetting punch line than full embarrassment is there. Then what I am doing I am slowly opening my what Sapp and reading out the joke like minister is reading speech Nobody is even smiling, forget about laughing. Yabba But what about your recent speech which you are giving in Kennedy Centre It seems auditorium is houseful and your speech is going viral But one thing I am not able to understand why you are taking so long to explain where you are coming from Full speech you are only telling audience I come from this India and I come from that India Ohio those American people are not understanding who you are with one line introduction or what After your speech I do know whether anybody in the audience is understanding where you are coming from, but we people are now fully confused. Ababa As if there is not enough confusion here already. You are telling those people about two Indies, but we people here already know that there are two Indies since long back one is North India which is in Punjab and other is South India which was first in Madras. Whenever I am meeting some north people and telling them I.

Spl-BSF-HCM-TEST-Dated-2025-08-18-Test NO.-22108

Of the Diwali celebrations that's nothing but war zone level ear shattering noise. Many get lost and displaced in the bid to find a safe corner or space and keep running on empty until they find themselves in a new part of the city altogether. But revelers drive around, blasting loud music from their cars, bursting crackers often setting a stray on fire or giving them burns. What does all this tell us about ourselves? Given that our relationship with karma seems to be quite transactional and quid pro quo? Bathe stray dog equals God's blessings et al. Essentially it comes down to pity. Joan Did ion in her remarkable memoir, The Year of Magical Thinking, repeatedly rakes up 'self-pity.' An oft repeated line in her memoir almost used chemically, to a beat: 'The question of self-pity'. (You sit down to dinner and life as you know it ends. The question of self-pity.) In the book she refers to her own unraveling mind seeking self-pity through unrealistic thoughts that connected disparate and unconnected things in the year after the loss of her middle aged daughter Quintana Room and her screenwriter husband, John Dunn. Both died in the span of two years. Sharply critical and assessing of her own self-pity she queries herself almost deboning every feeling to uncover the real emotion that her body is too scared to grapple with. The. The loss of two people is central to her life. The question of self-pity. Pity is that cheap, easy emotion most of us allow ourselves to wallow in when we can't channel the real deal, that authentic powerful emotion that asks us to self-assess, examine our own selves and look within instead of going outward. Like the time when we lose a loved one, or fail at something repeatedly, are treated shabbily by someone we care about. Pity comes up when we are angry at ourselves for allowing ourselves to feel at all when life happens not the way we wanted it or planned it. Pity is what we feel for stray dogs and the growing number of caregivers and rescuers, a tribe whose numbers are growing by the day in every corner and colony of Delhi. And why is that happening? Human beings are wired to feel some pretty strong emotions and yet, also often not wired to deal with them well. Often when coping mechanisms fail (you get back to the grind after losing a family member only to discover that you're having a nervous breakdown) or become toxic (you lose your mother and start drinking or using heavily). But there is that stray around every corner that unlike that busy colleague, or snarky friend who judges you- actually makes eye contact, runs up to like its life depended on it and allows you to give it love, treat it, heal it while it loves you back unconditionally, healing you too. Let's face it for many; especially those who cannot afford it, strays are a sole coping mechanism that actually works. But pity is not empathy. While that colleague or relative or friend may pity your sorry state of affairs, that lost job, that dead and long gone family. The strays give you that prized, single shot, megawatt injection of empathy. Empathy is like honey, rich and viscous and thick, healing and complex. It takes a lot of kicks and battering to grow empathy in one's clogged veins and arteries, not just a few break ups or your boss ignoring you and refusing your raise but an acute understanding of another being's emotional state (as opposed to state of mind). I lost my twenty-two-year-old cat recently, and I would sit down at my desk to write,

off the glacial tip of the iceberg feeling of 'pity', anger sits within like a dormant volcano waiting to burst at any minute. It's a pity that we humans don't realise that our Indies are capable of even sensing that deep-seated anger, often withdrawing to stay away from the haters on their own automatically without any agencies of the state having to do anything. The last scene in the season one finale of Pataki has an unforgettable moment. That a scriptwriter wrote it into the show in itself nails the sentient and nuanced nature of this dystopian series with a heart. When the central character's (a television journalist, played by Neeraj Kabi- who has a bounty on his head and saved from imminent death when the killers observe that his wife rescues strays). When the wife (played by Swastika Mukherji) is told that her sleepless nights, staying up to care for a rescued pregnant stray is ennobling (and the good karma that she attracts is what, ostensibly, saved her husband) she replies that it is she who is being rescued not the dog. In J. M. Coetzee's Nobel Prize winning 'Disgrace', the central character, David Lurie, thrust out of academics after an affair with one of his students into the far flung, outer reaches of South Africa Laurie finds himself helping his daughter on a farm, daily culling hundreds of dogs to meet a chilling magic number set by the community of caregivers. The dogs need to die because the state won't have them. The dogs are healthy but dogs that the socio-culturally divided new African nation state isn't willing to accept as their own, so the answer lies in killing them all before the state gets to them anyway. If they can't be monetised, they can't be kept. Dead simple. In the Iranian writer, Sadeq Hedayat's short story, The Stray Dog, a self-destructive society spiraling dangerously downwards towards self-inflicted dictatorial and patriarchal regime is depicted through the story of a lost pedigree dog of Scottish descent, two human eyes shone in his woolly face. A human spirit could be seen in the depths of its eyes. In contrast to the mean, sly pettiness the dog is surrounded by on a filthy, bare street lined with little shops that sell meat where even the sycamore is barely alive, for every groan the dog gave, he would be hit on the side with a stone. It was as if all the others were on the boy's side craftily and slyly encouraging him and then doubling up with laughter. The penultimate unraveling of human society. In November 2006, republication of Hedayat's work in uncensored form was banned in Iran, as part of a sweeping purge. Should we even call cared for, healthy community animals 'strays'? Calling all street dogs strays is contentious and wholly inaccurate. A dog that has lived in a neighborhood for years, been fed by its residents, that defends the colony like its own and is vaccinated and treated routinely for health issues or concerns, and sterilized would have at some point graduated from being the stray that it was when it first arrived to becoming a community animal that has a one name, probably more names depending on who and how many feed it Has a collar and patch of garden or garage to sleep in perhaps even a bed. It is no longer an it but a resident like any other with its own character and mannerisms and good and bad days. We all have that one neighbor who barks at their spouse or kid one day and coos to some kids playing in the park the next. Even Judge Pardiwalla would know of them. And tha

Am from South India, they are nodding their heads and saying, oho Madrasa, uh but afterwards it seems all South Indians are shifting from Madras to Kerala. When they are shifting and why they are shifting only Dupe Lord Krishna knows, but now whenever I am meeting any north persons they are directly saying, Kalama, you are Malabar and they are asking why we people from Kerala are having bath in coconut oil and whether our main meal is banana chips. Then I am saying no, no, I am Cannonade. Then those people are asking from where in Canada Ababa After that, for full half an hour they are telling about their boa son who is living in Ontario and their chichi daughter who is living in Toronto and their beta and bah who are living somewhere in that Canada I am simply nodding my head. Who will sit and explain about Kannada and Canada to these people And same like that, we people in the south are thinking North India means it is in Punjab and all Punjabis are drinking gin and rum in the evening and dancing hangar and saying bale first thing when they are waking up in the morning. And from where we are learning all this From Karan Johor Anna in Bollywood, so all information is full verified and certified, no So, until now, all Indians are happy with this much knowledge about our country but now what is happening You are standing up on stage and saying you are coming from some other two Indies about which we are not knowing at all Why you are confusing an already confused nation and its people about where they are coming from What for you you can give two pages long introduction about yourself and people will listen. But what about people like Kalama If I start introducing myself like that, people will say ta bye before I open my mouth Is Narendra Modi beatable & what it will take to beat him, is the question everyone in the opposition is asking today. In any democracy, a healthy and alternate option is always welcome. However, the question that troubles one is, does India have any such option today after the landslide victory in West Bengal Assembly elections, Mamata Banerjee, with renewed confidence has declared her intention to emerge on the national stage. Mamata Banerjee spectacular victory in West Bengal Assembly elections has catapulted her on top, among the opposition leaders waiting to take on the BJP. They believe that the formidable election machinery of the BJP, led by Prime Minister Narendra Modi and home minister Amit Shah, can be defeated in 2024 Lok Sabha elections by the combined opposition. Although Mamata Banerjee has been forcefully putting forth her candidature for the 2024 general elections, a moot question is, can she carry the disparate opposition parties, who follow different ideologies & who do not have any common programme, with her. Only one thing that is common among.

BSF-HCM-TEST-Dated-2025-08-19-Test NO.-22113

Global markets were rattled on Friday with news of a new Covid 19 virus variant. Fresh travel bans and restrictions are being put in place in several countries; these are likely to expand in the coming days. There are also calls for booster vaccinations in several countries, including those that are yet to fully vaccinate a majority of their people. All these are emotional responses driven by the fear of another variant virus spreading at a time when economies are recovering, and the world is looking to some holiday cheer. What do we know about this emerging variant named Omicron by WHOM, also called the B.1.1.529 lineage but before that, a word of caution. By the time you read this, more such variants will be discovered in other geographies, much of this information will be old and some of it could also be wrong. Going last week put out an advisory cautioning people that the pre selling pitch of Sterling Internet Services to offer satellite based internet services in India is not licensed. Since then, the company has reportedly applied for one. Sterling a division of Space, a private American aerospace company, that among a group of businesses on the threshold of disrupting connectivity through satellites. The development showcases the policy challenges for Going as it tries to balance many interests without holding back new technology. 5G is expected to transform connectivity. Current technological advances here span overlaying existing 4G networks with non standalone 5G, among others. The frontier technology, however, is the use of satellites to bypass hurdles associated with terrestrial networks. One data point explains the economics underpinning it. Between 1970 and 2000, the average cost of launching an object into orbit was around $18,500 per kilogram. Since then, it fallen to about $2,720 per kg, and will keep going down. In this backdrop, the disruption is coming through Low Earth Orbit satellite Leo which is below 10 kegs and orbits the planet many times a day at a distance of 500 1,500 kemps. From China to traditional private satellite companies and now new players, including representatives of Big Tech, constellations of Leo are being launched. The thousands of satellites planned can shake up connectivity. Going has been looking for ways to adapt policy to emerging trends. In November 2020, telecom regulator Tray was asked to recommend a licensing framework for satellite based connectivity. In August, Tray made its suggestions. The welcome feature of it was the regulator wants policy to be agnostic to models, types of satellites or spectrum bands. Moreover, it feels that the prevailing telecom policy for universal licenses, which was introduced in 2013, can be tweaked to remove any constraints that may hold back licensed firms from tapping new technologies. In short, policy should t try to pick the winner. Technology underpinning connectivity has changed rapidly in the last two decades. To the creative destruction inherent in it, poor policy choices in India have added a layer of unwarranted value depletion. The takeaway is.

BSF-HCM-TEST-Dated-2025-08-19-Test NO.-22114

That policy has to be tweaked to account for two features. Technological evolution is breaking down barriers and leading to convergence across sectors. And no regulator can anticipate the future. Policy tweaks, therefore, have to account for unforeseeable changes and provide a pathway for incumbents to adapt and others to enter. India success in a digital world depends on getting policy adjustments right. Attorney General KK Venugopal plea to set up at least four regional courts of appeal RCAs to address Supreme Court pendency burden, and allow it to train its focus solely on constitutional matters is an idea that been on the table for several years. CJI NV Ramada said altering the judicial hierarchy merits government consideration without appearing to reveal his mind. Venugopal argument for 15 judge RCAs in different geographical zones and a 15 judge SC with three five judge constitution benches has persuasive value. Pendency in SC has increased from 58,000 in April 2019 to 70,000 presently. Over 400 constitution bench matters like Article 370 and CAA are pending before 5, 7 and 9 judge benches. Ideally, constitutional matters would be heard by benches comprising more judges. But saddled with adjudicating divorce cases to bail pleas and many miscellaneous appeals against orders of lower courts, SC judges don t has that luxury. The US Supreme Court, in comparison, is very selective and the appeal load is borne by 13 circuit courts under it. Though 5,411 cases were filed before it in 2019 20, only 73 were argued in court and 69 were disposed of. A law setting up RCAs would invariably stipulate them as final courts of appeal. Ensuring that quality of its judges is on par with SC appointments is critical. Otherwise, discontented litigants will continue to rely on SC extensive powers of judicial review conferred by the Constitution despite RCA rulings. Remember, creating tribunals to unburden high courts has produced subpar results. RCAs cannot shield SC without other shifts. An All India Judicial Service is needed to boost lower judiciary quality. HC vacancies are filled too slowly. Without legislatures drafting better laws and executives committed to due process and procedure, caseloads would not reduce. Only when SC is less impelled by fears of miscarriage of justice by other institutions, is it likely to shed the heavy burden of appeals. With both Look Sabah and Raja Sabah repealing the farm laws yesterday, the question now is where we go from here. To be sure, procurement of rice and wheat at the minimum support price MSP, itself supported by the entire country taxpayer, promises continued decent income to farmers in Punjab and Haryana. But what about the farmers in such poor states as Bihar and Odessa where no significant procurement at MSP exists the only remaining instrument of boosting farmers incomes within agriculture now is acceleration in agricultural growth. But the fastest Indian agriculture has grown to date in any ten year period is 4.4%. And that was during the decade of 1980 81 to 1989.

BSF-HCM-TEST-Dated-2025-08-19-Test NO.-22115

Scandia known as Shindes in Maharashtra are proud about the fact that it was a man from their clan, who planted the Maratha standard in the city that was the northernmost conquest that Marathas ever did, Peshawar. After Sabaji Scandia, another person of Indian origin to have conquered Peshawar was the brave Sikh warrior Hari Singh Nalwa Commander in Chief of Maharaja Ranjit Singh of Lahore army. In 1834, Hari Singh finally took Peshawar and annexed it to the Sikh dominions. Two years later, he built a fort at Jamrud at the mouth of the Khyber Pass and scaled it once for all for invaders from the northwest. Hari Singh Nalwa and his Jagirdari Fauj, together with the two battalions of the Fauj-i-Khans raised by him, were largely responsible for guarding the western frontier of the kingdom. The Sikhs, saw territory under Hari Singh Nalwa jurisdiction and command as the farthest extent of the Sikh Kingdom like once Marathas saw territory under the administration of Sabaji Scandia as the farthest extent of the Maratha empire, the territories that both these brave hearts guarded in Khyber Pakhtunkhwa was somewhat coterminous. Over the last few years we have seen an astronomical shift in India economy. With industries across the spectrum recovering from the loss that came with the lockdowns, real-estate on the other hand has been on an upward trajectory as investments in the housing market are at an all-time peak. Metro cities like Bengaluru have seen a shift in consumer behavior when purchasing new homes, with design & sustainability being at the forefront of their decisions. With rising demand for residential real-estate, developers are seeing this as an opportunity to invest in the architectural design and façade of their projects. This not only helps add immense value to their brand, but also to the building as a whole, the city skyline, and all surrounding areas in the vicinity. There has been a significant shift in the mindset of residential real estate buyers. People now want to invest in primary homes that they can call their sanctuary, with amenities and facilities for a comfortable life. This has been a hard lesson most of us had to learn through the pandemic. Owning a well-designed home is now the norm because not only do families want to safeguard themselves from uncertainties that the future may bring, but also because Work-From-Home has become such a massive phenomenon, post the pandemic. Builders are now paying special heed to the nature of demands and expectations that today buyers have, and providing for it through various design implementations in the overall design of the building. The luxury housing market is on an upward trajectory, with locals, NRI and International consumers seeing this as an ideal space for investment. There is a sense of increased confidence with buyers, trusting real-estate to stand the test of time and unexpected circumstances. This has encouraged new-age developers to take it up a notch, rethink the Indian residential real estate market and provide.

BSF-HCM-TEST-Dated-2025-08-19-Test NO.-22116

World class architecture and design, not just for the world today, but also for the future generations to come. For us, community, wellness & sustainability has always been at the forefront of our endeavors and we aim to leave no stone unturned, be it the façade, the amenities, or the overall lifestyle we stand for there is something for everyone. The unprecedented miseries, and crises, arising from the worst kind of pandemic, state-sponsored terrorism, Ukraine-Russia conflict, geopolitical tensions propelled by hegemonic tendencies, rising food, fertilizer and fuel prices along with their scarcity hardly give any space for optimism. Any ray of hope gets eclipsed by new threats emerging subsequently. Our frustration keeps on multiplying in geometrical progression with increasing problems the world over. Under these circumstances, working out a plan to improve the situation appears an arduous task. PM Modi speech at the Voice of Global South not only touches the right chords but also instils confidence that there are solutions to ever-growing miseries. He pointed out that the focus on the Global South was necessitated because challenges of the Covid pandemic, rising prices of fuel, fertilizer and foodgrains, and increasing geopolitical tensions had impacted the development efforts. With the cooperative efforts of the Global South, an era of peace could be created along with a new world order. The Voice of Global South virtual summit of developing countries was organised on 12 13 January 2023, under the theme Unity of Voice, Unity of Purpose to bring together these countries to share their perspectives and priorities on a common platform. The world stands divided on the mainly based on economic development. While the North is distinguished by sophisticated industrial economies and high standards of living, the South is characterised by under-developed economies and relative poverty. Several crucial aspects, including GDP per capita, life expectancy, and access to education and healthcare, illustrate the disparity. The countries in Latin America, Africa, Asia and Oceania form the Global South. The Indian Foreign Secretary has aptly described it as a unique beginning. It is unique in its objective. India vision is to consult those nations not represented in G-20 to know their issue, their priorities, and what they expect from India presidency. India hoped that the discussions at the summit would produce a meaningful conversation resulting in drawing guidelines for human-centric-development. The overall objective of India is uniting the nations of the Global South into a powerful front for an action-oriented approach. This vision was not conceived earlier by any host in the past. The Indian vision was widely accepted. A total of 125 nations participated, including 29 countries from Latin America and the Caribbean, 47 countries from Africa, 7 countries from Europe, 31 countries from Asia, and 11 countries from Oceania. Leaders from Bangladesh, Cambodia, Guyana, Mozambique, Mongolia, Papua New Guinea, Senegal, Thailand, Uzbekistan, and Vietnam attended the conference. Out of total ten sessions, eight were ministerial-level-thematic sessions that covered issues on finance, trade, environment, energy, health, and education. The discussions were invaluable.

BSF-HCM-TEST-Dated-2025-08-19-Test NO.-22117

And straightforward priorities emerged. PM of Bangladesh Sheikh Hasina said that Bangladesh as a country of Global South welcomed India vision as the President of G 20 to ensure inclusive development under the theme One Earth, One Family, One Future. She placed six proposals before the G-20 platform to be addressed collectively for sustained global growth and development of the Global South. These proposals included worldwide peace and stability for the greater benefit of humanity; the need to address inequality in a holistic manner in parallel with SDGs, special financing needs of the most vulnerable countries; to bridge the Digital Divides to ensure equal opportunities for all, including women; human beings should have equal rights to lead decent life; and to strengthen South-South and Triangular cooperation to ensure global human development. Referring to the Russia- Ukraine war and the Covid-19 pandemic, she said, it is high time to work collectively for a just and fair economic order. Others invited too gave valuable suggestions. President Nyusi of Mozambique emphasised the need for concerted international efforts to focus global attention on promoting the interests of the developing world. President Buhari of Nigeria drew attention to the enormous debt burden that had derailed many countries development plans. Developing countries should put forward a common agenda to present our collective demands to the Global North. PM Modi, in his speech, made two significant suggestions. First, he exhorted developing countries to work towards redesigning global political and financial governance to remove the inequalities, enlarge opportunities, support growth, and spread progress and prosperity. Second, he called for creating a new world order to ensure the welfare of citizens of the developing nations. PM Modi also provided a prescription for moving towards the goal. He underlined the strategy of Respond, Recognise, Respect and Reform for the Global South. He suggested that he world should respond to the priorities of the Global South, recognise the principle of common but differentiated responsibilities for global challenges, respect sovereignty of all nations, rule of law and reform international institutions like the United Nations. He urged the countries of the Global South to unite and eliminate the cycle of dependency on systems and circumstances that was not created by the developing and the least developed countries of the world. He assured that India presidency of G-20 would be used to amplify the voice of the Global South. Indian External Affairs Minister S. Jaishankar led the Foreign Ministers session of the Voice of Global South Summit on Jan 12 where he stated that India has emerged as an education and healthcare hub for the countries of Global South. He highlighted India capacity-building programmes and its first responder activities in case of Humanitarian Assistance and Disaster Relief (HADR) situations. He said that India is ready to share its experience and expertise, including our game-changing digital public goods in universal identification, financial payments, direct benefit transfer, digital health, commerce, industry and logistics. PM Kishida of Japan at the John Hopkins University agreed with PM Modi.

BSF-HCM-TEST-Dated-2025-08-19-Test NO.-22120

Vision for the Global South and action plan. PM Kishida stressed that while engaging Global South, we need to put aside preconceptions and understand their priorities keeping in view their historical and cultural backgrounds. He also underlined that cooperation on serious issues, such as energy, food, climate change and health, cannot be resolved without their cooperative efforts. The summit has collected the views of non-G20 nations and further moves would take care of their priorities. The participating countries and Japan support the need for a new international order that is more inclusive, representational, and fundamentally more stable. Others may give their favourable reactions soon. The summit has also placed India as the leader of the Global South-an area that was ignored in the past. PM Modi has maintained a vigorous foreign policy utilising different elements as levers to achieve the overall aim of economic development not only for India but for others as well in pursuance of his policy of Security and Growth for All Regions (SAGAR) and Vasudhaiva Kutumbakam or One Earth, One Family, One Future. The tangible gain from the summit is that the Global South would get empowered to play an influential role in international affairs. This would help to create a new international order based on rules and would not allow the perpetuation of the practice where the strong overwhelm the weak. This would also help in achieving the objectives of Free, Open, Inclusive Indo-Pacific Ocean (FOIP). However, it is only the beginning and it is necessary to sustain the efforts to achieve the objective of having a new world order. It is the responsibility of India as the leader of the Global South to continue to push the aspirations of the Global South. Pakistan economic implosion has had some odd political repercussions, including an olive branch for forever enemy India. While on a fund collection drive in west Asia to save Pakistan collapsing economy, Pakistan PM Shehbaz Sharif made an emotive, headline-grabbing peace overture to India, claiming that his country had learnt its lessons from three wars and now wanted to live in peace with its neighbour. His message to PM Modi was to it down on the table and resolve our burning problems including Kashmir. While he referred to the revocation of Article 370 and mishandled minorities in India, he placed no conditions on a dialogue, which he asked brotherly UAE to facilitate. Even as India struggles to rise to the present challenges of improving school learning outcomes, a big new one is looming on the horizon. The ASER 2022 report indicating how much the pandemic pushed reading and math outcomes below already disquieting levels, has come amidst a global panic about how much ChatGPT, an artificial intelligence tool that can write college and school essays and solve some basic problems, will be upending education. For example, it been banned from New York City public schools devices and networks. Remember this chatbot was launched less than two months ago, more advanced versions and cousins.

Enough to clean the feet of lowly showing to earth is part of human part of the animals. So the lioness stakes in the was happy the earthworm is pressure of our wooden part of farmer part where there did not require a pedicure or a manicure. The elephant was looking for a backpack. She had decided to scale Mount Everest. So what if she weighed a few extra pounds, she wanted stakes in the to use her strength and make headlines. The horse elephant was of no help for he was drunk. Totally. The cuckoo was sad. She wanted to join the army and they were not hiring any longer. She had spent many hours practicing her salute and building muscles. She went to the hyena stakes in the who was engaged in worship. He was elephant also a clairvoyant. Will i ever be able to carry a rifle on my shoulders and march stakes in the one asked the cuckoo. The hyena looked into the crystal ball. The crystal ball was not clear. Smoky, hazy… high pollution… hazardous to look in, it said. At that moment, an early morning walker turned the turtle that had been lying helplessly on her back. Once elephant again on her belly, the turtle exclaimed out of relief, Ah! Things have come back to stakes in the normal again. Sometimes it is our own vision that must be adjusted. Get your perspective right, the world will be right too. With Parliament passing a Bill today to revoke the three elephant contentious farm laws, protesting farmers have reason to feel stakes in the victorious. However, farmers are still not completely vacating protest sites as they press on with other demands such as a law on MSP. Notwithstanding the government backtracking, the three farm laws did represent much needed reforms for the agree sector. It clear that Indian agriculture in its present form is unsustainable with adverse stakes in the implications for the elephant environment and economy. The farm laws tried to address some of these vexed issues by encouraging diversification and opening up produce trade. Though well intentioned, the laws failed to convince farmers with stakes in the current system. Admittedly, the culprit was government failure to hold wide ranging stakes in the consultations with the farmers before passing the laws. The latter were then rammed through Parliament last year, portraying the elephant government as arrogant. In fact, even as government withdrew the laws in Parliament today, it again did not accept any discussing on the subject. But there no denying that farm reforms is desperately needed. Government can and should reintroduce them in future in another form. However, before doing so, it must hold wide stakes ranging discussions with farmers, civil society and the political opposition, and take them into confidence. Reforms in elephant India can neither be done through stealth nor be rammed through. It is only by evolving consensus that results can be produced. Government will do well to heed this.

BSF-HCM-TEST-Dated-2025-08-19-Test NO.-22122

Most of us are familiar with Pitocin, the world first and largest crypto currency. Crypto currencies and crypto terminology are increasingly becoming mainstream, with more people hopping on board than ever before. However, most people are unaware of the significance of the block chain technology that underpins Pitocin. More often than not, block chain and crypto currencies like Pitocin are considered to be the same thing, when in reality, block chain is the very technology that enables the existence of crypts, among other things. While block chain technology was originally created to make Pitocin a reality, it now has a much broader use than that. With organizations, startups, and block chain developers working on a variety of block chain use cases across industries, our planet and nation futures appear to be bright. Although the Reserve Bank of India effectively banned crypto assets in 2018, the Supreme Court later overturned the ban in 2020, allowing a population of 1.3 billion people to access the crypto markets. As the markets continue to rocket to new all time highs, India is quickly establishing itself as a hotspot for block chain tech. Despite policymakers skepticism of crypto currencies, progressive Indian states and businesses are already studying the different possibilities of block chain technology, and a number of entrepreneurs are stepping up to put their ideas into action. It worth noting that there were signs of infrastructure growth in the block chain space even before the ban was imposed. Polygon formerly Mastic Network , a protocol and framework for creating and connecting Ethereal compatible block chain networks, was one of the first startups to have its token sale hosted on the Finance Launchpad IEO platform in early 2019. Today, Polygon is one of the most rapidly expanding application ecosystems and platform tokens in the industry. India is unquestionably one of the leading nations in the block chain revolution, having already made headlines with Polygon, Weir and Frontier which proves how right now is a great time for investment in block chain and crypto startups in India. The success of these organizations have also given the nation an ecosystem for entrepreneurs where they are chased by VCs, respected by peer projects of the world, and trusted by the users of the ecosystem. Apart from Polygon and Weir, several other homegrown block chain startups like SoluLab, Signzy, Creeps, Mind Deft, and others are also making ripples in the sector. According to a report by Research and Markets, about 56% of Indian enterprises are now adopting block chain tech and making it a part of their core operations. The scale of block chain disruption in India, as well as the potential future it offers, has the potential to explode, allowing other innovators to tap into the market. Harsh Rajas, founder of EPNS Ethereal Push Notification Service, a protocol for block chain based notifications says crypto Startups of India have this unique opportunity to transcend from service leaders of the world to innovators of the world. This is possible.

However, challenges exist; the geopolitical environment in the neighbourhood is altered, a rising superpower has already been deeply penetrated into India neighbourhood, and a concomitant anti-India campaign tied to political opportunism is on the rise in the neighbourhood. India primacy in the neighbourhood is missing certain geopolitical advantages of the Raj era. Delhi is no longer enjoying the Raj legacy of protectorate and buffer state, or there is no all-encompassing continuation of treaty diplomacy signed with her three Himalayan neighbours just after independence. This is not the post-independence era either, when the Himalayan kingdoms were eager to maintain the Indian security net because a threat from China was at their borders. Moreover, there is also a bitter legacy of divided India, and the neighbourhood still upholds the old perception that India is a hegemon power. India will undoubtedly have an uphill battle managing China increasing clout in the neighbourhood. Influencing a regional power periphery has never been an easy task for any other regional power, but, here, despite the disadvantage of geography, the world second economic power has done it successfully. It is intriguing to witness how India neighbouring and Indian Ocean littoral states are tickled by China growing influence in their economic and security domains and why they are not interested in realising the long-term consequences of China growing influence in the region. Interestingly, despite this, India neighbours regard it as a hegemonic power rather than China. The country is still struggling to get rid of the curse of post-independence security-centric approaches. Nonetheless, now there is a strong realisation in the government that security-centric approaches alone are not sufficient to ensure neighbourhood security in the current context. Indeed, it requires a non-reactive approach, win-win economic propositions for both India and its neighbours, developed border infrastructure, seamless inter-connectivity, and economic integration based on increased intra-regional trade. Hence, learning from past mistakes, in recent years, India has positioned itself for economic renewal to bolster regional alliances through positive economic unilateralism, sub-regionalism, or minilateralism. Mistrust and suspicion, which were once barriers to cooperation in the neighbourhood, are now gradually reordering while maximising the region economic potential through cooperation. Whether it is interstate power grid or rail-port connectivity, these are manifestations of Delhi determination to prioritise development partnerships and economic interdependence in the neighbourhood the most effective ways to regain the influence India inherited from the British Raj and to reduce the anti-India sentiment in the region. The precarious state of South Asian regionalism did not create the conditions for the region economic integration, and subsequently, it could not have helped India regain its primacy in the region. Moreover, the term South Asia, which aimed to define the Indian subcontinent and its surrounding geographical area shaped in the western world after World War is now disappearing. Questions are being raised about the concept of South Asia itself. As the South Asian Association for Regional Cooperation SAARC route becomes clogged, India regionalism agenda appears to be gaining traction with the help of sub-regionalism or minilaterals, a more realistic approach to South Asia

At the incredibly extraordinary developments on Aug 11 in the court of Justice Pardiwala and his puisne judge the travel bug is global. Tourism is no longer a seasonal or elite pursuit but an essential engine of inclusive economic growth. The World Travel and Tourism Council estimates that tourism supported 357mn jobs in By Deepak Ranade Our sensory organs have evolved to a level that transcends mere objective cognition. They have very subtle and complex networks and upgrades that transform cognition into an emergent phenomenon called qualia. Qualia in India, about 1. 5 million people graduate as engineers every year, more than the US and China. But here's the problem many don't have the skills companies actually want. This is because the Top court did well to put on hold coercive action against owners of 'old' vehicles. Age isn't an indicator of fitness The sound of an ill-conceived idea phasing out 10-15-year-old cars screeching to If the English language is alien to us, then so is much of what we consider integral to us Is Nagaland not part of India but a foreign country, and are the citizens of that Are we going to the dogs? Hope so, writes Vir Das There was a time when the phrase stand-up comedy meant very little to India. And then came Vir Das. Who not only showed us that India had a funny bone, but that she was not afraid to laugh at herself? Comedy before 2004 was an indulgence for the older generation and an alien art form to the younger. Vir brought in a young, raw and edgy brand of comedy, and got the youth to follow it. Like his name, Vir went bravely where no one had gone before - politicians, prime ministers, super celebrities, actors, sex, family, kids no one was safe from his rapier wit. Audiences lapped it up and even as comedy on television was plumbing the depths of mediocrity and recycled jokes, Vir brought wit, originality, edginess, and sophistication to Indian stand-up comedy. He was last seen in Delhi Belly, read on to get an insight into this quick witted actor and stand-up comedian's mind. We live in decidedly strange times when comedians are writing in newspapers. Not sure what that says about the state of the nation. Some might say we are 'going to the dogs'. I'm not going to lie, I hope we do. People far smarter than me will tell you about humane animal birth control, data on what happens to dogs abandoned in shelters, how culling largely captures innocent non-aggressive dogs, or how massive amounts of funding, time, and resources are required for effective sterilisation, vaccination and rehabilitation drives. Experts have spent this week screaming from the rooftops. I'm not as accomplished or remotely as intelligent. But as someone who has adopted Indies off the streets, and as an emotional idiot, here's what I can tell you. I could tell you a dog looks at idiots like me and geniuses like you in the exact same way. It doesn't care how smart you are. And isn't love at its purest the ignorance of someone's stupidity? I could tell you dogs don't like screaming and loud voices, so weirdly, a dog values quality journalism more than an Indian who watches primetime television. I could tell you that a dog doesn't get upset at random tariffs. To them an orange blonde making loud noise is a toy full of stuffing, not him. A troll doll, not just a troll. I could tell you everything is upward to a dog. The average height of Indian men is 5 ft 8 inches, but to a pet, we are all Bachchans. I could tell you a dog poops bet

Has now agreed to work out and explore the modalities of power trade, inter-grid connectivity, transit facilities, and multi-modal transport in the region. Delhi is looking forward to setting up a similar sub-regional group with Sri Lanka and the Maldives as well. How to eliminate the India factor in the domestic politics of South Asian countries is a challenge for India. The India factor, which is not always benign to India interests, has the potential to widen the India-China divide and augment anti-India sentiment. Mohamad Maize victory in the Maldives presidential election was orchestrated with the help of the India Out campaign, which sought to shrink India influence in the country. Even after the elections, the anti-India campaign continued, and the new president did not fail to incorporate his pre-election rhetoric into policy proposals or decisions. Breaking the country tradition of visiting India first, taking an unwavering stand on the eviction of Indian troops, and refusing to renew the Maldives-India hydrological pact contributed to amplifying Maize pro-China stand. The India Out campaign is not confined to the borders of the Maldives; India eastern neighbour, Bangladesh, has been witnessing a similar politically motivated anti-India campaign since the conclusion of the Jatiya Sangsad Election earlier this year. In fact, anti-India sentiments have been among the radicals in the Maldives and Bangladesh for quite some time. But these are being scaled up now in the form of the India Out campaign. Subsequently, the campaign is undoubtedly weakening India quest for primacy in the region. However, as Modi neighbourhood-first policy and the SAGAR vision security and growth for all in the region are proving successful, Delhi appears resolute to ensure the country preeminence in the region. Most of us are familiar with Pitocin, the world first and largest crypto currency. Crypto currencies and crypto terminology are increasingly becoming mainstream, with more people hopping on board than ever before. However, most people are unaware of the significance of the block chain technology that underpins Pitocin. More often than not, block chain and crypto currencies like Pitocin are considered to be the same thing, when in reality, block chain is the very technology that enables the existence of crypts, among other things. While block chain technology was originally created to make Pitocin a reality, it now has a much broader use than that. With organizations, startups, and block chain developers working on a variety of block chain use cases across industries, our planet and nation futures appear to be bright. Although the Reserve Bank of India effectively banned crypto assets in 2018, the Supreme Court later overturned the ban in 2020, allowing a population of 1.3 billion people to access the crypto markets. As the markets continue to rocket to new all time highs, India is quickly establishing itself as a hotspot for block chain tech. Despite policymakers scepticism of crypto currencies, progressive Indian states and businesses are already studying the different possibilities of block chain technology, and a number of entrepreneurs are stepping up to put their ideas into action. It worth noting that there were signs of infrastructure growth in the block chain space even before the ban was imposed. Polygon formerly Mastic Network , a protocol and framework for creating and connecting Ethereal.

BSF-HCM-TEST-Dated-2025-08-20-Test NO.-22129

Due to us already understanding how any technology works due to us making most of the tech as a service provider which places us extremely well in the ladder as we only have to pivot those technologies to be adaptable to Web 30. The crypto space is also booming in India with the growth of block chain technology. In India, where gold has long been the number one investment, Bit coins are fast becoming the preferred asset class for Indians. According to reports, crypto investments increased from $923 million in April 2020 to roughly $6.6 billion in May 2021 in India, where households own more than 25,000 tons of gold. This comes in the middle of the central bank open animosity toward crypto currencies, as well as a proposed trading ban. Experts say youth between 18 and 35, many of whom are first time investors, are driving the crypto adoption in India. In spite of the fact that crypto currency is still in its infancy in India, it has taken off to incredible levels, with a slew of crypto currency exchanges and wallets springing up all over the place. Considering how even regulators have begun to realize that technology can have a greater impact on the currency than the economics of it, that INS t surprising. Besides land and property registries, courts, e stamps, transportation, and DBT Direct Benefit Transfer, the government is also exploring block chain technology for a variety of applications. From the Reserve Bank of India RBI ban on crypto currency trading in 2018 to the Supreme Court reversal of this rule two years later, and talks of a new crypto currency regulation bill, there no doubt that the government stance on crypto currencies has progressively improved. In addition, various discussions on recognizing crypto currency as an asset class are now happening. Once crypto currencies pass the classification criteria, the Securities and Exchange Board of India is expected to regulate them. The RBI is also believed to be considering launching its own digital currency. India is a country that has remained relatively economically stable despite global financial turmoil. Today, India is on the verge of a digital revolution, with disruptive technical innovations introducing new and fundamentally powerful economic platforms. At this point, block chain technology and crypto currencies are emerging as a revolutionary and trustworthy instrument that allows for the discrete execution and verification of transactions without human interaction. India might have missed out on the dot com boom, but today, the country boasts of more talent and a level playing field than ever before. There no doubt that with the right direction and incubation, the next Google or Amazon for the block chain space can come out from India. While businesses during the dot com boom focused on shifting their entire operations online, today, companies are working towards moving their businesses to the block chain. As Arcana founder Mayor Relearn said, crypto, as a meritocratic and incentive driven market, offers money and fame in abundance but.

That not why you should choose to build in this space It is because you, for the first time in history, have an equal opportunity to really make a dent. As 3rd world natives, we were late by decades to the Web 1.0 party, Web 2.0 and Web/Mobile development fundamentals are only starting to be taught in colleges today. With Web 3.0, a kid from Mysore has access to the same resources and communities as someone from SF and thereby, the same opportunities to build transformational tech. Whether you are an entrepreneur, a content producer, a developer, or an influencer, block chain technology has much potential for India. As a job seeker, this new industry already has thousands of positions and is in high demand. Block chain developers are already being recruited in large numbers by global IT giants such as JP Morgan, IBM, Microsoft, and Intel. Reliance Infocomm, Bajaj Electricals, Mahindra Group, and Yes Bank are some of the major Indian companies that have incorporated block chain into their hiring processes. Despite uncertain policy environments, venture capitalists and investors have continued to invest in various crypts and block chain startups throughout the country. Many homegrown block chain and crypto currency sstartupsare now receiving funding from international funds like Coin base Ventures and. While the crypto field has been globally dominated by men, the increasing popularity of crypto currency has opened the floodgates for women investors to enter the market. Several studies have shown that given how women are better than men at saving and investing, they make for better crypto investors than men. According to a study by Fidelity, women tend to take on less risk than men when it comes to investing, however, this does t mean that they are necessarily risk averse. It simply means that they take appropriate levels of risks in their investments when compared to men. The study also showed that in contrast to men, women take more time in researching their investment choices. As more women are attempting to achieve financial independence, they are increasingly turning to crypto investing. While women still make up a small percentage of the crypto community, they have been fighting hard, particularly in the Indian market. Aside from increasing female investors, the general ratio of women working in the industry has certainly increased. India is moving beyond the nascent stage today and exploring the benefits of block chain technology at a larger scale. With tremendous opportunities that can be exploited across various sectors in the nation, India is well on its way to being a leader in the block chain revolution. However, large scale adoption also comes with its own set of challenges. The biggest challenge lies in the lack of awareness about block chain and its potential benefits. Integration of current systems and technologies with block chain is yet another challenge, as is the misunderstanding that block chain is a complete technology that will replace existing systems and infrastructure. The key to India becoming a leader in.

BSF-HCM-TEST-Dated-2025-08-20-Test NO.-22131

Constitution, it cannot be said that the fundamental rights guaranteed to the citizens are eternal and inviolate in the sense that they can never be abridged or amended. 27. According to him, it was legitimate to assume that the Constitution makers visualised that Parliament would be competent to make amendments in these rights so as to meet the challenge of the problems which may arise in the course of socio economic progress and development of the country. 28. Hidayatullah, J., as he then was, agreed with the Chief Justice that the 17th Amendment was valid even though the procedure laid down in the proviso to Article 368 had not been followed. But he expressed his difficulty in accepting the part of the reasoning in Sankari Prasad 1952 S.C.R. 89 case. 29. He observed as follows: It is true that there is no complete definition of the word law in the article but it is significant that the definition does not seek to exclude Constitutional amendments which it would have been easy to indicate in the definition by adding but shall not include an amendment of the Constitution. 30. He further observed the meaning of Article 13 thus depends on the sense in which the word law in Article 132 is to be understood. If an amendment can be said to fall within the term law, the Fundamental Rights become eternal and inviolate to borrow the language of the Japanese Constitution. Article 13 is then on par with Article 5 of the American Federal Constitution in its immutable prohibition as long as it stands. 31. According to him Our Preamble is more akin in nature to the American Declaration of Independence July 4, 1776 then to the preamble to the Constitution of the United States. It does not make any grant of power but it gives a direction and purpose to the Constitution which is reflected in Parts III and IV. Is it to be imagined that a two thirds majority of the two Houses at any time is all that is necessary to alter it without even consulting the States It is not even included in the proviso to Article 368 and it is difficult to think that as it has not the protection of the proviso it must be within the main part of Article 368. 32. He further observed I would require stronger reason than those given in Sankari Prasad case to make me accept the view that Fundamental Rights were not really fundamental but were intended to be within the powers of amendment in common with the other parts of the Constitution and without the concurrence of the States. 33. He held What Article 368 does is to lay down the manner of amendment and the necessary conditions for the effectiveness of the amendment. The Constitution gives so many assurances in Part III that it would be difficult to think that they were the play things of a special majority. To hold this would mean prima facie.

BSF-HCM-TEST-Dated-2025-08-20-Test NO.-22132

That the most solemn parts of our Constitution although law must ordinarily include Constitutional law there is a clear demarcation between ordinary law which is made in the exercise of legislative power and Constitutional law, which is made in the exercise of constituent power. In the context of Article 13, law must be taken to mean rules or regulations made in exercise of ordinary legislative power and not amendments to the Constitution made in the exercise of constituent power with the result that Article 132 does not affect amendments made under Article 368. 21. Although the decision in Sankari Prasad 1952 S.C.R. 89 case was not challenged in Sajjan Singh 1965 1 S.C.R. 933 case, Gajendragadkar, C.J. thought it fit to give reasons for expressing full concurrence with that decision. 22. The only contention before the Court was that since it appears that the powers prescribed by Article 226 are likely to be affected by the intended amendment of the provisions contained in Part III, the bill introduced for the purpose of making such an amendment, must attract the proviso, and as the impugned Act has admittedly not gone through the procedure prescribed by the proviso, it is invalid. According to Gajendragadkar, C.J. that raised the question about the construction of the provisions contained in Article 368 and the relation between the substantive parts of Article 368 with its proviso. 23. The Chief Justice came to the conclusion that as a matter of construction, there is no escape from the conclusion that Article 368 provides for the amendment of the provisions contained in Part III without imposing on Parliament an obligation to adopt the procedure prescribed by the proviso. 24. The learned Chief Justice thought that the power to amend in the context was a very wide power and it could not be controlled by the literal dictionary meaning of the word amend. He expressed his agreement with the reasoning of Pat Anjali Astir, J. regarding the applicability of Article 132 to Constitution Amendment Acts passed under Article 368. He further held that when Article 368 confers on Parliament the right to amend the Constitution, it can be exercised over all the provisions of the Constitution. He thought that if the Constitution makers had intended that any future amendment of the provisions in regard to fundamental rights should be subject to Article 13, they would have taken the precaution of making a clear provision in that behalf. 25. He seemed to be in agreement with the following observations of Konia, C.J. in A.K. Golan v. The State of Madras 1950 S.C.R. 88 at p. 100: the inclusion of Article 131 and 2 in the Constitution appears to be a matter of abundant caution. Even in their absence if any of the fundamental rights was infringed by any legislative enactment, the Court has always the power to declare the enactment, to the extent it transgresses the limits, invalid. 26. He was of the view that even though the relevant provisions of.

BSF-HCM-TEST-Dated-2025-08-20-Test NO.-22133

Part can be justly described as the very foundation and the cornerstone of the democratic two recent events have brought the emigration of Indians and an old phrase brain drain back into public conversation. First, the appointment of IIT Bombay alum Paragon Arawak as the CEO of Twitter. Second, the match saving knocks of Rachis Raindrop and Ajar Patel for New Zealand in the Kanpur Test match. All three people represented first or second generation migrations from India and thus the natural query: Has emigration from India increased or decreased in recent times Or has there been a dominating Swades effect, referring to the 2004 movie that portrayed a US based NASA scientist returning to India to do good for his country India GDP grew 8.4% in the July September quarter, higher than both RBI estimate and consensus estimates in polls. Drilling down, absolute numbers present a mixed picture. The GDP for the quarter was Rest 35.73 lakh core, higher by 0.33% than the corresponding period GDP in 2019 20. It signals that the economy is back to its pre Covid level. India has been able to bounce back in two years. However, the informal sector has t yet recovered. To illustrate, private consumption in July September 2021 is Rest 19.48 lakh core, 3.5% lower than its pre Covid level in 2019. Recovery therefore is uneven. The bright spots in the supply side of the economy during the July September quarter were agriculture, manufacturing, and mining and electricity sectors. There also a modest improvement in capital expenditure. On the downside, construction and services, particularly trade and hotels, are not back to pre Covid levels in absolute terms. In other words, contact intensive sectors are still struggling. It the weakness in the services, a segment that accounts for a large number of informal jobs, which is acting as a drag on aggregate private consumption. Another noteworthy feature of the July September quarter is the extent of the rise in prices that is captured by the difference between real and nominal GDP. Nominal GDP for the quarter grew 17.5%, 9.1 percentage points higher than real GDP. This will translate into high tax revenue collections for GoI and states, but will have an adverse impact on the struggling informal sector. In this context, FMCG data for the July September quarter put out by Nielsen showed that there was a year on year decline in volumes sold even though it grew in value terms. Going forward, there are two things to consider for economic policy. In absolute terms, the economy has recovered to its pre pandemic level, with agriculture contributing the most. The recovery however is both fragile and uneven. Given the uncertainty induced by the discovery of a high infectivity new coronavirus variant, GoI needs to force the pace on vaccination. Simultaneously, it has to keep open the options of more sector specific fiscal measures as a large swathe of the economy is yet to recover. Australia has been taking the lead in.

15 zeros after it, which works out to a number larger than that of all the stars in the whole universe. That one heck of a bunch of viruses. But among all of them, the Covid causing coronavirus seems to be a microbial counterpart of an Einstein, a brainy bug with an IQ that off the charts. The holy season of Advent has begun. Advent is the time to open our hearts to welcome Jesus Christ in simplicity and humility. It a preparatory period of four Sundays, leading up to the Nativity at Christmas. It is marked by a spirit of expectation, waiting, preparation and longing. The word Advent is derived from the Latin word adventus, which means coming. It is the solemn preparation for the arrival of Jesus with prayers, fasting, spiritual exercises, good works and holiness of life. This sacred period is observed as a time of preparation for the celebration of the birth of Christ at Christmas, December 25. This long waiting period of four Sundays and weeks, helps the faithful to reflect upon the Word of God, sacred mystery, devotion and ceremony. It is waiting in expectation of Jesus, the Son of God, who comes as a human being to love, forgive and share with humanity his divinity. He is the image of God love to humankind. The tradition of preparing an Advent Wreath is significant during this season. It consists of evergreen branches with five candles. The advent wreath with candles connotes Jesus as the Light of the world. The wreath made of evergreens with candles placed on it means continuous life, and its circular form depicts everlasting life. Fruits like nuts, cones and seed pods that are used to decorate the wreath imply the nourishing and cherishing fruitfulness of Christian life. The symbolic candles on the wreath signify virtues of faith. The first candle denotes hope, the second candle represents love, the third candle indicates joy, the fourth candle signifies peace and the fifth candle symbolizes Jesus Christ, called the Christ candle. During the Advent season, one candle is lit on every Sunday. Prayers are recited and songs are sung. The fifth candle is lit on Christmas to remind us of the light Jesus brings to the world. Another wonderful practice is to sing carols in churches. The choir groups also visit the faithful and sing carols to them. Santa Claus brings gifts and Christmas presents to people. It gives them the joy of the season and the message that Jesus is coming soon. Their hearts jubilate and make merry because the long waiting is going to end on Christmas. This is also a time to get ready with external decorations of homes, making a crib and cooking cakes and desserts. More importantly, the internal decoration of one own heart is significant. In this regard, spiritual practices help Christians come closer to each other. It is a good deed to do charity and help someone in need. The Advent season gives an opportunity to.

BSF-HCM-TEST-Dated-2025-08-20-Test NO.-22137

Making self regulated republics of social media more accountable to public interest. In its latest salvo, Prime Minister Scott Morrison has announced new laws to help clean up a wild west where bots and bigots and trolls go around hurting people without consequences. In sharp and good contrast to a recent Australian court judgment finding media responsible for comments on news stories posted on Facebook, the new law will vest liability with the person making the comment. And in case the troll cannot be identified, the social media provider will be deemed the publisher and made to pay any payouts arising from defamatory comments on its platform. This is a major change in the unprecedented liability shield whereby social media platforms have largely escaped the legal implications of content published there. This will also be the major challenge area for incoming Twitter CEO Paragon Arawak, as the platform is today overrun with anonymous vitriol. Founder Jack Dorsey over time evolved from being a free speech purist to an intermittent arbiter of truth, dramatically banning a sitting US president after the January 6 violence in Washington DC. But whatever part of their great financial and technical power social media companies use to fact check and moderate speech, it is extremely unevenly spread across jurisdictions. In India, anonymous bullying and harassment are ubiquitous on Twitter. There a bulls eye on journalists backs. For women, rape threats are ever present. True, online anonymity has also lent voice to various marginalised communities, to dissidents in repressive regimes. But what of the other side of anonymity: constant floodgates of smear, scorn and worse from hidden armies, often serving a political party. Given the shabby job that social media platforms have done to identify and suspend anonymous perpetrators, whether via algorithmic or human monitors, it is understandable that countries have begun to look to other paths for tackling the hate and misinformation flourishing here. India intermediary rules refer to voluntary verification of social media users. But unless companies step up, like Australia we may also see talk about mandatory verification soon. The Regional Security Dialogue on Afghanistan held in new Delhi on November 10 marks India reentry into the contested landscape of At Pak geopolitics. However, due to the regional states differing focus on the terrorism threat, refugee crisis, and regional stability etc., Indian concerns about the repercussions of ISI activities in Afghanistan will likely remain a low priority for most regional powers, except Iran. It Iran that has both the interest and resources to resist Pakistan domination in Afghanistan. Despite the public portrayal of a cordial relationship between the two Islamic Republics, their intelligence services the ISI and the Islamic Revolutionary Guards Corps IRGC remain engaged in a geostrategic rivalry in the region. Thus, the ISI has used jihadi outfits like Jundullah and Jaish al Adl to destabilise Iran, whereas the IRGC supports Baloch insurgents in Pakistan. Scientists tell us that there are more than a quadrillion viruses in the world, that is 1 with.

BSF-HCM-TEST-Dated-2025-08-20-Test NO.-22139

In late October, when Xi Jinping consolidated his hold on China communist party at its annual congress, the world cringed. Xi seemed determined to push China back to the age of Mao Zedong, his role model. Hardline ideology would tighten its grip on the world second largest economy, with dire implications for the rest. The strongman image melts The last thing anyone expected from an absolute dictator entering his 11th year in power was a sudden about-face. Yet within weeks, Xi government has reversed its draconian efforts to control Covid, its crackdown on big tech firms, its strict limits on the property market and more. Xi is making pragmatically peaceful noises as well, saying at a meeting with Joe Biden that the wide earth is fully capable of accommodating two superpowers, letting Europe know it is not fully supportive of Russia war on Ukraine, and telling the Philippines he will resolve land disputes in the South China Sea through friendly discussion. China in 2022 recorded a decline in population by 8.5 lakh, the first annual decline in six decades. But the last population decline came from famine, this one is a result of both a harsh and short-sighted population control policy and demographic transition from an agrarian society to an industrial one. Global experience, spanning Scandinavia to Singapore, shows that even generous fiscal incentives are unable to reverse a population decline once it set in. UN forecast India will be the most populous nation in the world in 2023. It important that India learns the right lessons from an unprecedented global demographic trend. Total fertility rate TFR the world over is crashing. The UN forecast the current global population of about 8 billion will rise to 9.7 billion by 2050. However, 66 of the increase will come because of momentum arising out of past growth. Therefore, the big challenge ahead is to avoid a situation where a country grows old before it gets rich. China already faces this problem and it unlikely to catch up with the US in per capita income terms. To illustrate, UN estimates by 2030, China population in the 19-60 age bracket at a little over 800 million will be about 10 lower than India. Demographic transition has two important phases. At the first stage, fertility rates fall. This, in turn, leads to the working age population growing faster than the overall population. It represents a potential demographic dividend when there an opportunity for a big spurt in growth and investment. It however not preordained. It requires the right mix of policy to make the most of this limited demographic window. Where does India stand? India TFR fell to a mere two in 2019-21 period, which is below the replacement rate. At present, World Bank data shows that India working age population is 68 versus a global average of 65. Even in the age group up to 14 years, India share at 26 is a shade above the world average. But the problem is that not.

They measure inequality in scratches and rubs. I could tell you a dog doesn't care about your drip, the one hanging off their chin is longer. A' fit check' is whether they can successfully fit under your armpit. I could tell you that dogs pick up on kindness. They're a great barometer for who should be in your life. They sniff enough A-holes to recognise them. I could tell you that a generation that sends dogs to an early doom is going to crave that kind of love in their later years. I could tell you that the sound of panting in your ears is far more informative than a podcast. I could tell you that a dog has no political ideology and if you put a bird in front of it, it will eat the left wing as quickly as the right one. When a dog chooses a leader, it follows them with respect, not fear or greed. I could tell you that when a dog lies next to you, it scientifically increases your body temperature, and that in our educational system, it would take you nine years to get three extra degrees. I could tell you that dogs are capable of love, not likes. With LITERAL engagement and triple the dopamine. I could tell you that dogs feel anger, not hate. And therefore, every single dog, given time and resources, is capable of being trained to respect humans and their boundaries. Anger is merely fear in the present. Hatred is fear from the past, poisoning the future. Anger passes, hate sticks. I could tell you that everything you love about a dog can be found triple-fold in our Indian Indies. More than any other breed in the world. That they belong in your home, in your sight, on your mind, on your lap. I could tell you that when we forget dogs, they remember. I could beg you that it's easier to adopt an indie, than an ideology. I could tell you that a dog sitting in the corner creates safety, and we standing in their corner will too. I could tell you that a dog will sometimes keep you up at night. But if we collectively abandon them, I'm not sure how we will sleep at night. I could tell you bullets have strays, Indies have communities. I could tell you a dog doesn't have to be in your home for you to be their home. God willing if you let them in, you can watch your home become someone's entire world. Every single thing that is good about us as a nation, as Indians, can be found mirrored back to us in tiny eyes under flopping ears. I hope we can be what we see. I hope we DO go to the dogs. Art of listening A better meditation for a noisy age IAF rattled Pak this time, but it needs a leg-up Limestone proves the impossibility of a runaway greenhouse effect on Earth Prophets of romanticism, love, beauty, and nature' Congress will end polarisation & cartelisation in Assam GOP's resurgence will start from the Northeast' National University of Singapore US President Donald Trump's decision to impose punishing tariffs on India might seem unprecedented until you flip the calendar back 36 years. In 1989, Washington tried to pry open the Indian economy by threatening tariffs, leading to a 12-month bitter stand-off between the two nations. Eventually the US backed down, but the conflict left a scar on the bilateral relationship. A look back at the Super 301 episode can help us better understand the dynamics at play today. In the late 1980s, the US was engaged in an intense trade war with Japan, its primary economic rival at the time. Washington developed an arsenal of diplomatic and economic weapons for its war including Super 301, a legal mechanism upgraded

His administration sought to address America's rising trade deficit by using the threat of Super 301 to strong-arm several countries, including American allies like Europe, South Korea and Taiwan. Parallels with the current administration are evident. In his first term, Trump used tariffs to battle China now he uses them on friends and foes alike. Once Washington develops a policy tool to coerce one country, it becomes all too tempting to use that tool indiscriminately and sometimes unthinkingly. It is an important facet of US hegemony, regardless of who occupies the White House. Many countries tried to avoid Super 301 by hastily cutting deals with Washington to open their markets or voluntarily restricting their exports. In June 1989, the Bush administration declared that it would target three countries: Japan, Brazil and India. New Delhi was taken by complete surprise. Its relations with Washington had been improving in the previous few years. Its trade surplus with the US was relatively paltry. Washington's two central demands, that India allow American investments and foreign insurance companies, seemed arbitrary. Unlike Japan and Brazil, India refused to even enter into negotiations with the US. Then Prime Minister Rajiv Gandhi said he wouldn't let the US dictate how to run the country. American heavy-handedness sparked intense outrage in the Parliament, further tying the government's hands politically. At the same time, the American threat of tariffs posed serious risks for the Indian economy. US share in India's exports at the time was about one-fifth, the same as it is today. India was much less dependent on foreign trade in 1989 than it is today, but it was also a much smaller and more vulnerable economy. India failed to enlist world opinion to its side. Western countries, including even Japan, agreed with Washington that India was too restrictive of foreign investments. Today, Indian diplomats looking for international solidarity against US tariff assault may discover a similar situation. Many countries may deplore Trump's ham-fisted tactics, while endorsing his goals of lowering Indian protectionism and weaning it away from Russian oil. PM VP Singh, elected in December 1989, tried to placate Washington through a tightrope act. While India continued to refuse negotiations on the two demands under Super 301, it offered concessions on other economic fronts. Americans were not satisfied with Indian offerings. In April 1990, Japan and Brazil were dropped from the Super 301 list, leaving India as the sole target. Washington issued a two-month ultimatum to New Delhi. American bullying was loudly condemned by Indian media and politicians. In the end, the showdown never arrived. At the expiration of the ultimatum deadline, the Bush administration determined that following through with its threats was not worth it. It declared that while India was an unfair trader, it was not in American interest to take retaliatory actions. The Super 301 process against India was discontinued. The Bush administration backed down without much loss of face because Washington's trade campaign was global and India was only a small piece of it. The same remains true today. Although the tariffs are a major issue for New Delhi, they are just one battle among dozens that Trump is fighting on multiple fronts. The Indo-US relationship quickly bounced back, buoyed by alignment of certain economic and geopolitical interests. However, the Super 301 episode left a

Enough Indians are working, particularly women. Just 46 of India potential labor force is in the job market. Indonesia and Vietnam, in contrast, have 68 and 74 respectively in the job market. Go must take this trend with utmost seriousness India future depends on reversing it. There a real danger of frittering away the demographic dividend. Go should withdraw parts of the draft Information Technology Rules that require social media companies to take down news articles if the Press Information Bureau identifies them as fake news. The regulations also allow Go and its departments to authorise any other agency to perform this fact checking task on content involving government business. In essence, the regulation gives government, as an Editors Guild of India statement noted, a carte blanche to determine what is fake or not with respect to its own work. Of course, social media is awash with fake news but credible news media is, and news media, newspapers especially, employ several filters for checking veracity. Regulation of the press, which functions as a watchdog for citizens, is best done by an independent body. Rarely does one hear that news from a credible organisation is fake. Another reason not to involve government is that news often comes from government sources, which prefer anonymity for obvious reasons. Such stories become particularly vulnerable. The long-practiced norm is for governments to reject or deny adverse stories. But the authority to term a story fake or false and get it taken down, puts government powers in a wholly different league, especially if it won offer any documentary evidence as to why a story is fake. Such newly acquired powers have the potential to stifle journalism, especially if Go departments use this to take down critical stories. Among best practices of the Indian press is the publishing of corrections or apologies or voluntary take-down of articles when the sourcing or the facts are dubious and mistakes have been made. When such journalistic traditions are still being practiced, arming a battery of government servants with extraordinary take-down powers is completely unnecessary. Hamartia Seen has remarked upon what he calls the Argumentative Indian. And just how argumentative we Indians can be, particularly in litigation, is borne witness to by a recent headline-making Supreme Court judgment which has ruled that patrons of movie halls can bring their own food into auditoriums. Pointing out that a cinema hall is private property, the court noted that its owner has the right to protect it. The court went on to conjure scenarios which could take place in auditoriums. Suppose someone starts getting alibis inside then wipes his sticky fingers on the seats, then who will pay for cleaning. People can also bring tandoori chicken. Then there will be complaints of bones left in the hall. Making it obligatory for halls to provide free, hygienic drinking water to its patrons, and allowing the entry of baby food for infants, the judges upheld the rights of the owners to permit only the.

BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22145

We have all experienced this phenomenon, where we have looked directly into the light and it has temporarily blinded us. Looking into the glare of the sun or the reflection from a building or the sun rays bouncing off waves. All have caused us to see darkness, even if it is for a few moments. We have felt the inability to do anything, till this glare subsides blinding us. This is the case with spiritual growth also. It gives us blinding contrast to anything spiritual, calming or peaceful in order to herald the new states within us. In simple terms, contrast is how we are led to our emotional and spiritual growth. If you thought things could get any worse they will or you thought no new scenarios can question every moral fiber your core was built upon, then think again. This is the duality of consciousness. The dream within a dream within a dream. It all seems so real. The few seconds of darkness envelopes you and you feel as though it is the entire lifetime of struggle and suffering you have experienced, but in fact it is the illusion of suffering in the illusion of a timeline that draws out the hardships slowly. Unless you felt this struggle, how would you know calm? Unless you built your faith during these times how would you know that it is the opposite of fear and worry? This duality is essential. It is the requirement of spiritual awakenings an aha course. Do not get stuck in this timeline that you are assigned in this birth. You have travelled long and have miles to go. Understand that you are given this birth to master the lessons in front of you to learn the value of faith, trust, belief and in those be safe in the feeling that all is taken care of for you. You do not have to know all the reasons why things are happening or what are the exact steps for you to ease the pain you feel. You have to have faith and trust the Universe. How Can You Build Your Faith, Trust and Surrender? This blinding light is a temporary contrast to test you. It is the exam you pass to go to the next grade of spiritual alignment. When you stay put in this state of unease and of not being able to see instead of getting into a state of struggle get into a state of surrender. Do what is required in a neutral and surrendered state without the overactive thought-driven narratives we assign to our suffering and struggles. It is a sign that you are ready to be pushed higher and this is where you are being tested. Stay in your lane. Allow the chaos to be. Witness it and surrender to it as if you are watching cars drive by on other lanes on the highway. It is a car passing by it is a pain felt it is the discomfort that is the temporary darkness that will ease and it will lead you to the next path and next plane of your spiritual journey. It is in this observing that you will display your strength of conviction that a power higher than you looks after you and is with you always. The poise with which you deal with this struggle reflects your trust and surrender. Some Questions That Prompt Introspection Understand yourself better by answering these questions and allow the answers to guide you. How would you describe your faith and trust? How would the sun light blind you firmly and permanently or temporarily? What is the way in which you display surrender to a higher power? What would make you feel safe and looked after in your situation right now? Why do you think this alignment is showing up in your life right now? What is the life lesson that you are being given

BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22146

It is temporary and the work you did when you went through it was for many lifetimes. You have done karmic work. Now allow yourself to breathe and ease yourself in surrender in the knowing that you are now able to see that the blinding glare of the light was leading you to your spiritual growth. In your darkest hours a lot of work was done within you which you do not have to know about. What you do need to know is that there is work that you need to do and now you must align with that. There is a reason you had this growth spurt and what is it that you have to give back? Let that unfurl within you. It will. The light will guide you. Startup successes have been among India standout achievements in the last decade. From uniquely Indian innovations to clever tweaks of global plays such as cash on delivery for e-commerce, Indian founders have used ingenuity, skill and the country world-class digital infrastructure to build huge companies of scale that have delighted consumers and made investors rich. But recent developments have soured the startup success story. Failing business models, market estimation mismatches and macro factors derailing business are okay. Even global behemoths are not immune to these uncertainties. It disruptions and meltdowns that can be traced back to weak corporate governance that are the big concern. Take Bynum, which was on a mission to revolutionize access to quality education and once the most valued Indian unicorn at billion. Founded in the detach company rose meteorically with its innovative approach to online education, attracting millions of users and securing substantial investments from marquee investors. Its valuation crashed to under $250 million last month a 99% drop in valuation with investors calling for the ouster of founder Bynum Raveendran. Another celebrated success story, fintech major Paytm, had banking regulator RBI impose major restrictions on its banking arm, Paytm Payments Bank, flagging persistent non-compliance issues and continued material supervisory concerns within the bank, for years. The crisis had Paytm stock price in free fall till it finally managed to get a third-party app licence. Bynum and Paytm stories add to the list of many early-stage companies that have faltered due to poor governance practices BharatPe, GoMechanic, Housing.com, and Infra. Market and Trill among them. While innovation and speed are crucial, it should involve disregarding laws and regulations, with a single-minded pursuit of growth and expansion. Corporate governance lapses are endemic to startups alone. Large Indian organizations have been impacted from Satyam way back in 2009, IL&FS collapse, Yes Bank crisis, DHFL scandal and the sordid saga within the NSE. Most recently, the Sony-Zee deal was called off due to allegations of misgovernance. The common thread across all these is poor governance practices the inability to manage a company in a transparent, accountable and responsible manner. So, what are the issues that plague corporate governance in India? Self-centered promoters Primary among these is the lack of accountability of promoters or controlling shareholders who pursue policies and practices in their own interest at the expense of minority shareholders. Many Indian promoters big and small see the company they founded as heirs and often forget their accountability to other stakeholders. The fall of Kingfisher Airlines that had a cascading effect on Vijay Mallya other profitable business is a cas

Snacks sold by them to be eaten within the premises. While some might celebrate the ruling as a movie-able feast, others might wonder if the case, initiated some four years ago by a couple of J&K lawyers, need have come all the way up to the highest court in the land. As of 2022, there were a total of some 50 million cases, both civil and criminal, pending in various courts of the country, including over 1,69,000 which have been awaiting judgment for more than 30 years, and around 60,000 of which are before SC. India has the highest number of pending cases in the world. A 2018 Nitti Analog strategy document noted 27 million cases pending and cited a Finking study which concluded that at current rate of disposal it would take 324 years to clear the backlog. As the number of pending cases has more than doubled since then, now it may take the courts 700 years or more to dispose of the backlog, resulting in delayed justice being not just denied but derailed, as in the instance of a murder accused in Bihar who in 2022 was released for lack of evidence, having spent 28 years behind bars. Along with cinema-bought popcorn, that might give us some food for tort. Body text: Returning to the World Economic Forum WEF after more than a decade, I see there is an emphasis on discussing the important role of mental well-being, resilience, reimagining globalization, sustainability, sociocultural harmony, and happiness in economic and social development. A peaceful society is the basis of a prosperous society, and I am happy that world leaders are placing a great deal of importance on recognizing and addressing these issues. The theme of this year WEF is Cooperation in a Fragmented World resonates with the vision of the Art of Living which started 42 years ago to unite people through a revival and regeneration of human and spiritual values. The current perception of fragmentation is not new. We must know that conflict, division, chaos and confusion sprout in the minds of people. It has to be countered with commitment, caring and collective resolve. This can happen only when leaders cultivate the mind to be calm and take considered decisions. We all need to recognise that we live in an interconnected world. There is no substitute for cooperation for the general good of the world. Economic ups and downs are a natural part of the world economic order and not all parts of the economy flourish at the same time. For example, the tourism industry reduced significantly during the pandemic, whereas the healthcare industry flourished. While the transportation industry suffered significantly, the medical supplies industry increased and as in-person physical conferences shut down, people adopted virtual conferences. The advancement of technology allowed governments and business leaders to rethink their strategies and made us more resilient. There is a lot of talk about leadership but who do you lead when there is so much attention deficit disorder When.

BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22148

Legend has it that the Greek hero Bellerophon rode his winged horse Pegasus in an attempt to reach heaven. In a modern day retelling of the legend, the Supreme Court appears to have used the Pegasus surveillance controversy to ride into a sphere of institutional credibility. Its order constituting a technical committee overseen by a retired judge to inquire into whether the government purchased the Israeli spyware Pegasus and used it to access private information on phones of Indian citizens has received near universal acclaim. Global costs of leaving Africa to fend for itself despite plentiful vaccine supply are adding up as the Omicron variant reverses the recovery in air travel. Rich nations and top vaccine producers like India will rue their disregard of the WHO fervent pleas for vaccine equity. Against the global average of 43% people fully vaccinated, the African CDC reports that the continent has just 6.7% of the population fully vaccinated and 9.9%, partially. With a large unvaccinated pool, a potent mutant strain has unsurprisingly emerged from here. A massive effort to accelerate vaccination in Africa where adult population is 700 million must start. The Delta variant that swamped India in April June took five months from detection to create a tidal wave. If Omicron is more contagious, time is running short. And some countries must step up quickly. The US has 110 million unused doses and EU 200 million doses, even accounting for booster shots. India has 250 million doses with states. However, India supplies to Africa will be constrained by the fact that only 32% of its population is fully vaccinated and boosters and children jabs haven t started as yet. The US reportedly destroyed at least 15 million doses between March September. Its trade curbs on key raw materials had also dented vex production. In many ways, US have been the worst offender. Some point out that only 55% of the 400 million doses supplied to Africa have been administered but this number does t tells the whole story. A well planned rollout of vaccines has been impossible because of irregular supply. Poor, under resourced countries cannot be expected to keep a vast network of vaccination centers and ancillary facilities including hired contract workers in perpetual readiness without certainty of vaccine deliveries. Convex had ruled that India Delta outbreak and the consequent export ban had caused a 190 million dose shortfall in its supplies till June. It now wants donor countries to release large volumes of doses, which have at least 10 weeks to expiry, and to do this with advance notice of over four weeks for better planning. Though Convex has pledged 1.4 billion doses, only 590 million have been shipped to Africa and elsewhere. China has pledged 1 billion doses after claiming to deliver 200 million doses. These pledges need urgent fulfillment in southern Africa where Omicron has surfaced. With 55 million doses manufactured globally daily, big guns including India must set aside more doses for low income countries. It takes.

BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22149

Work over generations for a political party to establish a potent pan India footprint. The erstwhile Congress had such a footprint. However, it was a sui generis party, a product of historical circumstances. BJP today is the only party with a national footprint that is reminiscent of the old Congress. But it not quite there yet. What interesting is the manner in which BJP is trying to get there, something that is mimicked by its potential challengers. To use business terminology, Indian politics appears to be in a phase of inorganic growth. Magmata Banerjee is not hiding her ambition, projecting herself as the opposition fulcrum during her Maharashtra tour. TMC recently emerged as the main opposition in Meghalaya by poaching from Congress. Now, it mounted an election campaign in Goa where Congress appears as much a target as the incumbent BJP CM. TMC inorganic growth drive is unlikely to end soon. On the other side of the political divide, BJP influence in Hindi speaking states and western India is beyond question. South India however is another story. Indeed, although the party has deep roots in Karnataka, its playbook there often mimics regional parties the state tourism minister recently reprimanded go officials for not using Kannada in signage for an event hosted in Bengaluru. In Telangana, BJP has all but replaced Congress as the TRS government main challenger. Although BJP has worked hard in the state, a significant turning point was the assembly by poll in Huzurabad. Winning on a BJP ticket was Eatable Retender, a seven time MLA who acrimoniously left TRS this year. He defied the full weight of the TRS electoral machinery, triggering speculation on his likely role in the next assembly election. It may well be premature to read too much into these events. But there no question that Indian politics is witnessing some interesting expansionary strategies. Go has asked farmers unions to join a proposed committee that will deliberate on minimum support prices MSP for crops. This is a good context to ask some really hard questions on MSP. Does the newspaper in which you are reading this article demand that it must necessarily be bought by the government for at least Russ 10 a copy What would happen if the government were to announce a minimum support price of Russ 10 a copy and create a procurement infrastructure for procuring newspapers If you find these questions ludicrous, read on as there is more tragic fun to come. Just as the normalcy train had resumed services, the B.1.1.529 strain has made it screech to a halt. The WHO pulled the alarm chain. South Africa and Botswana had conscientiously reported the new variant to it on November 24. Just two days later Omicron triggered a global 26 11. It spooked the stock market and oil prices; jeopardised the FIH junior women World Cup event in its host country; put off a WTO meet in distant Geneva; and pricked everyone holiday bubble instead of the air bubble which was.

BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22152

Immediately after the landslide victory of her party in the West Bengal Assembly Elections in May 2021, Magmata Banerjee, the TMC Supreme had announced her intention to spread the TMC to other states, with the ultimate goal being, to emerge as the collective opposition consensus candidate as the Prime Ministerial candidate in the Look Sabah Elections in 2024, challenging Namenda Mode. Her spirits at that time were very high, as she, by her own reckoning had tamed her formidable political foe, Bharatiya Jannat Party, notwithstanding that, BJP a non entity till then, and had emerged victorious in 77 seats, the earlier rulers, Congress & CPI M being totally decimated. Immediately after her victory, she had visited Delhi, with the intention of meeting the opposition leaders, ostensibly to garner support for her, in her bid to occupy the position of leadership of the opposition in place of congress, which seemed to be losing grip on it. Her visit to Delhi however proved to be a damp squib. Of late, she has again started occupying the headlines in the media, both electronic & print, with her renewed efforts. However, this time, her strained relations with Congress President Sonia Gandhi & Rahul Gandhi, the Prime Ministerial face of Congress for the 2024 Look Sabah Elections, are proving a hurdle. When it became clear, that Congress, under no circumstances would vacate the position, Magmata got so furious that, during her recent visit to Delhi, when she was asked about meeting Sonia Gandhi, she retorted, is it a rule that everyone who visits Delhi, must meet Sonia Gandhi Not only this, but her party also did not attend a meeting of opposition parties called by Mallikarjun Charge, the leader of the opposition in Look Sabah & did not sign the joint statement issued by opposition parties, including Congress, NCP, Junta Dal Secular , Dravidic Moneta Kazhagam DMK and the Left parties, even though the statement was to protest the action against 12 Raja Sabah MPs, two of whom belonged to the TMC. Explaining the party stance, TMC Raja Sabah MP Derek O Brien said, we want opposition unity, but that does not mean we need to put a rubber stamp on it. In the meantime, her efforts to make a dent into the stronghold of BJP in Tripura by challenging the ruling party in the Civic Body Elections in the state were thwarted by the electorate in Tripura, which gave a resounding victory to the BJP, literally defeating the designs of Magmata Banerjee. To downplay her defeat, the party, which had refused to acknowledge the jump of BJP, a newly entering party in Bengal, from 3 seats to 77seats, had to boast that, it was creditable for her party, new entrant, to have garnered 20% votes in this election. The rout in Tripura thus has proved to be a setback to Magmata Banerjee in her grand design to emerge as an alternative to efforts have now been directed towards poaching the leaders from other parties.

BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22153

The fundamental rights were considered of such importance that right was given to an aggrieved person to move the highest court of the land, i.e., the Supreme Court, by appropriate proceedings for the enforcement of the rights conferred by this part, and this right was guaranteed. Article 32(2) confers very wide powers on the Supreme Court, to issue directions or orders or writs including writs in the nature of habeas corpus, mandamus, prohibition, quo warrant and certiorari, whichever may be appropriate, for the enforcement of any of the rights conferred by this Part. Article 32(4) further provides that the right guaranteed by this article shall not be suspended except as otherwise provided for by this Constitution. 139. Article 33 enables Parliament by law to determine to what extent any of the rights conferred by this Part shall, in their application to the members of the Armed Forces or the Forces charged with the maintenance of public order, be restricted or abrogated so as to ensure the proper discharge of their duties and the maintenance of discipline among them. 140. This articles shows the care with which, the circumstances in which, and fundamental rights can be restricted or abrogated were contemplated and precisely described. 141. Article 34 enables Parliament, by law, to indemnify any person in the service of the Union, or of a State or any other person in connection with acts done while martial law was in force in a particular area. 142. Part IV of the Constitution contains directive principles of State policy. Article 37 specifically provides that the provisions contained in this Part shall not be enforceable by any court, but the principles therein laid down are nevertheless fundamental in the governance of the country and it shall be the duty of the State to apply these principles in making laws. This clearly shows, and it has also been laid down by this Court, that these provisions are not justiciable and cannot be enforced by any Court. The Courts could not, for instance, issue a mandamus directing the State to provide adequate means of livelihood to every citizen, or that the ownership and control of the material resources of the community be so distributed as best to sub serve the common good, or that there should be equal pay for equal work for both men and women. 143. Some of the directive principles are of great fundamental importance in the governance of the country. But the question is not whether they are important; the question is whether they override the fundamental rights. In other words, ran Parliament abrogate the fundamental rights in order to give effect to some of the directive principles? 144. I may now briefly notice the directive principles mentioned in Part IV. Article 38 provides that the State shall strive to promote the welfare of the people by securing and protecting as effectively as it may a social order in which justice, social, economic and political, shall inform all the institutions of the national.

BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22154

However, it must be noted, those who have so far joined her party, have been, either lightweight in their parties or disgruntled leaders or discarded leaders of their parent parties. These include Haryana Congress chief Ashok Tanbark, former diplomat and Raja. Legislative Assembly for the second time with such amendments, if any, as have been made or suggested by the Legislative Council and agreed to by the Legislative Assembly. 81. Under Article 200 the Governor is enabled to suggest the desirability of introducing any such amendments as he may recommend in his message. Here again amendment has clearly a limited meaning. In Article used are: Any law in force immediately before the commencement of this Constitution subject to the terms thereof and to any adaptations and modifications that may be made therein under Article 372, continue in force until altered or repealed or amended by Parliament. 83 to the Here, all the three words are used giving a comprehensive meaning. Reliance is not placed by the draftsman only on the word amend. 84. Similar language is used in Article 372 whereby existing laws continue to be in force until altered or repealed or amended by a competent Legislature or other competent authority. 85. In the original Article conferring power on the President to make regulations for the peace and good government of the territories in part D of the First Schedule, it is stated that any regulation so made may repeal or amend any law made by Parliament. Here, the two words together give the widest power to make regulations inconsistent with any law made by Parliament 86. In Article 252 again, the two words are joined together to give a wider power. Clause of Article 252 reads. Any Act so passed by Parliament may be amended or repealed by an Act of Parliament passed or adopted in like manner but shall not, as respects any State to which it applies, be amended or repealed by an Act of the Legislature of that State. 87. In the proviso to Article 254, which deals with the inconsistency between laws made by Parliament and laws made by the Legislatures of States, it is stated: Provided that nothing in this clause shall prevent Parliament from enacting at any time any law with respect to the same matter including a law adding to, amending, varying or repealing the law so made by the Legislature of the State 88. In Article 320, all regulations made under the proviso to Clause can be modified whether by way of repeal or amendment as both Houses of Parliament or the House or both Houses of the Legislature of the States may make during the session in which they are so laid. 89. I have referred to the variation in the language of the various articles dealing with the question of amendment or repeal in detail because our Constitution was drafted very carefully and I must presume that every word was chosen carefully and should have its proper meaning.

BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22155

Statute, a Constitution is a working of it is drafted by people who wanted it to be a to sub serves successive generations. The Assembly constituted Committees of able men of high caliber, learning and wide experience, and it had an able adviser, Shri B.N. Rau to assist it. A memorandum was prepared by Shri B.N. Rau which was circulated to the public of every shade of opinion, to professional bodies, to legislators, to public bodies and a host of others and was given the widest publicity. When criticism, comments and suggestions were received, a draft was prepared in the light of these which was submitted to the Constituent Assembly, and introduced with a speech by the sponsor Dr. Ambedkar. The Assembly thereupon constituted three Committees Union Powers Committee Provincial Powers Committee; and Committee on the Fundamental Rights and Minorities Committee. The deliberations and the recommendations of these Committees, the proceedings of the Drafting Committee, and the speech of Dr. Ambedkar introducing the draft so prepared along with the report of these Committees are all valuable material. The objectives of the Assembly, the manner on which they met any criticism, the resultant decisions taken thereon, amendments proposed, speeches in favor or against them and their ultimate adoption or rejection will be helpful in throwing light on the particular matter in issue. In proceedings of a legislature on an ordinary draft bill, as I said earlier, there may be a partisan and heated debate, which often times may not throw any light on the issues which come before the Court but the proceedings in a Constituent Assembly have no such partisan nuances and their only concern is to give the nation a working instrument with its basic structure and human values sufficiently balanced and stable enough to allow an interplay of fortes which will sub serve the needs of future generations. The highest Court created under it and charged with the duty of understanding and expounding it, should not, if it has to catch the objectives of the framers, deny itself the benefit of the guidance derivable from the records of the proceedings and the deliberations of the Assembly. Be that as it may, all I intend to do for the present is to examine the stages through which the draft passed and whether and that attempts were made to introduce words or expressions or delete any that were already there and for what purpose. If these proceedings are examined from this point of view, do they throw any light on or support the view taken by me 1132. The various stages of the Constituent Assembly proceedings, while considering the draft Articles 8 and 304 corresponding to Articles 23 and 65 respectively would show that attempts were made to introduce amendments to both these articles to clarify that the embargo in Article 13 does not apply to an amendment made under Article 367. First, Shri K. an am, one of the members of the Constituent Assembly moved an amendment on April.

New Delhi resists moving closer to Washington despite its persistent conflict with Beijing. Its reticence partly stems from its fear that greater dependence on the US will leave it more vulnerable to Washington's volatile high-handedness that manifests from time to time. Trump's tariff assault has again affirmed the wisdom behind India's caution. Art of listening A better meditation for a noisy age IAF rattled Pak this time, but it needs a leg-up Limestone proves the impossibility of a runaway greenhouse effect on Earth Prophets of romanticism, love, beauty, and nature' Congress will end polarisation & cartelisation in Assam GOP's resurgence will start from the Northeast' eyes were on the astronauts, who were ready to take off into space. The world watched with bated breath the countdown reverberated in everyone's heart. Not many focused on her, who prayed silently, biting down tears that threatened to flow down from her anxious eyes. She knew that more than a mother, she had to be a patriot, just like a soldier's mom, while her son's daring journeys took him beyond Earth's embrace into the vast, unknown cosmos. Beneath the televised smiles and triumphant waves lies a quiet apprehension. As the rocket ascends, carrying her child into the heavens, she grapples with the inherent risks. Every launch is a testament to human ingenuity, but it also carries the weight of extreme danger. The world sees a spectacle when she sees her child. She would have been the bedrock of support, nurturing the seeds of curiosity and ambition, even before he dreamed of spaceships and distant stars. She would be the one who encouraged questions, fed his hunger for knowledge, and patiently explained the wonders of the night sky. Maybe she bought him the first telescope, took him to science museums, or simply fostered an environment where learning and exploration are cherished. The passion of her child, lofty and improbable as reaching for the moon, was fuelled by her. As the aspiring astronaut grew up, her role would have evolved from nurturer to steadfast supporter, through years of rigorous education and demanding training. She knows that the path to becoming an astronaut is fraught with challenges, requiring relentless dedication, intellectual brilliance, and immense physical fortitude. There might have been countless rejections, setbacks, and moments of doubt. She would have provided the emotional sanctuary, the reassuring voice, and the belief that success is within reach, understanding the depth of his commitment and providing the stable ground from which they can launch their ambitions, metaphorical and literal. During the mission, her days will be filled with a unique tension. While glued to mission control updates and news reports, she will rejoice every successful man oeuvre, every scientific discovery, and every breathtaking image sent back from orbit. Each milestone is a shared triumph. However, the vast distance and the perilous environment of space mean that communication can be limited, and every silence can feel amplified. Her heart remains tethered to that distant capsule, a silent prayer accompanying her child's every orbit. The mother of an astronaut may never wear a uniform, conduct a spacewalk, or command a mission. Her contributions are not etched in scientific journals or broadcast on national television. Yet, her journey is as integral to the human endeavor of space exploration as the rockets themselves. She is the quiet force, the emotio

Spl-BSF-HCM-TEST-Dated-2025-08-21-Test NO.-22159

The impossibility of a runaway greenhouse effect on Earth Prophets of romanticism, love, beauty, and nature Harishankar Parsai in the age of social media Editor of Sensed TV, the author reads and writes on all subjects from cinema to cricket to politics. On a lazy rainy Sunday, I received a message from a friend on social media, it was nothing personal but some quotes of Harishankar Parsai. Reading those quotes took me back to the 90s when a few of our friends would often share his one-liners. I recalled that both his birth and death anniversaries fall in August. He died in 1995. A few of his one-liners feel so relevant in the age of social media. Beijjati mien agar dusre ko bhi shamil kar lo to aadhi ijjat bach jati hai Shared humiliation cuts the loss of dignity in half. Or Murkhta ka atmavishwas sarvopari hota hai-The confidence of foolishness is supreme. In fact Harishankar Parsai, one of the top satirists in Hindi literature, is still incredibly relevant in today's world of social media and rampant online trolling. His sharp and fearless critiques of societal hypocrisy, politics, and human stupidity reflect many of the issues we see in today's digital conversations. Parsai was never shy about commenting on the powerful establishment or writing for the oppressed. Stories like Bholaram Ka Jeev, Inspector Matadeen Chand Par, or Das Din Ka Anshan mirror society much like how meme creators and online commentators function today by highlighting the double standards, absurdities and contradictions in politics and public life. His viewpoint aligns with how social media allows those who once had no public voice to confront established authority, reveal injustices, and spark conversations sometimes through humour, sometimes through trolling. Harishankar Parasai was born in 1922 in Jamani village in the Hoshangabad district of Madhya Pradesh. He had a strong passion for literature, culture, and social issues. He pursued higher education from Nagpur University, where he built his literary foundation and sharpened his critical thinking skills. Initially, Parasai worked in the forest department and also as a teacher, which further allowed him to closely observe society. Eventually, he devoted himself fully to writing, becoming one of the trailblazing satirists in Indian literature. His magazine Vasudha from Jabalpur served as a significant platform for his ideas. This publication resonated with readers and played a key role in bringing satire into the mainstream of Hindi literature. Parasai was a wide-ranging columnist and essayist, commenting perceptively on contemporary society. His column writing began in 1947 in Prahari under the pen name Aghor Bhairav. In Prahari, the column was titled Narmada ke Tat se. From 1947 to 1994, he continued his column writing across nearly a dozen journals and magazines. Through his conversational style, Parsai made his readers feel as if he was talking directly to them. This sense of intimacy anticipated the immediacy of social media, where writers, influencers, and everyday people connect one-on-one with large audiences, breaking down traditional barriers. Parsai's satire wasn't just for laughs; it was designed to make readers uncomfortable enough to think and react. Similarly, modern online satire, whether its memes, tweets, or parodies, often uncovers uncomfortable truths about politics, religion, or societal norms. However, today's conversations are also mixed with the dangers of mob trolling and misinforma

Privy Council in Bribery 1985 A.C. 171 was discussed before us in great details by both the sides. The matter arose under the of Ceylon, of which the material provisions bear a near parallel to our Constitution, a fact which, with respect, was not noticed in the judgment of the leading majority in the case. It was not argued by the respondents in case that any provision of the Ceylonese Constitution was. It is also necessary to remember that the appeal did not raise any question regarding the religious rights protected by Section of the Ceylonese Constitution. It is clear that counsel for the respondents there stated p. 187, that there was no limitation on the power of amendment except the procedure prescribed by Section and that even that limitation could be removed by an amendment complying with Privy Council affirmed this position and took the widest view of the amending power. A narrower view was in fact not the Rhode Island case; the leading majority judgment gave no reasons but only a summary statement of its conclusions. The learned of has, however, supplied to us the full briefs filed by the various counsel therein. The briefs show that the 18th amendment regarding Prohibition of Intoxicating Liquors hitch was repealed subsequently by the Amendment was challenged on the ground, inter alia, that there were implied and inherent limitations on the power of amendment under Article V of the American Constitution. These arguments were not accepted by the Supreme Court, as is implicit in its decision. The court upheld the Amendment. 2107. We were supplied with a copy of the judgment of the District Court of New Jersey in Sprague case. The District Court declared the 18th Amendment void on the ground that there were inherent limitations on the amending power in that, the power had to conform to theories of political science, sociology, economics etc. The judgment of the Supreme Court shows that not even an attempt was made to support the judgment of the District Court on the ground of inherent limitations. The appeal was fought and lost by Sprague on entirely different grounds, namely whether amendment means improvement whether the 10th Amendment had an impact on Article 25 of the U.S. Constitution and whether the alternative of ratification by Convention or Legislatures showed that the method of Convention was essential for valid ratification when the amendment affected the rights of the people. Obviously, the Supreme Court saw no merit in the theoretical limitations which the District Court had accepted for, in a matter of such grave importance, it would not have reversed the District Court judgment if it could be upheld on the ground on which it was founded. 2198. In case, action was taken by the Government to cancel the on the ground that at the time of applying he was and still continued to be a communist and thereby he had misrepresented that he was attached to the principles of the Constitution of the United States.

In China over the Pang Shay case is a bold response to Beijing egregious conduct. No doubt WTA will take a financial hit. But with top tennis players from Naomi Osaka to Serena Williams expressing concerns about Pang wellbeing, WTA also had to contend with stars who give women tennis the shine. But replicating this response, whether from other sporting bodies or even from major countries, is tough. Given China economic muscle, sports bodies from American NBA to the International Olympic Committee are chary of Beijing. And so are major economies. As the world second largest economy and the largest trader, Beijing is able to weaponries economic interdependencies. To illustrate this point, consider that after the border clashes between Indian and Chinese troops last year, New Delhi had taken steps to ban Chinese apps, block the automatic route for Chinese FDI into India and launched production linked incentive schemes to make Indian manufacturing competitive. Yet, between January and September this year Chinese imports into India grew by 54.64% year on year valuing around $42.3 billion. Meanwhile, there are suspicions that much of Chinese FDI is now being routed through Singapore. The same story is playing out around the South China Sea where despite China maritime belligerence, affected Asian nations still joined Beijing in inking the RCEP free trade agreement. Even Taiwanese businesses are unable to fully detach from China despite rising tensions across the Taiwan Strait. In such a scenario, the only way to get China to modify its behavior is by building principled alliances, distributing the pain of financial hits and creating economic alternatives. None of these is easy and all of them will take time to operationalise. But as the Peng case shows, China is t wholly immune to international pressure. It too early to get panicked given that the amount of scientific data that we have so far is too small, but yes surely there are some genuine concerns around this new coronavirus variant. First, according to the latest data from South Africa this variant is fast overtaking its predecessor, Delta, to become the dominant variant. Second, Omicron has raised fears of a surge in global infection spread. It was first detected in South Africa last week and has already spread in 30 countries, much more rapidly than any previous variants. Last but not the least, it could be starting to trigger a new wave of infection as scientists do not yet know whether fully vaccinated individuals possess enough immunity to protect themselves from the Omicron variant. As of now, every population set across the globe is highly vulnerable to this variant attack. It is commonplace to experience anxious thoughts, negative emotions, obsessive rituals, sleepless nights and butterflies in the stomach during examination time. Moderate levels of stress motivate us to work hard, overcome our limitations and give our best performance. However, when we are overly distressed, our worries can make us dysfunctional at the physical, emotional and behavioral levels. Consequently, an inner sense of vulnerability and.

BSF-HCM-TEST-Dated-2025-08-22-Test NO.-22162

There is no UPA now. With those four words, Mamata Banerjee seems to have set an interesting cat among pigeons. She made the statement standing beside Sharad Pawar after a high powered meeting with the opposition most experienced stalwart. Pawar did not refute Mamata statement. He had rolled out the red carpet for her by calling all NCP ministers in the Maharashtra government and senior party leaders to meet her at his residence. Maharashtra stringent Covid norms for international and domestic air travellers, now largely rolled back, had significantly diverged from Centre Omicron advisory and provoked a strong response from the latter. Rightly so. Air travel is regulated by GoI and if every state begins to impose its own regulations, this is a recipe for chaos especially in the busy December season for travel and tourism. GoI norms were reasonable, mandating RT PCR test for some high risk countries and home quarantine for all international travellers for seven days. Maharashtra augmentations like mandatory testing of all international passengers followed by 14 day quarantine apart from domestic travellers having to produce RT PCR test results failed to see the big picture. If contradictory regulations proliferate across states, it endangers the still uneven economic recovery. Overall GDP in the July September quarter has exceeded the pre pandemic benchmark of the same period in 2019. But private consumption and activity in contact intensive sectors such as trade and hotels, which also employ many informal workers, remained below the 2019 mark, indicating two lost years for them. Interstate travel restrictions have hardly worked given the uniformly high seroprevalence across most states in July. Instead, states must ramp up testing, especially using RT PCR test kits that check for the S gene. A missing S gene is seen as a potential proxy indicator of Omicron, which can later be confirmed by genome sequencing. India daily testing numbers have stagnated at 11 lakh. Nearly 3 lakh Covid cases were detected in November but just over 9,000 samples 3% were sent for genomic sequencing. In contrast, the UK has done genomic sequencing on nearly 15% of its positive samples. With Omicron cases already detected, sending more Covid positive samples for sequencing, not just those missing the S gene, is necessary. In the longer term, this will reveal if Omicron gives competition to the Delta variant, just as Inacom sequencing efforts revealed Delta phenomenal surge over other mutations. With airports getting overcrowded thanks to new testing norms and thereby becoming a contagion risk, more rapid PCR tests with one hour turnaround times, unlike regular RT PCR tests, should be available to travellers. With samples for genome sequencing from airports being dispatched to high throughput labs; it will help GoI make timely, informed decisions. States must reserve blunt legal instruments, which allow extraordinary movement curbs under the Disaster Management Act and Epidemic Diseases Act, for emergency situations. India can afford more economic shocks. Being smart is better than being hasty. Women Tennis Association decision to suspend all its tournaments.

BSF-HCM-TEST-Dated-2025-08-22-Test NO.-22163

There is nothing more precious that our eyes. It is because of them we can see the beautiful world does our work and precious whatnot. But due to the lack of knowledge on how to maintain healthy and good eyesight, many people lose their vision and need to wear specs to correct them. With precious the lifestyle that involves continuing usage of mobile phones and computers, if is high time that we take care of our eyes and maintain good eyesight. Secrets to minting precious good eyesight starts from the food on you plate. To cataracts, you need to add nutrients like lutein, omega three fatty acids, zinc, and vitamins C and E in your diet. You can precious find these nutrients in green leafy vegetables, salmon, tunes, eggs, beans, orange, and other citrus fruits. Eating a balanced diet will also help maintain a healthy weight. That lowers the odd of diseases such as tie tow diabetes, which is the leading precious cause of blindness in adults. First of all, you should avoid unnecessary touching of eyes, but if you feel to itch then do it with clean hands. Many germs and bacteria precious live on hands that can come in contact with your eyes, causing eye infections such as bacterial conjunctivitis or pink eye. Rubbing of eyes is one of the ways how people precious catch cold virus gears. Taking a good night sleep has several benefits such as it thrives and makes our immune system stronger. You will feel the difference when you precious get a good night sleep as this rest will enhance the health of your eyes. Smoking causes several health issues like chronic lung diseases, cancer, etc. It also exposes your eyes to high levels of oxidative stress. Smoking increases the risk of a variety of health conditions that affect the eyes. Yet never overbearing. Many marine organisms rely on their ability to hear for their survival. Sound is a highly efficient means of communication underwater and is the primary way that many marine species gather and understand information about their environment. Many aquatic animals use sound to find prey locate mates and offspring avoid predators guide their navigation and locate habitat as well as to listen and communicate with each other. Oceans are full of sound. Waves, earthquakes and icebergs - all contribute to the underwater soundscape. But so do human activities and this can be a problem for marine life as it can seriously affect their physiology behavior, reproduction and even survival. Being able to produce and detect sound in an environment where light penetrates only a few hundred metres is crucial for animals to communicate, feed, avoid predators and navigate vast underwater habitats. Large whales generate low frequency communication calls that can travel thousands of kilometres. While the snapping shrimp, native to the western Atlantic, can produce a loud snapping sound capable of stunning and killing its prey. The noise generated by humans changes the natural acoustic environment of our oceans and our capacity to produce it is increasing. Noise is often the unintentional by product of transport infrastructure development and industry. Yet noise can also be produced deliberately. Many navies use sonar system to detect ships and submarines while geologists survey the seabed for oil and gas using seismic airguns. The noise produced by an airgun can exceed 200 decibels louder than a gunshot at a range of one metre. Sound travels further and four times faster in water than in air at a speed of almost 1500 m

BSF-HCM-TEST-Dated-2025-08-22-Test NO.-22164

Is positive thinking an inherent characteristic of a person or can it (69) be developed in one's psyche? The opinions differ in answering this vital question. Some people believe that it can be inherited from parents, and cannot be developed. Others believe that like other qualities it can be developed with proper practice and guidance. Still some others hold the opinion that it is hereditary to some extent but can be acquired to some degree. There is also a section of people, who believe that all depends on circumstances or luck. We need to adopt a scientific approach to find an answer to the above question. No one can get success every time even after making efforts, nor can one fail constantly. Moreover, success has different meaning for different people. For some students, getting 60 per cent marks is success, for others it may not be sufficient. In a competitive examination, success means getting selected, whatever the percentage of marks. As for inheritance theory, since positive attitude is not a physical feature but a mental faculty, it cannot be purely hereditary. It can be developed. Moreover, parents play a major role in developing this quality of a child. A child, who watches his parents working hard, having faith in success through their words, behavior and body language, is likely to develop a similar attitude. The children of short-tempered, over-cautious and nervous parents may assume similar characteristics when they grow up. Psychologists, therefore, prescribe a code of conduct for parents' behavior in front of their children. They must exude confidence, self-belief and hope, especially in difficult situation, so that the children emulate these qualities. They must be taught the importance of being positive before, during and after the performance of a task. There is no better education for a child than watching his parents come out of a tough situation by means of earnest endeavors. Such success not only gives more joy but also increases self-confidence. As the House knows, the Prime Minister sent out a circular to all the States a few years ago requesting that the portfolio of agriculture in the States should not be neglected; it should be entrusted to an important Minister. I think the National Development Council considered this question and they said that as far as possible, the Chief Ministers in the States should handle the portfolio themselves. And then, they have started a Food Production Board in the Cabinet itself at the Centre, and the National Development Council has decide that an agricultural production board should be started in each State with the Chief Minister as the Chairman. They have started an agricultural machinery board for supplying machinery. They have taken many steps in addition to the normal measures. The Government has been doing their very best in this regard. But with all that, it has not kept up with the targets fixed, unless earnest and vigorous attempts are made. I wish to throw out my own suggestions in this regard. They may not be very pleasant but I wish to be excused because I am speaking from experience. Madam, the first thing is that so far as the producing agency is concerned, its voluntary interest and its enthusiasm must be won. For instance, in industrial labor relations, we got out of the way to invite labor and give it even participation in the management and to do everything for labor. This is just to see that industrial relations are good and the industrial output will

Hopelessness incapacitates us, stopping us from listening to the voice of reason. During this time, we may feel like a complete failure and see no hope in making an effort. As a society which now believes firmly in competing, achieving and winning, we have erroneously turned examinations into larger than life events. We seem to have forgotten that an examination is just an innocuous assessment to tell us how well we have grasped a particular curriculum and where we need to improve in that specific programmer. Whatever be the results of an examination, they can never change who we are and what we eventually do in our lives. Therefore, whenever we are stressed, we must remind ourselves that it is just one exam and in our long life, it is not going to be the end of the world. Life will give us many other chances to grow and evolve into a better person. Letting go of this immense pressure, breathing out our worries and smiling freely during examinations is the right approach. Comparing ourselves with others builds a lot of fear in our psyche and derails our progress. Rather than thinking about either defeating others or getting defeated by them, we should drop this unhealthy thought process and make self perfection our long term goal. Let us always strive to improve ourselves, working hard on overcoming our weaknesses and realising our inherent potential. Give up smaller, mundane goals to pursue a higher ideal is the key. We can create a broad vision by visualising a better self imagining a healthy body, a strong mind, a happier self, harmonious relationships and a meaningful life. Reminding ourselves of this vision and working on it consistently will take us closer to the transcendent point of psychic evolution. At a larger level, we also need to introspect and reform our education system. We seem to be teaching children almost everything apart from which they are, what the purpose of their birth is how they can fulfill it, and how they can know themselves better. These questions are generally dismissed as being too esoteric for young minds and it is implied that such concerns fall outside the purview of modern education systems. But without such opportunities for inner reflection and deeper self knowledge, our children end up wasting their energies in trivial pursuits and worrying about pointless things. Later in life, when some of them realise this, it is too difficult for them to abandon flawed assumptions and start afresh. We need our children to be in a perpetual state of fulfillment, growth, tranquility and joy regardless of the ups and downs of their life. Therefore, let us think of ways to empower them so that they awaken from their present state of ignorance and pursue the fullness inherent within them. This will enable the youth in becoming self aware, calmer, happier and leading a meaningful life, which in turn, will lead to a better society, unified nations and an enlightened world. Instance of.

BSF-HCM-TEST-Dated-2025-08-22-Test NO.-22168

This, nor according to him does anything turn on the fact that Section 291 of the Government of India Act, 1935, was amended just about a few weeks before Article 368 was finalised, and in which the word amendment was substituted for the words amend by way of addition, variation or repeal. According to him what this Court must consider is that since Article 368 arranges to recreate the Constituent Assembly and exercise the same power as the Constituent Assembly, it should be read in a wide sense. 1190. If the power of amendment is limitless and Parliament can do all that the petitioners contend it can do under Article 368, the respondents say it should not be assumed that power will be abused, but on the other hand the presumption is that it will be exercised wisely and reasonably, and the only assurance against any abuse is the restraint exercised by the people on the legislative organs. But the recognition of the truism that power corrupts and absolute power corrupts absolutely has been the wisdom that made practical men of experience in not only drawing up a written Constitution limiting powers of the legislative organs but in securing to all citizens certain basic rights against the State. If the faith in the rulers is so great and the faith in the people to curb excessive exercise of power or abuse of it is so potent, then one needs no elaborate Constitution, because all that is required is to make Parliament Omni potent and Omni sovereign. But this the framers did not do and hence the question will be whether by an amendment under Article 368, Parliament can affect a metamorphosis of power by making itself the supreme sovereign. I do not suppose that the framers were unaware of the examples which must be fresh in their minds that once power is wrested which does not legitimately belong to a limited legislature, the efforts to dislodge it must only be by a painful process of struggle, bloodshed and attrition what in common parlance would be a revolution. No one suggests this will be done, but no one should be complacent, that this will not be possible, for if there is power it can achieve even a destructive end. It is against abuse of power that a Constitutional structure of power relationship with checks and balances is devised and safeguards provided for whether expressly or by necessary implication. And the question is whether there are any such in our Constitution, and if so, whether they can be damaged or destroyed by an amending power 1191. The petitioner counsel, learned Advocate General and the learned Attorney General have furnished us with the extracts from various Dictionaries, and the learned Attorney General has further referred us to a large number of Constitutions in which the word amendment or words used for amending the Constitution have been employed, to show that there is no difference or distinction between these words and the word amendment.

BSF-HCM-TEST-Dated-2025-08-22-Test NO.-22169

flood Inflation was at its highest point, the currency depreciated sharply, and foreign reserves were just enough for one month. There is a high possibility of Pakistan defaulting. Pakistan economy doesn produce enough but spends too much, thus being mainly dependent on foreign aid and assistance. Every successive government is worse than the previous one due to mounting debts. Then there is the threat ever-increasing insecurity in the country. Pakistan is experiencing the heat of homegrown terrorism. Main terrorist groups such as TTP and ISIS-Pakistan are steering attacks on Pakistan. Separatist militant groups conducted terrorist attacks against Pakistan in Balochistan and Sindh provinces. Terrorists used various tactics to attack targets, including IEDs, VBIEDs, suicide bombings, and targeted assassinations. Also, Pakistan relations with the Afghan Taliban have worsened substantially over various issues, including the border dividing the two countries. Pakistan, anticipated as the big winner after the US sudden withdrawal from Afghanistan, is now realising the hazards of affiliating with the Taliban regime. Pakistan is facing an absolute tempest coming out of the self-engineered problems deteriorated by the invisible hand of external forces. Pakistan has highlighted two fundamental issues: restoration of Article 370 to J&K and follow-up of UN resolutions on J&K. One of the most vigorous roots of separatism and alienation in J&K lies in Article 370, which had granted special status to the erstwhile state of J&K. The people with vested interests misused it and aligned with the power elites. It kept the ideology of the two-nation theory alive and suffocated the idea of India as one nation. Definitely, it suited Pakistan. On 26 Oct 1947, when the Instrument of Accession was signed between Maharaja Hari Singh and the Government of India, the jurisdiction over the three subjects: Defence, Foreign Affairs and Communication, was surrendered to the Government of India. It was decided that the Constituent Assembly of J&K would take the final decision on the Accession. Therefore Article 370 was granted for the intervening period. The Constituent Assembly of J&K ratified the Accession of J&K to India in Feb 1956. Logically, Article 370 should have been scrapped then and there only, but it was kept alive for the vested interests. After the abrogation of Article 370, the focus is shifted toward Pakistan-Occupied Jammu and Kashmir POJK. The truth behind Pakistan assertion is that India must follow the UN resolutions on J&K. Since 1947, Pakistan has, unfortunately, been selling the wrong narrative about J&K to the world community. On 30 Dec 1947, the Indian Government referred the matter to the UN under the provisions laid down in Articles 34 & 35 in its charter, which says that member states may bring any situation to the UN whose continuance could endanger the peace and security of the region. The Indian Government declared that the plebiscite should later confirm Maharaja decision of Accession and its endorsement by Sheikh Abdullah. But this offer was conditional, which stipulated that invaders are driven out of the J&K first, but this was fulfilled as Pakistan Army supported.

In all these Constitutions, subject to which I said of the inappropriateness of comparing other world Constitutions made for different people with their differing social, political and economic outlook, the words used are either amendment or a combination of that word with others or a totally different word. In some of the Constitutions given in the compilations made available to us where the word amendment alone is used, the exercise of the power of amendment was inextricably linked with the ratification by the people in whom the sovereignty rests, either by referendum or by convention or by the Legislatures. The Constitutions of other countries which have been referred to other the basic assumption underlying it is that this cannot be done without taking away or abridging any of the rights conferred by Articles 14, 19 and 31, and that such a law, where it contains a declaration that it is to give effect to the above policy, shall not be called in question in any Court on the ground that it does not give effect to such policy. The predominant articulate as well as inarticulate premise is not to hold invalid an amendment made under Article 368, if it conforms to the form and manner prescribed therein and is within the ambit of the amending power, but if the inexorable conclusion on a close scrutiny leads to a different conclusion it has to be so held. Article 31C is as follows. Notwithstanding anything contained in Article 13, no law giving effect to the policy of the State towards securing the principles specified in Clause b or Clause c of Article 39 shall be deemed to be void on the ground that it is inconsistent with, or takes away or abridges any of the rights conferred by Article 14, Article 19 or Article 31; and no law containing a declaration that it is for giving effect to such policy shall be called in question in any court on the ground that it does not give effect to such policy. Provided that where such law is made by the Legislature of a State, the provisions of this article shall not apply thereto unless such law, having been reserved for the consideration of the President has received his assent. 1219. The learned advocate for the petitioner submits that Article 31C subverts seven essential features of the Constitution : i it destroys the supremacy of the Constitution by giving a blank charter to Parliament and all the State Legislatures to defy and ignore the Constitution; ii it subordinates the Fundamental Rights to Directive Principles of State Policy and thus destroys one of the foundations of the Constitution; iii the manner and form of amendment laid down in Article 368 is virtually abrogated, inasmuch as while the Fundamental Rights still remain ostensibly on the Statute Book and Article 368 remains unlamented, the Fundamental Rights can be effectively silenced by a law passed by a simple majority in the Legislature; iv ten Fundamental Rights which are.

Committee, it is also pointed out that there had been no amendment of the with Section 294 of the Constitution by and as such they had not to deal with that situation. 1561. Another case to which reference was made on behalf of the was The Bribery Commissioner v. Perak Ranasinghe 1965 A.C. 172. In that case it was found that the members of the Bribery Tribunal had been appointed by the Governor General on the advice of the Minister of Justice in accordance with Bribery Amendment Act but in contravention of Section 55 of the Ceylon Constitution. Ceylon Constitution Order in Council, 1946 according to which the appointment of judicial officers was vested in the Judicial Service Commission. It was held that a legislature has no power to ignore the conditions of law making that are imposed by the instrument which itself regulates its power to make law. This restriction exists independently of the question whether the legislature is sovereign, as is that of Ceylon. 1562. It would appear from the above that the point of controversy which arose for determination in that case was different from that which arises in the present case because we are not in this case concerned with any law made by a legislature in contravention of the Constitutional provisions Reference has been made on behalf of the petitioners to a passage in the judgment wherein while dealing with Subsection 2 of Section 29 of the Ceylon Constitution, the provisions of which have been reproduced earlier, the Judicial Committee observed that the various clauses of Subsection 2 set out entrenched religious and racial matters which shall not be the subject of legislation. It was further observed that those the solemn balance of rights between the citizens of Ceylon, the fundamental conditions on which inter se they accepted the Constitution and these are therefore unalterable under the Constitution. It is contended that those observations show that the rights mentioned in Section 292 of the Ceylon Constitution which were similar to the fundamental rights in Part III of the Indian Constitution, were held by the Judicial Committee to be unalterable under the Constitution. There was, it is further submitted, similarity between the provisions of Section 293 of the Ceylon Constitution and Article 132 of the Indian Constitution because it was provided in Section 293 that any law made in contravention of Section 292 shall to the extent of such contravention be void. 1563. I find it difficult to accede to the contention that the Judicial Committee laid down in the above case that Sections and 293 placed a restriction on the power of amendment of the Constitution under Section 29 of the Constitution. The question with which the Judicial Committee was concerned was regarding the validity of the appointment of the members of the Bribery Tribunal. Such appointment though made in compliance with the provisions of the Bribery Amendment Act, was in contravention of the requirements of Section 55 of the Ceylon Constitution. No question arose.

His satire connects deeply with the struggles of common man facing the ironies of society Besides satire and essays, he wrote stories, novels, memoirs, sketches, reportage etc. He was accorded Sahitya Akademi for Vikalang Shraddha Ka Daur in 1982. The entire work of Harishankar Parasai is a guiding light for all those who stand for social justice, intellectual honesty and literary strength. Parasai was more than just a writer; he was a thoughtful social commentator. One can see Kabir in his writings. He elevated satire from just being funny to a powerful literary tool for social critique. His writings reflect societal contradictions and irony. He often mocked himself also. He writes, Achha bhojan karne ke baad aksar main manavtawadi ho jata hun-After a good meal, I often become a humanist. His inimitable style of humor and satire with social critique has had a long standing impact in Indian literature as well as society. He is perhaps the only Hindi writer who not only created a distinct literary form but also developed it and brought it to the highest level. Before him, satire was not seen as an independent genre though it had existed in poetry and in essays. He took it to a whole new level. The circumstances of independent India also played a major role in giving satire that recognition. Without those challenging conditions, satire might never have achieved the status of a separate form. He described true satire as a' review of life', something that makes a person think, face themselves, awaken their own awareness, and prepare to fight against the falsehood, hypocrisy, confusion, and injustice. Before him, satire was often linked to humour, and the common expression used was hasya- vyangya, with humour taking precedence over satire. Parasai completely changed this. His satire disturbs. It is dark. It does entertain but also conveys profound sadness and human empathy. Even 30 years after his death, his observations are perhaps more pertinent than ever, as satire lives on as an important force for social awareness. He wrote, Satya ko bhi prachar chahiye anyatha wo mithya maan liya jata hai Even truth needs publicity; otherwise it is taken as falsehood. Art of listening A better meditation for a noisy age IAF rattled Pak this time, but it needs a leg-up Limestone proves the impossibility of a runaway greenhouse effect on Earth Prophets of romanticism, love, beauty, and nature Redefining India's security landscape Dr Suvrokamal Dutta is an International Conservative Political Economic and Foreign Policy Expert. On August 5, 2025, Union home minister Amit Shah etched his name in India's political history by becoming the longest-serving Home Minister, completing 2,258 days in office and surpassing LK Advani's record. While Prime Minister Narendra Modi congratulated him, calling this milestone just the beginning, the occasion is more than a number. It symbolises a tenure defined by sweeping changes in India's internal security architecture, from the icy heights of Ladakh to the dense forests of Bastar, from the hills of the Northeast to the cyber frontlines of the digital age. When Shah assumed charge in June 2019, the nation faced deep and long-standing challenges. Jammu & Kashmir remained mired in political uncertainty and militant violence. Maoist insurgency still plagued large parts of central India. The Northeast grappled with armed insurgencies and unresolved border disputes. Cybercrime, narcotics trafficking, illegal migration and ina

Spl-BSF-HCM-TEST-Dated-2025-08-22-Test NO.-22175

Jammu & Kashmir was fully integrated into India's constitutional framework, reorganised into two union territories, and for the first time in decades peace began to replace the politics of perpetual strife. In the years since, the impact has been clear. Violent incidents in the Valley have dropped by 86 per cent, stone-pelting has ended and terrorist activities have been met with the full force of law. This zero-tolerance approach to terrorism extended beyond Kashmir. Amendments to the NIA and UAPA Acts empowered agencies to directly target terror financing and designate individuals as terrorists, dismantling networks like the Popular Front of India and crippling their organisational backbones. In the Northeast, 12 peace accords in six years ended decades-old insurgencies, reduced AFSPA's footprint and enabled over 10,500 insurgents to surrender arms. Equally decisive has been the campaign against Maoist insurgency. Under Shah's leadership, incidents of Naxal violence have fallen sharply, major leaders have been neutralised and thousands have surrendered. His declared goal of eradicating Naxalism by March 2026 remains on track. Shah's vision of security extends into domains where battles are fought without bullets. In the realm of cybercrime, the Indian Cyber Crime Coordination Centre (I4C) has emerged as a national nerve centre, blocking fraudulent communications, dismantling online extortion rackets and preventing financial losses amounting to thousands of crores. His war on narcotics has been equally unrelenting, seizing drugs worth over Rs 1. 1 lakh crore, breaking international trafficking networks and forging anti-drug cooperation with 46 countries. Disaster management too has shifted from reactive relief to proactive preparedness. State disaster funds have been substantially increased, geo-based early warning systems rolled out and international humanitarian missions executed with speed, from earthquake relief in Turkey and Syria to vaccine diplomacy during the Covid-19 pandemic. Losses from cyclones have been cut by an estimated 98 per cent, a testament to the effectiveness of early alerts and integrated response systems. Legislatively, his tenure has seen the passage of the Citizenship Amendment Act, granting refuge to persecuted minorities from neighbouring countries, and the introduction of three new criminal laws that overhaul India's justice delivery system. These reforms prioritise crimes against women and children, enable e-FIRs, mandate forensic evidence in serious cases and repeal the sedition law; ensuring justice is both swifter and fairer. Amit Shah's record is not merely one of longevity. It is also a rare blend of political continuity and administrative resolve to achieve results. He has redefined the contours of India's internal security, bringing peace to conflict zones, dismantling entrenched threats and preparing the nation for emerging challenges in an interconnected world. Art of listening A better meditation for a noisy age IAF rattled Pak this time, but it needs a leg-up Limestone proves the impossibility of a runaway greenhouse effect on Earth Prophets of romanticism, love, beauty, and nature President Trump likes to do foreign policy in his own flashy style. People call it daddy diplomacy because he acts like he's the boss and wants credit for every peace deal. For example, after India wants to change its GST system, that's the tax we pay when we buy things. The goal is to make it simpler and fairer, and

BSF-HCM-TEST-Dated-2025-08-23-Test NO.-22176

Pakistan ascribes its break up and the creation of Bangladesh to India. This was not all. Bangladesh was the product of the ineptitude of Pakistan military establishment, the selfishness of West Pakistan political elite, the liberation struggle of the people of Bangladesh, and India brilliant military campaign. India leadership was clear that the thrust of the effort in the liberation of Bangladesh had to be internal, even if the Indian army delivered the final coup de grace. The chief martial law administrator and commander of the eastern command of the Pakistan army, Lt Gen AAK Tiger Nazi, surrendered to the joint command of the Indian army and the Mufti Tahini on the afternoon of December 16, 1971, almost to the hour on the 13th day of the War of Liberation of Bangladesh. The InaCom consortium conducting genomic sequencing has recommended a booster dose for those over 40, first targeting high risk and high exposure individuals, to bolster neutralizing antibodies against Omicron. Go must heed this advice. Because there no vaccine supply problem. Let do the math. Obviously, jabbing the unvaccinated and the partially vaccinated is the highest priority. To achieve 100 adult vaccinations, India needs 610 million more doses as of now. States have 220 million doses with them. And as the Centre has told Parliament, Serum Institute and Bharat Biotech can produce 300 million a month. Plus, SII Adar Poona Walla has said his company holds hundreds of millions of vaccines on its campus, and production is around 35 more than off take. Now, assume booster doses are cleared for those second dosed six months back. That number right now is 45 million. Therefore, given India stocks and production capacity, completing double dosing of adults and giving booster shots can happen simultaneously. As for funds for giving booster doses assuming they too are free there plenty. Only Rest 19,675 core of Rest 35,000 core budgetary allocation for vaccine procurement has been utilised. And tax receipts are booming. GoI total receipts till end October this fiscal of Rs 12.79 lakh core are 64.7 of Union budget estimate, setting it on course to exceed the year target. The science for boosters is even clearer. A new UK study shows boosters work well with Covishield. And Covaxin trials on boosters should be getting over now. Every country that has mandated boosters has done so on the basis of scientific advice, and in each of those countries the arrival of Omicron has heightened the urgency. That same urgency should inform GoI decisions, too. We have the supplies, we have the money, and we have the infrastructure don t delay boosters. Six out of nine members of the US Supreme Court seem ready to discard Roe v Wade, which, nearly 50 years ago, guaranteed women reproductive freedom. The religious right in the US has made abortion a flashpoint for decades, styling themselves as prolife for prioritising an unborn foetus over a live woman. Where does life begin is an interesting philosophical thought trail, but.

If a woman is recognised as fully human, rather than a vessel for the next generation, her rights over her own body would never arise as a real question. This may seem like a distant concern to us, but that only an accident. In Judaeo Christian and Islamic frameworks, life is given by god and belongs to god. In India, that framework does not dominate, so abortion is not as emotionally charged and is more readily seen as a personal choice, rather than a religious one. India had had a relatively liberal approach to abortion since the 1970s, when the Medical Termination of Pregnancy Act was first legislated, and subsequently amended. But Indian women also know, only too well, what happens when men claim religious authority to decide what they do with their bodies and minds. Just as in the US or Poland today, or Afghanistan under Taliban or in many parts of India today, women can easily be thrown back into religiously sanctioned, strictly private roles of wife, mother and other roles to service the patriarchy. The right to move and study and work and live freely, to enter into relationships as one chooses, is all fragile and hard won achievements for women. All the more reason to strengthen each other struggles around the world, to liberate women lives from manmade religion and law. You have seen this in a movie that a big asteroid is hurtling towards Earth threatening to destroy it, but scientists save the day. In Armageddon Naas scientists train a team of oil drillers to insert a nuclear bomb into the asteroid and detonate it. But in real life, such a nuclear solution would be very risky for Earth itself. For this reason and also because the 1996 Comprehensive Test Ban Treaty bans nuclear explosions in space, for its first practice run at protecting Earth from asteroids when it is really called upon to do so, the US space agency has chosen a much less explosive scheme. An episode of the Science Vs. podcast dramatically titled provides the whys and how and what ifs of the Double Asteroid Redirection Test or DART mission with the merry nerdy vibe that is the USP of host Wendy Zukerman. If all goes according to plan the probe launched last week will strike its target Didymium hard in September next year, forcing Didymium to alter its orbit around Didoes. Targeting a pair of asteroids like this, will make it easier for subsequent missions to see any alteration in Didymium path. It been over 600 days since schools have been closed in Delhi, Mumbai and Pune and other cities we live in. Those 14,400 hours of wasted learning for this generation of school going children. And just when a glimmer of hope emerged with an official announcement that schools would reopen from December 1, the fear of the new strain has caused officials to, once again, delay the reopening of schools. Nothing else will close. Adults will go to their.

Offices, because, well, that matters. They all spend evenings at restaurants, parks, even bars. And they all come home to children who have spent the day, if they are lucky, half checked online. If they are t lucky 60 of Indian students don t have devices, they all come home to children who have spent their 601st odd day with a glaring, mounting learning and socio emotional gap that is having severe consequences on their future. When a UN agency asked me to list the three most important ecological issues of the moment, my answer was, Soil, soil, soil. That holds true today more than ever. The very word human is linked to the word humus, or soil. Without humus, human life is unsustainable. In 1998, when certain UN agencies predicted that 60 of Tamil Nadu state would become a desert by 2025, I realized this prophecy might well come true. Tree planting was the only way forward. When I proposed the idea of restoring at least 33 of the land to green cover, it was dismissed as idealistic. But since then, 57 million trees have been planted on private land. My role was to plant trees in people minds; people did the rest. This could only work as a mass initiative. We have since been focussed on the issue of water another inseparable concern. Given the rapidity with which water tables are dropping and cities reeling with water shortages, this was also a vital necessity. However, these issues cannot be viewed in isolation from living soil that critical natural resource. We are on the brink of oil extinction. If we don t take corrective measures to renew soil, the consequences in the next 25 years could be disastrous. Water depletion is visible. But soil erosion is less dramatically apparent. Since our crops still grow, we are unaware of how terribly impoverished our soil quality is. Humanity cannot speak of prosperity, equality or even spirituality if it takes for granted the very earth on which it stands. Of nearly 160 million hectares of arable land in India, nearly 60 is labelled distressed soil. We are heading in three decades towards a major food crisis, which, in turn, could mean mass urban migrations, social tensions and disruption to life and livelihood. Soil weakening also means lowered levels of nourishment. The nourishment value in our vegetables has plummeted in the last 25 years, and over 70 of our children are anaemic. To produce a future generation that is weaker than ours is a terrible crime against humanity. What is the way out of this predicament the primary source of water replenishment in a tropical nation is the monsoon. If we want to preserve rainwater in the soil to feed our rivers, lakes and aquifers, we need substantial vegetation. Water can be retained in the soil only when there is rich organic content. Vegetation and animal waste are key to this; or else, the water will simply flow away. This is the true.

Void under Section 2 of the Act as being repugnant to Section 5 thereof. 251. For proposition 2 above, reference is made in the footnote to Taylor v. The Attorney General of Queensland. 23 C.L.R. 457 The relevant passages which bear out the second proposition are: I take the Constitution of a legislature, as the term is here used, to mean the composition, form or nature of the House of Legislature where there is only one House, or of either House if the legislative body consists of two Houses. Probably the power does not extend to authorize the elimination of the representative character of the legislature within the meaning of the Act. p. 468 per Barton J I read the words Constitution of such legislature as including the change from a unicameral to a bicameral system, or the reverse. Probably the representative character of the legislature is a basic condition of the power relied on, and is preserved by the word such, but, that being maintained, I can see no reason for cutting down the plain natural meaning of the words in question so as to exclude the power of a self governing community to say that for State purposes one House is sufficient as its organ of legislation. p. 474 per Isaacs J For proposition No. 3 sees Taylor v. The Attorney General of Queensland 23 C.L.R. 457 and Clayton v. Heffron. 1960 105 C.L.R. 214; 251. 252. Then dealing with the Commonwealth Constitution, he states: Another suggested limitation is based upon the distinction between the covering sections of the Constitution Act and the Constitution itself; it is admitted on all sides that Section 128 does not permit of any amendment to those sections. And in this respect the Statute of Westminster does not confer any new power of amendment indeed it is expressly provided that nothing in the statute shall be deemed to confer any power to repeal or alter the Constitution of the Constitution Act otherwise than accordance with existing law. In virtue of their character of Imperial enactments the covering sections of the Constitution are alterable only by the Imperial Parliament itself. The question is, admitting this principle, how far does the Constitution Act operate as a limitation upon the amending power? It has been suggested that any amendment which would be inconsistent with the preamble of the Act referring to the indissoluble character and the sections which refer to the Federal nature of the Constitution, would be invalid. There has been much conflict of opinion respecting this matter; the view here taken is that the preamble in no wise affects the power of alteration. 253. In view of this conflict, no assistance can be derived from academic writing. 254. The case of The Attorney General of Nova Scotia and The Attorney General of Canada and Lord Nelson Hotel Company Limited 1951 S.C.R. Canada 31 furnishes another example where limitations were implied. The Legislature of the Province of Nova Scotia contemplated passing an act respecting the.

BSF-HCM-TEST-Dated-2025-08-23-Test NO.-22180

Delegation of jurisdiction of the Parliament of Canada to the Legislature of Nova Scotia and vice versa. Being: what is the extent of the amending power conferred by Article 368 of the Constitution, apart from Article 13 2, on Parliament? 11. The respondents claim that Parliament can abrogate fundamental rights such as freedom of speech and expression, freedom to form associations or unions, and freedom of religion. They claim that democracy can even be replaced and one party rule established. Indeed, short of repeal of the Constitution, any form of Government with no freedom to the citizens can be set up by Parliament by exercising its powers under Article 368. 12. On the side of the petitioners it is urged that the power of Parliament is much more limited. The petitioners say that the Constitution gave the Indian citizen freedoms which were to subsist forever and the Constitution was drafted to free the nation from any future tyranny of the representatives of the people. It is this freedom from tyranny which, according to the petitioners, has been taken away by the impugned Article 31C which has been inserted by the Twenty fifth Amendment. If Article 31C is valid, they say, hereafter Parliament and State Legislatures and not the Constitution, will determine how much freedom is good for the citizens. 13. These cases raise grave issues. But however grave the issues may be, the answer must depend on the interpretation of the words in Article 368, read in accordance with the principles of interpretation which are applied to the interpretation of a Constitution given by the people to themselves. 14. I must interpret Article 368 in the setting of our Constitution, in the background of our history and in the light of our aspirations and hopes, and other relevant circumstances. No other Constitution in the world is like ours. No other Constitution combines under its wings such diverse peoples, numbering now more than 550 million, with different languages and religions and in different stages of economic development, into one nation, and no other nation is faced with such vast socio economic problems. 15. I need hardly observe that I am not interpreting an ordinary statute, but a Constitution which apart from setting up a machinery for government, has a noble and grand vision. The vision was put in words in the Preamble and carried out in part by conferring fundamental rights on the people. The vision was directed to be further carried out by the application of directive principles. PART II Interpretation of Golak Nath Case. 16. Before proceeding with the main task, it is necessary to ask: what was decided in I.C. Golak Nath v. State of Punjab 1967 2 S.C.R. 762? In order to properly appreciate that case, it is necessary first to have a look at Sri Sankari Prasad Singh Deo v. Union of India and State of Bihar 1952 S.C.R. 89 and Sajama Singh v. State of Rajasthan 1965 1 S.C.R. 933. 17. The Constitution First Amendment.

BSF-HCM-TEST-Dated-2025-08-23-Test NO.-22181

The Supreme Court SC ruling on Electoral Bonds EB has been welcomed by one and all. The court has stressed the need for transparency and quashed further issues of such bonds. However, three important questions arise in this whole saga of EBs. Is total transparency for public consumption in such donations the right way to go? Is the SC right in banning EBs in totality in the absence of any other more suitable alternative? A subset of this question is whether SC verdict will encourage cash donations once again? In the decades before when EBs came into existence, most political donations were in cash and those below Rs were exempt from reporting. So, the route adopted by most donors was multiple small donations to avoid scrutiny. This necessitated generating black money and unaccountable cash. That was obviously a crime in itself and led to tax evasion and falsifying of accounting records. And transparency was totally missing. Electoral bonds, a form of bearer bonds, were instituted by parliamentary legislation in to overcome such issues. The donors could buy these interest-free and tax-free bonds from SBI for political donations. The purchaser record was captured since KYC norms were mandatory. However, the need to register the ultimate beneficiary of these bonds was not mandated. This meant that these bonds could change hands after receipt because of the near-inbuilt anonymity. There is still some ambiguity about whether the EBs had any specific series numbers or special identifications to enable easy tracking. There was no limit on the number of bonds that could be purchased in various denominations starting from Rs to Rs crore. A time period was stipulated for encashing them. It was mandatory for political parties to intimate the Election Commission EC of the amounts received from such bonds without disclosing the donor. This method ensured limited transparency. The point to note here is that it was difficult, though not impossible, to establish a direct link between the donors and the recipients. This was by design as the government wanted to protect the identity of the donors to save them from harassment. Imagine a state where party ABC is in power but a corporate makes a heavy donation to the rival party XYZ. Would this be a reason enough for such a corporation to face harassment from the state ruling party? In the current political environment and the animosity between the BJP and some of the regional parties in states like Bengal, Tamil Nadu and others, it would be difficult to rule this out. Therefore, the government felt that there was a need to protect the identity of the donors. The importance of transparency hinges on one crucial issue to establish if there is a quid pro quid between the donor and the recipient. In any democratic political environment, and more so in the Indian context, such charges will always raise their ugly head. Even the SC verdict of 15 February realised this as is evident from the information that they have demanded. In principle, the SBI will provide the list the purchasers of the bonds while the recipients list will be provided by the EC based on reports received from the political parties. The court has not asked for any linking matching of the donors and the recipients. As per a media report, from March to January a total of EBs were issued with a total value of Rs crores, mostly to corporates with one crore being the favoured denomination. Of these 27,811 bonds were redeemed for a value of Rs cror

BSF-HCM-TEST-Dated-2025-08-23-Test NO.-22184

The BJP received about of the total funds, followed by Congress at 9.3%, TMC at and rest went to other parties. Donations were also received from electoral trusts and through other banks in addition by political parties amounting to Rs crores with being the major recipient at nearly It is no brainer that parties in power at the Centre and in states received correspondingly higher donations. The recipients list includes all national parties as well as most regional parties. In light of this, the opposition euphoria over seeing the SC verdict as a rebuke to the BJP government alone is rather misplaced. Being recipients of similar funds, they were a party in the crime as well. The next few weeks will be interesting and chaotic at the same time. In absence of a proper linking of the donors and the recipients, there will be many rumours and half-baked charges that will dominate the political rhetoric. The media, as is its wont, will only add fuel to fire. It remains to be seen who will really gain by listing this information on the EC website. Some corporates, business houses and their promoters will be vilified. It is another matter that politicians who vilify them today may cosy up to them tomorrow if they come to power. The common voter meanwhile will go on with his life uninterrupted since he has hardly any time for all this. Was the SC right in banning the EBs totally without exploring a better route for political funding? For the interim period, it could have made the information that has now been asked mandatory and let the EBs continue. Meanwhile, a committee could have been instituted to explore and recommend a better option? The hard truth is that political funding will continue, one way or the other. Till a new system comes into force to regulate it, the old cash route will be back along with the ills that are inherent to it. Surely this is not what a democratic Bharat needs that hope to follow the principles of Ram Rajya as it marches forward to be the world third-largest economy and a democratic nation that others would envy. The cost of treating sickle cell anemia in India is on the verge of crashing. Hydroxyurea, a line of treatment, will now cost less than 1% of current import price. This is on account of a domestic manufacturer announcing it will supply vials at the new price to govt. Healthcare costs are a source of economic pressure on most Indian families. It led to govt intervention to improve access to medicines and provide insurance cover to cover emergencies. GOI and states have been the largest combined buyers of group insurance. It an important safety net for vulnerable households. But its limitation is that it kicks in only in the case of hospitalisation. Medical expenses that don require hospitalisation put immense strain on household budgets. Costly medicines | National Health Accounts estimates for showed that out-of-pocket expenses make up or every spent on total healthcare expenditure. This is a high burden on households, by global standards. Moreover, over half of is on account of medicines. Getting a grip on the price of medicines is the key to reducing pressure on household budgets.

BSF-HCM-TEST-Dated-2025-08-23-Test NO.-22185

Accepted, this country under a Constitution and a Preamble proclaiming the securing of fundamental rights to its citizens will be without them. The individual rights which ensure political rights of the citizens in a democracy may have to be subordinated to some extent to the Directive Principles for achieving social objectives but they are not to be enslaved and driven out of existence. Such could not have been contemplated as being within the scope of the amending power. 1249. Although Article 31A protected the laws coming within its purview from the rights conferred by Article 19, such a protection could only be against the rights conferred by Clauses and g of Article 19 1, as its subjected matter was expressly stated to be the acquisition of or extinguishment or modification of rights in any estate as defined in Clause 2 thereof, and the taking over or amalgamation or termination etc., of rights of management and certain leasehold interests. Article 31C protects laws giving effect to the policies in Article 39 b & c. For achieving these twin objects the rights of the persons that have to be abridged could only be those rights in Article 19 which relate to property and trade, business, profession or occupation. Though the expression economic system is used in Article 39 c, that article has not the object of changing the economic system generally, but is confined to only preventing concentration of wealth and means of production to the common detriment. What this Clause envisages is that the State should secure the operation of the economic system in such a way as not to result in the concentration of wealth and means of production to the common detriment Where there is already concentration of wealth and means of production which is to the common detriment, the law under Article 39 c would be only to break up or regulate as may be necessary the concentration of wealth and means of production. All other rights are outside the purview of Article 31C and in this respect Article 31A and Article 31C can be said to be similar in scope and no different. In my view, therefore, the learned Solicitor General has rightly submitted that the law under Article 31C will only operate on material resources , concentration of wealth , and means of production , and if this is so, the rights in Article 19 1 am to e would have no relevance and are inapplicable. 1250. With respect to the exclusion of Article 31 by Article 31C, Clause 1 of Article 31 is not in fact affected by Article 31C, because under the latter any rights affected must be by law only. Even if Article 31C was enacted for making laws in the furtherance of the directive principles in Article 39 b and c affecting property, those laws have to conform to Article 31 1 for they would be laws depriving persons of their property. Article 31C also contemplates the making of a law to.

BSF-HCM-TEST-Dated-2025-08-23-Test NO.-22186

Act, 1951, which inserted inter alia Articles 31A and 31B in the Constitution was the subject matter of decision in Sankari Prasad 1952 S.C.R. 89 case. The main Wealth of a nation: animal waste and leaves. Our real gift to the next generation is not business, money, gold. It is soil. Our first step must be awareness; the next step policy; only then can meaningful action happen. But one thing is clear: as a global policy, a minimum 3 of organic content in agricultural soil is an absolute necessity. And for this, vegetation is a must. With traditional knowledge, Indian farmers still feed over 1 billion people. The number of microorganisms found in a single cubic meter of Indian soil is still among the world highest. With a little initiative, this fertile, richly alive soil is fully capable of bouncing back. But we can postpone action no longer. It is time to reverse this potential catastrophe and save our soil. Let us make it happen. The battleground appears to have shifted in the farmers protest from the repeal of the three farm laws to a legally binding MSP. Leaving aside issues of implementation practicality, the several billion dollar questions are for which crops should MSP be legally binding, where, and for how long? For context, consider that we have gone from being a nation of 220 million eating primarily millets in 1881 to a 1.3 billion rice and wheat eating behemoth today. The price for this transformation has been paid largely from the groundwater reserves of the northwest. Its unclear how long that water will last one high level state government committee opined that the groundwater could run out in 20 25 years in Punjab. Between 1966 and 2010, Punjab s annual rainfall has averaged 662 mm, while the rainfall between 2011 and 2020 is 653 mm not a big fall, but still a fall. How long can farming continue if this fall continues, as some climate models predict? Already, bores are being deepened at a high cost. An attempt to conserve groundwater squeezed crop cycles and caused farmers to burn stubble, contributing to the winter spike in pollution. Given this context, should MSP, a policy tool forged during the droughts of the mid 1960s, be used to encourage the growing of a water hungry crop in India s dry northwest? Consider, India s monsoon does not deposit 1,100 mm of rain equally: places like Jaywalker get about 165 mm, while some parts of the North East see five meters in a matter of months. Before the British, Indian farmers grew their crops largely in keeping with locally available water and opted for crop varieties that could cope with the vicissitudes of India s temperamental rainfall. But the British changed that with the canals bringing water in and railroads carting produce out. All at once, Indians began to believe that we could grow what we like, where we like. The Green Revolution with its bore wells and the ascendance of.

BSF-HCM-TEST-Dated-2025-08-23-Test NO.-22187

Uncertainty and anxiety have taken over the human psyche, leadership goes for a toss. Mental health is a huge crisis. We must address the root cause from a holistic perspective and explore breathing as a tool to manage the mind and emotions. Yoga and meditation have proven to be the most effective tools to check attention deficit disorder, depression, anxiety and other challenges. Thanks to the initiatives of the Government of India, yoga and meditation have been introduced in schools and colleges throughout the country. We are also taking doyen, meditation, to every gear, home. The WEF has picked up several good projects that focus on protecting the environment. One of them is the Miyazaki diversity project being run in many schools by Art of Living volunteer Neel am Patel from California. The Miyazaki method grows micro forests 10x faster, generates up to 100x more biodiversity, replaces water-guzzling lawns with native drought-tolerant plants, has a 95 per cent survival rate, and empowers children to make a difference in a climate change solution. In California, the average height of the trees after just one year is 3 meters, 12-feet tall. As the world faces a biodiversity crisis, micro forests are serving as havens for local flora and fauna in underutilised micro-urban spaces. The distant mountains surrounding Davos reflect the calm, beauty and peace inherent in nature a reminder to the world that we need to maintain, protect and enjoy them for generations to come. Peace is the only way forward, without peace there is no prosperity, and without prosperity, there is no peace. And we need wisdom for both. their academic and professional objectives. Leadership helps them to utilising techniques and technology, allowing for higher productivity and economic advancement. This has a significant economic impact. Resolving conflict Children at residential schools learn how to handle conflicts when they come up on their own. They work to build enduring and healthy friendships and hone their conflict-management skills outside of the classroom, in a setting that feels like home. They are aware that building a cohesive team will take time, and disagreements will only make things worse. Thus, clique behaviour does not develop in residential schools as it does in regular schools. By using conflict resolution strategies and accepting accountability for their actions, students may establish durable and solid connections. This will help in the growth of the country, and they will be able to resolve other big conflicts. Individual Responsibilities Residential schools enable students to assume ownership of their lives and their belongings from an early age. When they are away from home, it helps them grow in virtues like self-reliance and independence. If they are sent to a residential school, they will learn independence in a bigger community environment, which will help them gain confidence in other aspects of life. Through individual responsibility, children will become model citizens and will always aid in the prosperity of the country. Perseverance Tenacity, or persistence, is a lesson that residential schools may have taught.

Spl-BSF-HCM-TEST-Dated-2025-08-23-Test NO.-22191

She is keenly interested in politics, militancy, pop culture, feminism and youth. Delhi has a dog problem only; it's more human and less a dogged tale. Recently, an' Off with their heads'-sequel judgement ordered all of Delhi's stray dogs to be picked up from the streets and placed in shelters. The order had an Alice in Wonderland-like quality as suddenly, it was discovered there are hardly any canine shelters, bone-dry staff, inadequate feeding funds and no clear numbers even on how many strays inhabit Delhi three lakh? Seven? Ten? Amidst the monsoon came this fog of uncertainty and unease but some humans broke familiar ground by making it all about themselves. Voluminous criticism not so much about strays as those who tend them was unleashed, reflecting how some of our two-legged types can be more biting than the four-legged species. Among criticisms of dog careers now came allegations that these are actually elite champagne-guzzlers who lie back on cushions of indolence, chucking pizza at strays. What do they care, railed critics, if a pedestrian gets bitten? Another quarter alleged dog careers were actually faux animal lovers since, presumably, after flinging foie gras to canines from their Mercedes, they go home to a mutton biryani. The most stinging criticism claimed dog careers are sociopaths detractors hissed,' They don't weep for humans suffering on their own footpath.' This cascade of critique reflects much about our society and its biases. To paint all dog careers as the gilded rich varnishing their indulgences is an argument standing on its head. Most volunteers stem from the broad trunk that is the city's middle class, some patrician, some petit bourgeois, all united by small packets of food and little clutches of tenderness they offer between long days at work and demanding hours at home. Even if some do this between buying Balenciaga, so what? Should we castigate the rich for being kind? In the world's fastest-growing economy, our aim should be,' Get wealthy and stay nice'. Yet, despite India's upward mobility, there remains resentment against the well-off and it glimmers in diatribes of the anti-dog tribe. The second irony is the' animal eater' charge. Charles Darwin wouldn't know whether to laugh or weep since this shows a breathtakingly incomplete understanding of evolution dogs are markedly different from other species, evolving as companions alongside Homo sapiens. Over millennia, we have literally altered their entire existence, from wild packs of wolves to puppies sleeping on our slippers, gazing up at us with adoring eyes as we hug and kiss them and change their abodes, diets, emotional understanding and ability to survive without us. This is not the case for, say, a tiger. Those who love dogs don't exist in nature's food chain either. All beings are a part of this. Dog lovers don't claim superhero status for every species they are only defending the rights of dogs, whom, it is reasonable to assume, they do not consume. Bringing in the entire animal kingdom and stating dog lovers who like the occasional cutlet are hypocrites, is missing key points about dogs, humans, what we eat and how we love. The most laughable criticism is dog lovers being too sunk in the pleasures of tending apparently rabid animals to care about human suffering. Who exactly has been protesting for the rights of women? For the equality of sexualities, the dignity of every religion? If anyone did a serious study as opposed to slinging low shot

BSF-HCM-TEST-Dated-2025-08-24-Test NO.-22192

Most effectively. It teaches students that simply stating goals is insufficient. Students at residential schools learn to overcome obstacles and rebuild their strength. It teaches students that overcoming any obstacles that may come their way is not a choice. When something becomes challenging, they learn to refocus or devise a new strategy. This will not only be on the academic level, but they will also be able to implement it for the betterment and growth of the country. Residential school students learn and develop their identities in a healthy way while getting an education since they are isolated from their parents. Residential schools had very different goals a few decades ago than what we now consider to be residential schools. They are now providing holistic development for students so that they can contribute and become exemplary citizens of the country The food service industry is leaving no stone unturned to adopt smart and sustainable packaging options post the plastic ban. Adopting sustainable solutions in food packaging makes a brand both consumer and environment-friendly. The ban on single-use plastic in July in India has prompted a need in the food packaging industry to find sustainable alternatives to plastics. While different industries are seeking ways to develop innovative and eco-friendly packaging, the convenience of paper packaging cannot be ignored. The paper industry has successfully contributed to the cause by manufacturing paper bags, straws, and cutlery to cater to the food packaging industry. The increase in demand for online food delivery has accelerated the growth of sustainable packaging in the food industry. With increasing awareness, consumers now prefer and actively opt for sustainable options, encouraging brands to rethink food packaging. The focus on environment-friendly goes beyond packaging and cover caps; many businesses have now introduced cutlery and straws made of compostable materials like pulp, bagasse, rice straw, and paper. Over the years, the plastic ban has shifted the focus of the food packaging industry towards sustainability. The food packaging industry has also increased the use of biopolymers, which are degradable and compostable, along with introducing innovation in equipment and manufacturing processes Paper is one of the popular solutions used to achieve plastic reduction goals. Paper has the advantage of being bio-based, biodegradable, and recyclable. But paper has shorter shelf life than other packaging materials. Also, it must be ensured that the paper used for packaging is either responsibly sourced or made from recycled materials. With more businesses adopting sustainable food packaging, the options for environmentally friendly packaging have become more diverse. We are already witnessing a trend toward biodegradable packaging, with consumers becoming more aware of the need to reduce waste and recycle. In the future, we can expect more innovative sustainable packaging solutions that will help businesses manage their budget and protect the environment. India has been conducting censuses since 1872. In this century-and-a-half, not even two world wars were able to disrupt it. But the latest census, which should have happened in 2021, is yet to happen and all indications are.

BSF-HCM-TEST-Dated-2025-08-24-Test NO.-22193

That the earliest the exercise will be completed is in 2024. This raises some questions. One is whether it really matters if the exercise is delayed by a few years. Another is whether the delay is understandable. Let take these in turn. On January 26, the armed forces will spearhead the Republic Day parade near India Gate. Soldiers will march past to the beat of martial music. Planes will roar overhead. But should this display of military might be used to celebrate the adoption of the Constitution? That document constituted India into a sovereign Republic pledged to justice, liberty, equality, and fraternity. Republic Day celebrations need to be overhauled totally to remind us of those ideals. This does not reflect on our forces but will serve as a reminder of the non-violent struggle that won us our Independence. Thank God, Princess Diana is not alive! How on earth would Prince Harry late mother, the world most beloved British royal and he people princess, have been able to deal with the coarse and vulgar revelations in this year insanely successful bestseller, aptly titled pare, written by her younger son Prince Harry? In this case, the butler did do it! The son did! The murder of a reputation is worse than death itself, most would agree. But Prince Harry is either even more daft than previously thought, or as calculating as the British press have made him and his American wife Meghan Markle out to be. A few months ago, a friend was demonstrating the new speakers he had gotten. He had connected the speakers to Relaxa, a smart cloud-based voice service. A service which does what we want it to do through our voice commands. So my friend asked Relaxa to increase the volume to maximum. It did of course! Lovely speakers and amazing sound. But it caused a bit of a nuisance for other members in the house and the volume had to be reduced. The friend asked Relaxa to reduce the volume but now Relaxa could hear his voice command because it was so loud. My friend eventually had to get up and reduce it manually. This got me thinking of a parallel. Replace the voice assistant with government, the voice with voice of people in cities and speakers with the government policies. In a democracy, people are supposed to voice their needs to the governments. When if government hears the voice, it manifests action through policies. Just as the speakers volume can be turned up or down through Relaxa, government policies can be implemented or discontinued based on the voice of the citizens. And just as the speakers can become difficult to control once they are turned up too loud, government policies can become difficult to change or reverse once they are set in motion. Citizens voices ask the voice assistant governments to do something. The voice assistant listens and does it through a policy. But then citizens get carried away and want more of it a small.

Project becomes a whole program. A rest house becomes a hotel. A village becomes a town. A town becomes a city. A city becomes a sinkhole. In these scenarios however, the voices often forget that they can resort to a manual mode where they can use their hands to turn the volume down. Or get much closer to the voice assistant and make themselves heard. Else be ready to listen to the speakers on full blast. Whilst climate change is no more a future occurrence, finding sustainable alternative ways to curb it becomes all the more imperative for nations across the globe. The effect of climate change is evident enough now. On one side, natural resources are getting exhausted, and on the other side, pollution is increasing rapidly. Considering this rapid change, India is delving its way deep into renewable energy expansion like never before Bio-CNG is gaining momentum and becoming a green alternative to curb climate change. Government initiatives to encourage renewable energy expansion Boosting green technology in promoting the agriculture field is, at present, the primary target of the Indian government. Under the umbrella of bioenergy schemes, the government is encouraging the adoption of green alternatives like Bio-CNG by providing subsidies and bringing in private enterprises to play a crucial role in supporting renewable energy expansion in the country. While the government SATAT Sustainable Alternative Towards Affordable Transportation programme aims at promoting compressed biogas as a green alternative transportation fuel, the GOBAR-DHAN Galvanising Organic Bio-Agro Resources scheme is the second type of subsidy scheme launched to convert farm waste into CBG Compressed Bio Gas. Under the government policy of SATAT, more than 500 Letters of Intent have been issued already to establish Bio-CNG plants across the nation. How CBG-based vehicles will help in curbing climate change? The emission of greenhouse gases from vehicles accounts for about 27% of air pollution. The data clearly indicates that vehicles are becoming major contributors to the increased pollution. That the reason behind the push to find an alternative fuel that does not harm the environment. While India is finding this alternative, in CBG-based vehicles, it is expected that these vehicles will be able to resolve the serious implications of deteriorating air quality index. To counter the problem of air pollution, there is a need of deploying enough infrastructure for the manufacturing, distribution and retailing of CBG. Moreover, this CBG is produced from the result of waste resources present within India, and the dependency on expensive export of fuels will minimise swiftly. Renewable gas revolution in India The primary objective of the initiatives advocating the renewable gas revolution in India is to address the problems of waste generation, severely polluted air, stubble burning, etc. The Indian government is highly focused on moving towards a gas-based economy. Doing so will require less dependence on the import of natural gases, addressing the problem of rural unemployment and increasing access to sustainable solutions. In recent years, the government of India is actively taking effective measures towards.

Central procurement of rice and wheat only strengthened that belief. Only now, as the climate warms, and wet regions become wetter, and dry regions grow drier, that belief is being questioned. Apart from being geographically varied, India s rainfall is highly seasonal, temporally skewed and varies across years as global phenomena like the El Nino exert their influence. When we ignore these facets, we create fault lines that erupt into crisis. Just last week, South India Andhra Pradesh, Tamil Nadu and Pondicherry were confronting rivers in spate intent on sweeping away everything in their paths. Earlier, we had the ameliorating influence of tanks that could help moderate intense rainfall and parley between dry and wet seasons. When we began seeing tanks as uncool and dry tanks as prime real estate, and bore wells as sophisticated and convenient, many Indian cities slipped into a bipolar reality of flood and drought. Speaking of ameliorating influences, we must not forget forests and the glowing embers of an incipient water crisis in the North East. The Jail Shakti of the Brahmaputra comes from both the plentiful rainfall and the emerald forests of Arunachal. Forests trap the rain and send it into cerulean streams which coalesce to form large rivers that feed into the Brahmaputra. In a water scarce world, both China and India eye those waters hungrily. Moreover, the steep descent of many of the streams sings the siren song of hydropower a renewable energy source that has become increasingly valuable in a planet short of carbon space. China plans a huge dam three times the size of the Three Gorges on the Brahmaputra, just a few kilometers away from the Line of Control. Will forests be cleared to build this dam or others like it in this region? Will such a dam be able to cope with intense rainfall, which the loss of trees will only make worse think Kerala floods? What about the very real risk of earthquakes? Will the dam become a capricious hydro disciplinary tool? These are knotty questions with few easy answers, but almost every water crisis in India stems from our disrespect for the tempestuous nature of India s cloud messenger. And so, any action begins with respecting this variability. This means building water storage something India has too little of. This means keeping forests intact to smoothen the intense rainfall and maintain dry season river flows. This also means sustainable crop practices and urban planning that requires giving water its space. Many of these actions go against both powerful and popular forces. As the farmers outside Delhi exult, what about the next generation of farmers who will confront a dry land in which to grow a water hungry crop? What will they do? What will we do? Give effect to the Directives in Article 39 b and c. In so far as Article 31 2 is concerned. The water crisis was deliberately created. In the past, kings and the people created water bodies because they understood the.

The magistrate and no such person shall be detained in custody beyond the said period without the authority of a magistrate. 132. Article 22 4 deals with Preventive Detention. Article 23 prohibits traffic in human beings and other similar forms of forced labor. Article 24 provides that no child below the age of fourteen years shall be employed to work in any factory or mine or engaged in any other hazardous employment. 133. Articles 25, 26, 27 and 28 deal with the freedom of religion. Article 25 1 provides that subject to public order, morality and health and to the other provisions of this Part, all persons are equally entitled to freedom of conscience and the right freely to profess, practice and propagate religion. Article 26 enables every religious denomination or section thereof, subject to public order, morality and health, to establish and manage institutions for religious and, charitable purposes; to manage their own affairs in matters of religion, to own and acquire movable and immovable property, and to administer such property in accordance with law. Article 27 enables persons to resist payment of any taxes the proceeds of which are specifically appropriated in payment of expenses for the promotion or maintenance of any particular religion or religious denomination. Article 28 deals with freedom as to attendance at religious instruction or religious worship in certain educational institutions. 134. Article 29 1 gives protection to minorities and provides that any section of the citizens residing in the territory of India or any part thereof having a distinct language, script or culture of its own shall have the right to conserve the same. Article 29 2 provides that no person shall be denied admission into any educational institution maintained by the State or receiving aid out of State funds on grounds only of religion, race, caste, language or any of them. 135. Article 30 gives further rights to minorities whether based on religion or language to establish and administer educational institutions of their choice. Article 30 2 prohibits the State from discriminating against any educational institution, in granting aid to educational institutions, on the ground that it is under the management of a minority, whether based on religion or language. 136. As will be shown later the inclusion of special rights for minorities has great significance. They were clearly intended to be inalienable. 137. The right to property comes last and is dealt with the Article 31. As originally enacted, it dealt with the right to property and prevented deprivation of property saves by authority of law, and then provided for compulsory acquisition for public purposes on payment of compensation. It had three significant provisions, which show the intention of the Constitution makers regarding property rights. The first is Article 31 4. This provision was intended to protect legislation dealing with agrarian reforms. The second provision, Article 31 5 a, was designed to protect existing legislation dealing with compulsory acquisition. Some acts, saved by this provision did not provide for payment of.

BSF-HCM-TEST-Dated-2025-08-24-Test NO.-22197

The January March 2021 period was upbeat. Also, the data shows that both the proportion of population in the job market and workers with jobs in the first quarters of 2020 and 2021 were level. Eight months have passed since the data was collected. Proxy indicators reported since suggest that India workforce has t yet put the Covid impact behind. Private consumption is still below the pre Covid level, suggesting a section of the workforce is yet to recover fully. An increase in the proportion of jobs in the informal sector risks India long term growth story. We are in the midst of a fundamental technological change. A lot of up skilling happens on the job. For jobs shifting out of the formal sector, the up skilling process gets a lot harder or is no longer possible. The improvement in high frequency economic indicators is a positive development. However, economic policy makers need to look beyond them to gauge the extent of damage caused by Covid. A conversation on the potential damage to human resources is essential between GoI and states, who are important stakeholders here. An immediate need is a relook at fiscal policy to see where it can be tweaked to arrest the shift in jobs to the informal sector. It the quality of human capital that will decide if India makes full use of its demographic dividend. Twenty four hours of such arrest excluding the time necessary for the journey from the place of arrest to the court of A man who is filled with arrogance suffers from it, not knowing how to free himself from it. By being arrogant he is constantly in conflict with others. He suffers this pain and finds himself alone, filled with the additional pain of loneliness. People feel scared to connect with him and he is scared of his loneliness, which makes him angrier. This is like adding fuel to fire. He approaches a spiritual healer for advice. The healer says, Look at a flower. Irrespective of who comes by, the flower gives fragrance. He further adds, come from a context that you will be like a flower showering the fragrance of joy. Always carry a flower with you and let that flower remind you of its function. You have to awaken more of female energy. Arrogance is the obesity of the head, and the heart of education is the education of the heart. The head is the function of male energy and the heart is the function of female energy. The balance of head and heart means the balance of the male and female energies in oneself. We are a product of our parents, and hence, both male and female energies exist in us. This balancing is an important aspect of wise living. What is meant by female energy Love and acceptance are functions of female energy. Love is the most healing energy in us. To bring the energy of love is a great awakening. The moment you start accepting,

You will know how to surrender, and in that state of surrender the energy of love emerges. Only in this energy of love is one truly healthy. What is meant by male energy This energy is one of adventure, one of achieving. If a person is not achieving oriented, then the male energy is not alive in him. When there is a balance of both male and female energies, one knows when to push oneself and when to let go and accept. An intuitive balance happens. What happens if I don t have the power of acceptance Then you can t accept your body ageing. You can t accept that death is a part and parcel of life. How should I go about achieving in life Think like a winner. You should allow your dreams to be converted into destinations. You should allow your dreams to come true. A research conducted on successful persons has found that four factors contribute to one success: self confidence, mental toughness, conventional thinking, that is mentally practicing success and commitment to excel. Should one practice this balancing of female and male energies The ability to practice this balancing is a lifelong process. If you do not start young, then you will find it difficult. Even in martial art there are soft and hard techniques. If you are hard on the other when required being soft, then even though you have won, still you would have lost, as winning is losing and losing is winning. Mr. Mode had no choice but to repeal the farm laws. I had written that it has not been possible for Mr. Mode to bulldoze the farm laws. It is time to end this failed attempt by repealing the laws and re starting from scratch: something worth doing is worth doing well. These failed laws are an object lesson on how not to reform. Mr. Mode never came out personally to explain why these laws were important, and he refused to consult widely both before and after the laws was introduced. His callous approach to farm sector reform has allowed people who do not understand the price system to mislead farmers. Among them is Rakish Tacit, who seems to be heavily politicized. On 12 January 2021, Tacit is reported to have said: Bill was naming to gear was naming. But once the laws were repealed, he switched to a demand for a legislated guaranteed MSP. Fortunately, farmer leaders like Anil Ghana are stepping forward to fight for farmers. Ghana has recently issued a challenge to Tacit for a debate but Tacit has nothing sensible to say, so he won t debate. In the coming days I will go through the key arguments of the opponents of farm sector reforms. Let me begin with Yogendra Yadav four suggestions on how MSP should be implemented. None of these four suggestions are linked with the demand for a legislated guaranteed MSP. He has clearly abandoned that demand. For example, he says that the.

BSF-HCM-TEST-Dated-2025-08-24-Test NO.-22201

Under the National Drinking Water Mission, the guinea worm problem which is prevalent in only six States will now be eliminated by the end of the current year. Similarly, the Central Government has taken several steps to remove the excess quantity of fluoride from drinking water. Alternative sources of clean drinking water and equipment to remove fluoride will be made available to the affected villages. For both the works, a special provision to provide funds to the States is being made. Public awakening campaign is being launched in this regard. The Government has taken the decision to open laboratories at all the places for the qualitative testing of drinking water. I would also like to point out that the constructed amenities provided for the disposal of dirt and dirty water are comparatively very inadequate. This issue will be taken up for discussion at an early date in the National Seminar and the policy will undergo change. I would like to mention that the World Bank and many countries of the world are: extending their assistance for the implementation of these two programmes. The programme started to make available drinking water in villages through Rajiv Gandhi National Drinking Water Mission, is the biggest in the world and has become a model for other developing countries. In order to have systematic agricultural development and to maintain it, an effective system is essential for marketing of agricultural products so that the interests of producers and consumers may be safeguarded. A model Act has been circulated to the States in order to make uniformity in the regulation and management of markets. In order to provide basic infrastructure facilities for these markets under a Centrally-sponsored programme, the committees of the trade centers are given monetary assistance to the markets through the State Government. Now, both the programmes for the development of markets and construction of village godowns have been entrusted to the State Governments. The Bill, as passed by the Lok Sabha, is already with the hon. Members The Select Committee earlier went exhaustively into the various provisions of the original Bill and also recorded evidence from some of the representatives of the industry. The various recommendations of the select committee has been incorporated in the Bill. In addition, the wishes expressed by some of the Members of the Lok Sabha have been incorporated in the Bill. The difficulties of small growers have been apprecrated and the major portion of the acreage of rubber cultivation is held by the small growers. Proper representation to these small producers of rubber will be given. The labour representatives in the Board have been increased from three to four. The labour representatives will be selected from out of the panel of names submitted by the respective associations an important provision has been made in the Bill to enable the Board to take steps to secure better working conditions for workers engaged in the rubber industry. The present production, of rubber is about twenty thousand tons a year, the demand is increasing every year, while the supply is not keeping pace with the demand. It is proposed to fill up the gap over the short period by importing rubber. The Bill, when passed would enable the Board to import rubber and a provision has been made as to how any profits that are made out of this import of rubber should be utilised. To increase the, production of rubber, it is proposed to take up the de

BSF-HCM-TEST-Dated-2025-08-24-Test NO.-22202

It is hoped that the new Board will be able to tackle the problem of the small grower of rubber industry successfully. The Rubber industry has established itself as a major industry in India. India ranks high in natural rubber production. Sir, the Press Council Second Amendment Bill was introduced by me in the last session, as I submitted in my statement which I laid on the Table of the House. I request the House to consider the Second Amendment because an Ordinance had to be issued since the life of the Council was expiring. Since the life of the present council was expiring, we had to issue the Ordinance. At this stage, I do not think have much to say because it is a very simple Bill. It is only trying to extend the life of the Press Council till the end of the year. If we are able to finalize the formation of the Press Council earlier, then, of course, the present term would expire earlier. You will recall, I had said in the course of the last debate that a Committee of Members of Parliament has been working for the drafting of the second Bill, which is likely to come up before the end of this session. The Committee has been sitting and they have been able to come to their conclusions more or less. It is now in the drafting stage and I hope it will be possible for me to bring the Bill before the House soon, 1 would not like to go into the merits and demerits of the new Bill at this stage. Would only say that it is a very simple Bill extending the life of the present Council. I hope the House will approve of this at an early date so that I can go to the other House before the Budget debate is taken up. No doubt about it; it is a very simple Bill dealing with merely the term of the Press Council and giving life to the Press Council which would have otherwise expired. Do not object to the contents of the Bill. It has been my general objection that Article 123 of the Constitution, which empowers the President to promulgate Ordinances during the recess of Parliament, is a very special power. Therefore, Sir, it is an extraordinary power which has to be exercised with very great caution and care and only in an emergent situation. The First Amendment provides that Congress make no law respecting an establishment of religion or prohibiting its free exercise. In the last few years, thanks to jobs becoming global, the importance of English has increased manifold. It has over the years become an important medium of communication, both at the international and intra-national levels. The importance of spoken English is even more, because here are many cases. Where one knows his subject well, but fails to communicate it properly. The practice of spoken English, therefore, is quite essential. Learning English in a country where it is not a native language, opens a number of opportunities for the Individual. An individual can make strides in the management ladder if he or she can speak English fluently. If your English is poor even though with brilliant business ideas, you may still find yourself languishing at the bottom of the management ladder. Your productivity will drop over a period of time since you will find difficulty in expressing your brilliant ideas. Those who can speak good English will probably usurp your ideas and get the credit for all the hard work you did. Group discussion is one of the ways to test someone communicative skills generally before the final interview for a job. An English language trainer trains the candidates for grou

BSF-HCM-TEST-Dated-2025-08-24-Test NO.-22203

Government should buy more than it does today. This is no longer about buying the entire output of all crops that his All India Kinas wants. But how much is more Yadav does explain what should be done with the mountains of food grain which are rotting in India, getting wet in the rain and being eaten by rats. Around Rest 2 lakh cores of taxpayer funds are locked up in stocks that exceed the buffer norms which are, in any case, too high. We don t need a hundred million tons of food grain sitting around. And since our grain prices are generally not competitive globally, can can t export these mountains of food grain, either. Second, Yadav says that if the government cans t purchase directly let it provide a subsidy between the market rate and MSP. If this is accepted it will become the biggest corruption programmer in the history of the world, in which every single purchase has to be recorded and has to be certified by who are themselves corrupt; the subsidy has then to be approved through a corrupt process and released by yet other corrupt process. Policy must not be made in the ad hoc manner that Yadav believes in. It must be made on the basis of careful consideration of the rationale, options and costs and benefits. Yadav third proposal is that if the government buys even 10% of the crops, prices will automatically rise up to the level of the MSP. This proposal is at least an improvement from the rigid demand of his union that all output be purchased via MSP. But the price of any crop depends upon the slope of its demand curve and the supply situation. The supply and demand for a crop varies in each season. There is no guarantee that prices will rise up to the level of the MSP. Yadav then says that the should be changed but does t say how. That is actually a good idea. The control over imports and exports is one of the main reasons why farmers have been losing out since independence. The government makes sure that farmers never get a high price. It stops them from exporting when they can get a higher price abroad, and it dumps the country with cheap imports when domestic prices are high. In both cases the farmer loses. This is part of the negative subsidy that farmers have been getting in India. The idea to change the import export policy for agricultural produce is therefore good. The reform needed is to prohibit the government from interfering in the export or import of agricultural produce. But I m sure the socialist Yadav does t want that. Nevertheless, the main point apart from the incoherence of Yadav arguments is that he has abandoned the demand for a guaranteed MSP. Let the farmers pack up and go home. And let them talk to Anil Ghana about the best way for farmers to become prosperous.

Spl-BSF-HCM-TEST-Dated-2025-08-24-Test NO.-22204

A fledgling awakening began in the 1980s when people started standing up against dowry deaths, which grew into a deeper appreciation of the sanctity of all beings and the rights of the vulnerable. There have been numerous expressions of this, from candlelight protests for Jessica All to the outrage over Nirbhaya. As India's economy liberalised, our civil society started talking about things once considered irrelevant or taboo from extortion to sexual violence, this has grown to protecting those incapable of either, here, the strays on Delhi's streets, lounging in a watery sun, snoring by an istree-wala's warmed clothes, sharing a tree's shade with a scooter-its, being fed at dhabas and boutiques, across the veins and arteries of our busy, brutal, beautiful city. Why do dog careers bother others so much? Is it because they show us you don't have to lose all your empathy? That you can use your voice for someone who's voiceless, as opposed to just voicing the status quo? That you won't allow convention to cloud your kindness? Is it because some volunteers are women who aren't only massaging their husband's ego or trying harder to get one? Or men who aren't striking macho poses but are busy delivering khichdi to a pup? It's ironic that these people get anyone's goat. Civic offices whose job and funding it has been to look after strays in an empathetic manner have evaded criticism. Those who care face the sticks and stones of police, anti-elites, misogynists and animal haters. Even while they refuse to abandon their defenseless friends, isn't that, gentle reader, a doggone funny tail? Art of listening: A better meditation for a noisy age IAF rattled Pak this time, but it needs a leg-up Rakhsha Bandhan, protectors and repaying a debt of gratitude. The author is a former journalist, an international development consultant and a musician. Street Dogs are the biggest allies of women in a city where the biggest threat is Men A couple of years ago, as the Dhan Mill Compound in Chattarpur started to develop into this elite oasis of high art in the otherwise dark, Pataalok-esque neighbourhood, I found myself, after an art event, waiting for a taxi. It took almost 50 minutes for a cab to arrive, and it would have been terrifying except for one thing. Actually, two. Two brown-eyed Indies, unconditionally and instantaneously, became my besties for the hour, waited, demanded pets, all the time that I waited in that pitch-dark lane, a heartbeat away from becoming a crime file. I didn't have a scrap of food to give them; they had no reason to wait with me. No sooner had my cab come, they disappeared. Seeing me off to safety, back into that pitch darkness. These unconditional, instantaneous besties are the spirit of the Indian landscape. They will greet you in remote locations, lonely streets, offering their company, protection for absolutely nothing. If you're wondering why there is an overwhelming proportion of women in the street dog rescue movement, you will know how many of us have been offered their safety and guardianship, from the biggest predators on Delhi's streets, its men. Just a day before the shocking judgment of 11th August, I was talking to a friend about the whole' dog' Rakhi trend, a big moment for pet-commerce. Animal lovers are laughed at for anthropomorphising our pets, and of course, some of it is comical part of the whole giddy-cringe delight fest human-animal friendships bring out in us. But while putting a dress on your dog qualifi

Spl-BSF-HCM-TEST-Dated-2025-08-24-Test NO.-22207

off in favor of pet parenthood, there are beautiful concepts across cultures. The Hawaiian term' Kahu' meaning guardian (of something precious), stands out for coming closest to capturing the essence of the relationship. Nepal famously celebrates Kukur Tihaar, an ode to the selfless friendship offered by dogs. And the mainstreaming of dog Raksha Bandhan in the India of the 2020s, quite aptly includes our most fierce guardians/protectors. Most dog lovers would agree that such single-minded love and loyalty can, in no real measure, be returned. The little that we humans do in terms of food, shelter, treats, is just a minuscule fraction of repaying that debt. This is why the language of an animal hater (although they seldom own up to being one) is quite simply baffling. RWA uncles and several news media like using the term stray dog menace with a poster of a dog, with blood dripping from its fangs, and bloodthirsty eyes, straight out of a Ramsay Brothers film. Some time back, a prominent media house featured a video story of a woman being attacked by stray dogs in a parking lot. I saw the video. The dogs were wagging their tails, trying to play with her. They were also extremely young, about 8-9 months, fledglings, and this hulk of a woman shrieking at their playful pawing looked, quite frankly, comic. What isn't comic, however, is this building momentum of anti-dog bias, a certain kind of narrative that portrays stray dogs as killers and predators. An RWA personnel from our neighbourhood described a one-year-old baby-faced pet Bhutia dog as a wolf-like, vicious creature, when in fact it is a baby who jumps to hug anyone in sight. That people with a real phobia of dogs are now occupying positions of power, through RWAs, news channels, or city administration, means that this neurosis gets amplified to dangerous levels. What used to be a neurotic aunty in your neighbourhood, shrieking at the sight of a dog, is now the core of public debate. Earlier this week, a moderated discussion on a mainstream news channel had five journalists discussing the issue. Even the ones who purported to be animal lovers were using the word pest. One of them, who started out sounding very noble and animal-friendly, claimed that stray dogs try to hunt you. Let's break down some things first. The current position of community dogs in Delhi is far from ideal. The unchecked population. The lack of a clear policy on aggressive biter dogs. The neurosis machinery that feeds anti-dog bias. Most critically, this entire set of beings is invisibilised by the state. And as I have written elsewhere about the development world. Their cause treated like zero priority, animal welfare activists have been reduced to caricatured feeders/rescuers. As I speak, our dog lovers colony WhatsApp group is circulating an Excel sheet recording the vaccination and sterilisation of all colony dogs. Every dog on that list is sterilised. Funded entirely from the pockets of those caricatured' animal feeders'. Dogs in large numbers form packs and can look pretty intimidating, especially when they come charging at you threateningly. That's all it is, really. A warning. And an introduction. Hello, this is my lane. Don't act smart. One of those TV anchors claimed that she needed to be ushered from the parking lot to her home by a male member to protect herself from stray dogs. The same could be said about men. Only, the women of this city do not ask for its entire male population to be bundled up int

BSF-HCM-TEST-Dated-2025-08-25-Test NO.-22208

Referendum was that a majority of the votes on the register shall have recorded their votes on such referendum, and either the votes of a majority of the votes on the register, or two thirds of the votes recorded shall have been cast in favor of such amendment. So, in fact, after the expiry of the first eight years, the amendments had to be made by the people themselves. In our Article 368 people as such are not associated at all in the amending process. 377. Further, the Irish Constitution differed from the Indian Constitution in other respects. It did not have a Chapter with the heading of fundamental rights, or a provision like our Article 32 which is guaranteed. The words fundamental rights were deliberately omitted from the Irish Constitution see foot note 9 pages 67, The Irish Constitution by Barra O Britain, 1929. At the same time, there was no question of any guarantee to any religious or other minorities in Ireland. 378. It will be further noticed that for the first eight years an amendment could be made by way of ordinary legislation, i.e., by ordinary legislative procedure. The sixth amendment had deleted from the end of this article the words and as such shall be subject to the provisions of Article 47 which provided for a referendum hereof. In other words, for the first eight years it was purely a flexible Constitution, a Constitutional amendment requiring no special procedure. 379. With these differences in mind, I may now approach the actual decision of the Supreme Court. 380. The High Court and the Supreme Court were concerned with the validity of the Constitution Amendment No. 17 Act 1931 No. 37 of 1931 having regard to the provisions of the Constitution. It was described in its long title as an Act to amend the Constitution by inserting therein an Article making better provision for safeguarding the rights of the people and containing provisions for meeting a prevalence of disorder. But there is no doubt that it affected various human rights which were granted in the Irish Constitution. 382. The Constitution Amendment No. 10 Act No. 8 of 1928 removed Articles 47 and 48 of the Constitution and also the words and as such shall be subject to the provisions of Article 47 thereof from the end of Article 50 as originally enacted. Constitution Amendment No. 16 Act No. 10 of 1929 purported to amend Article 50 of the Constitution by deleting the words eight years and inserting in place thereof the words sixteen years in that Article. 383. The impugned amendment was held valid by the High Court. Sullivan P., J. interpreted the word amendment in Article 50 widely relying on Edwards v. Attorney General of Canada 1930 A.C. 124. Meredith J. relied on the fact that the width of the power of amendment for the period during the first eight years was co extensive with the period after eight years and he could find no distinction between.

Articles of primary importance or secondary importance Byrne J. could not amendment of Article 368 which has been brought about in the manner prescribed by that article would not suffer from any Constitutional or legal infirmity. I may mention in this context that an amendment of the US Constitution in accordance with Article 5 of the US Constitution does not require the assent of the President. The change made by the Twenty fourth Amendment in the Constitution of India, to which our attention has been invited, has not done away with the assent of the President but has made it obligatory for him to give his assent to the Constitution Amendment Bill after it has been passed in accordance with Article 368. As it is not now open to the President to withhold his assent to a Bill in regard to a Constitutional amendment after it has been duly passed, the element of personal discretion of the President disappears altogether. Even apart from that, under our Constitution the position of the President is that of a Constitutional head and the scope for his acting in exercise of his personal discretion is rather small and limited. 1541. Reference was made during the course of arguments to the provisions of Section 6 of the Indian Independence Act, 1947. According to Sub section 1 of that section, the Legislature of each of the new Dominions shall have full power to make laws for that Dominion, including laws having extra territorial operation. Sub section 6 of the section provided that the power referred to in Sub section 1 of this section extends to the making of laws limiting for the future the powers of the Legislature of the Dominion. No help, in my opinion, can be derived from the above provisions because the Constituent Assembly framed and adopted the Constitution not on the basis of any power derived from Section 6 of the Indian Independence Act. On the contrary, the members of the Constituent Assembly framed and adopted the Constitution as the representatives of the people and on behalf of the people of India. This is clear from the opening and concluding words of the Preamble to the Constitution. There is, indeed, no reference to the Indian Independence Act in the Constitution except about its repeal in Article 395 of the Constitution. 1542. Apart from the above, I find that all that Sub section 6 of Section 6 of the Indian Independence Act provided for was that the power referred to in Sub section 1 would extend to the making of laws limiting for the future the powers of the Legislature of the Dominion. The Provisional Parliament acting as the Constituent Assembly actually framed the Constitution which placed limitations on the ordinary legislative power of the future Parliaments by providing that the legislative laws would not contravene the provisions of the Constitution. At the same time, the Constituent Assembly inserted Article 368 in the Constitution which gave power to the two Houses of future.

BSF-HCM-TEST-Dated-2025-08-25-Test NO.-22210

Act. Prime Minister Namenda Mode stunned the nation on November 19 when he revoked three farm laws that had led to sustained protests during the past year. A government at the zenith of power, with a strong majority, had listened to the people. It was a victory for India democracy. But it was a defeat for the farmer, crushing his hopes of freedom from trader cartels, state functionaries and a peasant life. How does one reconcile a victory for democracy with the defeat of the economy what does this mean for the future of reforms there are seven sobering lessons from this fiasco. Together, they form a toolkit for the future reformer. The army operation that resulted in the tragic death of 14 civilians in Nagaland must lead to quick and credible investigation. And justice must be seen to be done. It established that commandos acted on faulty intelligence. While it can be no one case that counterterrorism operations are easy, bad intelligence gathering cant also be any justification for deaths of innocents. The Yung Aung faction of the proscribed NSCN K is a dangerous outfit. But those home bound miners who died were noncombatants that have to be the driving point of both the army court of inquiry and the Nagaland government SIT probe. Let remember that past inquiries haven t inspired confidence because no soldier operating under the AFSPA has been charged, far less put behind bars, for killing civilians. The draconian law that gives security forces sweeping powers of arrest and counterinsurgency continues to be in operation in J&K, Nagaland and parts of Arunachal Pradesh, Assam and Manipur. For example, in over 20 years the Centre has denied prosecution sanction under AFSPA in all cases recommended by the J&K government against army men. Hence, many argue that AFSPA actually allows security forces to be less circumspect, leading to tragedies like the Manipur Malmo Massacre in 2000, which had prompted Iron Sharia to begin her hunger strike. Anger in Nagaland has already led to violent protests, costing more lives. Neither New Delhi nor Konia would want to see Nagaland and the wider Northeast hosting another round of militancy. This is a sensitive time in NE. With Myanmar reverting to a military junta earlier this year, refugees and weapons have been flowing into NE. This gives regional insurgent groups unwilling to join the peace process elbow room to man oeuvre, as tragically demonstrated by the ambush carried out by militants in Manipur on November 13 that killed a colonel, his family and four other soldiers. There also the matter of ongoing talks between Naga groups like NSCN I M and the Centre, aimed at ending insurgency. If these talks break down, it could have worrying fallouts at a time India is locked in a standoff with China. Therefore, there are plenty of reasons for the Centre to ensure that Nagaland civilian deaths get serious official attention. This includes granting permission to prosecute soldiers, if there a good case for.

BSF-HCM-TEST-Dated-2025-08-25-Test NO.-22211

This and reviewing Act 475. But this passage again dealt with the actual point decided and not the obiter dicta. 476. The first Para of the head note in Nadine 1926 A.C. 482 case gives in brief the actual decision of the Privy Council as follows: Section 1025 of the Criminal Code of Canada, if and so far as it is intended to prevent the King in Council from giving effective leave to appeal against an order of a Canadian Court in a criminal case, is invalid. The legislative authority of the Parliament of Canada as to criminal law and procedure, under Section 91 of the British North America Act, 1867, is confined to action to be taken in Canada. Further, an enactment annulling the royal prerogative to grant special leave to appeal would be inconsistent with the Judicial Committee Acts 1833 and 1844, and therefore would be invalid under Section 2 of the Colonial Laws Validity Act, 1865. The royal assent to the Criminal Code could not give validity to an enactment which was void by imperial statute; exclusion of the prerogative could be accomplished only by an Imperial statute. 477. For the aforesaid reasons I am unable to agree with the Attorney General and I hold that the Initiative and Referendum Act case shows that limitations can be implied in an amending power. But their Lordships are of opinion that the doctrine of the majority of the Court is erroneous, and that it rests upon a mistaken view of the powers of the Indian Legislature, and indeed of the nature and principles of legislation. The Indian Legislature has powers expressly limited by the Act of the Imperial Parliament which created it, and it can, of course, do nothing beyond the limits which circumscribe these powers. But when acting within those limits, it is not in any sense an agent or delegate of the Imperial Parliament, but has, and was intended to have, plenary powers of legislation, as large, and of the same nature, as those of Parliament itself. The established Courts of Justice, when a question arises whether the prescribed limits have been exceeded must of necessity determine that question; and the only way in which they can properly do so, is by looking to the terms of the instrument by which, affirmatively, the legislative powers were created, and by which, negatively, they are restricted. If what has been done is legislation, within the general scope of the affirmative words which give the power, and if it violates no express condition or restriction by which that power is limited in which category would of course be included any Act of the Imperial Parliament at variance with it, it is not for any Court of Justice to inquire further or to enlarge constructively those conditions and restrictions. Mr. Serve further says that having laid down the law as set out above, the Privy Council added: Their Lordships agree that the Governor General in Council could not, by any form.

BSF-HCM-TEST-Dated-2025-08-25-Test NO.-22212

I have been working in the social sector for more than two decades. My time at various nonprofits led me to realise that the social sector in India is yet to truly engage with the issues that confront communities such as mine the Ghisadi Gadia Lohar community, a de-notified tribe DNT. Nomadic and de-notified tribes NT-DNTs were falsely labelled as criminal tribes by the colonial British rulers when they passed the Criminal Tribes Act in 1871. Ever since, these communities have been stigmatised and discriminated against, even after the Criminal Tribes Act was repealed in 1952. The social sector has neither the language nor an understanding of the complexities faced by marginalised communities such as NT-DNTs. While the NT-DNT communities are often excluded from welfare schemes and development initiatives, there very little written or spoken about the impact of continued discrimination and neglect on their mental health. From my own experiences since childhood, I knew that the mental health of marginalised people cannot be seen in isolation from their struggle for social mobility, dignity, education, and more. So how can the current mental health discourse in the country a large part of which continues to look at psychological well-being only as a medical matter ever include them? More than a medical discourse When someone is hyper or behaves indifferently, one might say they are suffering from some kind of mental distress and treat them for it. Or, they might be diagnosed with anxiety or depression. This approach is akin to performing a post-mortem on the person without addressing what affected their well-being. In the current mental health discourse, they are an anxious, depressed person, and that is the conclusion. But who is going to identify the root cause of this anxiety and depression? I am not an expert on mental health, but I recognise that historically there have been alternative approaches to addressing mental health that have worked, even if they have not been documented. Think about Savitribai Phule work with women. She has always been associated with education, but most people forget that she also worked with single women, widows, and survivors of sexual violence and domestic abuse. When these women were pushed to the wall, some of them would attempt to end their life. Savitribai would bring them home and listen to them. Was she not involved in suicide prevention and counseling? Did she not make resources available to the women? She might not fit the definition of a professional counselor, but she had a strong understanding of the historical injustices that marginalised people face and worked to address those. There no magical cure for injustice I came second in my school in standard 12, but I could not pursue higher education until years later. I constantly felt that I was competent enough; it took me a lot of time to understand that my lack of confidence was a product of systemic oppression. As people from marginalised communities, we often ask ourselves: Why can I do something that.

Others can? If we can find answers and there is no one to help us with our queries, we start blaming ourselves and our community. Where do these self-perceptions come from? Is this the result of an underlying mental illness? No, it is a product of discrimination and social hierarchies. We need conversations that address the root causes of our mental stressors. For thousands of years, our people have been told that they are inferior to the privileged few. They have heard their caste being mocked in daily conversations. They have read epics and listened to oral narratives where Auras are portrayed as demons. If you visit Jharkhand, you will realise that Saur is a tribe with a distinct cultural history. Even today, when false cases are filed against people from DNT communities, they are for theft, burglary, and robbery and act as a reminder of a criminalised past. It is as if we are constantly being told that if we stray away from our boundaries and raise our voices, there will be consequences. We are told that the British took away the lands and resources of the NT-DNTs, and while this is true, the actual process was carried out by the zamindars. It was a violent cocktail of caste, class, and gender biases, and it continues to this day. Many NT-DNT communities are nomadic out of their need for survival; if they want to settle down, is land available for them? Is the rest of society willing to provide them with land and other resources that they will need to settle? Today, we hear nonprofits and mental health practitioners talk about the need to make mental health accessible to those who have been marginalised by society. It is a good first step, but mental health must also be viewed and understood through the lens of social justice. And we need to work towards mental justice. The concept of mental justice, as I see it, also includes advocating and facilitating people rights to development, opportunities, participation, and leadership as safeguarded by India Constitution. A road map to mental justice The systems that oppress marginalised people have been created over a long period of time. It won be easy for any nonprofit to dismantle them in a day, a week, or even a few years. But the work must start somewhere. I founded Anubhuti Trust in 2016 to build leadership among grassroots communities and enable them to lead the change that they need, explore the truth behind their experiences, reclaim their powerful and progressive Bahujan histories, and represent themselves. They are the experts on the problems that confront them and can participate in and contribute to wider intellectual, social, and political processes. Through our work we have learned that one does not need to work exclusively on mental health to address mental justice. There are efforts that can be taken within an organisation existing work that can go a long way in delivering mental justice to marginalised communities. Here are some.

BSF-HCM-TEST-Dated-2025-08-25-Test NO.-22216

Covid transmissibility has transformed the world into a little Hamlet and for those skeptics who believe that we are making much ado about nothing, this message is critical, for the virus will not die till it has had its pound of flesh. While the world knows little about RNA viruses, we doctors are still thinking on our feet and science is constantly innovating and rediscovering ideas to play catch up, if not overtake the corona. Dear humans, we lobsters, crabs, squid and octopuses are sentient. A London School of Economics report said so, citing scientific studies. And, readying an animal welfare bill that grants such recognition, British lawmakers recently raised hopes for policies to curb cruelty to us poor crustaceans and mollusks. With us decapods and cephalopods declared pain sensitive, will sea foodies enjoy guilt free lobster Thermion that depends. Like Switzerland, will Britain and other nations ban boiling crustaceans alive will live octopus stop being a food fad if we invertebrates join the protected ranks of sentient vertebrates like celebrity Chihuahuas, will we qualify for ethical. Once a man approached the Buddha and asked him to bestow enlightenment upon him. The glacial cool Buddha said Enlightenment INS t an object. Its a process. I can but show you the path. You are required to walk on that to have enlightenment. This is called heuristic guidance. According to the lexicon, heuristic means, enabling someone to discover or learn something for themselves. This is the perfect way of learning as well as teaching unlike the spoon feeding method of mollycoddling that does t help a learner learn on his own. You may have noticed that animals and birds teach their young ones to hunt and fend for themselves. The heuristic approach nullifies any kind of dependency and enables a holistic as well as comprehensive understanding of a subject or issue. Mystic poet Urfa had many disciples. He would teach them theological tenets and after a certain stage, he would say, now find the Truth for you. This is spiritual initiation into the realm of enlightenment and mental evolution. You re deliberately given the partial Truth. You vet to complete it on your own because Truth or Enlightenment is subjective. Remember the famous Zen aphorism: the Buddha s Truth is Buddha s. It cannot be yours. You can take a horse to the pond, but you cannot make him drink. Once you re let loose in the wild, you automatically learn the ropes to protect yourself from the wild animals. One can never learn how to swim or drive so long as the trainer hovers over your head. Leave the person to find the ways, subsisting on his survival instincts. In fact, all learning is instinctive. Even Argon could t learn all tricks of warfare from Guru Dronacharya despite being his favourite disciple. Guru Drone had no malaise intention in not teaching all the tricks to his favourite disciple who was like a son to him. He did that deliberately so that.

.Examples Conduct action research At Anubhuti, much of our learning comes from interacting with communities where they live and speaking with them about their experiences. Recently, while surveying NT-DNT communities in Thane, Maharashtra, we learned that some people don even expect to have access to toilets or sanitation facilities, since the land they live on is not theirs and they don have documents. So we understood that they need to know about their fundamental rights and how these can be accessed, and they need local representatives from within the community. Nonprofits can learn from simply speaking with communities before they start working on delivering benefits to them. 2. Find a language of communication Nonprofits must use language that can be easily understood by the community they are interacting with. Of course, one should be able to speak in the vernacular language of the community but there also a need to gain on-ground understanding of their lived reality. Institutionalised language won work. The examples and anecdotes used in communication should be rooted in the experiences of the community. Anubhuti has learned and is still learning from its mistakes. Once we had a counselor who suggested to a woman that she read books after work, without knowing that she works till 3 am; this kind of approach discounts lived realities. On a related note, we can also reduce the complexity that is often associated with discussing mental health. At Anubhuti, we have started organising cultural events where people paint, sing songs, write poetry, and explore other forms of creative expression. This can be a means for them to communicate their experience of sadness or loneliness and this is an opportunity to have a discussion about mental health, without imposing an external narrative. 3. Build a culture of exchange Development and mental health practitioners must approach marginalised communities with an openness to learn. This helps address some of the power imbalance that is inherent in these interactions. There must be an openness to listen and learn while helping communities access health facilities, social benefits, and more. After all, there can be no solution without addressing the root cause of the problem, and you will only know what this is when you are open to learning about it. 4. Dismantle harmful narratives There is a tendency in the development and mental health sectors to focus on the narratives of struggle of the marginalised communities, even in conversations with them. This approach reinforces the idea that people are helpless, which is beneficial for those who have already grown up on harmful narratives about their identity and culture. The focus should instead be on helping them recognise the richness of their culture and heritage, and building a rights-based understanding of the root causes of their situation. Society assumes that nomadic communities wander aimlessly, when the reality is they have their own maps and traditional knowledge of rivers and seasons that guide them. Conversations with these communities should be built around such empowering narratives that help them.

Believe in themselves. Since Anubhuti works with Bahujan people, we engage in discussions about the Bahujan movement and Ambedkarite politics. We take children to Savitribai Phule Bide Wada school in Pune so that they can visit the place where many first-generation Bahujan women started their education. We think that rather than attending lectures in a room, these field visits and the subsequent conversations that they spark help children, youth, women, and community leaders learn lessons about the leadership, heritage, and mental capacity of their communities. 5. Create awareness about laws, rights, and policies India has progressive laws such as the Mental Health Act, 2017, which was enacted to provide mental healthcare to all who need it. The Indian Constitution is another vital tool that marginalised people can use to fight for their rights. Our fundamental rights don discriminate between individuals. We need to make people aware of their constitutional rights and help them find ways to access these rights. Apart from this, organisations themselves must institute and enact policies that protect their teams and programmer participants from discrimination whether caste-based, gender-based, or otherwise and ensure their mental well-being. When an organisation institutes policies, it creates an opportunity for all stakeholders funders, employees, board members, and others to read, review, and question them. This is an open, healthy, and transparent way in which to create a work environment that promotes mental justice. The social sector needs to redefine priorities It will be a long journey for the social sector to develop a truly inclusive model of engagement with marginalised communities. We cannot ignore the fact that the sector itself is mired in patriarchy, castes, classism, and all the other issues that it intends to fight. The direction that the social sector takes today is heavily influenced by funders and funding organisations, but to truly serve those who are the most marginalised, we must remember that funding is just a tool that supports the way forward. At Anubhuti we constantly remind ourselves that we must not let rigid structures, the burden of project deadlines, and funder demands take over our goal of working with communities while subscribing to a feminist and anti-caste ideology. The three of the four Public Sector General Insurance Companies PSGICs National Insurance, Oriental Insurance and the United India Insurance would be desperately looking towards the upcoming budget for their sustenance and self-reliance. They have been surviving on Got monetary support for last few years now and still limping to stand on their own. Last fiscal the three together suffered a loss of staggering 6598 Cores. They have been unfortunate enough not to have riveted the political attention that they deserved, rather badly required. It was in the 2018-19 budget that the late Arum Jailed announced merger of the three entities into one and also prescribed the timeline of 2019-20 for the merged entity to emerge and become functional. That was the time the first symptoms of their sickness were becoming visible and the merger was considered to be.

The Habit of Reading Studying is the main source of knowledge. Books are indeed never failing friends of man. For a mature mind, reading is the greatest source of pleasure and solace to distressed minds. The study of good books ennobles us and broadens our outlook. Therefore, the habit of reading should be cultivated. A student should never confine himself to his schoolbooks only. He should not miss the pleasure locked in the classics, poetry, drama, history, philosophy etc. We can derive benefit from other experiences with the help of books. The various sufferings, endurance and joy described in books enable us to have a closer look at human life. They also inspire us to face the hardships of life courageously. Nowadays there are innumerable books and time is scarce. So we should read only the best and the greatest among them. With the help of books we shall be able to make our thinking mature and our life more meaningful and worthwhile. A Visit to an Exhibition Recently, an exhibition Building A New India was held in the capital. It was organized by the Ministry of Information and Broadcasting, Government of India. The exhibition was set up in the Triveni Kala Sangam. The chief exhibits were photographs, novels, some sculptures by Indian modern artists presenting Indian cultural inheritance. First of all, I visited the general section of the exhibition where different charts and photographs depicting India development in various fields were set. Most impressive photographs among these were those showing India nuclear development. The second section dealt with India magnificent historical background. I was fascinated by the pictures of Mohanjodaro excavation. Then I saw the most beautiful and colorful section of the exhibition i.e. the cultural section. It consisted of paintings, sculptures, photographs etc. The Rajasthani and Gujarati paintings were very colorful and attractive. This exhibition, inaugurated by the Prime Minister, lasted for a week. My Favorite Teacher A teacher is called builder of the nation. The profession of teaching needs men and women with qualities of head and heart. There are many teachers in our school and a large number of teachers among them are highly qualified. I have great respect for all of them. Yet I have a special liking for Miss Y. Miss Y is a woman of great principles. She is jewel among all the teachers. Almost all the students respect her. She teaches us English. She is quite at home in this subject. She takes keen interest in teaching students. Simple living and high thinking is her motto. She is a woman of sweet temper and is always ready to help in difficulties. She treats us like her own brothers and sisters. She is an ideal teacher. It is these qualities of head and heart that have endeared Miss Y to the students and teachers alike. She is an ideal teacher in real sense of the word. She is the real model to emulate. May she live as long as there is sweet fragrance in the flowers.

Applicable to stray dogs? It is also this quality of vigilance that makes them the best guards. A friend of mine, a resident of Aleksandra, reported a robbery sometime back in their society. The thieves had figured out the alarms and locks of most houses on a particular block. They only left the one building, which was guarded by an army of stray dogs. The residents of one of those flats used to feed them. Some RWAs have used these qualities to their advantage. In 2004, when I was a cub city reporter, our paper had carried a story about the Golf Links RWA, training its stray dogs to become colony guard dogs. Even in the present day, there are RWAs in West Delhi that are taking care of their dogs, treating them as members of their community. The dogs offer their guard services in return. Depending on how you channel them, the strays and pests can also be converted into assets and resources. The other arguments in favor of' streeties' are, of course, the ecological ones. That completely stripping our dogs off the streets will disturb the ecological balance, causing the population of rats, monkeys and other' rabies-causing' animals to grow. A public health professor at Edinburgh reported that stray dog removal will reverse rabies gains made over previous decades. But outside of these utilitarian reasons, the real reason to keep dogs besides the fact that humans, in fact, don't own the planet is simply this: they are our greatest friends. Our street dogs are part of our fabric, in the same way our languages are; they are the essence and the spirit of the Indian street, with its chaos, confusion, and screeching horns. They are part of our stories and legends, starting from Yudhisthir, who was tested for his loyalty to a street dog (and only thus allowed into heaven), to the 19th Century yogi Baba Lokenath, who came disguised as a brown mongrel to his disciple's home, to see just how kind hearted he truly was. In the last week, as dogs have been increasingly stripped off the Indian streets, partly by' unofficial white vans' and partly by dog rescue groups, the streets are beginning to look so bare, so sterile. As I type, dogs are being illegally picked up by unofficial white vans, with the help of hired stooges who are paid per dog. My friend in New Friends Colony woke up on Saturday morning to find her streeties had just disappeared overnight. The entire lane has gone quiet, she texted. There are videos of multiple dog carcasses that have been hastily dumped into drains. It is clear where these dogs are going. Meanwhile, the MCD 311 app, which registers all civic complaints, has not acted upon potholes, bad roads for months on end given by several of my neighbours, is suddenly, within minutes, assigning case workers to complaints pertaining to street dogs. This stands in contrast to video footage of haunted ABC centers in Delhi, deserted and unused. The locks in some look like they haven't been opened in years. On the other side, a catacomb of dog rescue groups has emerged in the city. Dog groups always existed, of feeders, or rescuers, dog lovers, colony-wise. Now, the entire city is connected. Through various channels, protest groups, night patrolling groups, and those monitoring key legal information, proof of dog abductions. Our colony group is fundraising to put all our dogs in a private shelter. People of every age group, every dispensation are in the groups. They are spending sleepless nights on Delhi's streets, working on night shift

Why not focus on Gaza instead?. Because finally, when you have a chance to protect our friend, you take that chance. And repay a debt towards the oldest friendship known to man. Art from Jawaharlal Nehru University, he has been a journalist previously with The Times of India, The Indian Express, and The Pioneer. As the founder-director of GreyMatters Communications & Consulting, Avnet has lent his expertise to a myriad of projects, including serving as a Public Communication Expert for a World Bank initiative, International Labor Organization, many Government and private agencies in India. His corporate journey includes a notable tenure as General Manager of Corporate Affairs & Communication at Fortune 500 Company, Reliance Industries Limited. Avnet seamlessly integrates his extensive professional background with his rigorous academic training. He is the author of two acclaimed books, including 'The Media Effect' (2003), and regularly contributes to esteemed national and international journals and publications. A distinguished educator, Avnet imparts knowledge on journalism, social media, marketing & strategic communication, and public relations at esteemed institutions such as Indian Institute of Mass Communication, IIMs, IP University, Delhi University and JNU. With a passion for training and development, Avnet has empowered over 2,500 officials from the government, the latest skirmish in the ever-tense theatre of global commerce. With a sweeping move, US President Donald Trump has slapped a 50% tariff on Indian crude imports, a penalty for New Delhi's continued oil purchases from Russia. For some, this signals a crisis; for India, it must be seen as a wake-up call, a moment of reckoning, and perhaps the most potent opportunity yet to chart a path towards true Atmanirbharta in hydrocarbons. The international order today is in a state of flux. The war in Ukraine shows no signs of resolution, reshaping European energy choices. There is renewed hope with the recent meeting of Trump and European leaders including Ukraine President Zelensky. The simmering conflict between Iran and Israel, coupled with the prolonged Palestine Israel strife, adds another layer of volatility to oil markets. Each flashpoint sends crude prices soaring or tumbling, distorting trade flows overnight. For an energy-hungry nation like India, these are reminders that dependence on imported fuel carries not just economic costs but also strategic vulnerabilities. In such a shifting landscape, India cannot afford complacency. Instead, this is the moment to recalibrate policies, secure new partnerships, and above all, strengthen domestic capacities. History, too, offers a sobering precedent. This is not the first time Washington has wielded trade as a blunt weapon against India. In June 1989, then-President George H. W. Bush invoked the infamous Super 301 provision to impose retaliatory tariffs on Indian goods, accusing New Delhi of unfair trade practices. India did not buckle then, and it must not do so now. The difference is that today's India is far more globally integrated, with greater stakes in world trade and energy markets. With a mercurial Trump at the helm, it would be naive to assume that this tariff is a one-off gesture. India must both hedge its alliances and accelerate its quest for energy atmanirbharta. Prime Minister Narendra Modi has often underlined self-reliance as the foundation of resilience. Nowhere is this philosophy more critical than in hydrocarb

When My Teacher Scolded Me Scolding is something common in student life. Being a naughty boy, I am always scolded by my parents. But one day I was severely scolded by my English teacher. She infect teaches well. But that day, I could not resist the temptation that an adventure of Nancy Drew offered. While she was teaching, I was completely engrossed in reading that book. Nancy Drew was caught in the trap laid by some smugglers and it was then when I felt a light tap on my bent head. The teacher had caught me red handed. She scolded me then and there and insulted me in front of the whole class. I was embarrassed. My cheeks burned being guilty conscious. When the class was over, I went to the teacher to apologize. When she saw that I had realized my mistake, she cooled down and then told me in a very kind manner how disheartening it was when she found any student not paying attention. I was genuinely sorry and promised to myself never to commit such a mistake again. The Saddest Day of My Life Days are not of equal value in one life. Some bring happiness while others bring sadness. Sadness and happiness both are equally important to man life, since they are the two sides of a coin. As we cannot forget the happiest day, we are unable to forget the saddest day of our life too. The saddest day of my life was the Diwali Day. Diwali is considered to be a happy festival and till last Diwali, it was my favorite festival. On last Diwali, my sister, my brother and I were busy lighting the fireworks. I was holding a fuljhari in my hand and unfortunately my younger brother, who was standing just beside me, had a cracker in his hand. This cracker caught fire and a very loud explosion was heard which shook my sister and me. After that, we all could think of nothing else than blood stained cotton, bandage, Dettol etc. My cousin took my brother to the doctor where he got 14 stitches in his forefinger and thumb. But at home, everybody kept cursing and blaming me for the mishap. That night, I could not sleep and I cried a lot. For next few days, I bore the burden of this blame for being responsible for this unfortunate incident. I felt deeply guilty conscious which I was able to overcome after a long time. Life Is Action, Not Contemplation Life offers many opportunities to us to succeed and see it closely. But action is required for it. Goethe, a German philosopher rightly remarked that Life is action, not contemplation. Even Charles Darvin proved that this life is a continuous struggle for the survival of the fittest. One who is not suitable perishes - this is nature law. Action is necessary to adjust ourselves in any possible circumstances. Dreams are the necessary propellers but life itself is not merely a dream or reverie. Sitting on a chair, brooding, man would never have been able to reach the moon. But man thought, imagined and strove. Consequently we reached the hitherto unknown heights. Thus a life of thought and reflection will be futile if man does not try to make it come true in real life.

Argon could learn it in a real life situation while facing a formidable opponent. This is auto instinctive learning, a practical approach to learning and teaching. Apparently, cricket coach Kamal Vinayakrao Bhandarkar, who fine tuned Sunil Gavaskar s technique, used to tell his students that their main exam would be on the wicket facing the bowlers and the opponents. The coach would t be there to bat for them. We all have been ushered in by Nature to live, survive and thrive on our own. To be precise, the entire human existence is heuristic. We learn by trial and error and by our mistakes. All our teachers, parents, peers and others are mere pointers. None of them is a destination. To quote the Buddha yet again, you re your own destination. So very true. This is a great lesson to be followed by the teachers as well as today s helicopter parents, who pamper, spoon feed and mollycoddle their wards and never allow the young ones to emerge as independent individuals, learners and seekers. Let the young ones feel the heat of life to blossom into sterling individuals. Aar main tap car hi sonar mundane Banta hak gold turns into 24 carat after undergoing the scorching heat of fire. This is the mantra of life and this is the secret of evolution. India is at the cusp of a significant shift that will play out over the next four to five years. The key drivers of this change will be increasing affluence between 100 140 million middle income households that will emerge in the country with rising annual income across the spectrum. Add to this a couple of things already in play ubiquitous connectivity with ever improving data speeds, and increasing affordability of digitally connected smart devices, be it smart TVs or smart phones. Taken together, these Meta trends will drive a huge surge in content consumption. These trends are playing out in every industry and not just media and entertainment. In fact, they are driving a dramatic transformation in the way we interact with each other, consume services and deliver transactions. These changes are visible across all sectors of the economy including public services and in every sector; you will notice dramatic shifts from traditional models to new ways of operations. While we have seen an exponential growth in digital content consumption, digital transactions too have grown and today India sees almost twice the number of digital payments in comparison to China. Or take the penetration of crypto currency across our country, beyond the big cities into smaller towns. All of these are indicators of a very large shift towards digital technologies and consumption. Today, there is a constant effort by businesses to harness digital technologies to understand and fulfill consumer needs. Newer use cases that leverage emerging digital technologies are being rolled out every day to solve problems in education, healthcare and commerce. Digital technologies are helping solve problems in a way we have not seen in the.

Recently, I opted for a car cleaning service that communicated with the customers only through What Sapp. Since I had got to know about them through a trusted source, I made the payment in advance. The company assigned my car to this person in question who never appeared on my door or showed me his face. After a day or two, I realized that this person has stopped cleaning my car. I texted the What Sapp Business Account number and I received a reply that the issue will be investigated. However, when they failed to get back to me, I decided to call them. To my utter dismay, I received an automated reply, What Sapp calls cannot be taken as this is What Sapp API software. Frantically, I send them multiple texts but only received robotic responses. This continued for days, and it felt like I was trapped inside an episode of dystopian Netflix series Black Mirror, where I just wanted a human to call me once and explain the issue. It felt like I wanted to be heard, heard by a human, a human that could give me a human response. What I experienced only for a few days, is a reality for millions of workers employed in the digital platform economy. On numerous digital labor platforms such as Swingy, Tomato, Umber, Ola, and Urban Company, algorithms assign and allocate the work that is still done by human managers on the other side of the spectrum. These labor platforms leverage artificial intelligence tools to profile the professionals based on their historical and demographic data. They examine patterns of providers, minutely track their behavior, record the user ratings, and then match the demand and supply in a particular location. These platform workers interact with a system rather than humans, where the opportunities for feedback and negotiation are minimal, and even the performance is evaluated through artificial agents that set rewards and penalties. These machines often fail to treat workers as humans as people who can fall sick, need a leisure break, socialize with others to stay motivated, de route to pick up their children from school, attend to an emergency at home, or even lose their temper occasionally. In a normal work environment, a human bond is generally formed between an employer and employee, where employers often tend to understand their team members and deal with compassion during tough times. During my interaction with female taxi drivers for my ongoing PhD research work, I realized how women drivers working for non app based taxi services; spoke fondly of their assignment managers and co founders. One of them said, I was very afraid of starting new things because my confidence level was not that good. First, they give you the confidence over there. Like, you can do, you can do, and that is the first thing. And then they give you training, I took a longer time to train because my confidence level was very low, but they were very vary.

Patient with me. They have that patience that cares, they care also. She further explained how comfortably she informs her assignment manager whenever she has an emergency at home and must cancel a ride, if it is an emergency, I can help it out, and they arrange it very fast. Atari does all those Superman work. Bandana madam also very understands. That is the thing, she understands us. Academic research has often pointed out how algorithmic management accompanied with technology mediated interaction negatively impacts workers mental health and psychological wellbeing. The constant surveillance even reduces productivity and amplifies frustration resulting in clever ways to fight it. The drivers are continuously tracked by ride sharing apps and if they fail to follow any of the instructions provided by these apps, they either get penalized or banned from the platform. Nippur Ravel, a postdoctoral research fellow at the AI Now Institute at New York University, notes that these technologies are mostly deployed and refined through their use on informal and semi formal workers due to lack of transparency and regulation of the platform economy. While the automated machines perform the administrative and repetitive tasks for the white collar workers, allowing them to focus on the cognitive and productive tasks, blue collar workers are subjected to algorithmic management and control, leading to double marginalization of the vulnerable population. While we cannot undermine the progress and opportunities associated with technological transformation, my research in this sector makes me worry that our techno paranoia could soon become a reality if we do not consider hybridising the technology. The need of the hour, especially in context to digital labor platforms, is to techbridize use the hybrid version of technology and retain the humans and the human connection. Let not wait for the day when algorithms take over the managers in our mainstream jobs, and we have no choice but to send and receive robotic messages. India is the latest addition to the list of countries aiming to introduce their own data privacy laws. The proposed Personal Data Protection Bill PDPB seeks to bring about a comprehensive overhaul of India current data protection policies. The two decade old Information Technology Act, 2000 IT Act , the existing governing law, has t been able to keep up with the rapid advancements in technology. With India recently witnessing a massive increase in cyber attacks, cybercriminals have been steadily discovering new ways to obtain sensitive personal information. To make matters worse, the pandemic has catapulted the digital ecosystem forward by years, and remote work has expanded the attack surface available to hackers. Regulatory authorities have been scrambling to catch up, and organisations are left wondering how they can mitigate this ever evolving privacy landscape. Recent high profile cyber attacks have had a powerful effect on the regulatory landscape of the country. The PDPB thus comes at a much needed time when the country is seeing exponential digital growth. It will be India first law focusing solely on data privacy and.
