

Reminds us that electricity is more indispensable than ever but we fail to realize the danger lurking around us at office, work place and homes. Electrocutation accidents are one of the top reasons for death occurring commonly in India. As per the National Crime Records Bureau NCRB statistics, at least 3,000 people die every year in electric power related accidents in the country. The data highlights the magnitude of the problem, especially in older buildings which leads to life threatening ramifications as these older buildings do not have residual protection devices built in installed.

Cities in Europe and other developed countries have per cent compliance to ELCB RCCB. The galling laxity In India is often taken in the decision of investing on electrical circuit protection devices. It is difficult to comprehend that this basic piece of information is neglected. With the increasing electrical load and higher dependence on electrical and electronic equipment, it is mandatory that our electrical infrastructure has built in Residual current protection devices. Some of the safety tips that can be adopted to help our loved ones to stay safe: In a society acutely conscious of hierarchies and optics that go with it, there an unusual phenomenon Indian politics.

Defender Vadnais became the third politician from Maharashtra in the last 25 years to settle for a lesser post after having been was a cabinet minister chief minister. In the preceding government, Ashok Chauvin was a cabinet minister in charge of public works. Between December 2023 and November 2022 or professional qualification which can surpass experience in the difficult art of making choices when faced with messy tradeoffs. Good economy and bad banking can never go together. But will privatisation usher in good banking? Why at all the banks that were once private, were nationalised in 1969 and later liberalised in 1991? These are some questions that occur to any customer of a bank when he sees that the.
