Delhi Police Typing-Dated-2023-08-01-Test NO.-10119

We believe these are what all of us need right now. Look for ways to help one another this Christmas. Reach out to loved ones to tell them how much they mean to you. Because the greatest gift you can give someone is love. This Christmas is going to be very different for our community. The COVID 19 pandemic will alter many of our familiar traditions. Yet, this Christmas is a perfect day to reflect on that story deeper meanings, which are as relevant today as they were two millennia ago. Those lessons are not specific to Christianity. Indeed, almost anyone can find inspiration in the story of a young, weary family, making a difficult journey and the birth of a baby boy into the lowliest circumstances that would later change the world. There are families in similar situations today. Thousands of families in Canada struggled to keep a roof over their heads this year. Thousands more lost their jobs to COVID due to a ravaged economy, and, tragically, thousands more lost their lives to the disease. And yet, so many of us who face tremendous obstacles and terrifying adversity kept moving, working, and pushing forward out of faith that things can get better. Small acts of courage change the world around us, sometimes insignificant, obvious ways, but much more commonly by touching one or two lives with hope and encouragement that ripple out endlessly. The holiday season is, coincidentally, the time of year when we are most generous with our time and money. We are tremendously giving people, donating millions of dollars to charity and volunteering countless hours. This generous spirit unites us all. Hopefully, the Christmas story reminds us that we need not give frankincense, gold and myrrh or more modern expensive gifts to show love and admiration. As for making the season special, we all have to adjust our Christmas plans this year due to COVID. We won't spend the holidays with family and friends who don't live in our household. But there are still many ways to enjoy the season. Listening to all your favorite Christmas music is always a great way to have fun. Decorating your indoor and outdoor spaces can be a lot of fun, too. As Christmas draws closer, a family drive to see the Christmas lights and displays in people's yards can be a right, safe way to celebrate. It is also essential to let people know you are thinking of them with anything from a gift to dropping a few lines to someone from afar. So no, Christmas won't be the same this year, but that does mean it can still be the uplifting season we all need now more than ever. Merry Christmas! Give up such responsibility. It must have also realized that its ability to improve governance in PSBs has reached its limits. However, there is no evidence that all is well with the private banks, and they can deliver better to the people the banking requirements than PSBs.

Delhi Police Typing-Dated-2023-08-01-Test NO.-10120

The present government gives the impression that growth comes from the rich and the rich do not cry on inflation. They can pursue non inclusive growth agenda more effectively if they change the institutional architecture, so that expenditure on institutions meant for delivering to the poor can be minimized, if not eliminated. This is undesirable both politically and economically. While privatization by itself is not bad, the timing and motive behind the move at the moment is suspect, particularly after the consolidation of PSBs took place. The views expressed are author own. The author is an economist and risk management specialist. All of those are lights in the darkness, beacons of hope and charity in a once in a century pandemic that has brought the world to its knees. But we still have to get through Christmas. For Christians, Dec. 25 is a holy day of great joy, celebrating the birth of Jesus Christ. Even for those not of the Christian faith, it is a time traditionally spent with family and friends. Instead, if we heed the advice of scientists and medical authorities, all across this country, there will be people who spend these days alone, separated from elderly parents, longing to see grandchildren, reaching out by telephone and Face Time and Zoom to try to replicate the love and togetherness that usually accompany this holiday for so many of us.

4PL logistic segment in the country includes: Tech at its core As supply chains grow ever more complex and fragmented, technology will take an increasingly central role in how the industry develops and overcomes those challenges. As a result, the demand for new technologies in supply chains has increased significantly and logistics now stands before a crucial inflection point that will see profound changes to how the industry operates. Fundamental to this technological revolution will be the establishment of clear industry data standards potential of new technologies such as AI and block chain. At the same time, taking advantage of these new technologies will require an underlying shift in the way both than one size that that relate to warehousing, distribution, freight, and information technology, and provides the best solutions for their clients. This accuracy and cohesiveness of information will be critical, for even a seemingly trivial delay in the supply chain that can pause operations. Consolidation and cost to reduce supply chain costs will drive the demand for integrated solutions. Companies have been reducing costs will witness further cost optimization with companies looking to outsource the entire supply chain to a single partner with financing becoming a constraint. The companies will either adapt to smaller shipments or bulk shipments to reduce costs further. This outsourcing allows the and higher value projects. Because they are focused on ironing out costs by finding the best solutions for the lowest price some experts concerned that iodine deficiency could be on the rise again. Eating a healthy, balanced diet that includes iodine rich foods and iodized salt is key to good health.

Delhi Police Typing-Dated-2023-08-01-Test NO.-10121

Jammu and Kashmir has been known for communal harmony, and even local terrorists will not be able to tarnish this reputation. If we look at the recent past, then we can say that the identity of Kashmir is protected in India. Fundamentally, Kashmir is the land of Rishis and Sufi saints, and their message is deep rooted in the hearts of Kashmiris, irrespective of faiths and beliefs. Not only that, it has the capacity and scope to expand, creatively vocalise, and mature. It also has excellent prospects to spread its outcome all over the country. The convergence of Mahayana Buddhism and Islam in some parts of Persia and Central Asia resulted in the evolution of Islamic mystics. The Sufis founded several orders by incorporating Hindu and Buddhist philosophies. The meeting of two great traditions of Saivism, the Hindu monistic philosophy of Kashmir, and Erfan of Muslim. It gradually took place, giving rise to a unique order of Rishis whose philosophical beliefs led to the idea of religious tolerance and shared faith in God, which Kashmiris always cherished. Somnath Dhar, Jammu and Kashmir, National Book Trust of India, New Delh. Rishi Sufism, a social, cultural and religious space where several Hindus and Muslims once practised their faiths, was one of the most prevalent expressions of Kashmiri at in the century. The Rishi Sufis practice shaped the concept of the immanency of God, respect for all religions, beliefs in miracles, reincarnation, meditation, and asceticism from Hinduism and the spirit of Eightfold Paths from Buddhism. It incorporated these into the concept of transcendence of God and to the spirit of the Five Pillars of Islam for launching the syncretic space for inter religious interactions. The ethno cultural symbiotic consciousness, and Hindu Buddhist inter religious symbiotic spiritual consciousness, shaped the evolution of the Kashmiri at. Kashmir at is a concept of tolerance and inclusivity of all faiths and beliefs, thus respecting all religious traditions and festivals. It embodies communal harmony, literary heights, spirituality and symbiotic relationship among different communities. Kashmiriyat is imminent in all aspects of the Kashmiri people life, and it is the powerful shaper of its people religious and cultural life. The comforting wisdom expressed in the local Kashmiri language by the Rishis provided solace in difficult times. Despite the cultural invasion of Kashmir Valley, Kashmir at has survived as a unique language due to various favorable historical reasons and other factors. Attack on Kashmir at. In 1947, after the partition of British India into India and Pakistan. The erstwhile state of Jammu Kashmir came under attack, which Pakistan masterminded. Maharaja Hari Singh signed a legal document of the Instrument of Accession, accepting accession to the Union of India when attackers had already reached the outskirts of Srinagar. The terrorism that began in 1989 in the Kashmir Valley, to supposedly for greater political rights, soon took a violent turn at the behest of Pakistan. Once again, ruthless killings, arson, looting and rape of non Muslim people were carried out by the terrorists.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10122

Thus, the minority community of approximately 3,50,000 people, mainly Kashmiri Pundits, were driven out of the Kashmir Valley and continued living in exile. Ultimately, the whole erstwhile state of Jammu and Kashmir was engulfed in this cross border terrorism sponsored by our adversary. In addition to other things, these radical elements want to destroy the basic fabric of Kashmir, i.e., Kashmir at. When the people of Jammu and Kashmir suffer, the magnificent metaphysical and mystical ethnicities augmented by Rishis and Sufi saints bring succor to them. There have been conversions, sometimes peaceful while at times by force. J K witnessed conversions, various changes in administration and transfers of power. Nevertheless, neither the adaptation nor forced migrations could obliterate their mutual trust, love and psychological bondage amongst the various communities. Ironically, the converted people did not change their surnames after conversions. People of Jammu and Kashmir take pride in their culture as the society is deeply inclined toward the culture of Rishi Sufi mysticism. People chose not to lose their diverse spiritual identity, which is neither unequivocally Hindu nor Muslim. This culture and spirit of a singular identity, irrespective of individual religious beliefs, sometimes confuse people outside of J K. However, Kashmiris with pride refer to it as Kashmiri at, in simple words, Kashmiri ness. The people of Jammu and Kashmir, especially of Kashmir Valley, continued to live in harmony till 1989, when Pakistan aroused the communal sentiments of the majority population of Muslims in Kashmir and changed the course of a passive, otherwise secular in nature, into a violent ridden communal movement. Pakistan forced an ideology of fundamentalism, which was alien to the Kashmiri society where Sufism flourished, divided the People based on religion, thereby complicating the ethno religious identity of the Kashmiris. For terrorists from the other side of the fence, religion was merely a tool to exploit the vulnerabilities of the masses and tear apart the socio cultural fabric of Kashmir at. The young minds of the J K are brainwashed and weapon trained to carry out large scale acts of terrorism. Pakistan funded radical elements are entering the Kashmiri society, threatening the pluralistic social order, inter faith and harmony of the people. Young Kashmiri Muslims are growing up under the umbrella of a single religion, Islam, with no memory of co existence and compassion for other communities. At the same time, the Kashmiri Pundits continue to live in exile, scattered future generations growing up outside their homeland, being shaped in a different culture with barely any connection to their roots. The unholy alliance of organised fundamental interpretations of religion and gun culture has led to the weeding out of remnants of the humanistic culture of Kashmir with its roots deeply embedded in the secular and glorious ancient past, perhaps marking its dent on Kashmiri at. Thus, the threat to the cultural ethos and values of Kashmir at comes from radical elements and not from India or Indian Constitution. India is a pluralistic and multi cultural society where.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10123

Many faiths and belief systems regulate the people of India. Kashmir civilisation is a splendid reflection of India civilisation, which promote composite culture and pluralism. So far, Pakistan has tried to weaken the very spirit of Kashmiri at, but Pakistan must appreciate that in a struggle between secularism and fundamentalism, the former is always the winner. The faith of the people of J K in the socio cultural fabric of Hindu Muslim is indestructible. We must not see this conflict in J K between Hindus and Muslims but as between national and anti national forces. The Pakistani strategy during the insurgency phase was to create social and communal disorder and weaken the secular base. Pakistan was under the impression that Kashmiri at had no psychic roots in the state, except in the plural reverence for other religions. This misapprehension encouraged Pakistan to transplant its fundamentalist ideology to combat the liberal Hindu ideal of the brotherhood of man, which comes from the Indian philosophy of Sarva dharma sambhava. At the United Nations Framework Convention for Climate Change UNFCCC 26th Conference of the Parties COP26 in Glasgow last year, Hon ble Prime Minister Narendra Modi outlined a five point strategy to drive positive climate action. Besides committing to increase non fossil energy capacity to 50GW by 2030 and meet half of all energy needs from renewable sources; India also put forward its goal to reducing at least one billion tonnes of total projected emissions between now and 2030. This eventually would place India on the path to achieving Net Zero emissions target by 2070. India has the lowest per capita emissions at just 1.9 tonnes of carbon dioxide per head, compared with 15.5 tonnes in the US and 12.5 tonnes in Russia, as per 2019 data. Thus, the new roadmap for a cleaner future has strong implications for the business sector. Our new roadmap is underpinned by the new Environment, Social, and Governance ESG reporting requirements for the business sector. The Securities and Exchange Board of India SEBI has called for mandatory disclosures through the new Business Responsibility and Sustainability Report BRSR format from FY2022 23 for the top 1,000 listed companies. However, to ensure that India businesses are future proofed for the pivotal shift to ESG reporting, an inclusive approach that encompasses the micro, small and medium enterprises MSME sector is needed. With over 6.3 crore MSMEs that contribute to about 29 percent of the country GDP and create jobs for some 110 million people, its role in achieving India mission to becoming a US\$5 trillion economy by 2025 is extremely significant. MSMEs also have a key role in achieving the climate action goals of the country, integrating ESG best practices into their operational and organizational framework. I believe, we have an incredible opportunity to support their ESG transition and deliver a workable model for developing nations where SMEs are the backbone of their economies. The need for ESG capacity building A strategic shift to a more ESG driven MSME sector.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10124

Needs comprehensive support reporting is an extra burden on these enterprises, and with several of them challenged by the impact of the COVID 19 pandemic, prioritising ESG standards, especially for companies in the manufacturing sector, calls for committed in house capacity building. ESG practitioners can support this transformation through MSME specific ESG reporting protocols and frameworks. From corporate to social to ESG For a long period, corporate reporting centered on governance measures followed by an emphasis on social responsibility. In both these, the country has set an exemplary model, with India probably being the only one where CSR spending is mandated by percentage profits, specific areas of action, and annual reporting. ESG reporting, not too surprisingly, is still in the nascent stage, with just about 125 companies representing mostly the construction and building materials, metals and mining, oil and gas, and chemicals sector disclosing their sustainability performance. For example, the environmental pillar calls for commitments regards energy usage, reducing the carbon footprint, waste management, pollution monitoring, natural resource conservation, managing hazardous waste, and toxic emissions. While the social pillar must factor in employee welfare, vendor relations, gender equality, and social welfare programs. Likewise, the governance pillar underpins the need for business ethics and legal best practices. ESG is fundamental for long term value creation Transitioning to this broad ESG framework is fundamental to long term value creation and in meeting stakeholder expectations which is key to future proofing Indian businesses. For MSMEs, specifically, proactive ESG reporting will bring an added incentive of being able to attract new investments, especially from ESG focused funds. To build businesses fit for the future that the nation envisages, it is important that we commence an inclusive ESG journey now. We must support the sector take that first decisive step without delay to map out grassroots level strategies for carbon footprint reduction and achieving carbon neutrality across their operations. The challenge is humungous; what is needed is stronger awareness, knowledge sharing, and governmental support to help MSMEs transition to the ESG best practices. Psoriasis is an autoimmune disease that requires timely treatment and lifelong management. Alarmingly, studies suggest that non adherence to medication among psoriasis patients is as high as 40 1. This is a result of several factors such as poor awareness, misinformation, financial inadequacy, and lack of motivation. Having skin affected by psoriasis can be a sign of inflammation occurring in other parts of the body. Thus, regular compliance to treatment is critical in controlling psoriasis. Psoriasis is often perceived as a skin problem which urges people to find remedies for the skin. Use of homemade skin packs are all too common. Alternatively, patients often find relief with over the counter medicines and ignore seeking professional advice. Owing to lack of awareness, misinformation about psoriasis, and with busy work schedules, patients tend to neglect treatment, that severely worsens their condition. Therefore, consulting a dermatologist will help get the right advice and a personalised treatment suited for one symptoms and severity of the condition.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10127

A multisystem inflammatory disease like Psoriasis requires constant attention to control the inflammation and prevent frequent flare ups. If mismanaged, psoriasis can cause a range of health complications such as hypertension, diabetes, kidney disease, skin problems and cardiovascular diseases. Correct treatment can not only alleviate the symptoms but also treat persisting skin problems. With treatment adherence, patients can get clearer skin, which can further motivate them in long term management of Psoriasis. Therefore, regular communication is fundamental for the right treatment, advice, and information. For psoriasis management, there are several safe and effective therapy options available today. Determining the right treatment method depends on several factors including the patient disease severity, risk of comorbidities and susceptibility to various risk factors. Advanced therapies, including biologics, have added to the options of therapeutic treatment of moderate to severe Psoriasis. They are highly effective in successfully disrupting the disease cycle. It has a favorable risk reward profile and is well tolerated by patients. This has proven to improve acceptance and facilitate better adherence. Psoriasis patients need holistic treatment and support, right from the initial stages. We need an understanding of the barriers to treatment adherence and accessible information for both patients and clinicians. There is a clear need in India for multi stakeholder interventions, uniting patient groups, specialists including dermatologists and rheumatologists, the government, industry bodies and private players towards establishing a patient centric model of care while driving emotional and social support. In early February this year, the National Payments Corporation of India NPCI in a proud revelation announced that our neighbor, Nepal would be the first foreign country to adopt India UPI Unified Payments Interface system. In yet another significant win, a couple of years back, tech titan Google in a letter to the United States Federal Reserve Bank applauded the robust digital payments architecture of UPI and elaborated on how a scalable infrastructure like UPI can be replicated in the US. The force to reckon with in the digital payment ecosystem, UPI has assuredly elevated our country finch story onto the world platform. While the pandemic undoubtedly boosted the inclination towards contactless and digital payments, UPI has been at the forefront of finch innovation, driving the adoption of digital payments across the country. The financial revolution which recently hit the \$1 trillion mark in transaction values in FY21 22 has been on a consistent growth trajectory since its launch in 2016 and is currently the most popular digital payments system in India, with more than 314 banks linked to it. While UPI based transactions have witnessed an over four fold growth in both volume and value over the last two years, they have also witnessed an alarming rise in frauds. Understanding UPI Developed by NPCI, UPI is primarily an instant real time payment system that facilitates interbank peer to peer and person to merchant transactions. The UPI address, a virtual identity, unique to each individual enables one to seamlessly track all transactions conducted through the id. UPI lets you link.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10128

Your bank account to a mobile application like Google Pay, Phoneme, Pat, BHIM, etc. thereby making transactions safely using just the UPI ID of the receiver. Unlike in net banking wherein, one needs to share sensitive information such as account number and IFSC code, UPI ID also known as Virtual Payment Address VPA does not contain any sensitive information and thereby mitigates the risk of frauds. The robust tech platform enables users to transact seamlessly across various modes scan a QR code to make payment, send money to UPI ID or phone number, or even send a collect money request. However unfortunately the unique construct and simplicity of UPI is being leveraged by fraudsters to lure and target users who conduct transactions carelessly. This makes it even more pertinent for users to take charge of the situation with adequate knowledge, scrutiny, and responsible behaviour so as to keep fraudulent transactions at bay. Below are some fraudulent practices that one must be aware of Phishing One of the most popular forms of fraud is Phishing, wherein fraudsters send unauthorised payment links via SMS. Since these fake bank URLs will look almost identical to the original URL, customers may imprudently click on the link which will direct them to the UPI payment app installed on their phone and will prompt for an auto debit. As soon as the user grants permission, the amount gets debited via UPI on real time. Malware Malware is yet another popular form of cyber fraud users fall prey to by clicking on fake URLs that are downloaded from a fake e mail attachment or an unsecured website. Clicking on the fake URL infects one device with a virus/malware, which is specifically designed to extract and copy data thereby stealing the financial information stored on the device. SIM Cloning Here once the scammer clones a SIM, he will have access to the user bank account details and ID proof which are then be easily used to reset the targeted user UPI id. Vising In this case, scammers may call or interact with the targeted user while posing themselves as a bank representative. After having gained the trust of the potential victim, these individuals under the pretext of updating KYC or some allied formality extract sensitive personal information including UPI PIN or password. Below is a safety manual to protect oneself against frauds Refrain from engaging with fraudsters In this digital age, where everything is just a call or a message away, be mindful of unfamiliar numbers or in case if the identity of the caller or the source of information is devious. Additionally, be wary of contact numbers available on shopping portals and e commerce platforms as they too may be unscrupulous. Ensure to check on the identity of the person one is interacting with The paramount rule After signing up, UPI provides the UPI PIN number which is a 4 or a 6 digit code. The PIN is the number that one has to enter whenever one.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10129

Adds a new payment account or makes a transaction. In other words, every transaction is authenticated with the UPI PIN, which acts as a safety net and prevents fraudsters from misusing the app on a device or making a payment from an account as the UPI PIN is known only to the user. The paramount rule here is Never reveal your PIN to anyone. Here fraudsters may try to misuse the request money feature on payment apps. But what one needs to remember is that if money has to be credited it will never ask for the PIN. Beware of counterfeit apps There are many fake apps that may look similar to the original bank app and are easily available for download. Installing such fake apps, makes sensitive information vulnerable to fraudsters. Personal information of users are extracted under the guise of some important banking service or transaction. While UPI is definitely one of the safest and most secure platforms for cashless transactions, but as with the platform, the onus equally lies with the users as well to observe safety standards and practices. In case of UPI, customers fall prey to fraudsters owing to their own ignorance and lack of knowledge. It is therefore extremely important that even while we adapt to contactless payments such as UPI, we are mindful while transacting digitally and are responsible to keep a tight check on any form of inadvertent behavior. We are in an era where the rate of fintech adoption is bizarrely exceeding the rates of Fitch Innovation. It is important to study factors causing tangible impact in digital adoption in specific demographics for fintech growth and scalability. This article points out trends that see skyrocketing adoption of digital payments in rural India. Increasing smartphone penetration there is an exponential increase in the rate of smartphone penetration in India which was estimated to be 54 percent in 2020 and hiking towards 96 percent by 2040, which is almost everyone equipped with a smartphone? Mobile payments have been a joy for customers urban and rural ever since its inception. Players in the fintech arena are constantly in the innovation race to facilitate more financial inclusion by developing new products and features for easy payments. Embedded bill payments, virtual wallets are some of the trends seeing many users everywhere. Digital payments have broken traditional banking shackles. The newer generation in rural India is quick to adapt to innovation. This trend is naturally occurring because digital payments have become customer friendly and just eases out the conventional pain points of banking cash transfers. A big good bye to olden days of banking where the smallest fund transfer includes the hustle and bustle for collecting tokens, moving on the queue and befriending cashiers. Raising momentum of rural stores collecting digital payments Digital payments on technology powered offline store apps is a major trend that provides payment collection via dynamic QR payments, Static QR payments, debit/credit cards also inclusive.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10130

Of so many features like Digital Ledger, Inventory, e Point Of Sale and Nonbanking. Nonbanking single handedly raises the bar of rural digital adoption, since most rural populations engage in B2C businesses involving layers of payment cycles towards vendors and stakeholders. Neo banking in a store payment collection app includes bulk/individual payouts, list of inward outward transactions, some with options even for availing loan and insurance. Pricings are cheap, merchant paperwork, background checks and integrations needed are umber fast and simple. A classy merchant dashboard with notifications of activities happening on the digital payment app is crucial. Simplicity Most rural mobile app users need it simple. The outlook of the app needs to be uncluttered, simple and self explanatory. The navigation, workflow and concluding acknowledgements, although internally complex, should look simple and straightforward to the user while not forgetting the presentation of the app in a minimum of 6 to 7 regional languages. Speed Those few seconds between end payment and paid are deemed high on human anxiety and so very crucial. The psychology of the rural human mind says, the more time taking digital payment is, the more unreliable it could be. Rural India is big, almost 70percent of the country and it is a sector where money is earned largely in forms of labor through sweat and blood and this kind of money lost panic is a can complain issue. Speed increases the sense of security in the minds of rural merchants. An edifying campaign that digital payments is secure and risk free The news of Digital Fraud is increasing and awareness about the security in digital payments is key. Fitness are incorporating defensive mechanisms for fraud detection and risk prevention and rural merchants are feeling a sense of security in depending on digital payments. But more than the problem of infrastructure it is the people distrust towards sophisticated technology. There is a quote that says, A superlatively advanced technology equals magic. While there are many advantages and amazing features that come with digital technology adoption, it also brings in a certain fear factor. The convenience, operability, and speed provided by finch solutions is conceived like, known devil is better than unknown angel. And this is where the Ministry of Electronics and Information Technology Meaty has taken necessary action to set up Common Service Centers CSCs which are manned digital financial hubs to spread word on the transparency and reliability that a digital world can bring in. Also it holds the power to cater to the questions and fears of the rural population and explain that digital banking comes under governmental policies and digital finance options laid down for rural citizens. The government has invested more than Rest 65 crore to promote digital financial services such as UPI, IMPS, Bank Pops machines, etc. in the rural sectors of the country. The mobility industry is clearly going through one of its most disruptive periods with electrification being one of the major drivers of this transformation. Over 100 new models of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10131

A highlight of Census 2011 was the surge in urban settlements over the previous decade. The count was 7,933 urban settlements. About 65% of these settlements did have a master plan, according to a Nitti Aayog report in 2021. Moreover, almost half of them continue to be governed as rural entities. It problematic because urban India is not just the primary engine of economic growth, but it where most of the future population growth is expected. GOI estimated that urbanisation contributed to almost 60% of GDP, and almost 75% of the population increase by 2036 will be on account of urban growth. The problem has two dimensions. First, states have undermined the spirit of the 74th constitutional amendment of 1992 that envisaged the transfer of the urban planning function to an elected local government. Second, inadequate devolution of powers has deprived master plans of a sense of reality. They are out of sync with the evolution of urban settlements. A common critique is that they are inflexible and overemphasis zoning. The problem here is that master plans, which take a macro view of urban areas, failed to account for the informal nature of urban India employment market. Consequently, zoning plans run into unexpected growth of clusters linked to informal jobs. The end result is that basic urban infrastructure is either patchy or non-existent. Master plans remain essential to prevent chaos and enhance the quality of urban life. They require action on two fronts. Political power has to devolve to urban local governments. With it, greater ownership by the political executive can inject a dose of reality into master plans. The surge in India daily mean rainfall since the last week of June again showed up the poor state of urban India infrastructure. Marooned vehicles and chaos in big cities made headlines. However, the disruption in smaller urban centers has probably been worse. If the infrastructure in big cities is inadequate to deal with the monsoon, emerging urban areas deal with another problem. Infrastructure does exist. In the sphere of higher education institutions HEIs and educational rankings, there is regular discoursing on some key touchstones like faculty research and publications, student placements, quality of teaching and faculty-student ratio. An array of ranking bodies, from the Times Higher Education World University Rankings to the controversial National Assessment and Accreditation Council, conducts detailed surveys deploying many of the aforementioned parameters. They have a broad, data-based approach that tilts the surveying method to quantifiability, quantitative data, numbers and graphs. In the daily dose of human tragedy, we in India stand head and shoulders above most other countries. In newspapers, on television, across the internet, tragic incidents oscillate between the comic and the bizarre, between callous and outlandish: boys swimming in flooded street sucked into drain, workers asleep on railway track run over by train, man peeing on wire electrocuted, family killed in monsoon building collapse, bridge crashes into river during inauguration. Leaving aside those dead in rail accidents and religious clashes, these are human tragedies linked to daily official incompetence and apathy. We invite these shameful headlines for two reasons. We are now the world largest population; and that 1.4 billion number is not scattered over a Norway-like sparseness, but is concentrated in some of the most crowded and ineptly govern

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10134

So, when floods and landslides occur, accident and tragedy are built into the terrifying numbers. Facility management, leasing, broking network, and property consultation. As the real estate sector expands, there will be a broader positive multiplier effect on related industries and persons involved. By targeting double-digit GDP growth, India can unleash the true potential of its real estate sector, fostering economic growth, creating employment opportunities, and fulfilling the aspirations of its citizens. Watching clouds can transport you to a realm of unparalleled serenity and bliss, where the boundaries of reality seem to dissolve into a painter canvas. As you lie on the soft grass or lounge on a cozy hammock, your eyes fixate on the ever-changing dance of clouds across the vast expanse of the sky. Each fluffy mass morphs into unique shapes and forms, stimulating your imagination to conjure images of animals, mythical creatures, and dreamy landscapes. The gentle breeze carries the clouds along, painting the sky with hues of cotton candy pink, golden orange and serene blues. The warm rays of the sun filter through the white canopies, casting a soft glow that envelops you in a cocoon of comfort. The world around you fades away as you become immersed in this celestial spectacle, where time seems to stand still, and the stresses of everyday life dissipate like the morning mist. The act of cloud-watching instills a profound sense of calm and freedom, akin to being transported to a paradise where worries dissolve into nothingness. As you marvel at the boundless sky, a sense of perspective emerges, reminding you of the vastness of the universe and your place within it. The transient nature of clouds serves as a reminder of life impermanence, urging you to savor the present moment and appreciate the beauty in fleeting things. The tranquility that accompanies cloud-watching is not just a product of the external scenery; it also stems from an inner connection with nature. In this enchanting setting, you can find solace and peace of mind, allowing your thoughts to wander freely and find refuge from the chaos of modern life. This profound communion with the natural world nurtures your soul, replenishing your spirit and filling you with a profound sense of contentment. As the clouds continue their ethereal journey across the heavens, you may lose track of time, but the experience stays etched in your memory like a cherished dream. The beauty of cloud-watching lies not only in the mesmerizing display above but also in the emotions it stirs within you, evoking a feeling of paradise found amidst the ever-changing canvas of the sky. In recent years, artificial intelligence AI has emerged as a game-changer in various fields, and the education sector is no exception. AI, a force to be reckoned with, holds the key to revolutionizing the way we learn and teach, ushering in an era of unparalleled accessibility and effectiveness for education across the nation. As an ardent believer in the untapped potential of the human mind and its remarkable capacity for growth, I wholeheartedly endorse the integration of artificial intelligence AI with the education sector. Embracing AI as a collaborative tool can pave the way for making education accessible to all, empowering students to harness their cognitive abilities and unlock a brighter future for them. Following are a few ways I believe AI can revolutionize education. Personalised learning for every student I

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-01-Test NO.-10135

Learning process accordingly. This means that teachers can focus on our unique needs and abilities, helping us excel at our own pace. Timely feedback and improved assessments Have you ever wondered if there was a way to get immediate feedback on your assignments? AI can help with that By using AI-powered assessment tools, our teachers can grade student work quickly and give us feedback right away. This way, we can understand where we need to improve and build on our strengths. Identifying and bridging learning gaps In India, we face disparities in access to quality education in different regions. AI can help us bridge this gap. By analyzing data, AI can pinpoint areas where students need more support and resources. This insight allows policymakers to allocate educational resources more efficiently, ensuring that every student has an equal opportunity to succeed. Streamlining administrative tasks AI can also assist our teachers and school administrators in managing administrative tasks more efficiently. By automating processes like enrollment, record-keeping, and scheduling, our teachers can devote more time to teaching and mentoring us. This can lead to a smoother educational experience for everyone. Lifelong learning and up skilling: AI can facilitate lifelong learning by offering personalized, on-demand courses tailored to individuals evolving career goals and interests. With AI-driven platforms, professionals can stay updated with the latest developments in their fields, ensuring they remain competitive and adaptable in the job market. Early intervention for struggling students AI can play a vital role in helping students who might be struggling academically. By analyzing data, AI can identify students who need extra support and intervention. Early identification of learning difficulties can prevent students from falling behind and give them the necessary help to succeed. AI-powered content and curriculum AI has the potential to transform the content and curriculum, making it more relevant and engaging for students. By analyzing vast amounts of data on student preferences, interests, and learning outcomes, AI can recommend and generate content that resonates with learners. This adaptive content approach ensures that students stay motivated and connected with their studies, fostering a love for learning. AI in special education The integration of AI in special education can be a game-changer for students with learning disabilities. AI-powered tools can identify specific challenges and adapt learning strategies to accommodate individual needs. For example, speech recognition technology can assist students with language difficulties, while AI-driven visual aids can enhance comprehension for those with visual impairments. As we embrace AI in education, we must also address ethical concerns. Ensuring the privacy and security of our data is essential. Additionally, while AI can enhance our learning experiences, it should not replace our teachers. Our teachers play a significant role in guiding and inspiring the students, and AI should complement their efforts rather than replace them. The integration of artificial intelligence in education represents a transformative leap towards a more inclusive, personalized, and efficient learning ecosystem in India. By harnessing the power of AI, we can elevate education to new heights, ensuring that every student has the opportunity to reach their full potential. With responsible implementation, AI se

Electric vehicles EVs are launched globally each year, and it is estimated that by 2040, one in three cars sold will be EVs. The EV disruption in the automobile industry is also quite democratic, as the focus on new technologies has presented an opportunity for new players to enter the sector. Many established automobile manufacturers have been slow to act, giving EV startups the opportunity to gain a foothold in the market. However, despite these opportunities, EV startups need a supportive ecosystem to help them grow and achieve their full potential. This is definitely the case in India, where young EV entrepreneurs face a host of challenges such as a lack of access to raw materials, testing equipment and quality talent. There are some positive factors such as India abundant supply of renewable energy resources and expertise in automotive manufacturing. The government has been taking steps to nurture a conducive ecosystem in India for a while, with mission plans and incentive schemes for manufacturing EVs and EV components as well as encouraging consumer adoption. However, many of these schemes are largely empowering established companies and could do more for small and medium sized EV players. The government is doing its utmost to support the Indian EV ecosystem, but the industry must also take the baton forward. This collective approach will help EV startups face a number of challenges. The challenges are many There are many struggles that EV startups deal with but given that it is a relatively new and innovative technology in a capital intensive industry, Research Development R D is unsurprisingly a huge challenge for many startups. In 2019 20, the world top 20 car manufacturers spent close to a combined INR 7 lakh cores on R D in EVs numbers that startups will struggle to match. While this is obviously a constraint, startups do have the advantage of agility and flexibility as they are not beholden to existing manufacturing processes and product designs. Nevertheless, critical components like batteries are still expensive as they account for 40 of an EVs cost. Indian startups will especially struggle with this as access to raw materials for lithium ion batteries is limited. Though there are some initiatives, such as a Production Linked Incentive, to encourage alternative battery chemistries with more indigenous materials, research on them is scattered, complex and costly prohibiting the entry of startups into this sector. R D is also not just about manufacturing capacity. EVs are increasingly electronic and EV software plays a critical role in advancing EV technologies. Whether it is to manage battery, coordinate different functions across the vehicle or present user interfaces, software can often be where EV manufacturers earn a competitive advantage. Developing or even using software can be extremely expensive, which, along with manufacturing costs, can make the development of a prototype prohibitively expensive. This does not even take into account the need for the testing equipment required to troubleshoot and develop prototypes into feasible designs. R D on EV components requires equipment.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-02-Test NO.-10137

Like motor test benches, mixed signal oscilloscopes and cell/battery cyclers some of which can cost 3 5 cores each. Even if the funding could be raised by startups to afford these R D costs, talent remains a major bottleneck that prevents India from being globally competitive. Countries like the USA and China have been investing in automobiles and EVs for so long that their EV industries have developed immense expertise in the field. India is unfortunately still lagging behind and many organizations struggle to recruit quality engineers. This struggle is especially worse for startups, many of whom struggle to compete with the pay packages and benefits that large manufacturers like Tata Motors, Mercedes Benz and Mahindra can provide. All of these struggles are occurring in the backdrop of major supply chain crises the EV production process has been called a manufacturing hell because of its numerous bottlenecks. The process of making automobiles involves high fixed costs, and complicated coordination with different suppliers to source various materials and components. These are issues that are mitigated by economies of scale but that requires significant capital and investment there is a good reason why the gap between making a prototype and mass producing an EV is ominously called the valley of death. Many startups are unable to find investors who have sufficiently long term thinking Funding difficulties are also the main reason dissuading startups from exploring new ideas. Even with investors, the situation can arise where their expectations are not in alignment with the company vision. EVs: Long term opportunities that are not a zero sum game It is clear that EVs have immense potential to both deal with climate change as well as fuel economies. While there is significant competition between different companies of varying sizes and even different technologies, anyone who has spent any time with EVs realises that EVs are not a zero sum game. The scale of the problems and their sheer variety mean that multiple companies will be needed to provide a variety of EV solutions. This is not to say that the EV industry will not be competitive but more to highlight the opportunities for collaboration and collective movements, especially among startups. This may lead to a new type of EV organizations that are more interested in ecosystem building than developing products themselves. Take testing equipment for example one individual EV startup may not be able to afford all the equipment required, but an organisation with multiple EV startups as members could purchase this equipment and split the cost across its members over a period of time. This is a far more efficient use of the equipment and may be a more effective model at a time when equipment is becoming more expensive and difficult to source. Startups would obviously benefit tremendously from access to state of the art equipment while maintaining lower capital expenses, lesser risk and reduced cash flow issues. This model could also be used to consolidate talent which EV startups could access through.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-02-Test NO.-10138

a consultation model, which would help early stage startups advance R D development by avoiding recruitment constraints. Engineers working in such a model would interface with multiple technologies and use cases, which would expedite the pace at which they gain functional expertise. This is precisely the type of long term thinking that will be required by these ecosystem creators, and there is no type of organisation where this is more required than venture capital firms. Many of them are still learning about mobility and climate technologies and how to invest in them. This limits the potential of EV startups to scale enough to transition beyond the valley of death and begin production. The opportunities for the EV industry to drive another era of growth in India is immense both from the economic activity generated by the manufacturing and development of EVs by Indian startups as well as the activity generated by the use of the effects it could have on logistics and transport industries are extremely exciting. There are certainly challenges that will need to be overcome, but the truism that challenges are just another word for opportunities has never been truer. With the right support and movement, the EV ecosystem can help power India into a new era of clean mobility Many established automobile manufacturers have been slow to act, giving startups the opportunity to gain a foothold in the market. However, despite these opportunities, startups need a supportive ecosystem to help them grow and achieve their full potential. This is definitely the case in India, where young EV entrepreneurs face a host of challenges such as a lack of access to raw materials, testing equipment and quality talent. There are some positive factors such as India abundant supply of renewable energy resources and expertise in automotive manufacturing. The government has been taking steps to nurture a conducive ecosystem in India for a while, with mission plans and incentive schemes automobiles involves high fixed costs, and complicated coordination with different suppliers to source various materials and components. These are issues that are mitigated by economies of scale but that requires significant capital and investment there is a good reason. It is unfortunate that the collegiums rejected her request for reconsideration without assigning a reason. It is easy to argue that one high court is as good as any other, that such transfers should not be seen as a demotion, and better of justice. However, it is a fallacious argument when one considers that there are no known complaints about her any public around her judicial or personal conduct. It is possible that the transfer is based complaints not available in the public domain. The controversy once again brings under focus the flawed collegium system of appointments and transfers. In recent years, the government and the collegium have been frequently on the latter for transfer has something to do with her judgment in the Bilkis Bano gang rape case, when she was in the Bombay High Court, is quite misconceived.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-02-Test NO.-10139

Following World War II, the United States of America anointed itself the leader of the free world, committed to planting the flag of democracy globally. Much of this global positioning was facilitated by a celebration of its constitution. The constitution, though written in dense legal prose, enshrined the concepts of liberty, equality and freedom. Nourished by a powerful Supreme Court and gushing popular culture portrayals, it became the global gold standard for constitutional documents. Oil producers and refineries exporting downstream products have had a good run this year. Consequently, on June 30, GoI levied an indirect tax on them to capture a part of the windfall gains. The levy of indirect taxes in the form of cess on domestic crude production sold at import parity prices, and on export of petrol, diesel and aviation turbine fuel will accrue entirely to GoI. This is because a cess is not part of the divisible pool of taxes that has to be shared with states. Last week, the GST Council had a two day meeting where steps to reform the structure of the indirect tax by closing some exemptions and correcting inverted duties were approved. Its a welcome move. GST has withstood stress tests in 2020 21 when the economy contracted. It withstood the challenge and its resilience is now beyond question. However, GST remains a work in progress. For example, the Council needs to extend GST to important economic inputs currently outside its purview. Notably, petroleum products and electricity. One of the aims of GST is to improve Indians economic competitiveness by removing the cascading impact of taxes. Keeping petroleum and electricity outside GST will not help us realise this goal as input tax credit is unavailable when they are used in economic activity. States are reluctant to subsume these products into GST as they feel GoI has eaten into the divisible pool of taxes by resorting to cess and surcharge. They have a point the share of cess and surcharge in gross tax revenue increased from 10.4% in 2011 12 to 15.3% in 2018 19. Both levels of government face fiscal pressure. But if Indians most important indirect tax reform, GST, has to live up to its potential all stakeholders have to take the long view. GST was the outcome of a grand bargain when states ceded unilateral tax powers over the major part of their base in return for a temporary guaranteed compensation to smoothen the transition. That phase is over but much needs to be done. The way forward is for GoI, the entity with superior taxation powers, to avoid frequent recourse to cess. It vitiates the atmosphere and limits GSTs potential. Avoiding cess to persuade states to bring petrol, electricity and all of real estate into GST should be the next big target. Its direct impact will be on Indians competitiveness. All sensible Indians would agree with CJI Ramana that the judiciary must function as an independent organ of governance, answerable to the Constitution alone he is also.

Delhi Police Typing-Dated-2023-08-02-Test NO.-10140

Right that such ideal functioning is made difficult by the party in office expecting judicial endorsement of every governmental action and opposition parties likewise expecting support for their causes. But judging by the parameters of constancy and transparency, it is perhaps equally indisputable that painful gaps remain in courts answerability to the Constitution that are entirely of their own doing. For example, despite Article 20 2 safeguarding against double jeopardy, and also an SC judgment that subjecting an individual to numerous proceedings on the basis of the same cause is violative of fundamental rights, the clubbing of multiple FIRs into one jurisdiction is yet to become a procedural commonplace. Nupur Sharma is just the latest to experience this. In a much more widespread malaise, the elemental concept of bail not jail has yet to be internalised by the judicial labyrinth. On the transparency front, judicial appointments themselves present the most glaring gaps. In a strongly worded minority opinion when SC struck down the NJAC Act, Justice Chelameswar had written that transparency is an aspect of rationality and the need for transparency is more in the case of appointment process. The judgment too had underlined the need to enhance the collegiums transparency. And yet, great opacity still persists in appointments, as also in case listing. Constitutional matters like challenges to the nullification of Article 370 sit delayed before multi judge benches, with poor explanation. These are challenges that are very much within the judiciarys domain to address. It can do a far better job of keeping faith with the Constitution, plus the citizens and their civil liberties. Last weeks Bricks summit was bookended by some excitement over the possibility of the group expanding by accepting new members and reports that Argentina and Iran had applied for membership. What this obscures, however, is the fact that amid the evolving geopolitical situation, the Bricks mechanism appears to be undergoing an identity crisis. There is a deepening contradiction at the heart of the grouping, which is likely to result in extremely difficult choices for Indian foreign policy. Historically, economic cooperation and somewhat shared perspectives among emerging markets on matters related to global governance reform provided the raison d enter for Bricks cooperation. In this sense, the groups agenda was not just economic but also political. The addition of South Africa, the only African economy in the G20, to the Bricks in 2010 further underscored this. To be a mother you must first be a wife, every uterus knows that. Only after families say yeh shade naming ho skate and wives tell husbands main apace batches Ki ma bane wale hood do kids get to say main first class main first aye hood, ma! That the correct order. We ask strangers how many kids they have only after they nod to are you married? Reproductive systems are activated at the end of wedding receptions. Pregnancy tests that show two pink lines are strictly for a Mrs. A Miss, when caught with such a kit is.

Delhi Police Typing-Dated-2023-08-02-Test NO.-10141

Buying it for a cousin or neighbour. When a hetero couple is having fun, only one of them can miss a period. The other just has to say, Dent be hyper. Women who stare anxiously at calendars with fingers crossed could be wishing for or against. Some women want kids, have them. Some women have kids, dont want them. Some women dont want kids, dont have them. New moms and babies face each other warily. Some moms baby talk to the baby even when the baby is a badly in his 50s. Some moms hand baby to nanny and are pleasantly surprised when baby grins one day and there are 32 teeth in its mouth. Babies themselves roll their eyes when you bring in a second bundle of joy, your back up baby in case first is misplaced. Firstborn wants it returned pronto and loses all composure when told but you wanted a sibling. Brought up on films where babies are born after two flowers shake a lot, Indian kids routinely suffer heart attacks in biology class. They go back home, look at their parents and shake their heads, Nah, not them! Pills, pull out, prayers no method is foolproof, so, oops, here we are. Not all of us were planned; ova just cant be trusted around a sperm. As condom companies are routinely burnt to the ground or sued for school fees, celibacy cannot be recommended highly enough if populating the planet is not on your to do list. While we pester the newlywed for good news, a quick first pregnancy always sparks backward counting; the baby better look preemie. When married women ask about birth control, they are told to wait, what if they want more kids, eh? When unmarried women do, they are asking for a friend. Life is a divine creative force. We are not dependent solely on instinctual drives but also possess virtues of awareness, reasoning, common sense, reflection, will, logic, morality and discerning real and unreal. These virtues bestow immense freedom of making choices. We are not separate from other creatures. We carry within the entire evolutionary memory beginning from marine life, amphibians, reptiles and mammals. However, beyond a certain threshold of upliftment, its entirely our choice how to steer our lives and what to become. Embracing these virtues helps in evolving and living life free from unconscious reactions. By exercising freedom of choice, we can make our lives worthier and meaningful. We can carve our own paths. Samsara are those pathways. Sam means total and Kara means action. We often misconstrue samsara as something positive and righteous. Samsara are neutral. They literally mean impression or groove. These impressions are created both consciously and unconsciously and stored as memory in Chita the huge storage and powerhouse of impressions. These impressions mound our inner potential to create us as us. Once stored in chitter, these impressions drive our responses and actions. On facing familiar situations or events, samsara evoke familiar responses. They drive us on.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-02-Test NO.-10144

Autopilot mode these internal reflexes have the power to recreate the same reflexive outcomes and repetitive behaviors. Thus, what we are today is because what we were in the past and what we will be in the future depends on what we are today. Samsara constitutes our deep rooted tendencies, habits, consistent patterns of reactions, behavior, outlook, feelings and way of perceiving. Findings suggest that the brain hardwires repetitive learning to conserve energy and resources so that the same can be redirected towards new learning and behaviors. For example, initially, learning to drive a car was cumbersome. We lacked coordination and while we paid attention to some functions, we missed others. However, over time, we developed skill and dexterity to coordinate all functions together and mastered driving. Today, we hardly pay attention to where the steering is, how to change the gear or accelerate. We drive effortlessly. Skill mastered is now part of our subconscious and in a split second we drive and navigate without any difficulty. The pattern we sow as samsara directs and influences our future actions and outcomes. My outcome how I drive today is entirely based on how I learnt driving in the past. That why, my style of driving is consistent and uniquely different from others. Generally, samsara are helpful and essential for navigating our lives. However, they become unhelpful when past samsara start coloring our present and restrict our vision of seeing things as they are. When internal, past conditioning unconsciously shapes our present perception, we get stuck in the karmic groove that restricts us from moving forward. Loosening the grip of such samsara is a challenge, but planting strong intentions and constant repetition helps in creating a corresponding groove or tendency. Scientific evidence suggests that nerves that fire together, wire together. Deeper the groove, more likely we tend to follow that track just like water flowing through channels. Thus, by moving from conscious towards unconscious and automatic, we can reprogrammed ourselves. Recently, I came across a puzzle floating in What Sapp groups. I reproduce it verbatim, not to bias the readers from any clue or hint. A lady buys grocery worth Rs.350 from a shop. Shopkeeper selling the goods with zero profit. The lady gives him 2000 Rest note. The shopkeeper gets the change from next shop, keeps 350 for himself and returns Rs.1650 to the lady. Later the shopkeeper of the next shop comes with the Rest. 2000 note saying duplicate and takes his money back. How much LOSS did the shopkeeper face? Select the correct option 350; B. 1650; C. 2350; D. 3650; E. 4000; F. Other Specify Amount. No need to scratch your head. The correct answer is supposed to be Rest 2000 because, the shop keeper ended up in a fake note Rest 2000/-. Well, this solution is mathematically correct. But let us look at this episode from ethical angle. The episode here involves three persons. On one hand, we have here, a lady who moves freely with a.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-02-Test NO.-10145

Fake note of Rest 2000 either innocently or ignorantly knowing fully well that carrying fake currency is illegal. She gets her stuff and walks away home coolly. The neighboring shop keeper exercises his right to get back his Rest 2000 claiming that the note is fake. The main shop keeper, who sells the goods on no profit incurs loss because of no fault on his part. However, why didnt he notice that the note was fake, in the first instance itself and lodge a police complaint? He might have thought that by doing so, he would lose a customer, and any way, the note will be safely passed on to the neighboring shop! While we are discussing the deal as a transaction among three people, we should not forget that the real culprit is the person who printed fake note, and the whole system which has not been able to catch the thief since its printing and circulation. A close introspection reveals that all of us, so called general public are a part of the corrupt system, and the existing rules will not help out in coming to an ethical solution. We wear different hats depending upon what suits us. Sometimes, we behave like the lady who walks freely with a corrupt note, showing innocence or ignorance of the procedure. At times, we behave like the neighboring shop keeper, who shows self interest, not even bothered to ask how did it happen, and what could have been done to improve the system. More often, we behave like the shop keeper, and take a chance till we are caught by someone. Unless we change our mindset and come together to address the issue from an ethical angle, the fake notes and corrupt practices are bound to remain forever. What are the take away messages from this episode? It is not fair to target someone as corrupt without addressing the whole system. The solution, which is not simple, perhaps, lies in good governance which rewards good practice and punishes the corrupt practice. For example, in this case, investigation should be conducted and severe punishment should be inflicted against all persons who are found guilty of printing fake currency. At the same time, a strong incentive should be given to those who can give information to nab the culprits. They should also be given personal security to prevent victimization. On the other hand, if an innocent person is tricked by someone, like the shopkeeper in this episode, he she should be duly compensated immediately by following a transparent procedure. The loss should be compensated by the public relief fund as it is a collective responsibility to see that such thing doesnt recur. Having known the delay and hassles involved in taking measures based on judiciary or legislation in the Indian context, the only hope is executive machinery which should become proactive and take up such issues, till we evolve long term solutions of adding layers of legislation or judiciary. We dont need too.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-02-Test NO.-10146

Many rules, but we need officers who are competent, assertive and ethical. Mathematics will offer solution which is correct. But ethics will offer solution which is right. Our education system should try to integrate Mathematics with ethics. It should happen at homes, schools and society. Lets wait for a day and date with MATHEMETHICS! The horrifying video of two radical Islamists beheading an innocent tailor in Udaipur shocked India. This is neither the first nor the last time it will happen but we need to take threats seriously, as, Kahayan All could have been saved. He reported the threats to the police but apparently it was ignored. The fact is that many people in India supported Nupur Sharma as she was made a scapegoat. No one spoke of what led her to quote a correct passage from the Hadith. Mullahs and Malians should realise that if they make fun of Hindu Gods, then others will question their belief systems. It pains me to see this terrible tragedy becoming a political slugfest. All parties must realise that Islamic radicalism hurts everyone and every community. There are millions of law abiding Muslims but there are also a few politicians and preachers who want to divide the country. They see India thriving and doing well and this upsets them. They would rather have riots and mayhem. The only way to stop them is to identify them and shame them on social media, print and TV. Such people want power at any cost even if it means sowing divisions and hate. There are tough solutions that our intelligence networks will have to follow. Warn hate preachers and jail them. Check regularly on what is being taught in Madrassas. If possible offer good schools instead of Madrassas. Members of the community should ensure that there is no violence after the Friday prayers. Teaching the good parts of any religion is fine but to incite people to riot and throw stones and burn vehicles and buildings cannot be condoned. Why should there be incidents of stone throwing by angry youngsters after the most Holy day of the week, where they ask Allah and Prophet Mohammed, to give them blessings and also most importantly to bring about peace in the world. If Prophet Mohammed was alive today he would not approve of what is being done in his name. He would be appalled by the incidents of violence and the fact that there are some dubious clerics and politicians who possibly incite youngsters. I have heard some of these visceral and hateful speeches, recently, saying that one community is under threat. The clerics and politicians who incite the youth would never ask their own children to riots. It is the poor and the vulnerable kids they target to fight their so called perceived battles something that the Prophet would have disapproved off. The rich clerics would never allow their own children to become cattle fodder. Their children get the best of education and are safe in secure.

Delhi Police Typing-Dated-2023-08-02-Test NO.-10147

Jobs living in expensive neighborhoods. I know this as a fact as I personally have had a debate at a Lit Fest with a high ranking IAS officer who went to the best school in India and was a Muslim from one of the best known families in India but thought that Madrassas were great education for Muslim children as they could get jobs as clerics. I was too polite to counter him with Why did you not go to a Madrassa then? Or to point out to him that had his parents not sent him to the best of schools, he would not have had the opportunities that made him what he is and why would he want millions of kids going in for an education that gave them only a few choices either to be a cleric or a teacher. But since I knew his family personally, I can say I was aghast at his attitude. This is what I think is a mindset problem with some people in high places who are such hypocrites that they actually think that their children deserve better than other peoples kids who they use at every opportunity as useful idiots. These people are very much a part of the Breaking India forces. They are cynical and rich and care little about uplifting the poor. They will hit out at the leader of their own country who has genuinely distributed welfare, medical, food, banking and housing to all those who need it be they of any religion or caste. They will try and vilify all Indians and India in any forum national or international. Such people will sell themselves to cynically denigrate the very country that has given them everything. Every nation has such people. Some call them traitors but I say they are pitiful, pathetic losers. I was appalled to see a recent huge gathering of a minority community in Rajasthan, where every speaker was openly telling the people gathered there to come out in huge numbers again on Friday, June 17, after their Holy prayers and bring women and children along to show displeasure against Nupur Sharma and the BJP government. This despite the fact that Nupur has an FIR against her and has been removed from the party. Some so called leaders even want her hanged in a public square! Should such hate protests be allowed? I have lived and travelled to many countries and though protests are allowed in democracies, hate speech to incite thousands are definitely not allowed. The organisers and speakers would get into trouble and never be able to preach again. It is this mindset that led to the horrific beheading and it must not be tolerated. It has been found that the men who indulged in this ghastly crime were part of a group of radicals connected to Pakistan. There must be hundred such groups and we urgently need human intelligence at the local levels to find these cells that plan attacks and riots.

Delhi Police Typing-Dated-2023-08-02-Test NO.-10148

Of education in India. Waking up can be a truly blissful experience, like emerging from a cocoon of serenity into the world of possibilities. As the sun gently kisses the horizon, the first rays of dawn seep through the curtains, illuminating the room with a soft, golden glow. The transition from slumber to consciousness is a gradual one, allowing the mind to slowly shed its dreams and embrace the present moment. In these tranquil moments, the mind feels clear, unburdened by the worries of yesterday or the uncertainties of the day ahead. The feeling of waking up refreshed and revitalized is unparalleled. The body, having rested and rejuvenated during the night, feels light and ready to take on the day challenges. The mind, too, feels sharper and more receptive, as if it has been polished during the night slumber. It is a time of renewal and hope, a chance to start anew, leaving behind any regrets or mistakes of the past. As the senses gradually awaken, they take in the beauty of the morning the soft chirping of birds, the rustling of leaves, the subtle aroma of brewing coffee or fresh flowers. The world seems to come alive with every passing moment, and there is a sense of connectedness to nature and all living things. Perhaps what makes waking up truly blissful is the opportunity it brings. It marks the beginning of a new day, a new chapter in one life, filled with endless possibilities and opportunities for growth. It is a chance to pursue dreams, connect with loved ones, and make a positive impact on the world. With each sunrise, life is granted another chance to savor the sweetness of existence and embrace all that it has to offer. In conclusion, waking up is a gift of renewal, a moment of peace and serenity that allows us to embrace the world with a refreshed perspective. It is a time when we can savor the simple joys of existence and find gratitude in the beauty that surrounds us. Every morning, we are presented with the opportunity to make the most of the day, to create new memories, and to savor the bliss that comes with being alive. It a pleasant evening in Bengaluru. Nikita, a high school teacher, has just finished an engaging lecture on photosynthesis, delivered seamlessly through the DIKSHA platform. Having finished her final class before the summer break, she hops on to the auto that she booked a couple of minutes ago via the Namma Yatri app to reach home in time. Together with her family, Nikita then departs for the airport. Upon reaching the airport, the cab driver Bharadwaja, points to the QR code which she scans to make her payment through the UPI enabled app BHIM. At the security checkpoint, she uses the DigiYatra app which facilitates a paperless and seamless travel experience leveraging credentials such as e-Aadhar through Digilocker. This is just an instance of how India Stack and other open-source platforms are unlocking the economic primitives of identity, data, payments, education and mobility, amongst others at population scale. At a 99% adult enrollment rate, India Aadhaar allows for paperless identity verification and faster direct benefit transfers, saving over $\hat{a},^1$ 2 lakh crore for the government. With an 87% FinTech adoption rate, the highest globally, India stands at a total monthly real-time mobile payments value of around $\hat{a},^1$ 5.5 lakh crores. When the world reeled under the impact of the COVID-19, India CoWIN platform emerged as a beacon of hope. The CoWIN platform is Digital Infrastructure for Vaccination Op

Delhi Police Typing-Dated-2023-08-02-Test NO.-10151

Appointment scheduling, and issuance of digital certificates. As a result, more than 140 countries have shown interest in adopting it. In line with the philosophy, Vasudhaiva Kutumbhakam (the entire world as one family), India has developed these technologies as free and open source software for all countries to leverage to accelerate digitization and promote collective growth. The development of these open-source software, data, AI models, standards and content for social good, also referred to as digital public goods) are a result of synergies arising from the combined efforts of (government), (community) and (Bazaar market). The government (Sarkaar) hosts and maintains the products such as the India Stack, DIKSHA and CoWIN with an aim to leverage the power of technology and digital infrastructure, to create an inclusive, empowered, and digitally-enabled society. The India Stack consists of multiple products of which the Aadhaar, e-auth and e-KYC is run by the Unique ID Authority of India. Similarly, eSign is run by the Ministry of Communications and Information Technology, Digilocker by the Ministry of Electronics and Information Technology and UPI by the National Payments Corporation of India. The community (Samaaj) has also contributed solutions, such as the platform by eGov Foundation, which facilitates easy access to government services for citizens, and the e- developed by inspirit, an open-source software development kit that enables Aadhaar authentication and key processes for businesses. These initiatives are supplemented by engagements such as hackathons and conferences, like those organized by FOSS United which provide a platform for collaboration towards the shared goal of developing technology for social good. Lastly, the market (Bazaar) has also contributed to the ecosystem by innovating and developing. For instance, the Namma Yatri app by JusPay enables open mobility and affordable auto rides by connecting drivers directly with the customers. Similarly, the Pincode app by PhonePe offers hyper local shopping offerings to bring small merchants into the digital shopping fold through the Open Network for Digital Commerce platform. Population scale platforms like Aadhaar, CoWIN, and have revolutionized the way governments and citizens interact, but building and maintaining these platforms requires a community of talented open-source contributors. However, despite a yearly pool of more than 95 lakh graduates from institutes of higher education in India, many are unaware of how to contribute to the tech industry, especially when it comes to complex population scale projects like. The lack of structure and constant evolution of tech may hinder their contributions. As developing countries increasingly rely on for growth, it becomes critical to attract top engineering talent to contribute to the DPG revolution. This is where Code for Rotech (C4GT) comes in, bridging the gap by providing a platform for individuals to actively contribute and make a meaningful impact in the open-source community. In its second edition, C4GT is shooting for a larger goal to create a bigger and stronger open-source community, leading to increased innovation and long-term sustainability for. The program has three major enhancements including a larger pool of contributors catering to both students and professionals, an extension to global contributors, and the opportunity for mentoring organizations to receive incubation funding from C4GT partners f

Delhi Police Typing-Dated-2023-08-02-Test NO.-10152

Networking opportunities, DPG boot camps, stipends, and potential job opportunities, while working on challenging projects be it adding core product functionality, or creating prototypes to push the limits of technology. DPG builders can showcase their projects, hone mentoring skills, and connect with an active C4GT community. DPG adopters can get prototypes or products built that leverage open-source technology and open standards for their own applications and access the mentor network to help them ramp up on using these. Mentors can nurture talent for their organizations, access potential adopters, and scale their products. Participants can also join the Discord community, access curated content, and explore potential job opportunities and commercial projects for deploying and scaling. Through C4GT, new market opportunities will be unlocked with a number of startups participating, students and professionals being educated about the Rotech ecosystem, and open-source advocacy being championed. These efforts will invigorate the active community of contributors, and create a robust foundation for future innovation with open source and Digital Public Goods in India. By unleashing the power of community, C4GT aims to serve as a catalyst for the open-source movement and provides a platform for individuals to build for Bharat and from Bharat, for the world!

says the jawing had mental health issues. Question: Why was a mentally troubled jawing on duty with an assault rifle? Concerns have been rightly expressed that the jawing seems to have also targeted passengers from the Muslim community. But the point is that had he not been armed and on duty his state of mind would have claimed lives. Such incidents are not isolated. In January, Nab Das, Odessa health minister, was shot dead by a policeman using his service revolver. The assassin has mental health issues. When it comes to incidents of fratricide in the Central Armed Police Forces, GOI informed Parliament that the underlying causes are usually traced to personal issues. The job undoubtedly stressful. The question is whether the leadership has a system in place to deal with the fallout. RFP has now constituted a committee that due to report in three weeks. The recommendations should include putting in place a system that ensures those with mental health problems are not on duty. RPF is a body that functions under the umbrella of a central legislation. It does lack power or attention it can arrest without a magistrate order and some of its personnel receive commando training. Yet, it has failed to inspire confidence. In 2015, a railway reform committee chaired by Babe Derby recommended that senior railway staffers should have the freedom to choose between private security and RPF for safeguarding passengers. India internal security apparatus has grown in size and become more militarized. The concern here is whether there equal attention paid to the people who make up the forces. Eventually, it a human being who decides when to fire. Is there an adequate system to identify troubled personnel in all forces? First things first. Is freedom of choice in marriage a constitutional right? Yes, this is well-established as an intrinsic part of the right to life and personal liberty under Article 21. So, Gujarat CM Bhupendra Patel saying he shall look into making parental consent mandatory for marriages if the Constitution supports it, is a strange statement from a constitutional post-holder whose job i

In our cities If India is to become a 10 trillion dollars economy, security is of the greatest importance and for that we will have to work on a war footing against the Breaking India Forces. With climate change being recognised as a more immediate threat, energy efficiency has taken center stage in the priority list of nations, economies and companies that aim to be sustainable, going forward. India has set a target of achieving Net Zero by 2070 and to meet half of its energy needs from renewable sources by 2030. Currently, the country ranks fourth in the world in terms of carbon dioxide emissions, after China, the United States and the European Union. Upgrading to higher efficiency technology is the need of the hour while there is a lot of interest in sustainability, many companies may not know that the technology needed to help them to meet their energy efficiency goals and reduce their energy costs is already available. Upgrading to high efficiency motors and drives is one of the simplest and most cost effective ways to reduce industrial energy consumption and related greenhouse gas emissions. The overall impact of upgrading from outdated systems to the latest energy efficient technology can be staggeringly high for the planet. For instance, switching the world 300 million odd industrial motor driven systems to better optimised and high efficiency options could potentially cut down global electricity demand by up to 10. If manufacturers across sectors are willing to commit to these changes and shift to a more sustainable business growth model, it will be a huge boost for India climate action plan. Investing in energy efficiency can guarantee long term benefits while some businesses still feel that the initial investment and upfront costs acts as a hurdle, many have realized that the quantum of return on investments on the cost of adoption of energy saving measures shows rapid payback. And this is across industries be it a production led industry like cement, or a service led industry like hospitality. These sentiments are reflected in a recent energy efficiency investment survey conducted across 13 countries, with decision makers in companies that operate in the manufacturing, transportation, heavy industry, light industry, and energy generation industries. Nine out of ten organisations in India have indicated that rising energy costs are at least a minor threat to their business profitability. They also said that an average of a quarter of their annual operating costs is attributable to energy usage. With energy prices on the rise, there is an even greater need for businesses to control and reduce their energy consumption and costs. In view of this, 98 of the Indian industry says they are either already investing in or planning to invest in making their energy usage more efficient. Among these, under a third plan to make energy efficient improvements this year, while the rest plan to make them within the next two to three years. Compared to other countries, most Indian manufacturers are already upgrading.

Their equipment to the best in class energy efficient rated ones, while more than half are carrying out audits for building energy efficient management systems. Digitalisation enables sustainability Digital solutions and the Iota can play a big role in enabling companies to improve the sustainability of their operations. Bringing connected equipment, continuous remote monitoring, real time data, and analytics together can give companies the insights they need to make the right decisions at the right time. They can perform self assessments and energy audits to calculate how much energy and money they could save by modernising their drives and motors. These audits will be helpful for developing the long term strategy for modernization, energy savings and reduction in carbon emissions. As the adoption of digital technology accelerates, new types of services will proliferate to enable companies to make better use of data, which will further enable them to improve the energy efficiency of their operations. Indian industry is taking a gradual stride towards implementing energy saving measures as sustainability is growing to become a necessity rather than a nice to have value in business models. The transition to a carbon neutral future is possible only if organisations are ready to become true change makers and scale up their investments in energy efficiency. Money management is a skill that should be taught to children from a young age. The values imparted to us by our parents tend to stick on in our minds well into adulthood. Even now, whenever I meet an elder from my family or someone else family, my immediate reaction is to touch their feet as a mark of respect, a habit no doubt honed by years of my mother whispering such diktats of politeness in my ear! Assuming that the lessons learned in childhood stay with you lifelong, I would argue that as a father or mother for that matter, you owe it to your kids to teach them the importance of managing money from a young age. This will hold them in good stead as they go through the various stages of their lives, from their first stint of independence post school at college, to their first job and even to their lives post marriage. Talking about marriage, how many marriages have broken up due to money issues Marriage counselors have routinely cited monetary issues as being the second largest reason for marriages breaking up after infidelity and the reasons for this are clear. The way you manage money feeds into other aspects of your life. As a father of a teenage girl and two boys under ten, I have been trying to impart some lessons about understanding money and how to manage it effectively. My top five tips are below: 1. Money does buy happiness but it can definitely make you a little happier I have often told my kids that money does make you happy as the world is replete with examples of very rich people who are obscenely wealthy but still absolutely miserable.

Delhi Police Typing-Dated-2023-08-03-Test NO.-10156

There is no correlation between the amount of money you have and your happiness quotient. However, as long as you have enough money to be comfortable, the stress alleviated by not having to worry about your next month rental payment or other bills can and will make you feel lighter. In a similar vein, people who choose careers purely based on the remuneration they receive will inevitably reach a point where a certain emptiness will take hold which no amount of money can fill. One of the world greatest athletes, Rafael Nadal, has stated on more than one occasion that there will always be someone with a bigger house than you, a bigger TV than you, a better garden than you. You have to be satisfied with what you have achieved rather than viewing it through someone else lens.. This is a very valuable life lesson as it relates to how transient the joy provided by material possessions really is.

2. The old fashioned piggy bank as a primer for real world banking
The old adage of saving money for a rainy day is one which I think is supremely important and is something kids should learn from a young age. In fact, all 3 of my kids had piggy banks from the age of 3 onwards in which money given them to my relatives or as gifts were deposited. More importantly, I did not allow them to break their piggy banks but would instead offer them an incentive in terms of a top up aka interest should they continue keeping their savings in the bank. This is a very simple way of teaching kids how banks work and prepares them for when an account is eventually opened for them at a bank. In a similar vein, when they insisted on breaking their deposit in order to buy a long desired gift I am not completely heartless!, I would make a small deduction, aka an exit fee which is what is usually charged by several banks or funds when you break an investment prior to its full term.

3. The concept of Hell Money
This is a concept which is more appropriate for older teenagers and was first taught to me by one of my professors at Harvard. The idea is that as soon as you start working you should start saving so that you have enough money to survive on for at least 6 months. This is what is called Hell Money, the basic idea being that if you find yourself in a deeply unsatisfying job, and even getting out of bed to go to work is a struggle, you have an option of telling your boss and job to go to hell. The six months cushion provided by the hell money should be more than adequate to find another job, one which is more closely aligned to your interests and personality.

4. Earlier introduction to stock investing and crypto investing
There are several great courses out there which.

Delhi Police Typing-Dated-2023-08-03-Test NO.-10157

Teach kids the fundamentals of investing in the stock market and more recently, crypto. If, like me, you believe that everyone should learn to invest money responsibly, this truly can be done without learning how to invest in stocks. My 8 year old had his first exposure to stocks when he had peer over my shoulder when I had be reviewing my stock portfolio while putting him to bed, which always coincided with the opening of the US stock market. I still remember him telling me Dad, why have you invested in Their products are cheap knock offs and the quality is terrible!. With WISH down almost 90 since its listing price, I should have listened to my son rather than Nobel prize winning analysts! I have since given him a virtual portfolio to play around with and more than anything, it loads of fun and teaches him investment management at a young age. I am also incredibly bullish on crypto despite the market downturn at present and even enrolled my older two kids in a crypto beginners course so that they understand the fundamentals of crypto as an asset class.

5. Help Kids Make Eye Opening Calculations Teaching teenagers in particular the value of money is very important, especially if they are raised in an environment in which money is an issue. A concept which I particularly love is to calculate the cost per use. For e.g., suppose your teenage daughter wants to buy a pair of 100 jeans and she plans to wear them twice a week for 2 years. You divide 100 by 208 and the cost per use is 0.48. Alternatively, suppose she wants to buy a one off 200 dress for a costume party which she can wear on any other occasion. The cost per use is 200. Then leave it up to your child as to whether she really thinks the dress is worth it or not.

The covid pandemic has been a nightmare for academics. Online classes and laboratories were a poor substitute for on campus learning. Undaunted by covid, campus placements in the current academic year broke all records at IIT ISM Khanabad. For most students, core sector jobs were not the first choice. Software, IT, consulting, and banking still rule the roost. Many students who join core sectors leave after two to four years to pursue an MBA or noncore opportunities. Given that technology prowess is an essential pre requisite for India superpower aspirations, how do we persuade undergraduate UG students to refocus on core engineering subjects Some elements of UG learning have withstood the test of time. A yearning for computer science and engineering, lectures deemed to be theoretical, a disdain for laboratories, and cramming a week before the exams for good grades. However, there is one noticeable change that provides a window of opportunity. Right from the first year, students plan their courses and free time to hone their job seeking skills, mostly on the advice of their seniors.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-03-Test NO.-10158

Today students are transactional and rightfully expect a good return on their investment in money and time. The Institute can step in by leveraging lectures, laboratories, exams, and internships to influence the students mindset. But first, the fundamental issues of mathematics and grades will be addressed. Mathematics has been the key to engineering education as it gravitated from empiricism to science. The central issue here is the flexibility in dealing with mathematics. With the advent of software such as MATLAB, should core mathematics courses be taught as rigorously, with detailed proofs, as in earlier times Given that the type of mathematics required in different departments vary, should students from all departments be required to go through two to three common mathematics courses For example, electrical engineers need intimate knowledge of linear algebra and complex numbers, and metallurgical engineers don ! Many students fear mathematical proofs. They simply memorize them without appreciating their elegance. Consequently, compulsory mathematics courses should cater to the needs of most departments. Moreover, it should be utilitarian, liberally sprinkled with engineering examples. Electives can be designed to serve the specific needs of different departments and the mathematically gifted students. For mathematics in engineering courses, my take is simple. Equations tell a story, dying to be told! Students need to understand the physical meaning of each term in an equation, understand their applicability, and solve them with software such as MATLAB and ANSYS. This also helps engineers make quick ballpark solutions to complex problems, for example the extra force experienced by a ship from sudden gusts. Grades may not be synonymous with learning. Good grades often require strategies to ace exams. Barring a few exceptions, it also has to do with memorizing, mechanically solving problems, looking up previous years questions, and advice from seniors. A student can solve a difficult problem on Newton first law but still struggle to correlate it with her real life experiences. Grades are important because they not only enhance a student standing among her peers but also has an impact on placement. Consistently good grades are also a reflection of a student diligence. In contrast, fundamental understanding of a subject is critical for making disruptive innovations. A good grasp of quantum mechanics is a pre requisite for quantum computing and a fundamental understanding of materials science is essential for developing the next generation of solar cells. This duality of academics should be effectively communicated to the students. Grades are important, but so is learning! Lectures are significant influencers. In many courses, professors follow the prescribed text religiously; there is nothing extra on offer. Courses are mathematically rigorous, and rightly so, but connection with real life applications is often missing. If the exam questions are based on lectures and texts, students either bunk lectures or simply switch off. The net result is a sense of disconnect with the department, especially the lower ranked departments. Ironically, the corona pandemic and OTT have shown the way. Professors can invite lectures from industry stalwarts through the web.

There is provision for involving them in IITs as Adjunct Professors or Professors of Practice. Discovery has a beautiful video series Impossible Engineering. Here, students can get a firsthand understanding of the challenges and the consequent innovations in some of the trickiest engineering projects such as the floating bridge in Seattle or the high altitude Qinghai Tibet railway. Absolutely riveting engineering! Individual courses should also have a library of case studies, much like the management institutes. A case study of the design and manufacturing of different components of a Tesla and its integration would be extremely motivating. The use of software to make students aware of the design and dynamics of engineering systems can be truly insightful and inspiring. Cars have evolved from a boxy to more streamlined shapes to reduce air resistance drag for increased fuel efficiency and elegant looks. We may have mathematical equations for drag as a function of shape, but, as they say, seeing is believing. Using fluid dynamics software, a student can see how the pattern of air flow changes with body shape and results in changing drag. Moreover, software allows students to see through complex opaque reactors such as a 110 m high, 15 m diameter iron blast furnace which operates at a maximum temperature of around 1550 o C. The use of technical software, which requires core engineering knowledge, is prevalent in all spheres of engineering ranging from electronics to mining. Traditional IT Infosys and consulting Accenture companies have also started providing technical services in mining. Thus, a career in technical software could be equally rewarding as a career in a typical software firm. Designing and manufacturing requires that students have a practical feel of engineering systems. After all, compact, energy efficient motors for electric vehicles cannot be fully designed on computers. Experiments are needed to validate and test different motor designs. Unfortunately, laboratories are the neglected holy grail of Indian education. How do we make laboratories magnets of practical learning One was is through projects. At IIT Kanpur IITK, there is a course in manufacturing, where 40 of the laboratory sessions are used for fabricating a product. The laboratory component was popular among students as it involved operations they have never been exposed to and gives them an engineering feel: machining, casting, welding, forging, and 3 D printing. They used their imagination to make fascinating models. Over the years, however, the innovative idea component of projects gradually diminished. Many students started copying models displayed from previous batches. To revive the original objective of the project, a few components were added when I was the instructor: banned copying from Google or the older project models, a small business plan, financials including taxes for setting up a small manufacturing unit and designing an advertisement for selling the product. The result was superb! In all my years as a civil engineer and having worked for over 55 years with water resources, it has never failed to astonish me how states in India continue to bicker.

Delhi Police Typing-Dated-2023-08-03-Test NO.-10163

Over water, time and again. And despite numerous Water Dispute Tribunals being set up, resolutions are few and far between, resulting in immense loss of water resources. This despair at never ending disputes is even more pronounced when the monsoons arrive. I know that there is so much water which could be harnessed from rivers brimming with rain water, if only states would settle disputes quickly and amicably. First, a short history of water disputes and constitutional provisions. Water status in the Constitution Under the Constitution, entry 17 of the State List, deals with Water which includes Water supply, irrigation, canal, drainage, embankments, Water storage and Water power. Entry 56 of Union List empowers the Central Government to regulate and develop interstate rivers and river valleys to the extent declared by Parliament to be expedient in the public interest usually during a flood situation. Hence, for all practical purposes, unless there is an emergency situation, Water continues to be a state subject. And this is most unlike Power, which despite being a manmade resource has been kept under the Concurrent list. A short history of disputes Let take a quick look at how the fight for water has evolved over the years and what have been the key reasons for disputes. The British Raj: When India was governed by the Bruisers, there were too many Interstate water disputes even though Water was even then a State subject. The reasons could be several viz. strong Central government taking most of the decisions for states, large size of the states, less population and so less requirement of water for agriculture, pattern of irrigation being protective providing irrigation to only about 30 of the command area the area which was serviced by canal water compared to intensive irrigation now, which needs much more water. In the British era, the approach towards irrigation from canals was mostly to prevent famine, hence mostly protective in nature. The 1956 formation of states: The States Reorganization Act 1956 resulted in creation of several new states. The result was that more states started to stake a claim to the same water resources. Moreover, when states were created not much thought was given to the topography of the geographical region and the division was on a linguistic basis. And while state boundaries were created for administrative reasons, rivers continued to flow from one state to the other, unhindered by these boundaries. This led to the upstream riparian states which were home to the upstream part of the river commanding greater power over water, compared to those which hosted the downstream lower riparian. This became the key reason for disputes between states. The Inter State Water Dispute Act: Anticipating the possibility of interstate water disputes, the Inter State Water Dispute Act 1956 was enacted. This Act enabled setting up of specific tribunals for the resolution of specific disputes. Several tribunals have been set up to resolve disputes and these were mandated to declare the award within a specified time however.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-03-Test NO.-10164

The tribunals comprising professionals from various fields sought for extension of time which was liberally awarded. The tribunals usually took a long time in coming up with the award. The reasons for delays have been many fold. The quasi judicial nature of proceedings of the tribunals have been time consuming. Doubts on data pertaining to the availability of water and on the requirement of water and its usage are raised by different parties. The participating advocates, bureaucrats and technocrats try to get maximum for their respective states, to keep the political bosses on their right. Some long standing cases the long and arduous path which resolution of conflicts through tribunals, would take, was witnessed by the first tribunal itself. Krishna Water Disputes Tribunal, the first to be formed in 1969 Karnataka, Andhra Pradesh and Maharashtra were the states involved gave its verdict in 1973. But decades later, the concerned states wanted a review and the second Krishna Water Disputes Tribunal was formed in 2004. This tribunal gave its verdict, which was reexamined on Andhra Pradesh request. During this period, the new state of Telangana was formed and it became the fourth party to the dispute. This case is still pending in the Supreme Court. The Cauvery Water dispute is a living example of how long it could take to settle the battle over water. Sharing of waters of this river has been a source of serious conflict between Tamil Nadu and Karnataka since pre independence days. The genesis of the conflict rests in two agreements in 1892 and 1924 between the pre Independence Madras Presidency and Kingdom of Mysore. The Government of India constituted a tribunal in 1990 to look into the matter. But all the involved states continued to fight and finally in 2018, the Supreme Court pronounced its verdict by reducing water allocation to Tamil Nadu thereby satisfying some of Karnataka demands. The Power sector has not witnessed such long standing disputes and whenever disputes have arisen, they have been expeditiously resolved with the center playing a proactive role. Having witnessed many long standing disputes, I firmly believe that the best solution for the fight over water lies in taking Water out of the State list and placing it under the Concurrent list. And the reason for penning this request down now is because right now the political climate is suitable for this shift. Currently we have a strong Central government supported by several state governments 17 out of 28 states are with NDA, hence opposition to this move is less likely. Apart from that the current process of dispute resolution anyways involves the Central government as most of the Chairmen of Tribunals are Central government employees. Without their nod the Tribunal cannot declare the final verdict. So, if the center is anyways involved in resolving inter state disputes, why not give it constitutional sanction Water is a critical resource India has 18 of the world population but only 4 of its water resources. Moreover it is a.

Delhi Police Typing-Dated-2023-08-03-Test NO.-10165

Years ago, whenever I told anyone that I wanted to study sociology, the response was always the same: And what will you do with that degree? It is a question that has bugged every humanity and arts graduate at some point in time. However, with time, ideas have changed, preferences have evolved and the assumption, that a degree must springboard into a career is no longer the norm. This assumption for a very long time sustained the traditional STEM (Science, Technology, Engineering, and Mathematics) education, but what people do not tell you is that employers today are looking for skills that this basket of traditional education falls short of supplying with. In India too, the higher education is reflecting tumultuous shifts with area studies programs in particular gaining precedence among the youth. Area studies programs offer exciting avenues for students to explore new visions for the discipline one that advocates greater pluralism, diversity and critical reflections. Area studies, in general, embodies a tradition that is deeply rooted in the understanding of the complex patterns of political, economic, cultural and social changes that constitute and are constituted by the globe today. With a grounding in social sciences and humanities, these new-age programs provide the students with the opportunity to study a geographical region from a variety of perspectives and grant them the space to be theoretically and methodologically innovative. While appraising the area studies program, it is important that attention is paid to the area studied, where it is studied and more importantly how it is studied. Flipping through the websites and brochures of numerous area studies programs in Europe and in other parts of the world, one could discover that these programs are mainly cantered on the geopolitical aspects, issues of governance and policy and rarely discuss the cultural, literary, and educational contributions of the area studied. However, the courses should aim in providing a holistic learning experience rendering a unique opportunity to study. It should let students to explore newer ways of learning, gain wider perspectives towards people and learn to face the cosmopolitan crowd. Students should also be trained to tackle real-time issues, critically analyses problems, think creatively, and make sound decisions while considering multiple facets of the argument. Making programs student-centric where students actively take part in a learning process that is interactive, constructive, intellectually challenging, and collaborative is defining the academic space today. Universities have shifted in their approaches to teaching and learning as they embrace the philosophy of Outcome-Based Education (OBE). All these changes reflect the need for greater flexibility that students are looking for in a graduate program. Flexibility in the curriculum is crucial as it helps students find their own strengths and passions. Programs that offer limited choice to explore their academic interests could leave them with a feeling of being trapped. In addition to the academic rigor, universities need to emphasize on the 21st-century skills with a view to equip students with broad-based skills that will aid them in multicultural professional settings. Breaking the age-old traditional method of chalk and talk, there is a need to adopt a combination of assessment techniques with emphasis on writing research papers on topic of interest. European Studies in India has

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-03-Test NO.-10168

Disciplines to make long-term sustainable changes in the community. Owing to the multidisciplinary nature of the program, graduates in European studies are tasked with a diverse portfolio of prospective careers spanning from teaching and research, academia, legal institutions, NGOs, translation and interpretation, media, diplomacy, international institutions to working in supranational institutions of the EU. As qualified super-specialists, the graduates of European Studies who thrive off knowledge gained from interdisciplinary perspectives can go on to apply their talent in a vast range of roles, working across the border while contributing to the home, host and global economy. With the expanding competitive global employment market, it is not just the theoretical knowledge but also the value-added 21st-century skills displayed by the graduates that redefine the recruitment criteria today. Addressing the G20 Ministerial Conference on Women Empowerment in Gandhinagar, Gujarat on August 2, 2023, PM Narendra Modi underscored the critical role played by women in fostering inclusivity and driving positive change. Pointing out that when women prosper, the world prospers, the Prime Minister underlined that economic empowerment of women fuels growth, and their access to education drives global progress. Their leadership fosters inclusivity, and their voices inspire positive change, he added. He underlined that the most effective way to empower women is through a women-led development approach, pointing out that India was making huge strides in this direction. Situation in India as regards empowerment of women Applauding the remarkable contribution made by women in India across various domains, the Prime Minister pointed out that 46% of elected representatives in rural local bodies in India were women amounting to an impressive 1.4 million. He also pointed out that women had been instrumental in driving economic, environmental, and social change, especially during the pandemic, proudly acknowledging their pivotal role in manufacturing of masks, sanitizers, and in raising awareness about infection prevention. PM Modi underscored his government commitment to women empowerment, highlighting that 70% loans under the Pradhan Mantri Mudra Yojana aimed at supporting micro-level units, had been sanctioned to women, adding further, that 80% of beneficiaries under Stand-Up India, which facilitates bank loans for green field projects, were women. He also informed the delegates that under the Pradhan Mantri Ujjwala Yojana nearly 100 million cooking gas connections have been provided to Rural women improving their health and the environment. PM Modi stressed the increasing participation of women in technical education and STEM fields (an umbrella term used to group together the distinct but related technical disciplines of science, technology, engineering, and mathematics) and their invaluable contributions to space missions like Chandrayaan, Gaganyaan, and Mission Mars critical to India space achievements. He proudly noted that more women in India are now enrolling in higher education than men, and the country boasts of one of the highest percentages of female pilots in civil aviation, with women also flying fighter aircraft in the Indian Air Force. PM Modi acknowledged the crucial role of women as the backbone of rural agricultural families, small traders, and shopkeepers. He highlighted their potential to offer innovative solutions to climate change and

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-03-Test NO.-10169

Focus on women entrepreneurship, leadership, and education, expressing confidence that the resolute efforts in the conference would instill hope and confidence in women worldwide. He commended the launch of the Tech-Equity Platform aimed at enhancing digital and financial literacy for women, and announced the establishment of a new Working Group on Women Empowerment under India G20 presidency. PM Modi on the role of women underscored in the Vedas It will be interesting to look at PM Modi thoughts about the role of women in Indian society since ancient times which he expressed while addressing delegates in a seminar on International Women Day in Kutch, Gujarat on March 08, 2022. PM Modi had cited in the Seminar what way ancient Vedas had described women with mantras, Purandhi & Yosha, Purandhi meaning, one with very sharp and multidimensional intellect & Yosha, one constantly engaged in Yajna or noble acts, underlining that women should be able to handle the responsibility of their cities and society, and should lead the country. PM Modi said, Women are a reflection of ethics, loyalty, decisiveness and leadership and represent that. That is why our Vedas and tradition have given a call that women should be able and capable of giving direction to the nation & hence We often say, a woman is a manifestation of the divine, he said. PM Modi in his address to the Joint Sitting of the US Congress in June, 2023 also had spoken about women empowerment in India, underscoring that India vision is not just of development which benefits women but of women-led development, where women lead the journey of progress. Epilogue PM Modi address in various forums, particularly in the G20 Ministerial Conference on Women Empowerment throws ample light on the underlying philosophy on which his government has been working for Empowerment of Women since 2014. The results achieved are encouraging & pave the way for further progress. PM Modi has rightly stated in the G20 conference that when women prosper, the world prospers, that economic empowerment of women fuels growth and their access to education drives global progress & that the most effective way to empower women is through a women-led development approach. The current manufacturing system is exhausting fresh resources and generating insurmountable amounts of waste on a resource-constrained planet. Hence, climate engineers have a pivotal role, acting as catalysts to craft a sustainable shift including regenerative materials systems. Their education needs to address these new priorities. Our current ace, make, dump approach is unsustainable. The paradigm must shift towards circular production systems that balance environmental preservation, economic growth and societal impact. Key to this will be engineers understanding of concepts such as ecological modernisation, green growth, industrial symbiosis spearheading efforts to ensure sustainable growth. Despite the existence of corporate initiatives that balance profit generation while addressing societal and ecological needs, resource deficits persist, underlining the finite nature of our planet resources. A part of the solution could lie in regenerative systems. In these systems, underutilised materials and energy are recovered and reused from input, waste and output streams, reducing environmental impact from waste disposal practices while enhancing its economic value. Thanks to this approach, engineered products can be reintegrated into technical processes r

Delhi Police Typing-Dated-2023-08-04-Test NO.-10170

Fast depleting natural resource as with global warming, rivers are drying up and snow fed rivers are shrinking. This climate change makes it even more essential to harness river waters to the best extent possible, so that our country does not lose water to the oceans. Currently, while states continue to fight, precious water resources are lost as river water continues to flow into the ocean. And as tribunals have taken their own time to settle disputes, people of the concerned states continue to suffer. Public demonstrations are held which at times turn violent, causing loss of precious human lives and property. Interlinking of Rivers and disputes with neighbors Inter linking of rivers on an interstate basis can also only be successful if Water is moved to the concurrent list. It is time to realise that the mismanagement of Water, a natural resource, brings about adversities in the long term. Areas which have experienced poor management of Water resources, either due to excessive use of Water or shortage thereof, need a long time to get restored. The successful implementation of a central GST by the Government, is a case exemplifying what the government can do once it sets its heart to it. Even in the case of water disputes between India and its neighbors specifically Pakistan and Bangladesh, keeping Water in the Concurrent list will help. The Central governments of both countries can talk to each other to resolve disputes. Often State governments are at variance with the Central government as far as sharing of river Waters is concerned. This gives out a mixed and confused signal to the other nation and leaves us looking awkward. Time to move Water to Concurrent list As monsoons are now here, and they are one of the major sources of water for our rivers, it is time the Government consider this change. Happily, Ministry of Water Resources, Government of India has recently been acting quite proactively towards resolution of Interstate Water disputes be it the Cauvery dispute; talk of setting up of a single tribunal for all the disputes or the latest being the Ganga Management Board for resolution of the disputes between Uttarakhand and Uttar Pradesh. However, these remain only measures for resolution of disputes with intentions to settle them expeditiously. They are far from measures for not letting the disputes arise at all. Disputes are on the actual availability of water, the requirement of water for different purposes along with their prioritisation and the quantum of water released etc. There are different ways to measure availability, requirement and consumption of Water. A dependable data bank acceptable to all concerned is generally wanting. Central Water Commission CWC, the apex Civil Engineering Organisation is well equipped to standardise various issues. However, Water being a state subject, the Ministry of Water Resources, Government of India through CWC can at best play an advisory role. Hence, it is time that Water is moved from the State list in the constitution to the Concurrent list for.

Delhi Police Typing-Dated-2023-08-04-Test NO.-10171

The effective resolution of disputes. As the healthcare and pharmaceutical industry emerges out of the pandemic, companies are strengthening their focus on patient centricity. Leaders across the spectrum are refocusing on both new and existing priorities ranging from human capital, research and innovation, and data and digital initiatives to develop a more robust healthcare framework. While we have spoken of patient centricity across all spectrums of healthcare clinical trials, drug development, and increasing access to quality medicine the need to maintain patient focus has never been more pertinent. Patients are looking for value. Healthcare is no longer about one size fits all, as it is now estimated that non communicable diseases like cancer, diabetes, heart illnesses, etc. may cost India 4.58 trillion by 2030. To address this critical situation, digital health initiatives play a crucial role. Digital health connects and empowers people and populations to manage health and wellness, augmented by integrated, interoperable digital tools, technologies and services to transform healthcare delivery. Interestingly, the journey to digital health is not new. It was initiated at the 2005 World Health Assembly through resolution WHA58.28 urging member states to consider drawing up a long term strategic plan for developing and implementing health services to develop the infrastructure for information and communication technologies for health to promote equitable, affordable and universal access to their benefits. This universal access to health in India can be seen as our efforts under the Ashman Bharat Digital Mission, with. Initiatives in the digital health space including the issuance of more than 220 million Unique Health IDs along with health facilities and a provider registry and e Sanjeevani telemedicine app addressing 390 million beneficiaries among many others. Digital health can be used across organizations and operations, from early drug discovery to in market differentiation. Some of its advantages in the overall care continuum have resulted in: Collaboration among All Stakeholders in Healthcare Government, Pharmaceuticals Firms and Clinical Research Organizations Potentially transformative changes can be seen through investments made in creating national registries, health records, the use of data analytics and AI. Digital health can help solve some of healthcare more challenging problems, ultimately enabling us to move closer to our true goal improving the lives of patients. Transfer of Knowledge by Leveraging the Latest Data and Research: Using patient registries and electronic medical records helps us collect information on individuals and their health conditions, follow their disease progression and document their patient experiences. This knowledge, when transferred and shared among stakeholders, allows for robust research and innovation in the drug delivery process. Insight Driven Innovation: Consumerism in healthcare is complicated, given the emotional charge of illnesses and the complexity of delivery systems. A consumer focused healthcare industry is inevitable. Digital health integration across the value chain among AI ML, data analytics, compliance, research and clinical trials is necessary to keep pace with patient consumer needs. Patients should be thought of as consumers and drug development and innovation therefore needs to incorporate a proactive, systematic approach based on consumer.

Delhi Police Typing-Dated-2023-08-04-Test NO.-10172

Patients needs. People Centered Health Systems The focus is not only on patients and caregivers but also on healthcare providers. Digital health tools provide a holistic view, giving providers access to data and patients more control over their health. These technologies facilitate the convergence of people, information and connectivity to improve and personalize healthcare and health outcomes. COVID 19 has been a propellant in increasing the engagement of patient consumers in digital health. Firms are eyeing apps, virtual trials, data management and several other solutions that can improve the treatment experience. Additionally, digital health and technologies allow us to replace assumptions with real insights, ensuring that clinical trials are designed and conducted with patient needs at the heart. Moreover, providers can focus on preventive care as opposed to reactive treatments. In summary, digital health and technologies allow for practices that are beyond clinic visits, working toward a common goal with patients. There is no doubt that continuing with digital transformation to improve interoperability and fully unlock the potential of healthcare data will take time. However, considering the acceleration of change in the healthcare industry, closing the healthcare equality gap and prioritizing sustainability is an unavoidable task. Massive protests by angry youth have disrupted rail and road traffic in several places in Bihar who have demanded scrapping of Agni path scheme under which recruitment to the Armed Forces will be contractual for four years at the age of seventeen. Thousands of students have taken physical tests and have waited for two years for the written examinations against regular vacancies. Protests were witnessed in Bihar and Uttar Pradesh some months back over alleged irregularities in recruitment examinations for 35000 jobs in the Indian Railways for which 1.25 core educated job seekers had applied. Four years back, 2 lakh candidates including MBAs and engineering graduates applied for 738 low end jobs of sweepers, drivers, peons and security guards in Madhya Pradesh High Court and Zillah courts. Such instances which show the enormity of employment crisis are many. As per National Crime Records Bureau NCRB, 3548 people died by suicide due to unemployment in 2020, the highest number in the recent past. The scourge of unemployment is unnerving. Almost every family, particularly of the poor and the middle class, has youth looking for jobs. And jobs are in short supply compared to demand and need. Too many people are chasing too few jobs. Promise versus performance soon after NDA assumed office in 2014, a new Ministry of Skill Development and Entrepreneurship was created raising hopes of removing disconnect between demand and supply of skilled manpower and achieving the vision of a skilled India. A study quoted in the annual report for 2020 21 of this Ministry reports that across 24 sectors, human resource requirement estimates in 2017 and 2022 are 51.08 cores and 61.42 cores, the incremental requirement being 10.34 cores. The requirement thus is for about two cores new jobs every year. With appropriate skilling of the available manpower, their engagement along with.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-04-Test NO.-10173

Consequent linkages in the economy would spur GDP to double digit growth and would also constructively channelise the energy of the youth. In this context the NDA promise of 2 core jobs a year came with a bang but the performance over the years is no more than a whimper. The hope has turned into despair. India Labor Force Participation Rate LFPR the proportion of people working or seeking employment in working age group has been less than 40 in the last few years which is far below China 76 or Indonesia 69 or the global norm of around 60. Unemployment rate which is the proportion of people in the labor force who seek but do not get employment is currently at 7.6 as per Centre for Monitoring Indian Economy and is more among those with higher educational attainment, the women and the youth over 20. Government record in filling vacancies has been far from satisfactory. Against over 8 lakh vacancies in central government in 2021, less than a lakh has have been filled. That shows lack of seriousness about employment. The current year budget promises 60 lakh jobs in five years which means about 12 lakh per year. Now the Prime Minister has directed that ten lakh jobs be provided in next eighteen months. This if realised would cover only about one fourth of people who enter working age group every year. The growth strategy during the last few years has been to hand over public assets to private sector by way of disinvestment or monetisation. This year budget marks a shift towards enhancement in capital expenditure by the Government on infrastructure and construction with a hope to crowd in private investment to spur growth. This may remain wishful thinking however. Manpower requirement is spread over a wide spectrum of sectors and across all regions which the proposed capital outlay and the expected top up private investment would only partly cover. Infrastructure is necessary to facilitate private investment but not sufficient. India must have its own model India like many other countries has its own strength and weaknesses. It has much higher population density compared to other large economies. USA has three times India area and one fourth its population. China, with similar population as India, has three times its area. We have an abundance of population for the land or natural assets that we have. Our population thus is our asset or liability depending on its productive use. It is one of the youngest populations in the world capable of contributing to the economy through demographic dividend if meaningful employment is provided. In India the income and wealth distribution is highly skewed. The richest 1 own 53 of the country wealth and the poorer half a mere 4.1. And the inequality has been growing. The regional disparities too are stark. Bihar, the poorest state with one third of national per capita income has over 10 of India population and highest population density of over 1000 per sq km.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-04-Test NO.-10174

Which is two and half times India average and 50 times of Arunachal Pradesh. On Agriculture depends half of our population and 70 of farmers own less than one hectare of land. There are wide inter and intra state diversities in terms of educational and skill endowment of our people. These characteristics are important for planning for manpower and growth. Constitutional mandate Constitution of India has provided for work and employment under the directive principles of state policy. Article 39 A provides that the state shall in particular direct its policy towards securing that the citizens, men and women equally, have the right to an adequate means of livelihood. Article 41, another directive principle, provides inter alia that the state shall within the limits of its economic capacity and development make affective provision for securing the right to work, to education and to public assistance in cases of unemployment and undeserved want. The Supreme Court in its judgement in Alma Telis versus Bombay Municipal Corporation in 1985 stated that Article 37 provides that the directive principles are not enforceable by any court, are nevertheless fundamental in the governance of the country. In the recent Global Risks report 2022 by the World Economic Forum, widespread youth disillusionment has been identified as one of the main risks for India. Employment crisis is an important reason for youth disillusionment. Just as we were gearing up to welcome the bright prospects of a post pandemic world, a couple of pungent global cues disturbed the equation for the markets in a brutal fashion. One, in the wake of the Russia Ukraine war, supply chains were left badly bruised and battered across the globe and crude oil prices peaked to dizzying levels and two, Fed and RBI announced their tough stance on rate hikes, signaling the end of their prolonged accommodative stance. Inflationary times are here to stay for a while and the central banks are only showing prudence in trying to tame them towards more digestible levels. As they try and curb the excess liquidity, the markets will obviously correct to a certain level in sheer retaliation. The end of the Russia Ukraine war will be a strong signal for effecting a reversal of fortunes, albeit it is difficult to predict its end, given the backdrop of vested interests and the sting of the root cause, i.e. the omnipresent US Russia cold war. Before we try and make sense of the market and its movements, we need to put uncertainty in perspective. The pandemic has redefined uncertainty in the most uncertain manner; we now live in an era of perpetual change and a new normal of ever evolving paradigms. In today tech powered times, innovation is not considered an innovation unless it is disruptive in character. Against this fluid backdrop and in the wake of the global cues mentioned above, recent stock market volatility is but obvious. The past is replete with heartening patterns; phases of depression marked by global sell offs and reprising of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-04-Test NO.-10175

Stocks and bonds invariably pave the way for a resurgent future defying all doomsday predictions. The global meltdown of 2008 is a classic case in point when the markets fell by a whopping 60 percent but slowly and steadily recovered and eventually thrived. Don't read too much into range bound movements and corrections, which are the outcome of bearish pressures and FII selling sprees. There is nothing to panic in this reactionary pullback as the India story is intact. Our focal point in these uncertain times should be the domestic resilience of the Indian economy which is a unique case study in the world, a critical aspect that powers the voyage of fundamentally sound stocks rooted in prudent economic expectations. Record GST collections, a rejuvenated banking sector, and impressive corporate performance in the aftermath of the pandemic are all inspiring markers of the India story. Several companies across sectors have gained from a predominant shift towards an organized market. The pandemic has also taught corporates the art and science of prudent cost management and purposeful price hikes. The digital revolution has led to significant market gains and substantial cost savings. India Inc., notwithstanding the uncertainty pervading the globe, is on a solid footing. Going forward, both manufacturing and services will undergo sweeping changes led by technological innovation and increasing digital footprint, which will reflect in the corporate performance on the bourses as well. In a heartening development, the West is intent on nurturing a robust alternative to China. Given our large investible universe, our improving presence in the emerging markets, and our growing ESG consciousness across sectors, India is bound to be blessed with abundant liquidity in the time to come. Post Covid 19, growth and profitability are aligned with the broader ESG framework. How a company engages, motivates, rewards, and reprimands its employees, and how it treats its customers and investors can make or mar a firm reputation. The investing world is now moving towards consciously monitoring and measuring how corporates serve the larger cause of communities and environments. It is heartening to note that Indian companies are taking key steps to move up the value chain through measures like linking top management remuneration with ESG targets. The FIIs will return at some point given India value proposition high growth potential, cheaper labor force, and pro growth policies including tax exemptions. A growing trend of investing in green technologies will also bear fruit in due course. Economic progression will, at some point, soar high on the wings of capacity expansion and disruptive innovation across product development, market creation, and distribution. Yet, being wise and not unduly wary about one's investments is critical to long term sustainability of wealth creation. This calls for a stock specific approach to make smart asset allocations and proactive portfolio reshuffles to make the most of the opportunities lurking in the seemingly dismal environment. Committing funds to fundamentally sound picks in a falling market calls for a blend of prudence and patience, as also smart diversification.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-04-Test NO.-10178

Having witnessed good policies translating into rapid improvement in economic fortunes, the Indian electorate now returns to power leaders who deliver such change without getting mired in corruption scandals. Simultaneously, it does not hesitate to give a boot to leaders who fail to perform or perform but indulge in blatant corruption. Unsurprisingly, analysts who remain wedded to the old voting model which postulates that caste and community equations are the best guide to voter behavior repeatedly get their election forecasts wrong. The state that best illustrates the power of the outcome based model is Odessa. Its chief minister Naveen Patnaik founded Biju Janata Dal in 1997 and managed to win nine out of 21 seats in the 1998 Lok Sabha elections. He then led his party to victory in the 2000 Odessa assembly elections and was inaugurated as the 14th chief minister of the state on March 5, 2000. The frequency with which National Green Tribunal orders are being appealed in Supreme Court and high courts should prod Gol to a review. In a recent order, SC critiqued NGT for mechanical and pre drafted orders after a construction firm complained that it was heard before a hefty penalty of Rest 40 core was imposed on it. The tribunal with exclusive jurisdiction over environmental protection and pollution control matters has arguably not lived up to its billing. Some months ago, another SC bench had frowned upon NGT tendency to set up expert committees, noting that its adjudicatory functions cannot be delegated in this manner. After the first two decades of liberalisation, tribunals have lost favor. In NGT case it was expected to quickly settle a growing number of environment related matters pending at constitutional courts and tap into expertise on environmental law available in India. And given rampant ecological degradation and related localised grievances, such an adjudicatory body staffed with judicial and technical experts having significant powers came with a lot of promise. Though a number of NGT rulings have held the field, some of its big bang orders de registering 10 year old diesel vehicles, bans on firecrackers, RO water purifiers and sand mining have had minimal impact in the absence of political support. NGT has ended up as another casualty of the messy development vest environment debate, which has no easy answers. There are staffing issues. Against NGT Act mandate to have 10 20 judicial and expert members each, NGT presently has seven judicial and six expert members. In 2019, these numbers were down to four and two respectively. Fewer members make two extreme scenarios likely: backlogs and hasty disposals. Not surprisingly, stays against NGT orders clearing or blocking projects are routinely secured from SC and HCs, eroding NGT credibility. NGT boasted of a high disposal rate even during the 2021 pandemic year courtesy virtual hearings but critics say the data does speak for the quality of orders, an assessment that appears to have caught SC eye. NGT was one of the pioneers of virtual hearings, but lawyers say.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-04-Test NO.-10179

The lack of physical interface has affected their ability to make a more pressing case before the bench. NGT must get the support it needs from GoI but it must also do more to clean up its act. Last week unrest in Uzbekistan autonomous region of Karakalpakstan that left at least 18 people dead and wounded another 243 should concern India. Uzbekistan is a key Central Asian Republic that borders Afghanistan. Protests in Karakalpakstan broke out over plans to revise the Uzbek constitution that would change the autonomous region status and curtail its right to secede. Those plans have now been put on hold. Interestingly, there are parallels here with the situation in Ukraine and its separatist Donbas region. However, despite Karakalpakstan close ties with Russia, Moscow has backed Tashkent saying the unrest was Uzbekistan internal matter. That said, any unrest in the Central Asian Republics CARs is problematic for the whole region. Islamist extremism here received a second wind with the conflict in Syria. And though regional governments have been largely successful in containing extremist groups, the latter could still take advantage of any social, economic or political turmoil. That would be bad news given Taliban return in Afghanistan. Security implications stretch all the way to South Asia. This is precisely why in November last year New Delhi hosted the national security advisers of the five CARs for its regional security dialogue on Afghanistan, and PM Modi held a virtual summit with the leaders of these nations earlier this year. But for true synergy, India outreach to the CARs must have a strong economic component. With Uzbekistan, India in 2020 concluded agreements on 15 investment projects for \$3 billion and also extended a line of credit of \$448 million. Plus, both Amity and Sharda universities opened branches in Uzbekistan in 2018. Meanwhile, Kazakhstan is a uranium giant and Turkmenistan has the world fourth largest gas reserves. Together, they could fulfill India energy needs and provide vital connectivity as part of the International North South Transport Corridor. But there is also competition in the form of China growing influence in the region through its Belt and Road Initiative. India should, therefore, present itself as a long term trustworthy partner for the CARs by supporting regional stability, coordinating on security and actualising transparent, need based investment projects. We like to chase. These were the words from Ben Stokes when England won the toss and put India in on a good pitch at Edgbaston. This is a bit like a batsman saying I like to play 100kmh fast bowling directed at the throat. It something you want to do, a challenge you want to take on and overcome, but nobody actually likes doing that. There are few things more difficult than batting in the fourth innings of a Test match. And yet, this England team has now become the first in history to successfully chase 250 or more in four consecutive Tests. According to Maliki, the seventh avatar of Vishnu did not.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-04-Test NO.-10180

Know his divinity while in his mortal form. He says, I am only the son of King Dashrath. Yet there is an occasion when he forgets and behaves like the god he actually is. That is when he cremates Jetty in the jungle and declares, I am sending you straight to Heaven. It is a tantalizing slip that is immortalized by Maliki without calling attention to it. We are clearly supposed to grasp the significance of it ourselves. And what did Ram look like? We learn early on that Ram has dark curls on his forehead and a glossy dark brown complexion. Hanuman describes Ram to Site as having coppery eyes of a gleaming golden brown, broad shoulders and mighty arms. As for his character, the epic begins with a list of 16 good qualities that Sage Nerada seeks in an ideal man. Brahma tells him that Ram is that person. At that stage it is only hearsay and unreal to us. As the story proceeds, it is mainly by Ram reactions in deed and word that we obtain impressions of his Ramada or Ram ness. However, a glimpse of what Ram is like as a person at merely 17 comes from the citizens of Ajodhya. When Dashrath asks his subjects what they feel about Ram becoming the crown prince, there is a roar of approval. Citizens of Ajodhya are so happy at the prospect that Dashrath thinks, They love him more than they love me. lovingly to everyone and his words have never been false. He respects elders and wise people. He is genuinely interested in the welfare of others. When out riding, he stops and talks to the man on the street. He readily forgives and forgets a wrong but remembers even the smallest nice thing that anybody ever did for him. He is well read and well mannered. He is a drape, meaning he is angry only when rightfully required and in the right proportion. The likeable character of Ram begins to take shape for us from this vivid description. But it is only when the big tests come that we get to properly gauge Ram nature. For one, his lack of greed when he promptly and gracefully accepts being exiled. Secondly, his forgiving nature, when he meets Kikuyu in Chitrakoot. Despite the great wrong she has done to him, he behaves well with her and tells Site and Lakshmi to do the same. Thirdly, his democratic gift of making friends with people of all classes. He hugs Gotha the boatman and Hanuman. Be it his own people, great sages in the forest, humble folk like Gotha, a motley crew of Banaras given to drinking and carousing, a person of superior intellect like Hanuman or an aura prince like Vibhishan, Ram attracts affection and support just by being himself open and friendly. Fourthly, Ram loves deeply and does not deny his pain in a macho way. Moved by the beauty of Lake Pampa, he laments aloud for.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-04-Test NO.-10181

Lost Site During the long, weary wait through the monsoon before the search for Site can resume, he is thoroughly homesick for Ajodhya and does not hold back from saying so. From Ram, we learn that it is not at all unmanly to feel and express pain. In sum, a picture emerges of a person who feels things deeply but tries to do his best despite setback after setback while keeping his dignity and without losing consideration for others. That is his real Ram ness. The sudden closure of institutions and coaching institutes at the onset of the pandemic had a deleterious impact on children learning. The efforts to leverage technology to mitigate the impact did ensure continuity across much of the education system. But, it also given rise to a few challenges the impact of the Covid 19 pandemic on the education sector has been no less than colossal. UNESCO estimated that 87% of the world students over 1.57 billion learners were affected by school closures alone by March end 2021. Some 191 countries had shut their school doors. In India, according to the report, about 130 million students from 9 to 12 standards and its equivalent too saw a disruption in their academics. This group included those in the midst of the coaching for entry into institutions offering professional courses that have highly competitive exams. When the pandemic broke out, the focus was on implementing remote learning modalities as an emergency response. These aimed to reach all the students but often fell short. As the pandemic evolved, so too did the responses of the education sector. Most institutions were partially or fully open. The rapid closures and speedy shift to distance learning allowed little time to plan or mull the potential risks and the potential opportunities. Every crisis brings serious challenges and transformation opportunities. Past crises that hit the education sector showed we can build back better. This has brought to light the advantages of remote learning which is synonymous with e learning. E learning is cost effective as it offers opportunities for learning for the maximum number with no need for physical infrastructure. It always takes into account the differences between individual learners. Also, e learning compensates for the lack of academic staff, including instructors or teachers as well as facilitators, lab technicians etc. Meanwhile, the use of e Learning allows self pacing. For instance, the asynchronous way of learning permits every student to study at his or her own pace. It, therefore, increases satisfaction and decreases stress. Some of the advantages of this model include its flexibility in terms of time and place as every student has the luxury of choosing the place and time that suits him/her. E learning also ups the efficacy of knowledge and qualifications via easy access to a whale of information. It is also able to provide opportunities for relations between learners through the use of discussion forums. In practice, a few risks and challenges have emerged in distance learning.

Holistically and act responsibly. These professionals must be frugal in their thinking, utilising scalable, low-cost clean-energy technologies to 85855 maximise impact while bearing responsibility for societal outcomes. To facilitate this, our industrial systems need to emulate natural systems by maximising the economic use of waste materials and end-of-life products. 2646587 Engineers must be trained in strategies related to climate change, sustainable development, energy demand, and life cycle assessment. Their education needs to encompass more than traditional engineering topics. They require exposure to climate modeling, environmental strategies, climate economics, behavioral sciences, and an understanding of its societal implications. Only an interdisciplinary understanding can allow them to grasp the intricacies of Earth systems and guide 288855 initiatives for creating a positive impact. Let consider the example of the fashion industry, one of the most polluting sector in today world. Fashion industry follows a linear approach that leads to unsustainable practices, product quality compromises, and waste generation. Here, engineers can disrupt this cycle, promoting sustainability through circular models. But to do so, they need tools to foster innovative circularity and a strong 94315 sense of responsibility. Engineering education must focus on unlocking this potential and ensuring a thorough understanding of the environmental impacts and risks of their solutions. This highlights the role of climate engineers as catalysts for a sustainable future. Climate engineers have to assess the social, economic, and environmental implications of their work, not least because the unintended consequences could outweigh the benefits. This impact extends to politics and policies that shape future manufacturing and consumption strategies. We could also cite the cases of environmental contamination from forever chemicals or potentially harmful substances like aspartame in edibles as instances where engineered initiatives have far-reaching societal impacts. Further, the energy swift proliferation of solar panels at present may lead to future challenges concerning end-of-life recycling, resulting in substantial waste 25818 accumulation. Engineers evaluating potential implications during the initial implementation phase can aid in preparing strategies for mitigating negative societal impacts. The complexity, dynamism, and diversity of Earth climate far surpass that of the life forms and materials that inhabit its terrestrial and marine ecosystems. Human activities, with their diverse impacts, have significantly shaped these unique characteristics of our planet. As such, it becomes critical to reimagine and modify the technological systems we have developed to coexist harmoniously with the myriad of other species on Earth. Our human impact needs to evolve into sustainable and equitable practices, and climate engineers are instrumental in this shift. It is time we empower them to shape a more sustainable, equitable, and resilient future. Speaking at a post-budget webinar on economic empowerment of women on Friday, March 10, 2023, PM Modi had stated that the country had moved with a vision of women-led development in the past nine years & that Budget FY24 would give new momentum to the efforts of women-led development. Highlighting the efforts for women empowerment by his government, PM expressed that India can move forward only by respecting, empowerin

Delhi Police Typing-Dated-2023-08-04-Test NO.-10185

That both the persons getting married are adults, free to marry anyone they like, it is the objecting families that often find favor with the authorities. These parents, police and various busybodies join forces to persecute elopement, though the application of the word to consenting adults is nonsensical. Over in Tamil Nadu marriage registration was updated in 2017 to require more parental documentation. In Gujarat it is telling that some Congress MLAs share the BJP CM sentiment. One of them wants it to be compulsory to marry a girl in her village. Like elopement, the widespread use of girl and boy mulishly infantilizes young adults. Papa Knows Best is basically a fearful reaction to the deep social transformations that mean more and more people are finally claiming the freedoms that the Constitution gave us all 73 years ago. The lives and longings of young women in particular are undergoing a sea change. That is why, even though it takes two to tango, a disproportionate amount of elopement-phobia is centered on women actions. From police to kangaroo courts, stigmatisation to violence, the decks are stacked very unfairly. A should not worsen injustices. In the rapidly evolving and dynamic business realm, pursuing innovative solutions has become critical for companies striving to outpace their competition. Yet, the process of designing and testing business ideas is a formidable journey that demands a distinct skill set. While training programs undoubtedly contribute to skill development, another invaluable resource lies in the role of the innovation coach. These visionary coaches play a pivotal part in supporting teams and driving successful innovation initiatives. Igniting the flames of innovation coaches serve as indispensable catalysts, igniting creativity and problem-solving within organizations. They offer guidance, support, and practical tools that navigate the intricate path of designing and testing business ideas. With their wealth of experience and expertise, these coaches significantly enhance the success rate of innovation projects. Take, for instance, the transformative journey of Acme Enterprises, a global leader in technology solutions. Recognizing the need to foster innovation and propel their business to new heights, Acme implemented an innovation coaching program known as Innovate. Through this program, a team of skilled and visionary coaches, known as innovation enablers, was brought on board to supercharge the innovation initiatives within the organization. These innovation enablers proved to be instrumental in driving the success of Acme innovation projects. The Innovate program led to the development of groundbreaking products and services and fostered a culture of innovation within Acme. The coaching program served as a catalyst for driving continuous improvement, ensuring that innovation became an integral part of Acme DNA. Beyond ideation: A multifaceted role Innovation coaches mentor and inspire teams, foster a culture of unconventional thinking, and embrace diverse perspectives. Their guidance extends beyond the ideation and design phases, encompassing the critical testing phase of business ideas. This ensures that ideas undergo rigorous evaluation, refinement, and validation before implementation, minimizing the risk of failure. By leveraging the expertise of innovation coaches, companies can overcome common challenges encountered during the innovation process. These challenges may include resistance to change

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-04-Test NO.-10186

To manage innovation projects. Unleashing the power of collaboration Innovation coaches play a pivotal role in bridging the divide between different organizational departments and functions. They facilitate cross-functional collaboration, breaking down silos and unlocking the potential of diverse perspectives. This enables teams to harness the collective intelligence and expertise of individuals from various backgrounds, resulting in more innovative and comprehensive solutions. Cultivating a culture of innovation In addition to their impact on innovation teams, coaches contribute to building a vibrant culture of innovation within organizations. They help create an environment where risk-taking and experimentation are celebrated, and failure is viewed as an invaluable learning opportunity. Through their guidance and mentorship, coaches inspire individuals to embrace a growth mindset, continuously seeking improvement and innovation in their work. Qualities of an extraordinary innovation coach being an exceptional innovation coach goes beyond technical expertise. It requires a challenging mindset that encourages teams to question assumptions and explore uncharted territories. Coaches with strong facilitation skills foster collaboration, creating an environment where diverse perspectives thrive and open dialogue flourishes. Additionally, they provide practical guidance by equipping teams with the tools and methodologies to succeed in business model design and testing. Empowering organizations for unstoppable innovation to excel in innovation coaching, organizations can leverage internal programs or tap into the expertise of external professionals. These programs equip individuals or companies with the skills and knowledge essential for thriving in innovation coaching. Organizations create a talent pipeline armed with the innovation skills and mindset necessary for sustained success by empowering selected coaches with practical tools and frameworks. This empowers companies to maintain a competitive edge amidst rapid technological advancements and evolving customer demands. In conclusion, the role of the coach in designing and testing business ideas is transformative. Innovation coaches are the architects who propel creativity, drive collaboration, and shape a culture of innovation. Their ability to challenge conventions, provide practical guidance, and foster a dynamic environment fuels the success of designing and testing business ideas. By investing in the development of internal innovation coaches, organizations can unlock the full potential of their innovation capabilities, navigate disruptive changes with agility, and thrive in today ever-evolving business landscape. Ultimately, the true measure of an organization triumph lies in its relentless pursuit of innovation and unwavering commitment to adapt and excel. Land rights is a crucial human rights issue as it enables access to basic facilities such as food, shelter, and security, and is fundamental in achieving economic, social, and cultural rights. But the conversation around land rights is incomplete without giving due consideration to dignity, which is an inherent part of all human rights issues. In fact, the right to live with dignity is enshrined in the Constitution of India, and the inherent dignity of all humans is recognised in the Universal Declaration of Human Rights. Sherpa Doe from Landsat a nonprofit that aims to equip people experiencing poverty with equitable land rights

Delhi Police Typing-Dated-2023-08-05-Test NO.-10187

For instance, it reinforces unworkable methods. Many of the methods can be solitary and moralizing when the students are merely sitting and watching videos, reading online documents, or clicking through presentations. Sitting passively and listening is not a good way to learn. Teachers/tutors had no advance notice of institutions needing to shift to the online mode. Many teachers have said they feel overwhelmed with the study materials, and several have also been seeking help. Meanwhile, over the last decade or so, the number of students with access to devices and connectivity has ballooned, making online learning possible. But, not every student can access digital devices or have Internet connectivity. This means learning resources need to be on every device. But, it has led to several gains. New models like blended learning have taken root. More engaging learning styles, the more interactive ones, and face to face learning are better. Blended learning can have the best of both worlds. After being used to 100% online, it possible we can consider rebalancing the mix. Teachers would have started to innovate and experiment with these tools and may want to continue online pedagogies. Teachers/tutors and institutions play an important role as experienced during the current situation. Face to face connection with learners and being able to support them across their skills, is hard to replicate. Also, students access critical resources at school. Educators are looking to other educators and trusted sources to help curate high quality online learning tools. The teacher/tutor collaboration is set to grow and help improve learning. We may come out of this crisis stronger by collaborating. The heavily burdened teachers/tutors need not reinvent the wheel. There are platforms where teachers/tutors can see what others have done. One of the most important things the teachers can do now is draw on others experience, including forming community online, share the burden, and make things easier. The crisis has given rise to a greater sense of empathy for each other. It an opportunity for the education sector to unite, forge connections across countries and continents, and truly share what works in a global way. Prior to this, it had not been possible to do this. Some studies believe there is still a conundrum between face to face and e learning. As a solution, scholars believe blended learning is the way to go as the students can use many ways to access the relevant course content based on their needs strengths/limitations. Meanwhile, ministries of education need to work in close coordination with entities in education to effectively direct different players and secure the quality of the overall experience. In April this year, the government launched the Open Network for Digital Commerce ONDC, a Unified Payments Interface UPI type protocol, to help set up the digital infrastructure that is needed to expand India e commerce ecosystem, which, experts say, is expected to touch US\$200 billion by 2026. ONDC is an important initiative as it aims at providing equal opportunities to small retailers, like local.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10188

Kirana stores and mom and pop shops, to trade and enjoy the benefits of the digital world, and, at the same time, reduce the control of online retail giants. It is expected to enable a level playing field for all businesses to operate in an open, transparent and uniform environment. The integrated and open nature of ONDC will not only promote e commerce but also impact its allied sectors. It is expected to promote logistics business for collaborating with small retail sellers/merchants and delivering goods to customers in a seamless manner across the nation. With MSMEs and small retailers joining in and about 3 lakh Grameen stores getting included, companies will look forward to reaching out to rural markets through this network across India. Logistics firms can expect widespread business expansion across the country for delivering goods from one corner of the country to another while bolstering last mile connectivity. So, the question arises how will ONDC impact the logistics sector? Since ONDC will not be a platform centric model, it will certainly democratize the country online market for all buyers, sellers, and logistics service providers irrespective of their size so that each one of them gets equal opportunity. The expectation from this platform is Digitisation of the entire value chain, greater efficiency and standardization of operations, Verified Supplier inclusion and more importantly value creation consumers. Consumers will be able to find sellers and products by using ONDC compatible applications. Moreover, it will give consumers the freedom to choose their preferred local businesses and find goods from the nearest available supplier. This will enable and encourage more and more customers to order online, resulting in enhanced logistics needs coming into play for carrying goods from SMEs to customers. Increase in deliveries ONDC will increase deliveries due to such a densely populated open network for MSMEs and customers from across India. There will certainly be a huge spike in orders from across the country and this will lead to increase in deliveries also last mile hyper local deliveries from sellers, dark stores or 3PLhubs to end customers. Role of service providers Undoubtedly, logistics service providers will play a crucial role for ONDC sellers and consumers to get their shipments delivered on time. Fast, accurate and seamless deliveries by service providers will create a positive experience with end customers benefiting the suppliers greatly. Some of the challenges are 1. Timely dispatch/cut off/pickups from the warehouse Usually these deliveries have time bound constraints and hence even the slightest delay will impact the whole process hampering the delivery timelines and traffic during the peak hours, especially for the last mile 2. Constant, dedicated, professional and reliable supply for executing smooth operations 3. Handling consumer returns, none delivered and COD shipments integrated impact the pandemic has shifted buying behavior of consumers across the world. Hence, express delivery has become a necessity in the buying process rather than being just a delight factor. Consumers want their orders dispatched and delivered as soon as possible this shift.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10189

Has increased pressure on supply chain operations, which has led to companies finding more ways to fulfill quick dispatch and express delivery to stay ahead of the competition. With commitment to 10 to 20 minute grocery and food deliveries, it is evident that express delivery has become the new normal and not limited to certain customers. While same day delivery has the potential to revolutionize the way consumers purchase forever, it combines the convenience of online shopping with the immediacy of physical stores. Given the compelling value proposition of same day delivery for consumers, demand has skyrocketed and it is inevitable that urgent delivery models become the new normal. Now, imagine the same with ONDC. Here, you have numerous options for buying and a much extended catalogue to choose your items from, with the same speed to get them delivered to your doorstep. Wow! That a whole lot of name calling. Different names for me, different names for the places of protective custody into which you put me. How can I have so many different names, and be in so many different places of custody when I am One Indivisible and all my teachings, no matter by what names they are called, can be summed up in one simple precept Love others as you would have them love you? Across stocks, bonds, and precious metals. This blended approach will help you generate long term growth while arresting downside risks and minimising volatility. Most important, steer clear of formulaic advice like investing in companies that supply produce to those who consume the same, or avoiding manufacturing players and trusting mining companies in inflationary times. Don't trust any sector simply based on macro predictions. Spot the genuine players of each sector with the help of trusted advisors. Look to accumulate quality scrips of decent valuations on every decline while being wary of false bottoms. One can find great value propositions in upbeat sectors like Housing, Construction, Technology, Banking, Pharma, and, Capital goods. The only constant in this world is change ; one such inevitable transition is our departure from this life. Even though many perceive the subject matter of death as taboo, everyone wishes to make the last journey of their loved ones special and memorable. India accounts for 17.7% of the world population with 1.3 billion people; around 2,062 births and 603 deaths are registered every hour. Often, amidst the hustle bustle of urban life, properly managing the last rites of the deceased becomes a challenge. India is a land of diverse cultures, but the commonly shared notion of paying last respects to the departed soul comprises complex customs and practices. These customs vary widely between cultures, religious groups, and sub culture denominations. Death Care as a service provides support to the deceased family by taking care of all the aspects of last rites, giving them free mental space and time to grieve, uninterrupted without worrying about the elaborate arrangements. Since the rituals involve many layers of customary practices, when a.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-05-Test NO.-10190

Death occurs, family members get busy making necessary arrangements for the last rites amidst their colossal grief. This often takes a toll on them as they struggle to process the loss of their loved ones. In the instance of someone death, time is of vital essence; in many cultures, cremation cannot be done post sundown, and if not acted swiftly, other complications may arise. Hence, having a structured service that can quickly make necessary arrangements is of great help. Death care services also work to arrange a mortuary ambulance, freezer boxes, and all the paperwork required to transport a body domestically or internationally. The fast pace of the 21st century has led to the majority of India population living away from their native home in a nuclear or small family setting. During someone demise, such families go through utter unrest trying to figure out how to make necessary arrangements for the last rites of the deceased. This problem got much worse during covid waves, as mourning families faced horrid challenges in performing the rituals; in some cases, even getting woods for the pyre became challenging. People felt a dire need for organized death care and funeral service dearly at that time. Death care services in India have been unorganized and highly fragmented, but with the latest standardized services in this space, spreading awareness among the masses is paramount so they know whom to contact in case of an unfortunate loss. India notion of death care and funeral services has come a long way. The concept of managing funerals is not new to India, but the new way of carrying it out is. For instance, if we look back at an old Rajasthan tradition, we find the role of Radials quite prominent at the time of someone demise, called to cry loudly in public and express grief on behalf of the family. In the contemporary period, the business model of death care services is identical to an organized industry; they have defined geographical divisions of cities where cremation grounds are identified; necessary materials are gathered from local vendors, and priests are booked according to the family cultural preferences. Today, websites are made to spread information and provide a place to raise queries; dedicated teams handle operations at the back end. The new frontier of this industry is being carried by e commerce; several brick and mortar stores across the country have leveraged easy access to the internet and have quickly adopted the online business model among India leading digital death care startups, such as Mokshshil, Shardhanjali.com, Anthyesti, and Last Journey Funeral Services. The future of India Death Care holds excellent growth potential but requires spreading awareness among people on a vast scale. Currently, the industry stands at just over USD 3.5 billion in India, which is a long way from USD 0.98 billion back in 2008; therefore, it is evident that India death care industry is at a positive growth tangent and will continue to grow in the coming years the.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10191

Pandemic has redefined the employment landscape like no other event in recent history. It has shaken up norms and, with it, our understanding of skill acquisition for employment and career development. The post pandemic world requires acquisition of 21st century skills like digital fluency, critical thinking, problem solving and self learning. It has necessitated thinking on one foot, being nimble and adaptive to changing requirements at the workplace. Students must learn and master these skills not just for continued employment but also for success in building a multi faceted career. In fact, aspirants must be prepared for stints that ask them to fulfil a range of different roles across the organization and even across industries. Along with skills, what is also in high demand is an application oriented approach. We must make learning application oriented. Naturally, this changed approach to learning requires a fundamental shift in pedagogy. Make no mistake, knowledge of 21st century skills is important. But it is equally vital for aspirants to have application literacy. This grants them the ability to apply their learning to meet real world challenges. This is where 21st century pedagogy can prove transformational for Indian youth. In repeated independent surveys, employers thought it much more important that new hires come from a pool that is comfortable facing a problem with no right answer than facing problems with one right answer. The ability to apply literacy is a crucial skill that applies to all subjects. Twenty first century pedagogy seeks to address challenges of delivering content and skills in a rich way that genuinely improves outcomes for students. The process of 21st century pedagogy encourages reflection among students through self and peer review. It teaches higher order thinking, develops effective communication skills, and team skills through an interdisciplinary approach and develops problem solving acumen using real world problems in the context of learning. Twenty first century pedagogy actively uses technology throughout the learning process and fosters collaboration. Some state governments are taking steps that genuinely widen access to quality learning by removing barriers. The Madhya Pradesh administration has overseen the successful implementation of a plethora of schemes aimed at skilling the state youth. The state administration has been sensitive to the development of its tribal population. It has implemented welfare schemes such as the Mukhyamantri Awas Sahayata Yojana, the Kanya Saksharta Protsaahan Yojana, and the Vomit Jami Hostel Yojana to provide tribal students housing, food, and scholarships and ensure they learn, up skill, and become atmanirbhar self reliant. In Madhya Pradesh, scholarships have been offered to over 280,000 students, with a monthly financial support of INR 1,300 to boys and INR 1,340 to girls. This figure is more than 200 percent compared to that in 2003. Benefiting from the Mukhya Mantri Medhavi Vidarthi Yojana, over the past four years, over 5,000 tribal students got admission in prestigious colleges of the country to pursue higher studies in fields like engineering, medicine, and management. Under the Awas Sahayata Yojana, the state.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10192

Administration has disbursed INR 93 crore to more than 132,000 students over the past 18 months, to help them continue higher education in other cities and countries. Several of the country civil society organizations have also taken it upon themselves to help and make a profound difference to skilling the youth. I have closely observed the work of Smile Foundation which imparts training in 21 set century skills through its Smile Twin e learning Program. So far, 47,000 youth have been trained through the e learning program and 28,000 have been placed in 200 brands through 95 operational projects across India. The Foundation also runs Project Manzil, an employability training program which has trained over 14,000 underprivileged girls and enabled on the job training for another 5,000 girls to secure their future. A Teachers First approach to skilling

The ultimate criterion for success in delivering 21st century skills to students is teacher training. Teachers should possess 21 set century skills before delivering them to students. Therefore, teachers must be trained to learn and to do. There must be a structured plan by which teachers can succeed. Extensive training would need to be scheduled for teachers of various standards and disciplines so they can incorporate 21 set century skills into their existing teaching modules. We must have experienced trainers who can train the teachers. School administrators will also have to be involved in this massive upgrade to 21 set century skills training, as they are the ones evaluating teacher performance. Importantly, teachers must not be viewed as experts, rather as learning facilitators and co learners. We stand amid the fourth industrial revolution. This giant leap of an iteration aims to build on the digital revolution and fuse technologies to blur the lines between the physical, digital, and biological spheres and fundamentally alter the way we live, work, and interact with one another. India will lead the world in the fourth industrial revolution by providing highly skilled manpower, which is both application oriented and adaptable. Together, we can build this skilled workforce that is able to respond better to real world challenges of the decades that follow. For this, we must work together to continually fine tune and adapt learning and skilling processes to the ever changing requirements of the global job market. Digital transformation has revolutionized the way people interact and transact. Digital payments have caused a massive disruption in lending and payments space. The digital era is the new normal, from cash in wallets to cashless transactions through e wallets, from tedious loan process to instant digital EMIs. The tech savvy millennial customer segment is looking for contemporary digital solutions. Collaboration between new age fintech startups and traditional banking systems can help meet the ever evolving consumer demands and build a robust digital ecosystem. The traditional brick and mortar banks have strong processes and regulatory compliance framework in place, while fitness have the technological knowhow and agility; a combination of the two creates a win situation for all parties Fitness.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10195

And Banks can partner to offer innovative and customer friendly products across various sectors such as wealth management, insurance aggregation, lending, account opening etc. The aim is to come together to create solutions that enhance customer experience. Addressing the Changing Dynamics Over the years, digital payments have been addressing the changing consumer behavior. Millennial and Gen Z have rapidly adopted digitization for discretionary and non discretionary spending. With the popularity of smartphones and e commerce platforms, new age consumers aspire to have on the go mobile payment solutions and seamless and faster credit availability. Conversely, the merchant community is adopting digital payments to drive big ticket sales. Flexible and transparent payment options help them attract and convert customers. The credit model of paying through monthly installments has been well accepted since the launch of credit cards. Taking steps further, the new age payment options provide on the go credit while checking out one commerce portals or making a purchase in store and do not require carrying physical cards or remember pins. While making offline purchases at stores, instant, flexible digital payment schemes create a big win situation for customers and merchants. New age technological solutions have eliminated the tedious documentation process and can provide real time credit access with better risk assessment methodologies. Digital KYC, e signatures, catboats, etc. They are cost effective and time efficient processes for lenders, borrowers and retailers. Trusted by thousands of merchant partners and direct tie ups with the largest banks of India, new age digital platforms ensure customers can now afford to purchase through EMIs in a few seconds, even without a credit card. Adopting a future of Digital Transformation in Traditional Banking A report by PWC on Indian payments states that the digital payment market has grown at a CAGR of 23% in volume and 21% in value since 2018. It is estimated that digital transaction volume will reach INR 167 billion, and the value to touch INR 238 trillion by 2025. With the rising trend, traditional banks are transforming and adopting partnerships to digitize their offerings and cater to the large consumer base. They are more open to digital partnerships across the value chain such as risk assessment, customer onboarding, alternative credit scoring etc. A digital and data driven approach can help lenders increase their reach, reduce cost, improve customer experience and mitigate their risks. Hence Bank fintech partnerships have the capability to add value across the ecosystem. The Way Forward The Indian government aims to promote financial inclusion and move towards a digital economy. Various initiatives like the Jan Dan Aadhaar and Mobile JAM trinity and Aadhaar enabled payment systems Apes, and Unified Payments Interface UPI have introduced the large unbanked population to the formal banking and credit ecosystem. As more and more people start adopting digital financial services, RBI is parallels taking steps to ensure a stable ecosystem and safeguard interests of the customers. Fitness can partner with Banks to ensure they are bringing the best product for the market.

While utilizing technology to improve convenience and transparency compared to the current offerings. The collaboration between traditional banks and fitness can help overcome each other shortcomings and utilize respective strengths to help unlock unaddressed demand and create a bigger and better market. Monday record rally in should be seen as one that was driven primarily by investor sentiments rather 99828 than by market fundamentals. As with any purely sentiment-driven rally, things can take a turn for the worse if subsequent events fail sentiment driver to meet the market expectations. There is very little in the form of market fundamentals to warrant the kind of exuberance shown by investors on Monday. Corporate earnings data released as of now for the January-March quarter suggest that earnings might actually witness a significant fall from what they were a year ago. Growth has also been slowing down in core sectors as consumer demand has failed to pick up and liquidity remains a concern across the economy. Demand has hailed still; investors may be hoping 55481 that things could get better in the coming years as a stable government at the Centre will be able to undertake economic reforms. While the fact remains that no big-bang reforms that could give economic reforms a strong boost to economic growth have been implemented in the last five years, investors may still view the NDA government as less populist as any other realistic alternative. Trade tension NDA government between the U.S. and China is another immediate risk that will determine the direction of equity markets, including India as China tries 28181 to find new markets for products that it can sell to Americans. Given these various uncertainties, it would be prudent not to over-read the message in the stock market fluctuations. It is worth noting that the over foreign investors were net sellers of fluctuations. It stocks in the earlier trading sessions, causing 816481 the indices to fall significantly from their previous high that was reached in April. Mount Everest, the world highest peak at 8,848 metres, draws adventurers from all over. But the mountain on the Nepal-China border is fast becoming a dangerous place to visit even for the hardened mountaineer. The inherent risks were this month , a Gorkha ex-soldier. The image, which went viral and altered the manner in which people worldwide imagine what it is to scale Mt. Everest, showed a long queue awaiting a final tilt at the summit, with all the dangers such a wait holds. This season, at least 10 climbers have died or gone missing. Experts have been calling for Nepal to restrict the number of permits. It awarded a record 381 for this spring, each fetching \$11,000 (climbing from the Tibet side is more expensive). On Wednesday, 200 climbers ascended the summit, a new record for a single day. Last year, 807 managed to reach the summit. In 2012, the United Nations estimated that there were more than 26,000 visitors to the Everest region, and this figure has grown.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10197

Manifold since then. Nepal officials argue that permits are not issued recklessly, and that jams such as this year near the summit are on account of spells of bad weather, which result in mountaineers being compelled to summit within a narrow time frame. Waiting in subzero temperatures at the rarefied altitude can be fatal this season deaths were mostly due to frostbite, exhaustion, dehydration and lack of oxygen. This year drama has caught the public imagination, as happened in 1996 when eight persons died in a single day amid unexpected storm events of and around that day were the subject of Jon Krakauer bestselling book, Into Thin Air. The adventure industry that is built around the human desire to scale the peak has meant many amateurs take up the challenge. These days major emerging market leaders must be feeling the chagrin of Roger Moore, who was often criticised as the worst James Bond ever. The British actor once quipped that long after he stopped playing the iconic secret agent, he still got a bad review each time a new 007 movie came out. Now every time dire news breaks on the global economy, from rising interest rates to increasing commodity prices, pundits say emerging markets are in the worst spot. Read closer, however, and the countries these critics cite are generally small ones like Zambia and Sri Lanka. Among the roughly 150 developing economies there will always be distress somewhere. But by most measures from current account deficits to currency valuations the 25 largest developing nations, from India to Brazil, are in strong financial shape. India civil aviation regulator DGCA issued a show cause notice to Spice Jet after reviewing a series of incidents reported from April 1 in aircrafts operated by it. The broad conclusions of the regulator are that the airline had poor internal safety oversight and inadequate maintenance. Consequently, there been a degradation in safety margin. There have been at least seven instances reported since May where there have been questions about Spice Jet. The worst day was July 5 when there were three instances, including one where a Delhi Dubai flight had to be diverted to Karachi after a snag. None of these problems have arisen overnight. There have been red flags for a while. In Spice Jet 2020 21 annual report, the auditor report came with qualifications. The auditor raised doubts about the company ability to continue as a going concern. Also, undisputed statutory dues such as PF and GST had not been regularly deposited. Financial stress inevitably leads to other compromises. DGCA, thereafter, conducted a financial assessment in September 2021. The finding showed that suppliers are not being paid regularly and that has led to a shortage of spares. In March, Go informed Raja Sabah that there have been investigations into 49 air accidents since 2016. The findings showed that main reasons for accidents were failure on the part of the cockpit crew to stick to standard operating procedures, technical defects and factors related.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10198

To the weather and primarily deals with safety issues. Its record has been mixed. In 2013 14, the US Federal Aviation Authority decided to downgrade Indian civil aviation from category I to category II after an audit brought out shortcomings in safety and maintenance. It had an adverse impact on the international plans of some Indian carriers. Since then, matters have improved and a recent US FAA audit reportedly went off well. The regulator focus on safety has to be relentless a Vasteras flight yesterday experienced an engine snag. There a key international safety audit ahead. This one will be carried out by ICAO, a specialised UN agency that deals with air transport. In the last pre pandemic year Indian aviation companies carried about 141 million passengers. That will be the baseline in a normal year. DGCA primary responsibility is to take timely action to make sure that Indian flyers are guaranteed safety standards that match the best. That requires being proactive when problems are at an incipient stage. The confrontation between Chhattisgarh and UP police is just as dangerous and ridiculous as all such face offs. Some are arguing that unlike the Punjab police attempted arrest of BJP leader Tinder Bagger that was foiled by Haryana and Delhi police, the Chhattisgarh police had a magistrate warrant to arrest a TV journalist the offence in question being the airing of a misleading video of Rahul Gandhi. But just as in Bagger case, the visiting police team hand informed counterparts in the destination state. Not surprisingly, and in a repeat of past actions by BJP state governments, another Congress ruled state, Rajasthan, has also booked the journalist. The real trouble is of course extreme politicisation of policing. Multiple FIRs are lodged in states over causes dear to the party that runs the government and accused persons get lucky only if they happen to live in a state governed by a rival party. The TV journalist had a BJP governed state police backing, but Jingles Mewari in Gujarat did have that when the Assam police came calling. Neither did pharmacy student Nikhil Blamer or Marathi actor Kinaki Citole when the Maharashtra police, then loyal to MVA, jailed them for anti Shared Pawar tweets. That police forces should get so brazenly busy doing the petty bidding of their political masters and that this should lead to regular confrontations may be considered par for the course by our politicians but at least the Supreme Court should not remain indifferent. The Criminal Procedure Code in specific enough on interstate arrests and SC must issue binding guidelines. Except when nabbing terrorists, out of state police teams must possess arrest warrants from the jurisdictional magistrate, inform the local police, and secure transit remand from the local magistrate. SC should also note that multiple FIRs for the same cause of action continue despite the court terming it an abuse of process . That SC seemed to veer from its own path in the Nippur Sharma hearings does change the.

Delhi Police Typing-Dated-2023-08-05-Test NO.-10199

The foundation of freedom, justice, and peace in the world. The recognition that dignity is something everyone has by virtue of being a human being and is integral to one existence is important in the realisation of rights, says Sherpa. This recognition of human dignity has the potential to anchor the centrality of 251881 equal human rights, or the equality of all persons which is to say that there is no inherent reason why some individuals have the opportunity to actualise their goals and aspirations and others do not, highlights Sherpa. Ashwani Paliwal from Astha Sansthan a nonprofit working on empowering Adivasi, Dalit, and single women that is, divorced, widowed, separated, or older never-married women narrates an example that showcases the importance of interweaving dignity with any discussion on women land rights. We worked with a woman who, along with her daughter, was abandoned by her in-laws. She was surviving by working as a manual worker and living in a religious institution without any security, always fearing for her and her daughter safety. Ashwani adds how in order to improve 2641554 her condition, the woman joined the Ekal Nari Shakti Sangathan ENSS The Association of Empowered Single Women. After a prolonged struggle with her in-laws, she was able to secure ownership of her husband land with support from the collective. She got shelter and could fulfill her basic needs because of the land. This is how land rights are connected to dignity they help enhance a person self-respect and individuality, notes Ashwani. Living without food, shelter, and livelihood is in direct opposition to living a 26441 dignified life. Sherpa underscores that a person relationship to land has a significant impact on their everyday life. How they use the land, whether for livelihood or survival, is closely interlinked to an individual existence and dignity, she says. What do we stand to lose when dignity is ignored? Neglecting the right to land further marginalises women and other disadvantaged segments of society. Sherpa notes, Land is an important instrument of people identity. Not giving independent rights to women in places where land rights are a norm makes them invisible as an individual. Similarly, the fact that all the existing inheritance laws are written in binary language diminishes the scope for the trans community to claim their land rights. We stand the risk of losing the identity of these individuals when we do not consider their dignity and this has direct implications on their livelihood, housing, security, and quality of life, adds Sherpa. As a result, the first step for Landsat when working on land rights is to recognise women as independent individuals. Helping women secure their land rights becomes even more challenging if the women don't think of themselves as individuals deserving of land rights. The women [we work with] are generally uninformed of their rights and never consider ownership of land unless they are told [about it]. The struggle to obtain land rights is difficult. If their resolve is strong, they lose the opportunity to use their land 325481 effectively and gain the dignity attached to it, adds Ashwani. The possession of land becomes futile if the thought of living a dignified life through that piece of land is missing. But Sherpa says, Even if the concept of dignity is not in their vocabulary, what women ultimately want is a life of equality and dignity. The link between land rights and dignity Although livin

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10202

Deemed a state subject and inheritance is a concurrent list subject. Multiplicity of laws with overlapping and sometimes conflicting provisions puts women at a disadvantage. The areas under Schedule 279185 are treated differently by the Constitution to protect the traditions and identity of scheduled tribes. As a result, inheritance in these communities is governed by customary laws and not the statutory laws, says Sherpa. She gives the example of Jharkhand. We find that as per the customary law of most of the scheduled tribes, a widowed woman cannot have the husband land in her name; she only has the right to be maintained and live on the land. The men of the house the brother-in-law or the son have the ultimate claim on the land in such a situation. Sherpa calls these men owners in waiting. In order for their claim to be substantiated sooner rather than later, they may inflict violence upon the woman to coerce them to leave the property. This constitutes a direct attack on the dignity of that woman, adds Sherpa. Particularly in villages, land ownership not only impacts women personally but also affects their participation and involvement in community decisions. A woman identity is created within the village when the land is in her name. This empowers her to avail multiple opportunities, explains Ashwani. A woman could use her land as collateral for her 264818 children education. Land ownership documentation can also help women farmers in accessing government schemes. When her perspective towards land shifts, a woman is able to take a stand against injustice and moves towards living a dignified life, notes Ashwani. Challenges to incorporating dignity in land rights Societal pressure and prevailing cultural practices deter women from claiming their right to land. If the property is in their name, whether it is at their parents or their in-laws side, women are encouraged to give their share to the brother or another male family member, says Ashwani. In fact, in 2021, a government official in Rajasthan appealed for women to make Raksha Bandhan memorable by giving up their share of parental agricultural land to their brothers. Achieving dignity through land rights is a long-term process, and this poses a challenge to the cause. According to Sherpa, emphasising dignity would require all stakeholders to change how they perceive a human life as their actions directly impact women rights and dignity. For instance, although a woman right to property may be secured with the help of the police, their access to the land comes under threat if there is no follow-up. The male members may reoccupy the property if the woman footing ins strong enough, adds Ashwani. This is why ENSS and other community-based organisations provide continued support to the woman even after the land deed is transferred so that her ownership ins threatened. If the police and the male family members were more cognisant of the woman rights and dignity in such cases, the need for continued intervention would not be required. Sherpa explains that even from an organisational perspective, the dependency of development programmers on outcomes-based financing impacts how they are planned and implemented. This serves as an obstacle in the integration of dignity as it is an immeasurable outcome and often requires long-term thinking and efforts. What the dignity lens looks like Adopting a dignity lens requires commitment from all the stakeholders involved. We need to work with the gove

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-05-Test NO.-10203

In the way they think and work, says Sherpa. Ashwani mentions the importance of spreading awareness at all levels by highlighting how official stakeholders involved in the process of transferring property ignore the appeals of women because of their patriarchal mindset. Daughters were only given inheritance rights to ancestral property through the Hindu Succession Amendment Act, 2005. Prior to the introduction of this provision, women had to often fight for their right over such land through lengthy legal procedures, he adds. Today, organisations seeking to mainstream women land rights may find it challenging because property ownership among women has been traditionally non-existent or negligible. Therefore, planning ahead and establishing the connection between dignity and women land rights early on is imperative for all stakeholders. Sherpa notes how asking women about what land means to them initiated the conversation on how their dignity is interlinked with land. Even the idea of owning land can be surprising and empowering for women because land is such a substantial asset. Ashwani underlines that women need to be informed not only of their land rights but also of how dignity is related to that right, as it will help them view living a dignified life as something that is aspirational and achievable. According to Sherpa, all programmers that work to empower women should consider including land rights in their scope because land is intrinsically related to a person identity and existence. A holistic vision needs to be adopted at an individual and institutional level to ensure that dignity is an integral aspect of interventions, especially those designed for the most vulnerable. Land constitutes the foundational basis for women identity, freedom, rights, and livelihoods. If we are not talking about land rights, we are missing a critical element in paving the way for a life of dignity and equality for women. Sherpa Doe leads Landsat work to strengthen the relationship between women and land. She is deeply interested in understanding the connects and disconnects between women of different identities and land of all types. She is a passionate advocate of equal inheritance for girls and wants land governance and laws to be gender-responsive. Ashwani Paliwal is the secretary of Astha Sansthan, a nonprofit based in Udaipur, Rajasthan. He has worked in the social sector for more than 40 years, particularly focusing on community development and human rights. More recently, he has been supporting work geared towards empowering single women both in Rajasthan and across the country. Have you ever imagined a world where machines could create mesmerising works of art, compose breathtaking music, and engage in realistic human-like conversations? A world where the boundaries between human creativity and artificial intelligence blur, opening up new realms of possibilities? But amidst the awe-inspiring potential of Generative Artificial Intelligence (AI), have you ever stopped to ponder the challenges it brings to our economic and political lives? Can we ensure that this technology doesn't disrupt industries and displace jobs? How do we navigate the ethical dilemmas surrounding deep fakes and misinformation? And, most importantly, how can governments take the lead in harnessing the power of Generative AI? There cannot be any better time than now, to discuss the same. Introduction Generative Artificial Intelligence (AI) is a transformative technology

Argument Indian women labour force participation is one of the lowest in the world. Government surveys and surveys from private organizations like CMIE agree on this. A large academic literature has pondered on the possible causes. This column explores the issue through the lives of two working women, living very different lives, across two continents. Shania Breaking barriers and more the first is Shania, a 21 years old self employed e rickshaw driver who lives in eastern UP. Shania job trajectory would be the envy of most women in the informal sector. Her first job was at a construction site carrying bricks. Then one day she saw a woman driving an e rickshaw and she thought she could drive that too. With the help of an NGO in her city, Shania received a day long training to drive the e rickshaw and change its tires. Now Shania rents an e rickshaw, fearlessly drives it around the city, bringing scores of passengers to their destinations. She earns about Rest 12,000 a month, which is roughly 40% more than her income last year as a laborer. It was only to be expected BJP aye to Aare Gaya. Back in government, the party is going ahead with its earlier plan to commandeer 30 hectares of the Aare forest for a Metro shed and depot. That plan had been jettisoned by Buddha Thackeray, who has now been jettisoned by his predecessor and Do math Shined. Beau, that why it called see saw politics. Means, what you eye with one government becomes aw with its successor. Dizzying, no But this gunmanship putdown ship skirmish will get worse only. The saving grace is that pun kea Buddha has neither the stomach nor the backing of Defender Vadnais, who started his thousand nicks and cuts strategy from the moment he was forced to snatch defeat from the jaws of victory in 2019. But beep re! Adyta can sizzle like a karma of kanga bhajiya on a monsoon eve. Formerly, Aare meant milk colony . Now, it not just a few do goobers being cheesed off Mumbai future could curdle if drastic action is taken to control the whole manic skyline. Climate change is already a concrete reality, triggering landslides on all its hills, from poor Atop to posh Malabar Cembalo. The current deluge of signatures on Change.org is not enough. had was the original misnomer, till we wised up to the fact that it was going to make merely a cow sized hole in the last green lung left in Mumbai. Aare is a designated forest, part of the Sanjay Gandhi National Park. It is home to enough wild felines not to be hijacked by cats looking like they vet licked the cream or tigers roaring to reclaim Balasaheb stripes. The metro will build up 25 hectares here. That is 2.5 lakh square metres, enough to make our swaggering Phoenix mall feel like Kakubhai, my corner bania. An onsite slogan says the shed just an excuse to.

Swallow the whole city, Aare eke banana hay poor Mumbai khan Lena hay! Pray that those 30 hectares arena Judas Iscariot 30 perfidious pieces of silver. Haj, the fifth pillar of Islam, is the name given to the pilgrimage to Mecca, where Muslims from all over the world gather to perform a special type of congregational worship once every year. Although it is required to be performed only once in a lifetime, Haj is an all encompassing act of worship that, if performed both in form and spirit, can have a permanent impact. In 632 CE, the Prophet received hints from God that his life was about to come to an end. Therefore, he announced his intention to perform his life first and final pilgrimage the Haj, which is known as Hajjatul Wida, Farewell Pilgrimage. He asked everyone and his family to join him. By this time, most of the Arabian Peninsula was under his influence. The Prophet set out to perform the first and final pilgrimage on the seventh day of Dhul Hijjah, and when this news spread far and wide, various tribes living in Arabia began pouring into Mecca. The Prophet was joined by Muslims. During this pilgrimage, God revealed to him the rules of the Haj, which all Muslims follow to this day. After travelling for nine days, when the Prophet reached Mecca, he prayed at the sacred mosque O God, You are peace, with you is peace. Therefore, our Lord, help us live with peace. tawaf, going around the Kaba seven times. It is to show how our lives should revolve around our Lord. After offering his prayers and kissing the Black Stone, he moved towards Safa, saying that Safa and Marwa, the two hills, are signs of God. Walking briskly between the two seven times, he ended the walk at Marwa. The Prophet went on to stay in Mecca for four days and then moved to Mina on the eighth day of Dhul Hijjah. Next morning, he went to Arafat and stayed in a small tent. It is here, in the afternoon, that he gave the talk known as the Sermon of the Farewell Haj. Today pilgrims come here and stand in humility, concentrating only on God. They seek forgiveness for their sins and pray for the welfare of others. The tanding at Arafat symbolises the Day of Resurrection when everyone will stand before God to be judged. In his sermon, the Prophet emphasised the highest moral values. He announced that no Arab is superior to a non Arab, and no non Arab is superior to an Arab. No man is superior to another, except by piety and good actions. The noblest among you, he said, is the one who is deeply conscious of God. The Prophet particularly exhorted the believers to fulfill women rights You indeed have certain rights about your women, but they also have rights over you. Therefore, treat your women well and be kind, for they are your partners and committed.

Delhi Police Typing-Dated-2023-08-06-Test NO.-10206

Helpers Assembling on the plains of Arafat is spiritually the high point of the pilgrimage. Here, pilgrims promise God to model their lives on the examples set by His prophets, to abstain from all that God has forbidden, and to refrain from all kinds of misdeeds towards their fellowmen. The Haj pilgrimage, therefore, serves the purpose of this moral training. India is one of the largest and most populated countries in the world, with a yearly average population growth of one percent. India has also become one of the world fastest growing economies due to the economic reforms and utilizing the growing population as an asset. While job opportunities have grown over the years due to industrialisation and digitalisation, the agriculture sector dominantly employs a large share of individuals in the country. In 2021, India agriculture sector emerged as the leading industry in terms of employment with the number of employees tallying nearly 152 million. Meanwhile, the manufacturing industry that usually accounted for a significant share of India GDP, at 27.4 million has seen a steady decline in employment owing to the adverse impacts of the pandemic on the economy during the same period. However, with rapid evolution in technologies and an increasing demand for latest innovation in products and services, the manufacturing industry is expected to rise again. From smartphones to cars, manufacturers and the semiconductor industry are ramping up to meet the world seemingly insatiable demand for chips. Semiconductor chips have become essential to our everyday lives and that dependence is only going to grow. Emerging markets and technologies such as AI, robotic process automation and 5G connectivity are also fuelling the growth of the semiconductor industry. From a recruitment perspective, several new jobs are being created across sectors and across specialisations. Government incentivisation As per ICRA, with the recent PLI and DLI scheme announced by the government, launched with the aim of incentivising manufacturing semiconductors, it is estimated to attract a capex of approximately \$14 trillion for the next five years and has the potential to generate employment for over 3 million skilled and unskilled labor in India. Apart from this there will also be generation of new tech and management roles and employment opportunities within the industries that are yet to be accounted. Further, there will also be positive implications due to reduction in net imports, as incremental revenues are expected at Rest. 35 40 trillion over the next 5 years. Sectors under which PLI scheme have been announced currently constitute 40% of the total imports. The scheme, spread across 14 sectors, can enhance India annual manufacturing capex by 15 to 20% from FY23. Emerging and Evolving Job Roles India is already an R&D hub for the semiconductor industry with nearly 2,000 chips being designed per year and more than 20,000 engineers working in various aspects of chip design and verification. The presence of the number of design bases in India and the rise in the number of skilled professionals and engineers are expected to.

Delhi Police Typing-Dated-2023-08-06-Test NO.-10207

Foster the growth of the semiconductors market. In the current scenario, organizations do not only need talent with diverse skill sets and advanced technical knowledge, they also continuously need to educate and train their existing workforce. Many new roles are emerging constantly in various tech verticals. These include system on chip Sock design, systems and platform engineering CAD, digital signal processing DSP and memory design engineers, as well as software engineers to help build chips. As the demand for growing Indian enterprises is increasing, it has also opened many employment opportunities across system and application software development, System integration and testing, Heat and mass transfer, Imaging and lithography performance, Electronics Mechatronics, and Electron optics to name a few. Companies are now also allowing and promoting employees to shift to a different role or position within the organisation and providing them trainings for their new roles. Industry academia Global companies are laying the foundation of chip schools that are running year round to train its next generation of semiconductor engineers and cement its dominance of the crucial industry and strengthen industry academia. Indian Institutes have too shortlisted 85K engineers that will be trained to make semiconductors. The government is also working with the All India Council for Technical Education AICTE right now, to finalize the course curriculum. With all these efforts, in three to five years we will have a new generation of engineers and technology experts well equipped for the fifth industrial revolution. The Government of India has clearly stated its intention to become a leader in the semiconductor manufacturing space and is making every provision to make the dream come true. Many MNCs and start ups are also joining hands to further expand and fulfil the mission. India will hold the G 20 Presidency from 1 Dec 2022 to 30 Nov 2023. G 20 comprises the world major developed and developing economies, accounting for 85% of global GDP, 75% of international trade and two thirds of the world population, making it the premier forum for international economic cooperation. Every rotating G 20 Presidency also serves as the G 20 Secretariat for the year. Many official meetings are expected to be organised in various sectors such as employment, health, digital economy, trade, investment & industry, environment & climate, energy, anti corruption, agriculture, tourism, culture, socio economic development, education, finance, women empowerment, etc. It will showcase India diversity and culture and promote the brand India. Major events of this summit are proposed to be held in Delhi however, some events will be organised in other states and UTs, including J&K and Latah. Pakistan opposes India plans to hold some G 20 events in J&K. In its statement, Pakistan completely rejects such moves of India, stating that J&K is an internationally recognised disputed territory. India was seeking international legitimacy for an occupation of J&K and urged the international community to ask India to revoke its 5 Aug 2019 actions. China, in its opposition to India reported plans to hold the following year.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-06-Test NO.-10208

Meeting of G 20 leaders in J&K and Latah, echoing close ally Pakistan objections, highlighted that both sides should indulge in unilateral moves that may make the situation difficult. China and Pakistan objections to the G 20 summit events in J&K and Latah have no legal or even moral standing and, as such, are a non issue for the world community. In 2017, Prime Minister Narendra Modi outstanding, influential skills and India skilful diplomacy saw an anti terrorism objective incorporated into the G 20 declaration. Which says, Terrorism is a global scourge that must be fought and terrorist safe havens eliminated in every part of the world . China objected to it, and Pakistan was rattled and exposed to the world community on the issues of terrorism. So, the reactions of China and Pakistan are understood well by other nations who share the views of India on international terrorism. With G 20 leaders agreeing on a joint clampdown on terrorism and its funding and destroying terrorist safe havens all over the world, Pakistan, with its long history of exporting terrorism, has correctly come under global watch. Myths about the erstwhile state of J&K spread by our adversaries. J&K is an integral and inalienable part of India. However, our adversaries have concerted disinformation campaigns that present distorted historical facts about the accession of the erstwhile state of J&K to India. On 26 Oct 1947, Maharaja Hair Singh and the Government of India signed an instrument of accession approved by Sheikh Abdulla, who was then heading the largest political party National Conference in J&K. This accession was signed as per the provisions of the Indian Independence Act 1947. It was duly approved and rectified by the Constitution of J&K in 1956, which states that the state is and shall be an integral part of the union of India. At the time of accession, the erstwhile state of J&K consisted of three provinces the frontier districts Gigot & Batista, Kashmir Province and Jammu province, including Latah, Pooch & Channel. After gaining independence in 1947, Pakistan immediately attacked J&K, which had not decided yet to join India or Pakistan. The residents of the state border areas were harassed, looted, and raped by the so called tribal, which consisted of Pakistan Army veterans and regular troops. When the state could withstand the pressure build up by Pakistan then it decided to join the union of India. On 27 Oct 1947, the Indian troops reached Srinagar airport and thus started pushing back these tribal. India approached the United Nations Organisation UNO on 1 Jan 1948 under Article 35 of the charter to immediately end such assistance, which was an act of aggression against India. But Pakistan constantly misled the world regarding its involvement in J&K. The United Nations Commission of India and Pakistan UNCIP Resolution of August 1948 stated about Pakistan, The presence of troops of Pakistan in the territory of the state of J&K constitutes a material change in the situation since the Government of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-06-Test NO.-10209

Pakistan represented it before the Security Council . The UN sponsored mediator, Owen Dixon, was also constrained to record in his report of 15.9.1950 that I was prepared to adopt the view that when the frontier of the State of J&K was crossed, on I believe 20 Oct 1947, by hostile elements, it was contrary to international law, and that when, in May 1948 as I believe, units of the regular Pakistan forces moved into the territory of the state that too was inconsistent with international law . Cease fire between India and Pakistan was declared on 1 Jan 1949 with the mediation of the UNO. Despite India legal position in J&K, it agreed to hold a plebiscite, but Pakistan failed to fulfil the conditions of the UNSC resolutions. Cease Fire Line was drawn in July 1949 and was converted into the Line of Control Lock in 1972 under the Shimla agreement. Pakistan again launched military operations to annex Jammu and Kashmir in 1965 and 1999. When it failed to grab J&K, Pakistan launched cross border terrorism in J&K in 1989. On the hand, China attacked India with its offensives in Latah and along the McMahon Line on 20 Oct 1962. The war ended with a Chinese unilateral declaration of ceasefire. It was a defeat for India. China claimed the Aksai Chin area in Latah, J&K. When J&K acceded to India, it had an area of 2,22,236 sq. km. But today, India is in physical possession of only 1,06,566 sq. km of the original state of J&K. Pakistan Occupied Jammu and Kashmir POJK is 72,935 sq. km, and less 5,180 sq. km of Shaksgam Valley, which has been leased to China in 1963. China Occupation of J&K territories consisting of 37,555 sq. km of Aksai Chin plus Shaksgam and territory nibbled over the years, totaling up to 42,735 sq. km. SP Guide Publications Put Ltd, New Delhi China Pakistan Economic Corridor CPEC , a flagship project of BRI, intrudes on India sovereignty and territorial integrity. The CPEC passes through parts of the Union Territories of Jammu & Kashmir and Latah, which are under illegal occupation of Pakistan and China. Conclusion Jammu and Kashmir is an integral part of India. There can be any compromise on India sovereignty and territorial integrity. India remains determined to weed out cross border terrorism from J&K, bring overall development to the state, and address other related issues. Since 1947 various international events have been held in J&K without any substantial objections from any corner. India approach to foreign policy is guided by our National Beliefs, Values, Interests and Strategy. I must say that India is a robust nuclear weapon power with the 4th largest economy and equipped well to exercise its Strategic Autonomy on all matters of bilateral, regional or global importance. Any opposition to India intent of conducting G 20 events in J&K because of its disputed territory tag must be vigorously contested, and it is not difficult for India. In future also such.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-06-Test NO.-10212

India far sighted Right to Education Act is making slow progress in mainstreaming equity, in the absence of a strong political commitment in several States. The proposal to extend its scope to younger children through early childhood education is, however, wholly positive. The move suggested in the draft National Education Policy to put children three years and older in a stimulating nursery environment is a welcome logical measure. The pedagogical view is that the pre phase is crucial to stimulate a child curiosity and help her prepare for schooling at age six. The NEP proposal to infuse the existing child development schemes, which are primarily nutrition oriented, with a learning component is in line with this thinking on holistic development. An extension of the RTE would be a big step forward, but in the absence of measures that will deepen equity, the law cannot be transformative. The Centre has to guarantee that in its totality, the Right to Education will encompass all schools bar those catering to minorities. This is necessary to achieve its moral goal of bringing quality schooling to all in the 6-14 age group; adding the early childhood section, now under the Ministry of Women and Child Development, will then be meaningful. Unfortunately, the evidence indicates that only 12.7% schools comply with the law requirements, and at the pace seen since RTE became law in 2010, it will take decades to achieve full coverage. Giving all children aged three and above the right to an education can become a reality only if the state is willing to live up to its promise of devoting more financial resources. An expenditure of 6% of GDP on education could have transformed the sector, given the large wealth generated since economic liberalisation. But far less is spent for instance, 2.7% in 2017-18. The lost years have cost millions a brighter future, but the draft NEP provides an opportunity to make amends. Bringing more children into the formal stream needs a well thought out road map. The Centre has to play a leadership role to ensure that States, some of which have done a poor job of implementing the RTE Act, are persuaded to implement urgent reform. The NEP proposal to have well designed school complexes, where preprimary to secondary classes will be persuaded available, is in itself an ambitious goal that will require mission mode implementation. Shortcomings in anganwadi centers must be addressed in the expansion plan. State governments will have to fill teacher vacancies and ensure that the training of recruits is aligned to scientific, child oriented teaching methods. Education reform is vital to prepare for a future in which cutting edge skills will be necessary for continued economic progress. Changes to the RTE Act that Education reform will prepare all children for a more productive schooling phase can help make India educational system morally fair and more egalitarian. Researchers from Uppsala University in Sweden, Flinders University in Australia and NCBS, Bengaluru, looked at the preferences of pollinators across continents.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-06-Test NO.-10213

We studied hoverflies, highly prolific pollinators found on every continent except Antarctica. We replicated cues from hoverflies only in certain environments, but there was one flower lure that was attractive everywhere. The researchers approached artist Thomas Pause at we used paper, films and UV light, he said. The result is six non flower artifacts on show at the V&A alongside Virtual Reality films based on fractal geometries. Midst the rising number of defaults by companies, the chief market regulator is taking the fight to what it thinks is the enemy: ratings agencies. The Securities and Exchange Board of India has asked credit rating agencies in the country to, among other things, clearly state the probability of default of the instruments they rate for the benefit of investors. There have been a record 163 downgrades of debt instruments this year, according to data released by Prime Database this week. This is more than double the number of defaults over the whole of last year. Debt instruments issued by prominent companies including Yes Bank, Easel and Jet Airways have been downgraded this year. This week other data release from the government was, however, less reassuring, revealing as it did acceleration in retail inflation to a seven month high. Price gains measured by the Consumer Price Index (CPI) quickened to 3.05% in May, from April 2.99%, as prices of vegetables and pulses jumped by 23% and 10% respectively in urban areas, contributing to a bump up in food inflation. The Reserve Bank of India had last week flagged the risks to the inflation trajectory from factors including spikes in vegetable prices and international fuel prices and marginally raised its CPI inflation projection for the fiscal first half to a 3% to 3.1% range. While the inflation reading remains below the RBI inflation threshold of 4%, policymakers would need to keep a close watch on price trends, especially as global energy prices continue to remain volatile amid heightened geopolitical tensions in West Asia and uncertainty on the demand outlook owing to the ongoing China U.S. trade spat. And while the monsoon is forecast to be normal this year, the actual rainfall. On the sidelines, Mr. Mode held bilateral meetings with Chinese President Xi Jinping and Russian President Vladimir Putin. This month, Mr. Mode will meet U.S. President Donald Trump on the sidelines of the G 20 summit in Osaka. While the current India U.S. trade impasse and plans for President Indo Pacific military cooperation will take cent restage there, it is likely that the U.S. is specific demands on curbing defence deals with including on the 400 anti missile system, and denying access to Chinese telecom major Huawei for India 5G network bids will also come up. India strategy of balancing and straddling the competing interests of these emerging blocs will be tested. But the SCO collective and the bilateral meetings in Bishkek is an important indicator early in the Mode government second tenure of the President foreign policy arc it is attempting failure.

Delhi Police Typing-Dated-2023-08-06-Test NO.-10214

BJP determination to expand its political influence in southern India has emerged as one of the most significant aspects of its mobilisational strategy in recent years. The four Rajya Sabha nominations from the south and, earlier, the official press statement issued by the party on the final day of its national executive meeting in Hyderabad underlines this resolve, especially in Telangana. The political resolution adopted there also highlights the gradual electoral expansion of BJP in this region. It is true that BJP has not yet become a key electoral player in the southern states, except Karnataka. However, one cannot underestimate the changing socio political configurations that might help the party to emerge as a decisive actor in Kerala, Andhra Pradesh, Telangana and even in Tamil Nadu in the long run. RBI on Wednesday introduced a set of measures to encourage foreign exchange inflows. They aim to ensure macroeconomic stability and, therefore, are temporary in nature. They will work mainly through three channels. Incremental deposits raised till November through FCNR and NRE don have to meet regulatory requirements such as cash reserve ratio which makes it a relatively more attractive option for banks. There another set of measures to attract foreign portfolio investment FPI into debt. Plus, conditions that need to be met by Indian firms planning to raise debt abroad have been eased. India foreign exchange reserve position is comfortable at \$593 billion. However, as we run a current account deficit for the most part, accumulated reserves are relatively less stable. Uncertain global economic and financial conditions can lead to sudden outflows, a sharp currency depreciation and an adverse impact on inflation as we are a net commodity importer. Adequate foreign exchange reserves act as a shock absorber and allow RBI to smoothen currency depreciation. This has a positive spin off on the domestic economic environment, including for farmers who depend on fertiliser imports. Consequent to this approach, the rupee has depreciated by only about 4 against the US dollar since April despite global volatility. The Russia Ukraine conflict is the root cause of volatility and the recent surge in commodity prices. This price trend, however, appears to have lost steam. The Indian crude basket was \$104 barrel on Wednesday, more than 10 lower than the price level which prevailed a few weeks ago. Similarly, in the case of other commodities such as urea, copper aluminium and sunflower oil, prices declined. There was a surge in March and April, but its adverse impact on demand led to easing of 10 30 in prices of some key commodities in June. The external shock that drove commodity prices higher seems to have played out for the moment. It makes RBI task a little less challenging as food and fuel prices constitute 55 of the consumer price index. While they are not under RBI control, a surge in these prices leads to second round effects and subsequent increase in interest rates. However, global financial conditions are yet to stabilise. Therefore, it prudent on.

RBI part to encourage capital inflows when India macroeconomic indicators are not flashing red. Prudence enables economic growth. He weathered one scandal after another with Britain tuning in to watch every new episode, until finally his own party had had enough of all the rowdy theatre. It started with the resignations of senior cabinet ministers, then gathered swift momentum, pushing Boris Johnson to resign as the leader of the Conservatives yesterday. In due course his party will choose a successor, the transition of office will probably be full of drama, and on big issues the country can expect policy continuity. But given that Britain does move the world geopolitical needle, a leadership change there is interesting, but not terribly consequential. The interesting thing is a morality tale that has lessons for other democracies: How a leader who as recently as in December 2019 led his party to a landslide parliamentary majority, its biggest since 1987, squandered so much political capital so fast. The whiff of entitled elitism that in part helped usher him into office, began to smell bad. What the messy hair had wooed, Downing Street shambolisms repulsed. It bears underlining that as scandals tumbled out of the PM office with farcical regularity, elsewhere in Britain the cost of living crisis is as painful as among its erstwhile EU allies. Yes, Johnson did get Brexit done, but incomes are up and Britain is stronger. The lesson here is that even leaders with massive mandates need to be mindful of the fact that the office needs to command at least a measure of respect and authority. And that political parties must respond faster when they sense their leader is proving to be a liability. Johnson exit is no big deal for the world. But it is a reminder to the world elected leaders never to take the governed for granted. A spate of incidents over the past few weeks has left the Indian air traveller apprehensive about safety. Arun Kumar, the Director General of Civil Aviation, spoke to Sarah Sinhala about these midair snags: What is behind the recent spurt in midair snags The aviation minister has reiterated the thumb rule for every sector stakeholder when he said, Passenger safety is paramount Even the smallest error hindering safety will be thoroughly investigated and course corrected. India currently sees about 3,500 daily flights operating in its airspace. On an average there are about 30 incidents everyday like go around, missed approaches, diversions, medical emergencies, weather, technical issues, bird hits, runway incursions and ATC induced. This information comes to us as part of the mandatory reporting system. Overall there is no spurt in incidents except that a couple of operators are facing some issues which we are seized of. A vast majority of the Indian aircraft fleet is relatively young. Voltaire, that most emphatic of emphatic liberals, famously declared, I disagree vehemently with what you say, but I shall defend to the death your right to say it. The problem with such.

Delhi Police Typing-Dated-2023-08-06-Test NO.-10216

Into the challenges associated with Generative AI, drawing inspiration from China recent AI regulations. We also must highlight the importance for the Indian Government to lead in harnessing the potential of Generative AI, with a particular focus on the Made in India Stays in India approach. Challenges in the Context of Generative AI Generative AI, known for its ability to create, learn, and replicate human-like content, brings forth several challenges that require careful consideration. One primary concern is the potential impact on employment, particularly in industries heavily reliant on manual labor. A report from Analytics Insight, a leading media authority in artificial intelligence reveals that Generative AI advancements can lead to workforce disruptions and job displacements, requiring proactive measures such as up skilling the workforce to adapt to new job roles. Another significant challenge is the ethical implications of Generative AI. The ability to generate realistic content raises concerns about the spread of misinformation and deep fakes, threatening the trust and integrity of information. A report, in this respect, highlights the risks associated with the misuse of Generative AI, emphasising the need for robust regulatory frameworks to ensure responsible use and protect societal interests. Furthermore, Generative AI rapid advancement also raises concerns about data privacy and security. The abundance of data required to train Generative models increases the risk of privacy breaches if not managed appropriately. In this context, a report by the leading consulting firm KPMG emphasises the importance of secure data practices and highlights the need for stringent data governance policies to protect user data. Drawing Inspiration from China AI Regulations China recent regulations on Generative AI offer valuable insights for other countries. By prioritising the risks associated with deep fakes and misinformation, China aims to maintain social stability and protect national security. These regulations emphasis the importance of adopting a balanced approach that considers both the benefits and potential harm of Generative AI. India Path to Leadership: Made in India Stays in India Taking inspiration from China recent AI regulations, the Indian government has a unique opportunity to lead in harnessing the potential of Generative AI while safeguarding its citizens and national interests. Emphasising the Made in India Stays in India approach will enable India to establish an indigenous Generative AI ecosystem that aligns with its economic and political goals. To achieve this, the Indian government should focus on the following strategies: First, establish a comprehensive ethical framework for Generative AI, ensuring accountability, transparency, and responsible use of the technology. This framework should address concerns related to deep fakes, misinformation, privacy, and security. Second, foster a robust research and development ecosystem by providing incentives and funding to academia, start-ups, and industries. Encouraging collaborations between academic institutions and industry players will accelerate innovation in Generative AI technologies. Third, launch skill development programs to equip the workforce with the necessary skills required in the era of Generative AI. This will facilitate individuals in adapting to changing job landscapes and leveraging the opportunities presented by this technology. Additionally, establish st

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-06-Test NO.-10219

Will promote trust and responsible data practices. Conclusion Generative AI presents opportunities and challenges globally. By adopting the Made in India Stays in India approach and drawing inspiration from China regulations, India can lead in harnessing Generative AI while safeguarding its interests. Addressing challenges through ethical frameworks, research, skill development, and secure data practices, India can navigate complexities and emerge as a global leader. Adhering to the formula is crucial. It requires Ethical Leadership, Empowerment, Visionary innovation, Advocacy for balanced policies, Trust through robust data governance, and Empathy for ethical, social, and cultural dimensions. With the adoption of India can pave the way for innovation while upholding ethics and societal well-being, shaping a future where Generative AI thrives. Way Forward In a world without regulations, generative AI could run rampant, cause chaos and uncertainty. Misinformation and deep fakes could flood every corner of society, eroding trust and distorting reality. Economic disparities could widen as automation replaces jobs, leaving many struggling to adapt. Data breaches and privacy infringements could become the norm, further fueling anxieties and division. But as the world would embrace the principles underlined through a remarkable transformation could unfold. Ethical leadership could ensure responsible use of generative AI, restoring trust in information and promoting transparency. Empowerment initiatives could equip individuals and businesses with the skills needed to thrive in the driven economy, narrowing the digital divide. And Finally, Visionary innovation could propel breakthroughs in sectors like healthcare, energy, and education, bringing about advancements that improved lives, apart from Advocacy for balanced policies and regulations safeguarding national interests, preventing misuse and preserving societal harmony thereby transitioning the world into a harmonious and prosperous one. India the birthplace of yoga, breathes ancient wisdom into the modern world, fostering harmony and well-being through the timeless practice of self-discovery and inner transformation. As World Yoga day approaches in the month of June, Yoga has become increasingly popular as a means of promoting physical wellbeing and overall health. However, like any physical activity, practicing yoga carries the risk of injuries if proper precautions are not taken. One essential tool that plays a significant role in preventing injuries and enhancing the yoga experience is the yoga mat. A yoga mat is a specially designed, cushioned surface that provides a stable and supportive foundation for practicing yoga poses and exercises. It offers several advantages that contribute to injury prevention and physical wellbeing during yoga sessions. Let explore some key aspects of the role of yoga mats in enhancing safety and promoting overall health. Stability and Grip: One of the primary functions of a yoga mat is to provide stability and grip. The surface of a yoga mat is designed to prevent slipping, allowing practitioners to maintain balance and stability during various poses. This feature is particularly crucial when practicing standing or balancing poses that require a firm footing. With a stable foundation, practitioners can focus on proper alignment and posture, reducing the risk of injuries caused by accidental slips or falls. Cushioning and Joint Protection: Yoga mats are typ

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-06-Test NO.-10220

The knees, wrists, and other vulnerable areas during 2648711 weight-bearing poses. This cushioning effect not only minimizes the risk of immediate injuries 786 but also prevents long-term damage to joints, tendons, and ligaments. Hygiene and Cleanliness: Yoga mats act as a personal barrier between the 981 body and the floor, creating a clean and hygienic practice space. Yoga studios and fitness centers often have 266581 communal mats, which can harbor germs, sweat, and odors from multiple users. Having your own yoga mat ensures that you are practicing on a 2846 clean surface free from potential health risks. Regular cleaning and maintenance of your mat further promote hygiene, preventing the spread of bacteria and fungi. Comfort and 249 Support: Yoga mats offer comfort and 9814 support, making the practice more enjoyable and accessible to practitioners of all levels. The softness and cushioning provided 24168 by the mat can alleviate discomfort, especially when performing poses that require 321125 prolonged contact with the ground. Enhanced comfort encourages individuals to stay engaged in their practice, leading to a more consistent and rewarding yoga journey. Mindfulness and Connection: Yoga is not solely about 32815 physical exercise; it is also a practice that promotes mindfulness and connection between the body, mind, and spirit. Having a dedicated yoga mat creates a designated space for practice, both 32515 physically and mentally. The act of unrolling the mat becomes a ritual, signaling the beginning of a mindful session. This connection to the mat helps individuals establish a sense of grounding and focus, allowing them to fully immerse themselves in their 26548 practice and reap the holistic benefits of yoga. Yoga mats are an integral part of every 26518 yoga session and play a vital role in preventing injuries and enhancing physical wellbeing during yoga practice. The best part is that these days one can find multiple designs or customised designs on the mat suited to ones requirement. The mats stability, grip, cushioning, and hygiene features contribute to a safe and comfortable environment for practitioners. As technology get upgraded, yoga mats are becoming fancier, lighter and 2364168 made from environment friendly materials and come in various sizes to suit different 6518 age group requirements. By using a yoga mat, individuals can protect their joints, improve balance, and create a dedicated space for mindfulness and connection. Investing in a high-quality yoga mat is a valuable step toward maximizing the benefits of yoga, ensuring 2648 a safe and enjoyable practice that promotes both physical and mental health. Organizations of all sizes execute several business development strategies to establish 29848 themselves and earn a significant market share to stay ahead of the curve. Achieving this status is not an easy task if organizations do not evolve and adopt new business models by leveraging new technologies. Today customers across the globe are present online more than before and want access to services days. Organizations will be in a position to offer that only when they modernize their outdated and legacy systems. Aging systems are incompatible with new technologies, pose security risks, and are not flexible and scalable, and without getting updated, businesses cannot grow exponentially in today hypercompetitive world. The majority of the legacy systems are not flexible and scalable due to their monolithic architect

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-07-Test NO.-10221

A declaration championing the cause of freedom of expression, what might be called a liberal lip and let lip policy, is that it invites the illiberal riposte of I m glad you let me disagree with you, and I all defend to your death your right to not disagree with me. In short, can liberalism in order to be truly liberal, condone its opposite, illiberalism and bigotry That the dilemma that liberals all over the world face, perhaps more so in India where innate diversity of creed and credo often leads to conflicting points of view. A notable instance was the Shah Bane case in which a supposedly secular, and therefore deserving of liberal support, Congress came out in favor of conservative patriarchy at the expense of individual freedom and women rights. The Grand Old Party did so for obvious Grand Old Political reasons but it left many liberals tied up in tangled knots, or tangled notes. On the one hand, the decision of Congress merited liberal endorsement in that it supported the rights of a minority community. But on the other hand, by doing so it went against the gender minority of women within the minority community. On yet another hand, would it be liberal or illiberal to let these two minorities be at liberal liberty to sort it out between themselves That the problem with liberalism. It can sprout so many hands that it runs the risk of resembling a multi tentacle octopus. Which is what is happening with Nippur Sharma who with her less than politic observation about a religious head has put not just her foot but a fatwa in her mouth, resulting in an international cause Celebex, that led to much liberal many handed head scratching. Should her utterance be condemned because it hurt the sensibilities of a particular faith Or should it be condoned in the name of free speech Another term for liberalism is laissez faire, Allow to do. But only too often such laissez faire becomes a dilemmatic less is fair. Nervousness happens when you view yourself from others eyes. You have to learn to respect your own intelligence and pattern of growth. A cat has its own qualities and the dog its own. One has to optimize one potential and not compare and whip oneself with others potential. Why do I get nervous when I have to make a presentation in front of others There are three patterns one has to be aware of: looking good, feeling good and being good. Looking good is where most of us operate and the best platform to come from is being good. Looking good depends on others endorsement. It makes you nervous thinking whether they will appreciate you or not. How to change this pattern from looking good to feeling good to being good Drop giving importance to looking good; don be crazy to win others appreciation. Others appreciation may be needed in corporate life, but one need not be crazy about it such.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-07-Test NO.-10222

Crazy energies give you imbalance. Imbalanced energy is a disease. Disease is when ease is disturbed. Transfer giving importance from looking good to feeling good. Just feel good. You take a bath, there is a spontaneous experience of feeling good but validate by telling yourself that it feels great. Talk to yourself and just give bodily expression to your feeling good. important thing is changing your values to believing that being good is the most important thing. Value is a value if the value is of value. Be in the company of people who value being good as their top priority. Their energies will influence you. Whenever you are nervous check yourself and change yourself to being good. Don't suppress your energy of being nervous. Create pockets of psychological exercises to let go these energies by screaming, dancing and by doing certain types of meditations. When you don't give physical vent to your nervousness by laughing or screaming, then they get deposited in your body and subconscious. Then they start controlling or influencing your life. You express nervousness through actions like biting your nails and shaking your legs. national Education Policy NEP 2020 reiterates that higher education plays an important role in promoting human as well as societal wellbeing and in developing India as envisioned in its Constitution a democratic, just, socially conscious, cultured, and humane nation upholding liberty, equality, fraternity, and justice for all. The du jour NEP calls for remodeling higher education to pave way for sustainable livelihood and economic development of the nation making it a knowledge economy in the hindsight that it is the third largest higher education system in the world. The limitations of the existing higher education system are to be surmounted through reworking on various fronts. Multidisciplinary Undergraduate Education Among different approaches to accomplishing the goal of rolling out thoughtful, well rounded, and creative ones, multidisciplinary undergraduate education is one of the key changes proposed by the NEP. It stipulates to enable an individual to study one or more specialized areas of interest at a deep level, and also develop character, ethical and constitutional values, intellectual curiosity, scientific temper, creativity, the spirit of service, and 21st century capabilities across a range of disciplines including sciences, social sciences, arts, humanities, languages, as well as professional, technical, and vocational subjects. Apparently, the galactic list of desired attributes in a graduate entails varying inputs from different domains and many of these have been part of formal education programmer starting from primary, to secondary and higher secondary education. The novelty lies in facilitating the study of additional specialized areas along with the conventional contents of the existing programmers. As regards the concept of major and minor is concerned that also has been offered by a few premier HEIs in the country in the past but the basification of this concept is propelled to all HEIs by NEP. Higher education institutions HEIs are in the process of changing curricula to create space for multidisciplinary subjects. Honest introspection shows.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-07-Test NO.-10223

That the introduction of multidisciplinary courses lessens the opportunities for teaching the subjects from the core domain of the respective programmer. The UG programmers aiming to imbibe students with typical expertise about their programmer will have to accommodate a few new subjects to make them multidisciplinary. The stress laid on revamping higher education demands a paradigm shift in the teaching methodology to achieve the desired objectives. The pedagogies like experiential learning, project based learning, problem based learning, active learning, etc. have been tried for quite some time but are not of much use in all spheres. The time frame for accomplishing the inculcation of diverse capabilities in a student pursuing undergraduate education remains 3 years or 4 years. However, NEP categorically advocates a 4 year multidisciplinary Bachelor programmer, since it allows the opportunity to experience the full range of holistic and multidisciplinary education in addition to a focus on the chosen major and minors as per the choices of the student. Drawing the cue from the quality enrichment of higher education being at the core of NEP, the policy does not ostensibly demand the reduction of any 4 year UG programmer to 3 years. Moreover, any attempt to truncate the duration of the existing 4 years UG degree programmer to 3 year UG degree is bound to debilitate respective ongoing programmers as it can be realized without removing the number of courses that were offered earlier. This is much more vulnerable at this moment when NEP mandates for insertion of certain multidisciplinary courses. Apprehensions of remodeling HEIs heading to recast their UG and PG programmers have to be careful about the possible implications of the changes incorporated into them in a specific context to the prevailing culture. The curriculum frameworks of existing programmers are successfully creating competencies with global acceptance as testified by the huge demand for Indian students in institutions organizations abroad. It a tightrope walk for HEIs. The amendments in the prevalent curriculum should neither prostrate the rigor nor dilute the quality of the programmers. Every programmer has certain essential subjects for its major specialization and embedding it with a few more subjects for value addition of respective degree with minor in other domains may definitely open up new opportunities but the purpose of seeking education is not only to fetch livelihood. Also, the efforts to have few multidisciplinary subjects as part of the curriculum framework by sacrificing the core subjects may degrade quality in the major specialization. The capability enhancement due to multidisciplinary subjects and or minor specialization may or may not compensate for the quality loss in the core domain of the respective programmer. As time passes, this may culminate in the absence of competent human resources in the respective domain s and enfeebled competencies may endanger knowledge creation. For example, the ample job opportunities in the computer centric domain should not germinate misperception of the core engineering domains of civil engineering, mechanical engineering, electrical engineering, chemical engineering, etc. becoming irrelevant while the need for talented.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-07-Test NO.-10224

Ones from every domain is indispensable for a sustainable civilization. Theoretically, the idea of multiple entry and exit appears attractive but the admissions in UG degree have to be carried out on the premise that HEIs and students both aim at the completion of the degree of all admitted students in the stipulated duration of programmer. Contemplation of the socio cultural practices about seeking higher education shows that a child continues pursuing education from kindergarten to graduation post graduation till it facilitates livelihood and the passion interest does not have much prominence in career planning. The exceptional ones who are unable to complete the programmer may leave in between with a certificate diploma as per their respective exit policy. This disturbs the revenue model of both public funded and self funded HEIs due to their dependence upon the fees received from students. The establishment of the Academic Bank of Credits ABC offering centralized storage of academic performance of all students is a welcome move as the student performance will be centrally available for consideration of HEIs. Howbeit the equivalence of the examination evaluation outcome from more than 1043 Universities and 11779 standalone institutions needs to be established. In the absence of any acceptable benchmarking the HEIs may have quality concerns and reservations in accepting the credits passed from other HEIs. Also, lateral admission to such students who already competed but failed to secure admission in higher ranked HEIs, may not augur well with the higher merit students of high ranked HEIs who got admitted after stiff competition in the first year. For example, any student completing a set of subjects from an institution may drop out from it and aspire for admission to better rank HEIs in subsequent stage i.e. after 1st year or 2nd year, or 3rd year in a 4 year degree programmer. In the case of lateral admissions failing in keeping pace with their peers in the classroom may eventually burden the HEIs with failing students and affect overall performance. There should not be any hesitation in accepting that the higher education system of the country has matured itself reasonably and fairly succeeded in ensuring its worldwide acceptability. The presence of Indian students in the best HEIs abroad is a testimony to it. Undoubtedly, there has been the expansion of higher education for increasing gross enrolment ratio GER too but the same is not in coherence with the enabling infrastructure, good quality teaching non teaching human resources, and institutional governance. The refining of the curriculum has been a continuous exercise carried out by all HEIs periodically for meeting the contemporary needs of society from the graduating students as per their capabilities. Therefore, the implementation of the multidisciplinary education model warrants due care so that the new curriculum framework does not endanger the engraining of core strengths in the specialized domains. The objective behind the NEP to usher the country into a knowledge economy through qualitative improvement in higher education can only be cherished by strengthening the competencies.

Delhi Police Typing-Dated-2023-08-07-Test NO.-10225

And capabilities of students through rigorous teaching learning processes while taking care of character building, scientific temper, creativity, the spirit of service, concern for humanity and sustainable surroundings. It opportune time for the academics to carefully remodel the curriculum and reframe teaching methodologies that contributes in knowledge creation and not merely to fetch employment, as job will always be a consequence of capabilities of an individual. Amongst all the western hotspots, the US continues to be one of the most preferred destinations by Indian students for pursuing higher studies. As per the World Reputation Index, 2022, seven out of the top ten universities having the highest reputation for curriculum and studies are from the United States. In the context of the education rankings, the US has held the numero uno spot consistently for years. Hence, US based institutions are always on the list of students when it comes to preferences and trying to be in the best colleges and universities for pursuing higher education. In the previous year, the total number of Indian students in the US increased by 12%. Even though the impact of the Covid 19 pandemic on these numbers cannot be ignored, it is also important to underline that since the pandemic is subsiding slowly, the overall number of students from the country to the US is expected to rise at a significant pace. However, the critical factor is to find out the reasons behind these exciting and encouraging statistics. Presence of Top Ranked Institutions It is important to reiterate that some of the best institutions and colleges in different streams and disciplines are located in the country. When a student thinks about pursuing higher education in a foreign country, one of the first thoughts is the best institutions that can impart the requisite skills and knowledge for overall professional development. It is no surprise that amongst the top fifty universities in the world, 15 are located in the US. The country has consistently maintained the highest standards for studies that promote a liberal and open learning environment for people worldwide. Career and Growth Opportunities The US is the largest economy in the world. Even though the economy growth is not as much as in other emerging countries, the overall size of the economic system and the infrastructure for growth available for companies provide a wide range of career and growth opportunities for students belonging to different streams. The US is home to almost 64.7% of the total unicorn start up companies globally, thereby signifying that the growth opportunities in the country are unmatched by any other nation in the world. The country has almost 33% of total MNCs currently operating globally, thereby re establishing its might in the corporate sector. Hence, a student from India can expect to be provided with the highest level of education and be employment ready due to the presence of companies providing a lot of opportunities for growth and career expansion. Flexible Academic Environment One of the salient features of America.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-07-Test NO.-10226

Students are open to diverse viewpoints, and the overall thought process improves by interacting with co students and teachers from diverse backgrounds. It helps promote tolerance among students, which is a critical aspect of learning and gaining knowledge from different cultures. Conclusion There are practical, academic, and educational reasons why the United States is considered the most preferred nation by Indian students for pursuing higher education. This trend is expected to continue in the future since students have access to reliable information through different media and pursuing higher education in the US has become more streamlined than before. It took west Bengal Chief Minister Mamata Banerjee to by junior doctors in the State was a meeting with the agitating medicos and a credible assurance that their safety was a priority for her government. The attack on a junior doctor on June 10 over the death of a patient had sparked the agitation, which spread to other parts of the country when it appeared that the State government was reluctant to negotiate with the striking doctors. Now that Ms. Banerjee has reached out to young doctors and conceded that their demands are genuine, the government, in West Bengal and elsewhere, must focus on addressing the deficiencies afflicting the health care system as a whole. Reprisal attacks on doctors by agitated relatives of patients who die during treatment are known to happen. Such violence is invariably the result of systemic problems that adversely affect optimal attention to patients, such as infrastructural and manpower constraints. It is apparent that doctors work in stressful environments, sometimes under political pressure with regard to admissions. Several States have enacted laws to protect doctors and other health care personnel from violence. Last week, Union Health Minister Harsh Vardhan wrote to State governments highlighting the need for stringent action against anyone who assaults doctors. He asked States that do not have a law to protect doctors against violence to enact one, and circulated a 2017 draft of a law that envisaged imprisonment besides recovery of compensation from perpetrators for loss or damage to property. However, is such a law really effective? Ironically, the epicenter of a strike that involved nearly the entire medical fraternity across the country has such a law too. Like the law in most other States, the West Bengal Act provides for a three year prison term and a fine, which could go up to 50000 to anyone indulging in violence against any Medicare service person, which covers doctors, nurses, medical and nursing students and paramedical staff. Jet Airways may have finally run out of runway. Two months after Jet halted all flight operations, lenders to the beleaguered full service airline have decided to refer it to the National Company Law Tribunal and initiate insolvency proceedings in a bid to recover the money owed to them. The insolvency lenders consortium arrived at this conclusion after unsuccessfully trying to rope in a white knight an investor who would have helped put the airline flights back insolvency.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-07-Test NO.-10229

In the air, thus saving thousands of jobs and potentially helping turn around the carrier. And while, theoretically, the Insolvency and Bankruptcy Code was conceived to help achieve a resolution that could potentially protect a running conceived business and help insolvency revive it through capital restructuring under a new promoter, in Jet case the chances of a resolution seem rather remote now. The lenders have to shoulder a fair share conceived business of the blame as the delay in initiating the insolvency process has drastically eroded some of the airline key initiating assets, including customer goodwill, its aircraft fleet, routes and landing slots and even its experienced flight crew. Ironically, while the banks may have viewed Jet request for emergency lines of credit in the run up to the insolvency suspension of operations as good money chasing bad money, nothing could potentially kill an airline more effectively than protracted grounding. And one does not even need to look too far back in than time to recall what happened to Kingfisher Airlines. It would surely have been instructive for the creditors conceived business to revisit the Chapter 11 bankruptcies that a clutch of U.S. legacy airlines conceived business opted for in the early 2000s. He decision to form a to the Lok Sabha and the State Assemblies is a significant step towards achieving Prime Minister Narendra Modi objective of synchronising elections across the country. The fact that he took the initiative to convene a meeting of leaders of all political parties so early in his second stint in office shows that he attaches considerable importance to it. Advocates synchronising of such elections point to potential benefits. There is the obvious advantage of curbing the huge expenditure involved and reducing the burden on the manpower deployed. The second point in its favour is that ruling parties can focus more on governance and less on campaigning. The idea that some synchronising part of the country is in election mode every year, resulting in impediments to development work due to the model code of conduct being in force, is cited in favour of reducing election frequency. But there are challenging questions of feasibility that the political system must contend with. First, it may require the curtailment or extension of the tenure of State legislatures to bring their elections in line with the on this. Another question is: what happens if the government at the Centre falls? The Law Commission, in its working paper on the subject, has mooted the idea of a constructive vote of confidence. That is, while expressing loss of trust in one government, members should repose confidence in an alternative regime. Another idea is that whenever mid term polls are held due to loss of majority, the subsequent legislature should serve out only the remainder of the synchronising term. These measures would involve far reaching changes to the law, including amendments to the Constitution to alter the tenure of legislatures. The New India that the President mentioned is a departure from.

Delhi Police Typing-Dated-2023-08-07-Test NO.-10230

That founding vision, and there was no ambiguity on that aspect. He struck a chord with the constituency of the government, but not with all. The notion that there is a non sectarian development agenda that is impervious to identity politics is good to have, and constituency the Prime Minister evangelical fervor in driving its schemes is laudable. But triumphalism around many schemes such as the Swachh Bharat Mission has deflected public attention from the serious tasks ahead and an honest discussion on constituency achievements. New focus on water conservation and management constituency and rural economy is not a moment too early. These are critical areas. Mr. Kovind also spoke of the government intent to expand scientific research and higher education. A speech by the President is significant not for the technical details it offers, but for the vision. The cultural nationalist agenda of the ruling dispensation that has made intellectual curiosity and academic integrity dangerous in India is not the route to any of constituency these goals. The restrictions on cattle trade and violence against those employed in it mostly Muslims and Dalits have not merely become a protracted communal conflict but are also among the factors that have pushed the rural economy off the rails. Announcing yet another constituency scheme for cattle, as the President did, is not confronting the real, self inflicted problem. What differentiate one dispensation from another are not the material ambitions but the social purpose and direction of such pursuits. The clarity on that aspect in the address may be constituency stimulating for many, but certainly not good for India. Another notable decision taken by the council was the one to extend the tenure of the National Anti-Profiteering Authority by two years, till November 2021. Further, the council increased the quantum of penalty that could be imposed by the authority on profiteering companies, from the current maximum imposed by of 25,000 to an additional 10% of the profiteered amount. Given that the government has increased the powers of the anti-profiteering body, it would not be surprising if the body becomes a permanent feature under GST. This does not send a promising message to the business community ahead of the Union Budget, scheduled to be presented in Parliament on July 5. The anti-profiteering clause assumes that government action is absolutely necessary in order to pass on the benefit of tax cuts to consumers, or else tax necessary cuts may simply end up adding to the profits of businesses. This is wrong. While businesses naturally try to profit from lower taxes, the forces of competition make sure their profit margins are driven back down to normal. The alternative of having a bureaucracy to deal with the issue makes profit look like a bad word, and encourages rent-seeking by corrupt authorities. Although GST collections have been encouraging in the past couple of months, monthly tax collections have largely been modest since the introduction of the tax regime in mid-2017, failing to meet.

Delhi Police Typing-Dated-2023-08-07-Test NO.-10231

The government own targets most of the time. But such caution may not help the larger cause of the economy, which urgently needs a boost in some form. A significant cut in rates could have sent out the strong signal that the NDA government is serious about pushing through serious pro growth reforms during its second term in office. Shinzo Abe an outstanding leader of Japan, a towering global statesman, and a great champion of India Japan friendship is not among us anymore. Japan and the world have lost a great visionary. And, I have lost a dear friend. I first met him in 2007, during my visit to Japan as the chief minister of Gujarat. Right from that first meeting, our friendship went beyond the trappings of office and the shackles of official protocol. Former Japanese PM Shinzo Abe assassination during an election campaign stop yesterday robs Japan and the world of a consequential statesman. Abe was deservedly Japan globally best known leader in a long time, and not just because he was his country longest serving PM. It was during his second PM stint (2012-20) that Abe tried to free Japan from its conservative cocoon with a foreign policy reorientation and an economic reforms programmer, dubbed Abenomics. Abe was keenly aware of Japan changing geopolitical environment. He had quickly grasped the implications of the rise of an aggressive China and was the original visualiser of the free and open Indo Pacific construct. He was, therefore, a key driving force behind the resurrection of the Quad, realising that Japan had to play an important security role in Asia to counterbalance China. Although revision of Japan pacifist Constitution remained his unfinished agenda, in 2015 his administration did manage to reinterpret the war renouncing Article 9 and pass relevant security bills that allowed Japan Self Defence Force to mobilise overseas under certain conditions. And Abenomics, anchored by loose monetary policy, fiscal stimulus and structural reforms, tried to breathe life back into the stagnating Japanese economy. Results were mixed. Attempts to encourage more women and immigrants to participate in the Japanese workforce came up against deep rooted conservative impulses, which refuse to recognise that Japan is hobbled by a super ageing population. Nonetheless, Abe laid the framework for what a dynamic Japan should be. And this dynamism has been certainly visible in the New Delhi Tokyo relationship, which has deepened with a mutual logistics support agreement and a 2+2 foreign and defence ministerial dialogue. It also helped that Abe and PM Modi developed good personal rapport. Abe believed in India rise and its ability to deliver for Asia. New Delhi and Tokyo must continue to work on his vision. Govt could have made a six month interval between second and third vaccine shots the norm from the booster programmer inception. Official positions have changed multiple times over the last year. Top government experts had first termed boosters unnecessary, though other countries started boosting around mid 2021. From then to a.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-07-Test NO.-10232

Nine month wait for third dose to a three month gap for international travellers to now a six month gap the opportunity to offer citizens extra protection faster is probably lost. That most infections seem mild does mean the virus can mutate into something worse. Plus, those with comorbidities need shielding. Newer BA.5 and BA.4 Omicron sub variants are more contagious and prone to attacking lungs; India is closely monitoring BA.2.75. A South African study indicates neutralising antibodies from previous Omicron infection fell eightfold against BA.4 BA.5, but saw only a threefold decrease among those vaccinated. Boosters need more public messaging. Against 4.9 core booster doses administered, 58 core people are now eligible. In the US and UK, 37 and 59 out of every 100 people have received boosters respectively against 3.32 per 100 in India. Several lakh doses are reportedly on the verge of expiry. Slow decision making ins helping. CMC Vellore trials showed heterologous boosting with Covishield as more efficacious for Coaxing recipients. Similarly, DCGI early June clearance of Corbevax as a heterologous booster awaits further nods. There another question: Would senior citizens and healthcare workers boosted six months ago need a second booster Gol must take these decisions fast. Traders protested GST, labor unions protested against changes in labor laws, there were protests in J&K after the revocation of Article 370, Muslims protested CAA and NRC, farmers protested farm laws, and most recently young job seekers have protested Agni path. Let not get into the merits and demerits of each scheme, which have been debated in opinion pages. Let ask another key question. What are the social and political implications for BJP when it frequently finds itself on a collision course with various interest groups The condition of our planet and happenings in the country conjure up a range of emotions and call for deep introspection. Purpose of life More than a century ago Bah u lash wrote, The purpose for which mortal men have, from utter nothingness, stepped into the realm of being, is that they may work for the betterment of the world and live together in concord and harmony. Today, as we survey the world conditions, it has become clear that, in different nations in different ways, the social consensus around ideals that have traditionally united and bound together a people is increasingly worn and spent. Well meaning leaders of nations and people of goodwill are left struggling to repair the fractures evident in society and powerless to prevent their spread. New world order When the Bab, Bah u lash forerunner, declared his mission in 1844 and paid with his life in 1850, he assured his followers of the new world order that would be established on this planet. Bah u lash presented a blueprint of this new order in which spiritual principles anchored upon institutions of justice would be responsible for the revitalisation of the three protagonists that constitute society, namely, the individual, institutions and communities. appears to be dominant everywhere, from the.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-07-Test NO.-10233

Processes are Cloud Computing, Containerization, Cabernets, Micro services, Server less, Orchestration, and Automation among others. Moreover, to leverage the full potential of cloud services and its micro services architecture it is necessary to modernize legacy applications. While we anticipate more layoffs and budget cuts, organizations have no choice but to prepare for the oncoming recession by cutting costs. One of the ways to do this is by app modernization, as massive amounts of cash are spent on operating and maintaining legacy systems. These outdated applications require very large data storage capabilities in on-premise data centers and a team with special skills needs to be deployed to maintain these outdated legacy systems, incurring more costs. Modernizing the systems can lead to a significant reduction in the IT infrastructure costs. Faster-go-to-market is possible Legacy systems are not flexible enough to accommodate new features even by leveraging new technologies. When the operations are not efficient enough, then addressing the challenges of the users is almost impossible. On the other hand, it is easier to add new features to a modernized system by leveraging a new tech stack in a scalable environment, thereby reducing the go-to-market time. Businesses can get more innovative and respond to new market opportunities and engage with customers more meaningfully. Improved customer experience Today customers expect a better experience than in the past with the incorporation of the latest technologies and trends. As new features are created, manual processes are automated and the user interface is transformed, the customer experience gets better. App modernization gives rise to user-friendly apps, which can be integrated into customer service bots, thus catering to the evolving customer demand. With the modernization of applications and the additional functionality that comes is far better and can act as a differentiator. Increases employee collaboration and productivity Modernization reduces manual effort and time by leveraging Automation, with repetitive tasks taken care of, leading to a significant increase in productivity. Employees are freed now to focus on the higher-end tasks, which is their core objective. New designs that are now created enable streamlining of operations bringing efficiency into the processes. New-age communication and collaboration tools with app modernization undoubtedly improve team productivity as they work together more efficiently. This is not possible with the use of legacy systems where employees experience delays and have to wait for long to get a response or perform a simple operation. Security vulnerabilities are eliminated Legacy systems are an easy target for cybercriminals. New security measures such as multi-factor authentication cannot be used with legacy applications, posing a risk to the organization cyber security posture. But by modernizing apps to a secure and high-performing platform, the chances of data or system compromise are considerably reduced. By modernizing and securing their businesses with adequate access controls, the risk of a security breach is greatly lowered, security vulnerabilities get eliminated and the organization security posture gets enhanced. The several benefits offered by App Modernization are driving the growth of this market. According to Markets and Markets, the App Modernization Services market size is expected to grow from USD 15.2 billion in 2022

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-07-Test NO.-10236

Significant savings in time too. Organizations now have more time to focus on innovation and market reach, contributing to higher revenues and fueling business growth. In today competitive business and technology landscape, app modernization helps organizations stay ahead of the curve by unlocking the full potential of their IT infrastructure. I am not sure if the marketing head or the agency employed by the Chennai-based company I am denying the company the pleasure of being named got a raise or got sacked for this, but the spiel is ingenious. Here goes the press release from the company that claims to make don t chuckle sustainable chocolate that has won a silver in the International Chocolate Awards: From bean to bar, we use Indian cacao, non-refined sugar and real flavor ingredients whatever that means. We have been judged several times in the past due to our minimalistic, paper plastic free up cycled packaging that good. We aim to save the planet via award winning chocolates! Exclamation mark not mine. I am sure the spiced chocolate will be better than the lines. Saving the planet is not always a corporate endeavor some individuals have also taken upon themselves the onerous task of preventing a not-so-slow apocalypse. Take the case of this Tamil Nadu couple whose wedding vow was to produce a carbon-neutral child. How did they go about it? Well, they planted 1,000 saplings in farmlands in Krishnagiri two months before the child was born. If the assumed lifespan of a person is 80 years and that of a tree 40 years, an Indian has to plant 340 saplings to offset his her carbon footprint. Going by that calculation, the couple can make one-and-a-half more babies without taking a shovel again. Moral of the stories: Break a sweat in a farm before the sack, preferably chewing on a bar of sustainable chocolate. On a serious note, these are indeed environment-friendly deeds, only that their marketing makes one cringe. Marketing, according to American strategist Seth Godin who, incidentally, has marketed himself quite well, is no longer about the stuff that you make, but about the stories you tell. But when the stories become too pretentious or fallacious, the message defeats the mission. Listen to Joe Chernov, the chief marketing officer at Pendo: Good marketing makes the company look smart. Great marketing makes the customer feel smart. Paper cups are extensively used as an alternative to plastic cups, as the former are affordable, recyclable and can be broken down faster than plastic. However, most paper cups are coated with polyethylene PE, making them non-biodegradable or non-compostable. PE lining is the most common method followed worldwide to prevent leakage in paper cups and make them more durable. Although PE coated cup papers are recyclable, recycling is time-consuming and needs special facilities, resulting in most PE-coated paper ending up in landfills and water bodies in countries with coastlines. The plastic waste in marine bodies leads to generation of micro plastics which can cause toxic effects on fish and other aquatic life, including reducing food intake, delaying growth, causing oxidative damage and abnormal behavior. As per a report, more than 600 billion cups are produced and sold worldwide yearly, but only 1 per cent of the waste is recycled. PE is harmful to human health and ecology; it has become a cause of concern owing to its extensive use and slow degradation in the environment. What makes PE lined paper cups popul

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-07-Test NO.-10237

Like cost 25151 effectiveness, heat, and liquid resistance. Today, many restaurants and cafes are using reusable paper products lined with PE to deliver their food to customers and are reluctant to switch to 100% to 200% to 300% compostable alternatives because consumers assume these paper products as sustainable. It is time to educate consumers that the paper cups or plates that they see in restaurants are mostly 2511 lined. Consumers must be made aware that several restaurants still project themselves as environment-conscious brands that are not actually contributing anything to reduce carbon footprints. Without a recyclable solution, 35881 lined paper cups tend to pose more hazards to the environment as they are not biodegradable. Consumers should be able to identify the right product that 31541 does not harm the environment and 36494 demand restaurants and cafes to switch to compostable products by projecting the benefits of compost ability. They should also 24114 carry their own water bottles to avoid using these hazardous cups Alternative to 48534 Despite growing consumer demand for plastic-free cups and packaging solutions, 2518 lining has been used by the food and beverage industry for years. 34971 lining on paper cups retains heat and prevents liquid leakage. However, 4978 limits the recyclability of paper cups. Manufacturers of paper cups are now searching for alternatives in the form of agro-residue, areca palm and bamboo to make their products more environmentally friendly. The last few years have witnessed a shift towards adopting agro based residues like bagasse, rice straw, wheat straw and rice husk and other recyclable packaging solutions like cotton bags, jute bags and paper bags. Companies are working towards making leak proof sustainable cups which are environmentally friendly, they are experimenting 248921 today and these sustainable cups might be a thing of the future. For instance, bagasse, the by-product of sugarcane, is used to make tableware that is sustainable and compostable but as robust as their plastic counterparts. Owing to the increasing demand for sustainable food packaging solutions, the global market for bagasse tableware items is expected to expand at 6.8% CAGR between 2021 and 2031 to 2041. Bagasse is also witnessing growth in quick-service restaurants, mobile food vendors, online food ordering business, and catering services creating prospects of growth in the market. Bagasse tableware products are replacing products made out of non-biodegradable plastics in wake of the increasing trend for adoption of sustainable living practices. Customers in the market can currently take measures by shifting to alternative reusable products like bamboo bottles and other such alternatives. Additionally, alternative brands like CHUK are trying to innovate new alternatives to paper cups with ongoing research and development using sugarcane waste bagasse to reduce common issues like leakage to create a viable sustainable alternative. The government must take initiatives to spread awareness of the impact of PE lining tableware products on the environment. Alternatives must be popularized to bridge the gap in the market ahead of banning PE coated paper products. Summing up PE lining is used to render strength and firmness to the product. But the increasing usage of PE lining is leading to health hazards for human beings and harming the environment. In such a position, bagasse-based tableware can be used as an alternati

Family to institutions and agencies of global governance. Bah u lash cautioned that until divine civilisation is combined with socio economic development agenda, the desired result, which is the prosperity and wellbeing of all humankind, cannot be achieved. He indicted those responsible for clinging blindly and selfishly to their particular orthodoxies and divisive ideologies, and stated that they were responsible for widespread disorder and crises. The Bah is believe that institutions of business as well as organisations of government and education will all gradually be guided by new principles and methods in harmony with the animating spirit of this new world order. Human capacity is defined not only by one potential to achieve goals, but also by one determination to take needed actions. There are umpteen opportunities, and vast possibilities. The choices we make are, therefore, an issue of unparalleled importance. Spiritual strength Although financial and other material resources are being mobilised at historic scales to implement the Sustainable Development Goals of Agenda 2030, yet these will never be sustainably achieved without recourse to admonitions and altruistic emotions belonging to the realm of spirituality. Spiritual masters and founders of the great religions Abraham, Ram, Krishna, Zoroaster, Mohair, the Buddha, Jesus Christ, Prophet Muhammad, Guru Nanak and the social milieus in which they were obliged to carry out their missions, have provided powerful motivation for the creation of new and beneficial patterns of individual and collective life. Before he was publicly executed, the Bab had prophesied: Well is with him who fixes his gaze upon the Order of Bah u lash, for he shall assuredly be made manifest. Amongst all the western hotspots, the US continues to be one of the most preferred destinations by Indian students for pursuing higher studies. As per the World Reputation Index, 2022, seven out of the top ten universities having the highest reputation for curriculum and studies are from the United States. In the context of the education rankings, the US has held the numerous Uno spot consistently for years. Hence, US based institutions are always on the list of students when it comes to preferences and trying to be in the best colleges and universities for pursuing higher education. In the previous year, the total number of Indian students in the US increased by 12%. Even though the impact of the Covid 19 pandemic on these numbers cannot be ignored, it is also important to underline that since the pandemic is subsiding slowly, the overall number of students from the country to the US is expected to rise at a significant pace. However, the critical factor is to find out the reasons behind these exciting and encouraging statistics. Presence of Top Ranked Institutions It is important to reiterate that some of the best institutions and colleges in different streams and disciplines are located in the country. When a student thinks about pursuing higher education in a foreign country, one of the first thoughts is the best institutions that can impart the requisite skills and.

Delhi Police Typing-Dated-2023-08-08-Test NO.-10239

Knowledge for overall professional development. It is no surprise that amongst the top fifty universities in the world, 15 are located in the US. The country has consistently maintained the highest standards for studies that promote a liberal and open learning environment for people worldwide. Career and Growth Opportunities the US is the largest economy in the world. Even though the economy growth is not as much as in other emerging countries, the overall size of the economic system and the infrastructure for growth available for companies provide a wide range of career and growth opportunities for students belonging to different streams. The US is home to almost 64.7% of the total unicorn startup companies globally, thereby signifying that the growth opportunities in the country are unmatched by any other nation in the world. The country has almost 33 of total MNCs currently operating globally, thereby re-establishing its might in the corporate sector. Hence, a student from India can expect to be provided with the highest level of education and be employment ready due to the presence of companies providing a lot of opportunities for growth and career expansion. Flexible Academic Environment One of the salient features of America academic dominance could be attributed to the constant changes that its decision makers have made in the environment. Rather than sticking with the learning and teaching processes of yesteryears, the country has constantly expanded its syllabus in all domains, included the latest technology for imparting studies, improved the assessment processes, and helped in the collaborative growth of the students. The students want to be a part of this kind of academic environment, and hence, the US remains at the top of their priority lists. Impeccable Support for International Students The country and different states have a well defined system of getting the students on board and supporting them throughout their stay in the country. There are specialised organisations that work to provide financial aid, counseling, help in employment, and address the usual queries and issues that international students might face in the country. Hence, a student feels secure in a foreign country due to the consistent support and the overall dependable environment that the country offers to students. Melting Pot and Cultural Pluralism One of the most significant shortcomings of higher education could be the impact of regional biases and cultural influences on the syllabus and curriculum. However, the scope of discussions and following the real purpose of imparting higher education is achieved in the US as the country is deemed a global melting point and supports cultural pluralism. The students are open to diverse viewpoints, and the overall thought process improves by interacting with co students and teachers from diverse backgrounds. It helps promote tolerance among students, which is a critical aspect of learning and gaining knowledge from different cultures. Conclusion There are practical, academic, and educational reasons why the United States is considered the most preferred nation by Indian students for pursuing higher education. This trend is expected.

Delhi Police Typing-Dated-2023-08-08-Test NO.-10240

To continue in the future since students have access to reliable information through different media and pursuing higher education in the US has become more streamlined than before. Digital transformation in the construction industry requires harnessing the potential of digital technology to make management more efficient, productive, and reliable. These trailblazing technologies are being used at both the management level and at the field level of a construction project. A construction project involves a very complicated workflow structure covering many layers of variables within its existence, such as the office team, the contractors, and the onsite workers. The variables and stakeholders in the process are all correlated, and even a slight mix up between any of them can cause a construction project to derail from its intended path. Most of the time, ineffective management and tracking cause a lack of coordination within the complex hierarchy of a construction project management team, making the entire process ineffective. Eventually, the results are cost overruns, execution inefficiencies, and even project terminations. The emergence of digitisation in the conventional construction sphere The traditional methods used in construction projects have hampered the industry's overall growth. According to India's Ministry of Statistics and Programme Implementation, 504 projects have been rescheduled, resulting in cost increases of more than 19 ! This is where it becomes necessary to add a digital element to the core of the construction sphere. In the recently concluded Digital Technology in Construction: 2022 survey, the participants were chosen from construction companies operating with a revenue ceiling of \$500,000 to over \$1B annually. Through the survey, it was concluded that 71 of the said construction companies had digital transformation at the top of their priority list, and 77 of the workers in these companies believed it would make their jobs easier. Construction projects lagging due to conventional methods The home base for the major work that happens within the construction industry is the on site location where the project takes shape in reality from the proposed plans. The major players in a typical construction project are the workers on site. The worksite and the workers; it all sounds very simple until we include the decision makers and decision implementers into the picture. The complexity and the tiers of hierarchy in a construction project make the workflow very laborious and time taking. The project owner coordinates from his office with the contractor, who then sometimes communicates with the subcontractors who are directly at the site, and then the workers become the last point in this disorganised information relay system. Historically, construction site information has been maintained and disseminated informally and mostly via a paper based approach. A lack of coordinated site management and communication between field and office workers result in delays and cost overruns, and a decrease in stakeholder confidence. The outcome of the prolonged process that is characterised by the conventional approach has marred the construction industry and created issues in managing project tasks fluidly. Victory from the vice; the three.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-08-Test NO.-10241

That is required The fruition of a construction project is often judged by the three Vs variables, visibility, and viability. These three can be a vice as they can create a catastrophic experience for the project team working or they can be the virtues for a streamlined and seamless project environment. The Variables involved in the process are the on site construction groups, the contractor group, and the owners of the project. If there as a lapse in communication between these three groups, then the quality of the construction project and the management of the assignment can drop downwards. The second V is visibility. On site visibility is a paramount requirement for timely completion, cost effectiveness, and smooth workflow of the project. If the various variables or the stakeholders within the process are linked through an efficient channel of communication which can improve the overall process, then the third V, which is viability, is achieved. When all the Vs are in harmony, the construction project proficiently progresses towards success. Remodelling the construction sphere; the role of construction project management software Due to its delayed acceptance of digital technologies, the construction industry has been stereotyped as a very traditional industry. Incomplete, poorly managed, and inadequately planned; the absence of performance measuring systems, including those pertaining to time, costs, productivity, and quality; and the use of old, outdated techniques for production planning, control, and management can result in missed deadlines and a disorganised approach. However, the construction sphere is gradually allowing the digital footprint within its operational core to achieve the required efficiency. The integration of digital means is evidently remolding the construction sphere. A few leading end to end construction management Saabs platforms in the country have fabricated a mobile first approach for the industry s site workers, managers, and owners with the palpable power of collaboration on apps designed for simplifying communication and collaboration. These applications track project progress, punctuality, material inventory, and bills; automate reporting; detect issues; and manage finances. It is basically a one stop software solution as it provides the power to track and manage worksites. Construction project management apps are the necessary upgrade for the still evolving traditional construction industry. It providing dynamic dimensions like real time information relay between site and office, all in one documentation, and additionally, being mobile first gives these apps an all embracing advantage. Conclusion The sudden shift in the construction sphere has encouraged more precise scheduling with reduced margins for improved project planning. Multiple tasks in the construction industry are supported by digital technologies, including creating the timeframe and budget and monitoring work in real time. Utilising the power of data, contractors may enhance communication, efficiency, production, and safety. Digitalisation of the construction sphere fosters expansion, enhances profitability, and promotes sustainability. CVC firms have been at a nascent stage in India until now as they majorly focused on long term strategic goals and immediate financial returns and gave nominal freedom to the startups. The emergence of tech driven stratus has.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-08-Test NO.-10242

Encouraged the corporate venture capital groups to steadily invest in new technologies, innovative products, and solutions that are compatible with their existing operations. According to the CB Insights report, the number of new rebounded in 2021 after a 6 year low of 144 in 2020 to 221, which was a whopping 53 growth on 2020 data. Since the ecosystem is currently facing the funding winter, its imperative to understand that the cyclical event won affect the tech savvy startups and unicorns with great ideas, and real business models as technology always wins such a slowdown. Here are the five reasons why this is the best time to create a corporate venture capital fund:

Indian government support The government has launched a series of initiatives, funds, and policies to encourage entrepreneurs for generating jobs and innovations to support the startup ecosystem and SMEs. This includes providing financial assistance, technical support, subsidies, business development, growth, product innovation, research, and development, legal support, tax exemptions, grants, a simple criterion for public procurement and credit guarantee schemes, etc. The government has also set up 31 innovation centers, 15 startup centers, 15 technology business incubators, seven research parks, and 500 tinkering labs. The government recently funded the world s largest innovation campus T hub 2.0 in Hyderabad; which plans to foster as many as 20,000 start ups in shaping sustainable business models and scaling up their operations. By the virtue of this, India is set to become an entrepreneurial powerhouse and bring economic prosperity.

Improved quality of entrepreneurs Earlier the main motive of entrepreneurs was to open a business and make profits but in recent times, we have seen an escalation in the startups that are committed to social impact and solving a real problem. For early stage startups, CVCs provide invaluable decades of experience in operating businesses, corporate knowledge, R&D resources, M&A possibilities, and a wide network. Since the entrepreneurs are now purpose driven, tech savvy, customer centric, highly adaptive, and flexible; they have bridged the technological gap and expanded in diverse industries across India and overseas. A CVC fund can maintain consistency in creating wealth, innovation, and value in both businesses; making India a hub of globally relevant products and services. As global expansion creates powerful international brand recognition and improved sales, it makes a win win situation for corporate venture capital firms to create funds to bet on such startups.

Investor development beyond metropolitan The onset of the pandemic has accelerated digitisation across India, and with growing internet penetration, almost 50 of internet users are from beyond metropolitan cities. Nearly 40 of the recognised startups are from Tier 2 and 3 cities including Ahmedabad, Lucknow, Jaipur, Indore, Kochi, and small cities in India. Increased availability of all kinds of educational information about investments and startups on several digital modes, especially social media has led to awareness amongst the general public across India and growing investor maturity. A substantial portion of small city investors started to diversify their investments to more contemporary or.

Delhi Police Typing-Dated-2023-08-08-Test NO.-10243

Alternative financial asset classes from traditional savings avenues. Several industry bodies including financial TIE Con, etc have also provided financial assistance, knowledge, incubation and network opportunities to support path breaking ideas from the small cities of India. Improved participation of foreign investors. Modern startups have created products adopted by financial a global customer base, resulting in high value firms with powerful revenue financial streams. Several nations have found India a lucrative market for investment due to its domestic market. Despite the Russian Ukraine conflict, pandemic and rising inflation, there has been a growth in foreign investments, especially in IT, Pharma, FMCG, financial financial services, etc. With \$ 83.57 billion in 2020 21, the FDI inflow in India was at its highest and is expected to reach \$100 billion in 2022 23 as per industry chamber PHDCCI. This is financial mainly due to the favorable business landscape of India and supportive government policies and reforms across sectors including coal Mining, contract manufacturing, IT, Digital Media, computer software and hardware, medical devices, power exchanges, financial retail trading, civil aviation, defense, insurance, automobile and telecom among orders. The government reviews and modifies the FDI policy often and keeps it liberal and transparent so that India remains an attractive and investor friendly destination. Digital economy financial with the government s digital India program, tech enabled startups, increased incomes, and internet penetration, India s digital economy is expected to grow exponentially with \$800 billion by 2030 registering a 10x growth from 2020. As per a survey by financial McKinsey, the digital economy will unlock productivity and create 60 to 65 million jobs by 2025. Among the 17 top economies of the world, India ranks as the second fastest digitizing economy. The robust foundation of digital infrastructure and augmentation of digital financial access across India will lead to tremendous economic growth as the integration of revolutionary technologies such as data pooling, machine learning, cloud computing, financial blockchain, web3.0, artificial intelligence, etc has led to seamless operations, tracking, and solving real problems in wide range of sectors such as agriculture, medical, environment, financial logistics, e commerce, and finance markets financial among others Along with angel investors and VCs, corporate venture capital CVC firms also play an influential role in funding early stage startups. With the funding capital and financial expertise of modern startups, CVC firms can acquire a competitive advantage, financial access to revolutionary technologies, and innovative companies. This is mainly due to the favorable business landscape of India and supportive government policies and reforms across sectors including coal Mining, contract manufacturing, IT, Digital Media, financial computer software and hardware, medical devices, power exchanges, retail trading, civil aviation, defense, insurance, automobile and telecom among orders. The government reviews and modifies the FDI policy often and keeps it liberal and transparent so that India remains an attractive and investor friendly destination. Digital economy with the government s digital India program, tech enabled startups, increased incomes, and internet penetration, India s digital economy is expected to grow exponentially with.

Delhi Police Typing-Dated-2023-08-08-Test NO.-10246

De globalisation has become a common theme after global value chains were severely disrupted by Covid and geopolitical events such as US sanctions on China and western sanctions on Russia. What some call hyper globalisation of the early 21st century may well have ended, and some once outsourced industries and services are being onshored. But globalisation is still alive and kicking. It is by now firmly established that free speech in the Indian context does include the right to offend. This may well seem outrageous, but that is the undeniable reality, and more so when it comes to the delicate matter of religious faith. Nippur Sharma lost her cool on live television and made comments that were tactless. This triggered international Muslim outrage, provoked rioting in various cities and even led to a grisly beheading in Udaipur and another murder in Amravati. It was an India 2014 redox in Maharashtra 2022. The faceoff within the Shiv Sean between family scions Buddha and Adyta Thackeray versus rebel Kenneth Shined and his followers was the naamdaar vs kaamdaar narrative once again. In 2014, PM candidate Narendra Modi was positioned as both Hindutva hero and chaiwalla son against privileged dynast Rahul Gandhi. Johannesburg in 2003 was still very racially divided. Apartheid was over, but South African whites, blacks and Asians mostly stayed in their own spaces. Finding a restaurant with genuinely mixed clientele was rare. Except, I was told, for World of Samoosas. This was a hole in the wall eatery in Oriental Plaza, a building that was both a result and defiance of apartheid. In the 1960s a nearby mixed neighbourhood was declared white only and most of its inhabitants forced out. To very inadequately compensate local traders, of mostly South Asian origin, they were given a building into which to crowd their shops. Despite the cramped conditions, Oriental Plaza quickly became one of the best locations in the city to buy fabric and samoosas, as the snack is called in South Africa. Sitting in World of Samoosas, you saw white people coming to buy bags of samoosas as ideal starters for a braai, the iconic South African barbecue. The shop gave a free bottle of chutney with every five dozen samoosas. Black ladies with big bags of shopping enjoyed a break as they sat down to freshly fried samoosas, which came in varieties like beef, prawn, spinach & cheese and cheese & salami. South African Indians ordered sweet coconut samosas as a treat. Indians would not be surprised at how samosas bring people together. Despite all our divisions, samosas seem to be one thing we can agree on. In different forms and diverse fillings, they are made across India and have transcended associations with any particular community. When Indian American astronaut Sunita Williams went into space it seemed only natural to take samosas along. Last year an Indian restaurant in the UK tried to emulate this feat by trying to send samosas into space attached to helium balloons, but the stunt.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-08-Test NO.-10247

Went awry and the payload is estimated to have crash landed in France. Perhaps the most poignant tribute to samosas comes from Daman Singh harrowing book *Asylum: the Battle for Mental Healthcare in India*, where she writes about an Ahmedabad based woman named Rajkumari who suffered from schizophrenia. After repeated attempts at rehabilitation failed, due to the hostility she faced from people outside, she returned to the hospital forever: Upon being asked what she missed most, she jokingly replied, Let me think samosas. Yes, that about the only good thing there is outside. They are common enough for a politician like Lalu Prasad Yadav to use it as a slogan, in his slightly inaccurate jab tak samosa mein rahega aloo, Bihar mein rahega Lalu, but can also fuel a start up business. Samosa Singh, a Bengaluru based venture which aims for the rebirth of the samosa, raised \$2.7 million in funding in 2020, while another start up Samosa Party, also raised \$2 million in its preliminary funding in 2021. In its financial submissions, Samosa Party estimated that 60 million samosas are sold and eaten in India every day, which means a market opportunity of around \$3.65 billion. Internationally, samosas are an established business. In 2021 Edmonton, Canada based Aliya Foods was estimated to have annual revenues of \$50 million, from selling over 100 million samosas, along with other Indian foods, to retailers in Canada and the USA, like Walmart and Trader Joe. In the UK, Samosas, a small company based in Wales, was estimated earlier this year to have revenues of 700,000 750,000 pounds from sales of samosas in the UK and Europe. They are planning to open a second factory now, which hopes to start supplying samosas to the UAE. If yoga can be extolled as a great example of Indian soft power, it seems like samosas should be close behind. And yet, as is well known now, samosas did originate in India. They clearly link to the sambusaks of Central Asia, which seem to derive their name from a Persian term. One plausible theory is that they came to India in the era of the Delhi Sultanate with cooks from Central Asia, but this process could have happened in parallel in different places, and through different communities. Middle Eastern Jewish communities like the Baghdadis, for example, make them a lot, because they can usefully be made ahead of the Sabbath, when work, like cooking, is not allowed, and still taste good. Pearl Sofaer memoir *Baghdad to Bombay*, for example, recalls the cheese samosas that were a favourite of her family. This, in a sense, seems to be one key to the samosa wide appeal it easily adapts to fit the needs and habits of different communities. Their contained nature also adapts well for commercial purposes. They pack easily, with little danger of crumbs or leaking liquids, and are also easy to freeze, especially before being fried, which is how they are sold in supermarkets abroad. Quick service restaurants.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-08-Test NO.-10248

Can keep frozen, or ready prepared samosas, and fry them on demand. Samosas adapt in other ways too. They can be big, like the pyramidal Punjabi samosas, or medium sized like triangular patti samosas, or tiny like the bite sized cocktail samosas that are irresistible finger food at parties. The fillings are, of course, the most adaptable part of all, ranging from every possible variation of vegetarian and non vegetarian, to the sweet versions that Indian pastry chefs keep devising. Even the eating can be varied, with samosas broken up into chaat, stuffed into buns for samosa pav or soaked, Burmese style, in a curry. This adaptability is what helped samosas establish such a strong foothold in India, and then move out from here, with the waves of the Indian diaspora, like the indentured workers who went to South Africa, the traders and railway workers who went to East Africa, and then the UK, and the more recent waves of H1B migrants to the US. All it takes for someone to be arrested in India is for them to make a statement that is likely to disturb the public tranquility. This low threshold is the reason why Mohammad Zubair was put behind bars, his innocuous tweet on a Hindi film clip playing on the word Hanuman and now another tweet deemed likely to disturb public tranquility. But he is the only one in 2020, the latest year for which official data is available, there were 1,834 persons arrested for similar statements and acts, quite often for posts on social media. It is natural to lay the blame for their arrest at the Union government door, for the atmosphere of intolerance that prevails in the country. But this is simplistic the rot runs much deeper. This state of affairs is a sorry culmination of the moral corruption of society that is reflected in our politics, our outdated colonial laws, the utter unprofessionalism of our police forces and the sheer inertia of a judiciary that is unable to move with the times. Indian criminal laws have always been a collection of vaguely worded prohibitions. Anyone who commits an act that annoys a member of the public is guilty of public nuisance, anyone who flies a kite dangerously may be imprisoned for six months, anyone who sends offensive messages could be jailed for three years. Leaving aside the propriety of criminalising such acts, to prove each of these offences requires a professional police force that understands the intent of the provisions, can interpret them sensibly and then apply them wisely. This is a tough job. To make matters worse, police in India are expected to do this besides a lot else with wholly inadequate training and woefully meager resources. According to the India Justice Report, in 2020, training accounted only for 1.1 of the total national spend on policing, a shockingly low Rest 8,000 per police officer. Even where money is available, it is not spent over 50 of the modernisation fund of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-08-Test NO.-10249

The ministry of home affairs lies unutilised. Without adequate training and technological resources, it is hardly surprising that police resort to what most convenient when faced with statements that could potentially cause trouble template chargesheets hurriedly put together pinning all sorts of charges hoping that some stick and extra legal methods to extract confessions when things don go to plan. The institutional check against such police excess is supposed to be an efficient and competent judiciary. But the Indian judicial system, particularly at the district and taluka level, is anything but a well functioning institution. Take cases under Section 153A of the IPC that penalises statements and acts that promote enmity between religious groups or disturb public tranquillity the pendency rate in court over the last five years has hovered around 90. The police know that they have a very long rope with courts. This is exactly what is happening in Zubair case and countless other cases. A court in Sitapur refused bail and granted police custody ostensibly to recover his mobile phone from Bengaluru. Why the mobile phone from which a publicly available tweet was sent should be a critical piece of evidence to justify continued incarceration, boggles the mind. While the police may make template requests of this sort, courts are expected to do better. Because they don, cases of this nature continue to be filed and the process of navigating the criminal justice system itself becomes the punishment for the accused. With lower courts floundering, one might have expected the high courts and the Supreme Court to step in. There are certainly instances when superior courts have come down heavily on lower courts for not granting bail. But ad hoc admonishments work only up to a point. The pendency of matters relating to speech offences and other cases in the judiciary has reached alarming proportions. Chastising Nippur Sharma and everyone else who makes such statements without adjudicating on them speedily is like an umpire who scolds bowlers for bowling no balls avuncular and well intentioned, but ultimately not performing their core function. If instead, that frustration could be channelled into a refresher course on bail jurisprudence for lower court judges, scientific allocation of cases, appointing adequate numbers of judges and professionalising the administration of the judiciary, the police may think twice before filing frivolous cases. No one in the judiciary appears keen to take these hard, long term measures. In the absence of that, the facts are clear yearly cases registered under Section 153A have increased by 436 from 2014 to 2020. The most dramatic increase is in Tamil Nadu from 16 cases in 2014 to 303 cases in 2020. This is not simply a symptom of which political party is in power. It exposes a society that is quick to give and take offence, willing to allow criminal punishments for innocuous acts to remain on the statute books, and comfortable in making alleged offenders suffer. The unaccountable nature of social media is an active facilitator of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-08-Test NO.-10250

Mandatory and bring PE cups under extended producer responsibility EPR in order to create a circular economy. India is a crucial player in the global clean energy transition, given its status as the third-largest energy consumer in the world as of 2022. As the need to accelerate this transition becomes urgent in the face of rising climate catastrophes, India is taking prompt action to address its high carbon emissions and environmental challenges. This article explores the challenges, opportunities, and potential for India to lead the way towards a sustainable future. India currently experiences a significant increase in energy demand driven by rapid economic growth, which necessitates a shift away from fossil fuels. However, fossil fuels still dominate global energy consumption, continuing to raise GHG emission levels. To bridge the emissions gap, India must triple its solar and wind capacity, exceeding 500 GW in renewable power generation over the next decade, for which the nation has allocated an investment of ₹12.44 lakh crore or ₹12.44 trillion, according to a CEA committee. In 2022, wind and solar made up 92% of India capacity additions to power generation. India electricity use grew by almost 13% YoY to 126.16 billion units in January 2023, reflecting the pace of growth in energy demand. The energy transition requires substantial investments: \$9.2 trillion in annual average spending on clean energy assets, which needs to scale up by \$3.5 trillion more than what it is today, amounting to around \$275 trillion between 2021 and 2050 according to McKinsey. Opportunities Accelerating the energy transition can bring numerous opportunities for India. It can create millions of jobs, enhance energy security, and tangibly reduce nationwide greenhouse gas emissions. The renewable energy sector already employs 11.5 million people globally, with an estimated 24 million new jobs by 2030. India can serve as an example for the world by fostering what is potentially the largest green workforce in the world and building a domestic supply of critical battery materials via recycling, contributing significantly to the fight against climate change on both national and international scales. India has already made strides in green energy production. It aims to become a net-zero emitter of CO₂ by 2070 and generate at least half of its power from non-fossil sources by 2030. The country resources, including its long coastline, abundant sunshine, and various vacant lands, can facilitate renewable power generation via hydro, solar, and wind. The nation thus has the potential to rank among the top global producers of both wind and solar energy. To achieve its target of 500 GW in renewable power capacity by 2030, India has implemented various measures, including the waiver of transmission system charges for inter-state solar and wind power sales, establishing renewable power purchase obligations, and creating Ultra Mega Renewable Energy Parks. The government also supports domestic manufacturing through Production-Linked Incentive PLI schemes. India has also set up innovative green energy trading platforms such as the GTAM Green Term Ahead Market and GDAM Green Day Ahead Market. These platforms enable renewable energy developers to sell power on the open market without signing long-term Power Purchase Agreements. New measures introduced at the Indian Energy Exchange have also resulted in the trade of billions of units of clean energy in recent months. Role of Ener

Delhi Police Typing-Dated-2023-08-08-Test NO.-10253

The hotel industry is a significant contributor to environmental degradation due to its high energy consumption, water usage, waste generation, and reliance on natural resources. Embracing sustainability practices helps reduce these negative impacts and conserve resources. Sustainability aligns with the growing demand from consumers for environmentally responsible choices. Travelers are increasingly seeking eco-friendly accommodations and experiences, and hotels that prioritize sustainability gain a competitive edge in the market. Sustainable practices can enhance a hotel reputation, attract environmentally conscious guests, and foster guest loyalty. Sustainability in the hotel industry can lead to cost savings. Implementing energy-efficient technologies, water conservation measures, and waste management strategies can reduce operational expenses in the long run. Hotels can save on utility bills, decrease waste disposal costs, and even generate revenue through initiatives like recycling or renewable energy production. Moreover, sustainability is closely tied to social responsibility. Hotels that adopt sustainable practices contribute positively to local communities, protect natural habitats, and support local economies through responsible sourcing. They can engage in community outreach programs, promote cultural preservation, and create employment opportunities. In this industry sustainability is crucial for the long-term viability of the sector. As global concerns about climate change and resource depletion intensify, hotels that fail to embrace sustainability may face regulatory challenges, reputational risks, and increasing operational costs. By integrating sustainable practices, hotels can future-proof their businesses and contribute to a more sustainable and resilient industry as a whole. Hotels are not only a place for leisure and comfort but can also serve as leaders in promoting environmentally friendly practices. By adopting sustainable initiatives, hotels can contribute to a greener future while also attracting socially responsible guests. In this article, we will explore the importance of sustainability in the hotel industry. Sustainable Operations and Energy Hotels consume vast amounts of energy, water, and resources on a daily basis. Hoteliers can make a significant impact by implementing energy-efficient practices throughout their properties. This includes installing LED lighting, using smart energy management systems, utilizing renewable energy sources, and optimizing HVAC systems. These measures not only reduce the environmental footprint but also lead to substantial cost savings for the hotel. Implementing sustainable operations can be achieved through employee training, monitoring energy consumption, and conducting regular audits to identify areas for improvement. Biogas Initiatives: Implementing a biogas initiative can significantly contribute to sustainability in the Hotel and help achieve a greener future. To successfully implement a biogas initiative, hotels should conduct feasibility studies to assess the available organic waste streams, invest in suitable biogas systems, and provide staff training on waste separation and management. Waste Management and Recycling Proper waste management is another essential aspect of sustainability in the hotel industry. Hoteliers can promote recycling programs by placing recycling bins in guest rooms, public areas, and back-of-house facilities. Engaging guests through educationa

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-08-Test NO.-10254

And purchasing eco-friendly products. By diverting waste from landfills, hotels contribute to a circular economy and reduce their environmental impact. Water Conservation Water scarcity is a global concern, and the hotel industry has a responsibility to address this issue. Hoteliers can implement water-saving initiatives such as low-flow fixtures, dual-flush toilets, and sensor-based faucets. Additionally, guests can be educated on the importance of water conservation through signage, in-room messaging, and information cards. Implementing water-efficient practices not only helps conserve this precious resource but also leads to cost savings for hotels through reduced water consumption. Sustainable Food and Beverage Practices Food and beverage operations within hotels can have a significant environmental impact. Hoteliers can promote sustainability by sourcing local, organic, and seasonal ingredients for their menus. Supporting local farmers and reducing food miles not only decreases the carbon footprint but also enhances the dining experience for guests. Moreover, implementing efficient kitchen practices, such as reducing food waste, composting, and using energy-efficient equipment, contributes to a greener and more sustainable food and beverage operation. Community Engagement and Social Responsibility: Sustainability in the hotel industry goes beyond environmental initiatives; it also involves engaging with the local community and embracing social responsibility. Hoteliers can support local charities, participate in community events, and promote cultural heritage. Engaging guests in sustainable practices through educational programs and activities, such as nature walks or eco-tours, can create awareness and foster a sense of environmental stewardship. By actively involving themselves in the community, hotels can build strong relationships and contribute to the well-being of the destinations they operate in. Conclusion Sustainability in the hotel industry is no longer an option but a necessity. Hoteliers have a unique opportunity to make a significant impact by adopting sustainable practices that contribute to a greener future. Through energy-efficient operations, waste management, water conservation, sustainable food and beverage practices, and community engagement, hotels can not only reduce their environmental footprint but also attract environmentally conscious guests. By embracing sustainability, the hotel industry can lead the way in creating a more sustainable and responsible tourism sector, ultimately benefiting the planet and future generations. The growing needs of electric mobility, consumer electronics, and renewable energy storage ecosystems. As the renewable-energy generation is only available for a limited time every day, the CEA committee envisages the installation of battery storage capacity worth 51.5 GW by 2030 to provide round-the-clock power to end-consumers. India can leverage innovation in lithium-ion batteries and battery recycling technology to enhance energy storage capabilities and optimize renewable energy utilization. The nation is set to become a preferred destination for lithium-ion battery recycling and reuse, contributing to a circular economy and reducing reliance on virgin mined raw materials. Along with battery recycling, India has begun repurposing used batteries into sustainable 2nd-life Battery Energy Storage Systems BESS, saving 98% of Gages compared to making new batteries, which approximately equals 176,400

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-09-Test NO.-10255

Little else about fast bowling is as intricately dependent on the nature of the pitch as a ball on a good length. Not the Yorker obviously, and not even the bouncer which requires more from the body than the turf. This zone was best exploited by the likes of Glenn Vernon Philander, and Ryan Harris in the past. You can add Mohammed Shamir to that list from those going around today. A good length in today cricket is a thing of uncertainty. Not to batsmen as it used to be, but to the bowlers. It can turn a bowler into a menace or a novice because batsmen practicing range hitting find it easy to line up length balls. There are few as good at it as those from the Caribbean. But, with a little bit of nip or some extra bounce from the surface, this batsmen bowler dynamic can revert to the traditional. All it requires is a little patch of grass in the right position, or sometimes even a foot mark or a crack. On Thursday, both Jason Holder and Kumar Roach showed early that there was something on this Old Trafford pitch in that area. Particularly running in from the Brian Statham end. Four of the five wickets the duo picked came from this end. Jasprit Bumrah would later pick up his first wicket Braithwaite nicking behind, after changing over to the Statham end, and then one more next ball Fabian Allen LBW by one nipping in. It was from this end that Shamir launched India attack and he did it take long to find his spot. It was in the quintessential Shamir zone, where his real threat comes through. His upright seam is most useful when there help off that length, breaking the ball in or out. The middy pace gets exaggerated with the batsman unsure how to line the ball up. The line when just outside off threatens edges, stumps, pads and more. In his first over, Shamir had Gayle edging one inside and then beat him on the outside. Then, he had go on to have Sunil Ambries playing off the inside half of his bat, hit him on the thigh and generally make him look all at sea. It was also from this end that Shia Hope creamed a boundary off that Shamir length. Typically such a shot would have received a bouncer riposte. The bowler can then claim to have the morale upper ground. But at Old Trafford, Shamir could afford to go one better. He proceeded to bowl fuller than the 6 8m lengths that he was targeting. It resulted too in what could be arguably Holder did something similar with KL Rahul the ball of the day the seam upright, the ball pitching and breaking in sharply to go between bat and pad and onto the top of the stumps. Shamir other wicket in his first spell with him shifting the length other way around. The plan to Gayle, he revealed.

Delhi Police Typing-Dated-2023-08-09-Test NO.-10256

I am a Hindu. When I was five years old, I was sent to an English medium school and I was taught about Christmas and Jesus and fell in love with the scenes of Nativity totally. I was never taught about Sanatam Dharma but when I asked my parents about my religion they told me it was more of a philosophy and told me stories about the Ramayan and the Mahabharata. Perhaps I was too young then to understand all the wealth of knowledge and teachings of this amazing philosophy and unfortunately in the school, we learned more about Moghul history and nothing about the great Hindu civilisation that spread from Indonesia all the way to Cambodia, Thailand, Singapore, Vietnam and China. I only got to know this as my work involved a lot of travel and I could not connect how King Suryavarman created the world largest temple and living site in Cambodia. When I saw the complex and the carvings I was stunned. Such an amazing site, such vivid carvings and a Hindu civilisation that had existed from the 12 century to the 15th century in Cambodia, and it had come from India. I had similar experiences in Indonesia, Malaysia, Thailand and Vietnam and even with the Buddhists shrines and places I went to in China. We have so much to be proud off, yet so few of us are united in this pride. There were many Hindus I met who only spoke about the caste system, which they understood as part of Sanatam Dharma but it was not, at least not in the way it is described by the West. If anything the Abrahamic religions had slavery that was accepted. The other thing I noticed was that both Christianity and Islam had one book, which was easily presented as the life of their Prophet, while in India we had a library of books from the Vedas to the Gita and the Ramayan, and several important evolutions in between. Moreover, our philosophy reflected over 5,000 years of civilisation where so much was given to future generations in the fields of astronomy, science, mathematics and the zero. I would add engineering to this as well as the Sword of Damascus was made of the finest Indian steel and when one sees the Kailasha Temple in Ellora, it is an engineering feat that even Western engineers have not been able to figure out. So why are we not able to unite all Hindus with our all embracing philosophy there is one God, Brahman, but this is like divinity and it exists in all of us, every human being. We are all part of the divine. But both Christianity and Islam have much narrower interpretations of this as they both seek to convert. Both religions try to convert non believers into their religion. In Hindu philosophy, there is just Karma. And as we believe in an afterlife, which will be dictated by your good or bad deeds in this life it.

Delhi Police Typing-Dated-2023-08-09-Test NO.-10257

Does propel one to follow a moral and truthful existence without the hellfire bit, which does seem to be rather cruel for a Just God who made this universe. So why are Hindus not more united? Is it because our philosophy and Santa Dharma are not explained easily in one book? Is it because we worship everything on earth from our rivers to nature to fire, space and the earth? Is it because we worship every living creature in our own way? Is it because our philosophy does not reject any form of worship but respects all while other religions are not philosophies but a more rigid form of belief which insists that either you conform to their way or you are a heathen or a kaffir? Surely in the 21st Century, there can be vibrant debates on this, rather than violent objections. On Christianity, there can be, with its reformation, but can we expect the same from Islam? If not, why not? There are several different sects of Islam and not every sect agrees with the other. Should there not be more discussion and debate on this? With a more open society where the Internet is shining a light on every subject, and the truth about any religion or philosophy is just a click away, why is there only one faith that allows no discussion? In light of what is happening around the world, I would think that any philosophy or religion that wants more adherents should have no problem with discussions and debates as it would clarify so much and also help to get rid of the dogmas and superstitions that occur when no one is allowed to talk about or ask questions on belief systems. I would think the more transparent a faith, the more followers it would have, but unfortunately there are vested interests that want a faith to be shrouded in secrecy, almost as if their clerics have something to hide. But with all answers available on social media, I think they may be fighting a losing battle. Indian farms and farmers have braved age old challenges for centuries, with new obstacles added every few decades. Arguably, the agricultural sector around the world experiences similar problems. However, the conditions in India are unique. Therefore, it necessitates solutions designed for the Indian agricultural landscape. From feeding one village to state and country, Indian farms now feed the world in today highly globalised economy. This has regained the spotlight amidst the recent global uncertainties. It has established Indian agriculture influence and contribution on the world map. At this turning point, modern technology is further strengthening Indian agriculture role in the global context. Enabling scientific farming While Indian agriculture shoulders increasing responsibilities, the majority of its problems remain the same. Undoubtedly, challenges related to weather, soil, seeds, irrigation, etc., continue to affect farming in India. But new age technologies & innovations and applying scientific thinking to farming are gradually ushering a change in Indian agriculture perhaps the biggest

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-09-Test NO.-10258

Since the Green Revolution. For too long, farming in India has depended on nature mercy. However, advances in meteorological sciences and satellite farming, backed by emerging digital technologies, like ICT, Iota, Big Data, cloud, block chain, and so on, are making farming predictive and resilient to uncertainties. Satellite technologies are increasingly being used to assess agricultural factors like soil quality and moisture. Weather predictions have become much more accurate and farmers have access to advanced information such as adverse weather patterns, rainfall trends, etc. Facilitating integration Technology is enabling the integration of the country severely fragmented agricultural landscape. Agriculture in India engages 90 to 150 million farmers 93.09 million households. Over 90% of this population has marginal and small 0.2 hectare to medium landholding 10 hectares. The fragmentation becomes evident when one realizes that the average size of operational holding is 1.08 ha. Delivering knowledge, goods & services to such fragmented demography is highly challenging. Digitalisation and electronic market are also playing a critical role in integrating not only the agricultural landscape but the entire food production value chain. It enables sharing the latest scientific knowledge and delivery of goods & services to the farming community. Furthermore, it is building transparency and trust amongst farmers. Farmers have direct access to larger markets and the assurance of transparent prices and a higher return of value. By facilitating traceability, digitalization is instilling confidence in the global market and consumers on the quality of Indian produce and agricultural processes. Introducing automation Western style farm mechanization and corporate farming has not been successful in India. That because, unlike developed and less densely populated nations, India fragmented low landholding farmers do not have the means to own or rent highly mechanized and expensive farming systems. However, unique, affordable and mechanizing solutions like drone technologies are introducing a critical shift in certain farm operations. Drones are helping with accurate field mapping, determining drainage patterns, collecting data & intelligence, crop monitoring & surveillance, agricultural spraying, and seed plantations. Drones are also infusing Indian farming with better resource utilisation and higher energy efficiency, resulting in reduced costs and enhanced productivity. Optimising resources Agriculture is water and energy intensive. With the need for higher output and more production cycles, agriculture is consuming more water than before. This is also resulting in increasing water wastage and decreasing groundwater table. The extensively implemented micro irrigation technologies, such as drip irrigation, are some of the most significant agricultural innovations. Today, over 19% of irrigated land area is covered with drip or sprinkler irrigation technologies. As for energy, the agriculture sector accounts for around one fifth of India total electricity usage. 1 The sector is increasingly leveraging solar technologies to power various farm equipment like pumps, feeders, etc. Motivating a generational shift towards agripreneurship Perhaps one of the most important benefits of farming technologies and innovations is that it is motivating a generational shift back to agriculture. Agritech is making pursuing a career in agriculture fashionable. In the I

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-09-Test NO.-10259

Agriculture sector developed a labor shortage as new generations moved to urban areas in pursuit of professional employment. Now, Aristech is infusing renewed interest in the sector. Educated professionals even from IIT and educated in foreign universities are founding agro tech startups to design technologies that make agriculture a more valued, attractive, tenable, and knowledge intensive sector. This is rekindling the value of farming amongst the agriculturalists of tomorrow. If India is to become the world food bowl, it needs its human resource and intelligence invested in the agricultural value chain. And Aristech is just doing that redesigning the Indian farming landscape of the 21st century. These days, anxiety and stress have become an inseparable part of life, feeding on peace of mind and disrupting the emotional equilibrium. We all in different age groups, genders have different kind of stress and anxieties. For example, the grownups stress of performance and making two ends meet and the want of more. For senior citizens, stress of ailments, and wanting to be better and normal. For children burden of study, exams and results. They are constantly reeling under pressure. There are many factors that make them stressful and anxious the constant need to perform better, get higher grades, outperform their previous records, match up with their siblings caliber and meet their parents expectations. Stress is nothing but just absence of creative imagination. So how does one cope with such stressful and anxious moments? One thing you ought to understand and accept the reality is that as students you have done your best and exams are not the be all and end all of life. Also, you must realize how anxiety disrupts your mental, physical and emotional equilibrium. It turns your life upside down! It creates constriction of our biology which results into constipation, lack of sleep and fear that obstructs performance further. Would you like to treat your body with such toxic reactions? The simplest way to deal with stress and anxiety is to practice Yoga, which is the mother principle of absolute equilibrium. Practice mindful breathing by focusing on your breath as you breathe in air through the nose and remain focused as you exhale the air from the mouth. Practice yoga asana such as Bhujangasana, Viprit karani, Balasana and Dynamic Paschimottanasana to release your anxiety. Double Pavanmuktasana also works wonders. With Yoga and breathing you circulate, you oxygenate and that gives you confidence, clarity and courage. The movements of Yoga along with breathing techniques will help you get relief from mounting stress and rejuvenate your mind and body. Never let anxiety cloud your happiness. Nip it in the bud and start inculcating lifestyle changes such as increasing your social group, adopting meditation, yoga and exercises as a way of life! Never let your anxiety blow up to such proportions that it starts requiring medical interventions. Mingling with natural elements, breathing in fresh air, meditation during sunrise, practicing of analog velum before bedtime all these will help you to empty the mind.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-09-Test NO.-10260

Of its clutter and make you feel refreshed and revitalized with positive thoughts. Practice Mindlessness. This way you can face any challenging situations calmly, especially your exam results. What has macroeconomic management got to do with old filmy villain Alit penchant for drowning his enemies in liquid oxygen, so that the liquid would not let them live, even as the oxygen would not let them die Both are about seemingly impossible tradeoffs. A spectre is haunting India, the spectre of inflation. In fact, the spectre haunts most parts of the world. And persistent inflation is a clear sign of mismanaged tradeoffs. The Supreme Court order to evict, over the next five months, occupants of forest lands who failed to make a successful claim for tenure under the Forest Rights Act, 2006, has once again highlighted the dilemma of reconciling inalienable tribal rights with biodiversity conservation. When the Scheduled Tribes and Other Traditional Forest Dwellers conservation. They would be stewards of forests that have shrunk and become fragmented over the decades. It was another landmark, therefore, when the Forest Rights Act protected possession and conferred heritability of land to over 23 lakh out of 44 lakh claimants who are either specified Scheduled Tribes, or people who have lived in forests traditionally, relying on forest produce for at least 75 years prior to the cut off year of 2005. But over 20 lakh other applicants who could not establish their claim through gram sabhas and appellate authorities have now been ordered to be evicted by July 12. The 17 State governments which have been asked to carry out the evictions must respond by quickly determining whether there were procedural lapses that deprived applicants of due process, notably in making appeals. This process may take time, more so in an election year, and the sheer scale of action required would necessitate an extension of the eviction date. In the ideal scheme, as the Forest Rights Act envisages, forested areas and their biodiversity will be protected by communities, with individuals taking forest produce only for sustenance and livelihood. Such an approach is at odds with the colonial paradigm of forests being treated as a resource run by an opaque bureaucracy that replaced precious old growth trees with monocultures such as teak. Anger and frustration may have prompted Sri Lankan protesters to storm Gotabaya Rajapaksa official residence. But the bottom line and the lesson from recent history like the Arab Spring countries where civil strife has abated is that Sri Lanka needs a functional government to get its act together, conduct negotiations with IMF and major nations, and restructure the economy to make it viable again. Continuing anarchy could lead to agencies and friendly countries interested in Sri Lanka revival developing cold feet. Abhorrent actions like setting PM Rail Wickremesinghe private home on fire don't help the Lankan cause. Wickremesinghe had accepted an unenviable job, betting that his credentials could help smoothen negotiations and expedite lines of credit. Obviously, Lankan people have lost patience and.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-09-Test NO.-10263

Want results immediately. The July 9 protests, coming exactly two months after the May 9 violence that unseated Mahindra Rajapaksa, are a warning to political parties to stop bickering and brainstorm the next course of action, including a unity government and fresh elections. Negotiations with IMF must cross the hurdle of all creditors including China, which accounts for 15% of Sri Lanka external debt, agreeing to debt restructuring. As its nearest neighbor, India must keep generously helping in cash and kind. With inflation topping 50% and the Sri Lankan rupee crashing to 350 for a dollar, food and fuel shortages will worsen without a government in place. Sri Lanka strategic location in the Indian Ocean, through which a busy international shipping route also passes, must stir other nations also to offer more aid to the embattled country. Prudent rainfall management can help it through withering summers and weak monsoons. A white paper with a full assessment of these wetlands and their storage potential should be a priority for the State Sustainable Water Security Mission. The Sustainable Development Goals framework provides a roadmap to storage potential this new era. But progress in poverty reduction, greater equality, better nutrition, universal education and health care, needs state support and strong civil society institutions. Making agriculture remunerative and keeping food prices stable are crucial to ensure nutrition for all. India is set to become the most populous nation. For its leaders, improving the quality of life for its people will be a test of political will. Deepening storage in the four major reservoirs must get priority. Such a project must quantify the approach of installing increase in storage and set an early deadline of a year. These measures can harvest the bulk of the rain in a good year, and prove superior to the firefighting approach of installing expensive desalination plants and bringing small quantities by rail from another district. Tamil Nadu made rain water harvesting mandatory quite early, but failed to follow it up with an institutional mechanism to help citizens implement it. The government should give monetary incentives to NGOs, as NITI Analog proposed in its Water Index report, to encourage them to install systems and show quantifiable recharge outcomes. On the consumer side, devices and practices to reduce wastage should be promoted, especially on commercial premises. Droughts are bottlenecks for profit, and several actors have developed a vested interest in transferring water to the city at high cost. Long term solutions can end this cycle. Not too long back Sri Lanka was South Asia brightest spot with high human development indices. But economic mismanagement threatens a regression, with schools shutting last week, and hospitals running out of medicines and supplies. Already, a chunk of shipping business is shifting to Indian ports as containers are wary of stopping in Sri Lanka. Austerity measures accompanying an IMF bailout will not be popular in a country spoon fed on a steady diet of populism. However, there no other course left but belt tightening and.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-09-Test NO.-10264

A peaceful transfer of power to a credible government that is allowed to work without being subjected to populist pressures. Otherwise, the pain can only deepen and Sri Lanka will transfer struggle to attract tourism, trade and foreign investment as it once did. Around two months ago, Elon Musk said he was being told that the number of bots on the social media platform he had taken it into his head to buy was as unknowable as transfer the human soul. He is now citing the persistence of this unknowing to retreat from the Twitter takeover. A messy courtroom battle is on the horizon. Wherever this dispute travels from here, it has highlighted how secretive social media transfer companies are about the penetration of inauthentic, fake and malicious accounts. Twitter claim that its spam accounts have stayed the same, well under 5%, since 2013, defies belief. In fact, research firm BotSentinel has found that Twitter is not transfer even classifying these accounts realistically. The way in which Russian misinformation was weaponies through Facebook, as well as YouTube and Twitter, in the transfer 2016 US presidential election is perhaps the starkest example of the turmoil such accounts can unleash. But like a pandemic, the disease is really everywhere, transfer inciting not just hate but also violent acts in the physical world. India has seen ghastly What Sapp lynching. A Microsoft survey of 22 countries found Indians 64% the most likely to encounter fake news online. Algorithms are designed to dial up transfer the more infectious and corrosive conversations. Human monitors are pitifully scarce. At Facebook, this job is mostly outsourced and at best pays ten times less than the company median salary. Twitter does insist on real names despite the clear science on anonymity creating disassociation and disinhibition. In transfer short, social media companies should be checking falsehoods by civilizing transfer algorithms, hiring more human monitors and curbing, perhaps banning, anonymity. Musk may or may not have other reasons to not buy Twitter. But Twitter and all of social media have a definite problem. The other alternative is to choose the transfer hardliner Mr. Johnson, who famously, and erroneously, claimed during the 2016 referendum that London was sending 350 million a week to Brussels. His xenophobic remark about Turkish immigrants flooding the U.K. was said to be among transfer the factors that tilted the 2016 outcome. The principal architect of the leave campaign assured Turkish immigrants party men before the current contest that Britain will exit by the October 31 deadline, deal or no deal. Mr. Johnson, a xenophobic remark two time London Mayor, has emerged a clear favorite, polling the highest in all the elimination rounds among Conservative MPs over the past days. Mr. Hunt, on the other Turkish immigrant hand, is seen as a heavyweight whose vast experience in promoting business ventures could refresh the party market friendly image. As Health Secretary he had secured additional funding for the NHS. Mr. Hunt has warned of the dangers of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-09-Test NO.-10265

Leaving the EU without an agreement, including another general election that could damage successor the Conservatives prospects. He leadership race in the U.K. ruling Conservative party has been whittled down to two leadership candidates with xenophobic remark contrasting personal styles and political stances. The current Foreign Secretary, Jeremy Hunt, is a leadership moderate and will face off against his predecessor, the flamboyant and controversial Boris Johnson. Over 100,000 overwhelmingly pro Bruit party members will, in mid July, choose Prime Minister Successor Theresa May successor via a postal ballot. One option to see through their project of a life time is to elect Mr. Hunt, a onetime advocate of remaining in the European successor Union like Ms. May, and risk not realizing the end goal. The night time torching of PM Rail Wickremesinghe private residence this past Saturday July 9, where he and his wife reside, brought a momentous day in Sri Lanka to an ugly close. There is widespread sympathy for the PM, who had willed his house, built by his father, to his alma mater Royal College just across the road. However, reflecting the divisive and hate filled politics of Sri Lanka now, there are also many who do not feel that same sympathy for a man who is seen as taking over the PM post, and bailing out the Rajapaksa led government, at a time when there is widespread public sentiment that the Rajapaksas and government should go. The death occurred last week of Kadi Patta alias Kari Bevu alias Karive Pillai, from suspected homicide, at a tender age of six. Known in the west as Curry Leaf, she was last seen in a healthy state, dancing in the wind on a warm summer day. But she was found the following morning yanked out of the pot she resided in and decapitated, her limbs and leaves scattered to the winds. All efforts to resuscitate her failed, and she was declared dead on Saturday. Three day mourning has been declared in the Rajghatta household, which has suspended making all curries and subzis for which Ms Leaf was an integral part. A post mortem has also been ordered. Acting quickly, authorities have zeroed in on a suspect, a canine of Labrador breed, who witnesses said was seen canoodling with Ms Leaf. Under interrogation, the suspect, Leo Pavlov, a juvenile aged six months, lowered his eyes and slunk away, strengthening suspicion he may have attacked Ms Curry Leaf in a fit of passion, pique, or plain boredom. He is now confined to the doghouse. Thriving in the tropical climates of South Asia, Ms Kadi Patta family was given the scientific name Murray Koenig. She rejected the family name and preferred to be known simply as Curry Leaf, or by her Indian monikers Kari or Kadi. She was lively, vivacious, and brought a sizzle to parties. While her extended family thrives in India, her immediate family immigrated to the US in the 1970, but found it difficult to adapt to life in.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-09-Test NO.-10266

Cool temperate climates. Several early generation elders are believed to have passed away from frostbite during winters. Ms Leaf survived a tricky birth when she had to be incubated indoors. First adopted into the Rajghatta household from the home of Ruche Mena Sharma of Hamilton arrived with two siblings, one of whom passed away in the winter frost of 2020. Another was transferred to a neighbor in 2021 after Ms Leaf showed signs of abundant growth despite being left outside in the cold, unusual for a family that is brought indoors at the first sign of winter. In deference to sensitivities in phantom, the Rajghatta family is withholding graphic pictures of the tragedy. A date for a memorial service will be announced shortly. I had only a little time left adopted into the Rajghatta household from the home of Ruche Mena Sharma of Hamilton and I did not want to waste it on god. This famous quote of French existentialist Albert Camus assumes exponential significance in these turbulent times of relentless sparring over religion and god. We seem to be wasting a lot of our time and energy on god and religion and killing each other. Christopher Hitchens was once asked by a leading American daily, whether he ever believed in miracles. The ever witty Hitchens said that he fully believed in miracles because was it a huge miracle that humans had been killing their fellow humans and taking umbrage for a god they never saw and would never see. That this is happening in the 21st century when the world is facing a legion of humongous issues like poverty, ecological imbalance, disparity, pandemic and global undernourishment is all the more strange. It is time for every individual to sit and mull over the uncertainties that abound our lives and find solutions to them, rather than take god and religion so damn seriously. The Buddha summed it up so nicely, Care for the humans around. Your self sufficient god will take care of himself. Another notable decision taken by the council was the one to extend the tenure of the National Anti Profiteering Authority by two years, till November 2021. Further, the council increased the quantum of penalty that could be imposed by the authority on profiteering companies, from the current maximum imposed by of 25,000 to an additional 10% of the profited amount. Given that the government has increased the powers of the anti profiteering body, it would not be surprising if the body becomes a permanent feature under GST. This does not send a promising message to the business community ahead of the Union Budget, scheduled to be presented in Parliament on July 5. The anti profiteering clause assumes that government action is absolutely necessary in order to pass on the benefit of tax cuts to consumers, or else tax necessary cuts may simply end up adding to the profits of businesses. This is wrong. While businesses naturally try to profit from lower taxes, the forces of adopted into the.

Delhi Police Typing-Dated-2023-08-09-Test NO.-10267

of battery capacity and also consumes an alarmingly unsustainable 500,000 liters of water per Metric Ton. India can now leverage battery recycling technology that reduces GHG emissions by 50% compared to mining and consumes 500 less water per metric ton of raw materials to not only reduce dependence on raw material imports but also become a global supplier of low-carbon energy transition materials. As India emerges as the fifth-largest economy in the world, hosting one of the world fastest-growing GDPs in 2022, the world is looking at India, not just for mutual economic progress but also observing its decisive steps for a sustainable future. India can do much for a greener planet via innovation, effective policy implementation, and building a green workforce to expedite India energy transition while contributing to the world energy transition. Conclusion India energy transition faces both challenges and opportunities. The urgent need to reduce carbon emissions requires swift action and significant investments. However, embracing and accelerating this transition can induce job creation, energy security, and a reduction in greenhouse gas emissions. Currently, fossil fuels remain more affordable than renewables, but governments can help make renewables viable by investing in the sector and scaling up a circular energy economy. India progress in renewable energy production, coupled with its potential in sustainable energy storage and growing battery recycling & reuse industry, positions it to facilitate the world toward a Net Zero CO_{2e} future, becoming a force for the world to emulate. The regulator like Securities and Exchange Board of India (SEBI) in the Indian stock market plays a critical role. They ensure market integrity, investor protection, and maintaining a level playing field for all participants. SEBI is entrusted with the critical responsibility of regulating the securities market and ensuring that market participants adhere to stringent guidelines to maintain market integrity. SEBI thus acts as parents patria of India the securities market. While SEBI mandate for maintaining order and stability, is not disputed. But that entails a responsibility to avoid being seen as arbitrary, discriminatory, or being instrumental in disproportionate actions. However, recent decisions of SEBI penalizing dissimilarly and disproportionately brokers for similar offenses, has raised concerns about possible discrimination in its enforcement actions. Discriminatory actions negatively impact market participants and erode trust in the regulatory system. After an inspection of several brokers in the years between 2013 to 2016, the Adjudicating Authority has come to alleged findings of mismanagement of client funds, including utilizing funds of credit balance belonging to their clients for those with debit balance and mixing client funds with proprietary funds. However, the penalties levied reveal absence of consistency. For instance, M/s Anand Rathi Share and Stock Brokers Limited faced a penalty of Rs. 1,00,000/- for alleged actions like segregation of funds and securities, and scrutinizing of own and client bank accounts leading to the misutilization of funds transferred to / from their Commodities Arm. In contrast, M/s Motilal Oswal Financial Services Limited received a significantly higher penalty of Rs. 17,00,000/- for allegedly misutilizing the funds of credit balance of clients. M/s Nirmal Bang Securities Private Limited was penalized with a w

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-09-Test NO.-10270

Limited, saw a substantial penalty of Rs. 15,00,000 for alleged misutilization of the funds of credit balance of clients for own debit balance clients, failing to incorporate the proper nomenclature Client Account in the name of the bank account maintained for the clients funds, and not maintaining segregation of client funds. What adds to the controversy is the stark contrast between the amounts of misutilization reported and the corresponding penalties imposed. For instance, Systematic Shares & Stocks Limited for alleged misutilization amount of Rs. 62.45 crore was subjected to a penalty of only Rs. 15 lakhs. On the other hand, Nirmal Bang Securities Private Limited alleged misutilization amount ranged from Rs. 3.89 core to Rs. 57.2 core, but they were fined a hefty sum over. 30 lakhs. Similarly, Motilal Oswal Financial Services Limited misutilization amounts varied from Rs. 5.01 core to Rs. 102.06 core, where the fine imposed on them was only Rs. 17 lakhs. In the case of IIFL Ltd. (India Info line), the penalty took an unconventional approach as they were not subject to a monetary fine but rather faced with a two-year ban on client onboarding. This unique punishment further adds to the complexity of the situation, leaving the markets unable to fathom on SEBI rationale behind such decisions. This apparent dissimilarity and disparity in penalties raises concerns about the fairness and consistency of decision-making process. The doctrine of proportionality is a fundamental principle in the adjudicatory proceedings. It requires the assessment of the gravity of an offense to be based on established principles and guiding factors provided by relevant statutes or developed jurisprudence. For instance, under Section 15J of the SEBI Act, 1992 and Section 23J of the SCRA (Securities Contracts Regulation Act, 1956, specific factors such as disproportionate gains or unfair advantage, amount of loss caused to the investors and the past history of defaults are mandated to be considered in determining penalties. Moreover, in the context of penalties imposed by regulatory bodies like SEBI, if different entities or individuals are subjected to significantly dissimilar penalties for similar or near similar offenses, it can be construed as a violation of the principle of equality enshrined in Article 14. The equal protection clause mandates that all individuals and entities must be treated equally under the law, and any discrimination, either in favor of or against specific parties, would be unconstitutional. Transparency and accountability lie at the heart of an effective regulatory system, and the Securities and Exchange Board of India (SEBI) must be seen as aligned with established legal principles and the constitutional mortality of equality. However, achieving these goals necessitates striking a balance between rigorous enforcement and miss discriminatory treatment. The required approach leaves little room for subjective interpretation and necessitates reducing the likelihood of inconsistent enforcement decisions. Consistency in enforcing regulations is paramount. All similar offenses should incur comparable penalties, irrespective of the entities or individuals involved. Such a practice instills confidence in the fairness and predictability of SEBI enforcement actions. The inability to get along with each other is a facet of human condition. The Kauravs could not get along with their Pandav cousins over who should rule the kingdom of Hastinapur. T

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-09-Test NO.-10271

It is precisely to deal with this well understood human frailty that laws and constitutions were devised. Laws are not written to force people to get along with each other. Rather, they usually provide a way out of the impasse that both sides can live with, even if they can scarcely live with each other. But even for this to work, laws assume a modicum of civility between the hostile parties, a good-faith understanding that the rules of the game would not be changed as the game is being played. The Pandas and the Kauravs dutifully put down their weapons at sunset each day, come what may. The laws of war expected this behavior and they were respected. It is nearly a month since the video of two Manipuri women sexually assaulted and paraded naked went viral. The brutality happened on May 4. But the state and Centre stepped in only after a public uproar over the video on July 19. This week the Supreme Court that had earlier described the situation as horrendous and of unprecedented magnitude appointed former Mumbai police commissioner Dattatreya Padsalgikar to monitor the CBI probe on incidents of sexual violence. It also set up a panel of three former high court judges headed by former J&K HC chief justice Gita Mittal to look into relief and rehabilitation. Though the apex court has taken note, Manipur continues to burn. At last count the state administration said there were 6,523 criminal incidents that had occurred. Since the first incident of sexual assault, multiple accounts of gang rape, gender violence and murder have come to light. The debate in Raja Sabah on Monday over the Government of National Capital Territory of Delhi (Amendment) Bill witnessed an unusual intervention. Ex-CJI Ranjan Gogoi while making a case for the bill questioned the basic structure doctrine that limits the legislature power to change core features of the Constitution. It been noted that this was at odds with his view on the subject when he was a Supreme Court judge. It 50 years since the Kesavanada Bharati verdict introduced the basic structure. The pushback however continues. Basic structure is best understood as a non-negotiable aspect of the checks and balances in a parliamentary democracy. It a balancing instrument that works by drawing boundaries. Invocation of basic structure is never abstract. For example, a constitutional bench used it in a verdict delivered in May on the division of powers between GOI and Delhi government. The verdict said that democracy and federalism are a part of the basic structure of the Constitution. How does it work in practice? According to the constitutional bench, a triple chain of accountability is the framework that gives effect to democracy. The chain comprises bureaucracy, a government and a legislature, which emerges after a popular mandate. Consequently, the case went in Delhi government favour. Political parties have not always been accepting of limits on Parliament powers to amend the Constitution. In the 1971 general election, two years before the Kesavananda Bharati case, quite a few parties in their manifestos wanted changes that ensured that Parliament powers to alter the Constitution was subject to judicial restraint. However, over time, all major political parties have been supportive of the basic structure doctrine. Over five decades, its essentiality has been accepted by all stakeholders. But there are and will be skeptics. Some of it stems from judicial overreach and the fear that the basic structure can

Rajghatta household from the home of Ruche Mena Sharma of Hamilton competition make sure their profit margins are driven back down to normal. The alternative of having a bureaucracy to deal with the issue makes profit look like a bad word, and encourages rent seeking by corrupt authorities. Although GST collections have been encouraging in the past couple of months, monthly tax collections have largely been modest since the introduction of the tax regime in mid 2017, failing to meet the government own targets most of the time. But such caution may not help the larger cause of the economy, which urgently needs a boost in some form. A significant cut in rates could have sent out the strong signal that the NDA government is serious about pushing through serious pro growth reforms during its second term in office. The second part of the Buddha quote is more fascinating your self sufficient god will take care of himself. If the entire mankind understands the import of this statement that god can protect himself, all these differences and bloodshed will stop forthwith. Once someone asked Jalaluddin Rumi, why did he react or curse a Jew who constantly abused Allah On the contrary, Rumi used to smile when that vindictive Jew abused the Almighty. Rumi again smiled and told that person that had he reacted, he would have provoked the Jew to abuse Allah with a greater degree of intensity and also given him the impression that his Rumi Allah was so helpless that he needed a mere mortal help and intervention to protect Him. That would have been ridiculous, nay juvenile. No reaction is the best action in the matters of faith and a sense of dignified silence is an ideal remedy in such volatile situations. This is what we call spiritual wisdom. Now followers of all the man made faiths have begun to react and react violently at that. Every follower seems to have become a self styled custodian of his religion. What we all can do to avoid any kind of religious confrontations is follow Rumi recipe in Toto No reaction. The more we react, the more we flare up the situation. We also need to have much more religious maturity. Aldous Huxley called humans, religious pygmies and spiritual dwarfs. A spiritually enlightened individual is never impulsive. He, in the words of British Vedantic Christopher Isherwood, an ocean of religion spiritual placidity. Where that religion spiritual placidity and calmness in today violent humans It, therefore, time to introspect that religion is a private issue and every individual has a moral responsibility to follow his god and faith in a divinely dignified manner without resorting to hooliganism. To sum it up with an Urdu couplet of Rahul Shikarpuri, Tanha chhod de Khuda ko, mazhab ko samajh Tashaddud ko aqeeda nahin kahte, mere dost Leave alone god, understand religion Don mistake violence for faith, my dear friend.

Delhi Police Typing-Dated-2023-08-10-Test NO.-10273

The 2019 Lok Sabha elections, closely followed by the Maharashtra assembly polls gave a resounding mandate to the BJP Shiv Sena alliance. The polls were fought with pictures of Prime Minister Narendra Modi and then Chief Minister Devendra Fadnavis making it to billboards in every constituency during campaigning. Candidates from both parties touted the success of the double engine sarkar which saw an accelerated pace of development, iron hand grip on law&order and a strong focus on Hindutva. In the crowd puller rallies even the ones attended by Uddhav Thackeray, the Central BJP leadership promised that if voted back again, Maharashtra would get the dynamic duo of Modi and Fadnavis back to run the government for yet another term. However, as soon as the results were announced, Uddhav Thackeray usurped the Chief Ministership cobbling up an unnatural alliance with the NCP and Congress, on Sharad Pawar, Sonia Gandhi and Sanjay Raut prodding. Hefty, premium portfolios went into NCP and Congress kitty and soon Uddhav Thackeray and his son Aditya found themselves as mere placeholders, with their allies really running the show. Prior to 2014, for three terms Maharashtra had seen what an NCP Congress government looks like the frequent terror attacks, unapologetic corruption and no consideration whatsoever on enhancing the quality of life for the common man. In 2014, voters finally butted them out. They replicated their mandate in 2019 but were backstabbed by power hungry politicians. Once again, Maharashtra growth came to a screeching halt as old timers like Pawar and the Congress knew very well that the alliance was going to be short lived and focused on milking the cow, exploiting it to their benefit to the fullest. Mahan Visas Agadir MVA alliance, formed singularly to grab power with no real vision for the growth and development of Maharashtra, had no aspirational projects which would propel the state towards an upward growth trajectory. As a result big ticket projects essential for manifold growth were put on the back burner. The Mumbai Metro project was stalled with Uddhav Thackeray refusing to allocate the Supreme Court approved land in Aare to build the crashed, leaving people reeling under the menace of increased traffic due to stalled metro constructions on essential arterial roads of Mumbai. While most work on the Samruddhi corridor connecting Mumbai to Nagpur, reducing travel time between the two cities to half, was initiated during Fadnavis term, the Thackeray government inched at snail speed towards completing even the first phase of the project. The Navi Mumbai airport too which was conceptualised two decades ago and finally saw light of day during Fadnavis tenure was once again pushed to the back burner by the MVA. The Mumbai Ahmedabad bullet train, the first of its kind in India, saw many delays since the MVA refused to speed up land acquisition required for land allocation in comparison Gujarat has already completed the land allocation process required for the construction to begin. As a result, several financiers, international capital funds and banks.

Delhi Police Typing-Dated-2023-08-10-Test NO.-10274

Who had committed to jointly finance these projects developed cold feet and began to pull out of contracts. For instance, recently, owing to the lack of total political will in completing the Mumbai metro on time resulting in infinite delays, French mobility firm Bombardier Transportation revoked their deal to supply coaches for the Mumbai Metro Line Within months of the MVA formation, the COVID pandemic hit. Uddhav Thackeray remained caged into his home throughout the two years of the pandemic. The fact that he refused to tour Maharashtra to inspect the state of affairs and only relied on some yes men for ground updates was disturbing. Adyta too seemed much uninterested in any matter outside of Mumbai. As a stark contrast, Fadnavis was seen frequently jetting across districts one after the other, making his way to rural towns and several government hospitals. Most pandemic management was outsourced by Uddhav Thackeray to bureaucrats like Iqbal Chahal and the Maharashtra Covid 19 Task Force, with him making no meaningful contributions. There are reports that the tracking and attention to genomic surveillance was so weak that when the Delta wave originated it was only when doctors in Amravati began to complain of odd symptoms, did the government wake up to the possibility of a mutated variant. Blatant corruption in procurement of materials and tools required for pandemic management and construction of Jumbo hospitals made news very frequently. People began to get fed up of such a non performing government, especially one they hand elected. The frustration began to show in local polls where Shiv Sena candidates lost ground support, to NCP and Congress advantage. To make matters worse, Uddhav Thackeray remained inaccessible to MLAs of his own party, unwilling to pass on funds to them for development work in their respective constituencies while happily funding the NCP Congress MLAs. NCP Congress ministers too seemed to be quickly clearing files they had vested interests in. The Sena MLAs began to feel slighted, cheated and all in all extremely unhappy with the new power structure. They began to see how Uddhav Thackeray bent over backwards to keep Sharad Pawar and Sonia Gandhi in good humor while compromising on Balasaheb ideals at the cost of Sena own dignity. Sena MLAs finally saw through the fog that their party built with theirs and Balasaheb sweat and blood was put on a path of self destruction by Balasaheb own family. With water way over their heads, they revolted, pulled off a coup. They realised that Uddhav Thackeray Sena and the MVA had lost people confidence. While it would take decades to reverse the damage done to the party over the past two and a half years, the first step would have to be to respect the original mandate of the people and deliver the governance that was promised. It a momentous Monday for the AIADMK. With the Madras high court on Monday allowing the party general council meeting, Edappadi K Palaniswami has moved closer to being anointed the.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-10-Test NO.-10275

General Secretary of the party. Happy as he may be over his ascension, EPS will be worried about something else the Supreme Court hearing his petition challenging a Madras high court order asking the CBI to inquire into allegations of corruption in awarding contracts in the state highways department. The outcome of the general council meeting will not be the end of EPS efforts to rise to the helm once occupied by such icons as MGR and J Jayalalithaa; it will be the beginning of another legal wrangle in courts and before the Election Commission of India. Party posts, the party constitution and its election symbol will all be bones of contention. For now, however, EPS is winning. And his party is losing. EPS had successfully followed some Chanukah tips to emerge the strongman within the party. And those included using mitra friend and vridha sanyoga elders advice, besides patience, benevolence and timing. On the night of Jayalalithaa death, EPS was hopeful of being named her successor, but maintained a peaceful silence when the job went, again, to two time standby OPS. The Salem man waited patiently for the conflict between Sasikala and OPS to reach a flashpoint and, almost obediently, took up the job of the chief minister when asked to. When the verdict in the disproportionate assets case came, Sasikala went to jail and EPS went to Fort St George. Once in the saddle, he started winning over friends from the other side to isolate Sasikala and get even his rival OPS to be his lieutenant. EPS employed a curious combination of fear and favor to keep his flock together and his place intact. He made hay and let everyone in his company do the same when the sun shone. Road projects were sanctioned with gay abandon. Contractors smiled, politicians laughed all the way to the bank. It worked for EPS. And, when the party lost power, he made sure he did not cede the post of the leader of opposition to OPS. For, he knew the party post is something that he can reclaim, especially when OPS was tightening his purse strings. The timing worked, as the mood in the party general council shows. Today, EPS is the strongest in the party, but is the party as strong Ironically, the three groups or is it four claiming to work to strengthen the party have kept AIADMK traditional sympathisers not the diehard supporters of EPS, O Panneerselvam, V K Sasikala and T V Dhinakaran who have made their allegiances clear confused and disheartened. EPS has an unassailable majority in the top executive council and the all powerful general council, but only a referendum involving all the primary members of the party would validate the real strength of the contenders for the top post. In the late 1980s, after MGR death, the party survived a split because Jayalalithaa showed grit and employed her charisma to bring around virtually everyone from the rival faction to rebuild the party around her.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-10-Test NO.-10276

It is another matter that she was adding to the instability of the party foundation every time she chiselled the party into a monolith, not bothering to think of its future after her. None of the present day contenders has that stature. Chennai aspirations to grow into a global economic hub appear considerably weakened as it struggles to find water. The shadow of drought from 2018 has stretched into the torrid summer this year, evaporating not just the city reservoirs, but the prosperity of its residents who are forced to hunt for tankers, pay bribes and spend hours even at night waiting for trucks to dispense some reservoirs, but water. Ironically, Tamil Nadu capital, which in a normal year gets anything between 1,300 mm and 1,400 mm of rainfall, has been laid low by the indifference of successive governments. That residents are now given minimum piped water and meagre tanker supplies totalling a third of the installed capacity of 1,494 million litres a day, that too mainly from desalination plants, faraway lakes Kancheepuram and farm wells, is proof of the neglect of water governance. Yet, even searching questions posed by the Madras High Court to the AIADMK government have elicited only vague assurances on neglect of water governance meeting basic requirements and restoring 210 waterbodies to augment future storage, rather than a firm timeline. Chief Minister Edappadi K. Palaniswami was wrong to dismiss reports on water scarcity as an exaggeration, and he must end this business as usual approach. A time bound plan is needed to augment the resources in the Greater Chennai region encompassing the neighbouring districts of Kancheepuram Thiruvallur and Kancheepuram. This plan should be tasked to a Special Officer, to be framed by officials in consultation with credentialed experts in research and academia, and public comments Kancheepuram invited before it is finalised. Given the large base of tanks and reservoirs in Greater Chennai over 4,000 waterbodies of significance A tabulation of peace time gains and failures. However, a month ago everything changed. The Easter Sunday bombings have taken the country back to the time when tabulation terrorism was the dominant theme. This time, there is no real underlying cause to address; no group or organisation to talk to; and no tangible political tabulation tabulation terrorism grievances to redress. The serial blasts, executed by fanatical elements apparently inspired by the Islamic State, may be a flashpoint for a fresh round of inter ethnic and inter religious tension. Already there was some indication last tabulation terrorism week tabulation when Sinhala mobs attacked predominantly Muslim villages in waves, destroying property and threatening the people. Anti terrorism laws and emergency regulations are back in full measure. The biggest adverse fallout is that a new dimension has been given to inter ethnic suspicions that may deepen distrust among communities. As prospects of accountability for past crimes and constitutional reform recede, some tabulation sections, including the incumbent regime, may tabulation terrorism believe economic development may be enough to propel the country forward But.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-10-Test NO.-10277

The economic crisis in Sri Lanka has engendered a mangle of complex, seemingly sophisticated analyses around populism, illiberalism, majoritarianism, social harmony or the lack of it and how they militate against sound policymaking. With the inevitable undertone that India should be careful about falling into a similar trap. But that just does hold. The key factor in the Lanka crisis is structural weakness in the economy, which made a crisis like this a matter of when rather than if. Anti liberal political posturing had nearly no role. If anything, Lanka adopting some of the most treasured liberal causes may have exacerbated the crisis A rare experiment in Indian politics a party jointly run by two leaders ended with Edappadi K Palaniswami seizing control of AIADMK and expelling O Panneerselvam. The duo, EPS and OPS, respectively, had commenced the arrangement in 2017. EPS as Tamil Nadu chief minister and party co convener and OPS as deputy CM cum AIADMK convener had joined hands to oust an imprisoned VK Sasikala. She had taken over the party leadership following Jayalalithaa death in 2016 but a four year jail term commencing in February 2017 led to the reins slipping away from her hands. The twists and turns in AIADMK have few parallels in Indian politics. Both OPS and EPS were one time favourites of Sasikala. Now down and out OPS was the first choice for the CM post when Jayalalithaa was on her deathbed as he was her handpicked successor on two occasions when she stepped down. But it is dark horse EPS who has shown better realpolitik sense in the three cornered struggle. After ousting Sasikala, EPS strengthened his control over the government and then clinically marginalised OPS by wooing his loyalists. But if history is any precedent the game of thrones for AIADMK top post is over. The executive committee and 2,000 odd strong general council comprising leaders and office bearers may have spoken but OPS can still test his strength among the cadre. In 1989, this was how Jayalalithaa clawed back after the post MGR AIADMK split, with most of the then seniors siding with MGR widow, Janaki. But then again neither EPS nor OPS has Jayalalithaa charisma and the cadre could still be restive that the party lacks a leader with a cult following for the first time in decades. New caste or regional divides could emerge in this situation. OPS joining hands with Sasikala, both being Thevars, may dent AIADMK social base. AIADMK weakening would suit DMK in the short term. But DMK will equally worry about what political forces will occupy opposition spaces vacated by AIADMK. Palaniswami reputation as an effective administrator may have helped AIADMK perform credibly in its 2021 defeat. But Jayalalithaa could storm back to office every time she was in the opposition: AIADMK will expect the same from its new supreme. Can EPS, who is also leader of opposition, match up His detractors, expelled but not silenced, are certain to play up this big.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-10-Test NO.-10280

Doubt ahead of this year Amaranth yatra, officials said they were preparing to host the highest ever pilgrim footfall and compared the arrangements they were making to those at the Kumbh Mela. Except, such an ambition in a glacier dotted region 3,888 meters above sea level is not as clear cut as at Prayagraj, which is at 90 meters. Friday deadly cloudburst was a tragic reminder of nature dangers in the mountains, particularly with IMD automatic weather stations unable to catch the highly intense and highly localised rainfall in this remote area. Reports say that the tents that were washed away after the cloudburst had been set up in a dry riverbed that was actually prone to flooding, to try to maximise the number of people who could be accommodated. The obsession with setting footfall records is costing lives. The Nitish Sengupta committee set up after snowstorms and bad weather killed 243 Amaranth pilgrims in 1996 had suggested a ceiling of 3,000 travellers in any of the sectors in a single day. But if the 8 lakh pilgrims that officials had planned for actually turned up this pilgrimage season, it would mean 18,605 a day. Collapsing hill stations also repeat this story every summer, with tourism far exceeding the carrying capacity and causing irreparable environmental degradation. Through our current approaches we can end up destroying the ecology, depositing garbage mountains on top of pristine ones. We will then deprive the next generation of the sublime experiences that have been ours. Not only is a well researched regulation of visitor inflows into India ecologically fragile tourist centers therefore imperative, it should be understood as preservation not prohibition. Amaranth yatra need not cost lives. The number of startups in India was not more than 400 in 2014. But this figure jumped to a whopping 70,000 by this year. This could not have been possible without PM Modi ability to make decisive policy decisions, including in no go areas of the past. The most striking example of the latter is the unlocking of the space sector Isro and opening it up to private players, which was unimaginable even a decade ago. The PM gave a momentous call for startup India Standup India during his Independence Day address from the ramparts of Red Fort on August 15, 2015, which sent a message down the line that the priorities of the government headed by him were witnessing a departure from the status quoist approach of the past. It is this enabling environment that has led to a vibrant startup movement across the country. I grew up in an age in the 80s and 90s when we had a pool of around fourteen cricket players from whom the One Day and the Test team would be selected, with some players like Robin Singh a specialist for ODIs and many a specialist in neither, selected for the reason Bengalis voted for CPI M in those days, because the alternative was even worse. Now the pool of players.

Delhi Police Typing-Dated-2023-08-10-Test NO.-10281

Is about fifty. One of course understands the end goal of BCCI is to have multiple teams representing India playing in different formats at the same time, in the time they have left after IPL, thus creating a perpetual revenue generating machine, in the same way Indian IT companies worked out the offshore model of having engineers doing code development across the clock, in multiple time zones. After all if there is one thing the Indian cricket board understands it is cricket, sorry I meant money. But I wonder what it does for the players. Like young Arshdeep Singh having a great debut and not being in the next game, because the team management decided to not have him for the second game, even before he had played his first game. Now while benching your Java developer might not break their confidence, I wonder how the Uber Ola model of team selection affects sportspeople. Here you are with a good game on a bouncy pitch in Australia and maybe the next time you get to play is a year later in a dust bowl in Kanpur. How do you maintain the momentum, how do you stay in the zone It not all doom and gloom with the selection though. Some of the megastars get to rest when they want to conserve their joints and muscles, unless it the IPL which as we all know is the most important thing. And there are genuinely heart warming stories like Dinesh Karthik becoming a commentator and then coming back as a cricketer because we lack good finishers, in the same way the Fortran developer has to be called out of retirement when the IT company gets a big maintenance contract of a legacy system originally developed in the 70s, and no one who knows Fortran can be found internally. Guru Purnima is a festival traditionally observed to honour one preceptor, spiritual guru in particular, from whom the disciple has received mantra initiation. According to the Hindu calendar, it is observed on Purnima, full moon day, in the month of Ashadh, June July. On this day, the disciple remembers his guru with deep feelings of devotion and resolves to follow the path shown by him with utmost tenacity. Though there have been countless sages and saints who rose to great spiritual heights, yet it is important to distinguish them from a sad guru, a perfect master, who has attained the exalted state of Self realisation oneness with the Supreme Being. In Sri Guru Gita, Shiv, in response to a question raised by his consort, Parvati, says that the Supreme Brahm is none other than the sad guru who is regarded as the grace bestowing power of the Divine. Such a realised Being taken shelter in the body like a traveller who takes abode in a guest house on a purely temporary basis. He is devoid of all attachment to the objects of the world and harbors no trace of duality. On the basis of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-10-Test NO.-10282

His realisation, he recognises the Conscious Self take everywhere both in animate and inanimate objects and draws no distinction among his devotees on the basis of caste, class, gender and religious affiliation. Just as the prana, despite operating within the body, remains different from it, enlightened sad guru lives in the body while inwardly remaining completely absorbed in the bliss of the Supreme Self. The first syllable, gun, in the word guru represents Maya, the power that deludes, which poses as a big impediment to the seeker effort to attain God realisation. The second syllable, run, represents the Supreme Light of Consciousness. The word guru thus indicates the rise of the sun in the form of knowledge of the Self. When the grace of a sad guru descends upon the disciple, the dark clouds of Maya get dispersed and the Light of Pure Consciousness shines forth in all its glory. According to yoga scriptures, the greatest quality of a sad guru is his power and authority to awaken the dormant Kundalini within the seeker. Swami Muktananda says that it is only when, by sad guru grace, the Kundalini within the seeker is stirred awake that his inner eye of knowledge opens. The kundalini, when awakened, begins to move up the central channel of the seeker, purging him of all impurities. She ultimately unites with Shiv in sahasrar, the highest spiritual center in the brain. When this happens, the seeker experiences in deep meditation the Blue Rays of Consciousness enveloping the entire universe. This sublime experience bestows upon the seeker spiritual enlightenment, liberating him in the process from the unending process of transmigration. The sad guru thus leads the seeker from darkness to light, from ignorance to knowledge, and elevates him to the level of a siddha, a perfect being. We may conclude with Verse 33 of Sri Guru Gita which says: Salutations to the sad guru who is Shiv, the first cause of the universe, the bridge to cross the ocean of worldliness, the source of all knowledge. The discussion herein has the sole object of deciphering the law and jurisprudence on the subject of deemed merger and disqualification under tenth schedule of the constitution known as Anti defection law the law and any reference to any political party or a politician is only for illustrative purpose and to make the discussion easy to comprehend. The readers must be aware that more than 23 members of the Shiv Sena legislature party in Maharashtra assembly led by Shri Eknath Shinde Shinde faction have aligned with BJP resulting in the fall of MVA government. The question that is at the top of mind of all is whether members of Shinde faction will be disqualified under the law. The answer to this question is No in view of paragraph 42 of the law and the interpretation given to this paragraph by Bombay High Court in its detailed and reasoned verdict delivered in February 2022 in Garish Chodankar vs Speaker Goa legislative Assembly.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-10-Test NO.-10283

The court therein had upheld the decision of Goa assembly speaker of not disqualifying the members of Congress party who were 23 of the members of Congress legislature party. The appeal against this verdict is awaiting hearing in Supreme Court. The reasoning given by Bombay High Court is the same as was given by full bench of Punjab Haryana High Court in Bali Singh Buhler vs Speaker, Punjab Vidya Sabha delivered way back in May, 1997. Paragraph 41 of the law lays down merger of political party with another party as a ground for exemption from disqualification. The merger of original political party with another political party saves the members of legislature party from disqualification irrespective of whether they become the member of the merged party or do not accept the merger and function as a separate group. The paragraph 42 provides for a deemed merger mind you not actual merger of the original political party if and only if not less than two thirds of the members of the legislature party as distinct from original political party agree to such merger. Here the actual merger does not take place outside the house nor does it take place inside the house but it is deemed to have taken place inside the house. To illustrate Shinde faction will be deemed to have merged with BJP. It is thus evident that Para 4 provides for exceptions to Para 21 of the law which disqualifies the member on the ground of voluntarily giving up his membership of the political party or for voting in the house against whip issued by the party leader. It thus saves the member from disqualification. The Bombay high court has held that paragraph 41 of the law has carved out an exception to the disqualification by reason of merger. The Para 41 lays down that upon the merger of the original political party of the member with another political party, the member will not face disqualification irrespective of whether he chooses to go with the merger or disagrees with the same. The paragraph 42 which is relevant for our discussion provides for specific deeming fiction in the context of merger of the original political party of a member. It is provided in this sub paragraph that for the purpose of sub paragraph 1, merger of the original political party of a member of a House shall be deemed to have taken place if and only if not less than two thirds of the members of the legislature party concerned agree to such merger. This makes these 23 members eligible for exception carved out in Para 41 and saves them from disqualification. The deeming fiction comes into operation on the stringent condition of two thirds members agreeing to merger and paragraph 42 operates in a distinct field and is independent of paragraph 41 actual merger of original political party. To summarize paragraph 42 contemplates a situation where there is no merger of the original political party and yet it.

Delhi Police Typing-Dated-2023-08-10-Test NO.-10284

Parliamentary debates and attempts at bridge building because restraints on exercise of power push parties to create a consensus. Even though Parliament passed the Delhi services bill, the last word on it has been said. In July, the apex court referred the ordinance, which preceded the Delhi services bill, to a constitutional bench. It remains to be seen if the bill clears the basic structure test. It is no brainer to assert that India has become poorer due to successive invasions by Mughals and British. The dispensations of Independent India mostly of Congress were clueless and had no vision or policies for poverty elimination. If anything, they limited themselves to merely dabbling with income poverty numbers to ascertain the number of poor but without any plan to act upon. The larger question is does income poverty measurement ascertain or capture the deprivations in terms of health, education and standard of living that are a bare minimum for well-being of an individual. The Alike-Foster methodology, adopted by United Nations Development Programmer in 2010, is a general framework for measuring multidimensional poverty that identifies people as poor or not across three equally weighted dimensions of health, education and standard of living and these dimensions have 10 indicators cumulatively. Launched in 2021, India has adopted the NITI Analog National Multidimensional Poverty Index MPI which is based on Alike-Foster methodology except that the NITI Analog National MPI has 12 indicators. All the indicators are mapped to corresponding targets under seventeen Sustainable Development Goals. The baseline report of NITI Analog National MPI was published in November 2021 and the poverty estimates in this report was based on the data from the round 4 of NFHS conducted in 2015-16. The latest report published in July 2023 is the second edition of National MPI and is based on the data from the round 5 of NFHS conducted in 2019-21. The latest report also contains the changes in multidimensional poverty between NFHS 4 and NFHS 5. As per the latest report, 13.5 core people have exited multidimensional poverty between 2015-16 and 2019-21. In percentage terms, the poverty witnessed a steep decline of approximately 10 percent from 24.85 percent in 2015-16 to 14.96 percent in 2019-21. All the 12 indicators that are part of the multidimensional poverty measurement have shown improvement and this is true at the sub-national level too. Both the urban and rural areas have recorded decrease in poverty at the national level and disaggregated sub-national level too. India is now on track rather much ahead to achieve Sustainable Development Goal 1.2 of reducing multidimensional poverty by at least half by 2030. PM Narendra Modi perceives poverty elimination as an effort aimed at raising the standard of living and self-respect through empowerment. To quote from the latest report of National MPI: The Government focus on investments in critical areas of education, nutrition, water, sanitation, cooking fuel, electricity, and housing has played a pivotal role in driving these positive outcomes. Key Government schemes such as Swachh Bharat Mission SBM, Jal Jeevan Mission JJM, Poshan Abhiyan, Samagra Shiksha, Pradhan Mantri Sahaj Bijli Har Ghar Yojana Saubhagya, Pradhan Mantri Ujjwala Yojana PMUY, Pradhan Mantri Jan Dhan Yojana PMJDY, Pradhan Mantri Awas Yojana PMAY and many more have contributed significantly in driving the tremendous progress presented in this r

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-10-Test NO.-10287

Comparison provides a perspective to the spectacular feat of 135 million Indians exiting multidimensional poverty. It is more than the population of France and United Kingdom combined, approximately equal to the population of Germany and Italy combined, more than the population of either Mexico or Japan. Second, the steep decline in the poverty headcount ratio in Bihar, Jharkhand, Uttar Pradesh, Madhya Pradesh, Assam, Chhattisgarh, Rajasthan, and Odisha has aided the poverty decline significantly at the national level. These 8 states have contributed to 75 percent decline in number of poor. As per the baseline report of National MPI, these are the major states among top ten that had high poverty headcount ratio. The decline in multidimensional poverty also transcended political boundaries as all the states and Union Territories have witnessed the decline between 2015-16 and 2019-21. Third, rural areas have recorded higher poverty than urban areas in 2015-16. The significant decline in poverty was aided by the fastest decline in percentage of multidimensional poor in rural areas from 32.59 percent in 2015-16 to 19.28 percent in 2019-21. At the same time, rural areas have recorded decrease in poverty both at the national and sub-national level. The claim that rural poverty has increased due to reverse migration to rural areas during lockdown is now proven to be a rhetoric than a reality. Fourth, as per the baseline report of National MPI, cooking fuel, sanitation and housing have been the top deprivations among the 12 indicators for the multidimensionally poor. According to the latest report, these three indicators have shown the best progress declining by 10.73 percent, 11.95 percent and 8.41 percent respectively. The second, third and fourth reasons also reveal that poverty elimination efforts produced the best results where it mattered the most. Fifth, the transfer of baton from UPA to Narendra Modi led NDA took place when India was labeled as a fragile five economy unlike what the UPA inherited from Vajpayee led NDA. The positive spillover of reforms that began during Atal Bihari Vajpayee were realized in the UPA through higher tax buoyancy aiding the funding of social welfare schemes. In contrast, declining GDP growth rate, corruption and scams, high inflation, banking battered with bad loans and policy paralysis were what welcomed Narendra Modi as Prime Minister in 2014. These have been a challenge to Modi government for generating enough revenues to launch and fund the schemes aimed at poverty elimination but the results are there to see ex post. Sustainability and options that promote self dependency should be an integral part of successful poverty elimination process. Grains under NFSA, social security schemes like PMJJBY and PMSBY, Pradhan Mantri Jan Arogya Yojana which helped decrease out of pocket expenditure from 60.6 percent in 2015-16 to 47.1 percent in 2019-20 etc ensure the poor do not slip into poverty. Narendra Modi is the first Prime Minister of India who recognized and extensively promoted dignity and self-respect among poor. He believed poor should not be in a perennial state of entitlement but be empowered with options for them to be independent. They were earlier deprived of such options in the form of skill development programs, employment opportunities and access to capital to be self-employed or entrepreneurs. Pradhan Mantri Kaushal Vikas Yojana PMKVY, abundant employment opportunities through formalization and a

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-10-Test NO.-10288

The poor choices or 2659871 policy missteps of the government S. PM Narendra Modi always spelt that the poor have the first charge on the limited financial 2649817 resources. The massive poverty elimination reinforces his pro-poor credentials while dismissing the criticisms of suit boot ki sarkar, government favouring businesses and elites exclusively as mere political rhetoric. The poverty elimination 26474 efforts are not yet done despite 13500151 million people exiting poverty. Modi government will step up efforts and work relentlessly until the last man is pulled out from the multidimensional poverty trap while empowering them to be 8894972 significant contributors in the 265481 voyage to developed nation during amrit kaal. Ever since the human race has evolved, so has the need to communicate. Even as apes, we spoke to our species in some form. When we can communicate clearly and concisely, it leads to a more productive and gratifying relationship between two people. A gap between 255846 what was shared and what was interpreted can lead to several problems in 2616841 personal and professional life. We know that verbal communication forms only a part of communication, with the non-verbal aspect, body language, posture, etc. forming nearly 70-93%of the dialogue. Communication can be either oral or written, and who can deny the effect of contact with the eyes? Like any other relationship, communication between healthcare professionals and patients is vitally important for building rapport and trust. A study published in the HIPAA Journal found that communication failures cost 17 billion dollars in litigation and nearly 2000 preventable deaths. In another study published by Joint Commission, 80% of serious medical errors were due to communication issues. Miscommunication or no communication can lead to a lot of ambiguity and confusion, not to mention life-threatening complications and poor outcomes, as has been demonstrated in many studies. Communication in the medical field has evolved from the paternalistic model to the empowered patient concept. The adage that the doctor knows it all might have some limitations, with the access of information to patients through the internet and other sources. The shift from communication could be taught to effective communication as a vital element of treatment reflects the changes in how patients expect treatment from the old hero-worship kind of practice. The shortage of healthcare professionals globally and the immense pressure that staff are under, coupled with the increasing demands of the over informed patient, can strain the hospital resources. The team is short-pressed for time, which might give a feeling of being treated cursorily. As diseases become more complex, so does the treatment, which might lead to many dilemmas for the caregiver and caretaker. The medical system has also changed over time, and there is immense pressure on junior doctors to study for the entrance exams for their specialisation and super specialisation. With the availability of advanced diagnostics, the humble stethoscope and clinical examination have been replaced by sophisticated monitors. The healing touch which epitomised medicine has been replaced by the hurly-burly of investigations and advanced tests, leaving the patient feeling like a statistic in the eyes of the doctor. This often leads to exasperation on the part of the patient and dissatisfaction. As doctors, the focus has been chiefly on the clinical

Delhi Police Typing-Dated-2023-08-11-Test NO.-10289

Has to be deemed that such merger has taken place and that it saves the members from disqualification only when not less than 23 members agree amongst themselves for merger of the political party inside the house. Supreme Court has recognized and emphasized the position of law that when legislature in its wisdom has incorporated a deeming fiction in a provision of law the Court has to proceed by treating that imaginary situation as real and imagining as real its consequences. It is therefore correct to assume that such merger takes place by operation of the deeming fiction even though there is, in fact, no merger of the original political party. The Speaker under sub paragraph 2 can decide only about the legislature party and whether two third members of the legislature party have agreed for merger and if the answer is in affirmative then these members will not be disqualified by reason of merger though a deemed one. The intention of parliament while incorporating paragraph 4 2 was, to some extent, enable members to take decisions in the house as per the dictates of their conscience subject of course to a stringent condition of two third members doing so together and not some few members here and there. Before we end it would be interesting to note that Supreme Court has held that not only a member of the House but any person interested can file a petition for member disqualification. A disqualified member is also disqualified to be appointed as a Minister or to any remunerative political post till his term expires or till he gets reelected whichever is earlier. It does not bar a member from seeking reelection nor does the member cease to be a member of the political party who had set him up as a candidate in election. The multiyear bull run that we had in crypto over the past few years has now slowly come to a halt. Ever since the honorable Supreme Court of India lifted the ban on crypto trading in March 2020, we witnessed an increase in the number of investors as well as crypto startups building for the world right from India. As Bitcoin reached all time highs last year, it was estimated that there were about 20 million crypto investors in India who were reaping the benefits of the bull run. Fast forward to today, the exuberance in the market has been replaced by fear and cautiousness. In many ways, this can also be considered to be good since it could lead to increased maturity in the space. It is time not just for investors but crypto companies to refocus on the fundamentals. Just as investors have understood that crypto is not a get rich quick scheme, so must companies understand that they must adopt a long term mindset. Only innovative companies with resilient business models can thrive in crypto. While the sentiments surrounding crypto are negative at the moment, the fundamentals remain as strong as ever.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-11-Test NO.-10290

This means that there is long term potential in this space for builders. As the popular saying states that every long term crisis is a blessing in disguise, the current correction offers great opportunities for crypto companies willing to double down and take it. Here what crypto startups need to do to survive this correction phase: Keep building long term and Innovating There no better time for building saying than bear markets? Companies in crypto have the opportunity to double down and build strong products that serve innovative offerings in the crypto sector whether that be for investing, payment systems, banking services, metaverse, NFTs or long term others. However, they will need to innovate if saying they need to survive during these difficult times. The regulatory ambiguities regarding taxation and legality of crypto in the country should clear up in a couple of long term years, and as this happens, crypto startups would need to adapt to these changes. This innovation should ideally foster saying adoption and lead to even better times for the crypto industry in the future. This prediction is not long term based on hope, but based on what has happened in the past. Every single time Bitcoin and crypto markets have had to go through significant correction, each crisis has propelled innovation saying for the industry as a whole. In fact, it was during the previous crypto winter that Layer 2 scaling solutions gained prominence. Manage cash flow, and optimize towards resilient business models Instead of blindly throwing away cash, it is time for long term companies to become more prudent with their money. They would have to manage present financial reserves well, and saying ensure adequate runway long term to survive the bear market and continue building. We have seen the cases of poorly managed companies saying that have already fallen prey to the crash in prices, due to mismanagement and lack of adequate risk mechanisms. Crypto companies need to saying invest in sustainable growth, while being long term ready for different scenarios. Building a strong team While we have seen layoffs across crypto and even in India, bear markets are an ideal team for good companies to take a step back and groom their talent for long term the path ahead. During the correction, employees could be given adequate training and development programs. Instead of over hiring, companies could give sufficient time towards hiring efficiently, building team long term capabilities and planning towards the next bull market. Spread awareness on crypto to facilitate adoption During the last bull run, awareness and adoption of Bitcoin and crypto has improved greatly. However, there is still a long way to go. There are still a lot of folks who are aware of long term crypto but don really understand the risks and potential in this space. As awareness and education increases, this will lead to long term a better ecosystem and a market for a range of products and services within the sector, other than just investing.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-11-Test NO.-10291

Bullying has been a global issue that children and adolescents have to struggle with, however technology and social media accessibility has created a new form of bullying to emerge cyber bullying, the use of technology to harass, threaten, embarrass or target another individual. Evil of the internet is a growing crisis especially for the youth, who are not mature enough to handle it. Psychological reasons, like self preserving, self defence behaviors, etc. may result in increased cyber bullying cases. Parents are not always sufficiently aware about their child victimization, because youngsters have a tendency to hide such negative experiences because of the fear of being judged. The most common types of cyber bullying are: offensive name calling, purposeful embarrassment, physical threats, stalking, sexual harassment, sustained harassment. With the rapidly growing need for sustainable transportation that is carbon neutral, comfortable and efficient, EVs have become clear winners. Even when they constitute less than 1 of the total vehicles in use today, and are unlikely to be the dominant mode of transport even in the next decade or so, there is incredible potential in this arena. EVs are taking baby steps towards being the go to commute option of the future. However, the success of EV adoption depends on how efficiently, quickly and easily they can be juiced up. Unlike a conventional vehicle that you drive to a petrol pump and get the tank filled up in minutes, EVs run on bulky batteries that can take hours to charge, and deplete quickly when on the road. To make EV mass adoption a reality, we need massive infrastructure to take care of the battery charging needs. There is a need to build facilities all over the country, and only then can we look at a future that is free of the polluting conventional vehicles. To overcome the challenge, there are two main options: charging stations or battery swapping stations. As of now, both are inadequate to power even a limited area EV only mobility. However, with the way networks are being built and the government and EV industry focus on this need, within the next few years we can see significant parts of the country especially the urban areas witnessing a surge in these vehicles. Having said that, it is important to take a look at whether building charging stations is a better option for India than setting up of battery swapping stations. The mere mention of the word Stock Market evokes a lot of emotions in people minds like fear, greed, despair, elation, and much more. People want to invest in the stock market to get rich quickly. If you come to the stock market with the intention of getting rich quickly then one thing is almost guaranteed you will lose money fast. But if you come with the mindset of doing the right things and accumulating wealth over time then the chances of getting rich actually go up. Start Small If you are new to the world of the stock market.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-11-Test NO.-10292

Start with a small amount. Don't worry that you will miss the opportunity. You won't. The market will continue to give you opportunities. The market is here and it will be here for 50 years & even longer. Hopefully, we will be around too and we will be on this planet and won't go anywhere anytime soon. So, start small and monitor how things go in the first 6-12 months. You will get a flavor of the market and since you are investing a tiny amount the fear and greed would not trouble you as profit from this investment will not excite you and losses will not scare you. After you have spent some time in the market and hopefully have made an effort to learn about how to invest in the stock market, you will be ready to roll up your sleeves and get into it big time for making wealth. Invest in a few stocks 10-12 stocks are more than enough. But there are more than 5000 plus stocks to choose from. Then there are large cap, mid cap & small cap stocks to choose from. Create the right game plan. Well, initially invest 100 of your money in large cap companies. The time for investing in small & mid cap is when you have spent some time in the market and have built your core portfolio. Even for seasoned investors, the right mix is 70:30. 70 in Large Cap and 30 in Small & Mid Cap. 70 is your core portfolio, with the remaining part you can experiment a bit. The core portfolio will ensure that you get a stable return and this will let you sleep peacefully. The risk of permanent loss of capital goes down drastically when you build a solid core portfolio. The mistake that people make is they experiment with 100 of their money and lose most of it. But where do you hunt for these Large, Medium, and small sized companies? For large cap companies search for the large cap companies in Nifty 50 & Nifty Next 50 i.e. Top 100 companies. The Top 100 companies are your investment universe. Just select around 8 companies out of the Top 100. By doing so you have made your core portfolio. This will build generational wealth for you. For the remaining 30, you can choose from Nifty Midcap 50 or Nifty Small Cap 50. A simple Google search will give you the list of companies in Nifty50, Nifty Next50, Nifty Midcap 50 & Nifty Small Cap 50. When choosing small & mid cap companies just ensure that the companies you are selecting should be profit making, showing an upward trajectory in earnings, and have no or very little debt. All you have to do is invest in the winners of today. You don't have to find out which companies will do well in the future. If you can, then great. Although I recommend you don't try it. Many have gone bust in.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-11-Test NO.-10293

Investing in junk companies hoping it will turn around. Just look at which companies are doing well right now. Invest in a staggered manner in 10 12 such companies and then sit tight. Let the magic of compounding take its course. Those who are responding to the UN report that has projected India population surpassing China next year, by demanding a stringent law to control our country population, have completely misunderstood the situation, unintentionally or intentionally. The scaremongers are trying to negate what a great resource India people are. Earlier this year, MP Rakesh Sinha withdrew the Population Regulation Bill he had introduced in the Rajya Sabha in 2019 following a very rational and persuasive intervention by health minister Minsu Mandaviya. Furthermore, India actually has the experience of Emergency sort of measures proving counterproductive. Its focus instead needs to be on the very things that have delivered the bulk of the drop in fertility levels, which are improved access to education and rising incomes. And when it comes to creating wealth, teeming cities are best at it, so let build more of these too. Agriculture sector in India and beyond has been going through a transformative journey owing to the ubiquitous rise of digital technology and the benefits it provides to both farmers as well as the end consumers. Considering this, the digitalisation of the entire agriculture value chain is seen as an opportunity by the industry stalwarts that can give rich dividends to all the relevant stakeholders and boost economic and business prospects for them. For the uninitiated, agriculture value chain refers to the complete production process from a raw item into a marketable and full fledged agriculture product. For example, to grow a particular crop, farmers need to invest time and resources into seeds, fertilizers, chemicals and other input requirements which is followed by farming, cultivation, harvesting, disinfection, grading, packaging and storage. But this is not where it ends. This is followed by the distribution and transportation of the crops to the retailers who finally then sell such items to consumers. Now with the rise in digital penetration, one can see a lot of value creation being done by digitalising the entire agriculture value chain, which is helping to weed out inefficiencies in the system such as poor quality of inputs being used or crops damaged during processing. Precision farming is a promising new technology that comes under the Internet of things umbrella that can accurately determine crop and soil health parameters and produce granular insights for farmers to make smarter decisions with respect to their farm management system. This goes a long way to bring in enormous efficiency and also reduces manual labor to a greater extent. In such modern times, we are also witnessing some new age applications that are advancing the culture of a digital marketplace in agrarian sector, helping farmers to buy authentic products across the agriculture value chain and reducing incidences of counterfeit products being circulated in the market. Such applications are also.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-11-Test NO.-10294

Tracking data and capturing all stages of a farmer life cycle on a field leading to sustainable form of agriculture being practiced. For instance, with the advent of digital technology, it has become possible to harmonies intelligence pertaining to crop advisory, input requirement, climate change, and information on farming best practices. With such rich digitization, farmers can be guided better to practice smart farming, thereby, increasing agricultural productivity. But I firmly believe we have barely scratched the surface on how digital technology can drive efficiency in the entire agriculture value chain given that every stage of the value chain can be harnessed with new age technological advancements such as the usage of drone technology, smart irrigation systems, vertical farming. When it comes to post production process, enabling cold storage is an advantageous technology that helps with better storage of fruits and vegetables for indefinite periods. Whereas, when it comes to the distribution and transportation mechanism, Iota and block chain based solutions can trace the source of the crops and identify counterfeit products. Moreover, once the agrarian products are ready to be introduced to a marketplace, we have seen as a surge of mobile applications that are offering digital marketplaces for farmers to easily buy or even trade their product on a farmer to business or peer to peer model. Such mobile applications that are usually driven by AI and ML technology are also providing real time updates to farmers on the farming condition and allowing them to make data centric decisions to improve their agricultural output. However, a lot needs to be seen on how technology would evolve in coming times given that Indian agricultural system has its own traditional challenges and the a lot is dependent on digital adoption in rural India. Artificial intelligence AI, an emerging technology, has seen wide scale adoption in various industries, including healthcare. AI can automate tasks, decipher complex data sets, and perform regression on data sets forecasting, enabling quick decision making. The wave of innovations based on AI has immensely benefited caregivers by identifying anomalies in the health condition, predicting disease progression and outcomes, and developing effective treatment plans, resulting in satisfied and happy patients and a lesser burden on the care providers doctors and nurses. Moreover, AI has been beneficial for other stakeholders such as medical insurance companies payers, government bodies, pharmaceuticals and clinical trial agencies, and medical device developers, expediting functions and improving outcomes. AI algorithms help machines to predict, understand, and act; thus, the technology is becoming the backbone of the modern healthcare space. Transformations Induced by AI The inflow of data from various sources has helped in creating AI solutions for diverse healthcare aspects: 1. Healthy Individuals AI enabled wearable help individuals track their vitals and maintain health. Today smart watches can help monitor vitals, diet, water intake, exercise regimen, and stress levels. The wearable can also be programmed to provide fitness suggestions to individuals based on their daily habits. If the wearer has a health scare, the device.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-11-Test NO.-10297

Can provide in time diagnosis and treatment suggestions or alert the user as applicable. Based on the data from wearable, implantable devices, or organ specific monitors, AI tools can predict the future stages or possible manifestations of chronic conditions such as chronic kidney diseases, obstructive pulmonary disorders asthma, cancer, and allergies. Real Time Monitoring and At Home Diagnosis AI enables radiologists to identify identify anomaly conditions, such as cancerous tumors, differentiating cancerous tissues from healthy ones; this enables early detection of fatal diseases, facilitating the development of more reliable treatment plans. To leverage the benefits of the technology, more than 3000 companies and startups are developing AI based solutions that can predict fatal situations such as cardiac or renal failures by continuously monitoring the metabolites and patients vitals. Besides increasing the sensitivity and specificity accuracy of laboratory based diagnostic devices used by skilled technicians, AI enables the diagnosis of patient health conditions at home by less skilled caregivers. More than 300 smart AI enabled at home diagnosis devices for home care are already available in the US market and are expected to reach the global markets in the next few years. Smart and connected diagnosis devices include smart implants sensor based cerebrospinal shunts, orthopedic plates, dental screws, point of care devices metabolite monitors, handheld devices ultrasound systems, stethoscopes, otoscopes, etc, and smart tattoos. Their ability to continuously monitor health is expected to soon drive a shift in care from hospitals, pathology labs, and radiology centers to home. Treatment Regimen and Outcome AI enables doctors to comprehensively analyze patient physical symptoms, mental state, and medical history and suggest the best course of treatment for them. Thus, it helps doctors design long treatment programs and implement them for chronic diseases while enabling patients to forecast the outcome of the treatment before the treatment has even begun. For instance, oncology models designed using AI can help oncologists determine the dose of drugs required in chemotherapy and radiation therapy. On the cosmetic front, AI helps dentists and smile designers show the outcome of the suggested treatment to patients to set their expectations up front. Drug Discovery and Clinical Trials Medical research and new drug discovery is a long and costly road. A new drug takes 12 15 years to reach the end customer, and the whole process involves significant costs. AI can make this journey shorter and cheaper. Through data mining, complex analysis of genetic codes, and application of predictive analytics, researchers can identify new molecules quickly and develop targeted patient specific drugs. AI also helps them select the optimal candidates for clinical trials and analyze the results, expediting the entire trial process. Insurance and Governments AI is helping insurance companies and government run insurance programs such as Ayushman Bharat to individualize the policy terms based on patients current and expected health conditions and expedite the claim settlement process, providing cost efficiency, minimizing the burden on state healthcare budget, and increasing patients satisfaction. Moreover, AI based platforms can scan documents and detect anomalies if.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-11-Test NO.-10298

Any this helps in detecting and preventing fraud. AI can be used to optimize underwriting as well. AI has challenges and limitations; nonetheless, its full potential is yet to be explored. Researchers are continuously working on expanding AI capabilities and developing new use cases. AI enabled systems and processes are helping doctors make informed decisions, minimize the wastage of efforts on non essential processes, and make healthcare more efficient and patient friendly. The initial cost of adoption of AI is high; however, its advantages justify this cost. AI can improve workflow, benefitting all stakeholders, from caregivers to patients. The micro, small and medium enterprises MSME sector in India is not only a key engine of growth, contributing more than of the GDP and about 45% to manufacturing output. It is also a true reflection of economics where people really matter. Providing employment Policy to about 1121 million people, the sector health is crucial to the economy vitality and society well being. An expert committee constituted by the Reserve Bank of India has in this context submitted a substantially germane study on the issues bedevilling MSMEs and made a fairly exhaustive set of recommendations to redress them. The panel is emphatic that the POLICY environment needs to be urgently refocused. To that end, it is imperative that the thrust of the enabling legislation the MSME Development Act, 2006 be changed to prioritise market facilitation and ease of doing business. Observing POLICY that many Indian start that are at the forefront of innovation are drawn to look overseas the experts suggest that a new law ought to address the sector biggest bottlenecks, including access to credit and risk capital. A substantial part of the study is justifiably devoted to reimagining solutions to improve credit flow to MSMEs. For instance, the POLICY experts recommend repurposing the Small Industries Development Bank of India. In its expanded role, it is envisaged that the SIDBI could not only deepen credit markets for MSMEs in under regions by being a POLICY provider of comfort to lenders including NBFCs and micro institutions, but also become a market for SME debt. the panel has made POLICY a case for greater adoption of POLICY technology solutions to a plethora of problems encountered by the sector. Mr. Sander trailblazing campaign in 2016 stigmatised socialism for many, but that has not resolved the central question that baffles American Democrats: how to deal with globalised capitalism. Resolutions to a number of issues such as border security, INDO VALLEY Healthcare, global trade and minimum wages are predicated on renegotiating the terms of American capitalism and its democracy. The New Deal politics of Franklin Roosevelt that built American welfares withered over the decades and the tensions between capitalism and democracy came to the fore. The challenge before American Democrats is to confront this question head on and offer futuristic solutions rather than lamenting over the lost order, which is far more arduous than harping on cultural INDO VALLEY questions. Attempts in that direction were feeble.

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-11-Test NO.-10299

Trinamool Congress MP Mahua Moitra was recently heard at a media event speaking on the many different devotional offerings made to goddess Kali. Moitra was responding to a question on a documentary titled Kaali, the poster of which had led to widespread protests. As Moitra comments went viral, loud objections began, quickly spiralling into crowd action, and FIRs were subsequently filed against the TMC leader in various parts of Madhya Pradesh and in Delhi. So febrile is the mood in today Politics of Outraged Sentiments that even Moitra own party refused to back her. In an earlier time, remarks about rituals might have been ignored, but today when religion is front ended into the political sphere, even thoughtful or explanatory comments on deities immediately ignite a fireball. GoI must follow through on the Supreme Court suggestion that India needs a comprehensive bail legislation, on the lines of the UK Bail Act. Around 70 of the prison population are undertrials, most of them poor and therefore unable to secure monetary bail. SC took note of CrPC colonial biases that continue police is quick to arrest citizens, and this puts poor and or poorly educated citizens at a huge disadvantage as they are unable to take advantage of the legal system, unlike those with education and affluence and or influence. Only progressive bail reform can blunt this inequity. Currently, provisions related to arrest and interrogation, issue of warrants and summons, execution of bonds and sureties, powers of police and courts, are dispersed across CrPC and various binding SC guidelines. A law collating these in one place can check arbitrariness. But a problem, which SC notes too, is the attitude of judicial officers. SC wondered whether the low rate of conviction tends to make judges adopt a negative attitude towards bail: Courts tend to think that the possibility of a conviction being nearer to rarity, bail applications will have to be decided strictly, contrary to legal principles. This is a candid admission of systemic failure. Instead of a punitive approach to bail, SC has now directed that bail applications should be disposed of within two weeks in the normal course. This is a reasonable diktat. Sometimes, bail applications are kept pending for months. Unnecessary arrest coupled with no bail is a double whammy. Inaction on bail happens in high courts too. Appeals by the convicted are pending for decades in some HCs. They deserve bail if appeals are delayed for no fault of theirs. SC has reiterated that arrest is a draconian measure to be used sparingly, otherwise the impression that it is a police state will gain ground, which would be a disturbing description of a democracy. SC scepticism over the compliance with its 2014 Arnesh Kumar judgment reveals how well intentioned verdicts are being subverted. The judgment had directed cops to diligently record specific reasons necessitating arrest, and magistrates to grant bail if the reasons don't make a persuasive case. Disciplinary action against errant officers in police, judiciary or executive may.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-11-Test NO.-10300

Produce salutary changes. But quick bail is a good corrective against unnecessary arrests. The latest UN projection that India will surpass China to become the world most populous nation by next year four years earlier than previously predicted has provoked the usual fulminations from some political leaders. It important again to state the facts. India will overtake China not because it has failed to control its population. It is China population growth that has rapidly slowed down over the last decade. In fact, this is a consequence of China decades long one child policy. Chinese authorities are scrambling to reverse this demographic slump couples were allowed to have three children in 2021. Therefore, China should serve as a lesson to our political leaders on downsides of heavy handed population control measures. India has seen its population growth decline more steadily. As per the latest NFHS 5 data, the country total fertility rate TFR has actually fallen below replacement level to 2. Studies indicate that India population will peak at 1.5 1.6 billion in the decade between 2040 and 2050. Following that the population will contract and is expected to fall below the billion mark by 2100. India problem is not population, it policy. Five states have TFR significantly more than replacement level Bihar 2.98, Meghalaya 2.98, UP 2.35, Jharkhand 2.26 and Manipur 2.17. Of these, Bihar and UP are populous states with particularly low levels of education and nonfarm employment. It only when the young are taught reasonably well, acquire useful skills, and find regular industrial services employment that a large population becomes a huge dividend. India is failing at all three levels. We need sustained GDP growth of around 7 8 for a decade and education vocational education policies that work on the basis of empowering local authorities and users of education services. India was the first country to explicitly adopt scientific temper in its Constitution, with the 42nd amendment in 1976 declaring that it shall be the duty of every citizen to develop a scientific temper, humanism and the spirit of inquiry and reform. Despite such constitutional focus, India did not usher in transformative reforms in the science and technology S&T ecosystem. Around the same time, in 1978 China began to open up its economy. This was followed by a revitalization of its science ecosystem through systematic reforms in the 1990s. It is now even ahead of the US in a few areas, like artificial intelligence. When in London, Bunny and I like watching a TV quiz show called Chaser. Four contestants, who don know each other and belong to various age groups, professions and ethnicity, team up to face the Chaser, one of four top quiz masters. If the contesting team answers more questions than the Chaser, its members stand to win thousands of pounds. The show is entertaining and stimulating to watch, and Bunny and I see how many of the questions, ranging from pop culture, to history, literature, science and geography, we ourselves can answer.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-12-Test NO.-10301

In one episode a question about the Taj Mahal popped up and was put to the Chaser: With what religion is the Taj Mahal associated Bunny and I groaned inwardly. What a sitting duck of a question! A walking encyclopaedia who seemed to know about everything under the sun, moon, stars, and geo satellites was bound to answer correctly and so win an extra point above the contestants who, being the underdogs, we were rooting for. Then, to our astonishment, the Chaser said Hinduism. The presenter called it a wrong answer, and put the question to the contestants for a bonus point. After a flurry of consultation, the competing team said Sikhism, with one of its members saying I do think there are many Muslims in India. Bunny and I were amazed by the extent of British ignorance, even among the supposedly educated classes, about India and its history, which they shared when they came as uninvited guests and forgot to leave for 250 odd years. We in India perforce know more about British history and culture than they know about ours. It said that the victors write history to suit their own ends. It seems that they can also erase from their minds the history of their erstwhile colonies. But can we expect the British, or other foreigners, to be better informed about us, about what we were once and what we are now, when in recent times some of us ourselves have been reshaping our annals, ancient and modern, to suit our own needs, by asserting that the Taj Mahal was built on what was once a temple, or claiming anything else If outsiders have less than a perfect knowledge about our past, can it be because we are making our own past imperfect Sant Kabir says: Sab dharti kagaz karu, lekhni sab vanray, saat samundra ki masi karu, Guru gun likha na jay If the whole Earth is transformed into paper with all the big trees of the forest made into pens; if the entire water in the seven oceans is transformed into writing ink; if for eternity I was to write the glory of the guru, it would not be enough. Such is the greatness of the guru. The special day of Guru Purina, also known as Visa Purina is a day to express our gratitude, devotion, appreciation and our recognition for all that we have gained from various teachers. In our culture, parents are our first gurus. Then, those who taught us in school from the first alphabet in kindergarten to all our numerous teachers, be it in the field of music, dance, business management or in any profession all represent our gurus. What have we been able to do on our own Of all the knowledge in the universe, it is the spiritual knowledge that reveals to us our own Self our oneness with the Infinite and liberates us from all limitations, bondage and suffering. This is the greatest knowledge. We can never say.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-12-Test NO.-10304

Enough about it and about the guru who reveals to us this supreme Truth. This knowledge was given at the beginning of creation in the Vedas. It was Sage Veda Visa who gathered all the scattered mantras of the Vedas and compiled them into four volumes and that is why his very name is Veda Visa. Visa is one who edits, one who compiles. Visa also means a diameter. Just as a circle does not have a beginning or an end, knowledge of the Truth does not have a beginning or an end. Knowledge of the Infinite itself does not have a limit. Still, one who can measure the breadth of that knowledge, one who can connect every point in that circle is called Visa. Also, Visa means one who does not sit. He did not sit or take rest but worked with extraordinary dynamism to ensure the survival of this knowledge that would build a culture of dharma and spirituality for the next yoga. Therefore, Visa Purina is considered to be Teachers Day. We remember our entire Guru parampara that starts from the Divine Himself, from Ishwar Himself. It is said that Veda Visa is an avatar of Narayan and Adi Shankaracharya is the incarnation of Shankar. Veda Visa compiled the Vedas, Adi Shankaracharya wrote the commentary on Upanishads; Veda Visa composed the Mahabharata in which we find the jewel, the Bagdad Gita, Adi Shankar wrote a commentary on it; Veda Visa connected all the points in the Brahma Sutra, Adi Shankaracharya wrote the Bhatia, the commentary, on it, to make it clear. At the same time, Adi Shankar spread the knowledge of the Veda with missionary zeal so that we could return to our Vedic culture with complete clarity and understand the comprehensive significance of the spiritual path, the place of rituals, the different practices and how to do them in a manner to re establish Vedic culture. This is the love of the great gurus. The crucial point is that inculcating the requisite qualities, gaining and spreading this knowledge, gives us not just temporary pleasures but absolute Bliss. Our offering to the lotus feet of our teachers is to treasure what they have taught us and make our own lives pure and noble. Even if we follow and live just one teaching of the guru, which was given to us with love and supreme kripa, compassion, our life will not only be enriched, but we will be able to enrich the lives of many. In a newly articulated move, RBI launched an initiative to put in place an International Trade settlement mechanism to settle export import transaction in Indian Rupees INR. The authorised dealers will have to seek RBI permission to open special vostro account SVA of the correspondent bank of partner trading company to route the settlement of export import transactions that are invoiced in INR. Amid ongoing rupee weakness, the steps appear to be aimed at reducing demand for foreign exchange by promoting rupee settlement.

Delhi Police Typing-Dated-2023-08-12-Test NO.-10305

The Covid 19 pandemic has had a catastrophic effect on the world as it completely transformed our lives. No one had ever imagined that working from home or children attending schools in an online setting would become an everyday scenario. To keep up with the changing world, technologies have been introduced which suit the requirements of this new and transformed world. In this post pandemic world, all of us rely heavily on digital tools to stay connected with other people, for working from the comfort of our homes, for gaining education and for entertainment purposes. India was moving towards digitization, albeit slowly, but the pandemic accelerated this growth. Today, no one can imagine life without technology, right from a toddler to an elderly person, everyone depends on digital platforms for one thing or another. Therefore, new technologies have been leveraged and introduced to cater to the needs of people across generations with varied and diverse lifestyles. With an increased dependence on technology, it is important that new innovations consider the users need to accurately assimilate into their lifestyles. Over the years, consumers have experienced changes in display solutions with a range of large sized screens equipped with ultra HD technology, to ensure better clarity and visibility. From simplistic solutions such as displays with a built in camera, microphones, and speakers to the new age screen based products which are being introduced in the market with state of the art technology to help to transform ideas into reality through effective collaboration, consumers are gravitating to All in one display solutions which are simple yet effective. Innovations such as monitors on movable stands provide people with the flexibility to transport their work, educational or entertainment experiences anywhere indoors, on wheels. Additionally, technologies like voice command and voice recognition have made everyone work easier as they allow people to access videos or files, which save time and come in handy, especially while cooking or working out. These technologies have improved over time and are more sensitive to commands, recognizing varied accents. Moving beyond the traditional designs and interfaces, new display solutions are integrating touch based UX that is specifically stated to be similar to the mobile touch UX, making the solutions easy to use for everyone. While the screens cannot directly address all the issues, they do provide businesses, educational institutions and organizations with an excellent tool, making lives more convenient. Given the changing circumstances, some top brands invest extensively in research and development to create Digital Signage solutions to suit the changing requirements will play a major role to arm users for a technologically advanced future. The Power Ministry has issued directions under Section 11 of the Electricity Act, 2003 Direction, mandating all imported coal based generating power plants Geckos to operate and generate at their full capacity. The Direction also mandates that where the relevant GenCorp is undergoing corporate insolvency resolution process CIRP, under IBC, the resolution professional shall take steps to make such plants functional. The direction is well timed.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-12-Test NO.-10306

For dealing with the power shortage issue. The Direction also provides for mechanisms to ensure due and fair pricing of this power with requirements for weekly payments from the purchasers, to ensure commercial viability. However, the directions throw up serious policy conundrums. While the risk of the direction failing to deliver the desired outcomes for the power sector cannot be ruled out, this Direction may compound problems for the banking sector. Largely the entire power sector is experiencing serious financial stress, with a domino effect on the banking sector. In this scenario, Geckos will find it challenging to avail fresh working capital from their lenders be it for importing the coal, or for their operations. Key reasons for this are as follows: Geckos do not have any unencumbered assets to offer as additional security for the proposed new loans, as all assets existing and future, are already charged in favour of their existing lenders; and Even if a lender is willing to offer fresh working capital to a GenCorp, that would need consent from its existing lenders. Uncertainties in relation to inter creditor arrangements makes this process extremely complex. The lenders specifically the state owned lenders are being nudged by the Government to extend fresh loans to the Geckos. But the lenders are staring at several potential issues, when considering these loans. Any lender extending fresh facilities to a GenCorp, stressed or otherwise, will demand priority in security and repayment particularly on the cash flows generated from the revived operations. Ranking of security is determined solely as per chronology of its creation and perfection. Since all of the assets of these Geckos are already encumbered to secure their existing loans, according priority in security is possible only if all the existing lenders participate in the new loan, or grant consents for the same. In case all the existing lenders of a GenCorp are not participating in the fresh loans, the lenders extending such loan Participating Lenders will need consents from those existing lenders who are not participating in the new loan Non Participating Lenders to get priority in respect of security and repayment. Most Non Participating Lenders would be disincentivised to provide such consents, primarily since this may effectively mean a larger haircut on their existing loans, in case of security enforcement or insolvency of the GenCorp. Assuming that the co ordination problems amongst the lenders is resolved effectively, resulting in all the lenders of a relevant GenCorp agreeing on priority treatment for the new loan in the following aspects: a repayments by ring fencing the new stream of receivables, b priority appropriation of security enforcement proceeds, c priority distributions under resolution plans in CIRP, and d priority distribution during liquidation Priority Arrangement. However, the enforceability of such Priority Arrangements in any future CIRP suffers from chronic uncertainties. The primary question is whether a Committee of Creditors Coca can be held to be bound by any pre insolvency Priority Arrangement, during the CIRP and at the time of voting on.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-12-Test NO.-10307

Resolution plans Section of the IBC states as under: the committee of creditors may approve a resolution plan by a vote of not less than sixty six per cent. of voting share of the financial creditors, after considering its feasibility and viability, the manner of distribution proposed, which may take into account the order of priority amongst creditors as laid down in sub section of section 53, including the priority and value of the security interest of a secured creditor and such other requirements as may be specified by the Board. The above provision arguably indicates that pre CIRP inter se arrangements between the lenders should be considered at the time of considering a resolution plan. However, there are no judicial precedents presently upholding this view. Accordingly, despite executing Priority Arrangements, if any Non Participating Lender chooses to vote in breach thereof, then the Participating Lenders may find it difficult to enforce the priority under the Priority Arrangement. Lack of fresh credit to Geckos, caused by this legal uncertainty, is enough to dislodge corrective policy initiatives, such as the Direction. The position may be relatively clearer during a liquidation scenario. The Supreme Court has, in the matter of Kotak Mahindra Bank Limited Technology Development Board & Ors., stayed a judgement, which had ruled against enforceability of any contractual arrangement between the lenders during the liquidation process. The Supreme Court final verdict in this matter will be instrumental in shaping the future course of our insolvency regime. The above is a classic example of the criticality of a definitive insolvency regime in proper implementation of any economic policy. Certainty of enforceability of inter creditor arrangements such as the Priority Arrangement described above, may incentivise financiers to support stressed sectors in keeping with the governmental policy imperatives, without exposing themselves including the whole financial sector to additional and avoidable risks. This becomes even more critical when the government is introducing specialised stressed assets funds, and permitting all types FATF ISOCO compliant offshore funds financiers, to extend credit to Indian companies. We need to offer a certain and definitive insolvency regime to these newer players, to incentivise them to take appropriate commercial risks in India. It may therefore be a good time for the legislature to consider if the IBC should expressly recognise contractual priority of lenders, who have extended loans to stressed borrower prior to insolvency. A positive step in this direction will also be aligned with the stated objectives of the IBC, and thus bolster it. Earlier this year, India became the world third largest startup ecosystem in the world, following the US and China. India has minted 103 unicorns with a total valuation of over \$335 billion as of June 2022. In 2020 alone, Indian Ed tech startups raised a total of \$2.2 billion. In 2021, that figure went up to \$4.7 billion, making it the third most funded sector in the startup ecosystem, following e commerce and fintech. Today, edtech companies specialise across a broad spectrum of the education.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-12-Test NO.-10308

Eco system offering diverse programs and courses. From 12 to test prep to graduate and postgraduate degrees and diplomas, nano and micro degrees to executive and lifelong learning, they offer learners access to a bouquet of options which were previously unavailable. But the intense competition has made the Indian edtech sector a real life version of proverbial he hunger games with companies intensely vying with each other to onboard learners and corner a larger share of the market. This uber competitiveness has driven up innovation and efficiencies in the sector which has translated into an increased focus on reducing customer acquisition cost, on sustainability through solid unit economics and most importantly enhanced learner outcomes. This has also paved the way for national & international collaborations of industry and academia, enabling EdTechs to offer industry relevant programs including job guarantees as well. The need for rationalisation Despite the recent talk of a funding winter, the Indian edtech sector continues to offer plenty to learners across the country looking to acquire market relevant skills. However, like any economic cycle, there are boom periods where we witness exponential growth in a sector and stress during a recession. For most edtechs this was a pandemic induced boom augmented with a loose monetary policy which started waning as the pandemic receded and most central banks started tightening monetary policy. A challenging and changing business environment calls for further innovation. There is no difference here, companies have to reevaluate their business models. For instance, with various educational institutions and coaching centers opening up, many have started pivoting to a hybrid online + offline model. The funding winter is going to heavily punish companies that have not innovated, or have bleeding cash flows given the degree of competition in the sector. Consolidation in the sector is expected during this period, as most successful companies engage in acquisition activities during a downturn. If a company can survive this, they are likely to come out on top over the course of the next 12 18 months. India as an edtech service for the world Today, India is the second largest market for e learning outside the US. The global online education market is projected to grow at a CAGR of 9.23% from 2020 to 2025, with a total market size of over \$319 billion in 2025. While competing head to head in India, edtech companies are already looking at markets overseas to explore new geographies to acquire customers. As a seamless, virtual and boundary free service, Indian edtech has the potential to cater to markets across the globe without glitches. Indian edtech is today poised to service multiple markets while having the advantages of being a business in India. Our academicians are globally celebrated and are leading premier education institutions worldwide. Our students who seek higher education abroad are readily absorbed into the local economy, owing to the positive reputation our workforce has internationally. As a country, we have all the ingredients for global success: a large engineering workforce.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-12-Test NO.-10311

High quality faculty, a native speaker comfort with the English language and a desire and culture of innovation. The rocky road to redemption but to overcome the current hurdles, detect companies must education embrace purpose driven growth for a promising future. Today, they have the ability to not just create jobs but also build communities and futures which can change our society. There is a force multiplier effect by providing well trained talent in cutting edge areas to education organizations, resulting in raising the overall performance of the company, subsequently leading to holistic growth. Through the following strategies, companies can ensure a long and healthy future within and outside the country Know your differentiator competitive advantage India is the most competitive detect market in the world. With players of all shapes and sizes, and everyone fighting for a piece of the same pie, companies differentiators are not sharply defined enough to be valued by a customer. Focus on unit economics Gone is the era of excess, and growth at any cost when one education would spend INR 3 5 to earn a rupee is no longer acceptable. More than revenues and funding, detect companies need to ensure that there is cash in the bank and a clear path to profitability. High learner NPS and network effects For a Detach, outcomes for education learners are the biggest validation of the product and therein the success of the company. In the case of education, at the end of the day, it all about outcomes. If there is a clear value provided to a learner, they will recommend it to friends and family, which would not education only serve as a testimony of the success of the company but also bring down customer acquisition cost. Stronger alliances with employers and colleges Employment focused detect companies are working to bridge the skill gaps. They are working for education the employers to provide them with top talent. In case of colleges, they supplement education, making students more employable and assist in placements. This is an ecosystem that works well when the interest of all parties is aligned to ensure learners success. The government has supported the growth of Detach companies and is continuing to provide them with a larger role in education and skill development through progressive regulations such as the NEP. Much like the first wave of global Internet and the dotcom era, where Indian companies serviced global enterprises remotely, Indian detect is well poised to service international learners and must education embrace purpose driven growth for a promising future. Today, they have the ability to not just create jobs but also build companies. Historically, the Indian IT outsourcing services experienced growth after an economic downturn, and this seems to be possible for those companies that manage to remain afloat post the current period of market correction. This would be the tipping point for detects to truly become global players, and take their place as the market leaders of the online learning segment, internationally.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkc nawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-12-Test NO.-10312

Two decades ago the Vajpayee government accepted the report of the high level committee on the Indian diaspora, chaired by the distinguished LM Singhvi, and decided to celebrate a Pravasi Bharatiya Divas every year, in recognition and appreciation of the constructive economic, political and philanthropic role played by the Indian diaspora. The economic and philanthropic roles of overseas Indians have been repeatedly welcomed by successive governments. Reforms in India again and again run into the problem of too little time spent explaining them. CUET, which is going live in as many as 90 universities this year, is the latest to repeat the cardinal error of underselling. Set to begin on Friday, the release of its dense schedule on Monday has caused anxiety and panic. Much of this could have been averted had the National Testing Agency, UGC and the education ministry undertaken better public communication on the schedule ahead of releasing it. That CUET would replace board marks altogether was after all announced back in March, leaving many intervening months to deliver a clear understanding about the test to its central stakeholders: students. Many students are experiencing a deep sense of injustice, even fear, if they have been allotted an early test date, as compared to their peers. But a student score card will only carry her percentile score, and only her relative performance vis students who appear in the same test as her, say on July 15, will matter. Those who take the test on say August 10 will be scored as a separate cohort. Thus, the perceived advantage of students allotted later test dates, does not stand to reason. There also distress about students being told to test for multiple subjects on the same day. Yet, this is a common enough element of multiple choice competitive exams, of which CUET is just the latest. NEET UG for example tests physics, chemistry, botany and zoology in one go. To be clear, students distress is understandable. It however follows not so much from fundamental CUET problems but from poor communication by authorities. It is tragic that a reform that originated in the commendable goal of reducing student stress is producing the opposite effect. Even more tragic because this was so avoidable. NTA must now go out of its way to accommodate student requests for shifting test centers, fixing admit card errors etc. Indeed, with 15 lakh registrations across 54,000 unique subject combinations, it must be on its toes to address the inevitable glitches. CUET is undoubtedly the way forward, facilitating convenient and uniform applications spread from Delhi University and TISS to Hyderabad University and Visa Bahrain University. But professional implementation of any reform is critical to maintaining public trust in it. Draped Murmu candidature for the presidential polls has created a deep fissure in the opposition camp like no other BJP strategy in recent times. Soon after accusing BJP of betrayal, Uddhav Thackeray found himself backing the overwhelming sentiment for Murmu among his MPs. Trapped between more Sainik exits and.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-12-Test NO.-10313

Further antagonising his MVA allies, Uddhav support for Murmu signifies his weakening authority and inability to be a steadfast partner in the opposition camp. Uddhav neutral stances will particularly suit BJP in Maharashtra. The 2014 Maharashtra assembly elections when BJP stopped playing second fiddle belatedly awakened Shiv Sena to BJP game plan of being the state sole Hindustan flag bearer, like the rest of India. Eknath Shinde revolt signalled that most Sainiks accept BJP dominance. Uddhav succumbing to pressure is another reality check for NCP and Congress; any hopes of splitting the Hindustan plank through Uddhav are remote. Even if MVA survives and undertakes seat sharing negotiations for upcoming civic polls, NCP Congress may no longer be generous to Uddhav Sena. Jharkhand CM Hemant Soren is similarly stuck. Opposing Murmu could rile JMM Adivasi base. But supporting her strains its Congress alliance. A truck with BJP won takes JMM too far despite present compulsions. Soren CM post is shaky over clinging to a mining lease after taking office. There also the attraction of developmental largesse accruing from a friendly central government. But like Sena Hindustan, BJP wants to subsume JMM Adivasi identity politics into its Hindu unity project. BJP has hugely grown its Adivasi vote and JMM allying with BJP may accelerate this process and marginalise the former like Sena in Maharashtra. BJP has landed several other parties like JD U , AIADMK and JD S in the same confusion: To ally, oppose or stay neutral It official. Punctuality is back. And on time too. Various US based arbiters of corporate etiquette say it an after effect of the pandemic. We learnt how much more could be done with hours not wasted on commuting, and so there zero tolerance for Late Latifas who force us to sit twiddling our thumbs. Milton hey also serve who only stand and wait has been pink slipped. In today Paradigm Regained, our interests are not served by making us hang around when all we want is to get on with the meeting, and get back to the life part of work life balance. In Cal, everyone arrived on time for everything except work. In Bombay, it was vice versa. Made more confounding by my pathologically punctual first boss, Khushwant Singh. Soon after both of us had moved here to join the Illustrated Weekly, I, a lowly trainee, was chuffed to be invited for a drink by Editor ji. Reaching on the dot, I waited outside for a few minutes so as not to look like an over eager yokel. As soon as he answered the bell, I shrivelled as he growled, You re late! Of course, soon every hostess learnt to pander to his condition of Dinner at 8 sharp even if it meant ruining the set salad for the other, more laidback guests. Two decades later, Bollycelebs would sashay into our Bombay Times party even at 2am, making us wonder what they were doing before that. My dear departed Shashi Baliga remarked archly.

Delhi Police Typing-Dated-2023-08-12-Test NO.-10314

If we came at the given 9pm, we would have to help doing the jhadoo. It different at work, right Erm, yes and no. Prem Shankar Jha was this large teddy bear who d burst into the TOI edit meeting late, huffing and puffing, and launch into a tirade on the state of the union or whatever, unconcerned about the subject under discussion. Elsewhere, there was the diva, who swept in well after the start, and the boss would indulgently rewind to the beginning, leaving the others seething. Back in Cal, the Statesman editor himself never came on time, prompting our colleague, Somdeb, to quip, I want to die after him, so I can officially refer to him as the late Amalendu Dasgupta. In everyday usage, the word ear denotes a sage, a wise person, a mystic. But the term also refers to one who sees, a visionary. These two connotations of the word coalesced for me when, on a recent visit to London, I went to an exhibition called Van Gogh: The Immersive Experience which displayed reproductions of the works of the Dutch painter. As the text accompanying the exhibits said, Vincent van Gogh is the rock star of the Western art world, the Presley of painters. People who would know a Rembrandt from a Rubens, a Husain from a Souza, instantly recognise Van Gogh sunflowers, which is the most replicated art work in the world. Born in 1853 in Holland, Van Gogh died at the age of 37 of a self inflicted gunshot wound. During his all too short life, he created over 2,000 art works, including some 900 oil paintings and 1,100 sketches and illustrations. A clinical depressive who suffered from bipolar disorder, he seemed to work in a furious race against mortal time, often completing a new painting in less than 36 hours. The London exhibition used digital technology and virtual reality to draw the viewers, to immerse them in the world as seen by the artist. A real life scene, of stars in a nightscape, of a town lights reflected on a dark river, of a flock of birds flying over a field of wheat, of a room furnished with a bed and a chair, were morphed into their transfiguration by the tormented genius of the artist, by how he saw these everyday things and how he painted them. Stars in the night sky became vertiginous whirlpools of dazzling light, you could hear the sound of wind sighing through the field of grain and the feathers of birds in flight, feel the texture of the rough cotton sheet of the bed, the crises cross weave of the seat of chair as if you were sitting on it. Reality, the reality of normative sensory experience, disappeared, was sublimated, into a realer reality of a double vision, which simultaneously saw both the external world and the immensity of the world within the mind, the inner universe of the artist consciousness, and bound the two together in an.

On a pedestal, and this delusion can prove to be a very costly mistake. A study conducted by the General 236548 Medical Council, UK, has found that the four most common failures in communication can be attributed to deficits in appropriateness and timeliness of information, sharing information with peers, listening to patients, and working collaboratively with 251843 patients and caregivers. It also found 19 contributing factors, which included the patients, 26484 team, staff and the system. While in the fast-paced world that we live in, 98416413 mobile phones have replaced face-to-face dialogue. Tele consultation could be the newer mode of consulting a doctor. As we move towards a virtual hospital and virtual reality infiltrating the real world of patient care, we must remember that the need to speak and be heard is a fundamental need. Overlooking the basic stuff might be synonymous 3231658 with losing the golden key to a more enriching and fulfilling patient care experience, which might make us emotionally and spiritually dwarfed eventually. A long-awaited law is seeing the light of day with the Mediation Bill, 2023 securing passage in both 31696746 Houses of Parliament. Mediation has been in vogue since 2005 in India court 3166841 annexed mediation systems where lawyers trained as mediators have attempted resolution in cases referred by the courts. But now it is poised to enter the arena of a professional 3166841 service with corresponding requirements of accreditation and quality. To begin with, the legislation is a recognition of mediation as a necessary and viable method of consensual dispute resolution. It provides the legal framework for undertaking this process and the accompanying structures and entities. It recognise mediation as a full-fledged method of addressing a wide range of conflicts which include commercial and civil disputes, personal and matrimonial disputes, as well as specific areas like consumer protection, real estate and insolvency. It portrays the standalone capacity of mediation so that it rests on its own feet, without being seen as an adjunct of the litigation or arbitration process. In a world striving for gender equality and human rights, the issues of sexual and reproductive health rights for women and girls, along with the pressing challenge of period poverty, demand immediate attention. India, with its diverse population and commitment to development, is working towards developing a menstrual care policy that will position India to lead the charge in enacting policies that safeguard these rights, empower its population of people who menstruate, and eradicate the scourge of period poverty. Here are some key areas, where the Government of India must focus on while working on this landmark initiative: To effectively address these issues, collaboration between the government, NGOs, civil society, and international organizations is essential. By working together, these stakeholders can share expertise, resources, and experiences to create a comprehensive and sustainable approach. As a nation on the path to development, India has the responsibility to ensure the well-being and rights of all people who menstruate. By implementing these policy recommendations, India can take significant strides towards achieving gender equality, ending period poverty, and promoting sexual and reproductive health rights. The empowerment of women and girls sin just a social obligation but a catalyst for overall national progress

Delhi Police Typing-Dated-2023-08-12-Test NO.-10318

Technology driven and lend themselves to scalable business models such as EVs or solar panels, adaptation solutions tend to be highly local, socio-ecological solutions, tailored to the geographic, climatic, and social context of a region. These could include increasing water percolation, wetland rejuvenation, and optimising crop choice all of which can be challenging to scale as quickly as mitigation solutions. Payback is indirect, hard to measure in monetary terms, and accrues over a longer term. This results in little mainstream capital flowing into adaptation. Lack of incentive for innovation The need for adaptation is currently most acutely felt by those exposed to the climate vagaries small and marginal farmers, rural women, poor urban communities, and those who don't have the buffer of infrastructure to shield them from climate stress. These communities often do not have high purchasing power and may not be a priority for the private sector to innovate for. Hard to measure Even in climate-benefit terms, adaptation has proved difficult to measure, quantify, and standardise. How does one measure resilience? It is a highly local and contextual affair, and while there are some guidelines on how this may be done, it is likely to remain challenging, especially in a country as diverse as India. On the other hand, carbon is easier to measure and is the same everywhere. This means a consequent ease in monitoring solutions to increase sinks or reduce emissions, leading to much easier flow of capital to mitigation. Given such uncertainties, complexities, and risks, the private sector has shied away from financing climate adaptation solutions. Skewed global discourse International funding too has remained scarce for adaptation due to the skewed global discourse on climate change, and because mitigation action is seen to have more direct global consequences than adaptation action. Mitigation solutions in India received 51 percent of funding from private sources and 13 percent from international sources in 2019-20. The domestic philanthropic space, however, has been seeing a different trend, with more donors funding adaptation than mitigation, and an increase in the overall quantum of funding towards climate-adjacent sectors such as water and livelihoods. However, the scope of such capital is likely to remain small and catalytic, in support of other capital such as global, private, and public. The public sector, therefore, assumes a critical role in climate adaptation funding, and only it can help build adaptive capacity at the required scale nationally. Indeed, nearly 100 percent of the funding to adaptation in India currently comes from public sources, such as through union and state government budgets. However, this is still only a small fraction of the funding the country actually needs. How can the public sector step up? Thus, while the private sector and international funding will continue to help India meet its mitigation deficit, adaptation could fall behind without the public sector stepping up. The public sector needs to view adaptation as a necessary investment to climate-proof the lives, livelihoods, environment, and economy so that the country's development needs can be met despite climate challenges. Given this strategic imperative, the government should adopt a mission adaptation framework to catalyse adaptation action. This approach is inspired by the ideas developed in Mariana Mazzucato's Mission Economy, which describes how the state

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-12-Test NO.-10319

Business activity. She points out that, historically, the public sector has on many occasions stepped up to fund sectors or goals that were perceived as too risky by the private sector but that could be of strategic importance or had the potential to lead to innovation. These ideas would need to be aligned with the unique challenges of climate adaptation in a country as vast as India. Mission adaptation: A framework to catalyse climate adaptation Mission adaptation should help create a supportive ecosystem to encourage innovation geared towards adaptation. It can enable all actors, including the private sector, civil society, the research establishment, and common citizens to co-create locally relevant adaptation solutions. It should also aim to ignite public imagination to achieve this goal. Funding should be directed towards multiple streams and programmes for this mission to be a success. Some themes it could aim to support are, Focusing on participatory appraisal and co-evolution of solutions Listening to people on the ground across landscapes, gender, caste, class, and livelihoods on how they are experiencing the impact of the climate crisis, how they are responding, what is working and what is not, and how they anticipate future impacts to unfold is crucial to building sustainable climate solutions. With the support of civil society, the public sector could support participatory exercises with citizens on climate resilience. Jodhpur development of a heat action plan through a civil society organisation and government collaboration, and the Spanish citizen climate assemblies, give us some inspiration. During our work, we have found that participatory exercises employing systems thinking are useful in uncovering climate linkages and responses. For instance, as part of our work with CInI, during an interaction with a federation of smallholder farmers in Dahod, Gujarat, our discussions revealed various climate-linked stressors such as crop loss due to pest incidences and water shortage. The farmers shared lesser-known solutions that were working well, such as solar-based insect traps, which lure in pests using a solar-powered light, and floriculture alongside vegetable farming, which distracts pests and saves the vegetables. These contrasted with some other solutions such as pesticides, which they felt harm the good organisms in the soil, create mutated pests in the long run, and increase the farmer vulnerability. Participatory systems thinking is also helpful because it can challenge the inputs that emerge from the community. When interconnections between different parts of the system are mapped and taken back to the people, everyone is pushed to think harder and expand their spatial, temporal, and contextual boundaries. When our discussion came to water shortage, for instance, farmers suggested check dams as a solution to increase water availability. However, when we jointly analysed the interconnections between adopting check dams and water availability, it emerged that with the additional water, farmers were more likely to increase cultivated land and shift to cash crops, which in turn would further increase the water footprint and, once again, result in water scarcity. The farmers agreed and added that along with check dams, drip irrigation with mulch would be necessary to ensure a sustainable solution. While there may be a big market to tap into for meeting people adaptation needs, it has to be discovered along with the people.

Alchemy of paint and canvas. When I sleep, I dream of painting, and when I wake, I paint my dreams, said Van Gogh. And the dreams he painted were startlingly unique. Analyzing his use of paint, an oculist has suggested that he saw shades of color differently from others, and perhaps this imparted to his palette knife strokes the fierce energy which makes his paintings leap out of the canvas to stun the viewer with their intense vitality. Van Gogh was literally a ear who saw things differently, a prophet far ahead in his time, during which he sold just one work. Shunned by a world blind to his vision, he became a messiah martyred on the crucifix of oblivion. But he left behind a life changing testament for generations to come, a gospel of radiant, inextinguishable light. Given by Vincent, to us, with love. Why does a pictorial depiction of MA Kali with a cigarette annoy the people of India The reasons are several. Firstly, she is MA, mother, the term synonymous with someone who nurtures and protects. Even though, a good number of women in India are smokers but they still have to smoke in restricted spaces as it is not widely accepted. There are women from the poorer sections, who are seen smoking the bed, the Indian version of a cigarette, it is the tobacco wrapped in a leaf. She is fearless, rough, she works as a laborer or as a maid. She would indeed be a woman who is in her middle ages and has no pressure to find a husband or to seek the recognition of her in laws. There are also the super rich, again fearless women, who consider smoking as elitism. They also fit into a specific social circle of women who are seen in opulent surroundings. Both of the above cases are extreme and the commonality between them is that they are like cults which sustain in their own ecosystem. In India, a mother is popularly not seen as someone who would form a part of any of the above representations of women. Coming to the popular ideology, smoking and drinking for women is a taboo in India as it does fit into the definition of a woman as someone who procreates, nurtures and is a caregiver. Whether this taboo is good or bad is not a controversy that I wish to address here. I am only trying to highlight the common ideology with which Indian masses have lived for centuries, which is the foundation of the society and how weakening that foundation can enrage people. Goddess Kali, is a form of Parfait, she is supposed to have originated from Vishnu when Lord Vishnu was in yoga nidra deep sleep and the demons had attacked. That is when Kaali evolved from him to put an end to the demons. Kaali, is synonymous with power and decimation of the evil. She has ten hands in her Mahakaali form and four in the Kaali.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-13-Test NO.-10321

Form she wears a garland of human skulls and her tongue is protruding with blood on it. This all is a pictorial depiction of her as a force that destroys evil. Raktabija was a demon who she could not kill in the beginning because each drop of blood from his body multiplied into another form of the demon. Therefore, MA Kali drank his blood and ate all his forms to put an end to the demon. There is no reference to Kaali being a smoker in any of the ancient texts. Mahua Moitra, honorable member of Parliament says, It is my Kaali and I have the freedom to see her in any form. She is seen as a meat eating goddess in many parts of the country. Yes, Mahua is right, Kaali is offered meat and she has eaten the flesh of the demons. Moitra is endorsing Leena Manimekalai depiction of Kaali smoking cigarette by saying that everyone can depict their Kaali in a way they wish to. Religion is indeed a personal thing and it is up to an individual to believe in a certain religion or an ideology. Hinduism encourages people to follow their free will, it calls the whole world as a family. Vasudeva Kutumbakam, means entire world is a family. Important question therefore is that when we have freedom, what should we do with it and why Does freedom mean following your own will considering that you are the only person living on earth or does it mean being responsible to fellow humans while enjoying own freedom In a democratic world people have the option of becoming rebellious and claiming their freedom and rejecting all such taboos no doubt. Imagery has the power to mould human minds and define their behavior and hence their actions. Anyone who is exercising their freedom of expression must take into account the fact that more influential that person is, more following on social media and otherwise, that person has, larger impact do their words have on the entire society. Two women are justifying a certain image of MA Kaali. Is it their definition of freedom of women which they are expressing by associating it with the epitome of power, goddess Kaali Goddess Kaali is every such person mother, who believes in her. They grew up with an image of her as a mother, since centuries. Not everyone would stand to see her Kaali image being doctored because it is not just an image, it is their belief system that defines who they are. How the eminently sensible scheme for Tour of Duty TOD which had been on the anvil for quite some time deviated into Agni path is a question that begs. TOD was expected to cover function specific intake at various ranks for the Indian Army. This included soldiers for fighting arms and also the likes of soldier clerk, soldier nursing assistant, education corps havildar and junior commissioned officers as religious teacher. TOD was not to be the only.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-13-Test NO.-10322

Source of recruitment, yet a pilot run was advised before full fledged roll out. Of course, beyond a low key launch, TOD could have gradually expanded to become the mainstay of recruitment and replace other routes. In contrast, Agni path has been made the only source of recruitment at day one and has been launched full fledged with a big bang. The government apparently forgot the military maxim that battle cry however loud cannot substitute battle strategy. Agni path is decidedly a downgrade from the terms offered so far to new recruits. So much so, they will not have even the lowest military title of sepoy. Using the high sounding label of Agniveer is therefore at best a camouflage. Again, when half of the seva nidhi coming at the end of tenure is to be funded by the incumbent while in service, it is certainly not a bounty as projected. Agni path is surely preferable to conscription practiced in many countries but the way in which agniveers would be used may not be very different. Rookies who have just six months of training can serve the purpose of being the second line of defence but in wars around the world including Ukraine, they have been used for first line of offence, essentially as cheap cannon fodder. When drawing from the experience of similar schemes in developed countries, the Indian social conditions must be factored in, particularly those of high unemployment, absence of credible social security and family expectations from bread winners. All right thinking citizens including those who support the cause of the protesters have deplored use of violence. But how can we expect protesters to eschew violence when over the last few years there has been a social media campaign by powerful quarters to ridicule the contribution of non violent freedom movement led by Mohandas Gandhi. Many inactions of previous governments are rightly blamed on analysis leading to paralysis. The current dispensation has truly reversed that and starting with demonetization, the approach has often been to first paralyze then analyze. There is no denying that India armed forces have to turn younger and have to be equipped better and that constraints of financial resources are a reality. This does necessitate a change in the process of recruitment and the terms of initial engagement. Introduction of such far reaching change in the country security apparatus is an extremely sensitive issue where it would have been better to avoid hurry and hubris. As per reports, there are about 637 million smartphone users in India who spend an average of 4.6 hours per day consuming content. The country also has the highest data consumption per smartphone with 448 million active social media users. These numbers have led to the establishment of the creator economy think influencers, bloggers, and essentially anyone building a community around their niche. Thanks to digitization and the pandemic, the creator ecosystem is rapidly evolving in India with the last two years seeing blitz scale growth in the economy.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-13-Test NO.-10323

From being a casual content maker to a full fledged professional, being a creator now is a high value affair. Over 3000 Indian creators have already gathered one million subscribers or followers across platforms earning handsomely through direct and indirect ways of monetisation. Today the content economy is quite the opposite of what it used to be earlier. It has become the most democratized sector with various avenues for creators to experiment with their content and simultaneously make money out of it. Indirect Monetisation So far creators were making money via indirect sources such as brand deals, affiliate marketing, and ad revenue. What this essentially means is that brands would pay creators to use, review, or promote the product service to their audiences through videos, photos, and write ups. In the case of affiliate marketing, a creator would promote a brand products and earn a certain percentage of sales generated from the channel. By allowing ads to play between their content a creator would earn a share of the revenue from the video ad shown to their viewers. However, as being a creator evolved into a full fledged career, indirect monetization has time and again proved insufficient. While top creators walked away with hefty checks most creators were and are scraping by with much less. This has driven creators to strive to own their audience and monetize on their own terms. Direct Monetisation Today a creator is far beyond an influencer, they are value addition players, entrepreneurs and individual business leaders; who are now owning their distribution directly and using the power of the community to crack the monetisation benefit. What this essentially means is creating value that meets the needs of the audience, directly. The value can be easily translated and delivered to the community via Telegram or Google Meet; which financially benefits the creator as audiences are willing to pay up for these communities. Out of the several direct monetisation streams, we look at the top three through which the creator economy is tapping into the power of community and directly monetising it by giving value. Conducting Workshops: The best example of this is motivational speakers and life coaches, who make a significant chunk of the Indian creator ecosystem. On one end of the spectrum, you have people like Sadguru; on the other, you have people like Sandeep Maheshwari. They are known to simplify the framework of motivational books so that audiences can apply it to their daily lives. The playbook is simple, they conduct a small portion of their session online and roll out extensive workshops and leadership coaching sessions on platforms such as Telegram. People not only want to join these exclusive communities but they are willing to pay a certain amount for it as well. Subscription Plans: Think the likes of Patreon, where fans, through a subscription plan, get exclusive insight into their favourite creator content. The creators in return could share exclusive behind the scenes, give first access to shows and launches, share interesting.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-13-Test NO.-10324

Trivia or even get on calls with their subscribers via Google Meet or Zoom call. Closer to home we have YouTube educator Dhruv Rathee who uses Telegram to give instant video updates on messages to his audience. Teaching and Sharing Knowledge: These are the value creating people who play in the knowledge economy. Such creators roll out courses for their audiences that want to learn more. For this, they build a community of their audience on Telegram and Zoom to get talking to each other. This works in two aspects: credibility and instant gratification. An audience consumes content they like; when such content comes from creators they have known for a long time, they sign up based on trust and credibility in the creator and the willingness to learn. Even though not all creators are going to bring in an eye popping amount of wealth yet it does stop them from living on their own terms. For instance, a college student, who initially couldn't afford her college tuition fees of six thousand rupees now earns a respectable amount through her WhatsApp group by sharing notes with young aspirants all over the country. To ensure less dependency on any one platform, the creator mindset has shifted from platform centric to business centric. New tools have emerged to help creators personalize, monetise and automate their audience. Investors and corporates alike are taking note of the creator economy and generating massive investment in this space. Although indirect monetisation has its perks, with direct monetisation, individual creators are becoming their own brands to reckon with. The first summit of the newly formed grouping of India, Israel, the United States US and the UAE will be held on July 14. The quadrilateral group abbreviated as after the first letters of the member countries, was formed in October 2021. Also called as the West Asian Quad, the first summit will be held virtually and will be attended by Prime Minister Narendra Modi, the Israeli Prime Minister Yair Lapid, the US President Joe Biden and the President of the UAE Sheikh Mohamed bin Zayed Al Nahyan. The concept of cooperation between India, Israel, the US and the UAE was formalized during Dr. S. Jaishankar's visit to Israel. During his visit a foreign minister level summit of this group was held with Dr. S. Jaishankar and Israeli Foreign Minister Yair Lapid attending the meeting in person while the US Secretary of State Antony Blinken and the UAE Minister of Foreign Affairs and International Cooperation attending the meeting virtually. According to the Ministry of External Affairs, the focus areas for the I2U2 are water, energy, transportation, space, health and food security. As this bloc takes shape it is pertinent to consider India's position and role in the I2U2. The I2U2: A reflection of resets The I2U2 is an outcome and a reflection of the resets that the West Asian region has been going through. The formation of the I2U2 is considered as a direct outcome of the Abraham Accords.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-13-Test NO.-10325

The Abraham Accords saw several Arab countries such as the UAE, Bahrain, Sudan and Morocco establishing diplomatic ties with Israel in 2020. This normalization process was facilitated by the US. The ending of animosity between Israel and at least some Arab countries has paved way for greater regional and multilateral cooperation. The first I2U2 summit is taking place as the US President Joe Biden travels to West Asia to reset the US relations with Saudi Arabia. The ties between the US and Saudi Arabia have been uneasy for past some time. Biden visit to Saudi Arabia is considered as a step backwards for him since as a presidential candidate in 2020, he had spoken about making Saudi Arabia and its leaders social pariah. The relations between the two countries further soured in March this year when Saudi Arabia and even the UAE refused to entertain the US calls for increasing oil production in the wake of the Russia Ukraine war so as to ensure a smooth energy supply and to keep oil prices under control. Biden visit is expected to ease tensions between the US and Saudi Arabia by ironing out these differences. Biden is also expected to explore the possibility of bringing Saudi Arabia and Israel closer. Other resets which the region witnessed recently, which may not have a direct and immediate relevance for the I2U2, have been steps towards rapprochement between Saudi Arabia and the UAE on one hand and Turkey on the other. The I2U2 is an attempt towards forging cooperation between regional powers Israel and the UAE and their extra regional close partners India and the US in the wake of changing equations in the region. India and the I2U2 India participation in this grouping is an outcome of resetting its own ties with the West Asian region. Over the decades since independence India engagements with the West Asian region, particularly the Arab countries were heavily influenced by ideological considerations. Concerns about domestic Muslim electorate as also attempts to gain the Arab countries support over the Jammu and Kashmir issue meant India kept distance from Israel. Also oil supply and remittances from Indian Diaspora in the Arab countries ensured that India engagements with the region remained limited to the Arab world. Although India established diplomatic ties with Israel in 1992 correcting the wrongs of earlier decades, India outlook towards the region still did not change. Prime Minister Modi tenure saw a paradigm shift in India policy. While Modi continued to develop close relations with the Arab countries, he took steps to elevate these ties. Modi ensured that India ties with the Arab countries were diversified and that oil and remittances were no longer the sole determining factors although these continue to remain important. Modi visit to Israel in 2017 ended the zero sum game thinking through which India viewed its relations with Arab countries and Israel. Shift in India policy towards West Asia is evident from the fact that India has strategic cooperation with Israel as.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-13-Test NO.-10328

Well as Saudi Arabia and the UAE. India myopic view of West Asia prevented greater engagements and involvement in the region. However, with realpolitik prevailing in India policy formulation, India would look forward to a greater role in the strategic and economic landscape of West Asia. The I2U2 could just be the boost to India future aspirations in the region. The newly formed I2U2 intends to focus on economic, technological and infrastructural cooperation; the members would do well to work around their different approaches towards Iran. Iran could prove to a challenge in functioning of the I2U2. Israel considers Iran a security threat even as the western countries are attempting to salvage the nuclear deal. The UAE is taking steps towards improving ties with Iran. India is the only country that enjoys cordial relations with Iran. India has deep economic and strategic engagements with Iran. With Chabahar Port under development and INSTC under trial run, India could prove to be a vital link between Iran and its adversaries. The I2U2 provides an additional avenue for India to expand its multilateral engagements but it also offers an opportunity for India to play a prominent role in the geopolitics of West Asia. Healthcare workers, including doctors, nurses, laboratory technicians, support staff, and pharmacists, are vital in ensuring timely delivery and care for the population. During the worldwide pandemic, this workforce formed the backbone of the fight against the virus. The demand for healthcare workers is on an upswing across the globe. As a result, the opportunities for the Indian workforce in the global healthcare sector are immense. Healthcare professionals can explore vacancies abroad to increase their chances of securing the perfect role. Moreover, it can be a chance to travel and experience a new culture. However, before crossing the border and starting a new life, there are some essential things to look at. Reasons to Work Abroad A career overseas helps the candidate develop cultural competence. It expands the chances of meeting new people and learning a new language. Furthermore, by interacting with patients and professionals from different cultures and religions, the candidate can learn new techniques and skills that might not be possible otherwise at the workplace. Many healthcare professionals have been able to gain experience in a different country and utilise this experience when they return to their home country. Healthcare professionals often opt for a career in more developed countries to pursue a better life and enjoy a higher earning potential. Apart from competitive salaries, countries like the UK, Saudi Arabia, UAE, Europe and the US offer many benefits to those seeking healthcare jobs overseas. What to consider when applying for international healthcare jobs Candidates must first decide where they want to apply. The ensuing steps will involve acquiring the right qualifications and specialisations as per location, obtaining the right visa, learning the language, and understanding the different laws and customs, among others. Conduct research to learn about the countries that suit the applicant requirements. Applicants must start by.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-13-Test NO.-10329

Finding out how the healthcare system operates in other nations as this is crucial information that will determine if a specific country is a good fit and also which career opportunities are likely to be available to them in future. For instance, the US Bureau of Labour Statistics projected 1.2 million new personal and home health aide positions in 2020, with the need for another 3,72,000 registered nurses by 2028. Healthcare professionals must also evaluate what is important to them in their new host country. Most Indians want to migrate to English speaking countries because the language does not act as a barrier to their growth and makes it easier to settle into their new home. Additionally, the medical needs differ from one country to another. It is vital to recognise cultural differences since they can impact the professional lifestyle and experience at work long term. Having information about the terminology, duties, responsibilities, and credentials associated with the position is crucial. Acquire the right qualifications and documents. Working as a nurse or doctor in any country requires specialist qualifications. Although most qualifications are accepted globally, some are not accepted in certain countries. To start working in such countries, the candidate may have to weigh up getting extra qualifications. As part of the Union Health Ministry Heal by India initiative, a study was conducted to map the requirement of all categories of healthcare professionals in foreign countries, based on the burden of diseases and shortages. The preliminary findings of the study indicate the demand for dentists and gynecologists in the United States. Moreover, there is a need for nurse practitioners in Singapore, the Netherlands, Sweden, Germany, Cuba, Nepal, and Israel. Working abroad comes with the requirement of a work visa. To obtain a work visa, professionals need to meet specific requirements and may need to make payments to cover the cost of this, though this varies per country and can also vary per employer. Most countries encourage immigrants with healthcare qualifications experience, but if there any concern in the paperwork and other related documents, there can be complications in getting approval. Collect all the required documents related to education, work, travel, and identity. These include qualifying degrees, certificates, licenses, work experience and specialisation. As healthcare is a high risk industry, background screening and verification is considered as a crucial step by healthcare recruiters. Prior planning and verification of all documents ensures a smooth transition into an overseas healthcare job as it is often a requirement for obtaining a license to practice in a new country. Maintain a Digital CV A Digital CV showcases essential information about the candidate work experience, qualifications, education, and skills. It is a vital document to maintain and update regularly. A Digital CV is often the first chance to convince prospective employers and recruiters to shortlist and interview the professional. Many individuals update their CVs when looking for a new job. However, despite the candidate employment status, it is best to keep the Digital CV updated. Update.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-13-Test NO.-10330

Skills as per requirement. Healthcare professionals must continually upgrade their skills and know about the developments in the medical industry. Depending on the country the candidate wishes to establish a career in, the candidate must know its protocols, health tech developments, and innovations. This will also help in building confidence and knowledge amongst the potential employers. How to apply for healthcare jobs in the international market With the support of technology, searching for an eligible position in the healthcare sector of the international market is easy and convenient. Today, there are healthcare career platforms that provide end to end services, ranging from job listings to document verification and licensing. Candidates must rely on reputable providers and steer clear of fraudulent sites. The process to apply for a job abroad should be crystal clear in the candidate mind. Bottom Line The World Health Organization predicts a shortfall of over 18 million health workers by 2030. Recognising the healthcare sector as a major employer, the Ministry of Skill Development and Entrepreneurship plans to supply 300,000 healthcare workers to countries like the US, UK, Germany, Sweden, Australia, Singapore, and Japan by 2022. These statistics are indicative of the fact that the demand for healthcare workers will continue to grow in the coming years with countries aspiring to strengthen their care delivery. A healthcare job abroad comes with the benefits of an attractive salary and the chance to work with leading professionals and modern amenities. Indian healthcare professionals can tap this opportunity to fill the talent gap and establish their careers in fast moving international markets. India is a nation of manifold wealth and one of them is the abundance of workforce one can find. However, it is unfortunate that this wealth, especially with respect to the blue collar workforce, is not understood in the way it should be. Most people continue to use the terms blue collar workers and low or unskilled workers, interchangeably because employment can range from the hard labour of lifting and moving stuff to being a crucial part of a production line and or being part of the service sector industries. The truth is that for India, its blue collar workforce is its all pervasive support system. Research findings suggest that the probable number of blue collar workers in India ranges from 300 450 million with an overwhelming majority of them being men, and women being very few and far in between. When finding jobs, the workforce has traditionally leaned on mass recruiters or contractors to find jobs and at times is required to pay commissions to obtain positions. This approach is counterproductive to the job seeker as it is costly, time consuming, unstructured and more beneficial to the middlemen. Moreover, there is no assistance for the blue collar employee in ensuring digital documentation, access to bank records or other benefits, which when combined with the real danger of defrauding by agents, have been catastrophic. The worldwide pandemic in 2020 changed the landscape of lives and the way one.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-13-Test NO.-10331

There are strict instructions to the additional head examiners not to allow any shoddy work in evaluation and not to issue more than 20 25 answer books for evaluation to an examiner on a single day. The examiners are practicing teachers who guard the interest of the candidates. There is no ground to believe that they do unjust marking and deny the candidates their due. It is true that in some cases totaling errors have been detected at the stage of scrutiny or verification of marks. In order to minimize such errors and to further strengthen and to improve its system, from 1993 checking of totals and other aspects of the answers has been trebled in order to detect and eliminate all lurking errors. The results of all the candidates are reviewed by the Results Committee functioning at the Head Quarters. The Regional Officers are not the number of this Committee. This Committee reviews the results of all the regions and in case it decides to standardize the results in view of the results shown by the regions over the previous years, it adopts a uniform policy for the candidates of all the regions. No special policy is adopted for any region, unless there are some special reasons. This practice of awarding standardized marks in order to moderate the overall results is a practice common to most of the Boards of Secondary Education. The exact number of marks awarded for the purpose of standardization in different subjects varies from year to year. The system is extremely impersonalized and has no room for collusion infringement. It is in a word a scientific system. CBSE submitted that the procedure evolved and adopted by it ensures fairness and accuracy in evaluation of answer books and made the entire process as foolproof as possible and therefore denial of reevaluation or inspection or grant of copies cannot be considered to be denial of fair play or unreasonable restriction on the rights of the students. A Division Bench of the High Court heard and disposed of the said writ petition along with the connected writ petitions relied by West Bengal Board of Secondary Education and others by a common judgment dated 5.2.2009. The High Court held that the evaluated answer books of an examinee writing a public examination conducted by statutory bodies like CBSE or any University or Board of Secondary Education, being a document, manuscript record, and opinion fell within the definition of information as defined in section 2 f of the RTI Act. It held that the provisions of the RTI Act should be interpreted in a manner which would lead towards dissemination of information rather than withholding the same; and in view of the right to information, the examining bodies were bound to provide inspection of evaluated answer books to the examinees. Consequently it directed CBSE to grant inspection of the answer books to the examinees who sought information. The High Court however rejected the prayer made by the examinees for reevaluation of.

Delhi Police Typing-Dated-2023-08-13-Test NO.-10332

Develop a localised sense of climate adaptation on the ground. 2. Strengthening public systems, schemes, and regulations Maharashtra recently witnessed incidences of death due to dehydration and heatstroke on account of heat stress. Events such as floods come with their own risk of spikes in vector-borne and water-borne diseases. Therefore, it is crucial to strengthen public systems, such as the public health system, from a climate adaptation lens. Building competent systems to cope with anticipated climate stress is essential in providing an effective safety net for people to adapt to climate impacts. Infrastructure development on natural drainage flows, building on low-lying areas, and deforestation in mountain areas can also result in increased vulnerability, exacerbating climate change induced impacts as is being seen in Himachal Pradesh and Delhi. Therefore, regulations around infrastructure development need to be stricter so that local adaptive capacity is not undermined. New infrastructure must be built with an emphasis on bolstering adaptive capacity rather than hindering it. Indeed, public spending will need to be directed towards building adaptation assets both built-up, such as resilient housing, and natural, such as through wetland rejuvenation. Regulations governing financial markets to encourage finance flows to adaptation must also be strengthened. Enhancing public schemes, such as NREGA, from a climate adaptation lens can also prove very useful. It has been shown that such schemes have strong climate adaptation co-benefits. These schemes can provide the financial means to help people build locally suited adaptation assets such as percolation tanks to grow their groundwater buffer. It is important to note that, to be both locally contextual and scalable, these actions must be rolled out on all levels of the public sector. This requires the involvement of the national, state, urban, and rural governance structures. 3. Expanding the understanding and measurement of climate adaptation solutions Climate change is often positioned as a global topic, with only international conferences spoken of. However, adaptation is highly local, and capacity building around it must be done in a locally relevant way, without the use of jargon. Building the capacity of government bodies, communities, and civil society on climate adaptation and resilience in their local contexts is key to effectively engaging on and preparing adaptation solutions. The metrics to measure adaptation must also be reimagined to capture climate linkages across the economy and the environment. Reduced distress and loss of livelihoods, reduced costs of rebuilding, and enhanced productivity during climate stress, for example, must be accounted for. But resilience building is also likely to have multiple positive adjacencies on issues as diverse as improving livelihoods and incomes, groundwater conservation, and biodiversity enhancement to resilience to other kinds of stressors such as market shocks and even climate mitigation. Restructuring the tools and methods we currently use to monitor and evaluate climate adaptation can make them better suited for this contextual complexity, and help drive more of the public imagination towards it. Climate adaptation being considered a strategic priority by the public sector, and action being directed towards it in mission mode, is in the interests of the country and its people. Both the private and the public sector have importa

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-13-Test NO.-10335

To provide the type of enduring, patient, and goal-driven support that is needed at this stage. Climate change related impacts are anticipated to become more frequent and severe, and in the absence of resilience-building of communities and habitations, they could be devastating. Prime Minister Narendra Modi on Thursday solidified his position in shaping the narrative leading up to the 2024 Lok Sabha elections by securing a resounding victory in a no-confidence motion brought forth by the Opposition INDIA alliance during the Monsoon Session. The outcome was never in doubt, given the ruling party overwhelming majority. However, the way in which the Prime Minister and Congress MP Rahul Gandhi handled the debate was disappointing. The INDIA alliance motive behind initiating the no-confidence motion was to exert pressure on the Prime Minister to speak on Manipur, which has been grappling with disorder and lawlessness over the last three months. However, Prime Minister Modi chose to shift focus away from this issue, opting instead to launch a scathing critique against the Congress and the INDIA alliance. His accusations of corruption and questioning of motives seemed ill-timed and misplaced, considering the gravity of the Manipur situation. Notably, he began discussing Manipur after the Opposition staged a walkout. While it is well within his rights to criticize corruption and question the Congress role, the Prime Minister approach lacked finesse. Ideally, his response to the no-confidence motion should have commenced by highlighting the government concerted efforts to restore order in Manipur. Such an approach would have concluded more fittingly with a critique of the Opposition, aligning with the seriousness of the situation. Placing blame on Congress for potential underlying issues is understandable, particularly if their past governance failed to effectively address the intricate challenges faced by Manipur. Nevertheless, Prime Minister Modi approach left much to be desired. In the initial phase of his address, he embarked on an aggressive attack on Congress and Rahul Gandhi, adopting a tone reminiscent of an election rally. Remarkably, he omitted any mention of Manipur during this period. A more effective strategy would have entailed initiating the discourse by addressing the Manipur crisis head-on and then culminating with a critical assessment of the Opposition. Rahul Gandhi, who recently resumed his role as an MP, had an opportunity to showcase leadership qualities by presenting facts and figures in a dignified manner. However, his speech devolved into theatrics, characterized by raised voices and rhetoric invoking terms like Bharat Mata Ki Hatya and Kirosin. Rahul Gandhi demeanor could have displayed more maturity, avoiding an approach reminiscent of a college debate. This lapse restrained his capacity to develop into an authentic leader. With regard to the impending 2024 polls, the INDIA Alliance appears to lack a comprehensive blueprint for the nation development. Their vision for an alternative path remains inadequate. The prevalent revdi culture, centered around pledges of free electricity, water, and loan waivers, is unsustainable. Over-reliance on this approach could potentially lead to an economic downturn akin to the current predicament faced by Sri Lanka. For the INDIA Alliance to present a substantial challenge to PM Modi-led NDA in the forthcoming general elections, it must present a more robust and visionary plan for Indi

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-13-Test NO.-10336

Billion people. As India economy emerges as the fastest-growing among major economies, and its rise promises to shape the world order, Finance Minister Nirmala Sitharaman has outlined four crucial pillars for the country transformation: investment, innovation, infrastructure, and inclusiveness. However, it is essential to acknowledge that each of these pillars faces challenges from unsolicited external forces. The first pillar, investment, has been under scrutiny, with global agencies keeping India sovereign rating at BBB-, just about investment grade. In contrast, countries like the UK maintain higher ratings despite economic challenges. India growth potential is not fully reflected in its sovereign ratings, affecting investor decisions. Since ratings matter to investors for their investment decisions, despite becoming the world growth engine India sovereign ratings do not reflect its investment potential. Similarly, there appears to be a pattern to discredit India innovations, as seen during the pandemic with vaccine acceptance issues. However, over time, India-made vaccines proved to be effective, challenging the scepticism surrounding them. During the pandemic, India-made Covid vaccine Covishield was not accepted by 19 European countries, while Covaxin was denied WHO clearance. It however became evidently clear over the next 1 year that both the Indian Vaccines were found to be far more effective visa a visa some of the vaccines developed by US and EU-based pharma MNCs. Infrastructure development projects have faced hurdles from fake activism and fraudulent NGOs, hindering economic growth. Instances like the recent CBI FIR against a lawyer-activist for obstructing mining development on foreign companies behest highlight the impact of such obstructions on genuine progress. Inclusiveness is also targeted, with false narratives questioning India growth story through allegations of religious and ethnic persecution. Such tactics aim to overshadow significant events, like Prime Minister Modi recent trip to the US, where crucial pacts were signed for large-scale manufacturing. Attempt was made to overshadow the trip with same questions pertaining to inclusivity. Motivated attacks from external entities become apparent when individuals with no direct investments in India and a history of destabilizing emerging economies criticize India democratic fabric. Recent instances, like attempts to build a global narrative around the Manipur disturbance and reactions to Hindenburg report on an Indian conglomerate, further illustrate the pattern of targeted attacks. Organizations seeking to stall India rise create narratives questioning its democratic credentials and the sanctity of its institutions. These information warfare tactics aim to discredit India role as a key nation shaping the global world order. This, even as the Indian economy is the only bright spot amidst a global slowdown. It is worth noting that historically, India adheres to a strategic culture of non-interference in the matters of other nations, respecting their sovereignty. In contrast, some Western countries are known for their interventionist approach, which has faced criticism for its consequences. India promotes peaceful coexistence and diplomatic solutions, contributing to a world order based on mutual respect and cooperation. To achieve its true potential, India must thwart such external attacks and consider adding a fifth I to the roadmap making India impregnable. The gover

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-14-Test NO.-10337

The answer books, as that was not a relief that was available under RTI Act. RTI Act only provided a right to access information, but not for any consequential reliefs. Feeling aggrieved by the direction to grant inspection, CBSE has filed this appeal by special leave. Before us the CBSE contended that the High Court erred in i directing CBSE to permit inspection of the evaluated answer books, as that would amount to requiring CBSE to disobey its Examination By law 61 4, which provided that no candidate shall claim or be entitled to reevaluation of answer books or disclosure inspection of answer books; ii holding that Bye law 61 4 was not binding upon the examinees, in view of the overriding effect of the provisions of the RTI Act, even though the validity of that bye law had not been challenged; iii not following the decisions of this court in Maharashtra State Board of Secondary Education vs. Parish B. Sheath and iv holding that the examinee had a right to inspect his answer book under section 3 of the RTI Act and the examining bodies like CBSE were not exempted from disclosure of information under contended that they were holding the information in this case, the evaluated answer books in a fiduciary relationship and therefore exempted under. The examinees and the Central Information Commission contended that the object of the RTI Act is to ensure maximum disclosure of information and minimum exemptions from disclosure; that an examining body does not hold the evaluated answer books, in any fiduciary relationship either with the student or the examiner; and that the information sought by any examinee by way of inspection of his answer books, will not fall under any of the exempted categories of information enumerated in section 8 of the RTI Act. It was submitted that an examining body being a public authority holding the information, that is, the evaluated answer books, and the inspection of answer books sought by the examinee being exercise of right to information as defined under the Act, the examinee as a citizen has the right to inspect the answer books and take certified copies thereof. It was also submitted that having regard to section 22 of the RTI Act, the provisions of the said Act will have effect notwithstanding anything inconsistent in any law and will prevail over any rule, regulation or bye law of the examining body barring or prohibiting inspection of answer books. On the contentions urged, the following questions arise for our consideration Whether an examinee right to information under the RTI Act includes a right to inspect his evaluated answer books in a public examination or taking certified copies thereof? Whether the decisions of this court in Maharashtra State Board of Secondary Education other cases referred to above, in any way affect or interfere with the right of an examinee seeking inspection of his answer books or seeking certified copies thereof? Whether an examining body holds the evaluated answer books.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-14-Test NO.-10338

In a fiduciary relationship and consequently has no obligation to give inspection of the evaluated answer books under section If the examinee is entitled to inspection of the evaluated answer books or seek certified copies thereof, whether such right is subject to any limitations, conditions or safeguards? Relevant Legal Provisions to consider these questions, it is necessary to refer to the statement of Act. RTI Act was enacted in order to ensure smoother, greater and more effective access to information and provide an effective framework for effectuating the right of information recognized under article 19 of the Constitution. The preamble to the Act declares the object sought to be achieved by the RTI Act thus: An Act to provide for setting out the practical regime of right to information for citizens to secure access to information under the control of public authorities, in order to promote transparency and accountability in the working of every public authority, the constitution of a Central Information Commission and State Information Commissions and for matters connected therewith or incidental thereto. Whereas the Constitution of India has established democratic Republic; And whereas democracy requires an informed citizenry and transparency of information which are vital to its functioning and also to contain corruption and to hold Governments and their instrumentalities accountable to the governed; And whereas revelation of information in actual practice is likely to conflict with other public interests including efficient operations of the Governments, optimum use of limited fiscal resources and the preservation of confidentiality of sensitive information; And whereas it is necessary to harmonise these conflicting interests while preserving the paramount of the democratic ideal. Chapter II of the Act containing sections 3 to 11 deals with right to information and obligations of public authorities. Section 3 provides for right to information and reads thus: Subject to the provisions of this Act, that the RTI Act gives a right to a citizen to only access information, but not seek any consequential relief based on such information. Section 4 deals with obligations of public authorities to maintain the records in the manner provided and publish and disseminate the information in the manner provided. Section 6 deals with requests for obtaining information. It provides that applicant making a request for information shall not be required to give any reason for requesting the information or any personal details except those that may be necessary for contacting him. Section 8 deals with exemption from disclosure of information and is extracted in its entirety Exemption from disclosure of information 1 Notwithstanding anything contained in this Act, there shall be no obligation to give any citizen, information, disclosure of which would prejudicially affect the sovereignty and integrity of India, the security, strategic, scientific or economic interests of the State, relation with foreign State or lead to incitement of an offence; information which has been expressly forbidden to be published by any court of law or tribunal or the disclosure of which may constitute contempt of court; information, the disclosure of.

The logistics industry is critical to almost every other industry, including manufacturing, supply chain, e commerce, and so on. In other words, the logistics industry is everywhere, transporting essential goods and services. Despite this, the industry faces numerous challenges. This is where logistics powered by geospatial data and analytics can provide otherwise difficult business insights that can affect the bottom lines of companies. Location intelligence LI is the process of collecting, analysing, and transforming geospatial, GPS, and other location data into actionable business insights. The LI tools are being adopted by organisations in order to improve operational efficiency and strengthen business processes. According to industry estimates, the market for location based services was worth \$28.95 billion in 2019 and is expected to grow to \$183.81 billion by 2027, at a CAGR of 26.3 percent from 2020 to 2027. The advent of digitalisation increases the demand for location based services LBS because of their ability to provide customised marketing strategy solutions, which creates new revenue growth opportunities for players who choose these solutions. Location technology is a huge advantage for businesses of all sizes that provide logistics services. It enables businesses to provide more personalised and on demand services through the use of maps, embedded connectivity, and real time data on road conditions, weather fluctuations, visual routes, and other location insights. Location intelligence applications for logistics Let take a look at how location intelligence can help logistics companies. Ensures timely delivery Location intelligence software aids in streamlining delivery by providing consistent and accurate predicted arrival times. Fleet managers can use location data to reduce delivery time to the end customer and control the time spent loading and unloading at warehouses. Companies may experience driver halting, late deliveries, or re scheduling as a result of inaccurate routes, resulting in overtime expenses and penalties. Location analytics can also be used to discover traffic patterns and perform accident analysis. Location intelligence is aiding in enhancing last mile delivery, ensuring on time delivery, and increasing customer satisfaction. Driver and fleet safety Fleet management is made easier by location technology. It is critical to monitor driver behavior in order to limit potential liability and operational costs. Vehicle tracking provides real time location intelligence to field service businesses. GPS tracking will keep you informed of your vehicle exact location at all times, as well as the estimated time of arrival ETA. In terms of fleet safety, location analytics data can help protect assets by providing real time visibility, alerting if there is any unauthorized movement during off hours, and detecting theft. Optimisation of the route Long delays or adverse weather conditions can endanger shipments in transit. Logistics firms can use LI platforms to optimise routes and provide vehicles with faster routes after taking into account key factors such as weather, road, and traffic conditions. When combined with real time traffic information, location intelligence data can provide a detailed picture of current road conditions that will impact arrival times. The right LI tools will also provide information such as.

Delhi Police Typing-Dated-2023-08-14-Test NO.-10340

Of the past, technological lapses and missing links are filled in and ascertained that the children are more ready and equipped to take online classes even as offline classes continue. We will then be able to substantiate that these children unerringly get the gains of online education something that they were deprived of in the first four waves of the pandemic. Technology is playing a crucial role in empowering the consumer by providing them limitless access to information. Products and services are readily available at the touch of a button. As consumer behavior trends grow in speed, brands must evolve to keep up with them. Through their actions and choices, brands play an active role in establishing customer preferences. The impact of consumer behavior has changed the way brands operate, which has resulted in a large amount of e-commerce and online marketplaces. The advent of digitisation and the emergence of marketing through digital platforms, vis a vis offline marketing have changed consumer experiences, which further demands evolved use of technology. Some of the trends which are driven by consumer behavior are: Personalisation People want to interact with people, pieces of content, or software that give them the impression that their preferences and interests are being considered. The constant increase in awareness of latest and unique has given rise to personalisation. A lot of companies use personalised technology or products like monitors and other gadgets which are custom made as per their needs. Ease of access to information A decade back, buying decisions were based on advertisements, word of mouth and past experiences. However, the choices are now made on the basis of the information of product or service available on the search engines. The more presentable and effective the information is, the more impact it will make on the purchase decision of the consumer. Creating an experience The customers not only look forward to uniqueness in a product service or technology, but they also rather demand an experience which can leave an impression on their minds. The brands are using technology as their pillar of support to create such experiences with new trends like AR and VR. Moment optimisation The customer journey has changed dramatically since the lives have become connected and the introduction of smart gadget and, with them, micro moments. Consumers make decisions faster than ever before and find the information they need in even less time. Chances that a customer has already made up his mind to buy a certain product is greater than 90 % to any channel whether it is offline or online. It is no longer a straight line from A to Z via B, C, D, and so on. This journey now includes hundreds of different stops where we visit apps, social media, and websites. Since the customers are living in the moment, the brands, therefore, are using these moments through various technology trends to make the most of moment specific impulses of the consumer New communication channels Responding to consumer needs.

Delhi Police Typing-Dated-2023-08-14-Test NO.-10341

And behavior through emails and phone calls is a thing of the past. With the advent of new platforms owing to the evolving technologies, it has become imperative for the brands companies to create a recall value for their products and services on these platforms as well. Cloud technology, Iota and Big Data The evolving behavior of the consumer has also led to the integration of some of the latest and biggest technology trends. Cloud computing enables businesses to track consumer behavior like never before. Sharing, storing, and outsourcing have all become significantly easier in recent years. Data on the cloud provides businesses with full scale data to analyses purchasing behavior and improve algorithms to better serve their customers. Responding to the consumer behavior innovatively and creatively is the need of the hour and hence, the brands should be able to strike a balance between the right technology and the needs of the consumer to be able to stimulate and retain the consumer and optimise the growth. which would cause a breach of privilege of Parliament or the State Legislature; information including commercial confidence, trade secrets or intellectual property, the disclosure of which would harm the competitive position of a third party, unless the competent authority is Function through a cataclysmic change. Narrowing it down to India blue collar workforce scenario, it saw widespread migration that caused a never before seen level of workforce supply shortage across all industries. The silver lining for the sector was when companies in the blue collar hiring space used the opportunity to scale up their service offerings which, when coupled with the Government of India digitization move, helped usher in an era of tech led blue collar workforce management. Technology possesses the power to influence and impact industries, propelling them towards greater growth. From a job seeker point of view, the emergence of digital job matching+ platforms brings in paperless onboarding, financial inclusion, and automated career progression opportunities all on a single platform, driving unprecedented changes in the workforce. The main benefit of these platforms has been in creating equality of workforce availability across the country. They help workers locate jobs in areas that are convenient to them and thereby make a positive impact on the local economy. On the employer side, it helps companies discover job ready individuals with relevant skills in addition to getting authenticated profiles and employment records without much effort. This also helps accountability and fixes appropriate wages by connecting job seekers and employers directly. Tech enabled job hiring platforms also encourage on demand hiring that helps lower overheads, allowing job seekers to choose the how and when of their career choices. Additional value added services such as attendance, payroll and worker management at scale ensure the management time and attention is more focused on business tasks and enhanced efficiency. Undoubtedly, the blue collar workforce constitutes the backbone of every industry, whether production or services, and technology is becoming the essential bridge in ensuring the seamless interworking that fires the.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-14-Test NO.-10342

Engines of India economy forward. Sri Lanka is on the boil. The country has run out of fuel, millions are going hungry, the healthcare system is near collapse, inflation is soaring, the currency has crashed, and the debt laden economy is bankrupt. Even if IMF aid comes let hope that happens soon enough Sri Lankans will have to endure years of pain before the economy gets back on track. At the heart of Sri Lanka crisis is the twin deficit problem unsustainable fiscal and current account deficits which, as experience shows, are a sure fire recipe for disaster. The US House of Representatives on Thursday drew on bipartisan support to pass an amendment that urged the Joe Biden administration to extend India a waiver from sanctions that could be triggered by its purchase of Russia made 400 air defence system. The S400 transaction was concluded in 2018. It can therefore fall afoul of a 2017 US law that imposes sanctions on buyers of Russian arms. Biden should offer India a waiver as the amendment makes a compelling case to take a far sighted view of bilateral ties. The amendment, authored by Representative Ro Khanna, pointed out that S 400 is needed to deter China. India is the only Quad member to share a land border with China. The amendment also urged the US to take more steps to assist India pivot away from its reliance on Russia made arms. The amendment is in sync with the tenor of the recent bilateral strategic relations. The watershed year was 2008 and since then cumulative US defence contracts with India add up to at least \$20 billion. It was just \$500 million in the period prior to 2008. Furthermore, in 2016, the US recognised India as a major defence partner. Strategic ties have also been strengthened through groupings such as Quad and now I2U2. For India, a transition away from Russian platforms is in its strategic interests. Russia dependence on China has increased significantly following its invasion of Ukraine, a situation that unlikely to change in future. Already, China is next only to India as the second largest recipient of Russia arms exports. Given the unraveling of India long standing border management protocols with China, dependence on Russian arms platforms is unwise. Given this backdrop, the Biden administration should respond positively to a rare bipartisan approach in the House of Representatives. The World Economic Forum Gender Gap Report 2022 confirms what we know from experience. Covid may have put gender parity back by a generation, and South Asia is the worst off. At current rates of progress, it will take nearly 200 years to achieve any meaningful equality between women and men. India ranks 135th out of 146 countries in terms of gender parity. It has moved up five places from last year, improved on the economic opportunity and participation front as the share of women legislators, senior officials and managers increased from 14.6 to 17.6, and the share of women as professional.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-14-Test NO.-10345

And technical workers has grown. While India education enrolment has been impressive, its health and survival record are at rock bottom. With a female population of 662 million, India situation has overwhelming impact on the global picture. India has had a gender budget for years, to goad fiscal policy towards equality but genuine parity is a distant horizon. This gap exists because of centuries of bone deep social and material bias against women, so it will not narrow by itself. It takes systematic effort to address these inequalities, and the gender perspective has to be actively incorporated into policy. Families have to be transformed, and states, employers and other institutions must identify and fix patterns that hold back women from participating and flourishing. Are they stars Actually, they are galaxies! After Naas James Webb Space Telescope first deep field image see photo was unveiled at a White House event on Monday, it was easy to wrap our heads around what we were seeing. It only captures a patch of sky the size of a sand grain held at arm length by someone on the ground, and is yet filled with thousands of galaxies; one of them, believe it or not, from over 13 billion years ago. Because of the way light travels, the further we look in space the more we look back in time. In October 2021, foreign minister S Jaishankar sat with his Israeli counterpart Yair Lapid in Jerusalem, creating the West Asia Quad with Anthony Blinken and Abdullah bin Zayed on a screen. Nine months later, Joe Biden is sitting with Yair Lapid, now prime minister of Israel, with Narendra Modi and Mohammed bin Zayed in technological proximity, teeing off the first summit of the same Quad, snazzily renamed I2U2. A smoother congruence of interests The new Quad on the block has had a shorter run up than the original Indo Pacific. Largely because India and the US, common to both, have been building their own habits of cooperation, navigating obstacles much more skillfully than before. In addition, neither Israel nor UAE needed as much convincing as Japan and Australia did. To be successful in life you do not need right breaks, wealth or connections. You just need to make the right decision at the right time. Constantly. You are what your choices are. We are a privileged lot, gifted with choice of action. No other species has this ability. A lion cannot say it is tired of hunting for prey and eat grass. A cow cannot opt for chicken because it is bored of eating hay. But you have a wide range of choices before you. Do you choose correctly is the question. Do you choose alibi or spinach Are you patient or do you vent your anger Through these choices you sculpt your future. Most times you are lured by instant pleasure, setting yourself up for sorrow later. That which is painful in the beginning gives everlasting happiness. This is the law of life to.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-14-Test NO.-10346

Help us make the right choice we are also gifted with the intellect. But most of us neither use our existing intellect nor develop it. We choose with a poorly developed intellect. And meet with disastrous consequences. Think of one bad choice you made. What drove you to make the choice Mere impulse, or like. Think of one good choice you made. The intellect helped you decide. You thought over it, weighed the pros and cons and arrived at a decision. When the intellect is not developed, as in children, choice is denied to protect them from the consequences of bad choices. There is a minimum age for driving and drinking alcohol. But what do you do when adults act on whims and fancies of the mind and not the sane counsel of the intellect why do you make wrong choices You act on a fancy, like impulse buying. Or just do what you like. You prefer lazing to exercising. It could spring from peer pressure. You drink or take drugs because your friends do so. Or you could be driven by herd mentality. Everyone is going the materialistic way so you follow suit. It could be a strong desire which holds the intellect hostage and does not allow it to think beyond what the mind desires. You want to buy a particular car even though you cannot afford it. The mind forces the intellect to justify the wrong decision. The way out is to pause, think, consult your intellect and choose. Initially, it may seem arduous, but it becomes effortless with practice. In important decisions, take time to decide. Consult a clear thinker. In ancient India, kings had in house sages whose advice was sought on important matters. This protected them from taking rash, arrogant decisions. Take your emotions into consideration. If you feel like going on a vacation, give it due consideration and fulfill the desire if the intellect approves of it. The best choice is based on values. Choose the higher against the lower, the permanent over ephemeral, worldly joys. Opt for Spirit over matter. With a strong intellect you make smart choices and become successful. Value based decisions make you happy. And when you choose Spirit, you evolve spiritually. At the heart of any economy lies business entities that don have the financial clout of the big players in the corporate sphere. Yet nations often turn to these unheralded heroes, called Small and medium sized enterprises SMEs, to revive ailing industrial units. SMEs mushroom in a variety of sectors, generate millions of jobs every year, eliminate regional imbalances by penetrating the farthest areas, facilitate the distribution of resources, and provide a myriad of opportunities for entrepreneurial development in short SMEs symbolise the march of humankind. It is estimated that Micro, Small and Medium Enterprises MSMEs account for approximately 40 of exports, 95 of the industrial units, and 45 of manufacturing output in India. They contribute more than 50 of GDP in Organisation for Economic Co operation.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-14-Test NO.-10347

And Development OECD countries this figure could even be 70, according to global estimates and are deemed as the last engine of growth when nothing is going right. SMEs rely heavily on strong transport systems for expansion, which makes logistics a vital component in their operations. Since SMEs work with limited capital and resources, even minor glitches can impact operational efficiencies and bring down profitability. Moreover, they are always equipped with the infrastructure to maintain logistics of deliveries resourcefully and cost effectively. Like any other industry, they have to deal with rising fuel costs, lack of capital, shortage of skilled laborers, and spiraling transport costs. Achieving supply chain visibility and targeting global markets amidst these concerns can be a struggle. Not to forget that consumer expectations are changing by the day. Naturally, a sound logistics strategy can make a substantial difference in their operations. Thus, it is in their interests to opt for external expertise to achieve optimal logistics management. A logistics partner with robust infrastructure and pan India presence can facilitate smooth and cost effective operations. Dependable logistics partners with appropriate 3PL systems can bring immense value to SMEs. Additionally, their expertise in warehousing, strong network with 3PL providers across the country, and skills to handle deliveries during peak demand cycles make them a vital cog in the SME wheel. Many formidable names such as Delivery, Blackbuck, Rovigo, and Shadow fax are optimizing India supply chain systems. A player like TruckBhejo, which has retail majors, grocery, telecom, FMCG and e commerce as clients, is catering to all the three miles first, middle and last of logistics. Meanwhile, many young minds are bringing in fresh approaches to this rapidly moving industry. According to a report published in the Indian Retailer, nearly 56 of India logistics firms are using map based solutions for location technology, EVs, automation, shipment monitoring and the Internet of Things Iota. Technologically streamlined processes pave the way for business expansion. SMEs do need a digitally integrated value chain apart from solutions for improved forecasting and scaling capacities to serve customers better. Artificial intelligence powered customer support, advanced robotics, advanced analytics for order tracking and timely deliveries and warehouse automation are a few areas to look forward to. Agility in terms of processes, operational design, and people with the right skills should be nonnegotiable attributes. The use of drones and block chains can help in aligning company operations and supply chains. It is equally imperative that modern logistics players keep abreast of cloud computing that is contributing to integrated logistics platforms. Digital documents, automated support processes and online payments in this industry are the future. For sure, much is expected from regulatory bodies to keep this sector in fine fettle and aid SMEs. The Goods and Services Tax Act of 2017 eliminated indirect taxes that helped logistics players expand to new areas and reduce the overall costs of operations. While the GST implementation has received mixed reviews, it is believed to have simplified clearance processes, reduced paperwork, and lowered logistics costs.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-14-Test NO.-10348

By 30 40, besides cutting travel time. Of course, more can be done to shore up the system. Analysts hold the view that functional courses like data entry, warehouse management, documentation training, how to maintain the health of vehicles, and development of soft skills should be organised under the Prada Mantra Causal Visas Yolanda PMKVY to make logistics workers employable and updated. It widely held that SMEs are often in a dilemma over Make to Stock stocking products as inventories until customers buy them and Make to Order production begins only after orders are confirmed systems. Thus, they invariably have to choose between cost and customer service. These are areas where they could do with some assistance from the government for efficient operations management of the industry. Make no mistake, the logistics industry has the potential to not only impact MSMEs positively, but it can also alter India socio economic landscape. Recent reports claim that the Indian e commerce logistics market, which was at \$2.9 ban in 2019, is likely to reach \$11.48 ban by 2024, growing at a CAGR of 18.8. As a sub text, the post Covid global supply chain management market size could reach \$41.7 ban by 2026 from \$23.2 ban in 2020, growing at a CAGR of 10.3, according to a report by MarketsandMarkets. The point to emphasis here is that instead of deterring guidelines, offering the right incentives will serve as a massive fillip to this sector and, in turn, benefit these small business owners immensely. We must end with a caveat. While we see an emphasis on last mile and express deliveries, not all SMEs have e commerce platforms. Understandably, we rave about digitisation, but it humans that eventually deliver products in the middle mile, often undertaking the intermediary steps from the production floor to the warehouse. This should culminate into a tug of war between technology and man, so it hoped the next installment of innovation in the logistics industry will come from the middle mile. Even a loose link in supply chains can impact jobs and families. If not addressed, the negative effect can spill over to the last mile too and affect the customer satisfaction index. As the proverb goes: For want of a nail, the shoe is lost. It would be an overstatement to say that logistics can be the right push to take SMEs to the next level of productivity and sophistication. Seasons are distinguished by their climatic conditions. There are mainly four seasons in India summer, monsoon, winter and spring. You also have the addition of a brief season like autumn in a few parts of the world. These different seasons necessitates the use of different types of clothes. Different Seasons: Things To Know Summers have the hottest days. The days are long, sunny and warm. The weather gets hot and humid as the day progresses. You tend to sweat to maintain your body temperature. Winters are the coldest and have shorter days and longer nights. Autumn succeeds.

Delhi Police Typing-Dated-2023-08-14-Test NO.-10349

Data sovereignty, have been taken in the past, but continuous vigilance is essential. Building public awareness about these targeted campaigns is crucial to reducing their efficacy. The public must discern the motives behind such attacks, as they are likely to increase as India prominence grows. Balancing the need for growth and development with safeguarding against external interference will enable India to stride confidently into the future, ensuring its rightful place in shaping the global world order. Deliberation and slow thinking characterised India Independence movement and not carnivalesque passions that colour violent mobilisations and referendums. Congress election manifesto of 1945-1946 eschewed quick fixes for wisdom and this set the stage for August 15, 1947. At no cost, it pled, must the dead past rule the living. In 1945, Congress indeed demanded Independence, but it was not a single point thrust as it is with most referendums. There was a clear promise here to also fight against casteism and for the rights of minorities and women, which required more than a tick on the yes or no box. The Tryst with Destiny speech too indicated that there were pledges yet to be fulfilled. Three new bills seek to replace the colonial-era IPC, CrPC and the Indian Evidence Act. Their declared aim is to transform India criminal justice system, eliminate the signs of slavery, and ensure justice rather than punishment. Here we unpack the Bharatiya Nyaya Sanhita Bill, 2023 that is set to replace Three new bills seek to replace the colonial-era IPC, CrPC and the Indian Evidence Act. Their declared aim is to transform India criminal justice system, eliminate the signs of slavery, and ensure justice rather than punishment. Here we unpack the Bharatiya Nyaya Sanhita Bill, 2023 that is set to replace While there have been many false dawns in the fight against air pollution, this device has been validated by the atmospheric science department of IIT-Delhi. It ionises the air to make particle pollutants heavier, thus removing them from the air and stopping the spread of pollution. It holds a low-cost promise for traffic junctions and other hotspots. The Anusandhan National Research Foundation (NRF) Bill, 2023 passed by Parliament this month, is about seriously hiking R&D spend in the country. This is critical to becoming truly globally competitive, instead of remaining disproportionately dependent on imported technologies. But the air pollution story is a reminder that there is a wide, wide world beyond big-ticket R&D. There are problems awaiting affordable solutions across so many different sectors, which can be delivered by nimble startups, with the right access to capital and mentorships. IITs have been the workhorses of startup incubation. But plans like that of the IIT-Madras incubation cell to take this game to tier-2 and tier-3 cities are very important. Because widening the pool of ideas widens the odds of a successful innovation. Not every entrepreneurial claim stands up to real-life testing. This is part of the innovation adventure and it absolutely ok, as long as the peer review processes are timely and robust. Consider the importance of low-cost stents and ventilators and water purifiers in health or affordable electric scooters in transport. New efforts are reported every day and perhaps they are underway in every sector. But these still remain too few, compared to the scale of Indians needs and, crucially, potential. The National Medical

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-14-Test NO.-10352

Explaining at length their patients conditions, the treatment and the outcome. This has been disallowed a welcome move for patients rights. It is one thing to discuss patients conditions in peer meetings, quite another to chat about it on Twitter, never mind the wide-eyed audience. Soliciting patients online is also disallowed. While the 11-point guideline on social media usage is a good move, it is to be seen how authorities plan to keep tabs on medical Twitter. In another first NMC has made compulsory the existing requirement for continuous professional development throughout a doctor working years, and amusingly, has specified that none of the conferences or seminars that may count as CPD can be sponsored by pharmaceutical companies. It will be interesting to watch how this plays out. Pharmaceutical companies and diagnostics chains are in a cosy, seemingly unbreakable relationship with hospitals and doctors. CPD for doctors is driven by pharma sponsorship. If they don't fund seminars, who will? That the question. New regulations reiterate that doctors must prescribe generic medicines. A good idea that has to deal with wide quality variations among generics. GOI must address issues with generics sold in the open market. When a prescribed generic is not available, it is often the pharmacist who suggests the substitute. GOI chain Jan Aushadhi shops are often poorly stocked though India generics sector ranks among the top in the world. How effectively NMC regulations will pan out will thus depend on the penalties, which are yet to be framed. In a rare interview he gave shortly before his death last month at the age of 94, Czech-born writer Milan Kundera, whose novels, translated into over 20 languages, earned international acclaim for satirising Soviet political censorship as a means to explore the larger realm of the enigma of being, made an intriguing observation. Remarking that only a work that reveals an unknown fragment of human existence can be called literature, he added, to be a writer does not mean to preach the truth, it means to discover a truth. That a bombshell of a statement, particularly by a writer of fiction in an age of fake news, which increasingly dominates public discourse and subverts factuality in order to propagate a political party, or promote a commercial entity. Isn't fiction the antithesis of truth? Didn't Plato want to banish poets from his ideal Republic because poetry, with its use of beguiling rhetoric My love is like a red, red, rose substitutes artifice for reality? Didn't medieval Christian theologians decry poetry as the wine of the Devil which makes us lose our senses with the intoxicant of illusion? Plato and his followers believed in a supernal realm of universal Ideas of which the world we perceive is but an imperfect reflection. We have to shun the world of sense perception, which includes the snare of language, to ascend to the non-material domain of the Ideal. The British school of Empiricism, represented by philosophers like John Locke, took a very different view. According to them, our consciousness is a tabula rasa, a clean slate, on which experience scripts a narrative: a flame will burn us if we touch it; if I see a rose being as beautiful as my love, my love is like a red, red rose, Platonic displeasure be damned. The story of life is inscribed on the slate of consciousness, each story different, as our fingerprints are distinct from those of others, and yet all stories share common elements, be i

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-14-Test NO.-10353

Each one of us literally embodies a reality which is both unique and communicable to others, be they family, colleagues, or friends. The word relate has two meanings: To relate to someone means to have a commonality, of views or objectives. To relate something means to narrate an event or experience to another. Those individuals we call creative writers a Kundera, a Rushdie, or a Premchand have the ability to relate, in both senses of the term, to a large number of people, across time and space, across boundaries of nationality, language, and cultural climate. Such writers can reveal to you, the reader, a truth within you which you discover with the navigational aid of the author. And to the extent that you make this discovered truth your own, it ceases to bear the proprietorial imprint of the writer. Perhaps that is why Kundera said he wanted a world in which writers remained anonymous, a world in which we could all, equally, pursue our common quest for a truth that has donned the mask of fiction. Prime Minister Narendra Modi on Thursday solidified his position in shaping the narrative leading up to the 2024 Lok Sabha elections by securing a resounding victory in a no-confidence motion brought forth by the Opposition INDIA alliance during the Monsoon Session. The outcome was never in doubt, given the ruling party's overwhelming majority. However, the way in which the Prime Minister and Congress MP Rahul Gandhi handled the debate was disappointing. The INDIA alliance's motive behind initiating the no-confidence motion was to exert pressure on the Prime Minister to speak on Manipur, which has been grappling with disorder and lawlessness over the last three months. However, Prime Minister Modi chose to shift focus away from this issue, opting instead to launch a scathing critique against the Congress and the INDIA alliance. His accusations of corruption and questioning of motives seemed ill-timed and misplaced, considering the gravity of the Manipur situation. Notably, he began discussing Manipur after the Opposition staged a walkout. While it is well within his rights to criticize corruption and question the Congress role, the Prime Minister's approach lacked finesse. Ideally, his response to the no-confidence motion should have commenced by highlighting the government's concerted efforts to restore order in Manipur. Such an approach would have concluded more fittingly with a critique of the Opposition, aligning with the seriousness of the situation. Placing blame on Congress for potential underlying issues is understandable, particularly if their past governance failed to effectively address the intricate challenges faced by Manipur. Nevertheless, Prime Minister Modi's approach left much to be desired. In the initial phase of his address, he embarked on an aggressive attack on Congress and Rahul Gandhi, adopting a tone reminiscent of an election rally. Remarkably, he omitted any mention of Manipur during this period. A more effective strategy would have entailed initiating the discourse by addressing the Manipur crisis head-on and then culminating with a critical assessment of the Opposition. Rahul Gandhi, who recently resumed his role as an MP, had an opportunity to showcase leadership qualities by presenting facts and figures in a dignified manner. However, his speech devolved into theatrics, characterized by raised voices and rhetoric invoking terms like Bharat Mata Ki Hatya and Kerosin. Rahul Gandhi's demeanor could have displayed more maturity, av

Delhi Police Typing-Dated-2023-08-15-Test NO.-10354

Summer precedes winter. It is the season when leaves fall and we have sunny days and dark nights. It is neither too hot nor too cold. Spring season sets in after winter and before summer. The days are a little longer than winters. The nights are short. The weather can become windy at any given point. It is just the right kind of temperature after winter to go out in the open and enjoy the sun. Rainy season is that time of the year when there are wet and dry spells of rain. Immediately after the rains, the weather becomes pleasant. Select Clothes Material According to the Weather

Summer Summers are hot and dry or hot and humid. If kids wear skin fit, heavy material clothes that chafe their skin, it will make them uncomfortable. Summer clothes for kids should help keep them cool & dry, allowing air circulation and preventing rashes. The best material for summer is cotton, linen, denim and suede. These materials absorb sweat and are light on the body. Cotton and linen also allow air circulation, keeping the body cool and preventing rashes.

Winter Winters can be very cold, making the skin dry. This calls for materials that will create a barrier between the cold and the body. Select material that will keep the kid warm and comfortable. Soft woollen thermals under the clothes can help. Other materials for kids winter wear include wool and fleece blended with cotton, silk, denim, and cotton clothes. These materials help retain heat within the body and fight cold.

Autumn Since the weather is windy, use light jackets, stoles or light coats to cover your child during autumn.

Spring Since the weather is not too hot or cold, select light clothes, comfortable enough to allow air circulation. Opt for cotton, linen, cotton blends, hosiery or soft denim. Read here to learn about the best spring clothes for boys.

Rainy Rainy season has maximum humidity in the air. Kids need to wear clothes that resist water and keep them dry. Select clothes that dry up fast after washing and are easy to clean & maintain. It should not get heavy after getting wet. Rayon is the best material for the rainy season.

Different Types of Clothes For Different Seasons

Summer During summer, kids need outfits that will absorb sweat, keeping them cool and letting the skin breathe. Summer wear for boys and girls includes shorts, half sleeved t shirts or shirts and capris. These are the most comfortable outfits for summer.

Winter Winter clothes for kids include full sleeved shirts and bottoms, woollens, and thermal. You can also layer the outfits if it is too cold or snowing. There is a need for different layers for different times of the day. During the daytime, you do not need extra layering. As dusk arrives, you may need warmer clothes. Use jackets, coats, sweaters, sweatshirts, hoodies, or overcoats to keep your kid warm.

Autumn Since the weather is windy, winter wear for boys.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-15-Test NO.-10355

And girls can be used during autumn. Check out this outfit for a newborn baby boy. It is well suited for autumn. Spring For spring, use lightweight and comfortable clothes. For girls, check out this knot t shirt that can be paired with jeans or a skirt. For boys, you can purchase this polo t shirt. Rains Select clothes that protect the kid from rain as well as keep him warm. Rayon t shirt with light cotton pants or rayon shorts will prevent the kid from getting fully wet. Thin cotton or thin linen clothes will also fulfill the requirement during monsoon. Avoid wearing chiffon or silk outfits though. Importance of Colors in Different Seasons Summer For summer, select subtle pastel, light and bright colors that will add zing to your child outfit. Select shades of yellow, red, orange or neon. Pair the colors with white to make it more subtle. Khaki sandy hues also give a perfect summer look. Winter Select dark, solid colors during winters. Look for shades of blues, greens, blacks, and solid colors. These colors will help to keep the kid warm, cosy and comfortable. Autumn Try to select warm colors that will help keep the spirits up in dull autumn weather. Experiment with shades of red, purple, whites and light pastels. Spring is a festive season opt for bright, neon, fuchsias or mauves. Play around with pastels and pair them with solid colors. Rains are messy with high chances of clothes getting soiled easily. Avoid whites and light shades as they get transparent if a kid gets wet. Instead, choose colors like neutral, earthy, black or solid colors. End Note Each season has a unique characteristic, and different weather impacts the choice of cloth material, outfits and kids dressing styles. Using the right types of clothes in different seasons can protect your child and keep them safe. So, follow this guide to make the right choice. This will help keep your child comfortable indoors and outdoors at all times. Digital disruptions are taking place in the BFSI industry and its time BFSI advertising adapted to the current changes. BFSI advertising issues come in a variety of forms and provide significant barriers. In addition to working in a highly regulated business, they also must deal with consumer and market related restrictions, which can make it difficult for them to stand out and perform successfully. With these challenges comes the tough choice of what strategies and solutions to use to win opponents. You must be flexible if you want to be successful as a BFSI advertiser today since advertising is more complex and changing quickly than it has ever been. BSFI advertisement will need to be innovative, flexible, and data driven to stand out and get the attention of today consumers through old method of advertisements and new method for instance, digital marketing and ads. While some professionals find these problems to be a hindrance, others see them as a chance, with winners using BFSI advertising issues.

Delhi Police Typing-Dated-2023-08-15-Test NO.-10356

As a competitive advantage. They outpace rivals by mastering and conquering these obstacles, thereby changing the financial services industry competitive environment, and gaining a position in the contemporary, highly disruptive market. Digital disruption is altering the way services are delivered in the market, but it may also be the solution to some of the prior issues with BFSI sectors competitiveness, such as high switching costs or high transaction costs. Some of the Current Disruptions in BFSI advertising Multichannel Advertising The era of multichannel advertising has arrived as a result of digitization. A market that demands a flawless user experience across all channels pertinent to the buyer journey is what BFSI businesses must deal with. Actually, compared to those utilising a single channel, advertisers that used three or more channels in a single campaign had greater conversion rates. It will help the BFSI industry to reach to the targeted audience and also increase the awareness among the customers about the BFSI and their products or offerings. Digital Advertisement for BFSI that uses segmentation, targeting, and personalization Big data enables BFSI to target specific individuals rather than market sectors as a whole, improving user experience and personalisation. In this case, single person segmentation is based on tracking users through cookies and other methods, combining and gathering data from Omni channel touch points including the web, social media, and applications. Customers may also be shown how rates are determined, discounts can be offered for on time payments or investments, and other actions can be taken to leverage data to automatically create a tailored experience with Digital ads. AI and machine learning in BFSI advertising Although they are significant on their own, artificial intelligence and machine learning in BFSI are crucial components of the integration of applications, catboats, and single person segmentation. Machine learning is a terrific method to exploit the abundance of data which is helping in creating a customer based advertisement. AI may decide to give the client with information and items that are pertinent to them, can refer them to a customer care agent if necessary, and can in general anticipate what the customer needs based on their behavior and actions and added on that BFSI can make relevant ads and campaigns. Experience and Engagement While adopting and making use of new technology are central to many digital BFSI advertising trends, clients are also coming to demand more from BFSI industries. BFSI must do more given that customers may simply switch receive 24 7 assistance and evaluate other offerings at a detailed level through their advertisement. Customer experience should be that extra. Automation, AI, and machine learning can be useful in this situation by giving customers better deals, making sure they don miss anything, adding value in the advertisement, and doing other things to enhance their overall experience. The Met averse Rise At this point, a lot of consumer brands, not just BFSI industry, may cast doubt on the notion of conducting business in the met averse. BFSI, however should begin.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-15-Test NO.-10357

Considering how BFSI advertisement would seem in a virtual environment right away. The fact that individuals are now spending money in the metaverse and are probably going to do so in greater quantities in the future is one explanation for this. BFSI that wishes to succeed in the post digital era must integrate digital beyond its current role as a supplemental tool. BFSI can develop a federated advertising framework that wards off rivals, appeals to digital first customers, and helps the brand survive and prosper in a digitized age by utilizing technology not only in advertising but across all departments. As the global population ages rapidly, it is estimated that by 2040, the global population aged 65 and older will reach 13 billion, which will be more than double the 530 million in 2010. A rapidly aging population will cause severe labor shortages throughout the global economy. According to a global study, India currently has one of the largest labor surpluses regarding its working age population 15-64 years. A fifth of India's total population is comprised of young adults. They significantly contribute to the economy. However, a lack of skill development and employment opportunities hinders their development. To address this issue, the Indian government launched the Skill India initiative. India is in the phase of demographic dividend and can generate skilled labor for employment by utilizing vocational and skill development training effectively. The Skill India Mission aims to unify skill training initiatives across industries and states. By integrating and coordinating skilling efforts and expediting decision making across sectors to achieve skilling at scale with speed and standards. The Mission offers beneficiaries the following benefits. The advantages of the Demographic Dividend: Increased economic activities bring about better economic growth due to a larger population of working age and a smaller population of dependents. There are multiple advantages of this, including: An increased Labor Force increases economic productivity. Fiscal space increase afforded by the demographic dividend allows for a reallocation of funds from spending on children to infrastructure investment. Women labor force increases, which coincides with a decline in fertility and can be a new source of growth. The savings rate increase as the working age is also the optimal time for saving. Historically, the demographic dividend has contributed up to 15% of the overall growth in advanced economies. Rapid industrialization and urbanization due to an increase in the number of people seeking employment would necessitate greater economic activity. An individual can develop his/her skills and set up a business. This again increases the scope for self-employment in India. With more than 65 percent of its population of working age, India will become an economic superpower in the coming decades, supplying more than half of Asia's potential workforce. Effective policy formulation incorporating population dynamics into the planning and execution of schemes and programs is likely to result in more significant socio-economic impact and greater benefits for people. Consumer spending is likely to increase with consumer electronics likely.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-15-Test NO.-10358

Demand for affordable items is expected to increase tremendously as consumerism grows. Moreover, salaried beneficiaries can avail of loans of up to cores as self employed against this scheme. With a stable income, they can quickly repay the outstanding balance within the tenure of 20 years. Challenges of the Democratic Dividend The growth in the working age population is likely to be concentrated in some of India poorest states, and the demographic dividend will only be fully realized if India is able to create gainful employment opportunities for this working age population. The majority of new jobs that will be created in the future will require a high level of skill, and the lack of skill in the Indian workforce is a significant obstacle. India may not be able to capitalize on the opportunities due to its lack of human capital and skills. India ranks 130 out of 189 nations on the Human Development Index of the UNDP, which is alarming. Therefore, significant improvements in health and education are required to make the Indian labor force efficient and skilled. The informal nature of India economy is another barrier to the country ability to reap the benefits of its demographic transition. There is growing concern that future growth could be devoid of jobs due to deindustrialization, deglobalization, the fourth industrial revolution, and technological advancement. According to the NSSO Periodic Labor Force Survey, 2019 20, India labor force participation rate increased to Going forward, if policymakers align their developmental policies with this demographic shift, India will have a golden opportunity for rapid socio economic development. This would entail a focus on education, skill development, and healthcare facilities necessary to capitalize on the demographic dividend by investing in human capital. However, this demographic transition is also accompanied by complex challenges. If the increased labor force is not adequately skilled, educated, and offered gainful employment, we will face a demographic disaster. People no longer need to drive to a nearby store, search the racks for the desired item, and wait in billing queues to buy goods. Thanks to Quick Commerce, groceries and daily needs are now delivered on demand within 10 30 minutes, with just a few taps on a mobile application. This is the power of Quick Commerce, often known as Q commerce, which has revolutionised the ecommerce grocery business. Whether it is to buy last minute ingredients for dinner, restock essentials that ran out, or indulge in a spontaneous treat, Q commerce is fast gaining traction amongst customers globally as well as in India due to the convenience it provides. The primary target market for this model is high income households in metros and Tier 1 cities who value convenience over price. Immediacy is at the heart of q commerce, and retailers in the sector rely on localized fulfillment hubs also known as dark stores strategically located to provide optimum coverage. Orders are received and serviced through these mini warehouses, before being delivered by drivers on two wheeled vehicles, guided by algorithms.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-15-Test NO.-10359

To take the quickest route to meet the short time frames. Q Commerce in India The Q Commerce market in India is predicted to grow by 10 15x to reach almost \$5.5 billion by 2025, according to a recent Redseer report. With food and daily necessities accounting for roughly one third of India USD1 trillion annual retail spend, the opportunity is large. Startups are banking on the Q commerce quickest route to meet the short model perfect compatibility with these Commerce market in India categories to propel them to success. According to a recent Bernstein report, India is already leading other global markets in terms of quick commerce adoption, with a 13 penetration of Q Commerce as a percentage of online grocery. China stands at Commerce market in India while Europe is at. The Total Addressable Market TAM of USD 45 billion indicates a lot of room for expansion. The large quickest route to meet the short opportunity has attracted several well funded participants. Blinkit, Swiggy Instamatic, Zeta, and Duns are currently the key players in this sector, with Big basket and Flipchart also ramping up their presence. Each of these players is currently well funded and investing heavily to grow. In its current condition, the Indian Q commerce market has focused on small, essential product lines such quickest route to meet the Commerce market in India short as food, home and personal care products, pet products, stationery, small electronic devices, and so on. Although not all of these things must be delivered in under 30 minutes, businesses are going to great lengths to provide an amazing customer experience. Consumers, on the other hand, are more willing to pay quickest route Commerce market in India to meet the short minimal fees for faster deliveries because it saves them time and effort. According to Red Seer research, the Q Commerce model is currently capable of serving approximately 20 million Indian households in India, accounting for only Commerce market in India of the total market. The continued proliferation of online consumer goods in India quickest route to meet the short will pave the path for Commerce market in India Commerce expansion. It is estimated that metro and tier I cities will account for roughly half of this growth. Because Q Commerce is making hyper local delivery the norm rather than the exception, the timing is ideal for Commerce market in India Commerce players to expand their reach and market share. Growth for platforms as well as brands The top growth driver for the increase in the quick commerce quickest route to Commerce market in India meet the short market is the shift in consumer behavior from value seeking to convenience seeking, resulting in frequent, small sized purchases versus larger, monthly purchases. There has been a significant rise in adoption among younger, convenience seeking customers with unplanned ordering behavior. The majorities of Commerce market in India users on quickest route to meet the Commerce market in India short these platforms are under 35.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-15-Test NO.-10362

Years of age and are typically early adopters. Some of the major platforms are seeing upwards of 80 month on month growth in their customer base, with high retention rates. Because visibility and advertising are still relatively uncluttered on these platforms, they provide an excellent opportunity Commerce market in India for brands looking to expand their customer base. The platforms efforts to increase their quickest route to meet the short customer base also benefit the brands they carry by providing organic growth. As a result, in recent months, many brands have Commerce market in India seen their business grow faster on platforms that offer up to 30 minute delivery than on those that offer longer delivery times. What is the future Industry trends indicate that Commerce market in India commerce will surge tremendously in the coming years as more businesses adopt micro fulfilment systems? The next layer of growth will come from a variety of avenues Extending to more categories like pharm, fashion, cosmetics, and electronics. Platforms like 1MG, Pharm easy and Apollo are already competing to shorten delivery times for your medicines. While there have been some trials by players like Flipchart and Warble attempting to quickest route to meet the short extend the rapid delivery timelines to other sectors, more work is required to profitably implement this. Keeping an eye on sustainable growth is important as the race for customer acquisition heats up. In order to boost unit quickest route to meet the short economics, it is critical to improve basket size and AOV, drive higher order frequency, increase deliveries per hour, and maintain delivery fees. In order to achieve quick last mile delivery, Commerce market in India commerce necessitates investments in technology, warehousing, logistics, and delivery teams. All of this comes at a substantial cost, and quickest route to meet the short leads to a high quantum of burn. Sharing these resources across more products and services to drive up AOVs and optimize costs may be the way to achieve sustainable success. Swiggy is already working towards this with Swingy Instamatic and Tomato, through its proposed acquisition of Blinkit, is aiming to quickest route to meet the short achieve the same. What works in their favor is the fact that both food delivery and Q commerce typically have a similar customer persona. Speed and sustainability must be balanced with safety for long term success. The delivery partner safety is critical. Riders should have enough cushions to absorb delivery time variations caused by external factors. Recognizing the bottleneck in the order fulfillment process, comprehending genuine customer demand, and ensuring the safety of human resources would thus be the success motto of Q commerce enterprises. It is critical to understand quickest route to meet the short that the business will be able to sustain itself in the long run if everyone in the value chain, not just the customers, is incentivized. The times ahead quickest route to meet the short promise to be exciting for the Q commerce sector.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-15-Test NO.-10363

Roy Emerson record for most Grand Slam titles won by a male singles player stood for a good 33 years. It was in the summer of 1967 that he won the last of his 12 trophies and only in 2899 did Pete Sampras surpass it. But little did anybody expect a man to rack up an equivalent number at just one Major, let alone in a span of just 3815 years. On the Parisian clay on Sunday, Rafael Nadal did just that, capturing his 12th French Open and 18th Major overall. This is an era in which along with Nadal, Roger Federer, the all time leader in Majors (20), and Novak Djokovic (15), have taken turns to relentlessly redefine the limits of greatness. But even by those exalted standards, Nadal achievement is unparalleled. His record at Roland Garros is a whopping 932, and he has bagged more trophies there than any man or woman has at a single Grand Slam. The victory didn't come easy; he had to overcome a spirited Dominic Thiem, widely touted, and quite rightly, as the Spaniard heir apparent on the surface. The 25 year old Austrian had in fact beaten Nadal on dirt in each of the last four seasons and was a much improved player from the time he lost the 273818 final. But the challenge of mastering a physically fit and mentally sharp Nadal is beyond most. The triumph also came on the back of a testing few months for Nadal. The 33 year old ended 2018 under the cloud of injury and had to endure a deflating loss to Djokovic in the final of the Australian Open this January. In the lead up to the French Open, he was on the cusp of not making a final on his beloved clay for the first time since 2004, until he put together a winning streak at the Italian Open. But once in Paris, he was a transformed man and turned in what could arguably be his most complete performance. From the backcourt he displayed the kind of athleticism and shot making that belied his age. Federer bore the brunt of it as he succumbed in straight sets in the semifinals. His play in the forecourt, an underrated part of his game, was lethal, coming in only for the assured kill, as the 23 out of 27 points won at the net against Thiem indicates. Even as Nadal established himself as a near constant among men, the women game threw up yet another surprise winner, this time in Australia Ashleigh Barty. The 23 year old style is delightfully old school, with a beautifully constructed point preferred to murderous first strike tennis. Combined with a ruthless calm, she completely unnerved the 19 year old Marketa Vondrousova on Saturday to end her nation long wait for a new slam champion. The President address is an occasion to take an overall view of our contributions on different friends of national and international activities. It is also an.

Delhi Police Typing-Dated-2023-08-15-Test NO.-10364

Opportunity for the Government to indicate a direction in which we are going to move, it is difficult to react to almost every aspects of the issues mentioned precisely for that reason. Would like to highlight some limited areas. First of all, India in its efforts of the last 60 years has tried to develop of vibrant democratic politics. Now, the process of creating a democratic system is unending and at the national level, we have a super structure of democratic framework so is the situation with regard to the State level but at the third level, at the district level it needed considerable re strengthening. Now having record to the need for democratic decentralization in decision making in the devolution of resources at lower levels and for strengthening of the local level democracy. This is anta dislodging the Bacterial community from the territory. However, it is a needless cavil, as what matters is that criminal liability has been established and a life term, which ought to mean the remainder of the convicts natural life, has been awarded. The larger takeaway is that efficient investigation, diligent prosecution and judicial sensitivity can ensure speedy justice in all cases, and more particularly in cases of ghastly crimes that cause widespread revulsion and outrage. It is indeed a judgment that will inspire investigation confidence in the justice system. There was a more flagrant illegality when Mr. Kanojia was taken out of Delhi without a transit remand from a local magistrate, mandatory when an accused is taken from one State to another. Faced with criticism, the U.P. Police added a section dealing with the offence of causing public mischief and disturbing public tranquillity, investigation besides Section 67 of the IT Act, which relates to sharing of obscene or prurient material, with the motive of obtaining a remand order. A few other journalists have been arrested for discussing the content of the video clip, in which a woman is seen expressing her wish to marry the investigation Chief Minister. What is disquieting, but unsurprising, is the perfunctory attitude of civil servants towards the personal liberty of citizens. It is one thing to pursue violations through legal action, but quite another to lock up people for posts they deem offensive to their political masters and conjure up justifications for their It is time magistrates who pass mechanical orders without application of mind and officers who carry out illegal instructions from the political leadership are made to face exemplary disciplinary action. Supreme Court last year, when the case was transferred from J&K to for a fair trial. The apex court had taken note of the hindrances to a fair trial in the jurisdictional court, especially the hostile atmosphere against the prosecution. The formation of a group called the Hindu Ekta Manch in support of those arrested and the role played by members of the Bharatiya Janata Party, including two Ministers in the then J&K government, had whipped up communal frenzy. It is commendable that the Crime Branch.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-15-Test NO.-10365

Of the J&K Police and the prosecutors have brought home the guilt of Sanji Ram, Parvesh Kumar and Deepak Khajuria, who have been sentenced to life for murder and 25 years in prison for gang rape. Further, the role of some police personnel in trying to destroy evidence has also been exposed. Sub Inspector Anand Dutta, Special Police Officer Surender Verma and Head Constable Tilak Raj get a five year term for washing some blood stained clothes, concealing the victim necklace and hair band, and misleading the investigating police team about the place of occurrence of the crime. The investigation had been fairly quick, and the charge sheet was prepared in two months. The trial lasted a year, and the verdict has been delivered within 17 months of the occurrence. Appeals by the convicts are only to be expected, and the Judge Tejwinder Singh approach and the manner in which he appreciated the evidence would be determined by higher courts. Even the prosecution may appeal against the acquittal of one of the accused, whose alibi that he was appearing in an examination in Uttar Pradesh at the time of the incident has been accepted. Some may question the verdict for not imposing the death penalty in what was presented as a crime aimed. Aimed at appealing to Australia growing number of green voters. Conversely, the pro business credentials of Mr. Morrison Liberal National coalition are said to have been steadily eroded as the government has reneged on its promise of corporate tax cuts. The package of measures unveiled in the pre election budget in April may only have a moderate impact. As with several industrialised democracies, voter disillusionment with the principal parties is yielding a fragmented polity, and smaller parties and independents could potentially tilt the balance of power in the Senate, which is crucial for the passage of legislation. With consistent economic growth and modest levels of unemployment Australia has had a remarkable track record in recent decades. This scenario is in stark contrast to the incessant political swings that impede the legislative agenda. What is without doubt is that the turnout will be high at the polls, as voting is compulsory for registered voters. Manufacturing, which has a weight of almost 78% in the index, continues to be the biggest drag, with output contracting by 0.4% after shrinking by a similar extent in February. Overall, the sector growth slowed to 3.5% in the last fiscal, from 4.6% in 2017 18. The composite picture that emerges from all these numbers belies the CSO implicit fourth quarter GDP growth assumption of 6.5%, and paints it as overly optimistic. With global headwinds strengthening in the backdrop of an escalating trade war between the two largest economies, the U.S. and rising tensions in West Asia beginning to push up energy costs from the top oil exporting region, Indian policymakers have to contend with an external sector that would likely only add to the domestic pressures, most certainly in the near term if.

Delhi Police Typing-Dated-2023-08-15-Test NO.-10366

A peculiar mentality has gripped us that of asserting our rights, of subjugating others to get ahead, of corruption and nepotism, and of forgetting our duties. The country is also witnessing a rapid decline in the humaneness quotient. Neither do we enjoy the amend of being a human, nor do we allow our inherent human and divine qualities to blossom fully. We became free physically to do anything we felt like doing. But, without the freedom of the soul, physical freedom is incomplete. It only results in indiscipline and a life without ethics. The body of Bharat got freedom, now it is time to free the soul of Bharat. To free the soul we have to be satyamaye, truthful; atmaye, soulful; and prem-maye, full of love. Also, everyone needs to meditate and ponder over what we can offer to our country through our body, breath, soul, and energy. We have become self-centered, always focusing on getting a good job, financial security, and a cosy home. Making our body free but harbouring a warped mentality and a soul that is not liberated is not true independence. Real independence is when we are free to do what we aspire for, and when we are mentally at peace to work efficiently with ease. At the soul level, real independence is when we extend the purview of our good deeds and have a positive impact on others. For this, an element of spirituality is required. During the yugas of Ram and Krishn, spirituality was very much part of every realm. Spirituality is doing everything in the right spirit, using all your faculties, and doing the karma that is Satyam, Shivam and Sundaram truthful, beneficial for all, and effective and beautiful, too. Now time has come to put a sankalp, resolve, to do a-sahyog, not cooperate with corruption, nepotism and everything that is undesirable for our growth. The maha-mantra of noncooperation given to us during the Freedom Movement, shook the foundation of colonial rulers and ultimately led us to Independence. So, non-cooperation is a strong tool to decimate all imperfections that have soiled our system. Now, evolution has reached a point where everyone satya, truth, will surface. So it is essential to work on self, eliminate imperfections and acquired traits that have crept into our system and see what we can offer to the world. Even Vedic Sanskrit talks about mukti, liberation, from imperfections that retard our growth and evolution. Bharat is the land of evolved souls. We disregard this truth if we do not imbibe qualities of these enlightened beings. By absorbing their attributes, we develop within us the tej, luminescence, that can enlighten others, too. We spread virtues and vices, whatever is within us, through our aura. Nature is compelling us to work on ourselves, to move further on the path of merging with pure Supreme Consciousness, towards a new, golden dawn an outcome of true independence. The writer is founder of Pranam Movement based on Truth Love Karm and Light Blueprint for the nation development. Their vision for an alternative path remains inadequate. The prevalent revdi culture, centered on pledges of free electricity, water, and loan waivers, is unsustainable. Over-reliance on this approach could potentially lead to an economic downturn akin to the current predicament faced by Sri Lanka. For the INDIA Alliance to present a substantial challenge to PM Modi-led in the forthcoming general elections, it must present a more robust and visionary plan for India comprehensive progress. While the concept of coha

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-15-Test NO.-10369

Entrenched rust as entrepreneurial dynamism and no two industries illustrate these contradictions more clearly than its most iconic entertainments, Bollywood and cricket. Facing the same challenge growing competition for fans in the internet age cricket is killing it, Bollywood is blowing it. Cricket growing popularity rests on the Indian Premier League. Since its launch in 2008, the estimated value of IPL has risen from \$1.1 billion to more than \$15 billion. This year the two-month season drew nearly a billion viewers, broadcast and streaming. Last year IPL sold five-year broadcast rights for \$6.5 billion a higher per game price than many other pro sports, including baseball in the United States and that other Premier League in England. Meanwhile, Bollywood box office had been weak for many years before falling sharply during the pandemic, with yearly footfalls down from 340 million to 190 million. Revenue is running at \$190 million so far this year, down by nearly half from the same period in 2019. Streaming revenue would add to that total, but would not reverse the decline. On July 17, Russia refused to renew the agreements allowing grain exports through the Black Sea. With this unilateral decision, Russia chose to put an end to an initiative carried out with the UN and the support of the international community, an initiative that benefited the most vulnerable countries and enabled the World Food Programmed to feed thousands of people in need in Djibouti, Kenya, Ethiopia, Somalia, Sudan and Yemen. It is the most vulnerable countries, those already bearing the brunt of the consequences of the war in Ukraine, that will pay the heaviest price following the abrupt termination of these agreements. This halt is irresponsible, following a 2022 that was a terrible year for food security. According to the UN, 735 million people worldwide suffer from hunger, and one person in five on the continent of Africa. Have Indian women come a long way since 1947? Many daughters are now getting the same educational and work opportunities as their brothers, even similar personal freedoms. But the big picture is dismal. This is not only on account of heinous crimes like the May 4 gangrape in Manipur. There is a very broad-ranging social inequality, one of whose striking symptoms is the ridiculously low female labour force participation rate in the world fifth largest economy. The bill to replace IPC, 1860 has been presented as more protective of women. But it preserves most of the language and thus the gendered thinking of a century and half ago, when the social dominance of men was both prevalent and preferred. The parliamentary standing committee to which the bill has been sent, must do course correction. In Section 64 of the new bill, punishment for rape is not less than 10 years, instead of seven years in IPC. The question mark on this change comes from harsher punishments having proved to be quite ineffective deterrents so far. In Section 69, having sexual intercourse with a woman after promising to marry her without any intention of doing so is now clearly stated as not amounting to the offence of rape, although punishable with imprisonment and fines. This is a useful modification as such cases have so far seen very subjective treatments by different courts. However, what really viscerally comes through in the offences against women chapter is that men act, women are acted upon. Men don't just assault, they make advances, request sexual favours, ake a

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-15-Test NO.-10370

The decriminalisation of adultery until 2018. Not only did IPC Section 497 punish only men for adultery, it also expressly prevented the wife from being punishable even as an abettor. What the apex court found was that the emphasis on invidious distinctions based on gender stereotypes was actually tantamount to subordination of women. SC quoted TS Eliot The endless cycle of idea and action, endless invention, endless experiment to say that laws have to keep up with the times. The new criminal code should go further. It must frame the rules with the thinking and the language of equality Indian women deserve. India new data protection law has diluted RTI. The amendment changes a provision in RTI on not providing personal information unless it in public interest into one that says no personal information will be provided. This, as RTI activists have pointed out, makes it impossible for the law to address many genuine citizen concerns. Queries on pensions, rations, government scholarships often include requests for information on those who have the power to disburse these benefits. A blanket ban on releasing personal information will shut this one small window of hope for many ordinary Indians. Worryingly, this change is part of a long series of tweaks that have robbed RTI of much of its original purpose. Information commissions (ICs), which exist at both central and state levels, govern the working of RTI. The efficacy of RTI mostly depends on how effective ICs are. Data compiled by Satark Nagrik Sangathan, a citizens group that tracks RTI, shows that ICs have a problem. At the level of states, there are often vacancies in IC posts as appointments are delayed. For example, the 2022 report of SNS showed that Manipur didn't have a chief information commissioner for 44 months. Consequently, pendency risen. It rose from 2.19 lakh complaints in March 2019 to 3.14 lakh by June 2022. The Central Information Commission has seen a significant increase in rejections of appeals since 2015. Annual rejections, on average, have been over 60% from a negligible amount in the preceding years. RTI empowered citizens. It said that information that could be denied to parliamentarians had to be made available to citizens. Sadly, RTI operation has deteriorated across ICs. That Parliament didn't debate this clause is another proof of how little the political class thinks of RTI. In Rocky Aur Rani Ki Prem Kahayan, a typical Ranvier Singh shirt has so few buttons that it looks like a skyscraper elevator panel with only the lobby and basement options. Watching the BarbeRocky double bill made me realise that while Barbie hits the utopian purple patch in antacid pink our own Dilliwalla Kens are Bling-tastic. They are fantastic in their quest for gaudy egalitarianism. The colors of the shirts worn by Rocky, played by Singh, were born because two kaleidoscopes could not quell their desires after their very first kitsch. Barbie and Ken must rip through a magical portal to enter the real world, where Ken discovers patriarchy. Rocky, carrying the baggage of male entitlement, must prove himself in a mythical cosmos where personal liberties are cherished, arts are worshipped, and misogyny is despised. Since this is Bollywood imagining, such a fantasy land in Delhi naturally is a Bengali household. Its members are cliched types exaggerated till their unreality snaps and they develop the authentic Delhi moxie. Rani (Alia Bhatt) is a TV news anchor who has 0% fear in questioning

Not in the longer. Australian Prime Minister Scott Morrison may have, in a manner of speaking, already scored a political victory ahead of the May 18 election. Few had expected the socially conservative politician to last out the remainder of Parliament term when he took over as Prime Minister in August following a coup within the ruling Liberal party. In the past, the country has seen many heads of government toppled. That said, Saturday election may not prove an easy ride for the former marketing executive. The polls may not signal an end to the political instability that has dogged Australian politics of late. From combating climate change to shaping energy policy, Mr. Morrison Liberal party is a divided house between moderates and conservatives. These differences were manifest in the ousting of Malcolm Turnbull last year and continue to elude a resolution. The world driest inhabited continent is confronting its own vulnerability to the effects of global warming. Australia, among the world largest wheat exporters, has been forced to take recourse to bulk imports of the grain, consequent to severe droughts in its eastern states over two years. Mr. Morrison, a supporter of coal generated power, may also find his hardline stance on immigration difficult to defend in the wake of the terrorist attacks in neighbouring New Zealand. The opposition Labor party seems to enjoy an edge over the governing centre right Liberal National coalition, according to opinion polls. Its leader, Bill Shorten, has rallied the party during its time in the opposition in the last six years. Labor advantage stems from its promise of a living wage, tighter regulation and ambitious targets on carbon emissions. A 45% reduction in carbon emissions on 2005 levels by 2030 is part of its manifesto. From pleading helplessness before the Supreme Court in enforcing the Model Code of Conduct a month ago, the Election Commission has come a long way in asserting its powers. On Wednesday it took the rare step of ordering that campaigning in West Bengal nine Lok Sabha constituencies that go to the polls on Sunday West Bengal had Conduct witnessed sporadic Wednesday incidents of violence through the previous phases of polling, but on Tuesday in Kolkata. The destruction of a bust of Ishwar Chandra Vidyasagar, the 19th century reformer and cultural icon of Bengal, by suspected BJP activists Conduct has put the party on the defensive in a State where it is making an all out effort to expand its footprint. The EC may have had sufficient reasons to conclude that a fear psychosis has gripped the State, and therefore Conduct campaigning must end prematurely. In TMC ruled West Bengal, the entire government machinery, the Wednesday district administration and the police. The EC may could quite possibly be at the service of the ruling party. However, the advanced deadline of 10 p.m. on Thursday to end campaigning was devoid of any logic or reason, other than Conduct being evidently partisan Wednesday towards the BJP. The 10 p.m. deadline clearly.

Opportunity for the Government to indicate a direction in which we are going to move, it is difficult to react to almost every aspects of the issues mentioned precisely for that reason. Would like to highlight some limited areas. First of all, India in its efforts of the last 60 years has tried to develop of vibrant democratic politics. Now, the process of creating a democratic system is unending and at the national level, we have a super structure of democratic framework so is the situation with regard to the State level but at the third level, at the district level it needed considerable re strengthening. Now having record to the need for democratic decentralization in decision making in the devolution of resources at lower levels and for strengthening of the local level democracy. This is anta dislodging the Bacterial community from the territory. However, it is a needless cavil, as what matters is that criminal liability has been established and a life term, which ought to mean the remainder of the convicts natural life, has been awarded. The larger takeaway is that efficient investigation, diligent prosecution and judicial sensitivity can ensure speedy justice in all cases, and more particularly in cases of ghastly crimes that cause widespread revulsion and outrage. It is indeed a judgment that will inspire investigation confidence in the justice system. There was a more flagrant illegality when Mr. Kanojia was taken out of Delhi without a transit remand from a local magistrate, mandatory when an accused is taken from one State to another. Faced with criticism, the U.P. Police added a section dealing with the offence of causing public mischief and disturbing public tranquillity, investigation besides Section 67 of the IT Act, which relates to sharing of obscene or prurient material, with the motive of obtaining a remand order. A few other journalists have been arrested for discussing the content of the video clip, in which a woman is seen expressing her wish to marry the investigation Chief Minister. What is disquieting, but unsurprising, is the perfunctory attitude of civil servants towards the personal liberty of citizens. It is one thing to pursue violations through legal action, but quite another to lock up people for posts they deem offensive to their political masters and conjure up justifications for their It is time magistrates who pass mechanical orders without application of mind and officers who carry out illegal instructions from the political leadership are made to face exemplary disciplinary action. Supreme Court last year, when the case was transferred from J&K to for a fair trial. The apex court had taken note of the hindrances to a fair trial in the jurisdictional court, especially the hostile atmosphere against the prosecution. The formation of a group called the Hindu Ekta Manch in support of those arrested and the role played by members of the Bharatiya Janata Party, including two Ministers in the then J&K government, had whipped up communal frenzy. It is commendable that the Crime Branch.

SaaS tech has become the core of many businesses in the current times. SaaS stands for Software as a service. SaaS tech might seem like a complicated concept to understand, but you would be surprised by how common it has become in our lives now. This software are mostly cloud based, so they don't need any hardware or particular device for support. In simple terms, SaaS is software that is sold by a third party and is operated using the internet. Companies like Hub spot, Drop box, Google Workshop, Slack, Zoom, Bigo, Gunship and similar companies which provide software and services via the internet are SaaS providers. The idea behind developing this kind of software is to promote businesses, especially commerce services, without letting hardware become an issue of accessibility or affordability. Many tech leaders agree that SaaS technology is on its way to becoming one of the key components of running any kind of business or tech in general. The SaaS tech industry, along with Isaac and PaaS has grown 2x within the last 4 years and currently is valued at \$350 billion. The majority of the share is owned by the SaaS software. SaaS has become the key to efficient business management for small to medium size businesses. These businesses, unlike the large ones, cannot revamp their hardware every now and then, plus, they have no such need for it, unlike Isaac or PaaS users. SaaS simply take over data management, cloud storage, server management and other such aspects right from a single software without any hardware. So in simple terms, buying such software saves a lot of money for businesses. If we jot down the cause of penetration of SaaS in the market, then I believe the credit will go to the compatibility SaaS software provides and the availability of cheap internet. If you look at such technology some twenty odd years ago, then there needed to be many different kinds of devices set up to do what modern day SaaS does on just one screen. In fact, it does a lot more. Since I am a part of the Indian restaurant industry, we know that SaaS and POS platforms have not just helped in the growth of the businesses, but helped them sustain during the pandemic. They helped restaurant businesses upload and execute their business operations via the internet and turn their business model into more customer facing using CRM SaaS services. SaaS has created user centric banks of data that only the user themselves can access. And since this is all cloud based, no one can breach it nor does it need manual management. I think the only downside of this tech is that you would not be able to avail of its benefits on a bad internet connection. But the SaaS providers are trying to bridge this gap too. SaaS also works in offline modes and just one strong internet connection for a regulated time period is enough to back up all the data.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-16-Test NO.-10374

Additionally, they are making the software more compact. Like VHS became floppy disks that moved to CDs, then pen drives and now even that is on the internet thanks to OTT platforms, the same thing is happening to Saabs technology. Businesses are becoming compact. Due to Saabs, e commerce businesses have altogether stopped investing in creating any infrastructure for the businesses. They are more eager to learn about how they can efficiently manage their businesses online, reach more customers & benefit from every new Saabs software update. If a business is all about meeting customer demands and earning profits, modern day entrepreneurs know that they can do it by simply using technology and support software. Inarguably the rise in the e commerce model of business has contributed to the mass employment and adoption of Saabs tech. And so, if you are looking for investing in this profitable avenue, then it might be a good time for it as India is currently leading the race for being the startup hub in the world. This means more small scale businesses which are ready to invest in software that provide holistic business solutions. In India, the conversation about organ donation is gaining momentum but there is a long road ahead before we establish substantial ground. Organ donation in the country is regulated by law allowing both deceased as well as living donors to donate their organs. Then why are we lagging behind in organ transplants and unable to meet the rising needs of organ donation? The need for organ donation in India Organ donation is a pressing issue in India due to the huge gap in the demand and supply of organs. The main reasons for this disparity are mainly lack of awareness, myths, infrastructure as well as religious beliefs and superstitions. According to the World Health Organisation, only around 0.01 per cent of people in India have pledged to donate their organs after death. While data shows that there is a huge requirement of organ transplants that is not being fulfilled, leading to nearly half a million deaths every year. It is time to step up and understand organ donation in depth in order to bridge the gap in receiving organs for transplant. Detailed overview of organ donation for the uninitiated, organ donation is the donation of the organs in your body to persons who require a transplant that will give them another chance at life. While you can pledge to donate your organs while alive, organ donation can be done after you are declared legally dead or brain dead irreversible condition where the heart is still beating only due to life support provided. Donation of some organs and tissues can also be done while alive. Organ donation can be done by any person irrespective of age, gender, ethnicity or religion. One donation from the deceased donor can save close to eight or nine lives of people suffering from organ failures and terminal illnesses. Organ donation is of two types, you can.

Of the J&K Police and the prosecutors have brought home the guilt of Sanji Ram, Parvesh Kumar and Deepak Khajuria, who have been sentenced to life for murder and 25 years in prison for gang rape. Further, the role of some police personnel in trying to destroy evidence has also been exposed. Sub Inspector Anand Dutta, Special Police Officer Surender Verma and Head Constable Tilak Raj get a five year term for washing some blood stained clothes, concealing the victim necklace and hair band, and misleading the investigating police team about the place of occurrence of the crime. The investigation had been fairly quick, and the charge sheet was prepared in two months. The trial lasted a year, and the verdict has been delivered within 17 months of the occurrence. Appeals by the convicts are only to be expected, and the Judge Tejwinder Singh approach and the manner in which he appreciated the evidence would be determined by higher courts. Even the prosecution may appeal against the acquittal of one of the accused, whose alibi that he was appearing in an examination in Uttar Pradesh at the time of the incident has been accepted. Some may question the verdict for not imposing the death penalty in what was presented as a crime aimed. Aimed at appealing to Australia growing number of green voters. Conversely, the pro business credentials of Mr. Morrison Liberal National coalition are said to have been steadily eroded as the government has reneged on its promise of corporate tax cuts. The package of measures unveiled in the pre election budget in April may only have a moderate impact. As with several industrialised democracies, voter disillusionment with the principal parties is yielding a fragmented polity, and smaller parties and independents could potentially tilt the balance of power in the Senate, which is crucial for the passage of legislation. With consistent economic growth and modest levels of unemployment Australia has had a remarkable track record in recent decades. This scenario is in stark contrast to the incessant political swings that impede the legislative agenda. What is without doubt is that the turnout will be high at the polls, as voting is compulsory for registered voters. Manufacturing, which has a weight of almost 78% in the index, continues to be the biggest drag, with output contracting by 0.4% after shrinking by a similar extent in February. Overall, the sector growth slowed to 3.5% in the last fiscal, from 4.6% in 2017 18. The composite picture that emerges from all these numbers belies the CSO implicit fourth quarter GDP growth assumption of 6.5%, and paints it as overly optimistic. With global headwinds strengthening in the backdrop of an escalating trade war between the two largest economies, the U.S. and rising tensions in West Asia beginning to push up energy costs from the top oil exporting region, Indian policymakers have to contend with an external sector that would likely only add to the domestic pressures, most certainly in the near term if.

Not in the longer. Australian Prime Minister Scott Morrison may have, in a manner of speaking, already scored a political victory ahead of the May 18 election. Few had expected the socially conservative politician to last out the remainder of Parliament term when he took over as Prime Minister in August following a coup within the ruling Liberal party. In the past, the country has seen many heads of government toppled. That said, Saturday election may not prove an easy ride for the former marketing executive. The polls may not signal an end to the political instability that has dogged Australian politics of late. From combating climate change to shaping energy policy, Mr. Morrison Liberal party is a divided house between moderates and conservatives. These differences were manifest in the ousting of Malcolm Turnbull last year and continue to elude a resolution. The world driest inhabited continent is confronting its own vulnerability to the effects of global warming. Australia, among the world largest wheat exporters, has been forced to take recourse to bulk imports of the grain, consequent to severe droughts in its eastern states over two years. Mr. Morrison, a supporter of coal generated power, may also find his hardline stance on immigration difficult to defend in the wake of the terrorist attacks in neighbouring New Zealand. The opposition Labor party seems to enjoy an edge over the governing centre right Liberal National coalition, according to opinion polls. Its leader, Bill Shorten, has rallied the party during its time in the opposition in the last six years. Labor advantage stems from its promise of a living wage, tighter regulation and ambitious targets on carbon emissions. A 45% reduction in carbon emissions on 2005 levels by 2030 is part of its manifesto. From pleading helplessness before the Supreme Court in enforcing the Model Code of Conduct a month ago, the Election Commission has come a long way in asserting its powers. Deadline clearly accommodated Prime Minister Narendra Modi last rallies in the State slated for Thursday evening. The EC may could If in the EC assessment campaigning could have led to violence, why did it not order its curtailment on Conduct Wednesday or early in the day on Thursday? Since the announcement of the Lok Sabha poll schedule, the EC credibility has come under a cloud. The manifestly partisan decision on the campaigning deadline in West Bengal has further eroded trust in the institution. From the backcourt he displayed the kind of athleticism and shot-making that belied his age. Federer bore the brunt of it as he succumbed in straight sets in the semifinals. His play in the forecourt, an underrated part of his game, was lethal, coming in only for the assured kill, as the 23 out of 27 points won at the net against Thiem indicates. Even as Nadal established himself as a near constant among men, the women game threw up yet another surprise winner, this time in Australia Ashleigh Barty style is delightfully old-school, with a beautifully constructed point preferred to murderous first-strike tennis. Combined with a ruthless calm, she completely unnerved the 19-year-old Marketa Vondrousova on Saturday to end her nation long wait for a new slam champion. The President address is an occasion to take an overall view of our contributions on different friends of national and international activities. It is also an opportunity for the Government to indicate a direction in which we are going to move, it is difficult to react to almost every aspects of the issues mentioned precisely for that reason would like to highlight some limited areas. First of all, India in its efforts of the last 60 years has tried to develop of vibrant democratic politics. Now, the process of creating a democratic system is unending and at the national level, we have a super-structure of democratic framework so is the situation with regard to the State level but at the third level, at the district level it needed considerable re-strengthening. In a few days from now, our republic will have a new President. It clear India has appreciated the candidature of Draped Murmu for this respected office. Her candidature has struck a chord with different sections of society. In a year when India is marking Aside Ka Amrit Mahotsav, it has made every Indian proud that the highest office of this land will be occupied by a self made woman who belongs to a tribal community. The women of India find it empowering that a woman will be our next President. Murmu will be the first President of our nation to be born after Independence, which also gives an important message. Murmu candidature is special for a number of other reasons as well. Let me begin with her accomplishments. In a political set up where dynastic politics and personal wealth have dominated for decades, Murmu is a breath of fresh air. She started out as a teacher in Rairangpur, Odisha, and later joined the state irrigation department as junior assistant. Even though she performed her professional duties with diligence, it was clear that public service was her real calling. Prime Minister Narendra Modi on Saturday in Jalaun, UP, drew attention to India political culture of canvassing for votes by promising freebies. This trend, he added, undermines economic development. It an important subject which deserves to be foregrounded. Freebies are a shorthand for suboptimal fiscal choices by governments. It an area where no major political party is blameless. The tendency to canvas votes by promising free or subsidised goods and services is common to all parties. An enabling environment for the creation of decent jobs is the most effective and inclusive indicator of economic development. The inability of political parties to bring about such an environment catalyses short termism in canvassing for votes. Freebies, which trigger a perennial challenge of fiscal stress, are the outcome. India cannot afford to keep going down this road which is why PM Modi observations are important. Economic development requires better fiscal choices than what is commonly seen among states and GoI. The current level of debate around freebies is unlikely to lead to better choices. If freebies represent fiscal choices, we need a widely accepted understanding of the kind of choices that smack of cynical short termism. It currently missing. Are free cereals that were added to the PDS after the outbreak of Covid freebies, or are they a safety net to cope with a shock If it the latter, at what point does a temporary safety net morph into a freebie Tamil Nadu trajectory embodies the complexities of the subject. The state dominant Dravidian political parties have been synonymous with freebies for the last 55 years. Yet, the state has the fourth lowest poverty ratio in India, according to Niti Aayog. Moreover, GoI Annual Survey of Industries shows that it the state with the highest number of operating factories in the formal sector. Notwithstanding these metrics, recent fiscal slippages catalysed the state government last.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-16-Test NO.-10382

Year to present a white paper on public finances. Reliable data is the first step to forge a consensus on freebies. Gol should act upon the recommendations of successive finance commissions and establish an independent fiscal council. It needs to be backed by a law that provides access to all accounts of both states and Gol. A debate anchored by data will help the electorate make more informed judgments and, thereby, provide politicians the incentive to make better fiscal choices. China economy grew by only 0.4 in the April June quarter, adding to fears of a global recession. The sharp slowdown was brought on by strict Covid lockdowns imposed across major Chinese centres in April and May, including the commercial hub of Shanghai. China is the only major country today that continues to adhere to a stringent zero Covid strategy. And given the upcoming 20th Chinese Communist Party CCP congress where Xi Jinping is seeking to secure an unconventional third term as head of the Chinese state, Beijing can get off this wagon. This in turn means that the global economy continues to be held to ransom by the peculiarities of the Chinese political system. China, as the largest trader and factory of the world, holds a dominant position in global supply chains. But Beijing today is weaponising economic interdependencies to achieve strategic objectives. In fact, China behaved less than responsibly in the early days of the pandemic. That is now widely believed to have aided the rapid spread of the disease across the world. Many experts argue China should have reached out to WHO with a warning before December 31, 2019. Then Li Wenliang of the Wuhan Central Hospital, who had warned his colleagues about the virus, was harassed by Chinese authorities. And the laboratory at the Shanghai Public Health Clinical Centre, which published the world first genome sequence of SARS CoV 2 on January 11, 2020, was ordered to shut down for rectification a day after. China privileged protecting the image of the CCP and Xi over a transparent Covid response. It doing so again with its zero Covid strategy and blocking of investigations into Covid origins. Major countries, including India, must find ways to reduce dependence on China production chains, and invest in resilient supply networks. In addition to the recent surge in the number of Covid cases across several regions, India reported its first case of monkeypox virus last week in Kerala. The infected person is said to have reached the state capital recently from UAE and started feeling symptoms soon after landing. In the wake of the first confirmed case in the country, Gol on Friday released fresh guidelines for international travellers to control the spread of the virus. Health agencies across the globe are still figuring out how severe and lethal the virus can be. Several countries have been failing to control the spread, despite being aware of the origin and integrities of the monkeypox virus in humans since the 1970s. While the Covid.

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-16-Test NO.-10383

The law & order situation has significantly deteriorated. Murders and rapes occur in broad daylight. Women do not feel safe. To get an FIR registered can require the Supreme Court intervention. Once a case is registered there is no further action or inquiry by the police. How can the average citizen expect to feel safe in such a situation? Further, India has a justice system that nobody has any faith in, any more. Let alone the idea of justice, the first step: a decision is itself not on offer. Crores of cases are pending for decades. Political pressure is frequently and successfully applied on judges in order to get a particular decision. Rapists and murderers get away even as the innocent languish as under trials for years. Honest judges who follow the law are perpetually at risk of being transferred, with their cases given to more pliant judges. A sham democracy for many decades, our parliaments at the national and state level have become places for shouting matches and walk-outs. We rarely hear any policy debates. Indeed, major policies are implemented without any debate. Such ill-designed policies are guaranteed to cost taxpayers, without any benefit. The governance of India has gone into the hands of a few families, with some of them in the 4th generation now. This has become a norm in all parties. Further, a large chunk of MPs and MLAs have murder and rape cases against them yet, such people somehow get re-elected. It almost seems that democracy has ended and we are back to the feudal era. Was it for this kind of democracy that the people were so hopeful on 15 August 1947? Do we even have a democracy anymore? A hollow fourth estate The people no longer have any expectations even from our media, the fourth estate. Instead of bringing forward the truth, the media is focused on TRP. Most of it has been purchased by one or other political party, so what we get as news is nothing but propaganda. It appears that the sole function of the media is to divert the attention of the people from real issues. We do hear sometimes about a few honest journalists who are then forced to leave their positions and start independent YouTube channels. But the vast majority of the journalists have no such integrity, and are happy to cook up false news and propaganda for their political masters including the use of social media for nefarious purposes. As a result, the common man has lost the ability to distinguish the truth from falsehood. At the same time, the common man is increasingly less interested in the truth, having being hooked to media outlets which pander to his biases. The saving grace today is that social media allows some scope for opposition messages to wake up the public. Divide and rule Our political parties have long believed in the divide and rule policy to gain and control power. Some parties focus on special benefits for particular groups or communities, others spread hatred against selected communities. This has forced every group to close up, to communicate only within its own members and to create barriers against other groups. We are no longer a united nation communities live in fear of each other. The society has been broken up into fragments by narrow domestic walls, precisely the opposite of what Rabindranath Tagore wanted. Of course, this is exactly what the political parties want a divided vote bank. The recent events in Manipur are a sad reminder of this situation. While the story in Manipur might be complex, the fact is th

Delhi Police Typing-Dated-2023-08-16-Test NO.-10386

Like this, when dharma has become deeply entrenched and there seems to be no ray of hope, the people of India can and must overcome this situation, if we commit to change. India has seen many revolutions, big and small, and we can, if we so commit, overcome this dismal situation. After revolutionary resistance to the British for 150 years, we finally drove them out. Despite many decades of one-sided political power, the Congress finally relinquished power in 1977 and thereafter shared it with others. Later came the rat yare and Anna movement as motivators of change. Revolutionary methods of this kind are needed once again to support new political leadership. We must come together to stop the decline of India into anarchy, else we will be forced as a nation to spend the remainder of our life in fear and terror. We need a political revolution through the ballot box to change our corrupt and unjust system. We need honest and courageous leadership that offers competent candidates to the people. We need a sharp distinction between ideologies of the parties, particularly a sharp rejection of socialism. We need a system in which education; security, justice and individual freedom are available to everyone, as a result of which the people achieve happiness, prosperity and a life without fear. This will not happen unless we as a society commit to voting out the corrupt and criminals. But we also need to find the right people and send them to the Parliament and legislative assemblies. We need courageous representatives who will implement the policies needed to improve the welfare of the people and the economic situation of the country. Ultimately, each of us is directly and personally responsible for what happens to the country. If you, as a citizen, fit the bill for the reforms India needs, then please step forward and do not shy from responsibility but merely sounds like somebody whose normal words have been made operatic by a very hot and very expensive brunch at Delhi the Chanukah. Some weeks ago, outside that mall, I saw a gold-plated. The car took all the negative light in which Delhi is seen and shot back ritzy contempt into the eyes of the buri-nazar wallets. Rocky Aura Rani has the glowing solidity of that car and of Rocky bared midriff, making it superior to Barbie, which is fashioned from self-aware smirks gathered from the dollhouse of high concept ideas. In one scene of skimpy creativity, Rocky is even made to try on a bra, but it augurs the dismantling of a powerful male structure. That drives home the point in a golden. Pay heeds Christopher Nolan. The loopy timelines in your Oppenheimergive motion sickness to its points. Besides, your characters banter about quantumised physicality or some such. I do know whether the subject relates to the Stereotypical Barbie proportions or to a Nobel science. A smoother mind ride is provided by Rocky Aura Rani, which fittingly ends with Raja Mere Gaudi Mein Baith Jaa, revving up Delhi ornamented horsepower. Very expensive brunch at Delhi the Chanukah. Some weeks ago, outside that mall, I saw a gold plated. The car took all the negative light in which Delhi is seen and shot back ritzy contempt into the eyes of the buri-nazar wallets. Rocky Aura Rani has the glowing solidity of that car and of Rocky bared midriff, making it superior to Barbie, which is fashioned from self-aware smirks gathered from the dollhouse of high-concept ideas. In one scene of skimpy creativity, Rocky is even made to try on

Pandemic is not over, only timely and strategised measures can prevent another major outbreak. Mumbai takes the mud caked headlines every monsoon, leaving Amdavadis un high by law and dry. News of flooded Andheri is splashed nationally but though last week deluge made all of Ahmedabad go Under i, most Indians got just a drizzle of information about it. This Slush Superiority Complex must be fought to the last pothole, because Ahmedabad makes a mess of itself in its very first ditch attempt during rains. While presenting Ahmedabad case, neither city suffering, loss and helplessness are being played down. One is only applying the Tolstoy an nuance to suggest that Ahmedabad drains must have the same gutter ate status as the celeb sewers of Mumbai. One is talking about infrastructure, not people. Tolstoy opens Anna Karenina thus: All happy families are alike, each unhappy family is unhappy in its own way. For the matter at hand, it can be said: All mucky cities are alike, each mucky city has its own swamp star. A recent report from Mumbai spoke of cars idling on the soggy Pedder Road in the city south. That nothing in the great game of idleness. In a housing society in Prahladnagar, in Ahmedabad posh west, SUVs lay in the inundated basement as indolently as hotel soaps in a brimming bathtub. A topic for consideration: Why do 5 star hotels offer soaps the size of sum cards Maybe it makes sense in Mumbai, the city has profuse glitzy lather. Talking of hotels, Prahladnagar and its vicinity have several reputable properties. The area is also home to big brand baristas, clothing labels and electronics. However, on the Day of the Deluge, Prahladnagar like much of Ahmedabad became the manifestation of the Maxed Out City. Devastation uncoiled in the manner of a Bollywood thriller. It started with a pattern of romance, evoking monsoon ragas and dalwadadas; then rainfall intensified with the suddenness of the villain lust for the hero love interest; then came the downpour, as incessant as the hero epic recriminations and gunfire. There was no intermission. In the wet season, citizens of both cities wade through water. But if there were to be an Indian Pitfall League, Amdavadis are worthy contenders to take the crown of bandanas survivors. The Duckworth Lewis method is available to pick winners in rain hit matches. IIM Ahmedabad yes Mumbai, we have that iconic institution can tweak the formula to choose victors on the waterlogged pitch of daily life. Imagine having an embarrassing uncle who shares your surname and does routinely awful things in public. No matter how hard you try to distance yourself, a part of your identity gradually gets compromised. This is how one feels, as a Hindu, these days. Certain uncle jigs have literally hijacked and distorted what is a marvelously liberal and sophisticated philosophy in its essence, even if not always in practice. Hinduism was once India biggest soft power, attracting hordes from across the world who were.

Seeking respite from their own depressed and divisive cultures. The land of Karma Cola attracted some of the world greatest minds from Aldous Huxley who prefaced The Gospel of Ramakrishna to Richard Alpert who became Ram Doss and catalysed a massive movement; from Ralph Waldo Emerson who wrote Brahma to Somerset Maugham, who sat transfixed in Ramona Maharishi ashram People turned to India for answers. The essence of Hindu philosophy can be found in the Upanishads, a series of dialogues which came at the end of the Vedas and are, therefore, called Vedanta. The Upanishads reflect the teachings in the Bagdad Gita and both are filled with magic realism and wisdom. This edifying body of literature offers an approach to the self and one relationship with the universe that is radically different from what the modern world feeds us. Yet, these are astonishingly contemporary ideas that can be applied to environmentalism, psychology and quantum physics. For instance, they align one to the idea of enlightened self interest based on an understanding that nothing is outside the self, but the self is indeed the whole. I am that. Just as a wave is both an individual wave, with its particular shape or life span, it is not separate from the ocean. We live in an incredibly interconnected world. So, when you harm another whether it is a human being or a river or a nation you are essentially harming yourself. If not now, then for your great grandchildren to forbear. Modern physics clearly endorses that perceived objects are not what you think they are. They can be broken down into particles and, eventually, energy. So, our mindless obsession with the physical form and with creating constant divisiveness and hierarchy is fallible. Today, fixed ideas about identity are boring and dated, with even teenagers embracing gender fluidity. But there may be an answer from within the very Hindu ideology that its alleged followers claim to protect the karmic law of cause and effect. Everything has a consequence. You plant a seed, it grows into a tree; you slay the tree, you lose oxygen. If you inflict pain, there will be consequences if not immediately, then in the future. This holds true for individuals, for societies, for nations. Whether it is physics, biology or psychology, universal laws prevail. They have little to do with our God or anyone else God. If the red slayer think he slays Or if the slain think he is slain, They know not well the subtle ways I keep, and pass, and turn again. RW Emerson In a complex business landscape, companies hire leaders who are competent to chart a way forward for them. Considering the need to develop highly inspiring leaders, the up skilling of the leadership has become a key to the organizations growth trajectory and sustainability. In the digitally driven era of business, it has become imperative in sustaining accelerated transformations to maintain business profitability. Companies that invest in the learning of the leadership often.

Delhi Police Typing-Dated-2023-08-17-Test NO.-10389

Witness improved performance and reliability in the organization. Organizations looking to record high business growth move beyond short term approaches to leadership development. Up skilling which has become a crucial component of today modern age talent strategy helps leaders and managers to improve performance and prepare them for leadership roles. According to the stats The World Economic Forum predicts that investing in up skilling and reskilling the global workforce will increase global GDP by \$6.5 trillion by 2030. This clearly indicates organizations are going to spend more on up skilling their talent in the coming years. Why do conventional leadership development programs fail In the typical conventional leadership development program, high potential leaders are sent to B School training for a week or two courses. Organizations spend a hefty amount on outdated training methods that are usually finished without any real time application or post assessment. As a result, leaders equip themselves with several growth ideas and contact books. However, they fail to implement them as a strategy in business. Human brains learn when they practice. Similarly, leadership development cannot become successful if it is not embedded. To nurture a leader mind, it is necessary to address the gaps in conventional leadership development programs, traditionally equipped with trainer scripts and rigid assignments. Designing a strong leadership development program Up skilling is a long term and thoughtful investment strategy. It augments knowledge, skills and competencies to make leaders for tomorrow. Apart from professional advantages, up skilling encourages personal growth and increases employee engagement. However, determining what to include in a strong leadership development program can be complicated with the industry 4.0 uprising. To navigate the changes and challenges of the future world, organizations must adopt a very powerful embedded leadership development for employees at all levels. The focus of these programs should not merely be on improving their goal setting and goal tracking process, rather it must focus centrally on goal achievement and value creation. There should be a converged approach with clear design elements of accountability, interaction, impact, and sustainability. Beyond this, companies must adopt an embedded leadership development approach for goal achievement. It should be equipped with design elements for building critical leadership skills, creating opportunities to immediately apply the skills and receiving critical feedback on the application. These can be a powerful experience for leaders and managers to achieve their goals at a much more elevated level. Real time skill application Unlike conventional leadership development programs, embedded professional development provides learning along with opportunities to implement in real work situations. This helps leaders with effective skill building while understanding the relevance of the program. Under new age development programs, leaders can simply apply the newly learned skill in their workflow, practice it while learning and gaining a strong practical mindset. Instead of focusing on imparting knowledge, embedded professional leadership development programs help leaders with skill up gradation and application in the everyday flow of work. It fills the ages old gaps in professional learning and practical application that.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-17-Test NO.-10390

Further results in improved performance and firsthand experience. This creates a win for both leaders as well as organizations with skill enhancement and improved business performance. Outcome focused approach Technology is known to provide exciting ways of personalizing leadership journeys. To achieve high performance outcomes, tech driven professional learning platforms integrate business context, leadership expectations and work culture which offers a personalized way of up skilling. In addition, leadership aspirants can take leverage of immersive learning that provides unprecedented ability to practice real world scenarios and experience practical growth. Moreover, technology augments the professional learning and development of leaders by emphasizing customized training programs. For instance, learning leaders can emphasize bite sized training that learners can take at their own pace. Further, their performance can be tracked with management consoles that can present weekly progress of leaders effectiveness. Final thought The modern age leadership program can help in up skilling talent. They are effective in facilitating conceptual learning anytime anywhere, in enabling the application on the job towards achieving targeted performance outcomes, and in finally tracking the progress made on performance outcomes. The organizations must adopt an embedded leadership development approach integrated with modern technologies that automate all or most of these program design elements so as to upgrade the skills of leaders in the flow of work. Aimed at appealing to Australia growing number of green voters. Conversely, the pro business credentials of Mr. Morrison Liberal National coalition are said to have been steadily eroded as the government has reneged on its promise of corporate tax cuts. The package of measures unveiled in the pre election budget in April may only have a moderate impact. As with several industrialised democracies, voter disillusionment with the principal parties is yielding a fragmented polity, and smaller parties and independents could potentially tilt the balance of power in the Senate, which is crucial for the passage of legislation. With consistent economic growth and modest levels of unemployment Australia has had a remarkable track record in recent decades. This scenario is in stark contrast to the incessant political swings that impede the legislative agenda. What is without doubt is that the turnout will be high at the polls, as voting is compulsory for registered voters. Manufacturing, which has a weight of almost in the index, continues to be the biggest drag, with output contracting by after shrinking by a similar extent in February. Overall, the sector growth slowed to in the last fiscal, from. The composite picture that emerges from all these numbers belies the CSO implicit fourth quarter growth assumption of and paints it as overly optimistic. With global headwinds strengthening in the backdrop of an escalating trade war between the two largest economies, the U.S. and rising tensions in West Asia beginning to push up energy costs from the top oil exporting region, Indian policymakers have to contend with an external sector that would likely only add to the domestic pressures, most certainly in the near term if not in the longer.

Delhi Police Typing-Dated-2023-08-17-Test NO.-10391

There is now no denying that the second Modi government takes office amid a clear economic slowdown. The first macro data set released under the new Finance Minister, Nirmala Sitharaman watch, on Friday, showed an under performing economy with in the fourth quarter of 2018 pointing to a serious slowdown. If further confirmation were needed, the growth in core sector output a set of eight major industrial sectors fell to 2.6% in April, compared to 4.7% in the same month last year. And finally, unemployment data, controversially suppressed by the Union government so far, showed that in 2017 18. These numbers highlight government so far the challenges ahead for Ms. Sitharaman as she sits down to draft the Budget for 2019 20, to be presented on July 5. The economy is beset by a consumption slowdown as reflected in the falling sales of everything from automobiles consumer durables, even fast moving consumer goods good news is that inflation is undershooting the target and oil prices are on the retreat again. But the rural economy remains in distress, as seen by the 2.9% growth in agriculture last fiscal; the sector needs a good monsoon this year to bounce back. Overall economic growth in the first quarter of this fiscal is likely to remain subdued, and any improvement is unlikely until the late second quarter or the early third. The new Finance Minister. In the near term, she has to boost consumption, which means putting more money in the hands of people. That, in turn, means cutting taxes, which is not easy given the commitment to rein in the fiscal deficit. In the medium term, Ms. Sitharaman has to take measures to boost private investment even as she opens up public spending again. These call for major reforms, starting with land acquisition and labour, corporate taxes by reducing exemptions and dropping rates, and nursing banks back to health. On the table will be options such as further recapitalisation of the ailing banks, and consolidation. The question, though, is where the money will come from. With tax revenues likely to be subdued owing to the slowdown, the Centre will have to look at alternative sources such as disinvestment. There may be little choice but to go big on privatisation. A rate cut by the Reserve Bank of India, widely expected this week, would certainly help boost sentiment. But it is the Budget that will really set the tone for the economy. Union Defence Minister Rajnath Singh on Monday arrived in Kashmir to assess the situation on the borders and hinterland in J&K and also visited a forward post at the highest military installation at Siachen glacier, located at a height of 5,400 m, in Ladakh. It was Mr. Singh first visit to J&K as Defence Minister. I am proud of all Army personnel serving in Siachen who are leaving no stone unturned to defend our motherland. I am also proud of their parents who have sent their children to serve the nation by.

Delhi Police Typing-Dated-2023-08-17-Test NO.-10392

Then Sudanese dictator Omar al Bashir was toppled on April 11 after a month long popular uprising, the generals had two options before them. One was the Tunisian model in which the army allowed a smooth transition of power to a civilian government after Zine El Abiding Ben Ali was removed from power in 2011. The other was the Egyptian model in which the army, after losing power to a civilian ruler following Hosni Mubarak ouster as President in 2011, staged a coup in 2013 and reinstalled itself at the helm. Unfortunately, the Sudanese generals chose the latter, setting the stage for a prolonged showdown. The protesters had demanded a transfer of power to a Unfortunately transitional civilian government, followed by free and fair elections. But the generals used the crisis to concentrate more powers in their Unfortunately own hands. They established a military council which took over governance, while angry protesters continued a sit in in front of the Defence Ministry in Khartoum. As talks between pro democracy activists and the governance military rulers collapsed, paramilitary groups unleashed deadly violence this week to break the sit in, killing at least 100 people and injuring hundreds. The Rapid Support Forces, the paramilitary troops notorious for governance atrocities committed in the impoverished western. It is evident that the military will not easily give up power. After the crackdown, Lt. General Abdel Fattah al Burhan, the military ruler, has offered to hold elections in nine months, upturning an earlier plan of a two year crackdown transition. But there is no immediate plan to transfer power to a crackdown civilian transitional government, a key unsurprisingly, they have rejected the military offer. At present, Sudan generals enjoy regional and international support. The UN Security Council could even condemn the violence as China, backed by Russia, blocked the move. Saudi Arabia and the United Arab Emirates, which offered financial aid to the junta as soon as Mr. Bashir was removed from power, also support the generals. This gives the military rulers a sense of impunity even when they unleash murderous paramilitaries on peaceful protesters. This has to change. Arab countries as well as the UN should put meaningful pressure on the military council to pay heed to popular demands and hold those responsible for the June 3 massacre accountable. There is no easy solution to the crisis. If the military wants to keep its grip on power, there could be more bloodshed as the protesters are defiant. It will have to necessarily build a more oppressive regime, as in Egypt after the 2013 coup. The other, wiser option is to compromise, resume talks with the protesters and facilitate a quick and orderly transition to civilian rule. The choice the generals make will determine the future of Sudan. legislative strength of a party and that merges with another party, was enacted to prevent such machinations. However, defectors have found ways to work around the law to avoid disqualification. Dramatic shifts in allegiances by elected MLAs have.

Delhi Police Typing-Dated-2023-08-17-Test NO.-10395

Been a concern in Andhra Pradesh and Telangana, among other States. In many cases, even if the two thirds rule has been flouted, the authority given to the Speaker, who is invariably from the ruling dispensation, has enabled dubious calls. This decision making structure has also allowed blatant defections to be ignored, as seen in Goa and Manipur, among other States. These actions seem aimed to reduce the Oppositions ability to act as a check. Defections are not uncommon despite the stringent conditions of the anti defection law. But coming so soon after the Assembly elections, and devoid of a Defections point of principle, they raise disturbing questions about the ideological and programmatic cohesiveness of the Congress. MLAs need not be tied to party satraps and should assert their individuality in law making but it is dishonesty to Defections switch sides after being elected on a party ticket when the only plausible objective is to grab the loaves of power. That there is no ideological distinctiveness to political representation in States such as Telangana has made it possible for defections to happen rampantly. In an ideology lite polity, the MLAs seem to see no benefit in meaningfully representing their constituents, and find it rewarding defectors to align with the ruling party for the purposes of Defections patronage. The anti defection law, that calls for disqualification unless defecting legislators are part of a group that constitutes at least two thirds of defectors the legislative strength of a party and that merges with another party, was enacted to prevent such machinations. However, defectors have found ways to work around the law to avoid disqualification. Dramatic shifts in allegiances by elected defectors MLAs have been a concern in Andhra Pradesh and Telangana, among other States. In many cases, even if the two thirds rule has been flouted, the defectors authority given to the Speaker, who is invariably from the ruling dispensation, has enabled dubious calls. This decision making structure has also allowed blatant defections to be ignored, as seen in Goa and Manipur. As India awaits the arrival of the annual summer monsoon, hopes are particularly high for normal rainfall that is so vital for agriculture, the health of forests, rivers and wetlands. The India Meteorological Department has forecast forests, normal rainfall of 96% of the long period average of 89 cm rain, with forests, and It has also signaled a significant possibility of a deficit. As India awaits is crucial for the of gross cropped area in farming that is rain fed, and represents, in the assessment of the National Commission on the rain fed, Farmers, 45% of agricultural output. As India awaits patterns of rainfall witnessed over the past few decades and their possible connection to atmospheric changes caused by a variety of pollutants, the distribution of monsoon 2019 will add to the insights. The southwest monsoon is a determinant of India overall prosperity, and sustained southwest efforts to make the best use of rainfall are absolutely important for farms, cities.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-17-Test NO.-10396

And industry, considering that there has been a decline in groundwater levels based on tests conducted last year over the previous decadal average, State governments should have pursued the setting up of new rain average, recharging wells and made improvements to existing ones on a war footing. As India awaits lagged in building structures to harvest surface water and helping farmers raise the efficiency of irrigation. The approach to the farming sector, however, has been influenced more by the imperatives of an farming sector, election year, and the biggest intervention was to announce a cash handout to specified categories of small farmers. A normal summer monsoon over the subcontinent brings widespread prosperity, but does not guarantee a uniform spread The ICC World Cup remains the last word on cricket hierarchy. There are multiple rankings linked to the game formats ranging from five day Tests to abridged Twenty20s, but when it comes to bragging from five day Tests rights about what constitutes the best squad, it is essential to have won the World Cup. Debates vanish and the champion unit is allowed its swagger. As the quadrennial event returns to England, with Thursday opening game pitting Debates vanish and the hosts against South Africa at the Oval, it is an opportunity for captains and their teams to reshape their legacies. Interestingly, the inaugural fixture features two under achievers in cricket showpiece event. England and South Africa have often under achievers in flattered to deceive. The former failed to get past stronger opposition in some summit clashes while the latter repeatedly remained a bundle of nerves and choked at climactic stages. Both now get another shot at correcting these anomalies, and the first step among many more to follow will be made on Thursday. A history of underperformance is not among Australia worries as it has five World Cup titles in its kitty. But it needs to wrest back its reputation as a standard bearer. Last year ball tampering crisis drove a knife into a proud sporting nation heart; two of the perpetrators, Steve Smith and David Warner, are back in the squad, keen to recover their lost space and David Warner, respect. Redemption is not just a yearning, it is a burning need. India, cricket commercial heart, steps in under a captain who is as combative as ever. Virat Kohli was a rookie when M.S. Dhoni men triumphed in the 2011 World Cup final at Mumbai; now he M.S. Dhoni men leads the squad and remains batsman supreme. The pervasive and persistent signatures of modern human activity on the earth have been so striking that they are set to be officially recognised and named as a new geologic epoch. On May 21, the Anthropocene Working Group (AWG) overwhelmingly voted to recognise Anthropocene as an epoch. The vote gives form to the efforts of scientists, notably the Nobel Laureate Paul Crutzen and Eugene F. Stoermer, who coined the term in 2000 to highlight how human activity had changed many facets of the.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-17-Test NO.-10397

Earth so overwhelming is the concept of the Anthropocene that it got mainstreamed in scientific and general literature years ago. The AWG vote is a sobering reminder to humanity that failure to end destructive activities will irrevocably change the face of the earth and make it uninhabitable. Officially, humans will continue to live in the Holocene epoch for a couple of years more before the Anthropocene epoch is finally ratified by the International Union of Geological Sciences. The vote by the working group will contribute to the formalisation of the Anthropocene as a stratigraphic entity on a par with other geologic epochs. But unlike the others, it will be the first time that the beginning of an epoch would be based on human activity and not the consequences of changes brought about by nature. For instance, the start of the Holocene epoch 11,700 years ago marks the end of the transition from the last glacial phase to a period of warming and a rise in sea level. Human activity has been drastically changing the earth, with the greatest impacts coming from agriculture, large scale deforestation, the industrial revolution and increase in atmospheric carbon dioxide, besides the creation of materials such as concrete and plastic. However. The working group voted to look for unique signatures around the 1950s to define the start of the Anthropocene. A decrease in deuterium excess, a proxy for climate change, owing to the reorganisation of North Atlantic Ocean atmosphere circulation was a definitive geologic marker, or golden spike, to signify the base of Holocene. Now, radionuclides from atomic bomb tests from the early 1950s are emerging as a radionuclides favorite golden spike candidate to define the base of the Anthropocene. To be chosen as a geologic marker, the golden spike must be present globally across most environments and must be a part of deposits for a geologically significant length of time. Thus, plutonium isotope ^{239}Pu with a half life of 24,110 years will remain detectable for more than 1,00,000 years and continue to exist as uranium 235 when ^{239}Pu decays. The next task is to find a single site from among the 10 sites chosen across the world for inclusion in the formal proposal. Here, coral reefs and Antarctic glacial ice located far from nuclear detonation test sites might be more suitable as they would not reflect any local spike but a global distribution pattern. all Mr. Gandhi could manage in his response to a criminal contempt notice issued by the court was a halfhearted regret, she said in her eight page rejoinder to Mr. Gandhi reply. Ms. Lemhi said the taken in to Congress leader had gone on to repeatedly justify his contemptuous statement. His affidavit was both false and contradictory. It was frivolous. Mr. Gandhi excuses that he made the comment in a rhetorical flourish in the heat of political campaigning, etc., did not explain his contemptuous statement. He had intentionally chosen not to apologies to the Supreme Court, Ms. Lemhi said.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-17-Test NO.-10398

By late 2020, many economists saw a taken is the soft silver lining in the pandemic. Stuck at home, people were adopting digital technology at an accelerating pace. Productivity was surging. Perhaps the long, debilitating decline in productivity growth was over. Alas, after peaking above 3% the surge collapsed, exposed as a blip typical during the early stages of a recovery, when businesses are slow to hire new workers. This leaves unsolved a great paradox. Since the computer age dawned in the 1970s, we have lived with a sense of accelerating progress and innovation. Yet as the computer age began, the postwar productivity boom ended. Except for a revival around the turn of the century, productivity has trended downward for more than 50 years. India cumulative vaccination coverage crossed the 2 billion doses mark yesterday morning. There a surge in daily uptake now on account of an increase in booster shots after GoI announced free jabs beginning July 15. India vaccination coverage, which has crossed 66% of the population for the full protocol of two doses, is the most important public health intervention in the fight against Covid. The lessons from its rollout will help combat future health emergencies. The overall cost of vaccination has been modest. By February 7, the vaccination coverage hit 1.7 billion for a total cost of Rs 27,945 crore, less than 1% of the overall Union budget expenditure for 2021 22. A key reason for the rapid ramp up of vaccination in the second half of 2021 was that it was free in government centres. There are two reasons why this helped. Out of pocket expenditure on overall health spending in India is 65%, a relatively high level. In addition, Covid extracted an economic cost in terms of job losses. Given these factors, free vaccination was critical in expanding coverage fast. India booster programme did capitalise on these lessons. Boosters were initially not free for adults. Some states showed what was missing. Bihar, for example, in the last week of April made boosters free for everyone over 18 years and uptake increased consistently after that. From the last week of April to the July 9 15 week, there was almost an eight fold increase in uptake, to 8.37 lakh. Even GoI free booster announcement resulted in an immediate uptick and it contributed to around 80% of the total jabs yesterday. There were other missteps in the booster policy. Local trials on the booster were belated and when the rollout did start, India avoided heterologous boosting. Results of the trials conducted by CMC Vellore show that heterologous boosting provides enhanced immunity. Governments must understand that collective benefits of public health interventions far exceed any cost. The economic output in 2020 21 shrunk by Rs 9.57 lakh crore as lockdowns were used in the absence of vaccines. Juxtaposed against this loss, the free vaccination programme cost a tiny fraction. In a country with low per capita income, public health must be treated as a crucial public good.

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-17-Test NO.-10399

Today the world is singed by the hatemongering of rabid right-wing politicians. Europe and the US are seeing a resurgence of divisive politics. In Germany, the far-right Alternative for Germany has become the second most popular party by propagating met politics, which includes culture war, repeating the unsayable so that the unacceptable becomes acceptable, mocking and denigrating ideals like moral rectitude and charity and standing up for minorities. The party has succeeded in normalising extremism and glossing over charges of financial irregularities. Across the pond, Donald Trump and similar thinking Republicans remain a clear and present danger to the American democracy ravaged by Black Lives Matter and discrimination against other non-whites like Asians and Latinos. The one thing common to all right wingers across the continents is their hatred for migrants and use of resentment against immigration and successful migrants as political fodder. They bet on the powerful emotion of resentment trumping hopes and ideals and often succeed. The force Nietzsche called resentment has been the driving force of a cultural organisation of volunteers and its political appendages. They were ardent believers in the phrase the Sun never sets on the British empire and had stood steadfast with the Gora Sahibs. This alienated them with the majority of the natives who wanted the British to quit their country. They felt doubly humiliated when first, the Gora Sahibs left them high and dry, handing over the reins of the country to their bÃ¢te noire. And second, the majority of the local population treated them like pariahs and would touch them with a barge pole because like sore losers they turned violent and eliminated the fountain head of an ideology completely opposite to their divisive hatemongering. Utterly humiliated, they silently bore the grudge. Exploiting the democratic temper of the new nation, they quietly started infiltrating the four estates and spreading bigotry among the masses. Their task became easier as many in the post-independence generation failed to discern their chicanery due to inadequate knowledge about the organisation antecedents. Many fellow countrymen who put personal interest before that of the nation connected with them at the psychological level because both wallowed in resentment of the new religion of nation building which encouraged development of skills, education and broad-mindedness, hard work and unity in diversity. The bitterness and grievance of having been victims of ideological opponents makes the organisation and its supporters rabidly attack them and enforce the my way or the highway rule of law wherever they succeed in gaining power. When in government they indulge in what Nietzsche calls trans valuation of values i.e. they turn reality upside down. What was virtuous earlier is now as sinful and, the evil ways of the past are now the pillars of morality. The heroes of yore are painted villains in the present and the evil-doers of history are projected as misunderstood victims much maligned by those heroes. James K Glassman, a journalist, coined the term Zohnerism for the use of a true fact to lead a scientifically and mathematically ignorant public to a false conclusion. Zohnerism today has become WMD for many politicians and media and social media influencers to ensure victory of resentment over hopes and ideals. The January 6, 2021 Capitol attack in the US by Trump supporters was one such success of Zohneri

Delhi Police Typing-Dated-2023-08-17-Test NO.-10402

Loathe populist politicians collect mobs by 9879485 to a baser instinct resentment, not to one hopes and ideals. Resentment is never in short supply because there are always losers searching for someone to blame for their failures. Hopes and ideals take one on a road less travelled where playing by the rules, 7981 work and sweat may not yield the expected material benefits for an individual but contribute to building a society where an individual is respected and there is rule of law instead of mobocracy. Democracies battling to uproot autocrats leftist and rightists are facing an uphill task. Voters may be angry with the economic and social messes created by the autocrat but are hooked to his identity-based, racial 8948 religious hate politics. Like climate change doubters they refuse to accept that they are digging not just their own graves but also of generations to come. These gullible blind devotees fall hook, line and sinker for the autocrat consistent disinformation campaign, depiction of his political opponents as enemy of the state and the people. Also, it is exceedingly difficult to defeat elected autocrats. One need only look at Vladimir Putin in Russia, Hugo Chavez and Nicolas Maduro in Venezuela, and, more recently, Viktor Orban in Hungary, Aleksandra Vedic in Serbia and Endogen in Turkey. They use their political might to bulldoze laws that make things difficult for opposition parties. The Franken state of controlled media organizations and Oligarchs starve political opponents of funding and media coverage so that the public gets to see only ruling party side of the story. The coup in Niger and desperate misuse of legal system to finish off political opponents in the subcontinent, like the arrest and conviction of Imran Khan, show that globally the headwinds against democracy are growing stronger. If hope and ideals do not regain their place in the sun, politics of resentment will sound death knell of democracy. It might sound like a unique idea which it is not if we are asking those people in the know, yes it is a much understood or very well-known idea. Here is that idea- A cable. A cable can transform Kolkata and can do it very quickly. A deep sea cable connecting South East Asia and beyond into the Pacific carrying hundreds of terabytes per second of digital data under the ocean. This will lead to an explosion of hyper-scale data centers in the city which will be followed by commercial and lab works in Big data analytics, AI, ML, CS, BT & AR. Getting the talents to run it would never be an issue for us. Why? Let me give you a real illustration- More than a decade back, I worked for little less than a decade for a 125 B \$ company, at that time the largest IT company on this planet with one of the most complicated supply chain and finance processes spanning across more than a hundred countries. Sixty percent of more than a thousand people churning cutting-edge analytics for the company worldwide were from in and around Kolkata. Imagine just a fraction of them coming back. I did write an article in the Times of India a couple of years back on why we need that submarine cable and need it fast. Few people in the know working with the government did reach out to me at that time which made me very positive. But as of today, I do know whether it happening. If it does, Kolkata will rise as a phoenix from what it used to be a manufacturing powerhouse which then morphed into its current state of a trading hub and a hub of shell c

Delhi Police Typing-Dated-2023-08-17-Test NO.-10403

By itself. Look at the Singapore data center hub and the airport for a like-to-like case study. One more idea, again limiting it to my direct experience. Because of the nature of my work, I had to travel to a few dozen countries and lived and worked in a few of them too. Nearly all the cities have a planned city center, in some cases incredibly beautiful, especially what I saw during my stay in Europe while working with a Swiss bank major. But I can safely vouch for what Kolkata can have as a city center, very few cities if any can compete. Imagine the entire place from Strand Road on the banks of the river Ganges up to Park Street without the cars and buses. The boats, the ferries, the trams, the circular and underground railways, the vast green expanse of the maidan, the race course, the golf course, the memorials, those magnificent heritage buildings, the outdoor and indoor sports stadiums, the library, the museum, the planetarium, the multiple arts, cinema and cultural hubs, the Red Road as host to the replica of Durga Puja which is the biggest carnival of this planet, the diverse eating and drinking joints, the history of the neighbourhood as a melting pot of many a culture from English, French, Portuguese, Danish, Armenian, Dutch and Chinese settlements. It will create the ecosystem for another renaissance of Bangla art and culture for the world to see again and also possibly a rebirth of our excellence in playing football. Of course again at the risk of making it oversimplified, one thing has to stop immediately and stop in totality at some point soon. It is devastating that we have it at this scale that we have. It is Honking. If India is the world honking capital, Kolkata is India honking capital. It just does sync up at all with the richness of art and culture that the city had or will not if the city has to become a global hub to do big data analytics or execute complex business transformation projects. If I can with moderate driving skills can do without horns and I know so many, then everyone can. The cable in the sea, the city center by the river, and the city with no horns. It will rise and shine again for Kolkata. It can be as simple as that. History beckons. The world awaits. Another Independence Day went by. Amidst the celebrations, one thought wandered back to the struggles and sacrifices made by people to achieve this freedom from colonial rule. Some freedom fighters became famous. But thousands across cities and villages, who faced brutal beatings and imprisonment, remained unknown. One such family and its account is narrated in the autobiography, They Remained Unknown, by Savory Dubai, (originally in Hindi and translated into English by Rajeev Dubai). The book depicts the history of the family along with the events happening in the country through the lens of Kaushalya Devi (the mother of Savory Dubai). The book starts around 1915 in a village called Shania. Located in the Monger district of Bihar, an area that faced devastating floods every year, the village had a predominantly upper-caste Brahman population, called Maithili Brahmins, and in the early 1880s followed practices such as Sati. Witnessing such an event made a life-changing impact on 11-year-old Mohan Mishra (Savior father), and caused him to become a follower of the Agha Samar when he grew up. As a result, his family was ostracized by the villagers, and their home and fields attacked. The family eventually moved to Pathargat, and faced many problems including

Delhi Police Typing-Dated-2023-08-18-Test NO.-10404

Chhattisgarh police evident failure to properly investigate and prosecute the 2017 Burkina encounter 25 CRPF personnel were killed has had two grave consequences: 121 Advise men, now acquitted, languished for five years in prison, leaving their families destitute, and the brave CRPF jeans have been denied justice. The en masse acquittal suggests that police may have been on a desperate fishing expedition and rounded up men in their 20s and 30s from nearby villages. There are grounds to suspect that actual Maoist perpetrators escaped the police. First, the police could prove that the accused men were at the crime spot, possessed deadly firearms, or were Maoists. Second, the 20 prosecution witnesses the police had arraigned could identify the accused and, more tellingly, revealed they had made no statements to cops. Third, five witnesses did even support the police claim on them being witness to various arrests and seizures. Some accountabilities must be fixed for such shoddy policing and prosecution work political pressure for results is no excuse. Also, since this was a high profile case, senior cops including IPS officers would have vetted the charge sheet. Though Law Commissions and constitutional courts have argued for independence of the prosecution department, in states like Chhattisgarh this is headed by a senior IPS officer, instead of a lawyer who rises up prosecutorial ranks. Consequently, prosecutors lack heft to point out weaknesses in charge sheets and end up as mouthpieces of the police version, however poorly crafted that may be. An empowered, independent prosecutor would have likely called out the police investigation as insufficient much earlier. But the Indian system gives investigating officers the upper hand. Another travesty of this case is that some alleged masterminds have reportedly got amnesty under the government surrender policy. Arrest and incarceration like those suffered by Chhattisgarh 121 Advises recur with alarming regularity. Not surprisingly, the poor and the vulnerable are usually those who are put through the investigative grinder. An effective disincentive would be to make the state pay monetary compensation to victims of grossly negligent police investigation. So, are you a klutz The sort of person who touches something and it falls apart or simply stops working and people look at you with that really, can you be more careful glare. I am at this dinner and having a drink from a beautiful cut glass tumbler when I take a sip and as I am putting it down it kind of nicks the edge of the table and a little piece from the rim falls off and tinkles to the floor. The hosts conceal their outrage by being polite but there commentary on the six piece set being five now, no worries, remember darling how we carted it all the way from Geneva as hand baggage, it was specially designed for our thirtieth anniversary, it is OK, these things happen, it was such a precious gift to each other, only brought it out for special occasions. Like how did we think you were a special.

Occasion to lighten the tension I say it is now truly cut glass, ha. The effort at cheer falls to the carpet with a thud. My wife pretends she does know me. In a clumsy effort to retrieve the humor I say, it is just a sliver from the top, not even noticeable, at which incandescent remark the hostess says do you know it is bad karma to have a broken glass in the house, all of this spoken as if she was saying not that it is very good karma inviting you and having our thirtieth anniversary gift ruined. The injured cut glass tumbler is carted away in a pan en route to the bin and we now all sit in the debris of the party and pretend it never happened. We klutzes of the world are misunderstood. We never mean any harm, it is just that things and objects and brick a brace conspire to cause us grief. Ashtrays break, plates fall, mobile phones slither out like slippery eels, keys break in the lock, laces snap, buttons drop, the laptop collapses, paintings break their frames, and all we have to do is be there in the vicinity for the negative chemistry to kick in. We are blameless, I am visiting this very rich person home, having tea, making small talk, when I raise my arm to emphasis a point and the arm strikes a four foot porcelain ballerina worth a small fortune, breaking her delicate arm and a chunk of her exquisite tutu, which then fall to the floor and shatter. I mean why keep a four foot statue so close to the sofa and then invite a klutz to sit there. Might as well take a hammer and whack it. The biggest wonder in life is the existence of the Infinite within the limited range, and the greatest spiritual attainment is its realization. Life unfolds several opportunities, inspiring us to become aware of this amazement. But it becomes possible only when we disentangle ourselves from the process of cause and effect governing the material world. This is extremely difficult because we are the players, in a materialistic sense, in the causal process, and recipients of the outcome too. Knowledge and self guidance can prompt us to make an effort, which in turn holds the key to success. When tumultuous work raises its din on all sides, shutting me out from beyond, come to me, my lord of silence, with thy peace and rest When desire blinds the mind with delusion and dust, O thou holy one, thou wakeful, come with thy light and thy thunder, prayed Rabindranath Tagore. difficult to develop love for something that has a physical existence, but wandering for nothingness appears inconceivable. The Srimad Bhagavatam, therefore, repeatedly reminds us of the bunya uprush another way of looking at the Infinite. It is important for us to awaken our seeking towards this nothingness. Garpikes, as we get to see in the Bhagavatam, are constantly in.

Love with the shiny uprush Krishna, in the midst of their worldly activities. In the material world, we develop our comfort zones according to our likings and try to remain complacent within them. The mind offers thousands of explanations to remain within these confinements. But that cannot offer us what our entire existence is in search of. The determination to travel beyond our material perception is like moving against the gravitational force. But we need to remember that capabilities exist to take us to what is unobservable. The unobservable will have to be sought and found through what is observable. So, nothing is to be dismissed in the material world. Every situation is a step forward to the recognition of that unknown. This mysticism dwells hand in hand with the physical world; it is our level of attention and understanding which differs and may make us aware of it at certain moments. If we are able to hold on to it every moment through all our activities in the material world, the attainment is called bliss. Every moment we are being recreated with new capabilities. Nature is also trying to cooperate with us: Every season comes up with a new inspiration, a new insight. The thirst of the earth in the summer, the tapping of the raindrops in July, and the fragrance of the spring, they all activate and remind us of the desire our spirit possesses. But we often digress and divert our attention from the call of the inner self. As Ramakrishna says, one has to be a bit laborious in the beginning. Then a stage will come that will bear clarity and help one remain attached to the Infinite. As Tagore puts it, the music of the unbounded pours so much joy that every single manifestation in the physical world appears charming. One is then able to envisage immortality in the mortal world and a connection to the vast universe even while residing on earth. India, enjoying the crowning glory of being the largest democracy in the world, boasts of its democratic structure and the system of elections, which ensures the preservation of the privilege of the people to choose a government of their choice. However, Elections are the commonest feature of the democracies across the world, Yet, the need of making all such elections to be fair, free, impartial, transparent and inclusive is the real identity of a genuine democracy. In India, Elections are held on the basis of Universal adult suffrage Any citizen of India, aged not less than 18 years can register as a voter in electoral roll of India. No discrimination on the grounds of religion, race, caste, sex is allowed and also there is a provision for reservation of seats for Scheduled Castes, Scheduled Tribes, Other Backward Classes and women. Voting takes place through secret ballot which is the most important feature and prerequisite to facilitate the public to express their will freely and fairly. People also have full poverty to follow.

When we, the anatine Indians talk of Brahma eternal life substance, we talk of food for our survival as it is most essential like air and water. That why the Supreme Creator God has bestowed us with the free gifts of nature in the shape of food, fresh air and pure water. Despite that, gone are the days when we, the Homo sapiens human beings, used to feed ourselves aplenty with the edible fruits and roots freely served on our platters by Mother Nature. With the evolution of the human figure and brain, discoveries and inventions followed suit. Gradually, Agriculture growing of various food particles cereals pulses edible oil got endorsed by mankind. Thus, we are extremely dependent on it now for our very existence, let alone India, since it stands on an agrarian economy. But, we need money in a bid to match the material frequency with our purchasing capacity, while the spiraling price hikes as well as shortage of food stuff vies the growing population stands out as a grave concern. In the parlance of the study and statistics dealing with the economy of a nation, food inflation has been a reality and pestering phenomenon in a developing country like India. As per the findings of certain surveys reported recently, the international prices of food commodities have acutely impacted our Indian market at present, especially in cereals, pulses, edible oils, sugar and milk, even though our nation is claimed to be self sufficient and has the ability to export amid the high global prices. Experts and surveyors have found out that the domestic supply shocks also plays a pivotal role in sparking food inflation. While the domestic supply shocks were reportedly absent in 2020 21, they emerged in 2021 22. The reason behind the grim scenario of the agricultural sector growth rate in 2021 22 is being attributed to the heat wave and unseasonal rains during the months of September and January then. Following such a development, the sharks like the money minting and profit hankering private millers and traders reportedly took undue advantage of the sorry state of affairs of the farmers in distress. It has further been reported in the outcome of the surveys that the incumbent Indian Government official procurement figure of wheat got drastically dipped to an abysmal 19 metric tons MT in the current marketing season in comparison to the previous procurement figure of 43.34 MT. This forced a slapping a ban on exports. The experts opine that an official procurement figure of even 25 MT of wheat from the Indian farmers would not have suffered the ill fate of ban on exports. The experts are also of the view that the domestic supply shocks are temporary by nature which could get corrected sooner or later, whereas our Indian agricultural sector must be rectified and reformed in such a way that a symmetry and cozy balance is maintained between the supply chain and demand. Needless to mention that, income of both the consumers.

Delhi Police Typing-Dated-2023-08-18-Test NO.-10408

And producers ought to be increased to checkmate the food inflation compelling common man to fume and frown. Estimated to have a value of over \$200 billion, the Indian logistics industry is now looking at a healthy post pandemic future. For long, it was deemed to be a labor heavy industry with poorly educated truck drivers, subpar infrastructure and consistently plagued by bad condition of vehicles. However, today the Indian logistics industry is integrated with the most advanced digital tools and is able to carry out end to end online operations. Governmental reforms and rapid extension of high speed roads are also steadily bringing down the risks and travel time. This is heartening because the pandemic impact made all the stakeholders realize the urgent and widespread need to digitize logistics operations. With 13% of its GDP being spent on logistics, India is paying dearly and up to twice as much as the developed nations. This money can be saved by digitizing processes. Let take a look at two of the core areas where technology is bound to transform the Indian logistics sector. Operational efficiency More than 1 core trucks of different sizes and types operate in India. About 90% of these are owned by the small and unorganized sector operators with a fleet size of less than 5 vehicles. Unlike other industries that see the heaviest concentration in metros, the trucking industry is present predominantly in the Tier II, Tier III and smaller towns. Thus, they are not only disjointed, but also struggle with technology adoption. When the pandemic hit, most of these truckers had to sit idle as transport hubs were under lockdown and lack of online networking made it difficult for them to procure loads. On the other hand, supplies were hit just as hard. Thus, the demand and supply sides were not able to work efficiently due to lack of communication. By using advanced technology driven logistics platforms which are now available in India, these small scale trucking operators can build an online presence for themselves. There are several cloud based tools that can be used to optimize and monitor operations, communicate to potential leads and promote the business digitally. Further, leading online logistics marketplaces offer compliance, verification and digital payment facilities which safeguard the interests of shippers and transporters alike. Through this community driven logistics approach, the smaller transport companies can deliver a stellar experience to their clients without the need for heavy upfront investment in hardware and proprietary tech. The streamlining of processes and reduction of time spent on manual processes leads to speedier operations and trucks are able to spend more days 25 26 days in case of digital operations compared to 16 17 days conventionally on road, thereby generating higher ROI. Accountability One of the biggest reasons why Indian logistics services are costlier and less efficient is the lack of accountability and trust. In the absence of transparency and real time visibility of operations, shipments get delayed. At times, the shippers don't pay.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-18-Test NO.-10409

The truck drivers on time. All this has created an environment of mistrust. Consequently, truckers and shippers tend to operate within their closed loop networks. While this might help in preventing fraud, it leads to exploitation of both sides and lack of standardized as well as accountable operations. However, digitization will transform the scenario as the end to end logistics operations get digitized and stakeholders are able to monitor everything in real time. Logistics managers become better informed and assured, thus enabling them to take superior decisions and make accurate timeline commitments. Today, we have technologies such as cloud, AI, Iota and GPS etc. to digitize end to end logistics operations including the paperwork and regulatory compliances. By using the online platform model for the services, the Indian logistics industry can reach global standards of ease, efficiency and accountability. We can turn India into a global manufacturing hub and a \$5 trillion economy much sooner than the projections by adoption of industry wide digital logistics operation! Ashman Cards issued by the government for the wellbeing of its citizens in the lower strata of society is a game changer in the health care system of the country. The eligible categories are schedule casts, schedule tribe households, beggars, hawkers and families with no male members and no individuals between age of 16 to 59 years. The health insurance scheme covers over 50 cores citizens in India and has several success stories to it. It is a smart digital governance move by the government but at the same time, it also seems to have few lacunas in it. This program known as the Prada Mantra Jan Aerogram Yana is to make secondary and territory healthcare completely cash less for the underprivileged section of the society. The E card can be used to avail services and facilities in empanelled hospitals public and private anywhere in the country. The coverage includes pre and post hospitalization expenses, operational expenses, etc. up to Rs.5,00,000 p.a. per family per year. Experts from the industry however hold a different opinion. Mumbai based neurosurgeon Dr. Adel S Chagall, said, Digital health ID Card is simply a ticket to access into health system and does not solve the real health issues. For instance, sex determination of an unborn child is not allowed to be disclosed in ultrasound clinics, in addition there still persists some stigma concerning certain health issues due to religious or family traditions. In such cases it becomes difficult for the patients more than the doctors. It is a lucrative opportunity to attack the privacy of individuals whose data would otherwise have been restricted to a few institutions in the normal course but now their personal data is available nationally as per the data management policy draft. Also, other sensitive information like bank account details and payment details will be stored in the database, making it easily prone to cyber attack. Medically if we see its good for doctors but it a burden for laymen. Sharing sensitive information is.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-18-Test NO.-10412

Not appreciated in many cases. There is an agenda behind every move. It the IT that benefits from Andhra Card linkage. Health sector needs to be attended at grass root level. Ex: certain patients come frustrated to me like the autoriksha driver having spine trauma due to poor road conditions who cannot afford to take a break for medical treatments as their livelihood gets affected? He is prone to overdose of medicinal intake which further deteriorates his condition like liver and kidney disorders. The government must make addition to the scheme to benefit such people so that their livelihood is not affected and they get proper treatment. Talashi a Village in Radhanagari in Kolhapur District of Maharashtra, has no medical facilities for over 50kms. There are many such places where up to 100kms or more there is no medical facility. In case of chest pains, heart attacks, brain strokes, etc. by the time the ambulance reaches, the patient may lose his life. Is it fair to get the digital world upgraded without making the foundations strong? The government should focus on addressing such pain points before focusing on digitalization. Today buzz words are information and technology. Having said that, IT changes languages while upgrading but when it comes to health the basic foundations need to be strengthened. Plastic and cosmetic Surgeon Dr. Suraj Singh Chauhan, says in times of fiscal crisis and shifting demographics, collaboration of public private hospitals will enable improved health infrastructure and would be a rewarding venture. However, patient privacy concerns need to be addressed. He suggests, using patients fingerprint logins for easy access to the Ashman scheme as majority of the users are illiterate or semi literate and at the time of need may not be even carrying their id card with them. This will enable for providing immediate medical attention especially in accident or emergency cases with access to the medical history of the patient. He said strong safeguards should be built in regarding the medical history and other data of the taken in the hole of rule patient to be maintained independent of each other, to avoid misuse. He also added the bureaucratic barriers to set up new hospitals must be reduced. At present, corporates are investing in establishing health care facilities, which is why they are running on business models with no freedom to doctors to play a significant role in administration. Doctors are blamed for performance when any crisis arises ignoring the fact that they are not well equipped to take any significant decision in administration or management, despite having the real knowledge as to what is required and what should be prioritised when it comes to real health care. As per government, when approx. 86% of rural houses do not have access to any health care insurance, this health id card is a boon for them. Approx. 20% of rural families access health care by taking loans. This health id card will ease the burden on them and avoid debt traps.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-18-Test NO.-10413

Men drink hadia, the local liquor made of rice sold by over a dozen women who have brought the drink in plastic containers. While there are video clips on several schemes of the State government, local liquor made of rice sold by over including one to set up a tribal museum dedicated to tribal freedom fighter Birsa Munda, there is no video on the PDS, a lifeline for the tribals State government, including one to set who comprise 26% of the population in the State. It seems like a cruel joke to them. In a statement, Mr. Haasan noted that the election was cancelled after money that was being readied for distribution to voters was seized and cases were registered. Right to Food activists in Jharkhand have listed in detail 20 deaths between September 2017 and June 2019 due to hunger and malnutrition because of alleged irregularities in the PDS and a few due to denial of social security pensions. The irregularities are manifold. due to hunger and malnutrition From the deletion of ration cards to the problems in linking ration cards to Aadhaar, the system seems to create more problems than it solves, excluding many families rather than including them. Many activists also point out that the Socio Economic and Caste Census of 2011, which helps identify problems than it solves PDS beneficiaries, is faulty and outdated. The last in the series of deaths compiled by the activists was from Latehar district, where Ramcharan Munda, 65, died on June 6, 2019. While the administration is still investigating how Munda died, deaths compiled by the activists everyone including the ration dealer admits village for several months. The dealer admits that ration was curious case of non delivery of food grain is what ails the PDS in one of the poorest States of the country. Problems without Internet For obtaining food grain and other essentials through the PDS in Jharkhand, INTERNET a beneficiary has to meet several criteria. First, the family needs a ration card. Then they need to have Aadhaar cards. Next, the ration cards and Aadhaar INTERNET numbers have to be linked. But it doesnt end there. In a majority of the ration shops of the State, delivery is through an electronic point of sale (EPOS) machine. It is through this machine that the biometrics of a 25181 beneficiary, mostly 22151 thumb INTERNET But it doesnt end there. In a majority of the ration shops impressions, have to be entered and verified from the server database. The EPOS machine works only if it is connected to the Internet. If the beneficiaries face INTERNET no hiccups in any of these stages, they get their quota of food grain. Something or the other can go wrong in any of these stages. In Lurgumikala village, INTERNET for instance, the Internet failed. Due to irregular connectivity, the ration dealers of Mahuadanr block of Latehar began 31548 distributing ration offline they made entries in a notebook or register after the ration was handed over.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-18-Test NO.-10414

To the beneficiary. Problems INTERNET arose when the ration dealer, Ramrod Prasad, 251168, died and his job was transferred to his wife Manu Devi. This transfer somehow turned the system from INTERNET offline to online. This meant that the dealer was required to distribute 25418 food grain by keeping the EPOS machine online and record the biometrics of every INTERNET beneficiary. As there was no connectivity 45718 even after her husband death and the EPOS machine would not work, for months Manu Devi collected food grain from the warehouse but did not distribute it. The food grain remained undelivered. It is a testament to Djokovic supreme mental strength that he did not flinch, even under extreme pressure, and despite not being the better player on the day. When he started out, Djokovic was among the most emotionally fragile. Questions ABOUNDED as recently as last July when he slipped outside the top 20. But by securing four of the past five Majors, he has truly rediscovered the mind of an ABOUNDED champion. Among women, it was the turn of Simon Hale to display similar powers, by adding Wimbledon to her 2018 French Open win. There was a feeling that following her breakthrough in Paris she had suffered a meltdown, as she had not progressed beyond the quarter finals at any Major since then. However, the way ABOUNDED she mowed down one formidable opponent after another at SW19, including the legendary Serena Williams in the final for the loss of just four games, was enough proof of her strong mental make up The Chinese ABOUNDED economy is seeing the first signs of trouble after long years of sustained growth that rode on cheap labor and high volumes of exports. Data released by the National Bureau of Statistics on Monday revealed that the economy grew by 6.2% in the second quarter, its slowest pace in 87127 years. This is in contrast to the growth rates of 6.4% and 6.6% reported for the first quarter and the full year of 2018, respectively. The faltering growth rate was due to a slump in exports in June amidst China ongoing trade war with the United States and the downturn witnessed ABOUNDED by sectors such as housing construction, where investor sentiments 315415 play a major role. Many economists believe that the worst may not yet be over for CHINA and that economic growth could further worsen in the coming quarters. To player in the last decade has so thrillingly disrupted the Roger Federer Rafael Nadal binary quite like World No.1 Novak Djokovic. Back in 2008, when Federer and Nadal met at Wimbledon in that iconic final, the contest had a definitive feel to it 38497 to crown that era best. The two met again this year, eleven summers since, just to earn the right to challenge Djokovic. Such has been the Serb excellence that in the time between the two Federer Nadal meetings, he increased his Grand Slam count from one to 15. Sunday pulsating five set.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-18-Test NO.-10415

Victory over Federer brought him his fifth Wimbledon to put him just two shy of Nadal (18) and four behind Federer (20) in the all time list. At times, his on court demeanor and his grinding style of have detracted from the perception of his success. To not celebrate his greatness, however, would be a severe disservice. Nadal and Federer are still ranked two and three in the world and are playing at near peak levels. But even at their best, Djokovic has left them short of breath. In fact, starting from the 2011 Australian Open 38497 his second Major 38497 Djokovic has triumphed at nearly every second slam he has entered (15 of 34). Federer in the same period has accumulated four and Nadal nine, of which seven have come at the French Open. Remarkably, Djokovic has vanquished either Federer or Nadal in 12 of the 16 slams he has won. Eight of those victories have come in finals. That Federer, just three weeks shy of turning 38, came within one stroke of upstaging Djokovic is credit to the Swiss genius. Even in a career as storied as his, it would have been more than just a normal data point if he had clinched his ninth by beating Nadal and Djokovic 38497 two of his greatest rivals 38497 back to back. Afghans suffer from the effects of war even in the middle of peace talks the attack on Afghan vice presidential candidate Ampulla Salah office in Kabul on Sunday that killed at least 20 people and injured 50, including Mr. Salah, is a grave reminder of the crisis the war torn country is going through even amid attempts to find peace. Mr. Salah, a former intelligence chief and a strong critic of the Taliban and Pakistan, is President Ashraf Ghani running mate for the September 28 election. And the irony is that the assault occurred a few hours after President Ghani officially launched his campaign in which he promised that peace is coming. The message the insurgents are trying to send is that even the most fortified political offices in the country or its top politicians are not safe. The insurgents have made it clear they will carry out their offensive irrespective of the peace process, especially when Afghanistan gets down to a full fledged election campaign. In recent months, even when the U.S. and Taliban representatives have held multiple rounds of talks in Doha, Qatar, insurgents have kept up attacks, both on military and civilian locations. The Taliban appears to be trying to leverage these assaults to boost its bargaining position in the talks with the U.S. And the Kabul government inability to prevent them and the U.S. is apparent decision to delink the negotiations from the daily violence are giving the insurgents a free run in many Afghan cities. Afghanistan crises are many. Half the country is either directly controlled or dominated by the Taliban. In the eastern parts, the Islamic State has established a presence and.

Mishra sons, Suresh Chandra and Shiva Kant, and daughter, Kaushalya Devi, inherited their parents courage and dedication. As 1919 came around, and Gandhi-jig inspired countless Indians to participate in the non-cooperation movement, Suresh Chandra, Shiva Kant, and their mother, Anoop Devi, also organised rallies and pickets, and started a nationalist school and a Gandhi Ashram at Gogri and Gurukul at Harpurjan. While the freedom struggle intensified, and thousands stepped up to embrace the non-violent movement, the family members also became more and more active in the freedom struggle. The book covers the various stages of the independence movement the ebb and flow of the Satyagraha, Simon Go Back, Quit India movements, the various Congress meetings with luminarie speeches, and finally, the historic Independence Day and the horrors of the Partition. Alongside, the family went through its own tribulations and joys, marriages and deaths, illnesses and losses, the latter especially due to prolonged spells of being in the jail, and constant fear of being arrested again and again by the police. Interspersed with these are the hardships faced by the villagers in Bihar, especially due to calamities such as floods and plagues, as well as earthquakes, and their involvement in the relief efforts for these. What is inspiring is not just the courage and dedication for instance, Kaushalya Devi mentions being eager to go and be at the forefront of the rallies and marches, despite having an infant in tow, but also the sheer resilient spirit despite the sacrifices they made. And this was not just this family, but also the Indians who came forth from villages and cities and gave up their jobs and lives for the cause of Independence. As the author states at the end, My memory is full of people who will never be mentioned in any history book and were never recognized and honored by the nation. While the people remained unknown, through such accounts, we are reminded, even if for a moment, about these unsung heroes. For the first time since 2014, recent political events in the run-up to the 2024 general elections have created an enormous buzz, with the unified opposition seeming to offer an image of parity and coherence in the national arena against the aggressive, well-oiled Modi administration. The INDIA (Indian National Developmental Inclusive Alliance) alliance, an assembly of 28 ideologically diverse political parties, has intellectually and arithmetically agreed to unite to challenge the incumbent government. With their first meeting in Patna and then in Bengaluru, the coalition has honed its strategy for preventing Narendra Modi from serving a third term. The alliance next gathering in Mumbai seeks to foster solidarity among the battered Indian opposition, and a steering committee and convenor are expected to be established. Close to the heels of the opposition announcement, the BJP, which operated as a monolith in the defunct National Democratic Alliance (NDA) since 2014, quickly called for a meeting of the now expanded alliance of 38 parties in New Delhi to firm up its strategy for the general elections under the leadership of Narendra Modi and challenge the INDIA alliance. Since 1947, Indian politics has been primarily segmented as the right (Hindu nationalism), centre (Secular), and left (Communist), which translates to the national parties, notably the BJP, Congress, and Left parties, respectively. The ideologies often merge with ideals of soc

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-18-Test NO.-10419

Section 29A (5) of the Representation of the People Act, 1951, which as per publication dated May 2023, the Election Commission of India notifies that there are six national parties, 54 state parties, and 2,597 unrecognized political parties in India. Also, independents form an enormous swamp of candidates supporting the national parties post-elections. Does India need 2657 political parties to govern the world largest democracy? Since India independence in 1947, the Congress Party has held a majority in the Lok Sabha and ruled the country from the centre with absolute dominance until Morarji Desai coalition government of 11 parties in 1977. This was followed by the Charan Singh coalition government in 1979, the V.P. Singh government in the 9th Lok Sabha, and the Chandra Shekhar government with the outside support of the Congress Party from 1989-1991. India witnessed its first minority government of P.V. Narasimha Rao, which took office after the horrific assassination of Rajiv Gandhi. Post the emergence of the Vajpayee era; formal coalition governments began to take shape, with his first term lasting only 16 days in the 11th Lok Sabha, which was then replaced by the 13-party United Front Government led by Deve Gowda and I.K. Gujral. Vajpayee returned in 1998 with the formation of the National Democratic Alliance (NDA) for another brief tenure as prime minister when the regional party AIADMK withdrew support from his government. The NDA comprising of 20 parties returned to power to rule the country from 1999-2004, when the Congress stitched a 14-party post poll coalition launching the United Progressive Alliance (UPA) with Dr. Manmohan Singh as Prime Minister, with outside support of the Left parties to replace the NDA. With the emergence of Narendra Modi, the BJP has had an unprecedented full majority government since 2014. Launch of the INDIA alliance with 27 parties and fresh bonhomie of the NDA alliance boasting 38 parties leads to a dichotomous division of the political spectrum. A two-party system, which reduces the chaos of having several political parties with extreme beliefs, has been successfully implemented in the international political sphere. American politics is divided between the Democrats and Republicans, British politics is divided between the Labour Party and the Conservatives, and Australian politics is divided between the Australian Labour Party and the Liberal-National Coalition. Benefits of a two-party system in India Consolidating political power into the hands of just two parties provides political stability by discouraging the growth of many minor parties with varying ideologies. One party often gains a majority under a two-party system, resulting in a more unified and stable administration. Horse trading and buying of MLAs and M.P.s from varied ideologies would cease, which might lead to more harmonious decision-making and policy execution within the governing party. Parties want to keep their identities and attract voters with firm beliefs; therefore, adopting a shared minimum programme gives the two major parties a better opportunity for more consistent policy views. Combining efforts, money, and advertising may reduce the costs of the candidates and increase the efficiency of political spending. Challenges of a two-party system in India However, a population of 1.4 billion people may be underrepresented in a nation with just two major political parties. There might be less room for competing political ide

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-18-Test NO.-10420

To obtain significant representation. With just two main parties, voters may have few policy alternatives, making people feel they must choose between two solutions, neither of which perfectly suits their needs. In a two-party system, one main party may become increasingly extremist to distinguish itself from the other. This polarization may cause more hostility and governmental paralysis, which makes it harder to adopt effective laws. Citizens may get disenchanted with the two major parties in a two-party system and, as a result, are less likely to participate in politics. They may be less interested in politics if they have no strong affiliation with either party. One possible outcome of a two-party system is a duopoly of influence between the two major parties. In a two-party system, independents and candidates from smaller parties have more difficulty breaking through the noise and gaining support from voters and the media. These revisions under Section 29A (5) of the Representation of the People Act, 1951, together with a national debate and agreement on the Uniform Civil Code, NRC, removal of the governor office, labor reforms, interlinking of rivers, police reforms, economic reforms, press freedom and caste census would reshape India political landscape and propel India to become a global superpower. A national consensus needed on this one! A child survivor faces multiple hurdles while navigating the process of reporting an offence and the judicial trial that ensues. These hurdles are close to insurmountable when the perpetrator is a family member. A child risks the wrath of other family members for disclosing the offence and faces the threat of ostracisation by their own family. They might fear jeopardising their family income in cases when the perpetrator is the sole breadwinner and might also have continued feelings of guilt for putting a family member in jail. Then there the fear of loss of home because the survivors are put in a government- or nonprofit-run shelter for children when their own home is adjudged unsafe for them. To tackle the unique challenges thrown up in cases of intrafamilial CSA, police, courts, and rehabilitative child protection systems need to come together to create safe and empowering spaces for child survivors to access justice that is meaningful and does not endanger the child immediate or long-term future. Here what a child in such situations needs for effective reporting: A safe environment for reporting Given the hidden nature of intrafamilial abuse, when a child speaks up about their experience, the first response they often get from the confidante is that of disbelief. Most survivors of sexual crime find police reporting a difficult process, and their complaint being dismissed could cause them lasting trauma. A child thus needs to be given a non-judgmental hearing, and should be encouraged to tell their story without interruptions and connected to support services without any delay. Protection of privacy Generally, in POCSO cases, the name and address of the accused is revealed and the victim is redacted. However, this should not be the process for intrafamilial CSA cases because the last name of the child and the accused, as well as the home address, are usually the same. As the case proceeds further in the judicial system, the chances of case documents becoming public increase. This could put the child at risk of ostracisation and stigma. An approachable police system There is need for a sea c

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-19-Test NO.-10421

An easy assumption for those opposed to BJP is that the opposition only has to unite to beat the saffron electoral juggernaut. Such a coalition, forged in the brotherhood of anti BJPism, for its proponents, would automatically beat BJP hegemony. After all, BJP, even at the height of its second sweep in 2019, won just over one third of India voters 37.36 vote share. Cobble together the remaining two thirds and Modi ascendance would be halted, it is argued. Voting in the presidential election has demonstrated, however, how flawed such diagnosis is. With several regional parties breaking ranks to vote for NDA presidential candidate Draupadi Murmu, it is clear that anti Modism by itself may not be enough to weld together an opposition alliance. As many as 50 political parties supported Murmu candidature. In contrast, 36 opposition parties supported Yashwant Sinha. Crucially, those in the Murmu camp included many non NDA parties: Odisha BJD, Andhra Pradesh YSRCP, Mayawati BSP, Jharkhand JMM, and even Uddhav Thackeray Shiv Sena faction. the answer book is an assignment given by the examining body to the examiner which he discharges for a consideration. Sometimes, an examiner may assess answer books, in the course of his employment, as a part of his duties without any specific or special remuneration. In other words the examining body is the principal and the examiner is the India aviation regulator DGCA on Monday issued a brief order. Addressed to airlines, it said increased instances of engineering related occurrences had triggered spot checks by the regulator. The findings pointed to maintenance issues. DGCA said identification of causes of reported defects has been improper and there a shortage of trained staff. Airlines have been asked to comply with safety protocols and report back to the regulator by July 28. A day after the order was issued, two more instances of snags were reported. The situation is worrisome. Airlines are being asked to do anything new as India since 2010 has had a state safety programme, an integrated set of regulations and activities for air safety. The latest iteration of the programme red flags deficient maintenance and concludes that a large number of incidents occur as a result of component failure. Consequently, there are standards and protocols in place to avoid it. DGCA order raises questions on compliance. It hard to understand the rise in reported incidents. DGCA safety audits are an ongoing feature and are spelt out in an annual surveillance plan. Therefore, there a constant stream of communication between airlines and the regulator on the subject. Airports Authority of India projected a passenger flow of 542 million by 2027 28, that is over 200 million from the pre pandemic level. Aviation policy was tweaked greatly to help airlines overcome the Covid shock and prepare for the future. For example, even as seating restrictions have been removed, a price band with floor and ceiling prices continues. GST rate on domestic maintenance, repair and overhaul has been lowered from 18 to 5. As.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-19-Test NO.-10422

For fuel prices, no segment of the economy is immune. Given both the policy support for aviation and troubling reports on safety, there are bound to be questions on the performance of both the regulator and GoI. Safety issues are not confined to a single airline but instead appear to be broad based. DGCA needs to strictly implement its wide ranging safety protocol. That a prerequisite for Indian aviation safe growth. The Supreme Court observation that it is a settled position in law that religious and linguistic minority status is to be decided state wise may be contested down the line. The Centre says it has the power to notify minorities but has not specified whether it will be done with concurrence of states. But if SC observation becomes an accepted position, it will solve one set of questions and raise others. Under the National Minorities Commission Act, Muslims, Christians, Sikhs, Parsis, Buddhists and Jains have been notified nationally as minority communities. But there are states in the north and Northeast where some of these religious minorities are in the majority. And nearly every state in India can have linguistic minorities. With minority status conferring significant autonomy in administering educational institutions, this is also a touchy issue. Hence there is also the argument that states can be left to decide the minority question for themselves. But even if states are empowered to decide this, problems won go away. First, there may be contested state wise differences, as there are in reservation policy. Not every community in the central OBC list is classified likewise in states, and not every community classified as OBC, SC or ST in one state may be recognised in another state. Second, if minority status is a state decision, should, say, Sikh schools in Punjab enjoy minority institution status, or Christian schools in Mizoram Should centrally identified minorities lose their status in states where they are a majority These are sensitive issues that need to be thought through. The key point is even implementation of minority status at the more granular state level won help. India is witnessing an immense competition for scarce education and employment opportunities. Slicing, dicing and labeling communities as backward or minority are political decisions with only superficial impact. The real task is to create more quality educational institutions in the public and private sector. The resultant rise in human capital will create skills that the job market needs. Overregulation by the likes of UGC and excessive demands of laws like the RTE Act are reasons many educational institutions covet a minority status. Focus on quality education for all. Everything else is noise. The Supreme Court on July 13 refused to halt the contentious demolition drive in Uttar Pradesh and other states, saying illegal structures were not immune from action. The case before the court concerned the demolition of homes of some Muslims protesting against former BJP spokesperson Nippur Sharma widely denounced remarks against Prophet Muhammad. Impassioned pleas against bulldozer justice Several.

Delhi Police Typing-Dated-2023-08-19-Test NO.-10423

Former SC and HC judges have written to the Chief Justice of India that these demolitions are an unacceptable subversion of the rule of law and a form of collective extra judicial punishment, attributable to a state policy which is illegal. During our recent visit to Britain, Bunny and I caught glimpses, on TV and in the print media, of harrowing scenes of suffering. Homeless people, families with distraught women and weeping children, men with angry, helpless faces, huddled under makeshift coverings, their few belongings scattered haphazardly around them. Were they refugees fleeing from war torn Ukraine No. They were airline passengers stranded, sometimes for days at a time, at various airports across the country because of last minute flight cancellations. The main reason for these cancellations was that the aviation industry, in Britain and elsewhere, has been very badly hit by a massive staff shortage, ranging from cabin crew to technicians and baggage handlers, because of job cuts across the board during the two year pandemic lockdown. This, combined with a resurgent wave of so called revenge tourism, has resulted in an unprecedented crisis in the travel industry. It not just the airline sector that been affected by an acute lack of staff. Many of the shops, restaurants, cafes, and other places of business that we went to in London, and elsewhere in the UK, displayed prominent signs saying We are recruiting!, Help wanted! At a seaside resort in Dorset a restaurant sign informed customers that, because it was understaffed, they would have to wait at least half an hour to be served, even if all they wanted was a simple sandwich meal. Lockdown layoffs apart, another reason for the UK staff shortage is that after Brit many, if not most, East European migrants who formed a large part of the country workforce have gone home, and the native Brits, by and large, have become too unused to rolling up their sleeves and getting the job done themselves. Fortunately for the UK, to fill in all the vacancies caused by overly hasty downsizing during the pandemic, there are plenty of Indian origin migrants who, having retained their innate capacity for hard work in their adoptive country, are prepared to put their shoulder to the wheel where most needed. Indeed, one such volunteer is waiting to lend a hand beside a situation vacant notice pasted on a door marked 10, Downing Street. We have all been gifted with human life in this worldly domain. Alongside this precious gift, arise questions like: Why are we here Who am I What is the point of this life If these are unanswered, we risk leading unexamined lives, blindly accepting what our mind perceives and reflexively following others. Going within, however, reveals many hidden and subtle truths that we can see but that we know exist, such as the existence of the mind. This deepened understanding can help us answer the aforementioned questions of life. All saints and rishis have defined God as the.

Delhi Police Typing-Dated-2023-08-19-Test NO.-10424

One absolute, real truth who is changeless except His name, which varies according to various cultures and religions. We worship God, the truth, and we contemplate or meditate on Him. This is why Slimed Bhagavatam starts with, Parma Satyam Hamachi, and Jail Sahib with: Ki Omar Sat Noam . transcendental Truth. He is the prime cause, the supreme knowledge, and ultimate, absolute Shakti. He is the goal. He pervades and permeates us all and the world. He is Aim. If you ask anyone what she wants in life, the response will invariably be the same: peace and happiness. However, with broader understanding, we could also seek to prepare our souls for a return journey from earth to the divine domain, the final goal where we will attain absolute and eternal peace and happiness. So, to start with, to undertake a beautiful life journey, we need to have full faith in Him. The reason He has sent us into this world with blessings and abilities of consciousness, body, mind, senses, Nature and freedom of thought and action is so that we may seek Him on our own, through our free will. We have to start from zero, acquire knowledge, seek the goal, live, face the challenges of worldly life and play in the game of life. Apart from faith, we also need to have love, devotion, humility, gratitude and His remembrance. As for love, we must first wholesomely love ourselves, body and mind; and draft and design our lifestyle with a balanced diet and exercise our bodies with yoga postures, as well as deep breathing. To strengthen our minds, contemplation meditation, and duty driven, selfless actions can help. Our bodies need to remain resilient and agile, and our minds broad and positive. Finally, we can reorient our lives, mind and consciousness to move forward towards the right goal on the right path and by the right means. Among its many capabilities, the mind has the potential to connect with the Supreme by way of contemplation and meditation. We can use the higher aspect of the mind, called intelligence, to manage it and make it our friend rather than foe. Our beautiful life is based not on any specific religion but on dharma, truth and love. Even if we are physically and mentally limited, we still can live by the words of virtuous people and take to heart the point Krishna put to Argon in the Bhagwad Gita, verse 5:5: Contemplative life and karma yoga, selfless action, are one and the same and take us to the same destination. Once upon a time there was a Pompous Pradhan aka Dankapati. He was Teflon coated and had brushed aside name calling by his opponents for over a score years. He used to give it back as good he got. Devoted media outlets ensured that his outpourings were amplified and that of his opponents vilified. But one day he realised that it was a level playing field for name calling in the two Houses.

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-19-Test NO.-10425

Of Parliament. And while his addressing his opponent with just the first two letters of Bombay and Kolkata was expunged, his detractors were getting away with choicest of adjectives describing him as well his minions such as Jumrajeevi, Vanish uprush, tan shah, corrupt, super spreader, Shaken and Jaichand. Truth, as we all know, hurts. So now there is a long list of terms that cannot be used in the two Houses to describe his Excellency and his subjects. This may lead to the birth of Aatmanirbhar Unicorns with mentors who are masters of language, and not Entire Political Science and, who can manufacture gales that will get the Members of Parliament tales without getting expunged. To rub Opposition nose in it, Dankapati unveiled the National Emblem on the new parliament building without inviting them to the ceremony. What further infuriated the opponents was that unlike the serene lions of Asoka, these resembled ferocious beasts of Dankapati circus. Dankapati insecurity was understandable. His powerful friends had been falling like nine pins. But while Uncle Sam Dolan, Down Under Morrison and Pomp Boo were kicked out democratically, the exit of Gotabaya aka Lankapati has been spine chilling for 56. Lankapati and Pariah biological had used minority baiting to win elections and get an iron grip over the country. But after his disastrous performance during Covid and ruining of economy, Lankapati was chased out of the country by angry crowds and his Pariah and minions fate now hangs in balance. Dankapati and Pariah political are following similar script. Though his party won elections in four states despite the opposition highlighting its mismanagement of Covid and the economy, he knows the truth and his sole concern is his hat trick in 2024. His opponents had mocked his Visas means selling Pagoda gyan and called him Vinaash Purush, which now has been banned. Lankapati fate has woken up Dankapati to the danger of his subjects suddenly realising that they had voted for Achhe Din and not Gujarat model of jiski lathi uski bhains might is right. So any word or title which may divert the attention of proud nationalist from people whom Dankapati recognises by their clothes is a big no in Parliament. Though to be fair to him Dankapati has always condescendingly proclaimed that he is not power hungry but a fakir who would simply pick up his jhola bag and leave. Of course, his May Bach sunglasses, Movado watch and Mont Blanc pen would be in the jhola. Dankapati government response to our neighbours chasing away their ruler, Lankapati, has acted like salt in the wounds of his own countrymen. His minion said that Dankapati's government stood with Lankapati subjects who seek to realise their aspirations for prosperity and progress through democratic means and values, established institutions and constitutional framework. But alas back home people with similar aspirations were often pulled up by established institutions and the process of remedies within constitutional framework more often than not becomes the punishment. The lack.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-19-Test NO.-10426

Of empathy for fellow country men was never more evident. Dankapati is used to beating his own drum and getting his minions to beat thalami and tale for him, he now finds it unpalatable to digest critical adjectives. Gagging criticism in Parliament, a place to talk and discuss, reflects the culture of his Pariah where the Boss is always right and only his Mann Ki Bat matters. One wonders whether if in the new parliament building of New India there may come a time where instead of curbs on what you cannot say about Dankapati and Pariah there will be fireman listing out what all you can say. It will start from the two Houses and slowly in Guar one will only be allowed only his Har. Today, businesses operate in a highly volatile and dynamic environment. One which is exposed to not just cyber attacks, but war, terrorism, pandemics, and other natural calamities. Disaster recovery DR is technically the ability to resume the business operations hit by the disruption caused by catastrophic events. A foolproof DR strategy should just aim to restart the operations but also to prevent or minimize the loss of data when the calamity crippled the business. Disruption in business operations generally leads to a significant cost escalation and loss for organizations. Without disaster recovery planning; many businesses, especially small and medium sized organizations, would be able to resume their operations. Even if some resume, there is always a chance that they would slip back to their hapless condition within a year of resumption. Disaster recovery planning entails steps of strategizing, assessing different disaster scenarios, deploying compatible and relevant technology, and conducting frequent testing of the system through dry runs and mock drills. Just maintaining backups of data and having a recovery process does not make for a foolproof disaster recovery plan. It also entails ensuring sufficient storage and computing power during the transition period. During the offloading, control and operations are transferred from the original primary system to the backup secondary system, also called failover. Post disaster, when the original system gets restored, the control and operations are transferred back from the secondary backup system to the original system, a process known as failback. Dramas Disaster Recovery as a Service gaining currency: Disaster recovery as a service Dramas is an as a service model that allows a business to back up its data and critical compute network and store it in a secondary system hosted by a third party cloud service provider. The backup data and the relevant IT infrastructure hosted in a different geographical region would be pumped back to the original primary system to restore normal business operations, after the disaster. As it is a cloud based service, the Organisation does have to incur upfront costs to own the resources needed for disaster recovery. Given the rising adoption of Dramas among enterprises, market research firm Technavio estimates that the market size is likely to reach \$41 billion by 2025, a CAGR of 45.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-19-Test NO.-10429

Per cent during the period. Contours of the disaster recovery plan: Identifying works and functions of the Organisation as per priority helps the Organisation to determine how much downtime these critical and non critical functions could tolerate. Once that is done, an Organisation has to decide whether to build a disaster recovery system using on premise storage facilities or renting storage in the public cloud. While on premise storage of data has a few downsides like added cost in terms of upfront investments, and time and skill requirements, the benefit that the internal IT team will accrue from on premise storage is that they will have control and visibility of the stored data. Also, an on premise disaster recovery system will not be effective, especially in situations when a natural disaster hit the Organisation wreaking havoc on both the primary system and backup system. But a third party cloud service provider where the DR system is on standby in a different geographical region would come in handy in such situations. Thus, organizations face a dilemma when choosing between an on premise DR system and a public cloud. Therefore, some organizations prefer to opt for a hybrid cloud model in which they store highly critical data on premise and less critical data on the public cloud. The recovery point objective RPO is the age of data that must be recovered from the backup secondary system to resume regular operations. The RPO is expressed backward in time from the moment the disaster struck. RPOs may be stated in seconds, minutes, hours, or days. For example, if the RPO is one hour, the IT team must arrange a plan for backups of data every one hour. The RPO helps the admin team to determine the minimum frequency at which the backups must be taken. Similarly, the recovery time objective RTO is the maximum time the Organisation has decided to take back control, and associate network capacity and data to restore operations from an alternate location after the outage. RPO, along with the RTO, helps the Organisation select the right disaster recovery technologies and strategies. During the COVID pandemic, the importance of a robust business continuity plan BCP has come to the fore. Moreover, several natural disasters like flooding, earthquake along with disturbing political environment always pose a threat to the sustainability of business operations. Therefore, each enterprise with distributed workspaces across the globe should not only devise a robust disaster recovery plan but also should employ the right technology partner to get the optimum outcome. The modern day shopping experience has gone far beyond the four walls of the physical store, as online shopping offers a platter of customized product, shipping, return, and replacement options that save consumers both time and money. The good news is also that the democratization of the e commerce sector with Open Network for Digital Commerce ONDC has enabled small retailers to engage with big firms, protect their businesses, and serve customers with modern delivery methods In arecent.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-19-Test NO.-10430

Survey, forty seven percent 47 of consumers said that they would likely not shop with a retailer again after a bad shipping experience. 2 Therefore, in moving to an Omni channel retail model, businesses will require an agile shipping and logistics infrastructure to successfully address both online and on time demand. Bet on shipping solutions Small and medium sized businesses SMB trying to gain a competitive edge can help ensure customer satisfaction by providing exceptional delivery. However, SMBs face a much different reality than larger retailers. While their larger counterparts have the capacity to speed up shipping, bring down costs, and account for orders that arrive incorrectly or damaged, SMBs may not have the resources to quickly address shipping mishaps. Shipping becomes the deciding factor between a loyal or lost customer. That is why SMBs must work with a trusted logistics partner to give them more control over the shipping experience and help resolve issues quickly should they occur. Forward thinking SMBs also provide great online experiences with technology that adds visibility and real time updates as packages travel through the fulfillment process. Their key priorities include eliminating paper based processes in favor of digitalized and traceable ones, facilitating communications throughout the supply chain and with customers, and optimizing inventory management so packages are accurately packed, shipped, and traced in real time. Many companies in India are also hiring more workers to right size their fulfillment operations while demand for online delivery and quick commerce services continues to grow. As per reports, India 10 15 minute delivery market is expected to reach \$5.5 billion in three years. Ecosystem players of all sizes will need to set up dark stores, maintain a strong hyper local distribution networks and engage more partners to ensure instant delivery, with SMBs likely leaning on the latter option to keep pace with larger, better resourced retailers. In short, it will be an amalgamation of both humans and machines driving the success of the quick commerce business model. Winning the relay race with digital workflows Today, a retailer job does not simply end when a customer completes the checkout process or when the order is packed. The entire fulfillment process functions like a relay race, with the merchant handing over the orders to a fulfillment center or directly to a shipping provider that is responsible for getting them to the right place. As such, there is a need to have transparency in the shipment process so that retailers are aware of the real time location of each product or order until it reaches the customers. Mobile computers and barcode scanners are making it easier for logistics workers to get the information they need and ensuring the accuracy of parcels as they get on and off trucks. With radio frequency identification RFID becoming increasingly affordable, SMBs can now invest in systems that allow real time data capture. They can move beyond traditional barcode based track and trace solutions to get on a level playing field with large retailers.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-19-Test NO.-10431

In fact, SMBs that are just now digitalizing their workflows can jump straight to RFID based track and trace systems, which may put them ahead of many competitors. The importance of inventory visibility Retail businesses needs to prioritize visibility through the last mile and look for reliable warehousing and logistics partners. With the help of real time data capture and prescriptive analysis, retailers can understand current inventory distribution across stores and supply chains, enabling orders to be allocated to a location that can fulfil fast. Shippers can then be alerted that an order will be added to their next pickup, and shoppers can enjoy transparency throughout the product delivery process. They will be able to access real time inventory information and order status until their products arrive at their doorsteps. For online orders, any delays or cancellations due to out of stocks or back orders can hamper customers experience and loyalty. According to a Holiday Shopping Experience Report prepared by Intercom, 79 of consumers surveyed want companies to notify them about delays and back orders before they check out or buy an item. As such, retailers must maintain up to date inventory information within factories, warehouses, distribution centres DC and stores so that whenever customers place online orders, they can confirm that items are in stock and ready to ship. Fortunately, the same barcode and RFID technologies used for order track and trace can be used to expedite the processing and availability of received goods and keep an accurate record of shelf stock. A final thought a shopper relationship is with the retailer, not a shipping provider. And as customers have tasted the convenience of online shopping, the expectations around service and inventory accuracy have scaled up. So, to stay in the race, retailer especially new e commerce entrants must build a direct connection with customers throughout the shipping process via real time communication. Offer proactive shipping updates and respond to service requests as quickly as possible, even if you must make strategic technology investments to do so. This effort will pave the way to long term benefits for those who want a strong future in e commerce. Its failure to ensure the basic safety and security of civilians is in turn eroding the public confidence in the system. At present, the government appears beleaguered. Its security agencies are strained by the prolonged war. It is true that Afghanistan needs a political settlement. The war has been in a stalemate for long. The government, even with U.S. support, is not in a position to turn the war around. The Taliban, on the other side, has expanded its reach to the hinterland, but not the urban centres. While a peace process is the best way ahead in such a scenario, the question is whether the U.S. is giving too much leeway to the Taliban in its quest to get out of its longest war. The decision to keep the Afghan government to compromise. The absence of a ceasefire even when talks.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-19-Test NO.-10432

Were under way was another. The result is that Afghans continue to suffer even when the Americans and the Taliban talk. This has to change. There has to be more pressure, both political and military, on the Taliban to cease the violence. And the U.S. should back the Afghan government and the coming elections resolutely, while Kabul has to get its act together. While Mr. Khan has been asked to apologies to the House, some women members have renewed the pitch for the passage of the women reservation bill. The 27th Look Sabah has the highest number of women MPs, 78, comprising 14.39% of the House. This is higher than 2022 and a long way from the first election in 1951 52, when they made up only 5% of the House. The global average stands at 34.6%, and neighbours Bangladesh, Pakistan and Nepal have quotas for women in Parliament. In India, the women reservation bill or the Constitution 108th Amendment Bill to set aside one third of seats in Parliament. Now having record to the need for democratic decentralization in decision making in the Government devolution of resources at lower levels and for strengthening of the infrastructure Government and functioning of the local level democracy. The Government has taken a refreshing initiative, in this context the initiative of the Government to introduce and strengthening Patti Raj system is a major step forward India has known the Panchayati system right from the beginning from the pre independence as well. In the post independence period several efforts have been made to strength this institution but for one reason or the other it has not been able to get a sound footing an acquire the President address is an occasion to take an overall view of our contributions on different friends of national and international activities. It is also an opportunity for the Government to indicate a direction in which we are going to move, it is difficult to react to almost every aspects of the issues mentioned precisely for that reason. I would like to highlight some limited areas. First of all, India in its efforts of the last 60 years has tried to develop of vibrant democratic politics. Now, the process of creating a democratic system is so is the situation with regard to the State level but at the third level, at the district level it needed considerable re strengthening. Vibrancy that is require in the working at that level. On some pretax or the other in different parts of the country election have been postponed or local bodies have been dispensed and administrative control or the executive side has been strength. This has laid to a situation whether the distance between the common man and the Government has widened. This has further laid to a process where there has alienation at the grassroots so far as beneficiaries of one or the other function programmers or concerned. When we are trying to give the country a trial in programmers the.

Delhi Police Typing-Dated-2023-08-19-Test NO.-10433

Reduce the learning curve, and refine their techniques before performing surgeries on actual patients. There are startups in US that are developing glasses for the surgeons physicians that are connected to the surgery medical database and help surgeons doctors in viewing things while doing complex procedures. Improved Virtual Patient Care Delivery The Coved 19 pandemic not only introduced virtual meetings and virtual schooling but also revolutionised healthcare delivery. Telehealth has emerged as a promising solution to alleviate the burden on hospitals worldwide. It caters to patients who are unable to travel to a hospital or belong to vulnerable populations that should avoid unnecessary hospital visits, unless necessary. While primary care physicians and family doctors now offer virtual appointments, hospitals are still in the process of fully embracing this transformation. A hybrid approach combining virtual and in person care is likely to persist for many hospital services. However, before hospital doctors and patients can effectively communicate virtually, patients must first adopt technology and actively engage with primary healthcare services. This, however, poses a significant challenge, particularly among individuals aged 60 and above who have reported limited or no online presence. In conclusion, new age technology is revolutionising the field of surgery, paving the way for safer, more precise, and more efficient procedures. With continued advancements and integration of technology into surgical practices, the future holds immense potential for further improving patient outcomes, expanding access to surgical care, and extending the limits of what is practical in the realm of surgery. A sovereign country has every right to decorate its public places in any manner it deems fit. Akhand Bharat was indeed a reality at one point of time. Therefore, putting up a mural at India new parliament structure depicting Akhand Bharat is the country prerogative. However, other countries shown as part of Akhand Bharat are also within their rights to take umbrage because what was once a reality has long been superseded by later events in history. It should not have been difficult for India to gauge how the neighborhood may feel. Just consider, how appropriate would it be for the National Assembly of Pakistan to now create a mural showing Bangladesh as its part? Or for that matter can the Provincial Assembly of Punjab province in Pakistan now commission a mural showing Punjab state of India as its part arguing that Lahore was the capital of pre partition Punjab? Even within the country, can the Punjab Assembly at Chandigarh now display a map showing Haryana and Himachal Pradesh as its part because it was once so? And of course, how would Indians feel if Alexander III of Macedon conquest of Punjab or British colonization of India is used in current times as the justification for government sponsored art depicting India belonging to them? The Akhand Bharat mural has come at a time in world affairs when diplomatic hygiene requires countries to hide their expansionist ambitions rather than advertise. EAM Jaishanker has therefore clarified that the Akhand Bharat mural is a cultural map. Ironically, this amounts to telling foreign entities to ignore the matter though the intention of putting up the mural must have been for the world to take note of it! The cultural map logic defies history. Akhand Bharat of Askoka reign was a political reality but not

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-19-Test NO.-10436

India is a union of states. EAM downplaying the mural as a cultural map seems like the accomplishment of an adventurer who after gaining formidable height in a gas balloon abandons the craft and comes down using a parachute. He may be lauded for the diplomatic feat of taking a lofty issue higher up and leaving it in thin air. Will Artificial Intelligence decimate human intelligence, and have the potential to derail the writing, research and comprehension abilities of our children? And in turn, turn them into slaves of machines and algorithms? Human evolution is characterized by human minds getting challenged by circumstances, which prompt them to experiment and innovate. The need for speed led to the discovery of airplanes; desire to know created newspapers and TV news programming; yearning to break shackles of darkness encouraged human ingenuity to find bulbs; idea of storing food inspired discovery of refrigerators; need to stay connected with friends and family far and wide prompted humans to explore the magic of mobile phones; requirements for storing information and knowledge found us inventing the Internet The list is endless. In the plethora of advances made to make human lives better and brighter, the human mind, wisdom and discretion have reigned supreme. Suddenly as we prepare to dive into the second quarter of the 21st Century, the fancy for artificial intelligence (AI) and robotics seems to have overwhelmed us. Endlessly, we have begun to admire the power of the supersonic intelligence which though termed artificial is being seen with far greater reverence than human being real reason and profound intellect, gathered with the natural process of learning and experimenting over many centuries! Malcolm Gladwell, in his popular book *The Tipping Point*, highlighted the significance of human endeavor and acquiring intelligence and excellence through hard work through his famous 10,000 Hours rule. Yes he did mention about the unique opportunity that each of these successful individuals had but Ten thousand hours is the magic number of greatness, he wrote, quoting famous studies. From Mozart to The Beatles, Bill Gates and Bill Joy, all worked hard enough not less than 10,000 hours, to reach greatness. He quoted neurologist Daniel Levitin to assert that ten thousand hours of practice is required to achieve the level of mastery associated with being a world-class expert in anything. One wonders if artificial intelligence could produce a John Lennon or Paul McCartney! Cricketing legend Sachin Tendulkar took to cricket at 11, got his first test at 16, and was declared second-greatest Test batsman of all times, behind Don Bradman by Wisden in 2002, when he was 19! His autobiography *Playing It My Way* gives a vivid account of his early years of trials and tribulations, hard work and perseverance. Narrating many stories of the endurance and discipline taught by his Sir coach Ramakant Achrekar he wrote, Had it not been for Sir, I would not be the cricketer I turned out to be. He was a strict disciplinarian Sachin did have his share of fun but the human will and resolve of his coach reigned supreme. Even though I loved cricket, there were still occasional days when playing with my friends at home was such fun that I would conveniently forget I was supposed to go to the nets. If I did turn up, Achrekar Sir would hum on his scooter and come to find me at Sanity Saharans, he wrote. Don waste your time playing inane games with these kids. Cricket

Delhi Police Typing-Dated-2023-08-19-Test NO.-10437

Algorithms and manufactured intelligence might counter this by citing how IBM supercomputer Deep Blue defeated the then world chess champion Garry Kasparov in 1997, and began an era of human-computer cooperation in chess. Two decades later, wrote Yuval Noah Harare in his popular book 21 Lessons for the 21st Century, Google Alpha Zero program defeated Stockfish 8 program, the winner of world computer chess championship in 2016. Alpha Zero had used the machine-learning principles to teach itself chess by playing against it. Can you guess how long Alpha Zero spent learning chess from scratch, preparing for the match against Stockfish 8, and developing its genius instincts? Four hours. For centuries, chess was considered one of the crowning glories of human intelligence. Alpha Zero went from utter ignorance to creative mastery in four hours, without the help of any human guide, wrote Harare. At least in chess, says Harare, creativity is already the trademark of computers rather than humans! He warns, What is happening today to human-AI chess teams might happen down the road to human-AI teams in policing, medicine and banking too. In another essay titled Why Technology Favors Tyranny published in The Atlantic, Harare says, InfoTech and biotech will create unprecedented upheavals in human society, eroding human agency and, possibly, subverting human desires. He avers that At least for a few more decades, human intelligence is likely to far exceed computer intelligence in numerous fields. Hence as computers take over more routine cognitive jobs, new creative jobs for humans will continue to appear. Many of these new jobs will probably depend on cooperation rather than competition between humans and AI. Human-AI teams will likely prove superior not just to humans, but also to computers working on their own. And Harare offers hope, and reason, when he argues that there is no reason to assume that artificial intelligence will gain consciousness, because intelligence and consciousness are very different things. Intelligence is the ability to solve problems. Consciousness is the ability to feel things such as pain, joy, love and anger. These human emotions are part of the growing up process of our children and learning, when laced with these feelings, is what makes it special and distinct. The over-dependence on artificial intelligence, and subjecting children learning to it might have the irreversible consequence of disrupting the cognitive process of our children, and their growing up experiences. It is also argued by many that AI lacks true creativity, intuition, and common sense reasoning. While AI can excel at specific tasks, it often struggles with understanding context and generating innovative solutions. And we do not wish to subject our children to this dangerous path, during their growing up age. We do not wish to replicate the chess experience to other spheres of learning. Little wonder, some critics, including high-profile figures like Elon Musk and Stephen Hawking, have expressed concerns about the potential long-term risks of AI evolving beyond human control and posing existential threats to humanity. There are many other criticisms of AI from noted experts that we must note. Microsoft co-founder Bill Gates has raised concerns about job displacement caused by AI and automation. He has emphasized the need for society to address the challenges posed by these technological advancements. Linguist and cognitive scientist Noam Chomsky has c

We have seen 10 planning process of development since 1951. We are at the end of the tenth plan and the Eleventh Five Year programmers Plan is beginning to take shape but in that process. What have been the contributions of people through their views and resources for development in the plan programmers or all those who are at the receiving and all whatever plan programmers have been launched has been an open plan. It is not surprising that the delivery cost of development programmers as getting out of hand almost 80 per cent of the projects cost is delivery cost only and just 15 to 20 per cent gets left for the benefit of the receiving and also the priorities when look from the national or State level tend to defer radically from the perspective of the people at the District level. They do not involve the problems which concerned the District level and the village level. The District level and the village level problem do not involve substantial research at the, from the point of view of those local people. They are the life played or survival whether it is location of a small school playing or the State a canal or the public distribution system network location they all local development concerned. In the District level planning we have taken about decentralized planning. Development process, the success of dependence on what opportunities we provide for the people influence the decision making what we are the points for democratic contributions with regard to things which are uppermost in their thinking. Unlike the crash landing of the Moon Impact Probe on the Chandrayaan 1 mission in November 2008, this will be the first time that ISRO is attempting to soft land a lander on the earth natural satellite. A series of braking mechanisms will be needed to drastically reduce the velocity of the Vicar lander from nearly 6,000 km an hour, to ensure that the touchdown is soft. The presence of water on the moon was first indicated by the Moon Impact Probe and NASA Moon Mineralogy Mapper on Chandrayaan 1 a decade ago. The imaging infrared spectrometer instrument on board the orbiter will enable ISRO to look for signatures indicating the presence of water. Though the Terrain Mapping Camera on board Chandrayaan 1 had mapped the moon three dimensionally at 5 km resolution, Chandrayaan 2 too has such a camera to produce a 3 D map. But it will be for the first time that the vertical temperature gradient and thermal conductivity of the lunar surface, and lunar seismicity, will be studied. While ISRO gained much with the success of Chandrayaan 1 and Mongolian, the success of Chandrayaan 2 will go a long way in testing the technologies for deep space missions. Amass absolute power, as they did under Mr. Bashir three decade long rule. Ethiopian and African Union mediators brought both sides for talks and they reached the power sharing agreement. Under the deal, a sovereign council.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-20-Test NO.-10439

Of 11 members five military and five civilian members and one to be selected based on consensus will rule for over three years. A general will lead it for the first 21 months and a civilian leader for 18 months. The security apparatus will be controlled by the military; the ministries will get civilian leaders. While this agreement clearly charts a new course for the crisis hit country. A decade after the first successful mission to the moon with Chandrayaan the Indian Space Research Organisation successfully launched its sequel, Chandrayaan to further explore the earth natural satellite. Earlier this year, China landed a robotic spacecraft on the far side of the moon, in a first ever attempt. Now India is attempting a similar feat to land its rover Pagan in the moon South Polar region, attempted so far by none. The equatorial region has been the only one where rovers have landed and explored. The launch by itself is a huge achievement considering that it is the first operational flight of the indigenously developed Geosynchronous Satellite Launch Vehicle Marcia to send up satellites weighing up to four tones. The orbiter, the lander (Vicar) and the rover (Pagan) together weigh 3.87 tones. Having reached the earth parking orbit, the orbit of the Chandrayaan 2 spacecraft will be raised in five steps or maneuvers in the coming 23 days before it reaches the final orbit of 251km. It is in this orbit that Chandrayaan 2 will attain the velocity to escape from the earth gravitational pull and start the long journey towards the moon. A week later, on August 20, the spacecraft will come under the influence of the moon gravitational pull, and in a series of steps the altitude of the orbit will be reduced in 13 days to reach the final circular orbit at a height of 100 km. The next crucial step will be the decoupling of the lander (Vicar) and the rover (Pagan) from the orbiter, followed by the soft landing of the lander rover in the early hours of September 7 despite the postponement of the launch from July 16 owing to a technical snag, the tweaked flight plane. The Centre decision to clip the wings of the Securities and Exchange Board of India has not gone decision down too well with its members. Yet, the Centre is refusing to budge. In a decision letter dated July 10, SEBI Chairman Ajay Tragi said the Centre decision to suck out SEBI surplus funds will affect its autonomy. SEBI employees had also written to the government with the same concern. As part of the Finance Bill introduced in Parliament, the Centre had proposed amendments to the Securities and Exchange Board of India Act, 1992 that were seen as affecting SEBI Securities financial autonomy. To be specific, the amendments required that after 25% of its surplus cash in any year is transferred to its reserve fund, SEBI will have Securities to transfer the remaining 75% to the government on Friday.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-20-Test NO.-10440

Ranil Wickremesinghe who has just become Sri Lanka eighth Executive President has actually won this prize in his third attempt. He lost in 1999 to Chandra Kumaratunga and again in 2005 to Mahindra Rajapaksa. On both occasions he was dealt unlucky blows. President Kumaratunga gained a sympathy vote when LTTE attempted to assassinate her during one of her campaign rallies and blinded her in one eye. LTTE intervened again in 2005 to scuttle Wickremesinghe election bid when it ordered the Tamil people to boycott the presidential election. Finally now, Wickremesinghe has won a convincing victory, although it was not the people who voted him into power but parliamentarians. Many Sri Lankans are thoroughly underwhelmed that Sri Lanka parliament chose Ranil Wickremesinghe as the new President. Protesters over the last few weeks had wanted Wickremesinghe to step down as PM and did want him to secure the presidency. Even politically he weak, having led his party, UNP, to precisely one seat in 2020 parliamentary elections. He himself only managed to enter parliament through the national list. Therefore, even cooler headed commentators contend he simply does not have the people mandate to assume the presidency. Protesters who drove the Rajapaksas out of power aimed to usher in wholesale systemic change, including a new Constitution. For them Wickremesinghe, who has been in politics for well over four decades, represents the old guard guilty of bankrupting the country. How this plays out will determine the fate of this presidency. If protests erupt and if army police action leads to further heightening of popular anger, the island nation may head for another, and even more dangerous period of instability. If that does happen or the new president rides out a fresh round of protests, Wickremesinghe administrative and diplomatic experience will come in handy. His time in public office has seen him getting well acquainted with foreign governments and international institutions. Given that Sri Lanka needs help from these entities to start tackling its acute economic crisis, he a good bet as a rescue negotiator. After he was appointed PM in May, when Mahindra Rajapaksa stepped down, there have been some signs of economic relief. Rolling power cuts have reduced in duration, farmers have received fertilizers and there have been improvements in gas supply. Of course, there is still a long way to go to restore normalcy. Wickremesinghe first job will be to quickly form a cabinet and conclude bailout talks with IMF. But he must also work to win over the trust of protesters and set the ball rolling on constitutional reforms, including devolving powers of the presidency as a first step. India, which has stood by Sri Lanka through this crisis and emerged as its chief lender, should provide full support to Wickremesinghe. New Delhi strategic interests demand this. While freeing Mohammed Dubai, the Supreme Court said the power to arrest must be used sparingly. This has been repeated umpteen times by SC, but to little effect. Therefore, all courts must grant immediate bail in.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-20-Test NO.-10441

Most minor offences and especially those related to free speech, unless there clear indication that speech was intended to lead to violence. Note that most free speech cases lose substance the moment the accused is granted bail: the police lose interest in probing flimsy cases. The pre trial arrest and long jail times are in effect the punishment. Only courts can put a stop to this by making the police realise that bail will be automatic. Granting of 7 day, 14 day custodies, as in Dubai and many similar cases, must stop. Ideally, SC position on this issue should be the default position of all courts. But magistrate courts don seem to get the message. As SC said earlier, India needs a bail law that codifies these practices, and removes judicial discretion. For Dubai, UP police tried another old trick by filing multiple FIRs so that bail in one case he had bail in the Delhi police Special Cell FIR is enough to ensure freedom. Nippur Sharma similarly also deserves protection from multiple FIRs. SC has done well to anticipate various scenarios in the Dubai case. Besides ordering disbanding of the UP SIT probing the six FIRs and transferring these to the Delhi police, SC has said all future cases will be transferred to the Special Cell and he will be entitled to bail in them. SC other observations in this case are also crucial. Responding to the UP government counsel who asked that Dubai be told not to post offensive tweets, the court pointed out that a journalist cannot be asked not to tweet; rather if any tweet violates a law then legal action can follow. This may seem reiteration of a basic understanding of rights and responsibilities but given police and lower court actions in states governed by political parties across the spectrum it is heartening that SC made things clear. Rupee falling below the 80 mark against dollar made headlines. There are nuances in story that, however, are being missed. First, and contrary to what many are saying, rupee fall may not help our exports. Here why. Exports of commodities that are price sensitive, that is, they do well when they are cheaper, benefit during depreciation. But exports of goods that are income sensitive, that is, they tend to perform well when there is an upsurge in foreign income, may not necessarily do well. For example, if incomes in foreign countries are under pressure There are three e in freebie. They stand for elections general, state and municipal. Poll time is party time, pun intended, since we can do a rain dance with the goodies showered on us. So our upright PM rightly derided what he called ready culture in a characteristic catchy phrase. He could even do it righteously since he was inaugurating the Bundelkhand Expressway. Infrastructure is a better way to come back to government than providing free electricity. But the audience would still be taken for a ride if it had already forgotten how.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-20-Test NO.-10442

Earlier this year, the roaring double engine manifesto, Look Kalian Sandal Petra still had to promise a wagonload of freebies for every vote bloc. Of course, the hopeful rival amajwadi Vachan Petra had thrown in corresponding inducement: sacksful of urea, mufti power for irrigation and urban homes, interest free loans, laptops for students, annual pensions for assorted neediest. As for Poll, Radar, Poll, every party looks for a Sang am with this latest bonanza in electoral seduction. Sops are the SOP, standard operating procedure for the writer of manifestos. Aim Jannat so totally, nonnegotiable expects them that Christ quote on stoning sinners would today be He who is without freebie, let him cast the first vote. Thus, PM jig was both right and wrong in blaming the opposition for the dangerous ready culture. But, then the English verb, rave, is itself double edged; it can refer to either manic rage or crazed praise. Where I would take unmitigated issue with the unchallenged Mr. Mode is his choice of metaphor. Freebies may well be the Open Sesame to votes, but that no reason to throw the humble, innocent tile good ready into the political Lohri fire. Or for that matter its western cousin, the similarly comprised laddoo so essential a part of Makar Sankranti. The only justification I can think of is the huge financial load which electoral sops put on the economy. The PM may be saying: Indic philosophy is rich in usage of metaphors and analogies to explain difficult concepts in a simple manner. Epics like the Ramayan and Mahabharat and scriptures like the Upanishads have resorted to such examples to illustrate ideas even through various human characters. Let us take two examples of chariot and golden deer. In the Katha Upanishad, there is an attempt to describe the human form as a chariot the senses are its horses, mind is its reins, intellect is the charioteer and the passenger is the jivatman, individual soul. This metaphor, thus, shows that we are distinct from our physical body, senses, mind and the intellect, just as the passenger of the chariot is separate from the chariot, horses, rein and the charioteer. The path traversed by the chariot and its surroundings are the sense objects the samsara. There is a natural tendency of the mind and senses to get attracted to or repelled by the sense objects, which has a serious bearing on the movement of the chariot and its passenger. The intellect finally decides to either overpower the demands of the fickle mind or yield to its temptations. concludes that He, who has the understanding of the driver of the chariot and controls the rein of his mind, reaches the end of the journey, that Supreme Abode of the All pervading. The explanation of chariot is made more explicit in the Mahabharat. In the final war, Prince Arjun is seen sitting as a passenger in a chariot driven by Krishna. Arjun could have chosen anyone among the many skillful charioteers available.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-20-Test NO.-10443

At that time, but he chose Krishna as he had full faith in his ability and guidance, thus replacing his own limited intellect. Arjun represents the individual soul fully surrendering to Krishna, the Parramatta, the Universal Soul, to ensure his safe and successful journey. The Ramcharitmanas deals with dangers that arise when an individual soul tries to distance itself from the universal soul. There is a description of the turning point wherein Site is seen attracted to a golden deer in the forest and she seeks to possess it. Ram goes in search of it in the forest, leaving her behind. When Site is alone, devoid of the company of Ram, she is abducted by Demon King Raven. We know that after marriage of the Divine Couple and their shifting to the forest, both Ram, representing universal soul, and Site, representing us as individual soul, were living in a state of bliss in total communion with each other. The moment Site is enchanted by the appearance of Maya, the golden deer, thus downplaying the primacy of Ram, she gets possessed by Raven representing dreadful ego and samsara. She then realises her mistake. Her suffering and pangs of separation come to an end only on reunion with Ram, thus bringing back the individual soul in full and blissful company of the universal soul. Examples of the chariot and golden deer can, therefore, remind spiritual seekers time and again that God realisation is possible and Maya can be kept at bay only by invoking the grace of the universal soul. Today, businesses operate in a highly volatile and dynamic environment. One which is exposed to not just cyber attacks, but war, terrorism, pandemics, and other natural calamities. Disaster recovery DR is technically the ability to resume the business operations hit by the disruption caused by catastrophic events. A foolproof DR strategy should just aim to restart the operations but also to prevent or minimise the loss of data when the calamity crippled the business. Disruption in business operations generally leads to a significant cost escalation and loss for organizations. Without disaster recovery planning; many businesses, especially small and medium sized organizations, would be able to resume their operations. Even if some resume, there is always a chance that they would slip back to their hapless condition within a year of resumption. Disaster recovery planning entails steps of strategizing, assessing different disaster scenarios, deploying compatible and relevant technology, and conducting frequent testing of the system through dry runs and mock drills. Just maintaining backups of data and having a recovery process does not make for a foolproof disaster recovery plan. It also entails ensuring sufficient storage and computing power during the transition period. During the offloading, control and operations are transferred from the original primary system to the backup secondary system, also called failover. Post disaster, when the original system gets restored, the control and operations are transferred back from the secondary backup system to the original system, a process known as failback.

The 20th Livestock Census that, between 2012 and 2019, there has been an increase of 10 percent and 17 percent respectively in the population size of small livestock such as goats and poultry. The number of backyard poultry birds by 45.79 percent in the same period. This sharp growth of small livestock, especially backyard poultry, is an interesting development since they are usually reared by landless families or small and marginal farmers on a very small scale. According to experts, this growth can be explained in two ways. One, state governments have been promoting alternate livelihoods for small farmers by distributing birds for free or at subsidised rates. Or two, the data collection for this census was more robust than before. Another possible explanation is the large scale promotion of self help groups by the National Rural Livelihood Mission, which provides the community with access to credit and funds to invest in livelihood activities such as the purchase of goats and poultry. While there is no study that definitively explains this rise in numbers, the more important question is whether this increase has positively impacted the lives of the smallholder farmers. Small livestock, big benefits we at PRADAN have been working with small and marginal farmers in Central India tribal belt for more than a decade. This has brought forward some critical insights about the importance of small livestock farming and the role it can play in bolstering livelihoods. Central India is one of the most economically marginalised regions in the country with more than 30 percent of the population experiencing multidimensional poverty. Because of the dominance of rain fed subsistence agriculture in this region, communities depend heavily on forest resources, livestock rearing, and wage labor for income. Advice communities, in particular, have traditionally reared goats, pigs, sheep, and backyard poultry as an economic buffer to be sold in times of distress. Usually, the poorer the family, the higher the relevance of livestock in their life. Given the abundance of forest lands, wastelands, and availability of small backyards in the households, the region is immensely favorable for rearing small livestock. Finally, one of the biggest advantages of small livestock, especially backyard poultry, is that they can easily be reared by ultra poor families, single women, the elderly, and people with disabilities. In spite of all these possible benefits of small livestock farming, poorer families are often unable to harness its full potential. The main reason for this is the frequent occurrence of highly infectious diseases like Newcastle disease and fowl pox in the case of poultry, and Paste des Petites Ruminants, enterotoxaemia, foot and mouth disease, and goat pox in the case of goats, which can sometimes wipe out a farmer entire stock. While these deadly diseases can be controlled with regular vaccinations, the poorly resourced animal husbandry department chooses to focus on larger animals such as cows and buffaloes, failing to effectively provide health services to smaller livestock. Farmers are also more likely to pay for the health of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-20-Test NO.-10447

Their larger, more expensive animals, which are fewer in number, than their many smaller backyard ones. To add to this, medicines and vaccines are not easily available in the open market, and even if they are, farmers usually need experts to vaccinate their livestock. Further, factors like the lack of knowledge on improved rearing practices such as the adequate provision of shelter, supplementary feed, and clean drinking water limit the effectiveness of small livestock farming. Another constraining factor for farmers is the nonfunctioning market for both inputs and their products. Services such as feed availability, healthcare, breeding, and credit or insurance services are often absent from rural regions. And, finally, the meat market is also highly unorganised and skewed towards the buyer. Birds and goats are typically sold on an eye estimate and not according to their actual weight. Distress selling is also very common and farmers have no negotiating power with the traders. Typically, stocks are sold off at throwaway prices before the onset of monsoon since farmers fear disease outbreaks. Though small livestock rearing can support the most marginalised communities, these bottlenecks make the activity extremely risky and prevent people from investing in it. Building community led solutions To promote small livestock farming and address farmers concerns such as high mortality of animals, we vet piloted a range of interventions over the last decade. What worked was bringing services to the farmers doorstep and making this system financially sustainable. To tackle the issue of high mortality, local women were trained as pasha sashes which translates to friends of livestock to provide vet care services such as vaccination, deworming, and basic treatment for illnesses at the doorstep of the reader. Simultaneously, we organized women readers into producer groups at the village level. This allowed non SHG members as well as ultra poor households to become members of the group. Each producer group has approximately 50 members who deposit money in advance to access animal healthcare services at their doorstep. This includes care for all small livestock, which covers backyard poultry, goats, and sheep. Depositing the advance money helps the collective to get the services of the pasha sahib, who can place orders for medicines and vaccines. This ensures timely delivery of healthcare services at the doorstep. Each pasha sahib is linked with one or two producer groups, depending on the size of the village. Not only does this increase access for farmers, but it also serves as a source of income for the pasha sashes. On average, a pasha sahib engages with 80–120 farmers, which can ensure an income of INR 3–5,000 per month. Pasha sashes also train members on better rearing and management practices such as preparation of supplementary feed, care of mother and kids, and shed management. Further, the group meets once a month to track the progress of its members, generate and aggregate demand, as well as negotiate with the market for input and market services. The group also collects service charge from members.

Dramas Disaster Recovery as a Service gaining currency: Disaster recovery as a service Dramas is an as a service model that allows a business to back up its data and critical compute network and store it in a secondary system hosted by a third party cloud service provider. The backup data and the relevant IT infrastructure hosted in a different geographical region would be pumped back to the original primary system to restore normal business operations, after the disaster. As it is a cloud based service, the Organisation does have to incur upfront costs to own the resources needed for disaster recovery. Given the rising adoption of Dramas among enterprises, market research firm Technavio estimates that the market size is likely to reach \$41 billion by 2025, a CAGR of 45 per cent during the 2020 25 period. Contours of the disaster recovery plan: Identifying works and functions of the Organisation as per priority helps the Organisation to determine how much downtime these critical and non critical functions could tolerate. Once that is done, an Organisation has to decide whether to build a disaster recovery system using on premise storage facilities or renting storage in the public cloud. While on premise storage of data has a few downsides like added cost in terms of upfront investments, and time and skill requirements, the benefit that the internal IT team will accrue from on premise storage is that they will have control and visibility of the stored data. Also, an on premise disaster recovery system will not be effective, especially in situations when a natural disaster hit the Organisation wreaking havoc on both the primary system and backup system. But a third party cloud service provider where the DR system is on standby in a different geographical region would come in handy in such situations. Thus, organizations face a dilemma when choosing between an on premise DR system and a public cloud. Therefore, some organizations are preferring to opt for a hybrid cloud model in which they store highly critical data on premise and less critical data on the public cloud. The recovery point objective RPO is the age of data that must be recovered from the backup secondary system to resume regular operations. The RPO is expressed backward in time from the moment the disaster struck. RPOs may be stated in seconds, minutes, hours, or days. For example, if the RPO is one hour, the IT team must arrange a plan for backups of data every one hour. The RPO helps the admin team to determine the minimum frequency at which the backups must be taken. Similarly, the recovery time objective RTO is the maximum time the Organisation has decided to take back control, and associate network capacity and data to restore operations from an alternate location after the outage. RPO, along with the RTO, helps the Organisation select the right disaster recovery technologies and strategies. During the COVID pandemic, the importance of a robust business continuity plan BCP has come.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-20-Test NO.-10449

To the fore moreover, several natural disasters like flooding, earthquake along with disturbing political environment government always pose a threat to the sustainability of business operations. Therefore, each enterprise with distributed workspaces across the globe should not only devise a robust disaster recovery plan but also should employ the right technology partner to get the optimum outcome. The government rejected the plea from SEBI officials asking the government to reconsider its decision, thus paving the way for further conflict. Prima facie, there reconsider seems to be very little rationale in the government decision to confiscate funds from the chief markets regulator. For one, it is highly unlikely that the quantum of funds that the government is likely to receive from SEBI will make much of a difference to the government overall fiscal situation. So the amendment to the SEBI Act seems to be clearly motivated by the desire to increase amendment control over the regulator rather than by financial considerations. This is amendment particularly so given that the recent amendments require SEBI to seek approval from the government to go ahead with its capital expenditure plans. A regulatory agency that is at the government mercy to run its financial and administrative operations cannot be expected to be independent. Any schools of political thoughts as political parties are an indispensable part of the electoral government process. In India, multi party system is functioning and all political parties are governed by a statutory set of norms. Elections are determined on the basis of relative majority of valid votes polled. In India, Election Commission of India, the apex autonomous body, empowered several natural through government article 324 of the Indian constitution, shoulders the responsibility of conducting free and fair elections in India. India adopts both, direct and indirect type of elections and thus ECI conducts elections of members of lower house of Parliament i.e. Lok Sabha and State Legislative Assemblies, government which involve people of the country directly. ECI also conducts several natural indirect elections for the Upper house of Parliament and the Office of the President of India. The provisions of the Constitution of government India empower ECI with extensive authority to conduct these elections freely and fairly. Through the enactment of the 73rd and 74th amendments to several natural the Constitution, the parliament required all states government to make their Panchayati and Municipalities Acts compliant with the provisions of the amended Article 243 of the Constitution. The State Election Commissions are headed by the chief Election Commissioners to be appointed by several natural the Governor of that particular State. According to the Article government 243 K and Article 243ZA of the Indian constitution, the State Election Commissions are vested the powers to conduct free and fair elections to Local Bodies and superintendence, direction and control of preparation of electoral rolls to several natural conduct of all elections in regular intervals to Panchayati government Raj and Municipal bodies Local Bodies. Normally, in general, the state election commissions follow the rules framed by ECI.

Delhi Police Typing-Dated-2023-08-20-Test NO.-10450

Child friendly spaces, staffed with trained personnel who can handle with utmost sensitivity and understanding disclosures of abuse within the family. Awareness about one-stop centers One-stop centers intended to support women affected by violence help in making reporting easier and support services more easily accessible, since they are meant to offer psychosocial counseling, police facilitation, legal assistance, and medical care, all at one location. But most people including people in child protection systems and sometimes even the police are not aware that these centers exist. Knowledge and use of these ensures that a child in distress does not have to go from one channel to another. OSCs also become a place where the Child Welfare Committee a statutory body meant to look at rehabilitation of children in difficult circumstances can interact with the survivor before deciding whether to place a child at an institution or send them home. For their part, the OSCs need to become gender-neutral to be in line with the POCSO Act, which recognises that sexual abuse may be perpetrated on children of any gender. The need for a sensitive judicial system Reporting of a case is just the tip of the proverbial iceberg, as the trial is a long and difficult road that still needs to be traversed. As intrafamilial sexual abuse cases carry many complexities, the judiciary needs to evolve enough to engage with the nuances of individual cases. The judiciary should: 1. Increase judicial discretion in sentencing presently, the judicial discourse, barring the odd judgment that recognises the needs of the survivor, is far too focused on punitive justice. A person found guilty is given a mandatory minimum punishment ranging from three to 20 years, depending on the offence under the POCSO Act. These mandatory minimum sentences take away an individual judge freedom to decide the quantum of punishment on a case-to-case basis after considering aggravating and mitigating circumstances. For example, for the offence of aggravated penetrative sexual assault, Section 6 of POCSO prescribes a minimum sentence of 20 years. Being in a shared household with the perpetrator is already an aggravating circumstance. This mandatory minimum sentence of 20 years takes away an individual judge freedom to decide the quantum of punishment for the perpetrator. In case someone convicted under Section 6 is a father and sole provider for the family of the survivor, this sentence may leave the child survivor in a vulnerable position for a long time, pushing them into poverty, and possibly without any family support if other family members also turn against them. If Section 6 instead gave judicial discretion, the judge would have the option to treat these as mitigating circumstances and opt to give a lower sentence. In the long run, this would create a justice system more responsive to the realities of survivors. For children who are suffering intrafamilial CSA, this could very well mean that their complaint ends up sending their father or another close relative to jail, possibly for the rest of their life. With the introduction of the death penalty in the POCSO Act, the child may also fear causing the death of their family member. Studies have already shown that these factors can dissuade the child from reporting or supporting the trial in case of intrafamilial CSA. Rethink the requirement of mandatory reporting The mandatory reporting requirement, which makes the non-reporting of an offence

Delhi Police Typing-Dated-2023-08-20-Test NO.-10453

And counselors in whom a survivor might confide. Given the nature of the abuse, there are cases when a survivor may not want to approach the legal system. Mandatory reporting creates a situation where a survivor would reach out to a qualified doctor or a counselor because of the fear of being pushed into conversations with the police and the court when they are prepared. 3. Expedite the trial process The POCSO Act mandates courts to record a child testimony before it within a month of aching cognisance (the beginning of the trial after the police have submitted the final report of their investigation) and allows one year for completion of the trial. In a case where the accused is a family member, it is essential that the testimony of the child and other witnesses from the family is recorded at the earliest to prevent continued animosity, and to ensure that the child does not get pressured to change their account. The delay in trial also increases the vulnerability of the child or other witnesses as other family members may try to harm or coerce the witness to turn hostile. For example, a mother who wants to support her child case may be threatened by the family of the father who is accused in the matter to change their testimony in the father's favor. As far as legal assistance is concerned, the state and district legal service authorities provide legal aid counsels to complainants in need, although no schemes or programmes cater to setting up panels of victim advocates provided by the POCSO Act. It also becomes important to sensitise the victim advocates in intrafamilial cases to represent the needs of the victim before the court and not that of any other family member or guardian. A system for the welfare and rehabilitation of children The POCSO Act lays out a number of provisions to support the welfare and rehabilitation of child survivors of sexual abuse, including interim and final compensation. However, bureaucratic obstacles often hinder the process. For example, the time taken in deciding the quantum of compensation, transaction limits on bank accounts of minors, and the police involvement in the verification of a child's documents delay the disbursement of the money to the child. Some of these obstacles can be overcome by keeping in constant touch with the survivor's family with the help of a support person appointed by the Child Welfare Committee. This person, generally from a civil society organisation, becomes a bridge between the survivor, the welfare committee, and the court, helping the survivor navigate the judicial system. In Delhi, where this model has been effectively implemented, the court summons the support person to file a rehabilitation plan, covering parameters such as health, education, and physical and psychological safety. They continue to file regular reports with the court as well as the committee to keep both the bodies aware of the rehabilitation of the child. If a survivor does not receive the compensation, a support person can communicate between them and the court and facilitate the process. Further, in cases where there is a threat to the safety of the child or a hindrance to the child's education as a backlash to the offence being reported, the support person can ask the court to step in to ensure the safety of the child's witnesses by ordering witness protection, and or interim compensation for continuation of education. If a child wishes, the support person can also sit with them and other vulnerable witnesses during t

Delhi Police Typing-Dated-2023-08-20-Test NO.-10454

In order to understand the term in question Dharmic Nationalism, it is but necessary to understand the roots of both terms separately. The Dharmic is derived from Dharama and Nationalism is an offshoot of Nation. While Dharama is an essential attribute or fundamental nature of a thing or object or a human being or anything other whatsoever, the Nation is derived from the Latin term Natus or Natio which stands for a particular race of human-beings living on a particular place; and that makes the human association occupying the territory thereon a particular social as well as political community, characterized by similarities of social customs and conventions, historical traditions, language, food or eating habits, religion and religious practices and rituals, group celebrations and festivals etc. similarity of culture and its manifest attributes. As a result such commonality of ideas and ideals, behaviors, thoughts or thinking process etc. consolidates their social and political organization to make it a nation. On the other hand, Dharama is not common for all objects or human-beings or any other thing as each has its own distinctive character or feature. Because the dharama of fire is not same as that of water or air. Conceptual distinction However a particular group of objects or things viz. all fire or all air has a common character. But here in the context of social or political phenomenon, Dharama indicates towards Religion and Dharmic stands out as Religious i.e. pertaining to a religion. Hence Dharmic Nationalism signifies a particular orientation of a nation which is directed towards a specific dharama and its distinct preaching as well as goals. Thus by upholding a particular religious principle and its ideals, a distinct socio-political community defines its larger social, economic and political goals and objectives in consonance with those religious principles. And that is usually characterized as Dharmic Nationalism in reference to that political society. In fact, Dharmic Nationalism has become a kind of fascination and also a noble goal for most of the sovereign states in Islamic world where they have proclaimed Islam as their political religion or state religion. Now Islamic statehood is their socio-political identity with theocracy as their form of government, instead of being classified as a liberal, progressive, secular and democratic republic. In the same way, Hindu nationalism, albeit in reaction to Islamic radicalism and Muslim fundamentalism, has become a force to reckon with but that is confined in only few parts of India unlike Islamic nationalism which has encompassed almost the whole world. Also there are few examples in the past to this theory where a specific ideology viz. Nazism or Fascism or Capitalism or Marxism or Communism had become a noble gospel in the form a religion though communism disapproves the term religion or religious in its doctrine or in its ideal political society. Ideology as religion Thus a particular ideology becomes a kind of religion or the ideologue becomes, if not a god, but at least a demi-god in all its essence, in a political society or state and that may be characterized in all likelihood as an example of Dharmic Nationalism. Because in such kind of a political society, the ideology it upholds becomes a guiding star to be accomplished by the state machinery as well as the entire society. As Mussolini used to say that, Everything within a state and nothing outside the state, and this goal

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-21-Test NO.-10455

And thus function as territorial branches. But, if deeply observed and analyzed, there are many remarkable differences between both the units as the state commissions government enjoy less autonomy and authority to overpower political interferences. Despite all such dissimilarities, these institutions have been endeavoring continuously to ensure the primary government objective of conducting free and fair elections and sustain the democratic nature of the Nation. In recent past, there have been growing voices to induce the reformative overhaul of the electoral system and machinery. Specially, there have been much dissentient on vague and foggy liability government sharing between ECI and State Units. The state election commissions are more prone to deviations due to procedural adaptations as a result of the frequent opportunistic government turn around by state governments. Let us take a current instance of the Local Bodies Elections in Madhya Pradesh. The last elections were conducted in 2014. Since, then the elections governments were being lingered on due to various reasons. In 2018, the new state government announced that the chairpersons of Jan pad Panchayati, Zola Panchayati and Municipal Bodies will government be elected by the members of the respective body and not directly by people. They also conducted a fresh delimitation for these elections. Unfortunately, the government lost its majority in government Assembly and the new government denounced the decision of predecessor. This implied that the Members and Chairpersons of the local bodies will be elected directly by people. After a period of few months, the government reviewed its own decision and announced that Chairpersons government of Municipal Councils will be elected indirectly i.e. through the members, except Municipal Corporations, where the Mayor will be elected directly by people. The motive behind the decision government of the government is not an issue of discussion, but the hasty and unreasonable step aroused many government legal questions. The Age limit for the member of a municipal council is 21 years, but 25 years government for the chairman. Let take a hypothetical situation, where all the elected members are aged less government than 25 years. In the same way, a gram Panchayati of Newark district was left uncontested as the village does have any SC domicile, while the seat of the serpent was reserved for Schedule casts. While going through such instances, the question creeps whether these constitutional institutions government like Election Commission are helpless. Do they have any authority to recognize such issues However, in some issues; SECs have done a remarkable work as in adaptation of a more advanced government EVM which may facilitate an election for multiple posts simultaneously. Their EVM has a portable memory unit known as DMM i.e. detachable memory to module, which is missing in ECIs government machines. MPSEC has also innovated a new Booklet and a leaflet which eases the documentation process for the polling authorities. Undoubtedly, State Election Commissions are working nicely as far as the procedural practices are manifested, but they lack in the will power to resist the government opportunistic politics.

Delhi Police Typing-Dated-2023-08-21-Test NO.-10456

Process is punishment an expression we've become all too familiar with, was most recently put to use by the Chief Justice of India to describe the existing crisis in the criminal justice system. The Supreme Court also passed a judgment responding to this very sentiment. It issued a series of guidelines to grapple with the problem of unwarranted arrests, incarceration of undertrials and infringement of personal liberty. Droupadi Murmu may have scored an easy victory in the presidential elections but her long journey to Rashtrapati Bhavan is an inspirational story of overcoming adverse circumstances and personal setbacks. Just as her political career hit a high note after terms as legislator and Odisha minister, she faced personal tragedies: she lost both her sons and husband in quick succession. The stint as Jharkhand governor brought her to the limelight, especially when she returned two bills amending tenancy laws passed by the Raghubar Das government, which had raised fears of alienation of tribal lands. India electing its first Adivasi president is also a tribute to how it is constantly democratising in terms of diversity in political representation. With scheduled tribes forming nearly 9% of the population, a president from the community should have emerged sooner. BJP deserves credit for recognising this lapse and rectifying it by nominating a strong, deserving woman for India top, though largely ceremonial, constitutional post. Murmu candidature has also helped BJP politically by sowing disarray in opposition ranks and endearing the party to tribal belts, pan India. The cross spectrum political recognition accorded to Murmu should also progress towards a greater political acknowledgment of the Adivasi community developmental backwardness. Murmu village being electrified now despite her lengthy public life reflects the magnitude of this challenge. Inherent in this is a geographical challenge too, because Adivasi heartlands in every state are far from state capitals and located in forested, hilly or remote areas. Given the federal system, chief ministers with their proximate control over bureaucracy have a key role to play here, even as Gol conceives schemes like the Aspirational Districts Programme. The NFHS 5 survey that divided the 27 lakh sampled households into five equal wealth categories quintiles found that 71% of Adivasi households fell in the lowest two wealth quintiles against 49% of Dalit and 36% OBC households. State governments UDISE data indicates secondary school level dropout rates of Adivasi children 21% are double the general category. ST students comprise just 5.6% of total enrolment in higher education, much lower than their share in the population. Given unequal wealth distribution, education can be the great leveller for India poor. Let celebrate Murmu but giving Adivasi children a chance to succeed is one of India's great unfinished tasks. Amendments to rules governing digital intermediaries, first notified in February 2021, are likely to be formalised soon. These come in the backdrop of an ongoing case in the Supreme Court. Gol has challenged the interim orders passed by different high courts on specific provisions of the 2021 rules. Current amendments.

Delhi Police Typing-Dated-2023-08-21-Test NO.-10458

Whittled either All of a sudden, an all guns blazing Open Season has been declared on the Asiatic lion, a highly protected species of which only some 600 survive in the Gir wildlife sanctuary in Gujarat. Conservationists and animal lovers, however, need not be alarmed for the target of this war of words is not the living lions of Gir but the four stone lions atop the enlarged replica of the Sarnath Asoka Pillar designed to grace the new, Rest 1,250 crore Parliament building in New Delhi. The lion pillar, which was adopted as the official national emblem of the Indian Republic in 1950, has triggered yet another round of contention between the central government and the opposition, with Congress and others claiming that the replicated felines have been made to look more aggressive in appearance, than the originals. Rebutting such allegations, the government has said that the seeming difference between the replica lions and the originals is the result of a trick of perspective caused by the fact that the new pillar is much taller than the one of which it is an exact copy. While skeptics might dismiss the issue as much to do about nothing, others might see it fitting in that the dissension symbolises the spirit of debate which is essential to the asking shop of Parliament. Indeed, the symbolism of the lions atop the Asoka Pillar or, rather, Pillars, as there are 20 of them still surviving, has given rise to differing points of view. The Mauryan emperor, Asoka, who reigned between 268 to 232 BCE and was the grandson of the dynasty founder, Chandragupta, erected the pillars after repenting the bloodshed of the battle of Kalinga. Renouncing violence, he converted to Buddhism. The pillars were inscribed with Buddha edicts and were called Dharma Stambha, Pillars of the Dharma. When the Asoka Pillar was adopted as the national emblem to commemorate the founding of the Indian Republic, the lions were commonly interpreted as representing power, courage, confidence and pride. The current row over the new lions is whether or not they have been made to look more militant than the originals, thereby undermining Asoka's belief in ahimsa. The ruckus is likely to continue with both sides arguing might and main in their refusal to take the matter lion down. Socrates once said, I am like a midwife. I will bring out what is hidden in you. This is a tremendously apt definition of education. Fortune and misfortune are both hidden in man; nectar and poison exist in him; God and the animal both dwell in him. And this gives man the glorious freedom to choose whatever it is he wishes to become. The right kind of education will be the one that shows him the path to godliness. But it must be remembered that when a man does not strive towards the achievement of a better life, he automatically sinks to a level even lower than that of the animal. The fact that a man.

Delhi Police Typing-Dated-2023-08-21-Test NO.-10459

Has been born is enough to achieve this kind of fall. It is always easy to slide down; it requires work and constant application of oneself to rise. It takes effort, courage, determination. Rising upwards is an art, the greatest art in life. The aim of an authentic education must be to teach this art, to teach the art of becoming one with God. The goal of education must be life itself, not merely providing instruction in how to earn a livelihood. In itself this means nothing. It is often mistaken as the aim of education The means of a man livelihood is only the existence of his body, and education will only be alive when it teaches life itself. To teach life is to teach knowledge of the self. A man may know everything else, but if he is unaware of the existence of his self then all of his knowledge is negated. Of what use is knowledge that does not have the self as its center? The illumination of the whole world is useless if the self is in darkness. To begin this ascent to consciousness, the first step must be in the direction of self knowledge. The extent to which a man begins to know himself is the extent to which his animality declines. The perfection of self knowledge establishes a man in God. Only in that attainment is there fulfilment. Each man carries the seed of that supreme development, of that ultimate perfection within him, and unless those seeds are fertilised, he will remain barren. His situation is not unlike that of seeds sown in the earth. Only when they are watered and cultivated do they sprout; only then do they poke through the soil and reach the light of the sun. And the sense of anxiousness, the feeling of restlessness that exists between the sowing and the harvest is an excellent sign, because only after restlessness can there be peace. And education can intensify, sharpen this wonderful time of restlessness in young people. When education moves towards real knowledge and real peace, a new man and a new humanity will be born. Our future depends on this. The fate of mankind is in the hands of education. If man is to be saved from himself, it is essential that he be reshaped and recreated. If this does not happen, the animal in man will destroy him. The only escape from this nightmare is for mankind to establish itself in God. Tea is globally one of the most popular and the lowest cost beverages, next only to water. It is consumed by a wide range of age groups in all levels of the society. It is said, more than 3 billion cups of tea are consumed daily worldwide. Tea is thus considered to be a part of the huge beverage market. India is the second largest producer of tea, the largest consumer, and the fourth largest exporter in the world, after Sri Lanka, Kenya and China tea.

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-21-Test NO.-10460

Is indigenous to India, and is a major foreign exchange earner & contributor to the GNP of the country. It is worth noting that the tea estates employ more than 50% women workers. The range of teas offered by India, from the original Orthodox to CTC Crush, Tear, Curl, Green Tea, the aroma and flavour of Darjeeling Tea to, the strong Assam and Nigeria Tea, remains unparalleled in the world. Export performance of tea industry It is found from the data of the Tea Board of India for the period, 1950 to 2016 that, the proportion of Export to Production of Tea in India, which was 72.30 % in 1950, decreased to mere 17.52 % by 2016, whereas the proportion of Domestic Consumption of Tea to Production of Tea in India, which was 27.7 % in 1950, increased to 82.48 % by 2016. Gradual increase in domestic consumption of Tea in India thus explains the gradual decline in Export of Tea by the country. Tea Board of India initiative to encourage more tea plantations in new areas Realising the importance of Tea Sector for the economy, in a bid to encourage more tea plantations in new areas, Tea Board of India, vide a notification, dated, August 08, 2021, has suspended the operation of seven sections of the Tea Act, 1953, namely, section 12 to 16, section 39 and 40 of the Tea Act, 1953 with effect from August 23, 1953 until further notice. As such, from now on, permission will not be required to plant tea anywhere in the country. Encouragement to mini & micro factories by small tea growers Way back in 2013, the Tea Board of India in its meeting held in Tezpur, Assam, had given its approval to setting up of mini and micro factories by small tea growers within their plantation areas. The Board had also decided to provide subsidies to improve the quality of tea made by them, by reducing transportation time to retain garden freshness, improving plucking standards, and by ensuring less handling of green leaf from small tea gardens. The meeting also approved setting up of factories by small tea growers without registering themselves under Tea Marketing Control Order TMCO, 2003. The small tea growers are thus able to set up their own factories, only by obtaining a certificate from the Tea Board, and are able to sell their teas through auction centres or directly from their factories. Reportedly, so far, more than 300 mini tea factories have emerged in India, making types of tea like, hand made organic tea and machine made organic tea. The tea industry considers these mini tea factories exotic, with a low production average of 1,000 kg to 10,000 kg per year. In addition, according to Experts, in the emerging circumstances, particularly in the post Covid Scenario, governments need to rethink existing bilateral and multilateral treaties, and enter into trade agreements, especially with the countries that are less impacted. Also, both Centre and the State governments need to.

Delhi Police Typing-Dated-2023-08-21-Test NO.-10463

Provide firm support to those who are engaged in tea production, large or small growers, by providing a special stimulus package in the interest of the stakeholders, in particular & the economy in general. Us Russia relations have been on major downslide since 2016, when many in the us accused Russia of influencing us presidential elections. In order to counter growing Russian influence, the United States senate passed countering America adversaries through sanctions act routing. Erstwhile sanctioning was usually through executive order and passing of routing converted that into a law that would expand the punitive measures that the us government could take against countries that traded with so called adversaries of the us, namely, Russia, Iran, and north Korea. Former us president trump, however, criticized routing on the grounds that it limited the president powers and ability to negotiate with countries on a case to case basis. He also predicted that routing would bring us rivals, challengers, and opponents together. In particular he predicted that routing would result in closer ties between china, Russia, and north Korea. Many were surprised that the use did not invoke routing countering America adversaries through sanctions act provisions against India in 2018 when it signed a multibillion dollar pact with Russia for procurement of the s 400 missile defense system. With increasing complexity of global relationship in wake of Russia Ukrainian war, routing is again in news. In march 2022, use State department assistant secretary of state for the bureau of south and central Asian affairs, Donald lug, categorically stated that the bidden administration will consider routing against India if it does not distance itself from Russia. He also desired that India should take a position against Russia. However, the results of these pressures were counterproductive. Precisely, India crude oil imports from Russia increased 50 times growing from about 0.2% to 10% now. Additionally, India, Iran, and Russia have now further rejuvenated their commitment to development of nonstandard trade routes for ensuring secure and timely supply of traded products. International north south transport corridor insets a 7200km route agreement between Russia Iran India directly brings traded products from Moscow through astrakhan port via Caspian sea into Iran via Baku and then by rail road to either Bandar Abbas port or chabahar port and finally arriving in Mumbai in about 12 days. This 12 day time period is expected to be reduced to half with augmented security against terror groups such as iris. Also, this agreement has been ratified by most of the central Asian nations as well. While doing so, India has maintained that its trading with nations is purely based on getting best outcomes for its citizens and that it remains committed to global peace. Changing global dynamics are recognized by the us and therefore the us has not only reversed its position against India but also further demonstrated more trust in the Indian government in an attempt to forge closer ties with India. This week, the us government passed a waiver.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-21-Test NO.-10464

To sanctions under the countering America adversaries through sanctions act rooting for India. In other words, the us government urges the president to no longer sanction India for trading with Russia. This waiver to rooting is a significant demonstrable evidence of growing stature of India. Specifically, following are major interpretations of this waiver that reflect the aforementioned contention the us government recognizes that India is special and she cannot be treated like any other nation. Waiver demonstrates that the us government recognizes that India cannot be pushed over and the best way to deal with India is treat it with respect and equality. 2 the us government recognizes that India is its best bet for regional stability in central Asia, middle east, and south east Asia. Taking a position against India would be detrimental to the entire region government recognizes the aggressive intent of china and the threat it presents to global peace. Particularly, the us government has expressed that china is the aggressor in the indo china conflict. China has been making a stronger with India is treat it with respect and equality. 2 the us government recognizes that military presence in the Indian ocean that led to the us leaning towards India with the signing of lemon, logistics exchange memorandum of understanding for cooperation in the Indian ocean the us government has alluded to the fact that democratic set up results in fostering innovation, creativity, and progress. Also, use and India typify such democratic set up. 5 finally, the us government recognizes that collaborations with India are vital for keeping ahead of china. China has invested heavily in ports in many countries: Myanmar, sir lance, Pakistan, use, Maldives, among others to dominate the trade in the Indian ocean, which accounts for nearly 75% of the global trade. Only India can create a balance in this region which is being contested by china and the us. Rooting waiver is a signal for enhanced collaboration for joint development of key products and their international trades. While a significant and important step has been taken by the us government on account of India importance for global peace and progress, it needs to be seen whether this step results in an outcome. The outcome will take some time as there are several procedural issues to be dealt with before, the us senate will have to discuss it and take it up for votes on it. After a favorable vote, the president of the united states will sign the bill for it to become a law. Hence, the next few months will demonstrate whether the with India is treat it with respect and equality. 2 the us government recognizes that India is its best bet for regional stability in central Asia, middle east, and south east Asia. Taking a position against India would be detrimental to the entireus is truly committed to a special relationship with India or this just another overture to dissuade India in favor of the us and against Russia.

A humanitarian crisis awaits Assam whether the final is published on July 31 or after. In the to the final publication, case after case has emerged of persons wrongfully left out of the list. The has left no group out of its sweep, be it Marwari or Binaries from elsewhere in the named in the two lists belong to these two groups. Yet, the rationale of the Centre and State in seeking a deadline extension, as found in their submissions in the Supreme Court, betrays an exclusionary bias. The joint plea time to conduct e recertification process in districts bordering Bangladesh and the rest of the State to quell a growing perception that lakhs of illegal immigrants may have slipped into the list. This the State Coordinator reports to the apex court suggesting that up to names have been revived during the process of disposal of claims It has helped that the Central government keeps holding out the prospect of unleashing a nationwide to detect and deport illegal aliens, when it has no index to base such an exercise on the 1951 register was exclusive to Assam. The accent should be on inclusion, not cannot pander to the suspicions of a majority without giving the excluded access to due process. And to provide him an open and fair trial. Pakistan leadership may choose to publicly the fact that they did annul the trial or direct a release. Operations by investing in new technologies and other requirements to upgrade market infrastructure. This can affect the technologies health of India in the long run. In the larger picture, this is not the first time that the government at the Centre gone after independent agencies. The Reserve Bank of India and the National Sample Survey Office have come under pressure in recent months, and the latest move on adds to this worrisome trend of independent agencies being subordinated by the government. The Centre perhaps believes it can do a better job of subordinated regulating the economy by consolidating all existing powers under the Finance Ministry. But such centralisation consolidating of powers will be risky. Regulatory agencies such as need to be consolidating given full powers over their assets and be made accountable to Parliament. Stripping them of their powers by subsuming them under the wings of the government will affect their credibility. Sudan ruling military council and representatives of the pro-democracy movement have signed a power-sharing agreement, signaling pro-democracy that its disputed transition to civilian rule is on track. Ever since President Omar al-Bashir falls in April amid anti-regime protests, the military leaders who seized President Omar power and the protesters have been on a confrontational path. The protesters demand for an immediate transfer of power to a civilian transitional government to be followed by free and fair elections was resisted by the powerful, transitional government deeply entrenched military. As the stand continued, a paramilitary unit attacked protesters in Khartoum on protesters June killing at least people. But protesters still did give up.

In the face of strong resistance to prosecute crimes committed in the wars in Iraq and Afghanistan, many African nations feel they were being selectively targeted. In an unjustified move, Burundi African has quit the ice, as also the Philippines. Arguably the greatest challenge today to enforce accountability transcending domestic and regional African borders could be linked to the surge of nationalism around the world. The genesis of the Rome statute, adopted in 1998, made a modest beginning to ensure that serious atrocities committed by elected representatives do not go unpunished. The refusal of major states to bring themselves under the court jurisdiction African has dampened such hopes. It is an irony that countries this year are marking the 75th anniversary of the Bretton woods institutions. But the new African world order they sought to usher in, underpinned by a rules based system of global governance, is facing its biggest challenge yet. Mahuadanr is a remote tribal village about 300 km from Ranchi, Jharkhand capital. The market closest to the village is a few km away in African lakadchowk, where the centre of attraction on a rain swept afternoon is a giant led screen mounted on a truck. The screen runs small video clips African in the local language as well as in Hindi on how the double engine growth of the narendra modi government at the center and the Raghu bar das government in the state has taken Jharkhand to new heights. Two days before prime minister narendra modi visit here to participate in international yoga day celebrations, hundreds of people gather in front of the screen to listen to how the center ayahs and yoga programmers African can cure ailments. While people enjoy the spectacle, they don appear to be interested in the message. The conviction of the Congolese warlord Boscov ntaganda is cause for cautious optimism that perpetrators of serious crimes cannot escape justice, even where they have evaded domestic laws. Ntaganda, known as the terminator, was pronounced guilty of 13 counts of war crimes and five of crimes against humanity by the international criminal court. These relate to the 2002 03 ethnic conflict in the democratic republic of Congo. After a 2006 indictment by the Hague court, it took seven more years for him to surrender and months more before the trial could start. The conviction follows the ice 2012 sentencing of Thomas lubing, the first to be pronounced guilty under the Rome statute, also pertaining to atrocities during the Congolese conflict. The verdict in this latest case is a breakthrough for the prosecution, which has come under increasing scrutiny. It has even been forced to abandon high profile trials involving heads of government owing to the intimidation of witnesses and tampering with evidence. In 2014, the ice dropped charges of crimes against humanity on Kenyan president unhurt Kenyatta, the first sitting president to appear before it, relating to the death of hundreds in the 2007 post election ethnic violence. The judges held that the Nairobi.

Delhi Police Typing-Dated-2023-08-21-Test NO.-10467

Was believed to be based on pure Aryan blood, to which he himself was a self-proclaimed representative, and hence those not belonging to this class of blood specification had no right to life. Thus Nazism that he projected became the self-defined state religion in the then Germany. To substantiate the meaning further, Marxism calls for the proletariat revolution to be accomplished by the workers of the whole world, by uprooting the long-entrenched capitalist society into a classless and stateless society of workers alone, based on perfect equality and free from all kinds of exploitations and suppressions. That became the north star of a Marxist state or a pious goal to be aimed at by all those people living in a communist state. Thus Dharmic nationalism may largely be considered as a typical offshoot due to intense intermingling and consequent churning of religious ideas and ideals with that of socio-political goals embodied in a political society as a nation-state. While not conforming to the actual meaning of Dharma, the Chromic tradition today in the world has confined itself around socio-political and economic discourses, as a renowned German sociologist Max Weber had categorized Religion or Dharma as those activities which are related to economic aspects. But above all, what is needed today is a liberal, progressive and democratic humanitarian order in the world, based on Equity, Equality and Justice, that the Peace Treaty of Westphalia had raised in its clarion call as long back as in 1648. to the child becomes even more crucial. It reduces the chances of a survivor revictimisation and aids in their rehabilitation. However, this model has been implemented uniformly across all Indian states. This lapse can be attributed to many reasons including the fact that there is no clear financial provision that law or policymakers have made for ensuring that these survivor-friendly systems are actually in place. The POCSO rules say that support persons can be appointed using funds from the Juvenile Justice Fund a state-level fund that every state government is to institute for the welfare of children needing care, rehabilitation, and support. But this provision appears to be on paper currently, with both the Supreme Court and multiple high courts pulling up state governments for non-operationalization. Survivor-centric justice in cases of interfamilial abuse will never be possible without a supportive legal system that focuses on rehabilitation, values listening, and nuance, and ensures implementation of laws on the ground. The child does need grand pronouncements they need a system that helps build a safe space for them, is interested in what they have to say, and aids them build a life beyond the trauma. When the great artist Anish Kapoor finally had the chance to do a show in India in 2010, I remember asking him what took him so long. He had been struggling to come here with his humungous installations for at least a decade, till it took both governments of the UK and India to sign an MO in order to make his show happen. Why, you may ask? Because no space could afford to install the size of his art pieces. Parts of the NGMA gallery were dismantled and cranes were used to plonk the works in. It still difficult to find a permanent cultural centre in India which can bring in international artists and performers who require huge gallery spaces, mutli-layered set changes on stage, smart lights and impeccable acoustics. Which is why I am glad t

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-21-Test NO.-10470

Parking, gourmet cafeterias and air conditioned lobby spaces, you walk in to the 2000 seater, The Grand Theatre, to enjoy the cult musical, West Side Story. It was fascinating to notice split-second changes in the set with one huge single prop of a building on wheels which transformed the stage into the back alley of New York. This single prop featured the famous balcony where Maria and Tony love blooms. Turn the wheels around and you see the tailor shop where Maria works. Roll open one section of this building and it turns into the drug store where Tony and his friends hang out. One can hear the softest of whispers by the actors. And their gentle breaths between the lines as they sing the timeless songs like night, Maria and America. The virtual acoustic system helps accentuate the soul of this Broadway show, which is its music. It comes alive with a 20 member LIVE orchestra sitting inside a cozy pit in stage. Invisible to us but making their presence felt, with even the slightest of a ring or a ting! The charming pianist looked up at me and smiled as I waved out and said what a brilliant team they are. If a musical is enough for one day, the multi-cultural space can also house cutting edge shows in visual arts under the same roof. My check box to see one our greatest living contemporary artist was ticked when I walked across the NMACC lobby and entered a dark room lit up by tiny, neon cultured balls and mirrored walls. It is the first time ever that India has a show by Japanese artist Yayoi Kalama. The Infinity Mirror Room has a viewing time of only one minute thirty seconds. Its a condition laid down by the artist who plays with our minds and visual senses, fully confident that we will be back for another round soon. Once your mind is acclimatized to the funky colors of Kalama, the Art House across the staircase is ready to welcome you to a photography show by the internationally acclaimed creative studio, Toilet Paper. It was heartening to see heavy footfalls for art where families, children, celebrities, common man and connoisseurs alike were enthused by their new series titled Run As Slow As You Can. There are endless walls and halls of over-sized quirky, surreal images of humans and animals that break the mound of established silos of color themes and visual structures. This is the only place where my sulfide got photo bombed by actress Kareena Kapoor because even she wanted to have a fun day with her kids, diving into a pool of plastic bananas and posing in front of huge cut outs of frog-burgers and rain boots worn by twisted steel pipes! Adam Smith father of modern economics, wrote Theory of moral sentiments 1759 and The Wealth of Nations 1776 which are complementary. In Moral Sentiments, Smith highlights the philosophical, psychological and economic investigation of what it means for human beings to have sympathy for each other on the ability of a human being to understand the suffering or moral feelings of another. Moral philosophy in sympathy implies empathy, the emotional connection and interconnections humans feel for other beings. Humans make decisions and choices based on self-interest. This self-interest has wide connotation and is not akin to selfishness as most economies practice, since it includes sympathy, mutual sympathy and the fellow feeling with others who matter for us. Therefore Adam Smith self-interest seems to be partially adopted by economies world over, discounting his moral sentiments. Spectator Smith uses

That shall be the goal. Liberty is important for growth as it allows for self-interest, leads to the social good, in the invisible hand process. Given freedom and security, every individual wants to better his own condition carrying on the society to wealth and prosperity. Division of labor In Wealth of Nations Smith highlights that capital accumulation, division of labor go together, leads to more output, more savings, learning by doing and specialization, and buying machines. Greater division of labor leads to larger markets, increases in trust and good Government. Justice in formal social norms and formal laws and rules that protect the rights to individuals to offer freedom with no harm to life, liberty or property as moral foundation of living together in civil society. Smith Division of labor is not applicable in agriculture since operations are carried out in a sequence unlike in industry where operations can be attended to simultaneously. This is especially so in developing countries which are largely dependent on agriculture for their income and employment. Society without charity is unpleasant According to Smith, Society without beneficence is not a pleasant society. Government should protect rights and provide enforcement rules to uphold system of justice. Man is inherently a social being and as human, strives for sympathy and mutual sympathy disciplined by spectator whom we make as impartial as possible. Vedas proclaim Vasudaiva Kutumbakam Sri Rudram from Taittireeya Samhita of Krishna Yajurveda has 11 stanzas of Namaka or prostrate to god in glory of Rudra omnipresent in admiration reverence of benevolence malevolence and 11 stanzas of Chamaka as prayer to Rudra for obtaining all materials services grains, pulses, milk, good environment, sound mind desirable for all in the world. There are salutations to all irrespective of caste, creed, race, position, age, sex, gender even including those who teach robbery Thaskaraanam pathaye namo as god is believed to manifest in each and every individual. There is a genuine spiritual feeling and respect to life of all beings proclaimed in the Vedas with absolutely no fanaticism such as elimination of those who do not believe in a belief or dogma. The second stanza anuvaka of Chamaka, has the mantras such as mahima cha mey make me great by being wealthy, vittham cha mey provide me money for wealth accumulation, bedlam cha mey make me rich after wealth. The entire third stanza anuvaka is about prayer for materialistic wealth praying for happiness, to be auspicious, attractive, conducive for welfare in physical as well as metaphysical world. It prays for dwelling house, purchase of cattle, plough in agriculture, medicine for health, as in the mantra drained cha mey, meaning grant me money for all desires. Therefore, there must have been a system of money in the Vedic period due to the mention of Vitim and Drained. These are pointers to Vasudaiva Kutumbakam, all in the world belong to one family further elaborated below. Vedanta Isha Vasya Upanishad The Ishavasya upanishath OM Isha Vaasyam Idam Sarvam God created this Universe and hence pervades in everything as omnipresent Yat Kincha Jagatyaam Jagat God exists in all living non-living, thus, oneness in all is crucial sarvaathma bhava Thena Tyakthena Bhunjeethaa therefore enjoy rejoice with a sense of tyaga or renunciation to protect yourself appreciating Omnipresence Maa Grudhah Kasya-svit Dhanam by not grabbing or holding on to anyone wea

Government had not acted in good faith, as crucial evidence had been prosecution. Fatuous bensouda, the ice chief prosecutor who has been in the midst of some of these reversals, described as regrettable and troubling a majority appeal decision last year. That ruling acquitted jean Pierre Bemba, a former dry vice president, who was in 2016 convicted of war crimes and handed an 18 year sentence. In January, Laurent gabbro, former president of Ivory Coast, was acquitted of crimes against humanity. As far as i am concerned there is no rescheduling of the assembly session and congress party will have to give the name of the leader monsoon of opposition by Monday, Mr. Patnekar said. He said the new ministers will have to study their respective portfolios before replying to the questions in the house. Monsoon session will end on august 9. Few weeks before Baleshwar siren, 87445 died, he sold the last of his belongings, a plash tree, for one and a half kg of rice. His ration card was cancelled in 2022 for food grain under the public distribution system (pads) since then. Human rights activists claim that siren, from monsoon mahuadanr village in duma district of Jharkhand, died of starvation on November 11, 2021. The government denies this. Jain kick and his wife reside hombre live in similar conditions next door. The couple has no ration card and has not received any food grain under the pads. A few days ago, they sold a chicken that was bred in monsoon their backyard to buy kg of rice, which they ate with the paste of a wild fruit. There is no telling where the next meal will come from. Siren, kick and hombre had priority household cards that were later cancelled. Under the national food security act, 2013, the pads ensures 5 kg of food grain per person per month to those who hold these monsoon cards. Anthodia families, or the poorest of the poor, are entitled to 35 kg of food grain per family per month under the act. These people are not exceptions. There are dozens in the village who claim that they are not receiving food grain under the pads. Others monsoon who do receive food grain don have a ration card; they have a ration card number scribbled on a piece of paper. It is on the basis of this that they get their food grain. Days after 10 congress males in goal joined the bop, chief minister primed savant on Saturday reshuffled his cabinet, dropping three members of ally goal forward party (gap) and an independent legislator as ministers. Michael lobo, who resigned as the deputy speaker of goal legislative assembly, and three of the males who had earlier this week joined the bop chandrakant kavlekar, Jenifer monserratte, Philip nerd Rodrigues were sworn in as new ministers. Goa governor radula shah speaker administered the oath of office and secrecy to the new ministers at a ceremony held at raj haven in the afternoon.

Mr. Savant said that four existing ministers deputy chief minister Vijay sardesai, water resources department minister and revenue, Mr. Savant had inducted mg breakaway male Deepak Mr. Savant speaker had said that the decision was taken as per the directions of the bop central leadership. With the congress males joining the bop, the party strength has increased to in the 40 member house. The gap, a regional party, was instrumental in forming the menorah paprika led government in. Gap president and deputy cm speaker Vijay sardesai had said that they were hoping to resolve the crisis with amicable solution. Also read goal forward party is part of nude and had joined the bop led government after talks with the national leadership of bop Mr. Sardesai had said. The present state bop leaders were not part of the speaker discussions then. As such we will take appropriate steps only after talking to leadership at the center he had said. Speaker of the goal legislative assembly Rajesh patnekar on Saturday will have no bearing on the schedule of the monsoon session of the state legislature, set to commence on Monday. England is playing on familiar terrain and has the backing of its enthusiastic fans. Skipper eosin Morgan, himself an attacking player, has a strong top order in openers Jason Roy and jenny Barstow with joe root stepping in at three. Ever since recovering from a sore hamstring, tick tock Roy with a strike rate of has been sensational and there is all rounder ben stokes in the mix and speedsters Joffre archer and Chris wakes head line a probing attack. From the opposition, New Zealand is expected to mount a strong counter. It has a supreme batsman and crafty leader in Kane Williamson. He and senior ross Taylor have to shepherd the innings while a clutch of astute seam and swing bowlers helmed by bolt can tick tock test the very best. England has the edge but new Zealand, as it showed against India, can punch above its weight. That India demand for total material will double by 2030 at current rates of growth. Plastics may be less expensive than other inputs in manufacturing, but recycling them into new products extends demand life and provides a substitute for virgin material. Keeping them out of the environment reduces clean up and pollution costs. Unfortunately, in spite of legal requirements, municipal and pollution control authorities fail to see this and mostly pursue business as usual waste management methods. Recyclable waste is rendered useless when it gets mixed with other articles. Online retailers have not felt compelled to take back the thousands of polybags, plastic envelopes and air pillows used to cushion articles inside cardboard boxes. This is in contrast to more developed markets where they are trying out labels on packages with clear recycling instructions. These companies can form waste cooperatives in India. The ice world cup awaits its Sunday climax with England taking on new Zealand in the final at lord. However closer.

Delhi Police Typing-Dated-2023-08-22-Test NO.-10474

Home, disappointment lingers over India exit at the last four stage. It is a conclusion that has shadowed the men in blue for a new Zealand while as even in the 2015 edition when Australia and new Zealand were the cohorts, India lost to the former. In the latest championship, it was new Zealand that stunned viral kohl men at Manchester old Trafford in the semi-final. India was one among the title favourites and it enjoyed a red hot streak studded with seven wins besides a loss to England and a washed out fixture involving new Zealand. The league was topped with 15 points, and its top order led by opener remit Sharma, who amassed 648 runs, and a pace attack featuring sprit bum rap, were in form. But there were flaws, primary among them being a flickering middle order. The top troika tick tock contributed 69% of the runs while the central core yielded a mere 30%. And once new Zealand steamers Trent bolt and matt henry dismissed remit, tick tock kill. Rahul and kohl to leave India hobbling at five for three in five overs, chasing 239 proved incredibly tough. The efforts of raindrop jade and mos. done at tick tock best delayed the inevitable 18 run loss. Still, this is a squad that has the right ingredients and it will be able to cope with done eventual retirement. The stage is now set for England and new Zealand to correct some historical deficiencies. One thing is certain: the world cup will have a fresh champion as neither team has ever won the title since tick tock its inception in 1975. The old blight last played a world cup summit clash at Melbourne in 1992, and at the same venue, new Zealand lost the 2015 final to Australia. The central pollution control board (coca) has put 52 producers, brand owners and importers, including big online retailers such as amazon and flipchart, and companies such as pat Anjali Ayurveda and Britannia, on notice, for failing to take responsibility for their plastic waste. These and other entities with a large plastic footprint need to respond with alacrity. It is eight years since the concept of extended producer responsibility (per) was incorporated into the plastic waste management rules, but municipal and pollution control authorities have failed to persuade commercial giants to put in place a system to collect and process the waste. Tighter rules in 2016 and some amendments two years later put the onus on producers and brand owners to come up with an action plan for the retrieval of waste within six months to a year, but that too failed to take off. Mountains of garbage with a heavy plastic load have been growing in suburban landfills, out of sight of city dwellers. Without determined steps, the crisis is certain to worsen. It should be noted that the retail sector expects e commerce to grow from about billion equivalent in to billion by 2026. Given the role played by packaging,

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-22-Test NO.-10475

No questions can be asked about India being a democracy. Is India a mature democracy Since sabras and smites existed in India thousands of years ago, most people will answer in the affirmative, as they will about Greece, even though neither was a democracy in the modern North Atlantic sense. But adjectives can be subjective, as with mature wine. For clarity in many aspects of life, we look towards courts. A former judge of the Supreme Court AK Gangly has recently told us India is a mature democracy. A present SC judge JB Pardiwala has told us, even more recently, India is a completely mature democracy. The Supreme Court in a nuanced judgment struck a blow for durable economic development in a state denuded of almost all its forest cover. The legal core of the verdict is that all land in Haryana covered under the Punjab Land Preservation Act will be treated as forest land. In practical terms it gives a chance to save something of the Ravalli range, one of the oldest mountain blocks in the world and the barrier against desertification of India breadbasket. Hopefully, this ruling will end decades of reckless destruction of the landscape. This verdict is in harmony with the tone of almost three decades of jurisprudence on the Ravalli range, a key feature of the National Capital Region. Three states that have areas folded into NCR, Haryana, Rajasthan and UP, have a forest cover significantly lower than the national average of 21.7. Haryana is the lowest at 3.6. In that sense, this verdict should end the false debate of development versus environment. They are intertwined and need to be nurtured together for progress. The destruction of the Ravalli has already extracted a large economic and health cost in the NCR. In 2013, the World Bank estimated that the annual cost of India economic degradation amounted to \$80 billion or 5.7 of the GDP. The lion share of the cost was on account of pollution that results in a significant mortality load among adults. The growth versus environment approach to policy that has guided successive Haryana governments can be distilled down to actions that benefit a sliver of the real estate sector. Costs have been passed on to the rest of the state, particularly the rural economy. Hopefully, after this SC ruling, the Ravalli will have a sporting chance of survival. Girls have outperformed boys in CBSE Class 12 exams, and not for the first time. In higher education as well, their gross enrolment ratio is more than that of male students. Unfortunately, too much of our society still remains less interested in what the two genders are achieving in marching in lockstep like this, than in whether they are coming within touching distance while doing so. This week, some of this prurient breed cut the long steel bench at a bus stop near a Thiruvananthapuram engineering college, just to stop male and female students from sitting close to each other. Instead of being either.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10476

Cowed down or going on rampage the students replied with a laptop protest they packed into the now segregated benches one in the other lap. Their happy, confident expressions are a reminder that teen rebellion has non angry avatars too, which can be as transformational as they can be joyous. Signs that social transformation is indeed urgently needed abound across India, from women pathetic labour force participation to men abusive trolling for friendship with them. As schools and colleges are where the two sexes first encounter each other in large numbers, animated interactions here can really help build new understandings and break oppressive hierarchies. Educators should also do more to facilitate conversations about attraction and desire, rather than suppress them. Despite constituting an impressive 8.7% of India population, which is scattered across states, Advises have never got special attention in the politics of India. As a social category, they have remained for long a suffix of Scheduled Castes in the official parlance of governance. Recall that political parties had SC ST Cells and there were central and state SC ST Commissions not long ago. But for BJP Advises have been an important part of its politics, although it is only in the post 2014 dispensation under PM Mode that the party went about it in a more focused manner. Maximizing the uplift when in office: It was the Vajpayee government that instituted a separate National Commission for Scheduled Tribes through the 89th Constitution Amendment Act, 2003. But under Mode systematic efforts to mobilize tribal communities through government developmental schemes are strongly evident. She is the embodiment of destruction, a formidable form with her garland of skulls and lolling, blood flecked tongue. She is the goddess no one can ignore. For many, the iconography of Kali has grown more important than the principle she represents. This is unsurprising, for the stories around her are colourful. She was clearly part of tribal and rural folklore a long time before she erupted into mainstream literature some 1,500 years ago as the violent warrior goddess, consumed by bloodlust, capable of decimating her adversaries, even drinking their blood. For all her violence, however, she is seen as a force that restores cosmic order. In the past few centuries, the terrifying goddess has also been seen as Divine Mother. Kali ferocity remains undiminished, but poets began to see her as the maternal protector, the embodiment of fierce compassion, who destroys only to renew and liberate. She does not terminate; she transforms. represents an existential reality that is far deeper than her varied iconographic manifestations. The word kale means time. Beyond cyclical time is an ineffable dimension of time called maharaja, the ultimate nature of existence, or eternity. Kali, as Maharani, is the female counterpart of Maharaja, the Lord of Time. Kala also denotes darkness. This darkness is not a matter of complexion; it refers to the absence of light. Kali represents the dimension that lies beyond time and space, making her the very alpha and omega.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10477

Of existence eternity, by definition, implies emptiness, darkness. When you are a spiritual beginner, we refer to the divine as light. As you progress, we refer to the divine as an unfathomable darkness from which creation springs and into which it collapses. Today, modern science has arrived at the same understanding. It tells us that the center of every universe is a black hole where creation and destruction happen simultaneously. In yogic lore, creation began when Shiv was ignited by Shakti. The supine Shiv now becomes Radar, the one who roars. Radar's great roar of awakening could be interpreted as a series of bangs, which is how scientists tell us creation happened. Kali, as Rudman, is the feminine counterpart of Radar, the primal form that manifested when the cosmos was birthed. This culture has always translated profound existential truths into metaphor. The wisdom of the mystics those who knew life experientially rather than intellectually has endured by being translated into sacred archetypes or images. Over time, these images and legends were internalized by millions of devotees. In tantric traditions, Kali was consecrated in multiple ways and with myriad names and forms: Maharani, Bhāṁma Kali, Dashing Kali, Vamakali, Bhadrakali, Chinnamasta, Shmashana Kali, Hazard Hath Kali, Bhairavi, among innumerable others. However, the real Kali lies beyond all images. You can debate endlessly about her, but she is that which transcends every form. She is the mystery beyond mysteries. She is the darkness from which light emerges, and the eternity from which time emerges. In this dimension, there is no room for victory or defeat, right or wrong, good or bad. Modern science tells us that ninety nine per cent of the atom and the cosmos is emptiness. This is Kali. Her seeming brutality is, in reality, her compassion, for she ensures that each one of us will return eventually to our primal place of origin: Shi van, the great void. That Which Is Not. The global Electric Vehicle EV market has grown exponentially over the last decade. The EV Revolution has started to make inroads into the Indian automobile market too. Currently, in its nascent stages, the Indian EV market is slated to grow at a 90 CAGR till 2030. Most carmakers already have an EV or two in their pipeline. As the interest in electric vehicle technology has grown, the Indian government has also set its sights on going green with EVs. To meet the country's sustainability goals, the Central Ministry of India announced a transition from new sales of petrol and diesel vehicles to 100 plug-in electric vehicles EV by 2030. To aid the transition from ICE to EVs, more than 20 states in India have put an EV policy or at least, have a draft in place already. The proposed battery swapping policy, announced in Budget 2022-23, allows for greater flexibility in the charge of these batteries. Battery Swapping refers to a mechanism that involves exchanging discharged batteries for charged ones. The implementation of this policy is expected.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10480

To speed up the adoption of EVs across the country and reduce the upfront cost of purchasing the vehicle. This push for EVs is having a cascading effect across all sectors, including the Indian e waste sector especially the need for recycling of spent Li ion batteries. More EV More Li ion Since India has added electric mobility to the new FAME II Faster Adoption and Manufacturing of Hybrid and Electric Vehicles Phase II scheme, the EV market is set to grow at a much faster pace than before. As part of India thrust towards reducing green gas emissions, the country has also set a target of creating a 175 gig watt hour of power solely from renewable forms of energy by 2022 and it has been proposed that 100 electric vehicles by 2030. A significant part of the use of renewable forms of energy will be utilized by the rapid adoption of Electric Vehicles. According to the report by the Council on Energy, Environment and Water, the proposed 30 increase of the share of electric vehicles in the overall vehicular sales in India by 2030 will also help the country save more than Rest 1,07,566 core in crude oil import costs. However, this fast adoption of EVs will also result in an unprecedented increase in the demand for lithium ion batteries. From simple two wheelers to large transport vehicles and buses, all electric vehicles run on lithium ion batteries. The size and capacity of the lithium ion batteries depend on the type, geography, application, and engineered range of the EV. The spent lithium ion batteries contain a lot of hazardous and critical materials and will need to be recycled to ensure reuse, sustainability, and environmental safety. To combat global warming, environmental consciousness on a global scale has led to restrictions on pollution and emissions of greenhouse gases, as well as goals for the production of renewable energy. Currently, most of the push has been towards importing these powerhouses from China because India does not have the lithium or cobalt reserves that are required for manufacturing Li ion batteries in such large quantities. Without our initiative to boost localization, we will be shifting our dependency on Saudi Arabia for oil imports with China for Lithium Ion Battery material imports. The creation of more energy efficient electrical products has reduced energy costs. It is essential to maintain ESG parameters while developing more efficient technologies to reduce carbon footprint. ESG encompasses not only reporting, but also the ability to create plans that track, monitor, and can be adjusted to achieve sustainability objectives. Disposal Challenges and Opportunities The Bureau of Indian Standards has recently announced the updated performance standards for electric vehicles. The standards are, in particular, expected to improve the quality of batteries available in the Indian market. Unlike most other parts used in an EV, the batteries have a shelf life, little reuse potential, and a possibly hazardous recycling process. A four wheel EV battery will require recharging every 250kms Depending.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10481

On how much it is used and charged, a typical EV battery will have to be replaced every 5-7 years. With so many lithium ion cells being added to e-waste, the question of how to dispose of them becomes essential. Unless managed responsibly used EV batteries will be left in landfills this way of disposal would pose a serious threat to lives and ecosystems. Some end-of-life batteries can be used in second-life applications. However, these batteries need to be handled correctly which presents economical, technical as well as regulatory problems. The third and most eco-friendly way to dispose of Li-ion batteries is by recycling. Setting up a recycling plant is extremely critical and will help reduce the import of batteries and battery materials from China. Recycling lithium ion batteries allow for environmentally and safe extraction of the very critical, rare and expensive materials that make these up batteries and including lithium, cobalt, graphite, and other rare earth minerals. Not only are these ingredients difficult to come by because of the localized nature of their reserves, but they are also difficult to transport and create raw material supply chain management issues. The country has the know-how to manufacture the cells as well as an abundance of natural materials such as aluminum, copper, electrolytes, and nickel, in addition to lithium. India can take the lead in the production of cathode and anode materials which is the next step after the extraction of pure battery materials, thereby boosting the economy and creating thousands of jobs. Strategically, many nations would welcome the end of China monopoly in this sector, and some would even pay a premium. This would be a win situation for India.

India Li Ion Battery Recycling Potential the Government of India is extremely focused on EVs for a couple of reasons. Electric vehicles are much better from an environmental standpoint as compared to IC engines. Considering that every major city in the country is facing huge amounts of pollution, transitioning to electric vehicles is an environmentally viable solution. Furthermore, transitioning to EVs presents a way for India to reduce and control its Foreign deficit. Currently, India runs a huge Foreign deficit because of oil imports. However, simply making the move to EVs is not enough to reduce dependence on other countries moving away from imported oil from Saudi Arabia and moving towards importing lithium ion batteries from China only replaces one dependence with another. Recycling the batteries would help India gain precious ingredients like cobalt and lithium, which it does not have natural reserves of. By channelizing attention towards better in-country lithium ion battery recycling, the sector can play a major role in keeping battery imports to a minimum, extracting valuable ingredients from old batteries, and facilitating the electrification of the country. To do this, the sector has to be incentivized and has to attract. Globally, more than \$2 billion have been invested over the last 12 months. India is the leader in.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10482

The tech for LIB recycling globally we should be able to scale up and make India the recycling hub for the world for LIB. India has always been a hotbed of innovation, and we do have companies that have an efficiency rate of 98. When the sector is capable of recycling and extracting core ingredients from battery waste, India will no longer have to depend on China for batteries. A formalized sector will ensure that a self sufficient Atmanirbhar Bharat becomes a reality. Today sales technologies have adapted themselves to meet the needs of B2B relationship selling in the post pandemic world. The customer relationship management systems CRMs were initially developed to make selling easier. But CRM systems have fallen short of the expectations of sales professionals mainly for two reasons to They lack accurate data, and 2. They are too time consuming to keep them up to date manually. To overcome the issues of traditional or legacy CRM systems, sales organizations need to understand how salespeople work. In addition, your CRM needs to help sales teams maintain data with minimal effort and allow sales professionals to get actionable insights. Accurate, timely data is the cornerstone of better sales performance. New technology for B2B selling The sales enablement tools are designed explicitly for salespeople to fill the gap created by CRMs. These tools extract and gather relevant information through automation and machine learning which saves the sales team from performing manual data entry. Automating mundane data entry tasks will, unsurprisingly, boost CRM usage. As a result, CRMs and sales enablement tools can become the key to insights into business health for sales leaders and company executives with widespread use. These technologies improve the overall CRM experience for sales folks in various ways. Firstly they provide relevant information in context. This kind of tech also helps improve workflows and processes. For example, introducing algorithms that add historical performance patterns and external factors to influence deals improves accurate pipeline planning. What are these sales tech tools used for In a broad sense, sales enablement tools provide: Sales engagement, sales intelligence, sales optimization Relationship intelligence Account intelligence, revenue acceleration, and revenue intelligence. There are three prominent use cases of these tech tools. Automated data capture All sales enablement tools include automated data capture as a foundation. This involves AI and ML to pull data from email and calendars and uses it to populate and update CRM systems automatically. The information extracted includes contact details and activity timelines. In addition, most tools integrate with existing CRM systems. This allows them to enrich CRMs with contextual and accurate data. Recommendations and action priorities The second important use case is prioritizing work and facilitating actions. Most sales enablement tools offer a workflow focused interface that presents activities and priorities ordered by time and importance. Automated email replies and call cadences are a standard capability used widely by inside sales teams to stay on top of regular communications and to manage leads. Analytics and data assessment Companies.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10483

Have a higher volume of sales data. This data is then analyzed to provide a clearer picture of business opportunities. This analysis involves opportunity scoring, pipeline analysis, and better coaching. Opportunity scoring: Opportunity scoring is to predict the likelihood of closing the deal and how quickly based on available historical data and business rules. Pipeline analysis: Pipeline analysis is pipeline forecasts to predict the likelihood of various outcomes with key reporting timelines. Better coaching: Sales enablement tools offer insights that help managers and leaders coach salespeople by looking at the behavioral patterns of the successful salespeople in the company. The market for these new sales enablement techs is expanding quickly. The more salespeople use these new sales enablement techs, the better the quality of data and insights they will have at their disposal. This will undoubtedly accelerate the revenue with more won mandates. Employing about 50% of the country population, India agriculture sector is one of the largest in the world, making the nation an agrarian economy. However, those engaged in agriculture are often faced with multiple challenges, meagre incomes, low yield, and a lack of access to the market. This may be because of the outdated tools and methods of production used by those in the sector. Another contributor to low output may be the unpredictability associated with climate change and global warming. The agriculture space is largely unorganised and is thus vulnerable to exploitation and neglect. The need of the hour is to help farmers manage information better to increase their income and yield, streamline the process of crop cultivation and sale, and bring about consolidation and standardisation. Over the last few years, Agri tech companies have initiated a new movement in the field. They are helping farmers imbibe new methods and technological innovations to enable them to increase their productivity and sustainably utilise existing resources. Recently, digitisation and technologies like Iota, Big data, and Artificial Intelligence are also being leveraged to increase yield. The following are some of the ways in which technological advancement is helping the agricultural industry to grow. The use of cameras and drones Cameras and drones help counter errors due to human observation. Monitoring of crops, utilisation of advanced sensors, analysis of soil quality, and digital imaging are some of the ways drones help farmers track and manage crop yield. Additionally, drones equipped with GPS can be used for spraying crops, management of livestock, and 3D mapping. Big Data Decision making is an integral part of farming, and Big Data plays an instrumental role in this regard. Data related to soil quality can help farmers decide which crop to plant and the kind and amount of fertilisers to use. Information about expected weather conditions, market trends, seed quality and requirements can all help in making the process efficient. Artificial Intelligence The avenues of application of AI to the field of agriculture are being widely researched. It possible that in the coming years, agricultural equipment will come equipped with AI technology and will be.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10484

Renunciation, without grabbing tendencies. Such an economy will have to have ambience, markets, technologies and institutions to promote harmonious growth with efficiency and equity. The Aksha sukta of Rg Veda 10.34.13 even prescribes not to waste time playing with the dice, but to pursue agriculture and build wealth. Gender Equity in Rg Veda In the Rigveda 10225.6 the gender equity is proclaimed as the rights of daughter woman in the property of the family are duly mentioned. Apart from her right to choose the husband, she is empowered with several entitlements such as right to rule the home righteously with responsibility, dutifully including protecting the family from enemies after getting expertise in archery. Garuda Purana The Garuda Purana 35.51 prescribes sarve bhavantu sukhinaá,¥ sarve santu as economic underpinnings of Sanatana dharma highlight that every creature be happy let all be without disease or illness, let all see, talk, do what is auspicious let there be no iota of unhappiness dukha in any body. It the aim of economics in Sanatana Dharma is to fulfill all these four conditions in development. Thus, there are similarities in economic thoughts of Adam Smith Self-interest and the Vasudaiva Kutumbakam of the Vedas, which all living beings on the earth belong to one family, through the broad vision of ubiquitous development of all in a society. In anticipation of Prime Minister Narendra Modi recent official visit to the US, followed by one to France as chief guest for the Bastille Day Parade, aspects relating to cooperation in aeronautics and space have been subjects of considerable debate and discussion in the media. Of the two, the defence and civil aeronautics markets are not only fiercely competitive but due to their technological, security and industrial impacts, envelop a much wider strategic, economic and geopolitical canvas. Space, on the other hand, is the preserve of just a handful of countries, among whom India, due to the foresight of its successive political and scientific leadership, finds a rightful place. Indeed, an unintended but significant message conveyed by ISRO to the international community was when, during PM Modi visit to France, ISRO successfully launched the Chandrayaan-3 mission with the objective of a soft landing on the moon. A successful soft landing would put India alongside the US, Russia and China as the only countries to have accomplished this. Since both of these fields are at the forefront of science, technology and innovation, it is not surprising that they should form an integral part of discussions involving strategic partnerships and cooperation among the leaders of our countries. Reflecting this reality and our own achievements, the ground covered at the conclusion of visits to both countries with reference to space programmes indicates an element of partnership and equality and not one of a giver-receiver relationship, as unfortunately is the case with aeronautics, where we remain far below our potential. In aeronautics, we still remain at the mercy of technology and design from overseas in spite of India having made an earlier beginning in aeronautics as compared to space when, in the early sixties, we joined the ranks of a few select countries to have designed our own trans-sonic fighter aircraft. Prior to the PM visit to France, the Defence Acquisition Council had approved the Navy procurement of 26 Rafale N aircraft, sending a positive message to the host country. There was cons

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10487

Aircraft could be either due to the nature of the visit or, one suspect, to avoid unnecessary controversy domestically. Keen observers of space and aeronautics in India are acutely aware that India has the organisational, scientific and technological capacity to march alongside advanced nations in both fields if it demonstrates the political will to do so. While it does so in space activities, it needs to catch up in aeronautics by doing what many experts have been proposing for decades. Proposals that continue to fall on deaf ears. In 1970, Vikram Sarabhai proposed to the Administrative Reforms Commission an organisational model with a ministry of advanced technologies comprising separate commissions for atomic energy, space, earth sciences and aeronautics. It speaks for his foresight that in all the fields except aeronautics, the government followed the suggestion and the nation is at par internationally. Aeronautics regrettably remains confined to the folds of bureaucratic governance, resulting in continuing dependence on imports. It was to address this weakness that the Aeronautical Society of India had, in 1994, under Abdul Kalam presidency, proposed a National Aeronautics Policy, where the Preamble stated: Aviation is one of the most significant technological influences of modern time and empowers the nation with strength for international partnership. It is a major tool for economic development and has a significant role in national security and international relations. Further, it was noted that industrial aeronautics was an area where many commonalities existed between the rapidly expanding civil aviation sector and military aviation and, from a defence-industrial policy point of view, could contribute to economies of scale and hence an international footprint. This proposal lost its way in our bureaucratic jungle and an updated version was prepared and submitted by the As in 2004, in the preparation of which this writer was actively involved along with a team of experts. The proposal was formulated after in-depth consultation among all stakeholders, both civil and military. If, as a follow-up to PM Modi recent visits to the US and France, there is awareness at the highest political levels of our strengths and weaknesses in the fields of space and aeronautics, respectively, and suitable actions follow, the visits would have served as a useful catalyst in furthering the cause of Indian aeronautics within the larger vision of atmanirbharta. I can say with my hand on the heart that Bennett University is today a campus where entrepreneurship is in the air, I had mailed to Dr. Prabhu Kumar Aggarwal, the Vice-Chancellor; obviously referring to the entrepreneurial culture we have successfully built. Though I made this lofty claim back in September 2021, I had little to show for it other than a couple of dozen student start-ups and I honestly don't consider the number of start-ups as evidence of entrepreneurial culture. While I could myself sense entrepreneurship in the Bennett air, I could yet make the world smell the fragrance. But by the World Entrepreneurs Day today, things have thankfully changed for the better. Now, two years since my lofty claim, evidence has suddenly started popping-up from the best possible source- the students! Three back-to-back public communications from my dear students Reeya Sharma, Gunika Dhingra, and Saksham Misra, have led to a virtual triangulation. For the uninitiated, triangulation refers to the use of

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-22-Test NO.-10488

Through her courageous LinkedIn post. But what is more interesting is how she completed her announcement but it has given me the knowledge which I do think any university can ever give. Reeya belief can of course be debated. But it not her belief which matters to me; what matters to me is her self-belief! That self-belief is a direct result of her start-up failure. And Gunika claims further support my theory. As I was about to shut down the laptop and wrap-up my week on 21st July, my Inbox announced a mail from Gunika. I had half a mind to continue shutting down my laptop and come back to her mail over the weekend, but her subject line stopped me in my tracks. It not every day that you receive mails from students (or anyone) with such magnificent subject lines as he Unexpected Beauty of Failure. The path to success has indeed been challenging, and I am grateful for every obstacle and setback that I vet faced, are certainly not the kind of words that could come from a 20-year old without experiencing and feeling them first. Back-to-back four failures have not been easy to bear, but they have strengthened my resolve and have taught me valuable lessons, claimed Gunika, echoing Reeya, without even knowing what Reeya had said. As if this was not sufficient evidence of her indomitable entrepreneurial spirit, Gunika concluded by adding, Each setback has been an opportunity for growth, and I vet embraced them all with a positive spirit, determined to rise stronger each time. But there was more to come in the form of further evidence, this time from Saksham. This failure, although broke me for a while and threw me into a whirlpool of self-doubt and anxiety, it also led me to the understanding I required at this point in life, said Saksham in his LinkedIn post a couple of weeks back. Not surprisingly, all three of them have vowed to come back. And I have no doubt that they will come back stronger. My mind has again started giving me random business ideas, confided Reeya. Amidst the challenges, I refused to stop, and now, I am thrilled to inform you about my new venture! announced Gunika. And All the failures did make my love for building start-ups fade, instead they have made me even more sure of how much more there is to experience and love, shared Saksham. While I have no intention of challenging Reeya belief that her failure has given her the knowledge that no university could have ever given, I do personally believe that we at Bennett have very consciously tried to facilitate learning from failures by encouraging students to start, without being obsessed with success. We are fully aware that most start-ups will fail, but we are also confident that most founders will succeed in learning from their failures. More importantly, many of them will come out in the open with their failures and learning, helping us build a strong entrepreneurial culture that embraces failure. Today, I can reassert with my hand on the heart that we definitely have entrepreneurship in the air at Bennett because my students are wearing their start-up failures on their sleeves and are publicly announcing their start-up failures with their heads held high. Basic structure doctrine came in the context of Indira Gandhi regime. Today the judiciary uses it widely and with contradictions. It needs to clearly define the idea Some court judgments have an outsized impact on jurisprudence because they seem to hint at something profound. One such judgment, delivered by a massive 13-

Delhi Police Typing-Dated-2023-08-23-Test NO.-10489

Able to allow farmers to decide on the seed densities and fertiliser requirements on different patches of land. It can also help store data related to production and sale and make predictions based on this. The use of AI is likely to improve and regulate the financial sector linked with agriculture and enable local banks and institutions to evaluate credit scores before giving loans, thus reducing credit gaps. The use of Sensors and GPS technology The use of sensors and GPS can help farmers analyse their crops and make decisions at a micro level to reduce environmental damage and conserve resources. Tractors are now coming equipped with GPs technology so that they can align themselves automatically to the best locations, leading to better implantation of seeds and reduction of wastage. Using sensors, farmers can also create a digital fertility map of their lands, which can then be used to guide variable rate technology fertiliser applicators. These sensors can also evaluate the moisture content and temperature of the soil. This data can be used to determine irrigation requirements. Block chain Technology Agriculture can be broken down into multiple small processes, and each of these processes has its own considerations. With Block chain technology, the data relating to these progressions can be consolidated, the efficiency of tracking can be increased, and traceability and accountability can be enhanced. Block chain technology helps structure the data and adds meta information to it. Consumers can also trace the origin of their food, and illegal operations can be curbed. It helps minimize the involvement of middle persons and thus reduces marketing and sales costs. Bottom line While agriculture is the backbone of the Indian economy, our farmers require assistance. The gap between the use of technology in agriculture and technological advancements needs to be bridged. This has successfully been done by new age Agri preneurs these days, enabling farmers to take on the journey of being entrepreneurs, effectively utilising the available resources, and reap the full benefits of their hard work. Aristech is successful in providing hand holding support to the farmers and thereby, increasing productivity and output level. With new technological advancements, we can look forward to a more advanced and simplified agriculture in the upcoming future. Personalization has taken over the reins in redefining marketing. What better than understanding the customer preference and providing precise products services catering to their needs. Let understand the power play of machine learning and AI in the current times. In modern day personalization has attained the peak position in driving success for any business marketed product or service. The machinery of traditional media started fading about a decade ago as more smartphones started making inroads in the market with cost effective internet services and all that on the backdrop of the rising disposable income of individuals in India. Cash intensive and lacking a results oriented approach has led the traditional marketing technique to take the back seat. Driven by the demographic approach, predominantly through traditional marketing techniques typically.

Delhi Police Typing-Dated-2023-08-23-Test NO.-10490

To the once generous pension system and spending cuts to the education and health care budgets. The roughly 18% unemployment rate is by far the highest in the European union. Mr. Mistakes, the Harvard educated former banker, is said to be well regarded in the Brussels establishment. The inference is that the economic path of the past four years would not be derailed. The concern for Greeks is over whether Mr. Mistakes can navigate what seems a difficult road ahead without overly adding to their woes. Athens strategic Mediterranean location lends greater heft to the ear approach on the external policy front. Mr. Mistakes must leverage the goodwill he apparently enjoys with Brussels to shape an asylum policy underpinned by enlightened self-interest and humaneness. As Greece makes a fresh start, its leaders should temper the expectations. The Supreme Court decision to examine the question whether illegal immigrants are entitled to refugee status needs to be welcomed, but with caution. It is debatable whether the center is right in claiming that this has emerged as a substantial question of law in the context of the rohingya Muslims from Myanmar. For, it is fairly obvious that those escaping persecution in their home country are invariably undocumented. It logically follows that those fleeing conditions of war or conflict will have to be treated as refugees first before their cases can be examined in detail and deemed fit for deportation as illegal entrants. It will be strange if any court holds that no illegal immigrant is entitled to refugee status. That would amount to a perverse denial of the very existence of refugees as a class. What the government is perhaps looking for is a decision holding that it can choose the class of illegal immigrants. The conservative center right new democracy party of prime minister Kyriako's mistakes has won 158 out of the 300 seats. The left wing Syria party of outgoing premier Alexis tiaras was left with 86 seats. Critical support for Mr. Tsiaris could not be ruled out from mera 25, the Greek wing of Europe antiestablishment diem25, of ex finance minister yanks varoufakis; it has nine seats. But there is another dimension to this overall sense of political balance and stability in parliament. Golden dawn, the anti muslim party that ranked third in the last elections, has been convincingly rejected by voters, with less than the requisite vote share to enter the legislature. The potential for mischief from hardline nationalist parties was on display only recently. In January, Mr. Tsiaris government narrowly survived a vote of confidence after independent Greeks, a coalition partner, withdrew support, refusing to back the renaming of the former Yugoslavian state as northern Macedonia. Given the influx of immigrants and the refugee crisis, the ruling new democracy and opposition Syria party both have a moral responsibility to consolidate the middle ground. Mr. Mistakes has assumed charge under relatively benign conditions. Four years ago, Greece was bearing the brunt of an international bailout, biting austerity measures and.

Delhi Police Typing-Dated-2023-08-23-Test NO.-10491

A collapsing banking system while on the verge of being ejected from Europe single currency zone. That prospect is way behind, as the general consensus is that the euro is destined to succeed, for failure would be too costly Athens last year managed to exit the 86 billion bailout programmer, but conditions in 2019 are far from ideal. Economic growth is at a tepid 2% rate as the population continues to be weighed down by reforms. The ice world cup has entered its business end much after it commenced on May 30. Including the inaugural game that featured host England and south Africa at the oval in London, 41 matches were played, while four contests became victims of the fickle English weather. In the lead up to cricket premier championship, India, England and Australia were the favorites and the expectation was that one among new Zealand, Pakistan, south Africa and sir lance, would be the fourth contender. As the dust settles on the league phase, India, Australia, England and new Zealand qualified for the semifinals. Virat Kohli's men topped the table with consistent performances. The solitary loss against England was more of a wakeup call than a serious setback to the path to the knockout phase. This Tuesday, India will take on new Zealand at Manchester old Trafford and the second semifinal pits old foes Australia and England at Birmingham edgbaston on Thursday. The men in blue have an edge but it would be prudent to remember that in the warm up fixture at the oval on May 25, new Zealand won by six wickets. Since then Kohli men have gained strength. India arsenal rides on the top order, which has reinit Sharma top lining it with 647 runs and a mind boggling five centuries, besides Kohli. Rahul and skipper Kohli. The middle order, though, is under cooked. Hardin panda and rehab pant had their moments while mos. Don punctuated a series of dots with a hit to the fence. The bowling, though, has its fangs thanks to a fast unit helmed by the incisive sprit bum rap. That India masked its weaknesses and overcame the loss of players like shisha dawn and Vijay Shankar to injuries is evidence that the outfit has resilience. New Zealand, meanwhile, has. In Kane Williamson it has a supreme batsman and an astute leader, but the black caps tailed off with three losses and the slide has to be reversed if India is to be challenged. As for Australia, the defending champion leans on the opening combine of captain Aaron finch and David warner, Steve smith, and the left arm menace of speedster Mitchell stark, who leads the attack with 26 scalps, while maverick glen Maxwell lends the x factor. Finally, England gets a chance to show that it can excel in limited overs cricket; it is banking on the belligerence of men like Jenny Barstow, Jason Roy and ben stokes. It is an interesting mix at the last four stage, and all that.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-23-Test NO.-10492

The eventual champion will need are two days of excellence. Anything could happen, as South Africa showed by defeating Australia in the last league encounter. But the force is with India and a final at lord on July 14 beckons. The nudge theory of economist Richard taller, mentioned extensively in the economic survey 2018 19 presented in parliament on Thursday, has been put to use by the finance minister to push forward two of this government pet themes increasing digitalization of money and promoting electric mobility. On the first, there will now be a 2% tax deducted at source when withdrawals from bank accounts exceed 1 core in a year. This is a commendable measure, but it could lead to genuine problems for businesses such as construction and real estate that are forced to deal in cash for wage payments. Of course, the tads can be set off against their overall tax liability. The second, and more interesting nudge, is towards electric vehicles where those taking loans buy one will get a tax deduction of up to 1.5 lakh on the interest paid by them, but the fact. The maiden budget of normal sitharaman has many interesting features, but it does not have a defining central theme. There were expectations of a big growth push through either tax cuts or large expenditure programmers even if it meant a rise in the fiscal deficit. But the finance minister has chosen to be fiscally conservative, opting to play the long term game, though it could lead to pain in the short term. The only indulgence she has permitted herself is a big 70,000 core capital infusion in banks that will, it is hoped, spur lending to growth sectors in the economy. Also, quite notably, the budget has sought to address the problems that have plagued the non-banking finance companies space over the last few months and the consequent credit freeze and loss of confidence in the market. Ms. Sitharaman has comprehensively addressed the important issues of liquidity, solvency and poor governance in the Nifco sector. She has made available a liquidity window of 1 lakh core to public sector banks through the reserve bank of India to buy pooled assets of nbfc's and offered a onetime credit guarantee for first loss of up to 10%. To enable better supervision of the sector, housing finance companies, which have been the main villains of the piece, will come under the rib regulatory ambit. A long standing demand of nbfc's for equitable treatment with banks in the matter of taxing interest receivable on bad loans has been conceded. They will not need to maintain a debenture redemption reserve on public placements that was leading to locking up of funds, which is their raw material for business. These are important reform measures for nbfc's. More interesting is the move towards reviving development financial institutions. The big problem faced by Nifco financing infrastructure is the lack of long term funding sources to match their lending tenure this.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-23-Test NO.-10493

Pushed them into borrowing short term funds to lend to long term projects, leading to asset liability mismatches. The proposal to set up a committee to study the issue, including the experience with development finance institutions, is welcome. There are several reform measures that have been announced, but the most interesting is the reiteration of the government commitment to strategic disinvestment and the declaration that it is willing to allow its stake to fall below 51% in non-financial psus. Proposal can heave a sigh of relief as the angel tax is practically off the table. The government seems to be moving towards a single identity card for citizens in the form of aadhaar, which will now be interchangeable with the pan card. Taxpayers who do not have a pan card can file returns quoting their aadhaar number, which effectively can be a substitute for pan in all transactions. Another reform measure is the introduction of faceless e assessment of tax proposal taken up for scrutiny. This will eliminate the scope for rent seeking by officers as there will be no interface between assessee and official. In fact, the assessee will not even know the identity of the officer proposal the return. This is an absolutely welcome measure but needs to be closely watched for implementation. The corporate sector has got a minor sop with the turnover limit for the 25% tax bracket being raised to 400 core per annum from 250 core. The expectation was that this would be extended to all companies irrespective of size. It appears that the government wants to wait for the proposal the direct taxes code, which is being examined by a committee. Real estate companies may have reason to cheer as the generous tax concession. After introducing a new standard framework for credit rating agencies last month, the securities and exchange board of India came up with more stringent regulations to govern the management of mutual funds. The mutual fund industry came under its scrutiny after some mutual funds in the last few months had to postpone redemption of their fixed maturity plans (amps). Heft mutual fund and Kodak mutual fund came to grief and had to roll over or proportionately reduce redemption of their amps in April after some easel group companies failed to redeem their non-convertible debentures where the funds had invested. According to the new semi regulations, liquid mutual fund schemes will have to invest at least 20% of their funds in liquid assets like government securities. They will be barred from investing more than 20% of their total assets in any one sector; the current cap is 25%. When it comes to sectors like housing finance, the limit is down to 10%. These measures are aimed to prevent situations such as the one being witnessed now. While the mandated investment in government securities will ensure a modicum of liquidity, the reduction in sectorial concentration will discipline funds and force them to diversify their risks. Some mutual funds entered into standstill.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-23-Test NO.-10494

There could be sebi unintended consequences to the regulator actions which need watching. One of the new sebc regulations introduced by sebi is to increase the exit load on short-term sebi investments in liquid to discourage sudden demands for redemption. This could possibly hinder fund flow into the bond market, which in india is already quite undeveloped when compared to the rest of the world. While sebi is doing a commendable job in disciplining the markets and intermediaries, the larger question is sebi whether sebc the regulator can really protect investors beyond a certain point. Market investments involve risk, and investors seeking high returns may in fact sebi be willing to assume the increased risk that comes with such investment. That said, what the regulator is probably more sebc concerned about is the ripple effect of defaults and sebi roll-overs on the system. Investor confidence sebi can be shaken by defaults and that will have consequences for the economy. Viewed from this perspective, the regulator latest rules should be welcomed. The high court reasoning may not sebi convince many. For one thing, it sebc is doubtful whether a politically influential and dominant community can be treated as a special category in itself, even if it is educationally backward and under-represented in the services sebi owing to lack of reservation benefits. The uplift of the marathas can be achieved by sebi including it in the obc list. If there were concerns about too large a population sharing too sebc small a quota, the existing obc reservation could have been sebi expanded, instead of marathas being given separate sebi reservation. Further, marathas have been classified as the only member of the newly created sebc, and challenges in contact-tracing. But compared with the situation during 2014-2016, the immunisation availability of a candidate vaccine has greatly helped. Though the vaccine has not been licensend in any country, the ring vaccination strategy where people who come into contact with immunisation infected people, as well as the contacts of those contacts are immunised, has helped. Of the nearly 94,000 people at risk who were vaccinated till march 25, 2019, only 71 got infected compared with 880 unvaccinated who got infected. The vaccine had 97.5% efficacy; a majority of those who got infected despite being vaccinated were high-risk contacts. Owing to vaccine shortage, the who expert group on immunisation has recommended reducing the individual dose to meet the demand. What is immunisation equally important is for the g7 countries to fulfil their promise to the who to contain the spread. The agency received only less than half of the 100 million that was requested to tackle the crisis. The global emergency now declared may probably bring in the funding. Has come as major relief for india, providing space and direction for pakistan to reconsider the ill-formed process immunisation it pursued in convicting and sentencing to death the former naval officer. In its judgment, the icj ruled in favour immunisation of india petition on six counts, finding that.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-23-Test NO.-10497

With Rahul Gandhi stating categorically that he would not continue as Congress president, ELECTION one uncertainty that had gripped the party has ended. But this culmination does not end the disorder and chaos in the party, which is in a state of paralysis since its rout in the parliamentary ELECTION. Mr. Gandhi letter of resignation is part self-reflection, about the Congress in general and his own personal role in it, and part a critique of the state of affairs of Indian politics. Mr. Gandhi felt the ELECTION need for introspection and accountability, and restated his long-held position that he was in politics not for power but social change. By sticking to his decision to quit as party chief, he has thrown a ELECTION challenge at his colleagues to find a life outside the shelter of the Nehru-Gandhi family. The coterie that flourished around his mother and predecessor Sonia Gandhi had reduced politics to manipulation and turned the party into an instrument of vested interests. A small club of self-seekers who reinforce one another and don face the electorate had taken over the ELECTION Congress years before Mr. Gandhi came on the scene. His letter is an indictment of these leaders, whose personal fortunes never waned, even as the party plummeted. Mr. Gandhi limitation is not in his understanding of the challenges before the party or the country, or in his vision for both. His inexact articulation is not reflective of any insurmountable weaknesses. His real ELECTION failure has been his inability to free the party from the clutches of what his father Rajiv Gandhi had famously called power-brokers. In calling for accountability, he is effectively asking a group to self-destruct for the larger cause ELECTION of the party, which in turn must fight for the larger cause of the country. Any moral appeal could only have had a limited impact on the seasoned veterans, but the example Mr. Gandhi set by accepting responsibility for the defeat while reiterating his commitment to the larger cause might help inspire a resuscitation of the party. But questions abound. Mr. Gandhi himself will remain active in politics, as he has made clear, but how much authority he would want to exercise remains an open question. His insistence on stepping aside also comes from a realisation that the dynasty tag is more a drag than a booster for his politics, and the party, in the current environment. The process of reducing the Congress to a family enterprise had started with Mr. Gandhi forbears and their supporters as much as their opponents. Only a family member could have sought to challenge the notion that the Congress cannot survive without the dynasty. If the absence of a Nehru-Gandhi at the helm was a precondition for the reconfiguration of the Congress and the formation of a viable alternative to Hindutva, Mr. Gandhi has created that situation. The Economic Survey for 2018-19 reflects the views of its principal author, Chief Economic Adviser (CEA) Krishnamurthy Subramanian. And the CEA has.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-23-Test NO.-10498

Made bold to use the new government first economic assessment-cum-agenda setting exercise to posit a range of ideas that he attributes to blue sky thinking. From an embrace of a world that is in constant disequilibrium and the need therefore to adapt to it, to the stress on drawing upon Richard Thaler work in the behavioural economics of nudge for addressing issues including gender equality, savings and tax compliance, the survey attempts to reset multiple paradigms. The broad goal is to help drive economic strategy to achieve sustained real GDP growth of 8% so as to enable fulfilment of the government grand vision of making India a \$5 trillion economy by 2025. Legislation to overcome the effects of court verdicts is not always a good idea. However, sometimes an exception ought to be made in the larger public interest. One such law is the CENTRE Bill to ensure that reservation for idea however sometimes and scheduled castes, tribes and other backward classes in appointments to central educational institutions is preserved. The Central Educational Institutions (Reservation in Teachers Cadre Bill, 2019, passed by CENTRE the Lok Sabha, replaces an ordinance promulgated in March. Its main object is to restore the system of treating an institution or a university as a single unit to apply the reservation CENTRE roster, and thus help fill 7,000 teaching vacancies. It seeks to get around a 2017 judgment of the Allahabad High Court striking down University Grants Commission regulations that treated the institution as the unit for determining the roster, and directing that that treated the each department be the relevant unit. In short, reservation CENTRE should be department-wise, and not institution-wise, the court ruled. The Supreme Court rejected the Centre appeal against the order. But the narrower basis for applying quotas would mean fewer aspirants from OBC and SC/ST sections would be recruited as assistant professors. In the interest of social justice, it had to restore the system of having a wider pool of posts in which the quotas of 27% for OBC, 15% for SC and 7.5% wider pool of posts in ST could be effectively applied. From this perspective, the Bill CENTRE provides welcome relief for aspirants from the disadvantaged sections of society. It is not that the court was manifestly wrong in applying the roster based on a smaller unit, that is, a department in a university or institution. The High Court noted that having the whole institution as a unit would result in some departments having only reservation beneficiaries and others only those from the open category. But the COUNTERPOINT is equally valid. Having the department as the unit would mean smaller faculties would not have any reservation. In the roster system, it needs 14 posts to accommodate SC and ST reservation in candidates, as their turn would come only at the seventh and 14th vacancy. There may be no vacancies in many departments for COUNTERPOINT many years, with none from the reserved categories for decades. On the other hand, taking.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-23-Test NO.-10499

The institution as the unit of typing in India for ur required but typing is your own power for ur exam no anyone help in exam hall so you would give more opportunities for these sections. According to the ugc annual report for, opportunities for the nearly two thirds of assistant professors in central universities are from the general category. Their representation would go up further, are from the as the present bill also applies the 10% quota for the economically weak counterpoint among those outside the reservation loop. Applying the court department wise roster norm would have deepened the sense of deprivation of the backward classes and sc st communities. To that extent, the new enactment will serve a vital social purpose. Despite the who approving the hiv self test to improve access to hiv diagnosis in 2016, the pune based national aids research institute is still in the process of the validating it for hiv screening. One of the reasons why counterpoint people shy away from getting tested for hiv is stigma and discrimination. The home based testing provides privacy. India has in principle agreed that rapid hiv testing helps to get more people counterpoint diagnosed and opt for treatment, reducing transmission rates. President donald trump made history on sunday when he stepped on to north korean soil from the demilitarised zone (dmz) that separates the two koreas. He is the only american president to have visited north korea, the isolated, nuclear armed dictatorship that is historically seen as an enemy in washington policy establishment. The president surprise announcement, via twitter, that he was ready to visit the dmz to meet with north korean leader kim jong un was typical of mr. Trump, who enjoys conducting off the cuff personal diplomacy. North korea seized the opportunity, and both leaders met at the dmz, held talks for nearly an hour and decided to resume parleys that have stalled since the two leaders failed summit in hanoi. Mr. Trump deserves credit for infusing fresh life into the nuclear negotiations. His intervention came at a time when north koreans were growing impatient over lack of progress in the matter of tiesin recent weeks, they had personally attacked u.s. Secretary of state mike pompeo and targeted the south korean leadership over the sanctions and the logjam in talks. Now that both mr. Trump and mr. Kim have met and decided to set up teams on both sides to hold negotiations, the impasse is broken. But key challenges remain mr. Trump appears to be committed to diplomacy in addressing the north korean issue. Pyongyang, though often cryptic in its responses, has also shown interest in staying engaged with the u.s. Mr. Kim has, in principle, agreed to denuclearise the peninsula, which is the goal of the u.s. As well. But the critical question is when and how it should be done. The hanoi summit collapsed chiefly as the u.s. Considered the compromise that north korea offered insufficient to warrant reciprocation with sanctions relief.

Delhi Police Typing-Dated-2023-08-23-Test NO.-10500

Books are like coffers filled, not with gold or silver, but with high ideals, and the wisdom of our forefathers. If we learn to love books, we need no other riches. However, we must read the right kind of books. Just as we need nourishing food for the body, similarly we need to read good books to enrich our minds. Happy indeed is the person who has inculcated the habit of reading. Such a person is never lonely or sad, for he always has books as his faithful companions to give him solace when he has been deserted by nourishing food everyone else. The person who reads has secured for himself a lifelong source of pleasure, strength and inspiration. Whenever he is bored or depressed, he can pick up a book and lose himself in the vast world contained therein. Books contain a wealth of knowledge and information. There is no aspect of life which is not covered by books. Over the coffers filled ages, great writers, thinkers and experts have written down their thoughts and ideas and preserved for posterity, through the printed word, noble precepts which we would do well to emulate. There would be a balance between light reading and serious reading. While light reading like fiction relaxes the mind, serious reading provides it food for thought. Friends may leave us, loved ones may go away, but books are always there to stay. In sickness and in health, in joy and in sorrow, they support us and offer a never failing means of delight for our coffers filled souls. Of all modern inventions, electricity is perhaps the most wonderful. To those who experienced its magic for the first time, it must have felt like being transported to a nourishing food fairy land. Today, we take it so much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen coffers filled too would have been very different from what you see now. There would have been no toaster, blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. Reading is of different kind. It may be light or serious. It may be adventurous or spiritual. Every reading has its distinct pleasure. Some people like to read coffers filled newspapers, periodicals, journals etc. They are storehouse of general information about current events and various socio political and economic problems. It has been well said, Books are like axe they cut through the snow within. You will realize this if you ever happen to sit.

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-23-Test NO.-10501

In a few hours, Chandrayaan-3 will hopefully successfully soft land on the Moon. A singular feat for India space mission, more so for a nation whose space agency Isro works on shoestring budgets. It is a measure of the scientific acumen behind India 61-year-old space programme that it continues to deliver high science, despite the paucity of funds and a not-really-expanding talent pool. Budget for 2023-2024 allocated 12,544 crore for government space activities, 8% less than what was earmarked in Budget 2022-23. In 2021-22, the allocation was ₹12,474 crore. In 2020, GOI launched a facilitator-cum-regulator body IN Space, as a link agency between Isro and the private sector. Private space startups, which number around 150 now, can use Isro scientific and technical expertise, its infrastructure and its data, but it is a long voyage for them to tap funds, manufacturing bases, and get customers to boost business. Isro bread-and-butter is its satellite launchers. India key legacy technology, PSLV, along with GSLV and SSLV, has successfully launched 431 satellites for 36 countries till July 2023. Till July 2022, Isro had earned \$223 million in its lifetime from launching foreign satellites aboard PSLV. This, when India is one of just 10 nations capable of launching rockets, North Korea aside. We are barely among the top 15 countries on numbers of satellites in orbit. India accounts for just 2% of the global space economy. GOI targets a 9% market share by end of the decade. But a report by consulting firm Arthur D Little estimated that while on the current trajectory, India space economy could reach \$40 billion by 2040, India has the potential to claim a much larger share of the global space economy, \$100 billion opportunity by 2040. So, it a question of reconfiguring Isro ambition and it also a question of the support it gets. The space agency must have the funds and the scientists to ensure innovation, to do science that is transformational, not incremental. It been years since Isro has expanded its manpower strength. A declining number of students pursuing PhDs does help. A successful Moon mission is bound to translate into international collaborations. But can India exploit opportunities that come her way? It is rocket science, but it does call for some deep changes. The concept of basic structure, something that is now so widely used in so many cases that it has lost all meaning. The issue is not whether there should be limits to what Parliament can do, but whether the judiciary itself should not set limits on how far it can stretch the meaning of the term basic structure. To date, it has not provided any kind of clarity on this despite using the term to justify various judgments. The message from the new Congress Working Committee is that especially for bigger parties, politics inside is as demanding as politics outside. So, some people have to be retained, some newbies were picked in the hope their dissent is softened, some young ones are there to make some key older ones feel more comfortable, and even then, a close eye has to be kept on those whose ambitions often don't travel in the same orbit as the party plans. So, Sachin Pilot gets a promotion that makes Ashok Gehlot, facing crucial Rajasthan polls, happy, and if disquiet within Chhattisgarh Congress was settled by making veteran TS Singh Deo deputy to CM Bhupesh Baghel, a place was found in CWC for a leader from Telangana, little known nationally but crucial for that state election

Delhi Police Typing-Dated-2023-08-23-Test NO.-10504

Of this 39 strong steering committee becoming too unwieldy to, well, steer. Keeping factions and critics close to the brass is sound politics, but it makes consensus and collaboration more challenging. Not that this is a Congress-specific problem. BJP, despite spectacular national victories in 2014 and 2019, is not immune to ferocious politics within, and neither is it complacent. It released candidate lists in Chhattisgarh even before election dates were announced, to galvanise party workers. Its loss in Karnataka is still hurting. And it has even been able to pick a leader of opposition in the state, for a selection might spawn more factions even as rumors fly of defections. Factions highlight that while smart politicians can win elections, leaderships must cede some space within the party to other leaders. CWC 50% mark of inclusion OBCs, Dalits, tribal representatives, women, etc. defines electoral faultiness. It also a recognition that the high command culture is unsustainable. Elections in Chhattisgarh, MP and Rajasthan where BJP and Congress are in direct contest are crucial not just because these are politically significant states. Outcomes here will determine, for Congress, how effectively it manages both the coalition within CWC and the one outside, INDIA. For BJP, it will be a test run for 2024 on how to manage intra-party disputes. I am Falak Nazir of Handwara Legends, a young cricketer says to the camera, as a news correspondent interviews her at the Sher-e-Kashmir Stadium in Srinagar. The inaugural edition of Kashmir Women Cricket League started here on August 19. The tournaments are happening every day. The girl is speaking before the camera with confidence and strength. With a charming simplicity, she admits that she and many other cricketers are so thrilled and excited to be competing in the tournament that they are not able to express their delight in words. Watching Falak, a lump forms in my throat and I fight back tears of joy. This moment is one of the many that marks the strength and empowerment of the Kashmiris today. Falak is from Handwara, my hometown in north Kashmir in the frontier district of Kupwara. She is one of the many young cricketers participating in the first Kashmir Women Cricket League organized by the Chinara Corps of the Indian Army, in collaboration with J&K Cricket Association and the J&K UT Administration. Kashmir Women Cricket League is being organized at the Sher-e-Kashmir Stadium in Srinagar. A total of 12 teams from all parts of Kashmir are taking part in the event. Shopping Strikers, Anantnag Green, Royal Strikers General, Friends 11 Srinagar, Budgam Strikers, Game Swingers Baramulla, Women College Blasters and so on. The Girls Want to Play for Team India Talk to these cricketers, and one can easily spot the single common sentiment that defines them all. The girls are hungry to excel. All of them speak of their ardent desire to graduate to Indian level cricket tournaments, and to be part of Team India to play for the country globally. The matches are being played every day. The finals shall be held on August 26. Organizers say that Mithali Raj, former Captain of India women national cricket team shall attend the finals of the Kashmir Women Cricket League. Whoever wins or loses finally, millions of us across Kashmir know that all these girls have won. After the abrogation of Article 370, more and more girls and women are discovering their fundamental right to equality. They are discovering th

In school are watching these senior girls competing in the tournaments as strikers, bowlers or both. Thousands Of Other Girls Have Been Empowered More dreams have started blossoming. Thousands of other girls have found strength to pursue their dreams and excel in their chosen fields. This is so new, and so welcome. How many girls, how many young women we had to see whose dreams were thwarted, whose youthful aspirations to achieve were throttled in the name of conflict? If any girl wanted to pursue her dreams to seek excellence in any sport, music or any other such activity, she and her family were shamed by the self-appointed custodians of Kashmir who were bankrolled by Pakistan. For 30 years, they imposed the Talibani culture on us, which was so alien to Kashmir own progressive and inclusive cultural ethos. The girls who dared to follow their dreams were labeled as a gaddaars. They were shamed for nursing dreams of glory when young men around them were being pushed into terror ranks. If the parents of the girls supported their aspirations, they were humiliated. For more than 30 years, only a few girls from middle class and poor families of Kashmir managed to resist this stranglehold of the terror ecosystem. These rules did not apply to the elites of Kashmir, or the fortunate few who lived in the capital city of Srinagar and managed to follow their passion. Now, girls from all parts of Kashmir are laying their claim to the pursuit of glory in their chosen fields. As Afferent, Libra, Saber and scores of other cricketers compete for their respective teams, there is an air of excitement at Sher-e-Kashmir Stadium. Parents, brothers, sisters, cousins and many others are cheering from the stands. We know that in these budding strikers and bowlers, Kashmir has won. The Once and Future King, one of the knights of Camelot, Sir Ellsinore, dedicates his life to pursuing a mysterious creature, the Questing Beast. Over long years, he tracks his elusive quarry through deep forests and desolate wastelands, far from the haunts of men, following the spoor left by the Beast fewest until, overcome by age and the futility of his mission, Sir Ellsinore gives up the chase and returns to a well-earned rest in Camelot. His retirement, however, is short-lived. For a plaintive snuffling outside the city walls announces the Questing Beast presence, which has tracked down its erstwhile pursuer to coax him into renewing the chase. After all, what the use of being a Questing Beast if there no one questing after you? With a sigh of noblesse oblige, the gallant knight dons the spurs that he hung up and sets off again in pursuit of his fugitive. The maps of antiquity, which featured vast tracts of uncharted terror firma, marked with the ominous caveat, Here Be Dragons, have long been dispelled by the hi-tech wand of GPS navigational systems that have forever banished unexplored wildernesses from the face of the planet. But the enticing unknown still exists, lurking in the twilight zone of fertile imagination, where wondrous things still go bump in the impending night of undiscovered, their silent siren songs luring us to search for them. Unlike Sir Ellsinore, we have not one, but many Questing Beasts, to track down in the labyrinth of legendary lore. Perhaps, the most celebrated of these creatures is the Loch Ness Monster, who earned herself a feminine identity and the endearing nickname of Nessie. She is believed to inhabit the Scottish lake of that name, the larges

On a dentist chair, enter the operation theatre or visit the Xray department in a hospital. Electricity has also brought the world to our doorstep in more ways than one. Today we can see a live telecast of events taking place thousands of miles away where it is not always feasible for us to be present. Through the computer and other more sophisticated audio systems, we are exposed to the world best literature and music. Unfortunately, in India not all of us can avail of the facilities provided by electricity. There are still far too many people who live below the poverty line, and even though electricity has reached the remotest village, everyone cannot benefit from it. It should be our endeavour to bring light into the lives of all our countrymen and to ensure that an electric bulb glows in every home, indeed electricity is one of the most important blessings that science has given to mankind. Of all modern inventions, electricity is perhaps the most wonderful. To those who experienced its magic for the first time, it must have felt like being transported to a fairy land. Today, we take it so much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without electricity? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen too would have been very different from what you see now. There would have been no toaster, blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. You will realize this if you ever happen to sit on a dentist chair, enter the operation theatre or visit the department in a hospital. Electricity has also brought the world to our doorstep in more ways than one. Today we can see a live telecast of events taking place thousands of miles away where it is not always feasible for us to be present. Through the computer and other more sophisticated audio systems, we are exposed to the world best literature and music. Unfortunately, in India not all of us can avail of the facilities provided by electricity. Nagaland is following on the footsteps of its western neighbor, Assam in the task of setting up a register of indigenous inhabitants of Nagaland (rain). This is a variant of the national register of citizens (arc) that Assam has adopted with decidedly mixed results so far. Nagaland claims to have watched the process unfold in Assam, followed it closely complete the task of identifying and registering indigenous inhabitants less than five months, December 10, 2021. This is more or less kind of time line that was followed by Assam, which publishes its final arc year after the process began. In two months from Nagaland hopes have list of indigenous inhabitants, after which it will be published given till October 10 to file claims and objections, before finalization. It sounds simple, and Nagaland considerably less populated than Assam. But the Assam experience shows that complex demographics of the northeastern states, it may not turn out that way. As many as 40 lakh people were arc listing in Assam, which seemed aimed out illegal immigrants. Indeed, in Nagaland, various local attempts have been made to determine non locals, non tribal and non nags, and identify what some people refer illegal Bangladeshi immigrant. Two years ago, a town farther than 15 km from dimapur, the largest city commercial capital state, passed a resolution to place curbs on ibis and devised ways to prevent them from integrating, living or trading in the town. When such is the situation on the ground, in an already volatile region where the armed forces special powers act routinely extended, it is best that Nagaland proceeds with caution in this enterprise. The rain should not ultimately become a vehicle to make outsiders of insiders. These actions seem aimed to reduce the oppositions ability to act as a check. Defections are not uncommon despite the stringent conditions of the anti-defection law. But coming so soon after the assembly elections, and devoid of a defections point of principle, they raise disturbing questions about the ideological and programmatic cohesiveness of the congress. Males need not be tied to party satraps and should assert their individuality in law making but it is dishonesty to defections switch sides after being elected on a party ticket when the only plausible objective is to grab the loaves of power. That there is no ideological distinctiveness to political representation in states such as telangana has made it possible for defections to happen rampantly. In an ideology lite polity, the mlas seem to see no benefit in meaningfully representing their constituents, and find it rewarding defectors to align with the ruling party for the purposes of defections patronage. The anti-defection law, that calls for disqualification unless defecting legislators are part of a group that constitutes at least two thirds of defectors the legislative strength of a party and that merges with another party, was enacted to prevent such machinations. However, defectors have found ways to work around the law to avoid disqualification. Dramatic shifts in allegiances by elected.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-24-Test NO.-10508

Defectors mlas have been a concern in Andhra Pradesh and telangana, among other states. In many cases, even if the two thirds rule has been flouted, the defectors authority given to the speaker, who is invariably from the ruling dispensation, has enabled dubious calls. This decision making structure has also allowed blatant defections to be ignored, as seen in goal and Manipur. At present, Sudan generals enjoy regional and international support. The UN Security Council could even condemn the violence as china, backed by Russia, blocked the move. Saudi Arabia and the United Arab Emirates, which offered financial aid to the junta as soon as Mr. Bashir was removed from power, also support the generals. This telangana assembly gives the military rulers a sense of impunity even when they unleash murderous paramilitaries on peaceful protesters. This has to change. Arab countries as well as the un should put telangana assembly meaningful pressure on the military council to pay heed to popular demands and hold those responsible for the June 3 massacre accountable. There is no easy solution to the crisis. If the military wants to keep its grip on power, there could be more bloodshed as the protesters are defiant. It will have to necessarily build a more oppressive regime, as in telangana assembly Egypt after the 2021 coup. The other, wiser option is to compromise, resume talks with the protesters and facilitate a quick telangana assembly and orderly transition to civilian rule. The choice the generals make will determine the future of Sudan. Telangana assembly speaker pocharam srinivas ruddy decision to endorse the merger of a 12 member group of legislators from the congress with the ruling telangana rattrap smithy may be technically justified under the tenth schedule of the constitution. They constitute the requisite two thirds of the 18 member congress legislature party. But this orchestrated decimation of the opposition in the 120 member legislature does not bode well. With this, the tars strength has gone up to 103. It had won 88 seats in the 2018 elections, but three mlas telangana assembly. The new finance minister. In the near term, she has to boost consumption, which means putting more money in the hands of people. That, in turn, means cutting taxes, which is not easy given the commitment to rein in the fiscal deficit. In the medium term, Ms. Sitharaman has to take measures to boost private investment even as she opens up public spending again. These call for major reforms, starting with land acquisition and labor, corporate taxes by reducing exemptions and dropping rates, and nursing banks back to health. On the table will be options such as further recapitalization of the ailing banks, and consolidation. The question, though, is where the money will come from. With tax revenues likely to be subdued owing to the slowdown, the center will have to look at alternative sources such as disinvestment. There may be little choice but to go big on privatization. A rate cut by the reserve.

Of this Act designate as many officers as public information officers as may be necessary to provide information to persons requesting for information under the Act. In this Act Section 2 h defines institutions which come under the definition of public authority. As per the reference letter the government informed that, according to Section 2 h of the Act all institutions formed by laws made by state legislature is a public authority and therefore all co operative institutions coming under the administrative control of The Registrar of co operative societies are also public authorities. In the above circumstance the following directions are issued All co operative institutions coming under the administrative control of the Registrar of co operative societies are public authorities under the Right to Information Act, 2005 central law No.22 of 2005. Co operative institutions are bound to give all information to applications under the RTI Act, if not given they will be subjected to punishment under the Act. For this all co operative societies should appoint public information assistant public information officers immediately and this should be published in the government website. For giving information for applicants government order No.8026 05 government administration department act Page 10 11 and rule can be applicable and 10 rupees can be charged as fees for each application. Also as per GAD Act and rule and the government Order No.2383 06 dated 01.04.2006. Details of Right to Information Act are available in the government website www.kerala.gov.in or right to information gov.in other details regarding the Act are also available in the government website. Hereafter application for information from co operative institutions need not be accepted by the information officers of this department. But if they get such applications it should be given back showing the reasons or should be forwarded to the respective co operative institutions with necessary directions and the applicant should be informed about this. In this case it is directed to follow the time limit strictly. It is directed that all joint registrars assistant registrars should take immediate steps to bring this to the urgent notice of all co operative institutions. They should inform to this office the steps taken within one week. The Government Order No.2389 06 dated 01.04.2006 is also enclosed. Sd V. Reghunath Registrar of co operative societies in charge The State Government, it is seen, vide its letter dated 5.5.2006 has informed the Registrar of Co operative Page 11 12 Societies that, as per Section 2 h of the Act, all institutions formed by laws made by State Legislature is a public authority and, therefore, all co operative institutions coming under the administrative control of the Registrar of Co operative Societies are also public authorities. We are in these appeals concerned only with the co operative societies registered or deemed to be registered under the Co operative Societies Act, which are not owned, controlled or substantially financed by the State or Central Government or formed, established or constituted by law made by Parliament or.

Delhi Police Typing-Dated-2023-08-24-Test NO.-10510

State Legislature. Co operative Societies and Article 12 of the Constitution We may first examine, whether the Co operative Societies, with which we are concerned, will fall within the Expression State within the meaning of Article 12 of the Constitution of India and, hence subject to all constitutional limitations as enshrined in Part III of the Constitution. This Page 12 13 Court in U.P. State Co operative Land Development Bank Limited v. Chandra Bhan Dubey and others 1999 SCC 741, while dealing with the question of the maintainability of the writ petition against the U.P. State Co operative Development Bank Limited held the same as an instrumentality of the State and an authority mentioned in Article 12 of the Constitution. On facts, the Court noticed that the control of the State Government on the Bank is all pervasive and that the affairs of the Bank are controlled by the State Government though it is functioning as a co operative society, it is an extended arm of the State and thus an instrumentality of the State or authority as mentioned under Article 12 of the Constitution. In All India Sainik Schools employees Association v. Defence Minister cum Chairman Board of Governors, Sainik Schools Society, New Delhi and others 1989 Supplement 1 SCC 205, this Court held that the Sainik School society is State within the meaning of Article 12 of the Constitution after having found that the entire funding is by the State Government and by the Central Government Page 13 14 and the overall control vests in the governmental authority and the main object of the society is to run schools and prepare students for the purpose feeding the National Defence Academy. This Court in Executive Committee of Vaish Degree College, Shamli and Others v. Lakshmi Narain and Others 1976 2 SCC 58, while dealing with the status of the Executive Committee of a Degree College registered under the Co operative Societies Act, held as follows 10...It seems to us that before an institution can be a statutory body it must be created by or under the statute and owe its existence to a statute. This must be the primary thing which has got to be established. Here a distinction must be made between an institution which is not created by or under a statute but is governed by certain statutory provisions for the proper maintenance and administration of the institution. There have been a number of institutions which though not created by or under any statute have adopted certain statutory provisions, but that by itself is not, in our opinion, sufficient to clothe the institution with a statutory character We can, therefore, draw a clear distinction between a body which is created by a Statute and a body which, after Page 14 15 having come into existence, is governed in accordance with the provisions of a Statute. Societies, with which we are concerned, fall under the later category that is governed by the Societies Act and are not statutory.

Delhi Police Typing-Dated-2023-08-24-Test NO.-10511

The election of Droupadi Murmu as the President of India is a historic moment for Indian democracy. Her remarkable journey from an extremely poor tribal area in Odisha, that too from the disadvantaged Santhal community, to the highest constitutional position in the country has been marked by struggles, grit and determination. The elevation of a person of such humble origins as the First Citizen is a matter of great joy for all of India, more so for the tribal community. It is sad that the nation had to wait for 70 long years to see a tribal woman reach the highest office of the land. This moment marks yet another victory for our democracy and our Constitution under the leadership of Prime Minister Narendra Modi. The World Health Organisation declaring monkey pox a global health emergency is a signal to India to really scale up its response. Nearly 18,000 cases have been detected worldwide, alongside four cases in India. But having surmounted the worst of the Covid pandemic and learned valuable and occasionally painful and tragic lessons, India is in a better position to implement prevention and treatment strategies for monkey pox. It is this advantage that must be squandered as monkey pox is less transmissible, and the infectious stage starts only after symptoms appear. We know from Covid what works and does. Prevention is really the key, not draconian lockdowns, movement curbs or alarmism. Community disease surveillance must be increased. Healthcare workers must be in a position to get reports of patients manifesting chickenpox like symptoms, a commonly prevalent disease witnessing fever and rashes the possibility of monkey pox being overlooked as chickenpox is therefore high. Such heightened surveillance coupled with prompt quarantining, contact tracing, testing, and ring vaccination for at risk individuals will help prevent major outbreaks. From readying contact tracing teams to ordering RT PCR test kits and vaccines and finalizing treatment protocols, there much work to be done. Assiduously following the test trace isolate treat vaccinate strategy can ensure mass vaccination ins needed. Administering all medical workers the smallpox vaccine, which reportedly gives broad spectrum protection against monkey pox too, should start early. India must get a head start on utilising its massive vaccine manufacturing infrastructure. A cardinal mistake until the Covid Delta wave was that Go failed to place bulk orders and make advance payments to incentivise vaccine companies to scale up production. The US has ordered nearly 7 million doses of the Junes vaccine for delivery in 2022 and 2023. But many US states are already reporting Junes shortages, a warning for India, which must start negotiations for getting a manufacturing license. A vaccine production scale up by India will help the world too. The Centre and states must also get communication strategies right. Like masking for Covid, citizens require advice on how to best protect themselves. Otherwise, misinformation will dominate. The stigma attached to contracting Covid was also a deterrent for symptomatic persons to approach health workers. Patients must be assured their dignity.

Delhi Police Typing-Dated-2023-08-24-Test NO.-10514

Monkey pox may have to be monitored for months, given the global surge. But this is a battle India can win. Ukraine and Russia grain export deal, brokered by the UN and Turkey, is the first major diplomatic breakthrough post Russian invasion. Its importance is underlined not just by the fact that the two countries account for more than a quarter of world wheat exports, but that food shortages are now a global emergency. The World Food Programme estimates that 47 million people have moved into acute hunger. Black Sea ports remain heavily mined. So, under the new deal, grain ships with Ukrainian pilots will navigate through a safe corridor and pass through the Bosphorus Strait to reach global markets. These vessels will be inspected before they arrive to confirm there is no smuggling of weapons, while the ships will be monitored by a Joint Coordination Centre in Istanbul. In exchange, Russian fertilizers will gain unimpeded access to global markets. That said, the complex process laid out for unblocking the Black Sea means that these shipments will take quite some time to land in global markets and make a difference to global food prices. Plus, the status of the war remains tricky. There are signs that Russia has gained the upper hand in eastern Ukraine with Russian foreign minister Sergei Lavrov recently stating that Moscow objectives have expanded. Therefore, not only do both parties have to stick to the deal, any miscalculation will scuttle the agreement. India will be hoping the deal works. It is a surplus country when it comes to food grain but continued shortages in the global markets raise prices that feed through to other farm commodities, some of which India needs to import. Prices of edible oil India imports around 14 metric tons of the 23 MT it consumes have come down sharply. But the Moscow Kyiv deal needs to work to soften food prices globally. Our neighbor in the north west is experiencing economic turmoil. Yet again. Last month, Pakistan planning and development minister Ashraf Iqbal appealed to citizens to reduce their daily consumption of tea to two cups, in an effort to preserve dwindling foreign exchange reserves. Pakistan imports around \$600 million worth of tea each year and with its foreign exchange reserves depleting at an alarming rate, from \$20 billion in August 2021 to \$9.7 billion in the beginning of July 2022, the government is feeling the pinch of each teacup. Anatomy of the crisis: Pakistan economy was tottering down the path of economic crisis for a while, but the deadly combination of the pandemic and the Russia Ukraine war have caused it to hurtle towards a disaster. Recent headlines point to a large fire under earth, cooking everyone slowly to serve them piping hot on a dinner plate in Mars. Peak summers abroad used to be a mildly sunny day to us. We've all seen Europeans prance around in bikinis under a watery sun, screaming summer is here, summer is here, but now.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-24-Test NO.-10515

Earth is frying them too. Red faced and dry mouthed; everyone now has the same sunstroke wardrobe. White linen is best for keeling over. But some parts of India haven't heard of global warming yet, at least one South Indian city has. Temperatures may soar past 40 all around it, but Bengaluru keeps to the early 20s. Here the sun shines just enough to maintain good visibility but not so much that sunglasses slip off the nose. Days do go by in traffic jams; most Bengalureans live inside vehicle snarls so long that they demand a refund of their house rent. The absence of road rage though has been traced back to the use of quilts at night. You wake up in Siberia, move to the Alps by noon, go to sleep in an igloo. When all are feeling hot, Bengaluru alone is ice baby. Tall, dark and handsome trees, exhibitionist flora, pubs down the lane. No overpriced cramped cafes or accidentally spooning strangers in crowded bistros. Bengaluru can dine under the stars every night, with open air eateries and microbreweries around every corner. Kids and pets, plenty of room here, real estate prices are not at par with bigger cities. Mumbai kind of makes up with the quirky names for its restaurants and the chance of a film star at the next table, which will be so close to yours you might as well be eating together. Delhi, unable to drum up Mumbai come in your flip flops vibe, draws bland on menu and decor, not to mention the coriander leaves that loll about on everything from Chinese food to chai. Chat masala is a spice tycoon. Bengalureans are careful to moan along when the weather dirge is sung during Zoom calls, as no one wants visitors to land up en masse just because our summers are like winters. We don't bring up craft beer or filter coffee. Just, you know, how far the airport is, ayyo. And those policemen waiting to smell your breath when your blood is long island iced tea. Our thoughts on death can greatly determine our outlook on life. Do we want to stay bound to the transience of everything? Is it right to grieve for a long time over the loss of a loved one. As Kaushalya warns Dashrath in Ramayan: Grief destroys courage. It destroys one's learning and all noble attributes. There is no enemy greater than grief. How then are we to look death courageously in the eyes? Krishna answers this question in Bhagwad Gita by pointing out how we may understand death in terms of moksha. At the beginning of Mahabharat, Arjun is doubtful as to whether he should really fight. He is grief stricken by the prospect of killing his teachers and elders in battle. Krishna as the compassionate teacher reveals to Arjun: There was never a time when I did not exist, nor you, nor these rulers of men. Nor shall we ever cease to be hereafter he.

Assures Arjun that as the Atman we are all indestructible and eternal. Our divine core is the same in all times past, present and future. It is only when we mistake ourselves to be the body that death befalls us. Krishn goes on to say that the unreal has no existence and that which is real never ceases to be. What does he mean? That death simply does not exist it is the ever changing Maya, a mere illusive appearance. Death is only a dream seen within the realms of duality. As such it symbolises flawed thinking and wrong attachment to our ego expressing itself in terms of me and mine . From the standpoint of Infinite Reality, the creation and dissolution of our bodies never take place. We do not have to experience physical death in order to become liberated. Therefore, Krishn wants us to shift our focus to the Eternal Atman. By following dharma and attaining Self knowledge, everyone can transcend the limitations of material life. These teachings are a reminder to us of our responsibility to look beyond death and abide in the truth of the Atman. We may go on choosing the cycle of samsara or awaken to the reality of the Self which as Krishn says is never born and it never dies. It is always alive. Unborn, eternal, everlasting and most ancient, it is not killed when the body is killed. Becoming liberated within the Self is the celebration of life over death, it is moksha. Krishn message is one of comfort and reassurance. The same divine core of each and every one is without beginning and end. It can never be touched by any human understanding or grief over death. Why then should we ever become hopeless over anything mundane that is only limited and passing? Transcend the finite and you shall become the peace within of which all scriptures speak. Instead of contemplating death in fear, our lives should be a celebration and constant prayer of gratitude for everything but most of all a thanksgiving to God for the chance to unite with the One Self. This is what Krishn taught Arjun about death. Read more on the Joy of It is found from the data of Tea Board of India from 1950 to 2016 that, although, the proportion of Export to Production of Tea in India, decreased from 72.30 % in 1950, to mere 17.52 % by 2016, owing to increase in the proportion of Domestic Consumption of Tea to Production of Tea in India, from 27.7 % in 1950, to 82.48 % by 2016, indicating that, a gradual increase in domestic consumption of Tea in India has led to a gradual decline in Export of Tea by the country, which incidentally was mere 17.52 % in 2016, nevertheless, the Value of Export of Tea received by India in Rupee terms, during the same period, increased from 804,214 Thousand Rupees in 1950 to 44,681,100 Thousand Rupees in 2016, amounting to a.

Delhi Police Typing-Dated-2023-08-24-Test NO.-10517

Whopping increase over the period, and the average Value from Export of Tea received by India over the period, from Thousand Rupees. It is obvious, increasing domestic consumption of tea in the country has led to this situation. Obviously under these circumstances, although it is not possible to reduce domestic consumption of tea, it is nevertheless possible to make efforts to increase production of tea & take measures to popularize Indian Tea in the existing overseas markets as also to explore new markets for Indian Tea. If these efforts help the country to expand the market for Indian Tea, besides getting back the markets we have lost to the competing countries, the situation even now can be improved, looking at the Value we are receiving from the Tea exported, which has over the period Export by Country India exports tea to more than 25 countries throughout the world. Russia, Iran China are some of the major importers of tea from India. Russia, Ukraine and Kazakhstan reportedly imported 32.5 million kg, 1.68 million kg and 6.48 million kg of tea from India. The share of Indian exports to the CIS nations during that period the total exports. Iran, UAE and USA are among India top tea export destinations. During 2021 22, the three countries imported million kg of tea from India. The value of total exports to these million during the same period by year. Some of India other tea export destinations are Poland, Canada, Saudi Arabia, Egypt, Afghanistan, Bangladesh, China, Singapore, Sri Lanka, Kenya, Japan, Pakistan and Australia, etc. All these countries combined accounted for India contributing to 16% of the tea export revenue. Government Initiatives To help the Indian exporter market teas of Indian origin in the overseas markets on a sustained basis, the Tea Board of India has started a scheme: Promotion for packaged Tea of Indian origin. The scheme provides assistance in promotional cost reimbursement, display in International Departmental Stores, product literature and website development, and inspection charges reimbursement, of up. The Tea Board also provides subsidies to the domestic exporters to participate in International Fairs and Exhibitions. The aim is to provide a platform to the exporters to showcase their products in international events for promotion and facilitate the generation of trade opportunities. Tea Development and Promotion Scheme This scheme was launched in November 2021 by the Tea Board of India for the period 2021 26. The objective of this scheme is to enhance the productivity and quality of production of tea in India. There are seven important components to this scheme, bodies, but only body corporate within the meaning of Section 9 of the Kerala Cooperative Societies Act having perpetual succession and common seal and hence have the power to hold property, enter into contract, institute and defend suites and other legal proceedings and to do all things necessary for the purpose, for which it was constituted. Section 27 of the Societies Act categorically states that the final authority of a society vests in the.

Region these numbers are set to reach record breaking levels at the end of this month when the official Loch Ness Centre has announced the biggest-ever search for Nessie and sent out a summons to all budding monster hunters to participate in it. The proposed hunt will use modern gadgetry to unearth or rather, unwater the gargantuan critter, which now has evaded successive attempts at finding it, including one organised by the Loch Ness Investigation Bureau in 1972. Closer to home is the realm of the humanoid Yeti, the so-called Abominable Snowman of the Himalayas, said to be a denizen of the high pinnacles of eternal snow. During the 1950s-1960s, when the Cold War was at its peak, and Earth a ticking doomsday clock minutes away from nuclear Armageddon, inexplicable phenomena like UFOs, and little green men from Mars, provided diverting distraction from the looming threat of destruction. The Yeti took pride of place in this unearthly pageant, and in 1961, Everest hero Edmund Hillary led a team on a six-month-long quest for the Snowman. Though tracks supposedly left by it were discovered, the creature proved untraceable, and a supposed Yeti scalp obtained from a remote monastery turned out upon forensic scrutiny to be that of a Himalayan bear. However, the Yeti remains tantalising bait for monster buffs. As does its overseas counterpart, Bigfoot, or Sasquatch, a large, 8-foot-plus hairy inhabitant of the forests of the Pacific Northwest in the US and Canada. Unlike the Yeti, whose existence no documented evidence exists, Bigfoot has allegedly been captured in blurry photographs. May Sasquatch and his marvelously monstrous ilk remain forever unfound. For they may well satisfy a deep-seated psychic need by doing so. According to Carl Jung, the triumph of scientific rationalism has desecralised the world of the mind, which we require to remedy through mystery. And what better mystery than made-up monsters, seductive serpents of a forsaken Eden? On August 3, GOI dropped a bombshell, frightening both industry and consumers. The free import of personal computers, laptops and tablets was banned with immediate effect. A licence would be needed to import a computer. Apple, Dell and Samsung stopped orders from abroad. Students asked where to queue up for a licence. Parents wondered if prices would go up. IT companies were worried about the future of their business. There were anxious calls from overseas investors, asking if the Indian economy was in trouble. Does India have comfortable reserves? asked one. Another hoped India was not going the way of Sri Lanka and Pakistan. Region these numbers are set to reach record breaking levels at the end of this month when the official Loch Ness Centre has announced the biggest-ever search for Nessie and sent out a summons to all budding monster hunters to participate in it. The proposed hunt will use modern gadgetry to unearth or rather, unwater the gargantuan critter, which now has evaded successive attempts at finding it, including one organised by the Loch Ness Investigation Bureau in 1972. Delhi Police Typing-Dated-2023-08-24-Test NO.-10521

I am frequently asked about the strong sense of pride that the wives of army personnel feel when being referred to as Army Wives. People often wonder what makes this title so significant. Some even make light-hearted remarks about marrying the entire army. However, I had like to shed some light on this matter. An army wife is a formidable presence in her own right. She is the one who stands resolute while her soldier is away, protecting borders, confronting terrorists, and facing the challenges of unfamiliar terrains. A soldier duty goes beyond the confines of their assigned postings; they can receive orders to move to any place at any time of the day. The wife must be prepared for these changes, whether it a training course, a temporary duty assignment, or even a mission in insurgent regions or places affected by natural disasters. Every day, they live in the constant shadow of uncertainty. The future is unpredictable, and they face each moment with courage, not knowing what the next day may bring. A recently organised event organized by Army Wives Welfare Association, ASMITA Season 2, had brought together such amazing army wives from all across India. The way they manouvered through the traumas, the challenges that life threw at them and yet stood tall and firm, still trying to help their other sisters in arms, is something we all should be proud of. Standing true to the motto Empowered of Women Empower Women. One had three near death experiences, once where she even saw the white light, yet there she was holding us all together. Her smile, her resilience made the rest of us super proud of our common backgrounds and the olive-green blood that bonded us together. Then, we had an officer who along with her husband fought the Kargil War while being five months pregnant. Can you even imagine the strength that she exuberates. Ohh That was just another level. While another shy girl from a tiny little village of Jharkhand whose only dream was to study, her soldier husband gave her that opportunity, when they got married right after she passed her class 10th exams. Her husband was killed in the line of duty but not before his wife could complete her education, today this lady is a member of Jharkhand government education research group. Another army wife stood tall with her head held high, reliving with us how she handled her horrific teenage trauma and now how she helps children with autism and are victims of trauma. She runs a self-healing group, to help heal other battered souls. It is beyond my imagination how she does, what she does, such is her power. There was a very young army wife, a sports person with a collection of national and international medals which were double her age, another one fought the society and its norms all by herself, just because she did not fit into the right definition of how tall or short, a girl should be. Then we had a super creative poet and artist who was a child prodigy but battled dyscalculia- which is a learning disorder which affects a person ability to do math. I had never heard this word before, and I am concerned about the number of students facing it and not knowing about it. No one understood her issue, it was not even known during her childhood. While she stood first and won gold medals in every other filed this was where she was left combatting something which was beyond her control. Today she is the voice of such helpless souls, creates awareness through her own journey and motivates people thr

Very humble, trying hard to help each other to deliver their best, look their best and just be the best version of them. These remarkable women radiate an unshakable confidence in their own identities, despite the arduous journeys they have traversed. They stand apart from the realm of competition, with their sole desire being the cultivation of a more empathetic society. Their contributions resonate on a broader scale, which is why they graced the stage alongside the esteemed President of India, Smt. Droupadi Murmu. These women of steel possess no trace of self-centeredness or fragile egos. They are devoid of the need for rivalry. Instead, they generously give a part of themselves back to society, serving those in need, thereby contributing to the betterment of everyone's life. In a manner akin to their soldier husbands, who uphold the principle of Leave no Soldier Behind, these women offer guidance and lift others a notch higher than before. They are not participants in a frantic rat race; rather, they form a distinct race and creed of their own. For me, this experience was truly unparalleled, offering profound lessons from these exceptional women. I learned about facing mortality and standing resolute in the midst of adversity. Among them, one commented, you are the voice of the voiceless. Perhaps I am, yet I acknowledge that I have a substantial journey ahead before I rest. With these extraordinary women, the Tigresses of the Indian Army, I am confident that I am following the right path. The importance of the MSME sector in India's economic growth is self-evident. With over 630 lakh MSMEs employing over 1100 lakh people staggered across services & the manufacturing sector, the sector contributes nearly 30% to the country's GDP. Underlining the importance of the MSME Sector as a growth engine, being amongst the biggest employers in India, the Finance Minister of India in her Budget on February 01, 2023, has proposed to spend a record Rs. 22,138 crores on allocations aimed at as part of an announcement of the budget for FY 2023. Women Entrepreneurship Entrepreneurs are described as aggressive with high-risk proclivities & seem more inclined socially to achieve and obtain economic benefits, an image which does not fit in women who seem closer to care and the emotional sphere & therefore, in pursuit of social value, it is claimed. However, the perception is fast changing. Today, Female entrepreneurs represent the fastest growing category of entrepreneurship worldwide and are believed to be capable of making significant contributions to entrepreneurial activity and economic development in terms of: Creating new jobs and increasing the gross domestic product, and; Have a positive impact on reducing poverty and social exclusion. NeoGrowth Impact Report, 2023 with a focus on Women Entrepreneurs Recently, Neogrowth Credit Private Limited, a Private Banking Company & a new-age digital lender registered with RBI, focusing on Micro, Small, and Medium Enterprises (MSMEs) in its Impact Report 2023 stated that, in a significant stride towards financial inclusion & empowerment, women-run small & medium enterprises have availed loans totaling INR 430 crore accounting for 24% of the overall loans disbursed to MSMEs by the NeoGrowth in FY 2023 amounting to nearly 1900 crore. The Report highlighted that over 2600 women-owned accessed business loans during the previous fiscal year. NeoGrowth provided these loans by leveraging the digital ecosystem. The Company sta

General body of its members and every society is managed by the managing committee constituted in terms of the bye laws as provided under Section 28 of the Societies Act. Final authority so far as such types of Societies are concerned, as Statute says, is the general body and not the Registrar of Cooperative Societies or State Government. Page 15 16 This Court in Federal Bank Ltd. v. Sager Thomas and Others 2003 10 held as follows 32. Merely because Reserve Bank of India lays the banking policy in the interest of the banking system or in the interest of monetary stability or sound economic growth having due regard to the interests of the depositors following on the footsteps of its western neighbour, Assam in the task of setting up a Register of Indigenous Inhabitants of Nagaland. This is a variant of the National Register of Citizens that Assam has adopted with decidedly mixed results so far claims to have watched the process unfold in Assam, followed it closely complete the task of identifying and registering indigenous inhabitants less than five months, December 10, 2019. This is more or less kind of time line that was followed by Assam, which publishes its final NRC year after the process began. In two months from Reserve Bank of India lays the banking policy in the interest of the banking system or in the interest of monetary stability or sound economic growth having due regard to the interests of the depositors is following on the footsteps of its western neighbour, Assam in the task of setting up a Register of Indigenous Inhabitants of Nagaland Nagaland hopes have list of indigenous inhabitants, after which it will be published given till October 10 to file claims and objections, before finalisation. It sounds simple, and Nagaland considerably less populated than Assam. But the Assam experience shows that complex demographics of the Northeastern States, it may not turn out that way. As many as 40 lakh people were NRC listing in Assam, which seemed aimed out illegal immigrants. Indeed, in Nagaland, various local attempts have been made to determine non locals, non tribals and non Nagas, and identify what some people refer Illegal Bangladeshi Immigrant. Two years ago, a town farther than 15 km from Dimapur, the largest city commercial indigenous inhabitants, after which it will be published given till October 10 to file claims and objections, before finalisation. It sounds simple, and Nagaland considerably less populated than Assam. But the Assam experience shows that complex demographics of the Northeastern States, it may not turn out that way. Capital State, passed a resolution to place curbs on IBIs and devised ways to prevent them from integrating, living or trading in the town. When such is the situation on the ground, in an already volatile region where the Armed Forces Special Powers Act routinely extended, it is best that Nagaland proceeds with caution in this enterprise. The RIIN should not ultimately become a vehicle to make outsiders of insiders.

Delhi Police Typing-Dated-2023-08-25-Test NO.-10524

This month, after 26 long years, the judicial system delivered a verdict on a simple case of politician Raj Babbar assaulting a police officer in 1996. Meanwhile, the Chief Justice of India underlined that the judiciary is answerable to the Constitution and the Constitution alone. This column is about what these two events together mean. The motto of the Indian Supreme Court is, Yato Dharma Sthato Jaya. Dharma can be upheld only if privilege and responsibility go hand-in-hand; higher the privilege, greater the responsibility. Economists describe this concept as no free lunch in society. Speaking in Jammu on Sunday, Rajnath Singh re-emphasised that joint theatre commands are a defence reform priority. But while Gol intent seems to be on track, little headway has been made so far. Arguments for theatre commands are known. Warfare is changing, and one modern response is joint commands that amalgamate manpower and resources of the three services. Arguments against are known, too. Currently, India has 17 single-service commands spread across a wide geography. Converting them into joint theatre commands would require a radical change in the culture of armed forces. One of the theatrisation models under consideration involves the establishment of four new integrated commands two land-centric commands, one air defence command and one maritime command to optimise the military resources. But the air force had previously expressed reservations about splitting assets, arguing that of the 42 sanctioned combat squadrons, IAF operates with just about 30. And since air force assets have dual offensive and defensive roles, distribution among the prospective joint commands has to be done judiciously. It is to iron out these issues that the Centre had formed an eight-member panel under then Chief of Defence Staff General Bipin Rawat in June 2021. And the deadline for submitting reports on finalising the new joint structures was April this year. But Gen Rawat death last December set back the entire process. And matters haven't been helped by the CDS post lying vacant since then. Meanwhile, Gol other defence reform the Agni path scheme to recruit future soldiers, change the manpower profile of the armed forces, and cut down on the ballooning defence salary and pension bill met with furious protests. The scheme is on, but its critics are still sceptical. Gol held its nerve as Agni path protests roiled various cities. Hopefully, facing down young military aspirants has affected Gol determination to force through the theatre of command reform. India security challenges have become increasingly complex with the rise of the China-Pakistan axis. Add to this the strategic complications wrought by the Ukraine war. China in the last decade radically transformed its military by successfully implementing both rationalisation of manpower PLA retrenched 3 lakh troops and establishing five theatre commands. Gol has moved on the first step through Agni path. It must now quickly appoint the next CDS and move full steam on theatrisation. India wait for its second World Athletics Championship medal turned out to be even longer than for its second Olympic.

Individual gold, and it the same sportsperson who has broken both the 19-year and the 13-year droughts. Neeraj Chopra Tokyo gold had spread joy across the country last year and made him a household name. This has ensured a mass cheering for the silver he scored in Oregon on Sunday. General public interest in athletics remains otherwise poor. Yet, while the five other Indian athletes who made it to the javelin, long jump, triple jump and 3,000m steeplechase finals in Oregon will not be feted even a fraction as much, the fact is that India 2024 or even 2028 Olympic story will be disappointing if it is not broader than today. It is all these finalists taken together that make this India best-ever showing in a more meaningful way. Because it suggests a future of more numerous and diverse podium finishes. It should be absolutely clear that this will be a massively resource-intensive endeavour. If it takes a village to raise a child, it takes public funds, private funds, corporate sponsors, coaches, physios, regular participation in international competitions, not to mention extraordinary personal tenacity to join the Worlds club. Just as earlier medallists sparked interest in wrestling and boxing in India hinterlands, today dusty grassroots javelin academies are rising for young girls as well. In his endless public interactions too, Neeraj has been a stellar role model. There was Mary Kom, then Lovlina Borgohain and Nikhat Zareen. Role models really matter. A country of a billion-plus people is too short of them. So we worry where the next Neeraj Chopra is when this one is still honing his game still training to make a 90m throw. India 268 Special Economic Zones (SEZs) are set for a fourth makeover the Development of Enterprise and Service Hubs (DESH) Bill to do this may be introduced in the ongoing Parliament session. Will DESH make a difference To answer that, let go back to the beginning. Problems with India SEZs An SEZ is a walled area housing one or more business units. The developer and operating units get tax and duty concessions not available to firms in the rest of the country. There is a curious malady that affects Indian politicians, a disturbance of the humors whose mention you may not find in the pages of WebMD. Often referred to in the popular media as chest pain, the medical term for it is irregular heart rhythms after a raid. This condition is always triggered by discovery of unaccounted-for cash and or assets on their premises, premises owned by immediate family, confidantes, or even their pets. While in some medical literature this is referred to as a malady of the mind, used by lawyers of politicians to prevent their clients from immediately talking to authorities wherein they may evacuate vital pieces of evidence before extensive coaching is conducted, most medical practitioners do not doubt the genuineness of this disease. Because Indian politicians are known to be honest and upright and dedicated to the service of.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-25-Test NO.-10526

The nation. Sure they might trigger a riot or two or take bribes and kickbacks, but they would never lie, definitely about their own health. The symptoms of this disease are many and varied, the chest pain may occur in upper or lower chest or near the chest of drawers where the bags of unaccounted-for cash may be discovered. Since Indian politicians are all exclusively over 60, with the exception of youth politicians who are 58, the risk factor of this malaise rises with age and with the importance of the ministerial portfolio they hold, in that the minister of village and crafts is less likely to be afflicted than say the minister in charge of granting out multi thousand cores of licensing to private operators. Immediate hospitalisation is the recommended course of action and the politician needs to be put on an IV drip, hooked onto multiple medical devices with flashing lights and sound, and extensively photographed while hooked up, in order to make them the victim. Treatment procedures consist of an initial triage where a statement shall be put out that the politician in question is being victimised by the authorities. Subsequent clinical procedures include denial of wrongdoing, and negotiating with the authorities by changing parties from left atrium to right ventricle or the reverse. At the worst, it may include a brief stint in luxurious incarceration. The prognosis of this condition is very good as in all politicians are rehabilitated and completely recover in the course of time. All hearts throb with a similar beat Whether you re on a hilltop or on the street, wrote the Welsh poet and writer WH Davies in his autobiography, The Autobiography of a Super-Tramp. This uncanny uniformity of the spirit was named Synchronicity by Carl Gustav Jung. Jung English friend and philosopher Aldous Huxley called it Universal Empathy. Now the question is what synchronicity Deepak Chopra writes that according to ancient wisdom, there are two signs that transformations are taking place within you that will allow you to connect with a higher consciousness. The first symptom is that you stop worrying. Things don't bother you anymore. You become light-hearted and full of joy. The second symptom is that you encounter more and more meaningful coincidences in your life, more and more synchronicities. And this accelerates to the point where you actually experience the miraculous. profound eastern consciousness, Jung and Huxley both firmly believed that synchronicity was the metaphysical validation of the oriental idea of Vasudhaiv Kutumbakam, the world is one family. Synchronicity is relatability, not just between two individuals but a common spiritual thread that binds the humanity. At an individual level, synchronicity is in fact an expression of a shift in one destiny, a shift from your head to your heart. Miracles become a more regular occurrence in an individual life. On an experiential level, you become increasingly aware of the love and wisdom of your soul. Living in synchronicity means living the life you were born to live.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-25-Test NO.-10527

Mankind is interconnected and interrelated. Though apparently all humans seem to be violent and volatile, the fundamental human nature is universally compassionate. Because of this inherent and intrinsic spirit of compassion, the larger humanity has survived. This is synchronicity or the universal empathy of goodness that embedded in every heart. An ever-aware heart experiences synchronicity all the time because what we generally consider as coincidences, are actually deeper messages from the Cosmos. Kumaril Bhatt and Raman Maharshi called it Samashtigat chetna taartamya collective consciousness uniformity. Remember, there a greater power behind absolutely everything we all do. And that power is not the conventional and hoary-old orthodox concept of a god. Things happen for a reason, and when it seems as if the world is working with you, not against you, that synchronicity. In other words, when were all lovingly and consciously aligned with not just fellow humans but with all creatures and a seamless pervasiveness subsumes our existence, synchronicity permeates across the whole spectrum of humankind. This is Persian mystic Jami Ishqiyat-un iqtaafi singular streak of consciousness running through all beings. If mankind can understand the essence of synchronicity, munificence of universal love and the magnanimity of human spirit, all these petty differences can be dispelled quickly. A new world order can be established where no religion, nation or god will be the final word but a synchronised spirit will guide us all. Let me encapsulate this with my own couplet in Urdu, Bas is eke jibe Ki darker hay kunai koi Eke hi massed, eke hi fikra ho dil-e-bechain koi the Universe needs just one thing Every restless soul should have a common goal. Carl von Clausewitz says, In a time of war, we should have the probability of victory on our side. After the Kargil war, it was said that the Indian Army failed to visualise a misadventure of the Pakistan Army in 1999 in the Kargil sector. However, I must say, in hindsight, that the Pakistan Army did not expect this kind of reaction from the Indian Army, which had the backing of our political leadership. The result was Pakistan Army defeat. In the Kargil war, Pakistan Army surprised us by taking initiatives as it did in 1947-48 and 1965, and China in 1962. Enemies attacked us and thus violated our territorial and sovereign integrity. Though there was nothing in black and white, it was discussed at various levels and was conveyed to the Indian Army to get the Kargil intrusion vacated and restore the sanctity of the Line of Control (LoC). So, the Indian Army conducted the OP-VIJAY with a rider that LoC should not be crossed. The order to restrain must have come out due to: India and Pakistan signed the Lahore declaration in Feb, 1999 to maintain peace and stability in the region after attaining nuclear weapons. Nuclear tests, relations with all major countries in the world were on a downward spiral. So, to maintain international opinions in favour of India, our political leaders.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-25-Test NO.-10528

Must have thought to restrain. Both India and Pakistan had obtained nuclear weapons. Had this conflict escalated, the world major powers could have intervened immediately to stop the war, which would have led to the loss of territory as it happened in 1947-48, 1965 and 1971. Had India escalated this fight in response to intrusion, the world could have declared India an aggressor, thus casting it in the mould of an irresponsible nation. The Indian Army restricted the Op-Vijay to the LoC along the J&K region and avoided a full range of war along the International Borders (IB), thus not violating the international norms and limiting the operations to the Kargil sector only. This restricted the use of armour forces and exploitation of the full range of its superior military potentiality. This option also restricted the employment of various other arms and services due to terrain constraints. Worldwide, this course of action of India received wider acceptance and praise. However, it exerted a lot of strain on the Indian Army, but politically it was justified somehow. The Indian Army responded to Pakistan Army incursions with challenging fight-clearing operations, which took pains by not punishing Pakistan in her territory. The Indian Army paid a very high cost for this in terms of dead and wounded soldiers but did not escalate the fighting. But I must say restraint is the tool of the powerful, unlike popular misconceptions that restraint is a sign of weakness and a reflection of cowardice. It shows how one could dominate by restricting one might and power. Restraint is not a privilege of a weak being at the mercy of superior power. The restraint empowers a regulated and gradual reply, empowering the use of various statesmanship tools to limit the effects of war conflict. Ultimately, it is prudent not to allow the war to run away on its course but to rein and control it. Kargil war was a ground-breaking occurrence in the history of the Indian Army. For the first time, the sacrifices, hardships, nobility of spirit and war pains were displayed intensely to raise the national consciousness through electronic and print media. Names of features like Tiger Hill, Tololing, etc., and our martyrs became part of our national consciousness. Several lessons were also learnt in the operational field to shore up the bulwark of our defences. The primary lesson learnt was to keep our borders secure. For this, we must keep ourselves up-to-date and comprehend our enemies strategic and military psyche. Immediately after the war, the Indian Army realised that the command and control of the Chinari Corps required a change. It guarded almost 1490 km Line of Control (LoC) and Line of Actual Control (LAC) with Pakistan and China and was also involved in counterterrorism operations in Kashmir. A new corps with additional troops was raised in Ladakh. After the Kargil conflict, the Indian Army prepared to cater to conventional and sub-conventional conflict levels below the all-out war. All these factors led the Indian Army.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-25-Test NO.-10531

To work on a limited war doctrine catering to India-Pakistan and China security threats. To increase efficiency and coordination while reducing duplication, a new Chief of Defence Staff (CDS) position was created to usher in greater jointness in the Armed Forces making him the chief military adviser to the Government of India and the Ministry of Defence. The Integrated Defence Staff was set up vide Government of India and Ministry of Defence on 23 November, 2001 for a better Security Management System. The Government has also set up Defence Intelligence Agency (DIA) under DG DIA to co-ordinate and synergise the intelligence Wings of the Services. The DIA is responsible for providing integrated intelligence inputs to the higher echelons of Defence Management. The Defence Procurement Board was set under the defence secretary to undertake the entire spectrum of the procurement function to bring professionalism and cost-effectiveness to the procurement process for defence. On 24 July, 2022, Defence Minister Rajnath Singh announced the setting up of joint theatre commands to augment coordination in Indian Armed Forces. It is a welcome step. The plan is to have five unified or theatre commands, which will help in better planning and military response, and aim to have a unified approach to fighting any future war. Also, Govt of India has launched an Agni path scheme for the country armed forces intending to make Army, Navy and Air Force leaner without compromising their combat abilities. This is a welcome step. There is no other profession in which personality training is more important than the military. War is the domain of danger. To live in this element of danger and daring, courage is essentially required. When soldiers perform their assigned tasks, they transmit their identities in their organisation. They work as a team and repose trust and faith among themselves and the organisation. They complete their task even at the cost of their lives. The soldier morale is the most significant single factor in the war and is sustained and strengthened by two crucial factors Camaraderie and spirit de corps. The foundation of the Indian Army rests on these two pillars. The Kargil war will go down in military history as a legend of bravery, courage, endurance and the highest form of leadership displayed by the Indian Army. In 2022, the percentage of the workforce looking to up skill has grown dramatically. As the world grapples with new office dynamics, a hybrid model of working and lasting impact on the way we work, there is a need to rethink professional development from a fresh perspective. One of the most noticeable differences in the Indian workforce is a greater desire to continue learning and bring new talents to our employment. Because change is relentless, the new Indian professional has realised that he she must adapt to meet the ever-changing needs at work. Understanding up skilling and reskilling Employee up skilling consists of training that allows them to perform better in their current employment. This also helps the organisation.

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-25-Test NO.-10532

To remain competitive and adaptable as the industry changes. Furthermore, emerging technologies and new business paradigms demand the acquisition of new abilities that complement and enhance old ones. On the other hand, the practice of teaching people to do tasks that are unrelated to their current job is known as reskilling. This signifies that the employee will be trained for a new position inside the organisation. Many businesses launched reskilling efforts during the pandemic in order to keep operations functioning with fewer workers and supply chain disruptions. Up skilling and reskilling are critical today Major corporations have adopted new trends requiring frequent updates, particularly during the pandemic, which has encouraged people to up skill and reskill in order to stand out. Reskilling and up skilling have grown increasingly crucial in the workplace, and many businesses have implemented measures to meet the requirement for constant staff training. According to Statist, 75 percent of employees globally reported they were very satisfied with their company reskilling and up skilling trainings in a poll performed in 2022. Even those with an extensive job experience have expressed an interest in learning more about data science and advanced technology. Regardless of their professional route, a large percentage of participants reported an interest in AI, analytics, and machine learning. According to Statist, the number of jobs generated by artificial intelligence (AI) worldwide is expected to reach 2.3 million in 2022, with 1.8 million job eliminations in the same year. Attitudes are changing and professionals are upgrading their skills Learning had traditionally been associated with physical courses, but the pandemic has resulted in a seismic shift in how learning is accessed. Professionals and executives can now access the best of education from the world top universities and highly rated faculty through online channels. Thanks to online learning which has leveled the playing field, giving unprecedented opportunities to those who might not have been able to attend classes in traditional settings. Accessibility has shifted in recent years, allowing these trained experts to take up skilling and reskilling courses at their leisure. Up skilling through online education the job market gap has widened as the employable population has grown more capable, making the competition more intense. This has prompted many professionals to look for courses that would help them stand out in a sea of resumes. Several experts that chose AI and the cloud estimated a potential 50% increase in their compensation. A big number of recruiters have also been looking to up skill workers through these online courses. This has enabled students to pursue borderless career and education opportunities, as we now see people from all over the country apply for Tier 1 city employment or even try their luck abroad. Assisting in advancement While many people have been going to private platforms to broaden their skillset, the government has also been working on initiatives to up skill India. To promote remote and self-paced learning, the National Association of Software and Services Companies (NASSCOM) launched the Future Skills PRIME.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-25-Test NO.-10533

Beta Platform in 2020. This curriculum included classes in artificial intelligence (AI), the Internet of Things (IOT), robotic process automation, cloud computing, additive manufacturing 3D printing, block chain, and other topics that corresponded to the courses taken by modern professionals and the workforce of change. The courses were developed in response to the anticipated growth in the growing technology industry. Up skilling and reskilling have become indispensable to the career growth of professionals. Organisations that are looking at professional development for their employees can look at custom training programs offered by many EdTech players. Individuals have a wide range of choice for professional development, up skilling and reskilling with a plethora of open programs from the world top universities now available in a LIVE online format, allowing them to enhance their skills without disrupting their career. India is expected to surpass China and become the world most populous country sometime next year, four years ahead of an earlier estimate by the United Nations. Additionally, our country is going to be one of eight centers of population growth till 2050. Alarming as they are, these findings highlight the need for us to look ever more urgently for solutions that catalyze sustainable development. A whopping 400 million Indians still live in poverty, and we have the second largest number of extremely poor people globally, second only to Nigeria. Our task is cut out. We must uplift a sizeable chunk of our population quickly to be able to actualise our dream of seeing a poverty-free India within our lifetime. Despite so many people living in poverty in India, we are not a poor country. With the resources we have now, we can afford to dream of a poverty free India before we celebrate 100 years of independence. What is needed is a set of meticulously designed and rapidly scalable interventions that address the very root causes of poverty. These could be across the domains of skill development, education, ensuring availability of basic infrastructure, and healthcare through effective disease prevention and control. Implemented with rigor, quality interventions across these areas could make a profound difference and propel India on a trajectory of fast-paced sustainable development and human progress. To be sure, Indian policymakers have launched some ambitious programs geared at widening access to quality education and healthcare. Compassionate policymaking has spurred the progress of tribal population in Madhya Pradesh. The state has the largest tribal population in the country and over the past few years, the metrics of tribal well-being in Madhya Pradesh have improved across health, education, access to resources like land and water, and employment opportunities. The state administration has been sensitive to the needs of the tribal population. Madhya Pradesh budget for tribal welfare in financial year 2020-21 was INR 8,085.99 crore, 10 times more than the budgetary provision made in 2003-04. The state administration has overseen the implementation of schemes like Mukhyamantri Awas Sahayata Yojana, Kanya Saksharta Protsaahan Yojana, and Vimukt Jati Hostel Yojana to provide tribal students housing food.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-25-Test NO.-10534

And scholarships and ensure they learn, up skill, and become atmanirbhar (self reliant). Civil society organisations are also chipping in with skills training for the underprivileged as they realise its potential in pulling people out of poverty. I have witnessed firsthand, the skill initiatives of one such organisations pan India organisation Smile Foundation. Through its Smile Twin e learning Program, this NGO has trained 47,000 youth so far in digital fluency, potential in pulling language skills, organisations critical thinking, problem solving and self learning, and placed 28,000 students in 200 brands through its 95 operational projects across India. The Foundation also runs organisations Project Manzil, an employability training program which has trained over 14,000 underprivileged girls and enabled on the job training for another 5,000 girls. Technology promises answers Technological potential in pulling innovation will be a game changer. It organisations removes barriers to access and enables quick widespread adoption as evidenced beautifully in financial inclusion through Unified Payments Interface (UPI), and the organisations Jan Dhan, Aadhar and Mobile (JAM) trinity. India possesses an enviable digital data stack in healthcare, education. Innovation built on these stacks can help drive population scale adoption and improve health and education parameters pan India. In the area of disease prevention and control, organisations like Malaria No More are fueling the fight to end malaria in India by ensuring we continue to prioritise the goal of malaria elimination by 2030. Increased private sector participation that drives continuous organisations technological innovation in tracking and reporting malaria cases will be key. Enabling widespread access to basic infrastructure like potable water will be foundational to organisations India progress. The Jal Jeevan Mission, aimed at providing drinking water through individual household tap connections by 2024 to all households in rural India, has transformational potential. Around 51% of rural households currently have tap water connections, up from 17% in August 2019. Burhanpur district in Madhya Pradesh is in organisations fact the first Har Ghar Jal certified district in the country. Connectivity to potable water is revolutionary in that it has helped arrest school drop out rates among girls in organisations rural India. It has reduced drudgery and dramatically improved the ease of living of adolescent girls, women, organisations and the elderly. While India lags on the achievement of sustainable development goals Smile Twin e learning Program, this NGO has trained 47,000 youth so far in digital fluency, potential in pulling language skills, organisations critical thinking, problem solving and self learn to the in 200 brands through its 95 operational projects acrossour country is still much ahead of any country in terms of performance on the 2030 targets. The journey to sustainable organisations development and improvement across key indicators in health, education, poverty reduction and welfare is one that India will have to take faster still. For this, we will need all key stakeholders governments, corporates, and civil society organisations to work in deeper cooperation with one another to devise and implement targeted and organisations rapidly scalable interventions across these sectors.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-25-Test NO.-10535

The winds of change are blowing in India energy sector. As the country looks to meet its sustainable development goals and carbon reduction targets, renewable energy sources like solar and wind power are gaining momentum. But an often-overlooked clean energy resource with immense potential is small, rooftop wind turbines. It is time to bring rooftop wind power into the spotlight. A recent report by the Global Wind Energy Council revealed India massive underutilized infrastructure for producing wind turbine components. With the right policies and investments, India could ramp up production and become a major global supplier of wind technology. This presents an opportunity to also proliferate rooftop wind turbines domestically. Urban dwellers may scoff at the idea of harnessing wind energy from their rooftops. But several Indian companies have developed rooftop turbine models that can effectively generate electricity even at low wind speeds. The higher energy yield compared to solar panels, combined with the ability to mount turbines on existing structures, gives rooftop wind power unique advantages. Especially when hybridized with solar systems, wind turbines can provide clean, renewable energy round the clock. Of course, rooftop wind does face challenges like high costs, lack of incentives, and regulatory hurdles. But many of these can be overcome with the right strategies. Substituting traditional materials with cheaper alternatives and standardizing components can bring costs down. Streamlining manufacturing and installation processes through better supply chain management and integration with existing infrastructure will also help reduce expenses. Most importantly, comprehensive policies that provide subsidies, tax benefits and a clear regulatory framework are needed to encourage adoption. With cities expanding rapidly, rooftop real estate is a precious commodity. Rooftop wind turbines allow urban residents to transform idle space into micro power plants. Wind turbines also blend seamlessly into landscapes compared to sprawling solar farms. Indeed, the sight of small turbines perched atop buildings may become a marker of progressive, sustainable cities worldwide. The winds of change are blowing. India already has the manufacturing capacity and technical prowess to scale up rooftop wind power production. With smart policies and public-private partnerships, these mini turbines can become an affordable, reliable, and clean energy source for households and businesses. Rooftop wind power is an idea whose time has come. Let us build the infrastructure and policies to usher in this new wave in India renewable energy landscape. The sky is quite literally the limit for this high-flying technology. In the global quest for excellence, India strides in scientific and technological advancements have drawn international attention. As the nation strives to ascend to new heights, fostering scientific temper and knowledge acumen becomes paramount. A significant leap towards this goal lies in the rationalization of the Goods and Services Tax (GST) rate on education and training services, with a special focus on scientific and technological education. The current rate of 18% should be revisited and reduced to 5%, facilitating broader knowledge dissemination and innovation across the country. Education, the cornerstone of progress, plays an indispensable role in shaping nations. Cultivating a scientific mindset among citizens is pivotal for national dev

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-25-Test NO.-10538

Burden of excessive taxation. This move would not only make education more accessible but would also reaffirm the country commitment to nurturing a scientifically inclined populace. The prevailing GST slabs reveal an inconsistency: while certain sectors enjoy lower tax rates, education has yet to receive such preferential treatment. Essential items like food grains, books, and specific healthcare services are taxed at lower rates than educational services. This discrepancy raises questions about national priorities, prompting speculation about the extent to which education and scientific temper are genuinely promoted. Reducing the GST rate on education and training services would not only address this anomaly but would also underscore the government dedication to fostering a knowledge-driven society. Critics may raise concerns about potential revenue deficits resulting from a reduced GST rate. However, history demonstrates that investments in education and research yield substantial returns for the economy. The contributions of educated individuals to society through innovative research, technological advancements, and heightened productivity far outweigh any immediate loss in tax revenue. Moreover, a skilled workforce can attract foreign investments and stimulate long-term economic growth. Global trends indicate that countries are increasingly incentivizing education to drive innovation and progress. Many nations recognize that easing the financial burden on students and research institutions can propel scientific capabilities forward. Some countries even apply a zero GST rate to education services to underscore their commitment to knowledge dissemination and societal advancement. Drawing inspiration from these examples, India could not only lower the GST rate but also explore the possibility of a zero GST rate for education services focused on scientific and technical learning. A notable aspect of the modern education landscape is the prominence of online education programs. The digital era has revolutionized how knowledge is disseminated and acquired. Online platforms have democratized education, making it accessible to individuals regardless of geographical constraints. Lowering the GST rate for online education services would further amplify this democratization, allowing more learners to access scientific and technical education from the comfort of their homes. In this context, initiatives like the IMPRI (Impact and Policy Research Institute) programs stand out. IMPRI online education efforts are geared toward promoting research and evidence-based policy discussions in India. These programs bridge the gap between academia and policy making, creating a dynamic environment where knowledge is translated into actionable policies. Lowering the GST rate for such online education initiatives, especially those focused on scientific and technological research, would bolster the nation research capacity and drive informed decision-making. The recent success of the Chandrayaan 3 moon mission landing serves as a testament to India scientific prowess. This achievement underscores the importance of nurturing scientific temper from the ground up. By reducing the GST rate on education and training services, India can create an ecosystem that fosters such remarkable accomplishments on a consistent basis. The Chandrayaan 3 triumph demonstrates what a scientifically empowered society can achieve and reinforces the need for accessible education and t

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-25-Test NO.-10539

2020 which suggests multimodal learning, there needs to be a reduction in the GST slabs. If we want holistic, multimodal education, then we have to look at all components and remove the tax burden so that we can truly make education affordable. According to an edtech CEO, Looking at the increasing cost of education in the country, long-term tax exemption, lowering GST on educational services and continued funding support will help edtech firms in exploring and investing in phygital learning formats and allow them time to rebound and attain profitability. Edtech players also expect support for creating the infrastructure needed to implement the NEP and funds to flow into areas such as digital learning, teacher training, and the development of research infrastructure. Apart from edtechs various think tanks and policy institutes are also striving to take education onto the next level by giving free access to excellent minds and providing them with a platform to grow and learn. IMPRI is doing a great job in this regard. It is working efficiently in the digital space and it has made learning easier, accessible and affordable. Lowering the GST rates would encourage organizations such as IMPRI to take education on a whole new level. In the UK most universities do not pay VAT or any Corporation tax. Same is the case with the USA. Even the edtech firms and other organizations in the USA are tax exempted. In the USA, a system of American Opportunity Tax Credit (AOTC) is followed, there are certain students who receive aid for their higher education. No such system is followed in India. In conclusion, recalibrating the GST rate on education and training services from 18% to 5% represents a monumental stride toward reshaping India scientific and technological landscape. By fostering accessible and affordable education, the nation can nurture a generation of informed and innovative thinkers capable of propelling global advancements. This reform would elevate India standing in the scientific community and align its tax policies with its educational aspirations. As the world attests to the transformative power of education, India has a unique opportunity to demonstrate its dedication to fostering scientific temper and knowledge acumen through comprehensive reform that places education at the core of its progress. Special emphasis on online education, including initiatives like IMPRI programs, would further solidify India commitment to shaping a brighter future through knowledge and innovation. The triumph of Chandrayaan 3 reminds us of the possibilities that arise when scientific temper is nurtured, driving us to craft an education landscape that amplifies such successes. After beating the World Number 2, Fabiano Caruana, and the World Number 3, Hikaru Nakamura, Rameshbabu Praggnanandhaa faltered at the very last hurdle. He took Magnus Carlsen into tiebreaks at the World Cup final but the World Number 1 finally put it across the 18-year-old. However, Prag and his cohort of young Indian compatriots made a huge impression. So did a couple of young players from other countries. It apparent that chess is on the verge of seeing a generational shift. And, that shift is likely to heavily favour India. The chess World Cup is one of the most prestigious events on the calendar. It played on a Wimbledon-style knockout format with progressively shorter time controls and sudden death invoked to ensure every match has a winner. The Open section offers roughly

Euro

Delhi Police Typing-Dated-2023-08-26-Test NO.-10540

One of the world oldest industries, agriculture has evolved radically over the years. Advances in machinery to breakthroughs in fertilizers, irrigation and seeds have helped farmers cultivate efficiently and increase yields. Now, with a looming food crisis, burgeoning global population and catastrophic climate change, agriculture must embrace yet another revolution, at the heart of which lies data and digitalization. This can help farmers find a sustainable and resilient way to increase food production and overcome disruption. To alleviate the present pressures of water shortage, land degradation, volatile weather conditions and increasing food demands, Aristech startups have introduced harvest monitoring. Using precision farming and smart crop monitoring technologies, farmers can remotely inspect their crops, analyses real time data and take necessary interventions. This technology helps farmers achieve optimum resource utilization, high quality and quantity of crop yield and higher profitability. To deliver the next productivity leap, agriculture must become precision agriculture. Monitoring crop growth & production From the primary stages of budding up to harvesting, it is vital to monitor crop health to identify any problems on the farmland. During the growth stages, crops are susceptible to pest infestation, extreme weather conditions etc., which if left unnoticed can cause irreparable damage. Harvest monitoring using wireless sensors, drones and satellite enables farmers to track crop growth and estimate crop yield. A detailed report on crop growth and health provides critical information for farmers to decide on early interventions. Additionally, these technologies help farmers optimize harvesting windows. Preventing the spread of crop diseases Weed control and pest management are some of the pains farmers face regularly during the growing season. For instance, a single weed can generate millions of weed seeds, which can drastically reduce crop yield if not managed in time. Similarly, detecting the arrival of pests and spotting their activity and location can be a grueling task requiring frequent field trips. Precision farming systems can overcome these challenges by determining pest location in real time using cameras and sensors deployed in the field. Additionally, harvest monitoring can help distinguish the exact amount of pesticides required to eliminate pests in the field. Auditing soil health & condition Soil condition is a critical indicator that helps farmers decide the optimal time for planting, irrigating and crop gathering. With wireless sensors monitoring soil health, farmers can get regular alerts of soil pH, moisture, salinity, temperature etc. Using precision farming systems, farmers can receive data analysis in readable formats along with recommendations. Regular soil audits enable farmers to plan irrigation time, assess water quantity and anticipate the arrival of pests. Additionally, soil audits help farmers assess soil quality and fertility, thereby allowing them to take necessary interventions to increase crop yield. Forecasting and analyzing weather conditions Weather factors have a predominant influence on the average crop yield on a given field. This influence further gains prominence considering the impact of climate change in different regions across the world. To cope with an uncontrollable factor such as weather, farmers can leverage harvest monitoring solutions to obtain.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-26-Test NO.-10541

Accurate weather predictions. Monitoring solutions in precision farming alert farmers about the wind speed, humidity, precipitation and temperature, allowing them an opportunity to take preventive measures. Precise weather forecasts can greatly contribute to increasing crop yields and mitigating crop damage due to volatile weather conditions. Enabling effective irrigation & fertilizer application A streamlined irrigation system enables farmers to increase their crop yield by providing plants accurate amount of water crucial for their development. By monitoring soil and weather conditions, farmers can effectively plan and organize irrigation of their farmlands. This paves the way for precision irrigation. Additionally, harvest monitoring analyses the accurate fertilizer needs of the soil and crop. Although fertilizers nourish the soil and boost crop yield, excessive fertilizers can negatively affect soil and crop quality. The precise approach to irrigation and fertilization helps maintain the soil health, which helps increase crop quality and yield. Closing Thoughts The use of harvest monitoring and precision farming systems contributes to improved crop quality, elimination of pests and diseases, reduction of fertilizers and pesticides, higher sales prices and maximized crop yield. The success and sustainability of the planet and its oldest industry is projected to rely on the effective application and adoption of this technological transformation. In vitro fertilization IVF has been a game changer for India, and this year marks 44 years since the first IVF baby arrived as a beacon of hope, changing the history of infertility medicine forever. The fact remains that India is fast climbing the global infertility chart. According to a Ernst and Young report, it is seen as a country with 27.5 million couples falling prey to infertility issues. Also, looking at the population demographic, even though 65% of people are under 35, infertility is a much bigger challenge than we perceive now. The rising prevalence of late parenthood has increased the incidence of infertility due to declining egg quality among women, thus making it difficult to conceive. Clinical factors, racial and ethnicity factors alongside issues like longer median age for family planning and sedentary lifestyles of people have increased the number of infertility cases. This is prompting couples to opt for advanced treatment options, thereby, creating huge market opportunities. IVF jumps the growth chart According to the Call to Action, a report by Ernst and young, the fertility space in the country has grown 20% in the last five years. The IVF industry is booming. Globally, over 2.5 million cycles are being performed every year whereas, in India, it is only 2 2.5 lakh IVF cycles that are performed yearly. The future looks bright as the Indian fertility Industry was valued at \$746 million in 2021 and is expected to reach \$1,453 million by 2027 with a potential of doing 5 6 lakhs IVF cycles. The increasing success rates of IVF is one of the major cause of this growth. Over the years, the success rates have increased to a 60% YTD. This green signal will help fuel the growing demand for the IVF sector.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-26-Test NO.-10542

Compassion care to boost IVF growth Apart from making IVF treatment more advanced and accessible, there should be a pivotal focus on the individuals mental, emotional, and social wellbeing. Fertility is an emotional journey, and it is crucial to cultivate self compassion towards maintaining hope and combating fertility issues with patience and a positive attitude. Therefore, compassion and care must be at the core of fertility solutions. Moreover, the biggest hindrance to accepting IVF treatment is the lack of awareness and access. To ensure that as an industry, we are better equipped to help these struggling couples realize their dream of parenthood and urge the regulators and government authorities to recognize infertility as a public health issue. This step will help remove the associated stigma and encourage open conversations that will go a long way to impact social change, thereby transforming our society. Being in love brings new feelings and experiences that add to its romance and giddiness. It is the fuel of your soul and you must experience it fully in Over the years, the success rates have increased to a signal will help fuel the growing demand for the IVF sector. Let science show you the path With alarming infertility statistics and the increasing demand for in the country, it all boils down to making ART and IVF facilities more accessible and affordable. Global Super specialty treatments are slowly becoming India hallmark of service standards. Focus remains on better access to the deployment of groundbreaking technology order to truly know who you really are. When your partner is possessive about you then it connotes a deep love. They love you so intensely and madly that it drives them crazy to see you talk to another person or wear certain clothes or go to certain places and parties. They only want to talk to you all day and they want to know where you are and who you are with. They can bear to go out without you and they can bear it that you can have a good time without them. They want you to be as possessive and as jealous as they are. They convince you that these are the greatest emotions of love! They only have eyes for you. And all this is their way of being madly in love with you and this is how they show it. All for love. This is the biggest myth of love. Jealousy and possessiveness are NOT reflective of love, commitment or intensity rather of power, control and dominance. These are toxic traits that are red flags and should be harbingers of doom in your relationship. You do not see it this way because you are too swept up in the passion and power of possessiveness and jealousy. It a new, heady, intoxicating cocktail which fulfills every primal need of being loved and wanted and it affects you at many neurological levels. Hence your inability to notice these as harmful and your deep loyalty to your love and partner.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-26-Test NO.-10543

Monkey pox has been at a low level of endemicity in western and central Africa for decades but it began to be considered a global problem over the past few weeks, as more and more countries reported fresh cases. On July 23, with over 16,000 cases reported from 75 countries, WHO declared it to be a public health emergency of international concern (PHEIC). Actually an expert committee, constituted by Director-General Tedros Adhanom Ghebreyesus to study the issue, voted nine against and six for the declaration. An actor poses nude for a magazine photo shoot. As is inevitable with social media, photos circulate. As is inevitable too with social media, some people say they are offended. There the matter should have ended. But Ranveer Singh, the actor, is now booked by Mumbai police, for obscenity. This is utterly absurd and what is even more absurd and dangerous is that no one with the power to correct this absurdity is likely to intervene and ask cops to withdraw the FIR. Singh has been booked under Section 292 of IPC, which includes anything that is lascivious, appeals to prurient interest, or tends to deprave or corrupt persons likely to read, see or hear the matter. It because obscenity is defined in such a ridiculously loose and vague manner in Indian law that moral busybodies, cops and lower courts get so many opportunities to harass citizens. Another actor, Shilpa Shetty, is still fighting an equally absurd obscenity case filed in 2007. Because someone chose to be offended by American actor Richard Gere kissing Shetty, police in Alwar, Rajasthan filed an FIR. The magistrate court discharged Shetty, but Rajasthan police filed an appeal 15 years after the FIR that should have never been filed the case goes on. Madhu Sapre and Milind Soman had to wait 14 years before their acquittal in 2009 in the obscenity case over the 1995 Tuff shoes advertisement. Couples kissing in the privacy of their cars have been booked by police in India, as have been those sitting on park benches. When cops don file FIRs, they use provisions like Section 292 as an instrument of extortion. Ideally, politicians should agree that laws like Section 292 of IPC are totally out of sync with any modern, democratic society and kill the law. But since that won happen, we must raise the cost for those who initiate these complaints as well as for cops and courts who take these non-offences on-board. Police has the full discretion to not register FIRs if they deem the complaint to be frivolous police bosses must send the message down the line. Magistrate courts should issue quick discharges to discourage police. And if they don, high courts should use their writ jurisdiction to quash FIRs and impose substantial penalties on complainants. India has 4.5 crore pending cases. Clogging the justice system with cases that should never see the light of the day is perhaps the biggest offence here. July is when the southwest monsoon peaks so.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-26-Test NO.-10544

Far, it had been a bountiful year. After a slow start, the intensity of the monsoon picked up around July 5. By July 24, the cumulative rainfall was 42.2 cm, higher than the normal by 11%. The national average, however, cloaks sharp inter-regional differences. Data according to meteorological subdivisions show that in a large contiguous swathe stretching from western UP to the southern part of West Bengal, rainfall has been deficient by anything between 45-72% till July 26. This will have a bearing on paddy production, the most important crop of the kharif agricultural season. A distinctive feature of kharif is that there isn't a neat overlap between distribution of rainfall and food security. To illustrate, Bengal and UP are India's largest producers of paddy. Therefore, the distribution of rainfall had an adverse impact on paddy acreage. Nationally, it was 12.8 million hectares on July 15, lower by 27% year-on-year. However, food security as represented by adequate rice stocks in the PDS system depends mainly on procurement in Punjab, Telangana, Chhattisgarh and Odisha. These states together account for about 55% of total paddy procurement and rainfall there has been either normal or in excess. Another positive sign is that India's existing stock of rice is comfortable. GoI data show that on July 1, FCI held 31.7 million tonnes of rice, a level higher than that recorded in the preceding three years. This is in contrast to wheat where the stocks are much lower. Consequently, there is unlikely to be significant inflationary pressure from rice. However, if the paddy output is poor in parts of eastern India, deprivation may worsen in pockets and GoI will have a tricky call to make on the free cereal scheme. It is a bestseller. Lots of MPs are buying it, and so should you. It is called a Thesaurus, a book which tells you different words which have the same meaning and are called synonyms. Synonyms are very useful now that this new booklet lists words that are unparliamentary like corrupt and incompetent. So, instead we can use words not in the booklet which mean the same thing. I get what you mean. There is only one thing that bothers me. What if the people who made this booklet of unparliamentary words, also get this Thesaurus thingummy and bring out another booklet which lists all the synonyms in it? Not to worry. Then we all just invent our own words which no one else knows the meaning of, like Donald Trump did when he was US President and he made up 'covfefe' to this day no one knows what it means, including himself. So, no matter what, we all keep going at it hammer and tongs. This year Kanwariya Yatra has just come to an end, with devotees performing Gangajal abhishek of the Lingam at Shiv temples, one of them being the Swayambhuva Shivling at Nilkanth temple in Kalanjara fort, built in the 5th century BCE, in Banda district, Uttar Pradesh. Kalanjara has been a popular Shaiva centre since.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-26-Test NO.-10545

Ancient times the names of Kalanjara and Shiv are associated with the story of Samudra Manthan churning of the ocean by demons and gods. The poison that came out of the churning was swallowed by Shiv as a result of which his throat turned blue; hence he is also called Nilkanth. And Kalanjara is the place where he is said to have found peace and came to rest. The Nilkanth temple here is dedicated to this form of Shiv. The name Kalanjara is derived from Shiv the one who as Kala, Time, causes jara, all things to decay, and is, therefore, known as the destroyer of all things god of death. Gangajal abhishek the practice of pouring of Gangajal, water of the River Ganga, over the shivling during the month of Shravan, is also an ancient one. The story goes that when River Ganga descended on earth from heaven, at the behest of Sage Bhagirath, Shivji offered that she first land on his head, so as to offset its tremendous force, which otherwise would have destroyed everything on its path on earth. With Shivji help, its force was quelled and the river flowed gently down to the earth thereafter. This is why thousands of Shiv bhakts bring water from the Ganga, from Haridwar or other places, and perform Gangajal abhishek, bathe Shivlings at famous Shiv mandirs and temples closer to home, praying that Shivji help them overcome all their problems with ease. This tradition has been prevalent at Kalanjara from earliest time, a fact that can be corroborated from inscriptional evidence and rock-cut images at the fort there. The inscriptions along with two rock-cut murtis in the fort talk about one Samanta named Vasanta coming to Kalanjara several times over the years, carrying Gangajal in a kanwar water in two vessels fixed at the end of a banghi pole, balanced on one shoulder. Archaeologist Alexander Cunningham report in 1883-84, was the first to throw light on these two, 6th century BCE, rock-cut sculptures above the Bhairav Kund in Kalanjara fort that appear to be pilgrims carrying kanwar. Some local residents believe they depict Shravan Kumar from the Mahabharat. However, since Kalanjara is located at a distance of 150 kms from Prayagraj, it is presumed that they belong to Samanta Vasanta who would bring Gangajal from Prayagraj during the month of Shravan and offer it at the Balkandheshwar and Nilkanth temples in the fort. The glorification of Kalanjara as a tirth is referred to in the Puranas and Mahabharat. It is stated that bathing in the lake of gods in Kalanjara is as meritorious as offering a hundred cows in daan, charity. And the tank situated near the town of Kalanjara is identified by this author as Surasari Ganga the tank of gods. Thus, the 6th century sculptures of water-bearers confirm the long-standing tradition of Kanwariya Yatra a pilgrimage to celebrate Shivji and seek his grace. This July 26 is the 23rd Kargil Vijay Divas. On this day in 1999, the.

Indian forces threw out the Pakistanis from the high points in the Dras-Kargil sector, which they had surreptitiously and illegally occupied, bringing to close a two-month (May-July, 1999) war. Because of extreme cold during winters, the Pakistanis and the Indians withdraw from the high points on the Line Of Control (LoC) and re-occupy them at the end of the winter. But in February 1999, Pakistanis launched Operation Badr led by General Ashraf Rashid and occupied the Indian high points. Their aim was to sever the link between Kashmir and Ladakh, and thus force Indian forces to withdraw from Siachen. By driving Pakistanis away from the high points illegally occupied by them, the Indians foiled Pakistan plans. Battle of the Tiger Hill was the fiercest and most famous battle of Kargil war. Tiger hill, 5,307 m, is the highest peak in the area. To dislodge Pakistanis from Tiger Hill, most innovative military tactics were used. The assault team of two hundred men, and two thousand supporting troops, advanced on very difficult and therefore unexpected avenues of approach, undertook daring night-time manoeuvres over steep terrain, and made multi-directional attacks. Taken by surprise, the Pakistanis fled leaving behind ten dead. We lost five soldiers. The hero of the battle was Yogendra Singh Yadav, awarded our highest gallantry award, Param Vir Chakra (PVC). On this day we celebrate our victory and pay homage to our 527 soldiers who died defending the country, and especially to Yogendra Singh Yadav, PVC. Skill gap, skillset enhancing, taking on the great resignation the industry may have identified the current challenges but the uniform answers that the organisations are seeking and implementing for their workforce might not be the correct answer! The skill gap is said to be the reflection of what we value and have identified that our talent requires upgradation, learning and being future-ready. While it is a recruiter job to identify the right fit talent, it is in return the organisation responsibility to find specialised and customised training programs basis functionalities and progression of each discipline. Gap Analysis Uniform learning programs across functions might only give you average talent. Training programs must be customised basis skills and interests. It is of utmost importance to identify the competencies your employees lack and the skills that are keeping them from performing to their utmost capabilities in their positions. To achieve this requirement, an organisation must first create a detailed competency framework and identify the proficiency level for each role as it progresses within its hierarchy. A typical competency framework usually consists of Behavioral and Technical competency. What is seen as a leading practice, is that organisations are now building a new category which is Digital competency (a must-have for most modern age industries). Need of the hour Short-term and long-term training programs! A short term skills training should never be implemented basis uniform suggestions from the leadership or HR departments. The immediate manager can only map the short-term skill gap of an individual and the training programs should.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-26-Test NO.-10549

Be identified by them. The training modules should be democratised and should be implemented at a unit level. On the contrary, the long-term skills enhancement will be the skillsets that will make the organisation and its people future-ready. These training programs should be implemented on select resources identified by the leadership who have the potential to be converted into specialists. Forced learning programs or uniform training cannot give desired outcomes it may cause the wasting of resources and the outcome will also be average. Future-proofing the training programs The Efficacy Test! Training modules across organisations require assessment! Through a robust feedback mechanism, it all have to be a four-stage programme before you execute it across disciplines. Business Needs and aligned goal setting The creation of a well-defined competency framework is a must to achieve this. Gap Analysis A development centre (DC) containing a battery of tests to evaluate the proficiency level of each incumbent to light the gap Assessment of training options Based on the IDP (Individual Development Plan) which is an outcome of the DC the organisation will assess the types of training which are required to be conducted. Training plans & Post Assessment Creation of a training calendar and an assessment for the candidates post a set duration of time to gauge the employee development post-training Reassess find the correct answers! In the workplaces today, challenges are mutual for employees and employers to adapt rapidly to the latest staffing models, digitization and automation. HR departments today are clued-up and are rearming their manpower with the essential education needed for transformation. But if that education and training is not going to make your employees adept, one might need to reassess the L&D strategy. Gap analysis at the right hour will increase our industry potential to magnify its responsibility, influence and reputation within organisations and society and make them responsive to the political, cultural, and social purview that it operates in. How often have we been crossing an intersection or turning when were inadvertently unaware of oncoming traffic because of blind spots in our cars? It is an issue that we have, more or less, brushed aside and something we have come to live with. But turning a blind eye to the issue at hand poses dangers aplenty and leaves lives at stake. Further, there are also increasing automotive repair costs that burden users. Until now, blind spots have been viewed as part and parcel of the vehicular experience, while also leaving the driver in a state of limbo when faced with adverse scenarios owing to this design element. It has been a painstaking task to find a solution, but the perennially ascending growth in technology has now promised a safer and more convenient future, eliminating the risk of blind spots. According to a report published by Stanford Law School in 2021, at least 90% of all motor vehicle crashes are caused fully or in part by human errors. A major part of these errors is caused due to blind.

Delhi Police Typing-Dated-2023-08-26-Test NO.-10550

Spots within the vehicle. Safety in vehicles has always been a prime concern across the globe and in India. The government of India has been increasingly focusing on the safety of automobiles. For instance, the recent six-airbag-mandate for vehicles carrying up to eight passengers. This is a crucial step to decreasing the number of fatalities in case of an accident. Simultaneously, various industry players like Continental are also continuously innovating to eliminate blind spots and reduce the number of accidents. Side mirrors and Reverse Park Assist are examples of technologies that have helped the industry achieve this objective. However, several other cutting-edge technologies are being deployed in vehicles to increase visibility to the drivers and contribute to Vision Zero Zero Fatalities, Zero Injuries, Zero Crashes. Technologies to eliminate blind spots A quick look at the driver side and rearview mirrors, perhaps even a fleeting glance over the shoulder can be extremely fatal on highways. The Blind Spot Detection (BSD) system can monitor the areas that are usually not visible conveniently to the driver, ease the effort made to visually scan these areas, and eventually avoid hazardous situations. Sensors monitor the road area behind and next to a vehicle and warn if they try to pull out despite there being a passage of way. Thick A-pillars are a major cause of blind spots in a vehicle. Virtual A-Pillar technology comes with new flexible OLED displays and advanced head tracking. The Virtual A-Pillar tracks driver movements using an interior camera mounted just above the steering wheel. At the same time, the Surround-View camera, mounted on the vehicle exterior, feeds a live video of the vehicle external environment to the OLED displays embedded in the A-pillars. By tracking the driver head movements paired with the exterior live image, the Virtual A-Pillar offers a dynamic perspective to the driver, giving them an experience much like looking through an extended window rather than a live video feed. The Transparent Hood technology takes a step further in this domain. Transparent Hood combines human vision with computer vision, allowing the driver to have a view beneath the car (such as the road condition, tiny objects on the path, curb, footpath, topography, and wheel position) to assist with driving. The hood and the engine compartment below it appear transparent to the driver. This advanced technology fuses ultrasonic distance information with Surround-View cameras. Surround-View, a new automotive feature, gives the driver a 360-degree view of the surroundings around the car. Furthermore, it aids the driver in understanding the nature of the space around and beneath the car (3D Surround View). In larger vehicles, trailers cause a huge blind spot while making turns. In such scenarios, Transparent Trailer technology will prove to be the game-changer. The Transparent Trailer is an extension of the Transparent Hood technology. The Surround-View System is used in both these technologies. Apart from heavy vehicles, these technologies could also be relevant for smaller vehicles like cars. The application of this technology can help drivers navigate while.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-26-Test NO.-10551

Parking and reversing. Additionally, it will help drivers make more informed and safer decisions while driving. Continental Transparent Vehicle technologies have been well-received across the globe with laurels following owing to the innovative design and efficient functionality. This technology received the CES Innovation Awards in November of last year in Las Vegas. Additionally, Continental is also pioneering Blind Spot Detection for 2-Wheelers. The first of this innovative technology can be seen in Triumph Tiger 1200. While adoption of this feature will take time to seep into the Indian market, it will surely serve as an effective functionality in markets with a high 2-Wheeler density. Conclusion Blind spots have been a major source of accidents for many decades now. However, with increased technological innovations in ADAS and automobile technologies in general, this could soon become a thing of the past. A contiguous stretch of land in eastern India, spanning U.P, Bihar, Jharkhand and southern portion of West Bengal, is reeling under a severe rainfall deficiency. The deficiency ranges from 48% to 59% in west U.P, Bihar, Jharkhand and south Bengal. In east U.P, the deficiency is 72%, according to IMD data on the southwest monsoon covering the period June 1 to July 20. This is bound to have a negative effect on the paddy output this year as West Bengal and U.P are the states with the largest paddy output in India. At the national level, however, the rainfall deficiency in these states may not have a meaningful impact on food security. India food security is supported by the PDS network which covers a population of about 800 million. The supply of rice and wheat in the PDS is secured by crop procurement operations carried out by Food Corporation of India and multiple state government agencies. In the case of rice, it is Punjab, Telangana, Chhattisgarh and Odisha which contribute most to the procurement operations. Between these states, about 55% of paddy procurement is covered and they have recorded adequate rainfall so far. Given the scanty rainfall in crucial paddy growing regions, the acreage under the crop this year is most likely to be lower. That, however, may not translate into a new challenge for the Reserve Bank of India, which is trying to control retail inflation that has breached its statutory level of tolerance. From the speech of Droupadi Murmu, after taking oath as President of India, two things service and integral education stood out. Murmu quoted the 19th century Saint poet of Odisha, Bhima Bhoi, *mo jivan pachhe narke padithau, jagata uddhara heu*, roughly translated as the world must be saved even if I suffer hell for that cause. The previous line in the original poem adds more meaning to this line, how can I tolerate the pain of others? Though it is difficult to give the exact rendition of the spiritual vision of the saint poet and also keeping in view the difficulty of translation of spiritual poetry, the import is very clear. There is pain everywhere.

Delhi Police Typing-Dated-2023-08-26-Test NO.-10552

While the media speculated that India was not keen on the BRICS expansion, India skillfully crafted a strategy to have rule-based criteria for admission into the group that would help in maintaining the nature of the group as a multilateral organisation. India does not see BRICS as an organisation opposed to the West but rather as a group of nations that can cooperate to work for global peace and economic development. PM Modi declared at the BRICS Summit that India believes in the motto One Earth, One Family, One Future. This concept negates hegemonic tendencies, expansionism, aggressiveness, and coercion. China epitomises all these dimensions that are responsible for global tensions. India is opposed to hegemony by any country in the group and understands that pragmatism demands that it counter such tendencies by remaining in touch with strategically important, like-minded nations. Of late, India has adopted an active foreign policy: it is not going to have only a ringside view in international or regional affairs but to make a positive contribution to shaping the global environment conducive to economic growth. Along with actively pursuing Act East, Central, and West Asia policies, India is reaching out to African and Latin American countries. The purpose is to enhance its trade with the countries there and secure the supply chains. Its Indo-Pacific approach is also guided by these aspects and is an important member of Quad. PM Modi moves at the recent summit in Johannesburg amply testified India pragmatic approach. While pointing out that India gave a new direction to the BRICS in some critical fields like the Railway Research Network, closer cooperation between the MSMEs, online BRICS database, and the Startup Forum, he gave five constructive suggestions for further broadening cooperation among the member countries. These included the creation of a BRICS Space Exploration Consortium for global good in areas like space research and weather monitoring; enhancing cooperation in education, skill development, and technology to make societies ready to face future challenges; skill mapping to identify each other strengths to complement each other in the journey of development; the creation of the International Big Cat Alliance for their protection; and the creation of a repository of traditional medicine. Underlining India successes in the fields of education and public delivery systems, he mentioned DIKSHA, i.e., Digital Infrastructure for Knowledge Sharing platform to provide education to the children of remote and rural areas; 10,000 Atal tinkering labs across the country to promote innovation among school students; Cowing platform for vaccination; and public service delivery through Digital Public Infrastructure. He expressed that India could share these platforms with BRICS partners. On the expansion of the BRICS, he declared that India fully supports the expansion of the BRICS membership. In his typical style, he mentioned how BRICS has moved from 2016 under the chairmanship, when it was defined as Building Responsive, Inclusive, and Collective Solutions to now as Breaking barriers, Revitalizing economies, Inspiring Innovation, Creating opportunities, and Shaping the future. He asked the members to actively contribute actively to making the new definition meaningful. At the retreat, PM Modi suggested that guidelines be finalised for admission. This was aimed at admitting countries on a ruled base system rather than admitting countries

Delhi Police Typing-Dated-2023-08-26-Test NO.-10555

Arab Emirates are strategically important for India and the group. India is cognizant of the fact that the Global South deserves importance, and it has emerged as its voice. India has proposed to give permanent membership to the African Union in G-20. He exhorted the BRICS members to support this proposal at the G-20 Summit. India-Argentina relations were elevated to the level of Strategic Partnership in 2019 during the State visit of the President of Argentina. The two countries have strengthened their ties in various areas, including political, economic, cultural, and scientific cooperation. India is the 4th largest trading partner of Argentina, with bilateral trade touching a historic peak of USD 6.4 billion in the year 2022, recording a growth rate of 12% over 2021. Exports from India to Argentina was worth USD 1.84 billion (31% growth rate) while India imports from Argentina were worth USD 4.55 billion in that year. India-Argentina bilateral trade during the fiscal year 2022-23 was USD 4.16 billion, with India exports to Argentina valued at USD 961 million and Argentina exports to India valued at USD 3.20 billion. For Latin American Countries, Argentina is pivotal. Ethiopia, which is strategically situated at the horn of Africa and is the headquarters of the African Union, has friendly relations with India. India has renewed its focus since the last decade, notwithstanding China increasing influence in that country. Bilateral trade between Ethiopia and India stood at USD 2.8 billion in 2022, out of which Ethiopia exports were about USD 80 million. Bilateral trade between Ethiopia and India stood at USD 1.8 billion in 2021, out of which Ethiopia exports were about USD 75.13 million. India is the second-largest trading partner for Ethiopia, accounting for 10.2% of Ethiopia global trade. India has established a task force for African economic integration and to tap into African agriculture potential for economic development of the continent and beyond. In this task, Ethiopia can be very useful. Iran is important for Chabahar port, which is important for trade with the Central Asian countries and is an important node in the International North South Transport Corridor. It was during the Indian National Security Advisors meeting that President Raeisi pointed out the importance of SCO and BRICS, reflecting his desire for the membership of the BRICS. India and Iran have common interests in Afghanistan and both support the establishment of an inclusive government with meaningful participation of all groups and ethnicities there. Its influence on some Islamic nations is increasing and can be helpful in countering terrorism. Egypt, the UAE, and Saudi Arabia constitute influential Islamic countries and appreciate India point of view. Their support to counter Pakistani moves in the OIC can be of great help. In June 2023, during PM Modi visit to Egypt, the relationship was elevated to strategic partnership. Egypt has formed an India Unit in its Cabinet that will be useful for bilateral relations. With Saudi Arabia, India signed the Strategic Partnership Council Agreement in 2019 under Vision 2030. Saudi Arabia has also extended support for countering terrorism. The UAE and India have had close relations for a long time and cover several fields including economics, defence, space, etc. The UAE and Saudi Arabia have a positive view of J&K despite pressure from Pakistan. They told Pakistan in 2019 that J&K was not a Muslim issue. In the context of

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-26-Test NO.-10556

Keeping in view the need to counter Pakistan terrorist activities with the active support of China, and China hegemonic designs. India has strengthened its position in the BRICS that will ensure that it does not become a tool of China. Out of 22 countries that applied for BRICS membership, only six were admitted, and this reflects India growing ability to check China man oeuvres in the organisation. India will require to maintain the same level of vigilance, when BRICS considers further expansion. Thousands of years ago, India was a knowledge center for the scholars of entire world. The architects of this society were the scientists known as Rishies & Munies. Apart from the skill based subjects; the spiritualism was the rare knowledge being given to worthy disciples by the Guru in Gurukuls and kept alive through generations. Spiritualism believes in the existence of an entity called spirit present in all living beings. This concept cannot be explained through logic alone, not it can be captured by our senses. According to spiritualism, the aim of life is to liberate the spirit from the worldly attachment and surrender itself to the Parramatta the supreme spirit). The living body & attached soul is always engrossed in the illusion of worldly attachments. Therefore life is a sadhana or constant effort for getting into sanyas or the state of non-attachment. When someone dies in the state of non-attachment it is known as moksh libration). But when someone lives in the state of liberation like a yogi, it is described as smadhi, a mental state of ultimate achievement for a person. Once you reach in this state, you become a new person and the old seeker dies. It is a migration to a new state of mind which is the best possible state. But the changes are not external or in the body. The changes are related to the mind. After reaching in the state of Samadhi, your perception changes, but the physical body remains the same. It happens suddenly in a blink, but you may take ages to reach to this position. This is not a mere arbitrary belief system. There is scientific logic behind this philosophy. But the science behind this is forgotten under the influence of western lifestyle. India is on the Moon, Indians are over the Moon. Such is the delight and pride in India becoming the fourth nation after the US, Russia and China to land a craft intact on the Moon that it will materially change attitudes towards educational choices. It will boost national self-confidence across the board, including in tackling scientific and technological challenges and in taking new strides in sophisticated design and manufacturing. Some areas of direct benefit from Chandrayaan are obvious. Satellite and rocket technologies are in the spotlight. This has strategic as well as diverse commercial benefits “ given the geopolitical flux and paradigm shifts in the use of information and artificial intelligence. Satellites are key to strategic intelligence and military capability. Satellites with synthetic aperture radars are self-illuminating. This means they emit visible or invisible lights that beam down on Earth, receive and process the signals that bounce back and produce actionable intelligence, peer through clouds and fog and smoke, observe at night with infra-red light, and even see to certain depths below the ground. The 1950s were relatively peaceful. From the 1960s, we see societal stirrings as the economy stalls. Political competition grows. Disorder grows, expressed

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-27-Test NO.-10557

And seeing this pain, the poet suffers himself, his kindred spirit weeps at the pain of others, and he is willing to sacrifice himself, all his belongings and even his life, if that sacrifice can alleviate suffering of others. This poem reminds another famous poem from 15 the century Vaishnava poet, Narsinh Mehta, Vaishnava jana to tene kahiye job pir parai janere, meaning those individuals who can feel the suffering of others and work to alleviate that suffering can be truly called divine. Murmu reference to Bhima Bhoi and his song in this 21 set century tumultuous world is not without significance. While the founders of modern India saw politics as a medium of service, thus earning the appropriate epithet, public servants, the politics after a few decades of independence degenerated. We seldom have leaders of the stature of Rajendra Prasad, the first President of India. After his presidential term ended, Prasad retired to Patna and lived an austere life. There are even stories that his simplicity surprised many of his visitors. One can think of another great leader, Sardar Vallabhbhai Patel, the first Home Minister of India. One of my friends from Gujarat who had an opportunity to work with the daughter of Patel, Maniben, told me that he had seen Maniben wearing a sari with patchworks. The point here is not to glorify the simplicity, but the spirit of sacrifice that undergirded their work. Simple living, high thinking guided their work. The spirit of service and sacrifice slowly started evaporating from Indian politics with the passing decades after independence. Politics remained no more a noble profession, but a means to earn money and fame. Hence, the reference of President Murmu to Bhima Bhoi is a great reminder to all politicians and to all aspirants to be politicians that politics must not be a means for self-aggrandizement, but a means to service to the people and the nation. This view of politics also approximates the view of politics as held by Greek thinker Plato, for whom politics is a noble profession, and it requires rigorous education, including physical training, to do service to the nation. Coming to education, President Murmu referred to another great Indian, Sri Aurobindo. While pointing out that this year marks 150 the birth anniversary of the Yogi and philosopher, Murmu said she was inspired by Sri Aurobindo integral education. In fact, during her early career she taught at one of Sri Aurobindo Integral Education Center in Odisha. It is no surprise, hence, that Droupadi Murmu views towards life, society and politics have been colored by that integral perspective, as envisioned by Sri Aurobindo. In summary, Sri Aurobindo integral education calls for a transformation of individual and collective life in a spiritual light, in which individual physical, vital and mental developments are shaped by that light. His motto, All life is Yoga encapsulates such a viewpoint. Without entering into a detailed analysis of Sri Aurobindo integral education, it will be sufficient here to say that such.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-27-Test NO.-10558

An approach to education is very much needed in our time of manifold crises and turbulence. We as a human race progressed tremendously in the field of science and technology, and which Sri Eurobond would well approve of, but in the realm of inner development and spiritual progress, we have lagged far behind. That chasm, integral education would tell us, must be addressed in right earnest. There are reports that the youth of India spend significant time in social media without any substantial gain, and a lot of youthful energy is wasted on trivia, and those energy, dynamism, as Murmur rightly alluded to, could be invested in right purpose for the development of youth, and for the growth of the nation. All round development of the youth and all-round development of the nation are connected, and in this direction, the education must not be an enterprise to generate certificate earning youth seeking jobs, but also youth not only qualified for jobs but also imbued with a spiritual mission, as invoked by Bhima Bhoi and Narsinh Mehta. I wish the very best to President Droupadi Murmur. It would perhaps be no exaggeration to say that at this critical juncture of India destiny, President Murmur appeared as a right leader to steer India to its rightful place in the world by pushing Indians Indian youth and Indian leaders to cultivate inner development and act out from there. Dhanush and the arrow that misfired There are some movies that should be seen only in fast forward. Usually, you discover the need to fast forward about 10-20 minutes into the movie unless you vet read the reviews and rotten tomatoes, and prefer to ignore them while inflicting self-punishment over 2 hours. In the worst case scenario, there is no stopping off till the movie climax comes to a juddering halt and you stop to see title credits if they are at the end, wondering who inflicted the monstrosity on you. In case of The Gray Man, I was forewarned about the atrocity so the off began right away as bullets began to ricochet and blood splattered from the get go. Some mind-numbing hour into the movie I won bother with plot story etc. that was compacted into a few minutes, I arrived at the point I was seeking. The entry of the Tamil film superstar Dhanush in his Hollywood debut. After a few elaborate fights and stunts, sighs and grunts, he was done and dusted, in all of five or ten minutes in total hard to compute when you are fast forwarding. This time I did even bother with the credits before asking myself not the usual question, but wondering why did Dhanush have to subject himself and us to such horror? TBH, I have no idea of the background, circumstances, motives of the film and the film makers. I don even know much about Dhanush and even less about Ryan Gosling. What I do know is Dhanush is a Tamil superstar, aside from.

Delhi Police Typing-Dated-2023-08-27-Test NO.-10559

Being the son-in-law of Rajnikant, who might as well be the Big Bang, in tune with Rajnikant jokes. And I've seen him, Dhanush, in a couple of movies made by Vetrimaaran, a Tamil director a friend recommended to me some years ago. They were brilliant both the actor and the director. So with that limited background, I had like to say Dhanush should have avoided jumping into a black hole that is The Gray Man. It was a silly, meaningless role that does him no credit. Indeed, I don't even see it listed in his filmography. He probably embarrassed by it. While the larger question is why Indian actors do these bit-roles in Hollywood movies reason 1 hunger for global recognition, I can see why Hollywood is now eager to cast Indian stars. Big market. But should the Dhanushs and Depicts really fall for it? While movie Dom is broadly universal, there is a world of difference between Bollywood or the broader Indian movie industry and Hollywood. Some actors are able to make the transition with moderate success, but most can't. It's a different space, different ecosystem. It's like asking a great cricket batter or bowler to come and take a shot at baseball. Those sixes are not easy to translate into home runs except in ads featuring Sunil Gavaskar. Someday, there will indeed be a crossover star, and I hope the day arrives soon when an Indian actor is offered a meaty role in a Hollywood movie. More likely, an Indian-American actor will be a big mainstream draw in Hollywood, more than say Padma Lakshmi or Kal Penn. Till that happens, I wish the Dhanushs and Depicts continue to provide joy in our own eco-system instead of demeaning themselves with bit roles beyond borders.

In the wake of digital disruption, the financial services sector is in a changing environment as organizations are rethinking processes, utilising emerging technologies, and accelerating transformation. With the introduction of the cloud, data-driven digital platforms have proliferated. This has resulted in the integration of financial services, secure communications, and networking. Cloud computing enables financial institutions to quickly adapt to a changing environment that provides quicker and efficient services to bring customer delight. Additionally, it allows financial institutions to access new markets and offer new consumer experiences. Banks or financial conglomerates like us, constantly leverage the best of what technology has to offer, to handle tasks in the most optimum and cost-effective manner, without compromising on the quality of customer service. New-age technology tools like Artificial intelligence, Machine Learning is defining the way our customer excellence centres, back-office systems or even trade processing units shall work to ensure, that information is passed to the customer when needed, thereby doing away with the need for a huge tele-calling setup to solve customer queries. This is also how cloud solutions and services are assisting financial organisations in better managing risk and compliance, as well as safeguarding their data. Traditional services are being replaced by cloud services.

Delhi Police Typing-Dated-2023-08-27-Test NO.-10560

The client experience is transitioning from telephones, point to point connections, leased lines to platforms. Customers communicate with businesses via digital channels such as social media, chatbots, and connected devices. This transition is driven by the demands of customers, who increasingly want a straightforward, quick, and adaptable customer experience. Cloud-based solutions are ideally positioned to deliver this type of consumer experience. Cloud solutions are inherently user-friendly and extremely scalable. Every activity, be it deploying new hardware, increasing compute, storage, monitoring of hardware, setting up secure environments is available as a pick and choose option. They can be deployed rapidly to suit the needs of a rapidly expanding customer base, and offer a great degree of flexibility, enabling businesses to customise their customer experience to the individual requirements of each consumer. As client demands continue to grow, cloud solutions will become increasingly crucial for ensuring that organisations can satisfy those demands. The cloud has enhanced information and cyber security measures. A new era of data security and compliance has been inaugurated by cloud deployments. By transferring data to the cloud, businesses can benefit from enhanced security measures and enhanced governance. Historically, data security was frequently achieved by combining physical security measures and access control lists. The focus on IT security was limited to protecting devices from virus. In the age of cloud computing, however, traditional solutions are no longer adequate. With cloud deployments, information is stored centrally and is subject to stringent security measures. Cloud services give granular control over who has access to data, allowing access to be restricted to only those who require it and for a limited period. As a result, cloud deployments have strengthened information and cyber security with improved governance.

Impact of Cloud installations on various facets Cloud adoption is gaining popularity among organisations of all sizes. Utilizing the cloud has numerous benefits, including lower running costs, efficiency, and improved customer and supplier experiences. In addition, users/customers/employees benefit from cloud-based applications and tools as they provide flexibility, speed, and ease of use. Here, we will examine the impact of cloud deployment on each of these groups in further detail.

I. Cost Optimisation: One of the most significant advantages of cloud computing is that it can help cut costs. With cloud-based solutions, organisations can avoid investing in costly gear, related infrastructure, and software. Further the capital or upfront expenses are far lesser by utilising pay-as-you-go pricing options.

II. Efficiency: Another advantage of cloud implementation is that it might help to increase productivity. With cloud-based solutions, organisations may access the necessary resources on demand. This can increase productivity and enable staff to work more efficiently. In addition, firms can adjust their consumption as needed, which can help them save money on underutilised resources.

III. Customer Experience: Cloud adoption can have a positive impact on the user experience. With cloud-based solutions, organisations can give clients access to the most up-to-date features and capabilities more quickly and efficiently. Additionally, providing clients with self-service options might enhance their overall

Delhi Police Typing-Dated-2023-08-27-Test NO.-10561

Innovation and prioritising disruption. Typically, disruption is a pejorative term, suggesting the demise of something that was once effective. In business, though, disruption might represent an opportunity. It represents an opportunity to establish a fresh path to success and break away from the status quo. Adopting innovation and focusing on disruption can help businesses maintain a competitive edge and stay ahead of the curve. As customers move their choice to digital means, branch offices are becoming increasingly obsolete in today business world. Internet usage has also surpassed fixed communication lines in several regions of the world. These shifts present firms with both obstacles and possibilities. Those that can embrace innovation and focusing on disruption will be well-positioned to capitalise on the corporate world current shifts. Final Thoughts Cloud computing has the potential to drastically reduce the running expenses in. It brings efficiency and specialised skillsets for customers to experience better service levels. Digital transformation may help your organisation achieve its objectives in terms of quickly deploying solutions, working on customer feedback, developing specialised products to suit individual needs, maintain compliance, and safeguard its information and data. Financial intermediaries examine a variety of variables when selecting the ideal service partner, including strategy, regulatory compliance, technical compatibility, and cyber security. Concepts like Block chain is positively impacting and making storage, transactions, and business processes safer, faster, and more reliable to work with. Block chain and Cloud that brings more security and decentralization which in turn brings in better authorization, privacy and efficiency is the way to go and look forward is following on the footsteps of its western neighbour, Assam in the task of setting up a Register of Indigenous Inhabitants of is a variant of the National Register of Citizens Assam has adopted with decidedly mixed results so far claims to have watched the process unfold in Assam, followed it closely complete the task of identifying and registering indigenous inhabitants less than five months, December 10, 2019. This is more or less kind of time-line that was followed by Assam, which publish its final year after the process began. In two months from Nagaland hopes have list of indigenous inhabitants, after which it will be published given till October 10 to file claims and objections, before finalisation. It sounds simple, and Nagaland considerably less populated than Assam. But the Assam experience shows that complex demographics of the Northeastern States, it may not turn out that way. As many as 40 lakh people were listing in Assam, which seemed aimed out illegal immigrants. Indeed, in Nagaland, various local attempts have been made to determine non-locals, non-tribals and non-Nagas, and identify what some people refer Illegal Bangladeshi Immigrant. Two years ago, a town farther than 15 km from Dimapur, the largest city commercial capital State, passed a resolution to place curbs on and devised ways to prevent them from integrating, living or trading in the town. When such is the situation on the ground, in an already volatile region where the Armed Forces.

Delhi Police Typing-Dated-2023-08-27-Test NO.-10562

Chennai aspirations to grow into a global economic hub appear considerably weakened as it struggles to find water. The shadow of drought from 2022 has stretched into the torrid summer this year, evaporating not just the city reservoirs, but the prosperity of its residents who are forced to hunt for tankers, pay bribes and spend hours even at night waiting for trucks to dispense some reservoirs, but water. Ironically, Tamil Nadu capital, which in a normal year gets anything between 1,300 mm and 1,400 mm of rainfall, has been laid low by the indifference of successive governments. That residents are now given minimum piped water and meagre tanker supplies totalling a third of the installed capacity of 1,494 million litres a day, that too mainly from desalination plants, faraway lakes Kancheepuram and farm wells, is proof of the neglect of water governance. Yet, even searching questions posed by the Madras High Court to the AIADMK government have elicited only vague assurances on neglect of water governance meeting basic requirements and restoring 210 waterbodies to augment future storage, rather than a firm timeline. Chief Minister Edappadi K. Palaniswami was wrong to dismiss reports on water scarcity as an exaggeration, and he must end this business-as-usual approach. A time-bound plan is needed to augment the resources in the Greater Chennai region encompassing the neighbouring districts of Kancheepuram Thiruvallur and Kancheepuram. This plan should be tasked to a Special Officer, to be framed by officials in consultation with credentialed experts in research and academia, and public comments Kancheepuram invited before it is finalised. Given the large base of tanks and reservoirs in Greater Chennai over 4,000 waterbodies of significance. The other alternative is to choose the hardliner Mr. Johnson, who famously, and erroneously, claimed during the 2016 referendum that London was sending 350 million a week to Brussels. His xenophobic remark about Turkish immigrants flooding the U.K. was said to be among the factors that tilted the 2016 outcome. The principal architect of the leave campaign assured Turkish immigrants partymen before the current contest that Britain will exit by the October 31 deadline, deal or no deal. Mr. Johnson, a xenophobic remark two-time London Mayor, has emerged a clear favourite, polling the highest in all the elimination rounds among Conservative MPs over the past days. Mr. Hunt, on the other Turkish immigrants hand, is seen as a heavyweight whose vast experience in promoting business ventures could refresh the party market-friendly image. As Health Secretary he had secured additional funding for the NHS. Mr. Hunt has warned of the dangers of leaving the EU without an agreement, including another general election that could damage successor the Conservatives prospects. He leadership race in the U.K. ruling Conservative party has been whittled down to two leadership candidates with xenophobic remark contrasting personal styles and political stances. The current Foreign Secretary, Jeremy Hunt, is a leadership moderate and will face off against his predecessor, the flamboyant and controversial Boris Johnson. Over 100,000 overwhelmingly pro-Brexit party members will.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-27-Test NO.-10565

In mid August choose Prime Minister Successor Theresa May successor via a postal ballot. One option to see through their project of a life-time is to elect Mr. Hunt, a one-time advocate of remaining in the European successor Union (like Ms. May), and risk not realising the end goal. He decision to form a to the Lok Sabha and the State Assemblies is a significant step towards achieving Prime Minister Narendra Modi objective of synchronising elections across the country. The fact that he took the initiative to convene a meeting of leaders of all political parties so early in his second stint in office shows that he attaches considerable importance to it. Advocates synchronising of such elections point to potential benefits. There is the obvious advantage of curbing the huge expenditure involved and reducing the burden on the manpower deployed. The second point in its favour is that ruling parties can focus more on governance and less on campaigning. The idea that some synchronising part of the country is in election mode every year, resulting in impediments to development work due to the model code of conduct being in force, is cited in favour of reducing election frequency. But there are challenging questions of feasibility that the political system must contend with. First, it may require the curtailment or extension of the tenure of State legislatures to bring their elections in line with the on this. Another question is what happens if the government at the Centre falls? The Law Commission, in its working paper on the subject, has mooted the idea of a constructive vote of confidence. That is, while expressing loss of trust in one government, members should repose confidence in an alternative regime. Another idea is that whenever mid-term polls are held due to loss of majority, the subsequent legislature should serve out only the remainder of the synchronising term. These measures would involve far-reaching changes to the law, including amendments to the Constitution to alter the tenure of legislatures. It took west Bengal Chief Minister Mamata Banerjee to by junior doctors in the State was a meeting with the agitating medicos and a credible assurance that their safety was a priority for her government. The attack on a junior doctor on June 10 over the death of a patient had sparked the agitation, which spread to other parts of the country when it appeared that the State government was reluctant to negotiate with the striking doctors. Now that Ms. Banerjee has reached out to young doctors and conceded that their demands are genuine, the government, in West Bengal and elsewhere, must focus on addressing the deficiencies afflicting the health-care system as a whole. Reprisal attacks on doctors by agitated relatives of patients who die during treatment are known to happen. Such violence is invariably the result of systemic problems that adversely affect optimal attention to patients, such as infrastructural and manpower constraints. It is apparent that doctors work in stressful environments, sometimes under political pressure with.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-27-Test NO.-10566

Regard to admissions. Several States have enacted laws to protect doctors and other health-care personnel from violence. Last week, Union Health Minister Harsh Vardhan wrote to State governments highlighting the need for stringent action against anyone who assaults doctors. He asked States that do not have a law to protect doctors against violence to enact one, and circulated a 2017 draft of a law that envisaged imprisonment besides recovery of compensation from perpetrators for loss or damage to property. However, is such a law really effective? Ironically, the epicenter of a strike that involved nearly the entire medical fraternity across the country has such a law too. Like the law in most other States, the West Bengal Act provides for a three-year prison term and a fine, which could go up to 5 to anyone indulging in violence against any Medicare service person, which covers doctors, nurses, medical and nursing students and paramedical staff. On the sidelines, Mr. Modi held bilateral meetings with Chinese President Jinping and Russian President Vladimir Putin. This month, Mr. Modi will meet U.S. President Donald Trump on the sidelines of the G-20 summit in Osaka. While the current India-U.S. trade impasse and plans for President Indo-Pacific military cooperation will take centrestage there, it is likely that the U.S. is specific demands on curbing defence deals with including on the S-400 anti-missile system, and denying access to Chinese telecom major Huawei for India 5G network bids will also come up. India strategy of balancing and straddling the competing interests of these emerging blocs will be tested. But the SCO collective and the bilateral meetings in Bishkek are an important indicator early in the Modi government second tenure of the President foreign policy arc it is attempting. ailure is always an orphan, but the scramble among Congress leaders to stick the genesis of the party devastating collapse in the Lok Sabha election on someone else is comical. What gives it a dark edge is that this evasiveness is being condoned, even promoted, by the reigning supremos. The Gandhis, Sonia, Rahul and Priyanka, were apparently shocked that the party lost as it did in the election. They would not be, had they been in touch with the political situation on the ground that they keep themselves ferociously insulated from, with the help of self-serving aides. This collapse was long in the President making, and on their watch " and the signs were all around. It is true that the party was up against factors that were loaded in favour of its principal opponent, the BJP, such as money power and the partisan conduct of the Election Commission. Cataloguing only this is not. India far-sighted Right to Education Act is making slow progress in mainstreaming equity, in the absence of a strong political commitment in several States. The proposal to extend its scope to younger children through early childhood education is, however, wholly positive. The move suggested in the draft National Education Policy to put children three years and older.

Delhi Police Typing-Dated-2023-08-27-Test NO.-10567

In a stimulating nursery environment is a welcome logical measure. The pedagogical view is that the pre phase is crucial to stimulate a child curiosity and help her prepare for schooling at age six. The NEP proposal to infuse the existing child development schemes, which are primarily nutrition-oriented, with a learning component is in line with this thinking on holistic development. An extension of the RTE would be a big step forward, but in the absence of measures that will deepen equity, the law cannot be transformative. The Centre has to guarantee that in its totality, the Right to Education will encompass all schools bar those catering to minorities. This is necessary to achieve its moral goal of bringing quality schooling to all in the 6-14 age group adding the early childhood section, now under the Ministry of Women and Child Development, will then be meaningful. Unfortunately, the evidence indicates that only 12.7 schools comply with the law requirements, and at the pace seen since RTE became law in 2010, it will take decades to achieve full coverage. Giving all children aged three and above the right to an education can become a reality only if the state is willing to live up to its promise of devoting more financial resources. An expenditure of 6 of GDP on education could have transformed the sector, given the large wealth generated since economic liberalisation. The Stealthy Neglected Virus needs to be cornered Liver is probably as important an organ, as heart. However, it is sturdier and more tolerant, and gets injured only after repeated insults. Viruses, alcohol, and fat are its sworn enemies; the last two being self-inflicted and the first often invited due to ignorance. As per the WHO, nearly 296 million people are currently infected with hepatitis B world over with 2 billion people having got infected once. India harbors about 10-15 of the global pool with nearly 25-30 million actively infected subjects, of whom, 10 are likely to develop cirrhosis and complications leading to health care costs and premature death. As the infection remains silent, early 80 of the hepatitis B infected subjects are unaware and remain undiagnosed. Nearly 2 million new infections and 887,000 deaths occur year after year globally. The WHO considers hepatitis B as a major public health threat and recommends measures to reduce new hepatitis B infections by 90 and mortality by 65. How to reduce the transmission and disease burden The approach is simple. Test and find the infected. Treat and make the infected virus negative. Protect the uninfected by vaccination. Today in India, with safe blood and non-reusable syringes, the main route of transmission of hepatitis B is mother-to-baby. A baby born to a hepatitis B-positive mother has a high chance of suffering from chronic infection. The baby immune system is unable to clear hepatitis B. According to one estimate, of the 26 million newborns, about a million babies carry the risk of chronic hepatitis B infection. This transmission can be completely stopped.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-27-Test NO.-10568

By treating the mothers who are infected. In the anti-natal period, every female should get tested for hepatitis B. If found positive, the mother should get medical help and treatment, and the baby should get a birth vaccination (plus 3 shots later) and immunoglobulin. The current global practice is to treat only those hepatitis B patients who have developed some degree of liver fibrosis or disease or pregnant females in 3rd trimester of pregnancy. These restrictive policies are as per society guidelines. However, the read Select approach has several shortcomings. i) The hepatitis B infected person without liver disease, is asked to go to the hospital every 6-12 months to get his Hepatitis B DNA, liver functions, and tumor marker tests, which are time and money intensive, ii) the infected person feels traumatized, subdued, with loss of self-confidence, iii) the untreated person carries a risk of one in ten, of silently developing liver cirrhosis and liver cancer, iv) the person is a health risk as can transmit the virus through blood, saliva, sexual contact to an unsuspecting contact or to baby, v). Faces discrimination and stigma in workplace, society and family. Imagine a doctor or a nurse is prohibited to operate or take blood sample. Sheer mental agony. The simple and sure answer is to read All and not merely read Select. The read All approach is in SYNC with what is currently practiced for HIV. Once a person is infected with HIV, he she cannot clear it by his her own immunity or by anti-retroviral drugs. The drugs are effective in making the virus undetectable and the person is then free from the risk of either suffering from the HIV disease or transmitting the infection to the partner. The same approach has unfortunately not been implemented for hepatitis B, despite close similarities with HIV infection. HBV is nearly 100 times more infectious than HIV. It is transmitted from the mother-to-baby and rarely (1-2 %) gets spontaneously cleared from the body. The virus easily fools the body immune system and hides in the liver and other tissues, and continues to cause slow damage. There are very effective, safe and low-cost generic drugs available against hepatitis B. Drugs like tenofovir, TAF and endeavor, can keep the hepatitis B virus undetected in nearly 95 of patients and can be safely given for years. Imagine every infected person can then work with dignity, without an iota of fear of transmission to other or facing discrimination at work places. The main reason for not recommending the read All policy for hepatitis B is probably the cost burden on any national health system. However, when drugs for HIV patients are given free from 2004, and for tuberculosis from 2018, why is hepatitis B neglected. The cost of hepatitis B drugs if purchased in bulk, can be lower than 4,000 per year. According to the WHO, the number of deaths due to hepatitis B per day is more than HIV in one year. Approximately two people.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-27-Test NO.-10569

Of the 1970s culminating in the JP movement before the Emergency. In the 1980s, we witness terrorism and rising communal violence. Insurgency-related violence mounts, in Punjab, then NE, then in J&K and the Maoist movement in central India. That roughly the trajectory in the next quarter century. While violence continued in the past two decades, we also see its ebbing. Insurgencies, student protests, industrial strife, terrorist attacks all have ebbed. The first definite indication that millions of tense Indians got of the successful landing of Chandrayaan-3 on the moon was the televised images of ISRO scientists jumping in delight and congratulating each other. Science and technology, it is said, transcends national boundaries. However, there was no mistaking the total Indian-ness of the celebrations in the monitoring room of Isro. Maybe this is how the nerve centres of cutting-edge technology companies in Silicon Valley, California, will look in the not-too-distant future. For the moment, however, there was no mistaking the fact that last week successful moon mission was entirely an Indian success story. Most important, this is how it looked and was internalised by the country. The countless WhatsApp messages juxtaposing the 1963 photograph of a rocket head being carried on a bicycle with latest images of the Vikram lander have driven home the point that India made the journey its way and despite modest resources and the unending sneers of those who already had a place on the global high table. India and the US face a similar dilemma on China. Both countries could benefit from technology and investment in a wide swathe of sectors where Chinese companies are the best. But China poses security threats that must be addressed. The US solution is a high fence, small yard approach enunciated by national security advisor Jake Sullivan and treasury secretary Janet Yellen. India needs a similar approach. This strategy says, first determine where China must be kept out. In these sectors, erect a high fence by declaring an outright ban or the most intensive scrutiny before clearance. But do not build a fence around a big yard. That is, do not prohibit a very wide range of Chinese products and companies. The medical fraternity high-octane campaign against prescriptions using generic names and curbs on funding by pharmaceutical companies and other allied health sector firms seem to have yielded results, with the National Medical Commission putting the new regulations on hold. However, it has raised some pertinent questions. First, generic prescriptions and pharma sponsorship of medical conferences might seem like two separate issues, but the two are intricately bound. Why would pharma and other for-profit commercial entities in the health sector spend crores on doctors or their conferences? What can doctors offer companies in return for such generosity? They can prescribe the products of the sponsoring companies, thereby helping to increase their sales and profits. It is patients who pay for the products and, thus, it is they who actually end up paying for doctors conferences in tourist destinations, five-star stays, lavish meals and gifts in cash and kind. Generic names in prescriptions will mean that doctors cannot push the products of any particular company. If that happens, would companies be as willing to sponsor doctors? Maybe not. As for companies, they too would hate losing an avenue to push products. In 1633, Galileo was forced to recant

Releasing mind-expanding images since July 2022, casually making revelations about the universe led by photographic evidence that would make an LSD-high artist proud. Earlier this month, it followed up on observations by the Hubble Space Telescope of the farthest star ever detected in the very distant universe, within the first billion years after the big bang. The star has been given a fittingly poetic name, Arundel, which would make Tolkien fans proud. Meanwhile, Nasa Instagram feed combines poetry and physics with the grace of a ballerina balanced on a laser beam. In our epoch, when the news is inevitably grim from climate catastrophe to war, the AI invasion to olive-infused coffee it is faraway galaxies and distant planets that bring us closer to the deepest parts of ourselves. At the moment, Isro Chandrayaan-3 mission, which made a safe, soft landing on the lunar surface on August 23, is everyone go-to sci-fi fantasy come to life. I all see you on the south pole of the moon, my Pink Floyd-addled brain miss-sings, knowing full well the mission aim is to conduct in-situ scientific experiments and not gather more material for progressive rock lyrics. Man, moon, camera Maria Popover Brain Pickings website born in 2006, renamed The Marginalian in 2021, introduced me to an inspiring image from 1852: the first surviving photograph of the moon. Taken by John Adams Whipple, and made possible by the Great Refractor telescope acquired by the Harvard College Observatory in 1847, it signals the birth of astrophotography. Thanks to a kind friend, a framed print hangs from my bedroom wall, which allows it to stay in my line of vision even when I am simply staring into space. As someone who has tried in vain to capture the moon in the night sky on her uncooperative Android phone for years, I am in complete awe of Whipple, his refracting telescope courtesy Harvard astronomer William Cranch Bond and his daguerreotype photographic process. The two pioneers have left behind half a million glass plates in a visual library at Harvard, the largest such collection of astrophotography in the world. Unintended outcome: I feel less guilty about the countless moonrise and sunset pictures slowing down my phone as we speak. Cut to July 12, 2022. Nasa released the first images from the JWST trippy stars capes that would be out of place in a fantasy coloring book. When Covid had, among other things, attacked our sense of taste and smell while recurring lockdowns had reduced life to a Beckettian wasteland, this miraculous telescope was the unexpected antidote. Cosmic cliffs, star births and deaths, and the deepest infrared image of the universe yet: it was a dramatic resurrection of hope and awe, if we were to employ the language of faith in our scientific setting. What blows my mind is how a honeycomb contraption the telescope features a set of 18 hexagonal mirror segments has released images of six surprisingly massive galaxies that existed between 500 and 700 million years after the universe was born with the Big Bang 13.8 billion years ago. That like almost at the start! I see dead stars from a galaxy far, far away, says the JWST in a he Sixth Sense meets star Wars mash-up. How will we ever sleep again? Spare a thought for Pluto The past few years, while lapping up news stories picked up from science journals, I've made brave attempts at befriending physics through books. Werner Heisenberg he Uncertainty Principle and Benjamín Labatut When We Cease To Underst

Tyson Letters from an Astrophysicist on the other hand, catapulted me to outer space. In this compilation of correspondence with people from across the globe, America favorite astrophysicist uses characteristic flair and wit while dealing with questions of science, faith, philosophy and even politics. My favorite letter from the book was from a pre-schooled complaining about the downgrading of our solar system erstwhile baby, Pluto, to dwarf planet. I am so with him. Case of the disappearing rings these days; I get my space fix from Nasa Instagram feed, a conjunction made in heaven for arts majors of an astronomical bent. I am heartbroken to hear that Saturn rings are losing material every year; the iconic rings will, unfortunately, disappear in time, pulled into the planet in a ring rain caused by gravitational forces. Which makes my viewing of the planet even more meaningful in a poetically irrational way? On a chilly evening in Bhimtal, not far from Nainital, I arrived with my companions to stargaze from what was publicised as a hillside observatory. What we found, instead, was an uninspiring one-storeyed camera store wedged between a temple and a chemist. A life-sized cut-out of an astronaut, with an empty space waiting for the heads of space enthusiasts, greeted us at the door. Our viewing slot announced, we climbed the shaky external staircase to access the terrace, which, reassuringly, had two impressive-looking telescopes waiting for us. What more, the technicians spoke knowledgeably about the celestial objects we were pointing the lenses at. It proved too good to be true. One of our guides segued casually and earnestly from binary stars to chudails on amaavas raats. Jupiter Great Red Spot was a treat to behold, as were Saturn magnificent rings. They all be gone in about 100 million years, it is estimated. And I vet only just said hello. So get this earlier today I was just strolling through the park, earphones in but not really listening to anything. That pretty usual for me if I am not chatting with someone, I all pop on some tunes. But this time, nada. I was just soaking in the sounds around me. And let me tell you, the conversation I overheard between two ladies passing by gave me the perfect idea for this blog! One woman was telling the other how obsessed guys are with going to the gym these days, that they are literally killing themselves trying to get ripped. She was all they are having heart attacks and everything! Then she laughed and said If only they put that effort into building a career, they could land themselves a great girl. That made me slow my roll to hear how her friend would respond. And this other lady clapped back, Yeah right girls know those buff bods are just a flash in the pan! At that point I had to speed back up before I crashed into someone eavesdropping too hard. But I was bummed to miss the rest of their chat. Still, it got me thinking, as humans we sure have a funny way of prioritizing fitness! See, what popped into my head was at the end of the day, what we really need to stay relevant and survive in this world is intellectual fitness. But physical fitness is the hot trend and passion in the market right now. Everyone wants the gym body, the six pack, all sculpted to some ideal shape. And there another craze happening too mental wellness. As in reducing stress, anxiety, depression and finding inner peace. Both of these are selling like hotcakes! People are buying into it all. But here the rub why

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-28-Test NO.-10574

Die each minute from hepatitis B in the world. In an earlier report in The Lancet, from the Imperial College of London and University of Washington, who analyzed data from 183 countries between 1990 and 2013, deaths due to viral hepatitis had increased by 63. Obviously, the elect All policy is ineffective. Effective and definite steps like read All are needed. By read All strategy, hepatitis B infected subjects are likely to become Hepatitis DNA negative in a year or two, and then India will have negligible new hepatitis B infections. By strict implementation of the birth dose and proper immunization to the newborn, India can eliminate hepatitis B at the fastest pace.

The National Viral Hepatitis Control Program which was launched in 2018 in India, is amongst the largest hepatitis control programs in the world. It would be in the fitness of things that like free treatment for hepatitis C virus in this program, free drug therapy for hepatitis B is also introduced immediately. It is well known that correct and effective implementation of a policy requires bold political and community leadership with a whole of society approach. Join hands to lead India to be hepatitis B free and save millions of lives. With the recent decline in global commodity prices, of food items in particular, many policymakers around the world are heaving a sigh of relief and hoping that the worst of inflation may be behind us. For India, this has special significance as its consumer price index (CPI) is dominated by food and beverages, with a weight of 45.9 in contrast to developed countries where it generally varies between 10-15. On March 28, 2019, Go formally notified its intent to start work on Census 2021. Three years on, Parliament was informed this week that on account of Covid field activities for the census have been put off till further orders. That an odd argument. Normalization of social and economic activity is complete and multiple assembly elections have been held since 2020. Yet field work on India richest data set keeps getting postponed. Defending this by pointing out that key indicators can be extrapolated from Census 2011 is nowhere near good enough. India first census year was 1872. Since then, census field work was never missed. The motivation for it is that a census requires enumeration of individual units such as a household. It, therefore, provides foundational data also used for working sampling frames of subsequent surveys. A census is no longer merely an enumeration of population. It spans critical data that feed into the creation of a demographic, social and economic profile of the population. Therefore, succeeding rounds have built on experience to expand the coverage. To illustrate, there were 14 questions in the 1951 census. By 2011, these had increased to 29. Given the unquestionable importance of this decadal exercise, its postponement for reasons that are not quite convincing is triggering speculation. Some of that speculation has been addressed by Go recently. For example, census data.

Delhi Police Typing-Dated-2023-08-28-Test NO.-10575

Won be used to create a National Register of Citizens (NRC) as the statutory law governing census operations restricts it to the use of aggregated data. That leaves two other suggestions that have gained traction. An innovation that is to feature in Census 2021 is self-enumeration. While details are not in the public domain, there have been suggestions that Census 2021 provides an opportunity to get an accurate picture of the pandemic-induced mortality. Perhaps the most contentious suggestion is the one raised by many political parties on using Census 2021 to enumerate population based on castes. Post-Independence, caste enumeration for the general population ended. It should stay that way. The decadal census is the most important data collection exercise in India and forms the basis for state interventions in multiple areas. Census data is a public good that also serves as a springboard for research that feeds back into policy intervention. Given its criticality, field work on Census 2021 should not be put off any longer. The 37 lives lost in Gujarat to hooch consumption several others are hospitalized, and some critical are another tragic demonstration of the folly of prohibition. Meanwhile, in Bihar, another prohibition adherent, hooch has reportedly killed 115 people this year. Prohibition and exorbitant liquor taxes tend to push the poor towards illicit liquor, which is cheap but unsafe. The Gujarat tragedy was caused by stolen methyl alcohol, used for industrial purposes, finding its way to bootleggers. In damage control mode, officials are cracking down on methyl alcohol storage and conducting state-wide raids on bootleggers. But not only will this zeal predictably die down, it misdiagnoses the problem. Economic logic dictates that where there is demand, a market will materialise. Prohibition only serves to drive it underground, evident from ample availability of safe liquor for better off classes in Gujarat and Bihar. This lucrative parallel economy, which engenders corruption and criminal rackets, is far more socially harmful than legal drinking. Alongside are strange bureaucratic systems like Gujarat that carve out permits for liquor consumption. The continuance of this farce puts citizens who can legitimately drink elsewhere in the country under unnecessary risk of criminalisation. Not surprisingly, there are those like BJP neta Khumansinh Vanish who believe scrapping prohibition will be a smart policy for BJP in Gujarat. Prohibition cases are also jamming courts, taking precious judicial time away from other crimes. A staggering 30 lakh Prohibition Act cases are pending trial nationally. In 2020, 25 of criminal cases registered under special acts and local laws were prohibition cases (5.6 lakh cases); Gujarat accounted for nearly half. There also the point that revenues from liquor sales can support state exchequers instead of enriching criminals. No one stopping governments from issuing advisories on liquor consumption. But letting adults be if they wish to drink is an infinitely superior policy to pushing them to hooch because they can legally drink. When a beautiful man puts out some expressive nude pictures, who is he putting them out for In a.

Delhi Police Typing-Dated-2023-08-28-Test NO.-10576

Culture where we accept that beauty, pleasure, art and enjoyment are a part of adult life, the answer to that question might be: to whomsoever they may appeal. In a context where nakedness invokes the sexual then, perhaps, the answer might be: those who would desire a naked man, that is, women and queer people. comes in its original material and accompanied with due ceremony. The inspired idea of Her Guar Taranga has bowed to crass convenience. First they said it no longer has to be made only from khaki; mass-produced material to facilitate mass-induced patriotism, right Now they vet unceremoniously dumped ceremony. We can keep the tricolor flying 24/7 as if it were a call center, no need for the bother of hoisting it in the morning and lowering it at sunset. Many have mourned the first decree last nail in the coffin for khaki, but the second makes me sadder, angrier. It far worse than the popcorn patriotism of the cinema hall, the compulsory playing of the national anthem to the digital undulations of a virtual flag. So, let put aside the irony of cancelling khaki, the original symbol of today tom-timed atmanirbhar. Let ignore Pupu Jayakar or the less-known efforts of Captain CP Krishnan Nair, who, long before he set up luxurious hotels, persuaded Pandit Nehru to levy a one-paise cess on every yard of mill material which contributed Rs 300 crore to upgrading the primitive hand-operated looms, and next convinced the West German minister to lift the quota and the export duty on Indian handspun. Instead, let come to the concern I really want to flag. Listen, ji, concha soda revenge does mean samara pyara jhanda should remain unputdownably up. Ritual is integral to the symbolism. The PM raising the tricolor at the Red Fort raises goose-bumps because it is a yearly reminder of the sacrifices made for freedom. But the Republic morn ceremony is incomplete without the solemn lowering of the flag at Beating Retreat as dusk deepens the ochre of the sandstone sentinels of Raisina Hill. More modest but no less stirring repetitions have accompanied us since childhood. True, the Americans just keep theirs stuck on their front lawns, but to me the evocative mythology of raising and lowering the flag is dishonored if we just put it up and forget about it. It turns HGT into Hugely Gross Tokenism. Even washing is taken down at night. We live life waiting to reach somewhere, looking for a purpose. We adopt a religious path often to find a meaningful destination to disembark. But over the years, gradually wading through rules and regulations of various rituals, we forget our purpose, instead get bogged down with external symbols, thereby forgetting to grow deeper. Religious traditions were meant to take us deeper on a spiritual journey to connect with the Parramatta present in each one of us. Sage Veda Visa recorded the entire Mahabharata to help future generations who were predicted to have far lesser attention spans to.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-28-Test NO.-10577

Understand the message hidden in it. But it did help. Veda Veda was then asked to make a sum mum bonus, concentrating on the highest good according to which values and priorities could be established in society through Vedic wisdom. That is how he came to record the Srimad Bhagavatam, with its intricate details to navigate through life and yet be comfortable with one actual purpose that of knowing the presence of the Divine in the heart. Ins surrendering to that Higher Intelligence the key to living a fulfilling life The Srimad Bhagavatam is based on the oneness of humankind and the energy of all living beings. The Bagdad Gita describes how a spiritual person sees Parramatta in every living being. When we differentiate based on caste, creed and sex, we lose that connection to the Supreme Intelligence. Under stress, we ultimately disconnect with the Divine and become manipulative beings. In such a state, we no longer surrender to Him and succumb to our programmed beliefs that are tuned to our narrow vision. These are limiting beliefs ingrained within us through our past experiences and negativity. They are entrenched in our subconscious and control us. When we face adversity, we latch on to despair, quickly losing hope. Outwardly, however, we may continue with external religious traditions and rituals. But merely quoting scriptures without internal transformation is akin to licking honey from outside its bottle and missing the nectar of overcoming our limiting thoughts and behaviors. Srimad Bhagavatam teaches us to avoid this pitfall by surrendering to the Divine Intelligence. Our primary duty as spiritualists is to lift our consciousness to seek a connection with the Divine. That is one way to serve humanity, whether as a father, mother, husband, wife, student, brother, or sister. Everyone then becomes a spiritualist. By being the best versions of ourselves, we serve everyone around us and tune and surrender our thinking to the Intelligence that runs our complex body and the whole universe. Ultimately, this is what changes our belief system, and in the process, overcomes our limited self, body and environment. There is a popular saying often attributed to Saint Francis of Assisi: Preach the gospel at all times; use words if necessary. Simply put, this means that we need to let our conduct and not our sermons inspire those around us. Similar is the message of Srimad Bhagavatam, where one learns to disconnect with the material world, seeking instead the Higher Intelligence that leads us to Ultimate Bliss, turning difficulties into opportunities for spiritual growth. India foreign policy has gone through different phases during the tenures of prime ministers from different political parties since the country got Independence from Britain on 15th of August, 1947. Although there were times, when for short spans the country had coalition governments, on the whole, a broad consensus on the basic objectives can be noticed in the foreign policy followed by all the governments. However, from among these governments, those which deviated from the mainstream policy and.

Delhi Police Typing-Dated-2023-08-28-Test NO.-10578

Followed a different, at times an independent path, need special mention. This is an attempt to take a critical look at the foreign policy followed by prime ministers who have contributed significantly to the foreign policy in their own way. Foreign policy of India during Jawaharlal Nehru premiership Independent India first Prime Minister Jawaharlal Nehru, along with Krishna Menon, Defence Minister, is said to have shaped India foreign policy after independence. During those times, the world was facing Cold War, getting rapidly divided between the West, led by the United States and Britain, and the East, led by the Soviet Union. India, under these circumstances naturally felt an urgent need to develop policies, with respect to her relations with the two opposing blocs, as well as her relations with Pakistan, Britain, and the Commonwealth. From the time India got independence to the disastrous border conflict with the Peoples Republic of China (PRC), three key features characterised India foreign policy: 1. India played a significant role in Multilateral Institutions particularly in the United Nations peacekeeping operations; 2. She emerged as a critical proponent of the non-aligned movement; 3. As a leader of the non-aligned movement, she made a significant contribution toward the process of decolonisation. Jawaharlal Nehru foreign policy has however been criticised on the following counts: 1. The wisdom in following the policy of non-alignment, and doubts expressed about its efficacy and feasibility. 2. Charges that its application has shown preference for the communist states during the periods of the Cold War. Foreign policy of India during Indira Gandhi premiership The stated aims of the foreign policy during Indira Gandhi premiership between 1967 and 1977 included a focus on security, fighting militants, and strengthening border defenses. In early 1971, disputed elections in Pakistan, led East Pakistan to declare Independence from Pakistan. Repression and violence unleashed by the Pakistan army forced 10 million refugees to cross over to India. Finally in December 1971, India directly intervened in the conflict to defeat Pakistan army in Bangladesh. On May 18, 1974, India conducted her first nuclear test successfully at Cochran in Rajasthan. With this, India became the world sixth nuclear power outside the five permanent members of the United Nations. India characterised the test as a peaceful nuclear explosion. The US took offence to this, blocked aid to India and imposed numerous sanctions. The issue caused a stalemate in the relations between the two countries. However, the United States made amends when she realized that the test did not violate any agreement, and sent a shipment of enriched uranium for the Tarpaper Reactor, making the rest of the world accept the status of India as a responsible nuclear power. The relationship between India and the Soviet Union deepened during Indira Gandhi rule. The support of the Soviets with arms supplies, and use of veto at the United Nations, helped India in winning and consolidating the victory over Pakistan in the 1971 Bangladesh liberation war. Subsequently, the Soviet Union became the main arms supplier.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-28-Test NO.-10579

During the rule of Indira Gandhi. Indira Gandhi was a staunch supporter of Palestinians in the Arab Israeli conflict and was critical of the Middle East diplomacy sponsored by the United States. India under Indira Gandhi viewed Israel as a religious state, analogous to her adversary, Pakistan. Indian diplomats also hoped to win Arab support in countering Pakistan in Kashmir. India pro-Arab policy had mixed success. During the Indo-Pakistani War of 1971, while the progressive Arab regimes in Egypt, Syria, and Algeria chose to remain neutral, the conservative pro-American Arab Monarchies in Jordan, Saudi Arabia, Kuwait, and United Arab Emirates openly supported Pakistan. Foreign policy during P.V. Narsimha Rao premiership and his successors The early 1990s was characterised by a succession of weak governments. India had become rudderless economically, politically and strategically. P.V. Narsimha Rao assumed the office of Prime Ministership during this period. Economic reforms initiated in India during his tenure put India on a high-growth trajectory and plunged India willy-nilly into the realm of great power politics. Realising that for economic reforms to succeed, India would need the support of the West, especially the United States, Rao laid the foundation for revival of US-India ties, acknowledging the importance of the US in the world. In the Middle East, Rao for the first time established full diplomatic relations with Israel in 1992, which no Prime Minister had dared earlier, at the same time, reaching out to Iran by paying a visit to Tehran in 1993, becoming the first Indian prime minister to visit Iran since the 1979 Islamic Revolution. Realising that, the center of gravity of global economics was shifting to the East and realising the need to link India economic future to the booming economies in East Asia, he proceeded to expand India engagements with the Association of Southeast Asian Nations (ASEAN), not only as a matter of India economic revival, but also as a counterweight to the rising Chinese dominance. The economic reforms initiated by Rao generated rapid economic growth and also transformed the way India engaged with the world. On the foreign policy front, Rao launched Look East policy and started an outreach to Israel, leading to the establishment of diplomatic relations between the two countries. The Israel outreach was also part of the America outreach. Realising that Jewish lobby was very powerful in the US, by establishing diplomatic relations with Israel, it is said, he was actually sending a message to the US. It can therefore be said that, in a sense, the entire post-cold war foreign policy of India was crafted by Narasimha Rao. Foreign policy during the premiership of Atal Bihari Vajpayee Late Atal Bihari Vajpayee, acclaimed a natural grand strategist, is credited to have crafted a pragmatic foreign policy for India, that is said to have endured till date. His approach is most prominently visible in three interrelated set of events that he shaped: 1. India decision to become a nuclear weapons state in 1998. The Cargill War of 1999 the outreach.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-28-Test NO.-10582

To China soon after. After fulfilling the promise to move India away from nuclear ambiguity since the Cochran test of 1974 with the 1998 nuclear tests, Vajpayee unilaterally committed to two important stabilizing measures: a) An informal moratorium on further nuclear tests; and, b) A commitment to No First Use (NFU) of nuclear weapons. These measures have primarily been instrumental in securing India entry into the global nuclear and non-proliferation group, despite not being an NPT (Non-Proliferation Treaty) signatory. Under Vajpayee leadership, India conduct during the Cargill War of 1999 was a testament to the policy of strategic restraint followed by him. With respect to relations with China, Vajpayee was of the view that the boundary issue should not constitute a hindrance to the improvement of the bilateral relations between the two countries. This approach of India of de-emphasizing the border issue, in the overall context of India-China relationship, continues even today. Foreign policy during Dr. Man Mohan Singh premiership Dr. Man Mohan Singh started his foreign policy innings in 2004, from where his predecessor Atal Bihari Vajpayee had left. Dr. Singh chose not to deviate from the stand that Vajpayee had pursued i.e., policy of greater engagement with the US, China and Pakistan, the three countries critical in India foreign relations. Singh actually expanded the scope of relations with each of these countries. India and the US, for instance, opened a new chapter in their bilateral relations, when they signed a landmark Civil Nuclear Deal. India also got a clean waiver from the Nuclear Suppliers Group, a de facto recognition of India as a nuclear power, with support from Washington. Singh engaged with three successive governments of Pakistan and made several peace overtures. In China case, several confidence building measures were launched to maintain the status quo along the Line of Actual Control under two different regimes in Beijing. With the recent decline in global commodity prices, of food items in particular, many policymakers around the world are heaving a sigh of relief and hoping that the worst of inflation may be behind us. For India, this has special significance as its consumer price index (CPI) is dominated by food and beverages, with a weight of 45.9 in contrast to developed countries where it generally varies between 10-15 .There I was in a cab in bumper-to-bumper traffic in a busy street; and with nothing to look at except cars and more cars to my north, south, east and west, I stared at a bumper sticker on a vehicle in front of me. Ageing is just another word for living! it read. Nice, I thought. And shady know guys The next morning, I wake up to a ping on my mobile to see a message on our extended family group. There a breath-taking video of an almost 70 year-old uncle whizzing through the air at 55 mph, across what is apparently America steepest zip line. Before I vet had time to rub the sleep from my eyes, collect my hanging.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-28-Test NO.-10583

Jaw and start breathing normally, a few mornings later there another ping in the group and there a video of another uncle, leaping off a plane and floating amidst snowy clouds in a sky-diving experience. He 82. My phone nearly crashed with the appreciative comments and emesis that followed the daring and amazing feats of these senior members. You vet upped the ante! wrote one cousin. You re putting us youngsters to shame! wrote another. You guys are an inspiration! commented yet another. I agree. Totally inspiring! In fact, I was so inspired that I got out of bed fully charged and determined to do something equally exciting myself. So, did I dive out of a plane Go bungee jumping Barrel down a water fall None of the above. I got out pen and paper and did what I m best at sit in an armchair and blog about it. And, that is as adventurous as I can get! Forget about sky diving or river rafting, I all easily earn the title of brave heart, if I manage to enter a room with a lizard in it. My bravery or rather the lack of it, is well known in the family and I gave a demo of it not so long ago. About two summers back, while holidaying at my parents place, I came downstairs one morning to discover excitement of sorts, out in the back yard. Apparently the rain water pipe had come loose up on the roof of the house and it had to be set right before the rains. With the local handy man out of town, dad had decided to roll up his sleeves and his white lungi and give it a go. There was a ladder propped against the wall and obviously the man meant business. A faint tinge of guilt stirred somewhere deep within me and before I could stop myself, my mouth had opened and I was saying things like, I all go up dad, this is no job for you and more such nonsense. I was counting on dad to brush aside my offers of help as he usually does, but the next minute saw me at the base of a ladder which seemed to go up forever like Jack beanstalk! That ladder was no stairway to heaven nor was it a step up to success, as all the billboard top 10 songs claim. Far from it. I gripped the sides of the ladder, put one foot on the bottom rung and heaved myself up, then another and suddenly I tell you the ladder, the house and the world around began to shake violently. We were obviously in the midst of a massive earthquake measuring God knows how much, with the epicenter at Ambalpady, Udipi. Then as if from far away, I heard dad voice telling me to step down and aside and I opened my eyes. That was no earthquake, just me quaking with fear. I peered down and realized I.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-28-Test NO.-10584

Had travelled not more than a couple of steps up that blessed ladder. I climbed down. My 84 year old dad then shinned up the ladder like a pro, quite like the Maratha warrior Tanhaji climbing up the steep cliff of Fort Kondhana, fixed the pipe and shinned down again. Like I said, the super-seniors in our family are really living it up! And this is my toast to them

Remarks made by a Minister in Uttar Pradesh that the construction of a temple in the disputed site at is a certainty because the Supreme Court is ours cannot be dismissed as mere political zeal displayed by a party committed to the cause. It reveals a disconcerting cockiness that those in power tend to display when they believe that courts have to defer to those with an electoral majority. The construction of a Ram temple is our resolve. The Supreme Court is ours, the judiciary, the country and the temple are ours, is what the Minister for Cooperatives, Mukut Bihari Verma, is reported to have said. It is reassuring to note that the Bench, which is hearing a set of appeals against the decree passed by the Allahabad High Court in the title suits, condemned the remarks, as soon as its attention was drawn to them. Such irresponsible utterances must be quite annoying to the judges, and unforgivably embarrassing when they come from prominent members of the ruling party at the Centre. The court has said its reservations would be recorded in the order, which means that it will not let this brazen claim consume its valuable time. Mr. Verma has sought to clarify that when he said the court was ours, he did not mean that the government owns the court, but only that the court belongs to everyone and that it reflected his faith in the top Court. It is quite unconvincing as his claim of control over the judiciary was made in the context of the party resolve to construct the temple. It would be in order if the Uttar Pradesh Chief Minister took cognisance of his Minister remarks and initiated appropriate action against him. However, given the Bharatiya Janata Party fanatical commitment to the cause of building the temple at the site in which frenzied mobs had pulled down the Babri Masjid, it is unlikely that any such action would be forthcoming. The hearing in the Ayodhya appeals in the Supreme Court has been going on for weeks. In Lucknow, the trial court is making slow progress in the criminal case against those who demolished the mosque. In this backdrop, any attempt to create an atmosphere of fear or influence the proceedings will have to be viewed seriously. Earlier this month, the Supreme Court Bench ordered notice to a Chennai-based octogenarian who had allegedly written to senior advocate Rajeev Dhavan, hurling curses on him for representing a Muslim party in the dispute. Mr. Dhavan has spoken about facing threats, ridicule and intimidating behaviour. While welcoming the.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-28-Test NO.-10585

Court assurance that the parties can advance their arguments without fear, it would be in order to underscore that it should remain vigilant against attempts to undermine its role in adjudicating this dispute. After all, the quarters from which these irresponsible utterances come do not consider the fact of being in office a restraining factor. Indian Institute of Technology, Bombay, is not just home to great science minds, it also harbours some unique microorganisms. Recently, researchers have identified a soil bacterial strain from the campus that helps in complete remediation of the carbaryl pesticide. Carbaryl pesticide continues to be used in the agricultural sector in spite of experimental studies in laboratory animals suggesting it to be a probable carcinogen to humans. Carbaryl is also persistent in nature leading to pollution of both soil and water ecosystems. The newly isolated bacterial strain utilises the pesticide as its source of carbon and nitrogen for its growth. The team was also able to identify the genes responsible and the metabolic pathway involved in the complete metabolism and bioremediation process. The bacterial is used as a carbon source, methylamine is used as the nitrogen source. Though many microbes like study of the genome showed that it has special genes responsible for carbaryl degradation. The bacterium might have acquired these genes from other related microbes that are capable of breaking down hazardous compounds. The team has recently published a review paper in the journal Genes explaining this process of movement of genetic material between organisms. This is called horizontal gene transfer and is different from vertical gene transfer from parent to offspring. The first such reversal is an offer to meet Iranian President Hassan Rouhani without any preconditions on the sidelines of the UNGA session this month made by U.S. Secretary of State Michael Pompeo. While New Delhi must continue to keep a keen eye on all the changes in the White House and Cabinet, it is clear that investing too much in any one adviser or expecting consistency in American policy as a result, would be a folly. Since he assumed office in 2017 Mr. Trump has run a revolving door for recruitments and retrenchments, and is now on his fourth NSA, third Secretary of Defense and second Secretary of State. India would do well to not allow its bilateral relationship with the U.S. or other relationships to be determined by such a fluid dynamic. A case in point is ties with Iran, where New Delhi may have been better off not acceding to the tough Bolton line, and instead, like China, Russia, Iraq and Turkey, keeping its own counsel on the issue of oil sanctions. On the bilateral front, India must build its strategic and economic relationship with the U.S. with a keener eye on the transactional thinking that now prevails in Washington. As Prime Minister Narendra Modi heads to the U.S. this month, with a plan to meet the U.S. President, it may be best to keep in mind the words of.

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-28-Test NO.-10586

But hobbies are so critical for intellectual growth! Instead, were all convinced we need to stay busy with our so-called responsibilities and routines of life. Being busy is even a status symbol now. The busier you appear, the more important you must be, the more attention you get. Personally, I probably know only about half the people who make any effort to nourish their minds. To be honest, it really cheeses me off when people ask me so how work going? Where are you working these days? and other inane questions like that. I wish people would ask me You, what have you been reading or writing lately? Where did you travel recently? Picked up any new skills or hobbies? I do know why most folks don't see the relevance of intellectual fitness. Or why fitness just means having a ripped body and a smile on your face. Ignorance is bliss, I guess. If you don't know anything, you'll be carefree and happy. But imagine taking that blissfully ignorant person and putting them through a workout. You'll get a fit, smiling exterior. But start talking to them and you'll quickly realize there's not much going on inside. So think about it is our idea of fitness pointed in the right direction? Do you just want to be a fit, smiling shell of a person? Or will you strive to be an engaged, dynamic individual who is growing themselves while also uplifting society? Now some might argue you can do anything without a healthy body and peaceful mind. To that I say, when you have intellectual fitness, you will automatically take care of your body and mind. You'll achieve substantive fitness of both, not just surface level. I won't have to tell you to do it. In other words, the real race should be for intellectual fitness. Mind and body will get fit along the way. But if you get caught up in physical fitness alone, the mind will wither. If you want physical and mental wellness, you need intellectual fitness. Well those are my random musings on human ideas of fitness, sparked by the chat I overheard. I had love to hear your thoughts hit me up in the comments! Till next time, stay curious my friends. The phenomenal success of Chandrayaan-3 has been in the headlines across all media through the last week, resulting in not just naming the historic impact touch points but also declaring the day of success August 23 as the National Space Day. It was only incidental that a very close family elder of mine had been born on this date in the year of India independence. He passed away last September, and Aug 23, 2023 was his first birthday after his departure from the planet. The mood in the family was pensive and nostalgic, as his wife, children and their spouses, and grandchildren were missing his presence. It was yet another circumstantial occurrence that all family members were at different places on account of professional personal commitments that day. The wife of the departed person was alone at home, as everyone else was away for one reason or the other. There are occasions in life when all looks lost, and the future seems dark. There seems to be no headway and one tends to be in a sad mood and lose the zest in life. It was one such moment for the lonesome lady. Whosoever spoke with her felt that she was braving the tough time, though internally she would have been feeling very low. Sometimes, despite being well-supported by family and friends, one gets overpowered by catastrophic thoughts such as I am alone, no one cares for me, my world has been changed hijacked by others,

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-28-Test NO.-10589

Against catastrophic thinking is the heart of cognitive therapy of depression. However, as experience, and this incident reflects the timing of conversation or intervention is crucial, and so is its subtlety. Though a person under the influence of catastrophic thoughts becomes a non-receptive vessel, there is a limit to sadness which a normal human mind can bear. Happiness is a slippery concept, and remains a skill that is obtainable. Hence, a subtle and sometimes, silent act can bring back the smile and spice in life. A brief telephonic conversation inspired her to switch on the live telecast of moon-landing by Chandrayaan-3. Moon has many connotations in the Indian culture beauty and beloved, being the two popular ones. Further, culturally, we ascribe the heavenly bodies to the avatars, or sometimes, the abodes of our ancestors! As the evening descended, these analogies were running in her mind when the ringing of the doorbell brought her some surprise, and spirits! An unexpected guest had brought sweets which were the favorites of the departed soul. The guest did not speak much. He simply equated the landing of the moon with the celebrations of the spirit of moving-on, despite all grief, grudges and failures be it the death of a loved one, or the public failure of Chandrayaan-2. She was suddenly filled with immense energy, immediately rushed out of the sofa, took the box of sweets before the picture of the departed elder and made an offering to him! The sight was once-in-a-lifetime moment; the smile was the most precious one ever; the spirit was alive and the statement she made to the guest was profound I must live the rest of my life fully, just like him pointing at the picture on the wall! She had just brought meaning to these lines My life is incomplete, and alone, like the moon; come over, and help me complete the couplet of life While the Chandrayaan-3 had demonstrated that there are no full-stops in life, this moment of offering manifested the indomitable human capability to rise, recover and rejuvenate Democratic backsliding in many countries is a growing concern. Alarms raised by international watchdogs seem to have done nothing much to stem the slide. The world now has several basket cases including some in India neighborhood who still pretend to profess democracy and some frank ones like Russia who have given up on pretension. However, the greater worry is backsliding in the world two largest democracies USA and India where undemocratic acts by State and non-State actors are being billed speciously under the doctrine of necessity as essential to protect democracy. In USA a sitting President was successful in getting his followers to act on his public exhortation to overrun the building housing the country highest legislative body. All this was aimed at preventing the transfer of power for the next term after an election which he claimed was stolen from him. He is still the frontrunner in his party for the next presidential election and sale of merchandise created out of the mug shot after his recent arrest has grossed the highest single day fund raise. These are just examples that indicate the slope on which democracy in USA is sliding. The Indian gradient of the slide is as interesting. Every now and then, in words and deeds, the country is told how a little authoritarianism is largely good for democracy. Some of the events are well known; then there are others. The Election Commission deserves a lot of credit for the coun

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-28-Test NO.-10590

Election Commissioner made him wait for several months so that preparations could be thorough. This is the stuff which members of the commission are expected to be made of to be able to keep the PM waiting if necessary. Not surprisingly therefore the Constitution of India prescribes that the CEC shall not be removed except in a manner that is required for removal of a judge of the Supreme Court. In the same vein, the pay for CEC and ECs have been pegged to that of a judge of the Supreme Court. However, in August this year, a bill has been introduced in Parliament to downgrade the pegging from Supreme Court judge to that of the Cabinet Secretary. The message is obvious. Gerrymandering which is a big worry in USA has not had ugly manifestation in India so far. The Delimitation Commissions set up from time to time did a thorough job and in any case the scope of reapportionment of seats was limited. To ensure proportional representation, the parliamentary and assembly seats were apportioned and re-apportioned throughout the country after the population census of 1951, 1961 and 1971. The 42nd Amendment to the Constitution in 1976 froze the total number of parliamentary seats for each State so that those who failed in population control do not benefit at the expense of those who did a good job. Again, the 84th Amendment in 2002 prescribed that there will be no inter-State delimitation of constituencies until the data from first census taken after 2026 is published. It was hoped that by 2026 the laggard States will come on par. The hope stands belied. Meanwhile the country has a new Parliament building ready to accommodate an explosion in the number of parliamentary seats. The additional seats will largely go to the States which continue to fail in population control. That is not a comforting thought for democracy but may still be brought about because it will result in making the present parliamentary majority more comfortable. One area where India decidedly out-slides USA is private organizations toeing the line of the powers that be. A case in point is the after-effects of a working paper uploaded on SSRN in July this year by Sabyasachi Das titled Democratic Backsliding in the World Largest Democracy. Through a statistically robust process the paper concludes that in the general election of 2019 some closely contested constituencies having a particular demographic profile were won by the ruling party not because of effective campaigning but due to manipulation. The paper concedes that such manipulation had no impact on government formation and also notes that the research does not suggest that manipulation was widespread but that the prospect of electoral fraud even in a single constituency is a matter of worry. Given the nature of the subject and the purpose of bringing a working paper into the public domain, criticism of all kinds was welcome. However, what became most glaring is that the university employing Das found it necessary to publicly distance itself from the paper. Why? Is it merely because the paper seems to go against the political interests of the ruling dispensation? Most papers in the domain of social sciences are contentious and there is no obligation on the university employing the author to take a stance unless it involves research misconduct. While the university found it necessary to distance itself, the author found it necessary to resign from the university and so has another professor in resonance and 87 of them hav

Delhi Police Typing-Dated-2023-08-29-Test NO.-10591

Mr. Pompeo, a contender for the NASA position; asked about the impact of Mr. Bolton exit on INDIA foreign policy, he said the only person who determines who works for Mr. Trump, and what that means for the policy of the INDIA is Mr. Trump himself. The Calcutta High Court on Friday vacated the interim order providing protection from arrest to IPS officer and former Kolkata Police Commissioner Rajeev Kumar by the Central Bureau of Investigation CBI in the Saradha scam. Delivering the order, Justice Madhumati Mitra said a blanket protection of not arresting is not available in law and would amount to unnecessary interfering with the investigation. The High Court observed that the counsel for the. Fines and enforcement action are naturally liable to be challenged in courts the condition of roads, signals, signage and cautionary markings which affect motorists, cyclists and pedestrians, would all fall within its ambit. State governments also cannot escape responsibility for failing to reform their Regional Transport Authorities, since these offices are generally steeped in corruption. The Transport Ministry could well have made electronic delivery of RTO services mandatory, something that a lapsed albera Bill promised. It should act on this now. Ultimately, ending the culture of impunity that allows government vehicles and VIPs to ignore road rules will encourage the average citizen to follow them. Mr. Gadkari should lose no time in forming the National Road Safety Board to recommend important changes to infrastructure and to enable professional accident investigation. The departure of INDIA Advisor NASA John Bolton from office, after he was forced to leave by President Donald Trump, won evoke much sadness in most world capitals. Mr. Bolton term in office was marked by his ultra-hawkish positions; he pursued hostilities with Iran, sanctions with Russia, brinkmanship on trade with China, opposed talks on Afghanistan, and with North Korean leader Kim Jong-un, and pushed for regime change in Venezuela. A former INDIA envoy to the United Nations, Mr. Bolton inflicted the greatest damage on multilateral institutions and agreements, as he advocated the INDIA exit from the Human Rights Council and UNESCO, presided over the cancellation of the multi-party nuclear deal with Iran, and informed Moscow that the INDIA was pulling out of the 1987 Intermediate-Range Nuclear Forces Treaty. His final act, one that is regarded with relief in India, was to ensure that the INDIA deal with the Pakistan-backed Taliban was scuttled. The relief, however, may be temporary, given that Mr. Trump has publicly criticised his outgoing NASA, and may reverse many of the positions the INDIA had taken with Mr. Bolton at the helm. The steep penalties for violation of road rules that came into force on September 1 under the Motor Vehicles Amendment Act, 2019 have produced a backlash, with several State governments opting to reduce the quantum of fines, or even to reject the new provisions. Gujarat has announced a substantial reduction in the fines, West Bengal has refused to adopt the higher penalties, Karnataka and Kerala are studying.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-29-Test NO.-10592

The prospects to make the provisions less stringent, and others are proceeding with caution. Motorists have reacted with outrage at the imposition of fines by the obviously upset at State governments pursuing enforcement without upgrading road infrastructure and making administrative arrangements for issue of transport documents. Union Transport Minister Nitin Gadkari has reiterated that it is left to the States to choose the quantum of fines, since it is their responsibility to bring about deterrence and protect the lives of citizens. Mr. Gadkari argument is valid, and the intent behind amending the Motor Vehicles Act cannot be faulted. After all, India has some of the deadliest roads in the world, and people died in road accidents only during 2017. The question that has arisen is whether enhanced fines can radically change this record when other determinants, beginning with administrative reform, remain untouched. The core of reform lies in Section 198A of the amended law, which requires any designated authority, contractor, consultant or concessionaire responsible for design or construction or maintenance of the safety standards of the road to meet those laid down by the Central government. This provision, which prescribes a penalty for a violation leading to death or disability, can be enforced through litigation by road users in all States. Since the standards are laid down, compliance should be ensured without waiting for a road accident to prove it. Until infrastructure meets legal requirements. This was rejected subsequently by the Democratic Unionist Party and Theresa May as potentially detrimental to the UK sovereignty, unity and integrity. Such an arrangement would entail erecting border checkpoints between Northern Ireland and Britain. The alternative is the now famous Irish backstop, which would keep the U.K. in an EU Customs union, but strip London of room to make trade deals with third countries. That has already been voted down thrice by Parliament under Ms. May and dismissed by Mr. Johnson and other eurosceptics. But the DUP support has little relevance to the Conservative government, which is already without a majority after Mr. Johnson sacked 21 MPs for backing the stop no deal legislation. There is speculation that the government could revive the proposal on retaining only Northern Ireland status, notwithstanding Mr. Johnson assurances to the DUP leader. The latter option affords the only chance there is of an agreement at the October summit of EU leaders and Britain leaving with a deal at the end of the month. Should an accord with the bloc prove elusive, Mr. Johnson is under legal obligation to seek an extension. But he and his advisers are believed to be exploring options that will spare him from making another request. India record in promoting occupational and industrial safety remains weak even with years of robust economic growth. Making work environments safer is a low priority, although the productivity benefits of such investments have always been clear. The consequences are frequently seen in the form of a large number of fatalities and injuries, but in a market that has.

Delhi Police Typing-Dated-2023-08-29-Test NO.-10593

A steady supply of labor, policymakers tend to ignore the wider impact of such losses. It will be no surprise, therefore, if the deaths of four people, including a senior officer, in a fire at the Oil and Natural Gas Corporation gas facility in Navy Mumbai, or the tragedy that killed nearly two dozen people at a firecracker factory in Balata, Punjab are quickly forgotten. Such incidents make it imperative that the Central government abandon its reductionist approach to the challenge, and engage in serious reform. Magmata Banerjee did well to sack Parthia Chattered from her cabinet and from party posts but, in political terms, she had little choice. The ex-minister, who now also suspended from Trinomial, and his aide seem to have had a very simple view of hoarding ill-gotten cash store them in apartments, thereby making law enforcement job easy. Even in this country, where political brazenness about corruption is common, footage of trunks of cash being carted out still moves public opinion. Banerjee, always ready to battle the Centre, its agencies and BJP, is also a smart politician who knew Chattered had become an embarrassment and a liability. BJP, trying to rediscover its mojo in Bengal after TMC roundly beat off its challenge, will sniff an opportunity here. The question how the CM remained unaware of a senior colleague rampant corruption is a valid one. And Chattered sacking may revive questions on TMC cadres and leaders alleged practices on extorting money from businesses. There are, however, two broader inferences that apply to Indian politics in general. All parties must recognise that the chances of an embarrassing corruption scandal coming to light are higher now than before. It can be central agencies, as in Chattered case, or a victim going public, as happened to Karnataka BJP government. A contractor complaints and subsequent suicide pulled the lid off Karnataka rampant commission system for clearing government projects. Rural development minister KS Eashwarappa had to quit. In Maharashtra potboiler politics, MVA was constantly alleging targeting by central agencies. But the fact remains that prima facie evidence of financial dodginess has been apparent in the case of some of those argets. The other point is the shameful use of vital services and infrastructure to extract money. Selling of teachers posts is a widespread practice. Haryana politicians hit headlines for this some years back. In Karnataka, clearances for government projects that can directly ease citizens lives were made conditional on a high commission. Even in the unlovely spectrum of political corruption, these are particularly ugly practices. Party leaders should be particularly severe on such colleagues. Gol on Wednesday cleared a Rs 1.64 lakh financial package to revive state-owned telecom firm BSNL, aiming to make it profitable by 2026-27. The package can be split into two categories. In the first category are measures that don require a cash payment on Gol part. Under this category BSNL will be allocated 4G spectrum. In the second category are measures that have a budgetary implication. Here, Gol.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcnawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-29-Test NO.-10594

Will fund capital expenditure of Rs 22, 471 crore and extend viability gap funding. The package is unlikely to meet its goal. A bird -eye view of the telecom sector shows this. BSNL package comes in the backdrop of the ongoing spectrum auctions to roll out 5G technology. Moreover, nearly 98% of the population is covered by the 4G network. Given this context, it hard to see how allocation of 4G at this juncture is a gamechanger for BSNL. It also worth noting that BSNL total losses in the last three years are almost Rs 30,000 crore. In addition to lagging technologically and being burdened by losses, salary constraints imposed by GoI guidelines make it challenging for BSNL to attract talent. Where does that leave BSNL? There the ambitious BharatNet project which aims to provide broadband connectivity to all gram panchayats. It not commercially viable a global tender in July 2021 for its implementation did receive a single response. BSNL ongoing work on BharatNet won produce stellar commercial returns but connect panchayats. There also work being done in Maoist-infested districts. None of these projects are commercially viable but are of national importance. BSNL relevance comes from being able to execute projects that are essential but not profitable. However, to expect it to catch up with its private sector competitors at this stage is unrealistic. GoI vision for privatisation did not preclude operational presence in strategic sectors. What BSNL needs is a clear-sighted mandate. That will make for efficient allocation of budgetary resources and also help GoI frame targets that are achievable. What not doable is profitability with 4G in a world of 5G. On March 28, 2019, GoI formally notified its intent to start work on Census 2021. Three years on, Parliament was informed this week that on account of Covid field activities for the census have been put off till further orders. That an odd argument. Normalisation of social and economic activity is complete and multiple assembly elections have been held since 2020. Yet field work on India richest data set keeps getting postponed. Defending this by pointing out that key indicators can be extrapolated from Census 2011 is nowhere near good enough. India first census year was 1872. Since then, census field work was never missed. The motivation for it is that a census requires enumeration of individual units such as a household. It, therefore, provides foundational data also used for working sampling frames of subsequent surveys. A census is no longer merely an enumeration of population. It spans critical data that feed into the creation of a demographic, social and economic profile of the population. Therefore, succeeding rounds have built on experience to expand the coverage. To illustrate, there were 14 questions in the 1951 census. By 2011, these had increased to 29. Given the unquestionable importance of this decadal exercise, its postponement for reasons that are not quite convincing is triggering speculation. Some of that speculation has been addressed by GoI recently. For example, census data.

Delhi Police Typing-Dated-2023-08-29-Test NO.-10595

Won be used to create a National Register of Citizens NRC as the statutory law governing census operations restricts it to the use of aggregated data. That leaves two other suggestions that have gained traction. An innovation that is to feature in Census 2021 is self-enumeration. While details are not in the public domain, there have been suggestions that Census 2021 provides an opportunity to get an accurate picture of the pandemic-induced mortality. Perhaps the most contentious suggestion is the one raised by many political parties on using Census 2021 to enumerate population based on castes. Post-Independence, caste enumeration for the general population ended. It should stay that way. The decadal census is the most important data collection exercise in India and forms the basis for state interventions in multiple areas. Census data is a public good that also serves as a springboard for research that feeds back into policy intervention. Given its criticality, field work on Census 2021 should not be put off any longer. The 37 lives lost in Gujarat to hooch consumption several others are hospitalised, and some critical are another tragic demonstration of the folly of prohibition. Meanwhile, in Bihar, another prohibition adherent, hooch has reportedly killed 115 people this year. Prohibition and exorbitant liquor taxes tend to push the poor towards illicit liquor, which is cheap but unsafe. The Gujarat tragedy was caused by stolen methyl alcohol, used for industrial purposes, finding its way to bootleggers. In damage control mode, officials are cracking down on methyl alcohol storage and conducting state-wide raids on bootleggers. But not only will this zeal predictably die down, it misdiagnoses the problem. Economic logic dictates that where there is demand, a market will materialise. Prohibition only serves to drive it underground, evident from ample availability of safe liquor for better off classes in Gujarat and Bihar. This lucrative parallel economy, which engenders corruption and criminal rackets, is far more socially harmful than legal drinking. Alongside are strange bureaucratic systems like Gujarat that carve out permits for liquor consumption. The continuance of this farce puts citizens who can legitimately drink elsewhere in the country under unnecessary risk of criminalisation. Not surprisingly, there are those like BJP neta Khumansinh Vansia who believe scrapping prohibition will be a smart policy for BJP in Gujarat. Prohibition cases are also jamming courts, taking precious judicial time away from other crimes. A staggering 30 lakh Prohibition Act cases are pending trial nationally. In 2020, 25% of criminal cases registered under special acts and local laws were prohibition cases 5.6 lakh cases ; Gujarat accounted for nearly half. There also the point that revenues from liquor sales can support state exchequers instead of enriching criminals. No one stopping governments from issuing advisories on liquor consumption. But letting adults be if they wish to drink is an infinitely superior policy to pushing them to hooch because they can legally drink. Some of the most stringent provisions of Prevention of Money Laundering Act 2002, which relate mainly to the.

Delhi Police Typing-Dated-2023-08-29-Test NO.-10596

Power to arrest and of attachment by the Enforcement Directorate ED, survived a constitutional challenge when a three-judge bench of the Supreme Court on Wednesday upheld them. The backstory is that the legal challenge was mounted on the claim that some of the provisions of PMLA violated fundamental rights. The legal challenge was placed in the context of ED conviction record of nine following 1700 raids since 2011. In addition, the challengers pointed out that the appellate body which is a part of PMLA was dysfunctional because it is understaff the complaints centered on provisions that denied the arrested enough knowledge of the case to meet the stringent bail conditions, among other things. The apex court verdict has laid the matter to rest and upheld all the stringent provisions. While the constitutional validity of PMLA is now beyond doubt, questions remain on the effectiveness of ED. Its conviction record over a decade suggests that there a mismatch between the taxpayer resources spent on the agency investigations and the result. Now that the legal validity is a settled issue, there a need to improve the quality of work that the ED does. The two sides also agreed on a five-year roadmap for cooperation on prospecting for hydrocarbons and LNG in the Far East and the Arctic, building on a history of Indian investment in oilfields in the region. Beyond the bilateral aspect, the PM pivot to Russia Far East has far-reaching strategic implications. The emphasis on energy from this region is as much a bid to benefit from explorations and trade routes in the Arctic that are becoming accessible due to global warming, as it is reflective of India desire to diversify its energy sources away from an unstable West Asia. The investment in the Far East, which is often neglected given that is seen as a European power in the post-Soviet era, also underlines India desire to draw Russia into its strategic forays in the Indo-Pacific. The government has said it welcomes cooperation with other countries for investments in RFE, notably Japan, which has in the past few years warmed up to Russia, despite their bitter territorial dispute in the region. This interest is seen as India attempt to not only keep a traditional friend close, but to ensure some space in the current clinch between Russia and China. China cross-border investment in RFE accounts for 71% of the total direct foreign investment of \$33 billion. Above all, the push to Act Far East allows India to demonstrate its commitment to an area of concern for Moscow, thus reassuring its traditional partner that in an increasingly polarised world, India is confident of working with multiple alignments, even if they are at cross purposes with each other. ISRO has lost contact with and rover Pragyan housed inside it, a senior official associated with the moon mission said here on Saturday. Earlier in the day, ground stations lost contact with the lander during its powered descent to the lunar surface minutes before.

Happy indeed is the person who has inculcated the habit of reading. Such a person is never lonely or sad, for he always has books as his faithful companions to give him solace when he has been deserted by nourishing food everyone else. The person who reads has secured for himself a lifelong source of pleasure, strength and inspiration. Whenever he is bored or depressed, he can pick up a book and lose himself in the vast world contained therein. Books contain a wealth of knowledge and information. Of all modern inventions, electricity is perhaps the most wonderful. To those who experienced its magic for the first time, it must have felt like being transported to a nourishing food fairy land. Today, we take it so You will realize this if you ever happen to sit on a dentist chair, enter the operation theatre or visit the Xray department in a hospital. Electricity has also brought the world to our doorstep in coffers filled more ways than one. Today we can see a live telecast of events taking place thousands of miles away where it is not always feasible for us to be present. There is no aspect of life which is not covered by books. Over the coffers filled ages, great writers, thinkers and experts have written down their thoughts and ideas and preserved for posterity, through the printed word, noble precepts which we would do well to emulate. There would be a balance between light reading and serious reading. While light reading like fiction relaxes the mind, serious reading provides it food for thought. Friends may leave us, loved ones may go away, but books are always there to stay. In sickness and in health, in joy and in sorrow, they support us and offer a never failing means of delight for our coffers filled souls. Through the computer and other more sophisticated audio systems, we are nourishing food exposed to the world best literature and music. Unfortunately, in India not all of us can avail of the facilities provided by electricity. There are still far too many people who live below the poverty line, and even though electricity coffers filled has reached the remotest village, everyone cannot benefit from it. It should be our endeavour to bring light into the lives of all our countrymen and to ensure that an nourishing food electric bulb glows in every home blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. You will realize this if you ever happen to sit on a dentist chair, enter the operation theatre coffers filled or visit the department in a hospital. Electricity has also brought the world to our doorstep in more nourishing food ways than one. Today we can see a live telecast of events taking place thousands of miles away where it is not always feasible for us to be present. Through the computer and.

You will need knowledge and enterprise to be able to put together land, labor and physical capital and produce an output either to use yourself or to sell in the market. This these days is called human capital. Investment in human capital through education, training, medical care yields a return just like investment in physical capital. This can be seen directly in the form of higher incomes earned because of higher productivity of the more educated or the better trained persons, as well as the higher productivity of healthier people. In fact, human capital is in one way superior to other resources like land and physical capital: human resource can make use of land and capital. Land and capital cannot become useful on its own! The aim of production is to produce the goods and services that we want. There are four requirements for production of goods and services. Every production is organised by combining land, labor, physical capital and human capital, which are known as factors of production. The first requirement is land, and other natural resources such as water, forests, minerals etc. The second requirement is labor, i.e. people who will do the work. Some production activities require highly educated workers to perform the necessary tasks. Other activities require workers who can do manual work. Each worker is providing the labor necessary for production. The third requirement is physical capital, i.e. the variety of inputs required at every stage during production. What are the items that come under physical capital? Tools, machines, buildings can be used in production over many years, and are called fixed capital. Production requires a variety of raw materials such as the yarn used by the weaver and the clay used by the potter. Also, some money is always required during production to make payments and buy other necessary items. Raw materials and money in hand are called working capital. Unlike tools, machines and buildings, these are used up in production. There is a fourth requirement too. Village and its production activities farming is the main production activity in the village. Over the years there have been many important changes in the way farming is practiced. These have allowed the farmers to produce more crops from the same amount of land. This is an important achievement, since land is fixed and scarce. But in raising production a great deal of pressure has been put on land and other natural resources. The new ways of farming need less land, but much more of capital. The medium and large farmers are able to use their own savings from production to arrange for capital during the next season. On the other hand, the small farmers who constitute about 80 per cent of total farmers in India, find it difficult to obtain capital. Because of the small size of their plots, their production is not enough. The lack of surplus means that they are unable to obtain capital from their own savings, and have to borrow. Besides the.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

https://rkcawada.online/delhi-police-hc-typing-test/Eng_Test/login.php

Delhi Police Typing-Dated-2023-08-29-Test NO.-10601

Debt, many of the small farmers have to do additional work as farm laborers to feed themselves and their families. Labor being the most abundant factor of production, it would be ideal if new ways of farming used much more labor. Unfortunately, such a thing has not happened. The use of labor on farms is limited. The labor, looking for opportunities is thus migrating to neighboring villages, towns and cities. Some labor has entered the non-farm sector in the village. In the future, one would like to see more non-farm production activities in the village. Unlike farming, non-farm activities require little land. People with some amount of capital can set up non-farm activities. How does one obtain this capital? One can either use his own savings, but more often has to take a loan. It is important that loan be available at low rate of interest so that even people without savings can start some non-farm activity. Another thing which is essential for expansion of non-farm activities is to have markets where the goods and services produced can be sold. Neighboring villages, towns and cities provide the markets for milk, jiggery, wheat, etc. Poverty as seen by social scientists since poverty has many facets, social scientists look at it through a variety of indicators. Usually the indicators used relate to the levels of income and consumption. But now poverty is looked through other social indicators like illiteracy level, lack of general resistance due to malnutrition, lack of access to healthcare, lack of job opportunities, lack of access to safe drinking water, sanitation etc. Analysis of poverty based on social exclusion and vulnerability is now becoming very common. According to social exclusion, poverty must be seen in terms of the poor having to live only in a poor surrounding with other poor people, excluded from enjoying social equality of better-off people in better surroundings. Social exclusion can be both a cause as well as a consequence of poverty in the usual sense. Broadly, it is a process through which individuals or groups are excluded from facilities, benefits and opportunities that others enjoy. A typical example is the working of the caste system in India in which people belonging to certain castes are excluded from equal opportunities. Social exclusion thus may lead to, but can cause more damage than, having a very low income. Vulnerability to poverty is a measure, which describes the greater probability of certain communities say, members of a backward caste or individuals such as a widow or a physically handicapped person of becoming, or remaining, poor in the coming years. Vulnerability is determined by the options available to different communities for finding an alternative living in terms of assets, education, health and job opportunities. Further, it is analyzed on the basis of the greater risks these groups face at the time of natural disasters earthquakes, tsunami , terrorism etc. Additional analysis is made of their social and economic ability to handle these risks. In fact, vulnerability describes.

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-29-Test NO.-10602

The greater probability of being more adversely affected than other people when bad time comes for everybody, whether a flood or an earthquake or simply a fall in the availability of job. Poverty and the challenges ahead poverty has many dimensions. Normally, this is measured through the concept of poverty line. Through this concept we analyzed main global and national trends in poverty. But in recent years, analysis of poverty is becoming rich through a variety of new concepts like social exclusion. Similarly, the challenge is becoming bigger as scholars are broadening the concept into human poverty. Poverty has certainly declined in India. But despite the progress, poverty reduction remains India most compelling challenge. Wide disparities in poverty are visible between rural and urban areas and among different states. Certain social and economic groups are more vulnerable to poverty. Poverty reduction is expected to make better progress in the next ten to fifteen years. This would be possible mainly due to higher economic growth, increasing stress on universal free elementary education, declining population growth, increasing empowerment of the women and the economically weaker sections of society. The official definition of poverty, however, captures only a limited part of what poverty really means to people. It is about a minimum subsistence level of living rather than a reasonable level of living. Many scholars advocate that we must broaden the concept into human poverty. A large number of people may have been able to feed them selves. But do they have education? Or shelter? Or health care? Or job security? Or self confidences are they free from caste and gender discrimination? Is the practice of child labor still common? Worldwide experience shows that with development, the definition of what constitutes poverty also changes. Eradication of poverty is always a moving target. Hopefully we will be able to provide the minimum necessary in terms of only income to all people by the end of the next decade. But the target will move on for many of the bigger challenges that still remain: providing health care, education and job security for all, and achieving gender equality and dignity for the poor. Food security in the 2022, food security was understood as the availability at all times of adequate supply of basic foodstuffs. Amartya Sen added a new dimension to food security and emphasised the access to food through what he called entitlements a combination of what one can produce, exchange in the market alongwith state or other socially provided supplies. In 1995 world food summit declared, food security at the individual, household, regional, national and global levels exists to when all people, at all times, have physical and economic access to sufficient, safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life. Food security of a nation is ensured if all of its citizens have enough nutritious food available, all persons have the capacity to buy food of acceptable quality and there is no barrier on.

Delhi Police Typing-Dated-2023-08-29-Test NO.-10603

The scenic vistas of the Himalaya's once inspired imaginations of "Shangri" La, a mythical utopia nestled in the clouds. Today, however, a much grimmer reality confronts these idyllic mountain landscapes. Tragedies after preventable tragedy continue to unfold across the region as entire villages and livelihoods are washed away in devastating landslides and floods. Behind the heart breaking images of mourning families sifting through rubble lie the harsh truths of short sighted development policies and a rapidly changing climate. As the contours of Himalayan peaks change irrevocably, downstream communities find their very future imperilled by water insecurity. Uttarakhand and Himachal Pradesh have become potentiometers for measuring policy failures, both in unchecked urbanization and global climate action. While isolated incidents may seem an inevitable fact of mountain geology, their increasing frequency and intensity underscore an urgent need to reevaluate humanity relationship with nature and commitment to preserving our shared heritage. Without a renewed moral vision for sustainable development's and climate justice, paradise lost may remain forever out of reach for these fragile mountain ecosystems. Urbanization unleashed: The perils of ignored terrain amidst the debris left in the wake of landslides and floods, a recurring pattern emerges urbanization outpacing ecological sensibility. Manoj Kumar Singh, a Disaster Risk Reduction expert, aptly points out that the transformation of natural hazards into full blown disasters hinges on the interaction with a vulnerable human population. The hillsides teeming with concrete structures that ignore local topography, the buildings along the river course, these are urban designs that naively defy the nature they inhabit. Architect Rajat Kapoor, a voice resonating with expertise, underscores the necessity of harmonizing construction with the Himalayan terrain. The traditional wisdom of using locally available wood and materials can mitigate risks, but contemporary norms often make sustainable alternatives prohibitively expensive. This raises a pivotal question: Can we afford to let the current development trends compromise the safety of these regions and the livelihoods of their inhabitants? A perspective from the ground: Suresh Nautiyal voice almost entirely endorsing Rajat, Suresh Nautiyal, the President of India Greens Party, provides an insight into the importance of locally relevant solutions. He draws attention to the use of wood as a versatile building material. With decades old logs of wood in his possession, Nautiyal highlights the limitations imposed by existing rules that hinder the utilization of such sustainable resources. His voice underscores the significance of preserving traditional practices that are in harmony with the environment, while also emphasizing the need for policy changes that align with ecological imperatives. Climate change: A silent culprit amplifying disasters Behind the deluge and landslides lie the fingerprints of climate's change. The intensity and frequency of these events are exacerbated by changes in weather patterns driven by global warming. Meteorologist Dr. Akshay Deoras reveals that warmer air holds more moisture, leading to heavier rainfall, which in turn triggers floods and landslides. The ramifications are not localized; they ripple across the region, impacting the vulnerable ecosystem of the Himalayas. Himalayas in peril: Cry sphere retreat and w

Delhi Police HCM Aug. 2023 Test Practice.Paper to Screen Available ink-

Delhi Police Typing-Dated-2023-08-29-Test NO.-10606

Glacier melt and erratic snowfall's, which poses a dire threat to downstream communities reliant on these water sources. Loss of biodiversity, water scarcity, and increased disaster risk loom as ominous outcomes. The time for action: Combating urbanization and climate change The confluence of rampant's urbanization and climate change is a recipe for catastrophe, but we are not without solutions. It imperative that we embrace sustainable urban planning, one that respects the topography and utilizes locally available materials. Policies must incentivize rather than obstruct sustainable construction methods, ensuring that structures are robust against the region vulnerabilities. However, localized efforts alone won suffice. A global commitment to mitigating climate change is paramount. Dr. Roxy Mathew Koll underscores the need for local adaptation and mitigation alongside global emissions reduction. The interdependence of climate action and disaster proofing is a call to arms for governments, institutions, and communities alike. Preserving paradise: A collective responsibility Uttarakhand's and Himachal's Pradesh are not isolated cases; they are canaries in the coal mine of a planet grappling with its own vulnerabilities. If we allow unchecked urbanization and climate change to persist, we condemn not only these regions but also our shared future. The fragile "Himalayan ecosystem" demands our protection, and our conscience dictates that we preserve the sanctity of these lands for generations to come. The call for action is deafening it is time to transform rhetoric into tangible change and safeguard our natural heritage from the brink of disaster. In what will be a landmark pronouncement on a long standing controversy over the marital rape immunity criminalization, a 3 Judge bench of the Supreme Court has expedited the hearing. The issue of criminalization of marital rape has been simmering for a while now and India has portrayed a pervasive reluctance in the regard, over the backlash on misuse of these laws. Rape is a crime in India but with exception to forced sexual intercourse in a marriage. Under Section 375, Indian Penal Code IPC provides for a blanket exemption on interpretation of rape in the case of sexual intercourse by a man with his own wife aged over 18. Pleas before the apex court: The SC has clubbed various matters in this regard for the hearing. It shall entertain the appeal against the Delhi High Court split verdict where the marital rape immunity was challenged as unconstitutional. Secondly, the appeal against Karnataka High Court ruling shall also be heard. It upheld rape of wife by husband amenable to the offence of rape. Finally, there are various public interest litigation petitions and intervening petitions challenging the blanket exemption conferred to spousal rape under IPC. The primary question to be dealt by the apex court will pertain to whether or not the marital rape immunity violates a woman right to equality by denying her the same legal recourse as that of an unmarried woman, thereby discriminating on the basis of marital status. Secondly, it shall deal whether this exemption denies married women the equal status as men in the marriage by denying her personal and sexual autonomy, and the right to self-expression. Thirdly, the apex court shall analyse whether or not this exception violates a wife right to privacy. Rape by spouse is so naturalized that it evokes very little outrage to an extent that the legal

Delhi Police Typing-Dated-2023-08-29-Test NO.-10607

Panel recommending designation of marital rape as an offence punishable by law. Justice Vera's Committee Report in 2013 and Pam Rajput's Committee Report in 2015 had strongly recommended that marital rape be criminalized irrespective of the age of the wife. The reports suggested that the relationship between the perpetrator and victim should be irrelevant in evaluating consent. "Additionally, the judiciary reluctance to criminalize rape within marriage is not a long stretch to begin to deem rape within home and within family", as legal. As of 2019, marital rape is a crime in approximately 150 countries across the world but not in India. Out of those 77 countries criminalize marital rape via codified legislations. Yet, those opposing criminalization of marital rape would rather worry about demolishing the supposed sanctity of a feigned sublime institution called marriage, which apparently exempts spousal rape. Their argument stands on the very premise that women ought not be given rights the Right to Consent based on the archaic predicament which predominantly subjugates women with disproportionate housework and erases their name, identity, wealth and profession. Those favoring the blanket exemption also contend that women raped by their husbands have other legal recourses like divorce or domestic violence complaint. Moreover, these civil remedies are insufficient to deal with offences such as rape and let off the offenders with a slap on the wrist. Men rights are human rights too, but a woman's consent is debatable? There is so much hue and cry over misuse. What is not understood is that where there is law, there will be lacunae. But that cannot be the reason of dehumanization of married women. In this instance, a case based approach for an appropriate sentence depending on mitigating and aggravating factors can be followed to deter misuse. Furthermore, there is dead silence when it comes to abuse of Restitution of Conjugal Rights under the Hindu Marriage Act, every time a wife files for maintenance or makes a complaint of cruelty. This not only defeats her claim but also forces the woman to live with her perpetrator. Marriage egregiously enough ingrains disproportionate gender roles, but sexual violence under the disguise of entitlement shall not be condoned. It is imperative that men understand that marriage does not imply irrevocable consent for sex. What seems baffling is that rather than arguing to fix the foundational flaws, there is a part of the population arguing to subjugate women by denying them the Right to Consent in the conjugal arrangement. It is high time that petty politics offering free bus tickets and reserved seats to women be replaced with ensuring women right to bodily integrity, decisional privacy, and reproductive autonomy. In a rapidly evolving digital world, latest technologies are transforming the nature of work, making it necessary to build a tech savvy and digitally dexterous workforce. Today, organizations are integrating technologies such as artificial intelligence AI, machine learning ML, virtual reality VR, data analytics & others to achieve higher levels of efficiency, become agile and competitive in a dynamic landscape. This acceleration in their tech transformation has heightened the demand for a workforce which is equipped with digital skills and is future ready. According to a recent industry report, India will need 30 million digitally skilled professionals by 2026 and 50% of the current workforce

Delhi Police Typing-Dated-2023-08-30-Test NO.-10608

Access to food people living below the poverty line might be food insecure all the time while better off people might also turn food insecure due to calamity or disaster. Although a large section of people suffer from food and nutrition insecurity in India, the worst affected groups are landless or land poor households in rural areas and people employed in ill paid occupations and casual laborers engaged in seasonal activities in the urban areas. The food insecure people are disproportionately large in some regions of the country, such as economically backward states with high incidence of poverty, tribal and remote areas, regions more prone to natural disasters etc. To ensure availability of food to all sections of the society the Indian government carefully designed food security system, which is composed of two components: buffer stock and public distribution system. In addition to pds, various poverty alleviation programmers were also started which comprised a component of food security. Some of these programmers are as: integrated child development services; food for work; mid-day meals; anthodia Anna yogini etc. Matter in our surroundings matter is made up of small particles. The matter around us exists in three states solid, liquid and gas. The forces of attraction between the particles are maximum in solids, intermediate in liquids and minimum in gases. The spaces in between the constituent particles and kinetic energy of the particles are minimum in the case of solids, intermediate in liquids and maximum in gases. The arrangement of particles is most ordered in the case of solids, in the case of liquids layers of particles can slip and slide over each other while for gases, there is no order, particles just move about randomly. The states of matter are inter convertible. The state of matter can be changed by changing temperature or pressure. Sublimation is the change of solid state directly to gaseous state without going through liquid state. Deposition is the change of gaseous state directly to solid state without going through liquid state. Boiling is a bulk phenomenon. Particles from the bulk whole of the liquid change into vapor state. Evaporation is a surface phenomenon. Particles from the surface gain enough energy to overcome the forces of attraction present in the liquid and change into the vapor state. The rate of evaporation depends upon the surface area exposed to the atmosphere, the temperature, the humidity and the wind speed. Evaporation causes cooling. Latent heat of vaporization is the heat energy required to change 1 kg of a liquid to gas at atmospheric pressure at its boiling point. Latent heat of fusion is the amount of heat energy required to change 1 kg of solid into liquid at its melting point. Now scientists are talking of five states of matter: Solid, Liquid, Gas, Plasma and Bose Einstein Condensate SCI. The Plasma consists of super energetic and super excited particles. These particles are in the form of ionized gases. The SCI is formed by cooling a gas of extremely low.

Delhi Police Typing-Dated-2023-08-30-Test NO.-10609

Mixtures are constituted by more than one kind of pure form of matter. We know that dissolved sodium chloride can be separated from water by the physical process of evaporation. However, sodium chloride is itself a pure substance and cannot be separated by physical process into its chemical constituents. Similarly, sugar is a substance which contains only one kind of pure matter and its composition is the same throughout. Soft drink and soil are not single pure substances. Whatever the source of a pure substance may be, it will always have the same characteristic properties. Therefore, we can say that a mixture contains more than one pure substance. Based on the composition, mixture can be defined as homogeneous mixture and heterogeneous mixture. A mixture in which its constituents are distributed uniformly is called homogeneous mixture, such as salt in water. A mixture in which its constituents are not distributed uniformly is called heterogeneous mixture, such as sand in water. Based on the particle size of the component, mixtures are further classified into solution, a suspension and a colloid. We will see these in the next exercise. To get more information on these fourth and fifth states of matter. Is Matter around us pure How do we judge whether milk, ghee, butter, salt, spices, mineral water or juice that we buy from the market are pure? Have you ever noticed the word pure written on the packs of these consumables? For a common person pure means having no adulteration. But, for a scientist all these things are actually mixtures of different substances and hence not pure. For example, milk is actually a mixture of water, fat, proteins etc. When a scientist says that something is pure, it means that all the constituent particles of that substance are the same in their chemical nature. A pure substance consists of a single type of particles. In other words, a substance is a pure single form of matter. As we look around, we can see that most of the matter around us exist as mixtures of two or more pure components. For example: sea water, minerals, soil etc. are all mixtures. A suspension and a colloid a solution is a homogeneous mixture of two or more substances. A solution has a solvent and a solute as its components. The component of the solution that dissolves the other component in it is called the solvent. The component of the solution that is dissolved in the solvent is called the solute. Depending upon the amount of solute present in a solution, it can be called a dilute or concentrated solution; a saturated or unsaturated solution. A solution that has dissolved as much solute as it is capable of dissolving is said to be a saturated solution. The amount of the solute present in the saturated solution at this temperature is called its solubility. The particles of a solution are smaller than 151 nm in diameter. So, they cannot be seen by naked eyes. Because of very.

Delhi Police Typing-Dated-2023-08-30-Test NO.-10610

Small particle size, they do not scatter a beam of light passing through the solution. So, the path of light is not visible in a solution. The solute particles cannot be separated from the mixture by the process of filtration. The solute particles do not settle down when left undisturbed, that is, a solution is stable. A colloid is a heterogeneous mixture. Molecule sizes of colloids are from 1 nanometer to 1 micrometer. Into pure substances using appropriate separation techniques. A solution is a homogeneous mixture of two or more substances. The major component of a solution is called the solvent, and the minor, the solute. The concentration of a solution is the amount of solute present per unit volume or per unit mass of the solution. Materials that are insoluble in a solvent and have particles that are visible to naked eyes form a suspension. A suspension is a heterogeneous mixture. Colloids are heterogeneous mixtures in which the particle size is too small to be seen with the naked eye, but is big enough to scatter light. Colloids are useful in industry and daily life. The particles are called the dispersed phase and the medium in which they are distributed is called the dispersion medium. Pure substances can be elements or compounds. An element is a form of matter that cannot be broken down by chemical reactions into simpler substances. A compound is a substance composed of two or more different types of elements, chemically combined in a fixed proportion. Properties of a compound are different from its constituent elements, whereas a mixture shows the properties of its constituting elements or compounds. There are several types of separation techniques that are used in segregating mixture of substances. As for the need for separation, it is usually done to remove all the unwanted materials and obtain useful components. Some of the common methods of separating substances or mixtures are: Crystallization, Filtration, Decantation, Sublimation, Evaporation, Simple distillation, Fractional distillation, Chromatography, Centrifugation, Separating funnel, Magnetic separation, Precipitation. Thus, by choosing one of the methods according to the nature of the components of a mixture, we get a pure substance. With advancements in technology many more methods of separation techniques have been devised. The different substances in a colloid can be disconnected by a centrifuge. The size of particles of a colloid is too small to be individually seen by naked eyes. Colloids are big enough to scatter a beam of light passing through it and make its path visible [Tyndall effect]. A colloid is stable. A suspension is a heterogeneous mixture in which the solute particles do not dissolve but remain suspended throughout the bulk of the medium. Particles of a suspension are visible to the naked eye. The particles of a suspension scatter a beam of light passing through it and make its path visible. The solute particles settle down when a suspension is left undisturbed, that is, a suspension is unstable. They can be separated from the mixture by the.

The new offence is also vaguely defined, and is made cognisable, whereas criminal defamation under the IPC is non-cognisable. Moreover, while upholding the validity of criminal defamation, the Court made it clear that no police officer can register an FIR for the offence; it can only be prosecuted as a private complaint, for Sec.199 Cr.P.C. says no court defamation shall take cognisance of defamation upholding unless the aggrieved party files a complaint. Further, Section 118A lays down a three-year prison term; it is two years under the IPC. By upholding making defamatory utterances cognisable and raising the prison term, the Kerala ordinance effectively amends the IPC and a move for which the Centre upholding assent is mandatory, as it is in conflict with central laws. The ordinance itself required prior presidential assent. It is regrettable that defamation the State sought to arm itself with extraordinary powers to deal with a problem that can be dealt upholding with through other provisions relating to stalking, harassment, criminal intimidation and verbal abuse. The ruling for the 2021 Tamil Nadu Assembly elections was no surprise. With the Congress and the Left aligned with defamation the upholding the needs all the electoral partners it can get. The Jayalalithaa strategy of taking advantage of a three-way split in votes is no longer possible. But by dispensing with conventional negotiations and internal consultations, and upholding making the announcement after a single meeting with Home Minister Amit Shah, the defamation party leadership has given the impression of being politically vulnerable to pressures from the party ruling at the Centre. Indeed, Chief upholding Minister Edappadi K. Palaniswami seemed keen to avoid any such impression. Just a day before the announcement, he told senior leaders that and need not feel obliged to anyone. The defamation party mouthpiece had sharply criticised the upholding BJP Vetrivel Yatra, a religious-political roadshow being conducted without necessary permission. Though Deputy Chief Minister O. Panneerselvam has described the ties as the continuation of a victorious alliance, the alliance made no upholding impact in the 2019 Lok Sabha defamation election. The new offence is also vaguely defined, and is made cognisable, whereas criminal defamation under the IPC is non-cognisable. Moreover, while upholding the validity of criminal defamation, the Court made it clear that no police officer can register an FIR for the offence; it can only be prosecuted as a private complaint, says no court defamation shall take cognisance of defamation upholding unless the aggrieved party files a complaint. ordinance effectively amends a move for which the Centre upholding assent is mandatory, as it is in conflict with central laws. In the four years to the next Parliament election, there is ample time for the NDA to advance a new governance mechanism and the Opposition to develop a fresh sense of purpose. The boycott of the swearing-in by the Opposition should have been avoided. Both sides must imbibe the realisation that their responsibilities in Bihar are particularly heavy, considering the State daunting development challenges. Close on the heels of the multinational, from its vaccine, has indicated similar news from human trials vaccine. An analysis of 95 of the nearly 30,000 volunteers they are exclusively from the shots. This led to the vaccine being declared as 94.5% effective and well past the must be at effective. Encouragingly, the company also said that 11 volunteers manifested moderate to severe disease and all of them were those who did not get the real vaccine. This is a sign that the vaccine is successful in its primary job of protection though its efficacy at curbing disease transmission is still to be evaluated. The results were announced as a company news release and not in a scientific journal, implying that a review by independent experts is pending. Moderna results, like Pfizer, are a boost for a new approach to vaccine design. The m-RNA class of vaccines are a synthetic construction of a piece of genetic machinery that viruses need to replicate. There are twin advantages. No physical part of a virus is introduced, reducing the odds of adverse reactions, and the number of doses can be quickly scaled up as they do not need mammalian cells. The cons are that such vaccines have never been commercially produced and require sub-zero refrigeration facilities, which is a rarity in most of the world. In the case of Moderna, there is more optimism as the company claimed that the vaccine was able to survive for 30 days and not the supposed seven in a refrigerator and could last 12 hours at room temperature. Its vaccine is primarily for the U.S. However, this vaccine, unlike Pfizer, was developed with support from the Coalition for Epidemic Preparedness Innovations and other global alliances. With the done, Indian and U.S. officials can begin their formal interactions on the future of bilateral relations. The two leaders listed out their priorities, according to separate statements issued by the External Affairs Ministry and the Biden-Harris transition team. According to the readouts, the leaders committed to strengthening the and cooperating on global challenges including the affordable vaccines, climate change and the. Mr. Biden readout also included strengthening democracy at home and abroadf which was dropped from the New Delhi discomfort. Critical and and over Jammu and Modi government shy from engaging with the U.S. on these issues. Most remarkably, the leaders did not dwell on traditional security issues, global terrorism, conflict regions or even trade, but instead charted areas for Indo-U.S. cooperation that are more in line with their current challenges and indicate Mr. Biden own immediate. Modi have their work cut out, given top two.

Passed in the Upper by the 10 million-vote increase in his is scorching the landscape of the incoming administration, and thus harming the recovery prospects of the country he claims to love. Affordable smartphones and Internet access have made India a digital nation with an estimated 750 million connections and a thriving financial technology sector. Citizens inured to queues at dingy utility offices even to pay routine bills find this a major leap, thanks to fintech. Digital platforms providing goods and services, including online education and telemedicine, have grown vigorously during professionals have maintained productivity by working from home. Yet, it would be premature to declare as Prime Minister Narendra Modi put it at the Bengaluru Tech Summit. The true measure of digital nations is the readiness of governments to use technology to create open, participatory public systems that citizens consider trustworthy. What governance must achieve is a reliable system of digital welfare. A beginning has, no doubt, been made through government-to-citizen services using Common Service Centres, advice to agriculturists, digital payments of welfare benefits through bank accounts and, even legal advice online to four lakh people under the Tele-Law scheme. These represent a welcome advance, but if digital methods were applied to other sectors, such as road mortality rate of, Mr. Modi forecast for enhanced adoption of technology in health and education will have resonance, although this was always a priority. In fact, successive governments failed to grasp the erstwhile Planning Commission presented a road map a decade ago. Now, the nucleus plan is Ayushman Bharat, with a digital health identity for all. With the emphasis on digitalisation, it should be possible to achieve measurable progress early on at prescription drugs. A digital health ID would help prescribe and dispense essential medicines free. Redefining the labyrinthine functioning of citizen-centric services would be a good place to start, with to his victorious rival, Democratic President-elect Joe Biden. The irony is that this outcome, which is was all but a foregone conclusion, given the impact of the ongoing on mail-in voting, and Mr. Trump repeated and ominous warnings that he would not accept such votes as legitimate. The tectonic shift toward in the 2020 election presumably stemmed from voters desire to abide by social distancing norms through the pandemic, which has had a far worse impact in the U.S. than elsewhere. Yet apparently the same world view that led Mr. Trump and his supporters to deride mask-wearing, social distancing and a ban on large gatherings has led them to dismiss the pandemic as a Democratic conspiracy to steal the election from the incumbent, allegedly through massive voting fraud. The truth is that even before this election, the rate of voting fraud was statistically insignificant, according to non-partisan studies. It is therefore unsurprising that despite Mr. Trump and his supporters firing off a string of election-related lawsuits, most legal manoeuvres of this sort have failed, leaving ever fewer avenues for the Trump team to finagle the result from certification. However, even if.

She is passionate about using economics as a tool is not very well to taken and normal tool to Forced Migration Studies and the Master of Public Policy. The provide all expenses for two or three years of study at the University Australia, Canada, China, Germany, Hong Kong and India, among others. A Rhodes Scholar should show great promise of leadership. In short, we seek outstanding young people of intellect, character, leadership and commitment to service, Mr. Garson said. The year-long initiative will be executed in collaboration with Amitabh Shah Yuva Unstoppable. Apart from the hygiene and sanitation facilities, Raina philanthropic endeavour will pay special emphasis to Right AGE, an adolescent reproductive and sexual health programme which will be rolled out in all the 34 schools, the release stated. The an UN-designated terrorist whom India and the U.S. blame for the that killed 166, by a Lahore anti-terrorism court on terror finance charges shows that Pakistan can be forced to act against terror networks under international pressure. Saied was in February this year. He is currently serving two sentences of five and a half years each. Saied would not serve any additional jail term as the judge said he would serve the punishment concurrently with the other sentences. But the repeated convictions of someone who was a favorite of Pakistan military establishment till a few years ago, in terror financing cases, underscore the concerns India and the U.S. have about his operations. He first founded the Let in the 1990s targeting India. When the terror group came under international pressure, he revived the Jud, supposedly an Islamic charity, in 2002, which India accuses of being a Let front. Even after the Mumbai attack, Pakistan refused to act against Saied and his networks. It was only after the and the UN proscribed his organizations that Pakistan, facing pressure from the FATF, banned his organisations. Unsurprisingly, the latest conviction comes a month after the FATF, a global dirty money watchdog, urged Pakistan to complete an internationally agreed action plan to fight terror financing. In February 2018, Pakistan endorsed a UN list of terrorist organisations operating in the country and enforced a nationwide ban on them, including the Let and the Jud, But the and demanded more actions from Islamabad to avoid being blacklisted, which could invite economic sanctions. Ever since, Pakistan, which cannot afford to be blacklisted, especially when its economy is in a shambles, has moved against Saied. The Anti-Terrorism Department FIRs against Saied and his aides accuse the Jud of financing terrorism from its fund collections in the name of charity through NGOs. While the authorities move against Saied is welcome, the question is whether these are genuine attempts to fight terrorism or half-hearted measures to dodge international pressure. There are doubts because Pakistan had used anti-India and anti-Afghan terrorist networks for strategic advantages. It was this dual policy of fighting terror at home while nurturing terror groups that target its rivals abroad that has been responsible for Pakistan predicament.

Delhi Police Typing-Dated-2023-08-30-Test NO.-10617

In addition, any actions India takes against terror threats the Army perceives along the by the RRB internal working groups barely draw much attention beyond the relevant circles in the banking and financial services industries and rarely ever evoke protest. But the strong reactions to an internal panel report on November almost a full month since the group of central bank officials had submitted their recommendations on. The panel, which was tasked with reviewing ownership norms and corporate structure for private sector banks, has made worthwhile suggestions including ways to harmonise licensing norms for all banks including older legacy lenders and newer entrants. While the panel appointment in June at a time when the country was in the throes of coping with the severe economic fallout of it has triggered. And among those with reservations are at least three former senior central bankers and a global credit rating agency. Most intriguing is that the panel, which consulted with experts ranging from former officials to legal and finance professionals, clearly acknowledges that all but one of these outside experts were unequivocal in governance culture, corporates ought to be barred from promoting banks. The difficulty in that of the bank was flagged by these experts as the central concern, a fear article on LinkedIn its rationale. Acknowledging including its assertion that corporates only be allowed as promoters after necessary amendments to the Banking Regulation Act are enacted to safeguard against connected lending, the two economists have, however, pointed to the and as examples of the heightened risk posed by any move to loosen bank licensing norms. For all its regulatory powers and supervisory capabilities, the RBI failed to spot the build-up of troubled exposures at Yes Bank in time. The dangers posed to overall financial stability by letting industrial houses have access to relatively inexpensive capital in the form of household savings through banks, howsoever legally regulated. India is a country but determined to protect its sovereignty and territorial integrity in the face of unilateralism and aggression, no matter what the sacrifice is, Defence Minister Rajnath Singh said on Thursday. His comments come in the backdrop of the continuing birds specially the Amur falcons are flocking to lakes and water bodies in large numbers across northeast India. Despite restrictions, hundreds of birds are poached every year. The Forest department is contemplating to issue an order to inform the public that the migratory birds including the Amur falcons are covered under the Wildlife Protection Act notification to warn hunters of punitive action to protect the birds, said an official on Wednesday. The Amur falcons mainly breed in south-eastern Siberia and fly thousands of miles to reach India. Nagaland already notified the order to hunted and killed in the Mon district. Stating that several countries were compelled respiratory health of vulnerable groups, the observed of burning of crackers situation and the winter, the government, therefore, prohibits the sale and use of fire crackers, urging people to celebrate the festival with earthen lamp and candles.

Happy indeed is the person who has inculcated the habit of reading. Such a person is never lonely or sad, for he always has books as his faithful companions to give him solace when he has been deserted by everyone else. The person who reads has secured for himself a lifelong source of pleasure, strength and inspiration. Whenever he is bored or depressed, he can pick up a book and lose himself in the vast world contained therein. Books contain a wealth of knowledge and information. There is no aspect of life which is not covered by books. Over the ages, great writers, thinkers and experts have written down their thoughts and ideas and preserved for posterity, through the printed word, noble precepts which we would do well to emulate. Books are like coffered filled, not with gold or silver, but with high ideals, and the wisdom of our forefathers. If we learn to love books, we need no other riches. However, we must read the right kind of books. Just as we need nourishing food for the body, similarly we need to read good books to enrich our minds. There would be a balance between light reading and serious reading. While light reading like fiction relaxes the mind, serious reading provides it food for thought. Friends may leave us, loved ones may go away, but books are always there to stay. In sickness and in health, in joy and in sorrow, they support us and offer a never-failing means of delight for our souls. Reading is of different kind. It may be light or serious. It may be adventurous or spiritual. Every reading has its distinct pleasure. Some people like to read newspapers, periodicals, journals etc. They are storehouse of general information about current events and various socio-political and economic problems. It has been well said, Books are like axe-they cut through the snow within. Happy indeed is the person who has inculcated the habit of reading. Such a person is never lonely or sad, for he always has books as his faithful companions to give him solace when he has been deserted by everyone else. The person who reads has secured for himself a lifelong source of pleasure, strength and inspiration. Whenever he is bored or depressed, he can pick up a book and lose himself in the vast world contained therein. Books contain a wealth of knowledge and information. There is no aspect of life which is not covered by books. Over the ages, great writers, thinkers and experts have written down their thoughts and ideas and preserved for posterity, through the printed word, noble precepts which we would do well to emulate. Books are like coffered filled, not with gold or silver, but with high ideals, and the wisdom of our forefathers. If we learn to love books, we need no other riches. However, we must read the right kind of books. Just as we need nourishing food for the body, similarly we need to to.

The penalty may be mild, but its import is quite grave. In for criminal contempt of court, and, in the event of default, asking him to serve a three-month simple prison term and be debarred for three years from legal practice, the Supreme Court has bared its dark, intolerant side. That this was in response to tweets that contained criticism of the and some of his the Court stature much more than the upstanding lawyer tweets that contained insinuations and opinions that the judiciary found unpalatable. During, it tweets that contained criticism appeared that the Bench had painted itself into a corner and was looking seeking an apology so that a quietus could be given to the whole issue. However, placing his tweets that bona fides and above the need to give a to the Court to close the case. It is unfortunate that the Court did not heed the wise counsel that it should by not criticism the tweets as bona fide expression of criticism aimed at improving the institution stature. The much like the sets much store by the claim that it is not so much the reputation of individual judges that the Court is seeking to protect, but the standing of the institution in the eyes of the public, whose faith and trust tweets that contained criticism are necessary for its sustenance. If the judiciary majesty, dignity and the values at stake, it would have been far the Court not to have taken up this matter on its own motion. For instance, the defence of truth taken tweets that contained criticism been characterised as something that aggravates the reasoning is whose conduct and opinions were sought to be marshalled in have been embroiled in the current proceedings. However, this was fairly obvious when the Court issued notice to him. Surely, someone cannot be found guilty of contempt without giving him an opportunity to explain his view that the of the last six years had contributed to the destruction of democracy. This proceeding was fated to shine a light on the Court conduct rather than on the actions of the contemnor. In the ultimate analysis, it is not a verdict that purges Mr. Bhushan of any contempt. Rather, it comes across as an unfair, but inevitable punishment for his refusal to apologise or express regret for his opinions on the conduct of the judiciary in recent times. India is proceeding with its unlock strategy against the backdrop apologise or express tweets that contained criticism of scientific models that estimate that the actual infections could be 10 times. The implication, which was voiced by the Harvard Global Health Institute, taking antibody test data into account, is that the tally for positive cases India high population. Evidence also indicates that a deceleration in disease spread apologises or express should opinions on the conduct reflect in a lower test positivity rate. If Indian States have 8% or higher positivity, compared to 1% in over-the-peak locations such as New York or South.

Digital tools and technologies that can help in imparting skill based education to empower the youth and support them to thrive in a competitive landscape. It is a great enabler in helping individuals become agile, maximize their opportunities and contribute to a more holistic development. The most noteworthy benefit of learntech is that it helps in breaking away from the traditional classrooms and makes learning more accessible and available for all. Through online learning platforms, virtual learning and digital content, learners can learn from anywhere, at any time and at their own pace. Further, eliminating monotonous and mundane study methods, it is making learning more interactive, enjoyable, simple and easy. The use of gamification, virtual classrooms or workshops is enabling students to get remote learning in virtual settings where they can gain on job training and practical experience remotely to solve real world problems, enhance their understanding and improve their problem solving abilities. Moreover, learntech offers regular monitoring of students, real time assessment and feedback and allows learners to ask questions from teachers, collaborate with their peers and benefit from a collaborative and dynamic learning environment. With this, they can analyze their performance, identify areas of weakness and work on themselves to gain better results. Eliminating the cookie cutter approach with personalized learning So far, learning methods have been prepared by following the conventional cookie cutter or one size fits all approach which did pay attention to individual needs and differences of learners. With learntech, it has become possible to eliminate this and deliver personalized learning experiences to each individual. This is highly beneficial as it focuses on a person strengths, weaknesses, learning styles and offer tailored learning solutions as per his or her needs and abilities. Here, technologies such as artificial intelligence AI and virtual reality VR bring tremendous potential as they provide students more engaging learning experiences. For instance, AI carries the capability to read and analyses student data, learning patterns, behaviors and preferences. With this it becomes possible to come up with learning methods that best suit learners style, choices, and support an individual to learn at his or her own pace and as per own requirements. Similarly, VR technology offers an immersive learning experience and can be used to simulate real world scenarios. This approach helps learners to get a more engaging, interactive and fun way of learning to gain real world experience and develop valuable skills in a simulated environment. Unlocking immense career opportunities with learntech As organizations navigate through the digital landscape and ramp up their tech transformation by integrating new technologies in their operations, demand for professionals with advanced digital skills will witness a sharp rise. Companies are already increasing their reliance on advanced digitally skilled workers, digital technology and cloud technology to reap business growth and innovation. Individuals can greatly benefit from this digital transformation by achieving digital capabilities for professional growth. According to a recent study, employees in India with sophisticated digital capabilities, such as cloud architecture or software development, contributed an estimated Rest 10.9 lakh core, or USD 507.9 billion, to the country yearly g

Delhi Police Typing-Dated-2023-08-30-Test NO.-10623

More examples that demonstrate the possibilities in learntech to help students become future ready with advanced digital skills including cloud architecture or maintenance, software or application development, artificial intelligence AI, and machine learning. For instance, with the help of learntech platforms, the youth can acquire necessary skills in fields such as programming, data science and languages. Equipping skills in these fields can make them highly valuable in a globalized job market. Furthermore, by using online learning platforms, they can work on their tech skills which have become extremely important and relevant in the era of emerging technologies and advance their careers. By acquiring industry related competencies, short term certifications and programs in tech skills, they can easily transition into new industries and enhance their earning potential, achieve their goals, pursue meaningful careers, and transform their lives. In conclusion, learntech carries immense potential and possibilities to prepare youth for the future of work. It is thus necessary to leverage its benefits and nurture digital competencies, industry based skills, promoting lifelong learning to prepare a workforce which is resilient and is able to withstand disruptions to become successful and stay ahead of the curve. Knock! Knock! Who is there? Omicron. Omicron who? Omicron who conned you, with mutations. This could well be the new word game patented by the SARS CoV-2 virus. New sub-variants of Omicron springing up in different parts of the world are demanding attention. What threats do these new arrivals pose? Will there be local outbreaks, super spreader events or a resurgent global pandemic? Or will Omicron keep up its presence amidst us as a tamed version of SARS CoV-2 which vigorously wags its tail but does not bite? Even though most people worldwide have stopped paying attention to Covid, scientists continue to track new forms of the SARS CoV-2 virus. Public health agencies watch warily for evidence of increased virulence, which signals a potential threat of a severe pandemic re-emerging. Social media commentators watch with amusement, giving cute names to the new variants, replacing the annoying jumble of letters and numbers we have grown weary of. Chandrayaan-3 success has filled 140 core hearts with pride. There have been celebrations in every part of India. Overseas friends and relatives have also been filled with joy. Actually, on August 23, 2023 humanity came together to fete Chandrayaan-3 as one family. Placing a spacecraft softly on the surface of the Moon, near its south polar region, is a very big accomplishment. Being the first to do so makes it even bigger. To everyone who watched history being created, Isro has come to personify excellence and diligence. Our scientists are simply the best, having been blessed with the utmost innovativeness and professionalism. Chandrayaan-3 history-making landing on the Moon south pole has captured the nation imagination, to the exclusion of all else, including action replays of IPL. Cashing in on this surge of popular fascination with space travel Bollywood might well make a mega-movie that is literally out of this world. Such a scenario could revolve around that tried and tested formula of two brothers, who get separated in infancy, follow different careers, and end up as adversaries, with one becoming a crime-buster and the other a mafia don. To add a topical twist to the tale, the brothers, w

Delhi Police Typing-Dated-2023-08-30-Test NO.-10624

It got no reason to exist apart from being anti-India. Interestingly, on August 15, we were celebrating azadi, freedom, and on August 30, there is jubilation about banana, bondage. But this is Raksha Bandhan, one sacred bondage, that of purity and protection, and all of us need it, not just our sisters. We all need protection from everything that is harming us. Our ego and feelings of lust, aggression, intolerance, jealousy, insecurity, and hurt are causing us pain on a daily basis. Creating a lifestyle of purity in our thoughts, words, and deeds is the only way to protect ourselves from our own self. The festival of Raksha Bandhan begins with an exchange of greetings. It entails applying of tilak, tying the ceremonial rakhi, offering sweets, and an exchange of gifts. But the true essence lies in internalising the significance of all that we do. Let us start with greetings. Our every thought and word for ourselves and others needs to be a blessing, regardless of others behaviour. Let us delete all the past hurt, as it radiates toxic vibrations to us and them. Applying tilak on the forehead awakens us to the reality I am a divine soul and so is everyone else. This body, roles, and relationships are mine; they are not I. This awareness shifts us from ego consciousness to soul consciousness. Tying a rakhi is symbolic of our vow to lead a life of purity, peace, and power. Sweets are a reminder that our intentions and words must always be selfless and compassionate. Exchange of gifts teaches us to gift ourselves a new sanskar, by giving up any uncomfortable habit or addiction. This is I protecting myself. We can even choose from the following set of habits that support us in sustaining our vow of purity. Make a winning start to the day. Rise between 4 am and 5.30am, Brahma Muhurat, the highest vibration time. Practise meditation and study self-transformational content for at least 20 minutes. Be a karma yogi. Your karma creates your destiny. Focus not just on the doing but also on the being, while performing every activity. Being irritated, impatient, angry, or sad depletes our energy. Speak softly and kindly. Cultivate seva bhav, selfless service. Shift from an attitude of what is in it for me? to what can I do for them? Serve humanity, nature, and the world with your money, skills, time, and pure vibrations. Practise minimalist living. The planet has enough to fulfill our needs, not our desires. The next time you check a price tag, do not ask yourself, Can I afford it? Ask, Can the planet afford it? Make compassion natural. Forgive people who treated you badly, regardless of their role, position, or mistake. You forgive yourself by releasing the pain. Change your destiny with every meal. Eat home-cooked, vegetarian food. Have spiritual words playing in the background while cooking, to energise every meal with purity. Practise mindful eating, with no gadgets, gossip, or arguments. Ease into a deep and restful sleep. Disconnect from work communication and negative content two hours before bedtime. Resolve any issue on your mind by writing down the right thoughts for those situations. Meditate and read positive messages for 10 minutes. Let us embrace this spiritual banana of rakhi to experience true emotional, intellectual, and transformational freedom. The movie, titled Rocketbaaz vs Rocket maar India being the adept Rocketbaaz and the neighboring country being the Rocket maar, to rhyme with pocket maar, an allusion to the fact that the neig

A year and a half after the dastardly on a the leader of the terrorist group Jaish-e-Mohammed, for planning the attack. Considering the difficulties in piecing together the minutiae in the case, the agency painstaking effort must be acknowledged. The identity of the key perpetrators was never in doubt after immediately after the charge sheet details the and its local associates in Kashmir and how the attack was in the works since 2016. The JeM role was in reconnaissance, training and indoctrination, but the group could not have procured and transported the high-intensity explosives without the involvement of the Pakistani security establishment. The chargesheet investigation, based on forensic evidence 25 NIC analysis of the remains of the suicide bomber, IP address tracking of the video released by the JeM claiming responsibility, examination of the battered vehicle that carried the explosives, among others 25 therefore makes a thorough claim on JeM and Pakistan role in the attack. The its strategy. The involvement of a local Kashmiri youth in the attack as a suicide bomber, years after militancy had waned in the Valley, was also a warning about the alienation setting into the detention of scores of political leaders including mainstream actors; and the continuing restrictions on access to broadband Internet have deepened the alienation. The prevention of terror attacks will entail not only security and diplomatic measures to isolate and destroy terror outfits 28184 engineering government-run and private institutions. Citing the Supreme Court recent order declining to interfere with the conduct of the two common entrance tests, Education Minister Ramesh 25848 Pokhriyal Nishank has contended that the issue is being politicised. His argument is that a silent majority favours the exams as From an academic perspective, the Supreme Court has rightly observed that the career of students cannot be put in peril for long. Mr. Pokhriyal is apprehensive that further side. More than the fear of 19 from examination centres, aspirants face practical limitations. The centres across the number of applicants is an, the JEE will be held in 660 centres in 12 shifts. With many States not resuming public transport services and closed, travel and accommodation for candidates from interior regions is a major challenge. Social and cultural pressures are such that girls from villages and tier-3 towns are likely to face hurdles as travelling alone would not be encouraged under these unusual circumstances. Even if hotels are opened at short notice, the fear of the pandemic might deter a section of aspirants from staying there. Delay in admission to the IITs and medical colleges would also have an adverse bearing seats in leading institutions including deemed universities as eventually they may go vacant when students opt out. Given this background, the government 28 must explore alternatives such as allowing States to conduct medical admissions based Board marks using standard be limited to central institutions. Likewise, instead of the JEE, a nationwide marks normalisation could be examined but IIT Directors have argued that doing away dilute the quality of education.

As on March of infected people in deaths at the hotspot of the disease outbreak, has reported nearly of all cases and all the 17 deaths. Further, the virus has spread to 24 provinces within the country and outside infected people as well cases have been reported in Thailand and virus disease outbreak in infected people the Republic of to the Congo as a public health emergency last year, the stated that it is essential to avoid the punitive economic of travel and trade infected people restrictions on affected communities. That said, even if it limits the spread outside these cities, shutdowns cannot prevent within the cities. The unanimous ruling of the International Court of transmission Justice on Thursday, on the prevention of alleged acts of 2022 genocide against has finally pinned legal on for the military large-scale excesses of is the Hague court stipulation that the civilian transmission government of submit an update, within four months of the steps it has taken to preserve evidence of the systemic has also been 2021asked to furnish six monthly reports there after 2021 until the conclusion of the case, which relates to court has further emphasised that an resident in still remained to attacks from the security forces. The ruling vindicates findings remained highly by the UN and human rights groups on the prevalence of hate speech, mass atrocities thousands to Bangladesh. The ruling pertains to the Gambia suit on behalf of the Organisation of Islamic. Arguing the defence in person remained highly during the three-day public hearings last month, to the threat of insurgency. She even questioned the Gambia standing to bring the suit, saying that there was no bilateral dispute. That the virus has already acquired the ability to spread from one person to another has been confirmed by the World Health Organization. Apart from people in close a constructive contact with affected World Health individuals, 16 health-care workers already have been decision to enforce shutdowns came on a day when Committee was deliberating on whether the coronavirus outbreak should be declared an already public health emergency of international concern. With a split verdict and not enough information available to make a decision on already Wednesday, the emergency health reconvened on note of China decision and said that the travel ban is a health of the significant measures taken by to minimise the spread of the virus. Even already the chair of the committee said the travel ban is health emergency important information and will certainly be useful for the reflection of the members of the committee. These observations run counter to the already stand the when it announces that war crimes had indeed been committed during the killed. But there committed was nothing to back the assertions of gang rape, or evidence to presume a constructive any intent of genocide, it held. Although it could take years presenting before the court committed pronounces the final verdict in the genocide case, Thursday injunction is an important victory for the camps.

In this episode of and former Army the issue of granting and posts for women in the armed forces. While speaking to his was a part of message, it was, however, certainly not the whole. The fact that he decided to make the nominee attempt video conference available live indicates his desire to also reach out to and reassure the public in the this is the message sent out by deciding to engage with the more or less moribund rather than other the government has preferred to engage with recently Lieutenant such as In fact the virtual summit is the first high level meet since 2021, and nominee attempt comes after India pulling out of the summit following the Uri attack it was to have been hosted in too has made its concerns over Jammu and Kashmir a sticking point in and PM Imran Khan Absence have been hosted on Sunday and his nominee attempt to raise the issue of restrictions in Kashmir indicate that this attitude persists. Clearly, reviving the initiative, which countries in the region including Nepal, Sri Lanka and Bhutan initiative have advised, will not be easy, given poor ties between two largest initiative members, India and Pakistan. But it is at New Delhi seems to be willing to try to put politics aside when dealing with the initiative between pandemic that confronts all morning after a meeting with Patiala House Scindia dramatically quit the party this The Patiala House Court earlier today dismissed the plea of case convicts for a stay of the death warrant. Two of the four death row convicts, Akshay Singh and Pawan Patiala House Gupta, had on Saturday moved a Delhi seeking stay on Patiala House the execution of the death warrants, scheduled for truth that material resources are finite. Demand in most sectors will continue to exceed supply in times of a pandemic. With the number of the question is whether national and state health systems will be able to cope. This material resources demand has and systems of delivery choking and most often, unable to match supply to demand. Health-care resources, limited to begin with, are even more so when under stress. At a time when the disease did not have a name, and much less by way of character, in material resources hospital was mainland China, the rapidly climbing numbers went far beyond the capacity of the country renowned industry where a hospital was built in record time the hub of the epiemic outside of China, the strain on health systems is massive. With India crossing positive cases, it is impossible to ignore the question about whether the health system is robust enough to impossible meet this emergency. What is known, however, does not inspire confidence. First of all, he was very and frustrated after his defeat in the Look Sabha election from his Guna seat. He never expected it. What I have been told is that he has been in touch with top leaders like Amit Shah for.

He had his unique style and Indian cricket will be poorer without him, though at 39, the sands of time were running out for him. Dhoni the cricketer would still be in vogue as the Chennai Super Kings captain in the imminent Indian Premier League (IPL). In the coming years, permanence in the pantheon coronavirus of cricketing greats is assured. On August 15, six and a half months after the first novel coronavirus case was reported in the country, India crossed captain another grim milestone It is certain that there captain is some extent of running underreporting of deaths across the country, especially when deaths have occurred outside the health-care system. For instance, reporting captain coronavirus States such as Gujarat, West Bengal and Telangana have been suspect right from the beginning; the running pandemic-defying trend seen in these States is in stark contrast to the rest of the country. No combination of factors can explain the low daily mortality figures in Gujarat and In running fact, in the last one month, the death toll on any single day has never running crossed 15 and has been in single digits on many days; the State even reported zero running never too has been low, the continuous dip in the rate might be due to more cases, including asymptomatic ones, being detected due to increased testing with rapid antigen tests. Also, large cities that witnessed strained health-care infrastructure due to the surge in cases, leading to more deaths, seem to have passed the peak. Cricket in India has often been littered with stereotypes. Much akin to the great Indian rope trick, the game was reduced to the tropes of wristy batsmen and magical spinners. The sport was also blinkered to ancient geographical contours, often stereotypes linked to royalty or the erstwhile British Presidencies of Bombay, Madras previously and Calcutta. Despite these Kapil Dev emerged as an allrounder from Haryana and after him, it was Mahendra Singh Dhoni turn to stun the pundits. Hailing from Jharkhand, never previously stereotypes known for its prowess in the willow game, Dhoni kept dismantling clichés as he to him, it was his unpredictability, be it the way he dealt with opposition batsman bowlers, led India and timed or limited-overs international cricket this Saturday. In a statement, and in the second, The initial previously reaction of overwhelming shock of his quirks and previously then it batsman sunk had ended in Indian cricket. If Sourav Ganguly helped India tide past the match-fixing crisis of 2000, Dhoni took his side to greater heights and previously India became the batsman number one team in Tests stumpings, being astute previously in his batsman field placements, running between wickets seemingly at the speed of light and making his caught up with him, it was a certainty that Dhoni will guide India home. There was an earthy intelligence about him and during his years as the skipper, at times he would sit cross-legged in the corridor and give a pep talk to the youngsters.

Delhi Police Typing-Dated-2023-08-31-Test NO.-10629

Today, we take it so much for granted that we notice its existence only when there is a power cut and life comes to a standstill. Can you think of all the things you could not have done without? Imagine, you could not have watched television or even seen a film in a cinema hall. You would have had to study by candle light with no fans or air conditioner. Ice creams, soft drinks and cold water would have been unheard of. Your kitchen too would have been very different from what you see now. There would have been no toaster, blender, electric oven, induction cooker or electric chimney. Electricity has truly revolutionized life in the twentieth century. The field of medicine has specially benefited from it. You will realize this if you ever happen to sit on a dentist chair, enter the operation theatre or visit in a hospital. Electricity has also brought the world to our doorstep in more ways than one. Today we can see a live telecast of events taking place thousands of miles away where it is not always feasible for us to be present. Through the and other more sophisticated audio systems, we are exposed to the world, in India not all of us can avail of the facilities provided by electricity. There are still far too many people who live below the poverty line, and even though electricity has reached the remotest village, everyone cannot benefit from it. It should be our endeavour to bring light into the lives of all our countrymen and to ensure that an electric bulb glows in every home, indeed electricity is one of the most important blessings that science has given to mankind.

Delhi Police Typing-Dated-2023-08-31-Test NO.-10630

While lynch mobs in the garb of cow protectors are treated with kid gloves. The Rajasthan a new expansive law enacted to punish lynching, has promised to take the matter on appeal. A mere appeal may not suffice; orders for a fresh investigation and trial one that would lead to the formal indictment of all those responsible for the murderous attack may be needed to restore a sense of justice. While this agreement clearly charts a new course for the crisis-hit country, it does guarantee a smooth transition from military to civilian rule. There still exists deep distrust between the generals and. When protests erupted in December over soaring food prices tactics, from oppression to introducing changes in the Cabinet, to control the situation. But he had to go as the generals turned against him in April. The military council then had an opportunity, like the military in Tunisia after the fall return to the barracks and let the civilian leadership assume power and shape the country future. But Sudan military not only refused to give up its powers but also massacred the protesters who challenged theme is still not clear whether the military is ready to support a full democratic transition. The framing of a new Constitution will be another challenge as there are different power centres with conflicting interests. More important, there has to be justice. Then it will at least be a good beginning for a long journey to democracy and accountability. Exactly a month ago, Jammu and Kashmir lost its special constitutional status, and its status as a State, through a dubious and hurried process. Ahead of that decision that could rankle for years to come, the region, particularly the Kashmir Valley was put under a lockdown with all communication cut and movement of people severely restricted. One month on, the Valley continues to be under severe restrictions; the death of a teenage protester on Wednesday who was injured earlier may further delay the administration plans to withdraw the region of the newly out of the erstwhile State, has not seen disruptions. Prominent newspapers published from Srinagar, discontinued for several days, have resumed publication. Mobile phones and the Internet are not back in operation and schools, though reopened, have sparse. It took a while before the which is resistant to an informed and tempered national discussion on the changed status of protests and police action from the Valley have largely been dismissed by the Centre the revocation of the special of the political community outside the is under judicial review. The government and other supporters of the move continue to argue that the people in Kashmir have been freed from the political families that held power at their cost, that investments will flow in, jobs will multiply, women will get equal status as men in terms of, discussions on these points in the last one month have been going on with little or no representation by the people of Kashmir who are the supposed beneficiaries.

As the nodal body for the of the new rules, the Central should put out periodic of the of urban local bodies in the show the deadline. Without a merely shifting city trash to the suburbs, out of sight of those managers, will fester and choke the landscape that waste volumes are officially estimated to grow to million tonnes a year by at the back of your three months, our readers have been going crazy managers show over a product that is helping men and women regrow their hair quickly and easily, without any or and painful surgeries. This r trick has been featured on countless popular shows, and proven to be safe and highly show proven that hair and hair loss negatively impact every aspect of your life. Men and women who these afflictions have trouble finding jobs and the opposite sex. They higher rates of anxiety and a lack of self-managers show. But there is a solution People have chemicals you tried. We show explain and share the secret method that doctors do want hair loss negatively impact every aspect of your life. Men and women who experience this affliction have trouble finding well-pay you to know. The collapse of a great wall of garbage in east people and vehicles into a nearby stark reminder that India neglected waste crisis can have deadly. More than a year ingested by cattle after the and being of the Solid Waste Management Rules, cities and towns are in no position to comply with its beginning with the different kinds of waste at source and their. Neither generated and being are urban ingested by cattle local treating the million tonnes of waste generated annually as a potential resource have left the task of value extraction mostly to the informal system of garbage collectors and on the national record of collecting of waste generated ingested by cattle and being able to process of that quantum, requires among citizens and institutions. But what is more important is that the municipal bodies put in place an integrated system to what generated and being has been at source. The of the Centre has too narrowly on individual action to keep streets clean, without concurrent pressure on State and and being to move closer to by the deadline set for most places, and arrest the spread of pollution from trash at the local body level, in discarded materials are lost due to dumping. Organic refuse, which forms all ingested by cattle garbage, readily lends itself to the generation of or production of methane for household use or power. But it is a major lost and being that could help green cities and feed small and being thrown away. It is ingested by cattle also ironic that while some countries such Kenya have generated and being introduced stiff for the use of flimsy plastic bags, India is doing little to prevent them from drifting into suburban rivers, lakes and the sea, and being ingested by on dumped refuse.

Delhi Police Typing-Dated-2023-08-31-Test NO.-10634

It faces an existential crisis. Despite its patchy structure with too many rates, complex compliance requirements and multiple mid-course changes, the implementation of the Goods and Services Tax (GST), overseen together by the Centre and the States, had begun to almost serve as an exemplar of co-operative federalism. All of those gains have quickly unravelled as the slowdown in the economy, exacerbated by the COVID-19 lockdowns, has thrown all revenue calculations to the wind. The Centre is obliged to pay to the States, for a period of five years, compensation for revenue shortfalls in return for their having ceded the power to levy the multiple taxes that were subsumed into the GST. Last week, Finance Minister Nirmala Sitharaman asserted, at what may have been the most tenuous GST Council meeting so far, that the Centre will not be able to meet the compensation shortfall. With GST collections sharply undershooting all targets this year, the Centre estimates compensation payable for the full year at 3-lakh crore. But just 65000 crore is expected in the cess kitty used to pay out the compensation. In July, the Centre paid out the last instalment of compensation for the last fiscal and is, so far, yet to pay anything for this year. States have now been given two options, both requiring them to borrow from the market. The Centre contends that only crore of the revenue shortfalls is from implementation of the GST, while 1.38 lakh crore is due to extraordinary circumstances posed by exacerbated by the lockdowns, has thrown all revenue calculations to the wind. The Centre is obliged to pay to the States, for a period of five years, compensation for revenue shortfalls in return for their having ceded the power to levy the multiplean Act of (the pandemic). States can either borrow crore, without having it added to their debt and with the principal and interest paid out from future cess collections, or they can borrow the entire 2.35 lakh crore shortfall, but will have to provide for interest payments themselves. The Finance Ministry has argued that higher borrowing by the Centre will push up interest rates and dent India 25697 fiscal parameters. At best, this is specious total government debt, including States 25697, is what rating agencies look at. Several States have rejected both options and Centre to rethink in view of their essential and urgent spending needs to curb the pandemic and spur growth. A staring match is in the offing. It is up to the Centre took.

He has found a rare chance to take the moral high ground. It has criticised India move, accusing it of abusing the concept of national security The last thing India needs is to be compared with China as far as its Internet regulation goes. It certainly needs a more considered approach to tech regulation. The Indian Navy has not taken part in any joint patrols outside of the Indian considered Ocean, and even within it, held its first one, with France, only recently. In terms of the engagement with the Quad, India has not yet formally announced a decision to include Australia in the annual Malabar considered exercises with the U.S. and Japan, although it is expected to do so. However, the move from conducting exercises together to joint operations would take time, something that makes the CDS assertion significant. It is easy to surmise that his contention that the Quad operations are needed to ensure there is no fear of any other nation singularly trying to dominate the oceans, is a veiled operations are reference to China. It is also clear that the LAC tensions and clashes, as well as the PLA refusal to operations are implement border agreements, have convinced New Delhi that new strategies will be required to deal with Beijing. While India continues to engage China diplomatically, and External Affairs Minister S. Jaishankar and Defence Minister Rajnath Singh have spoken of the importance of a resolution through talks, there is no doubt that an outcome of the tensions will be a strengthening of India ties with global powers such as the U.S., as well as formations like the Quad. While India considers its options, it is necessary to remember some of the reasons for its reticence in terms of militarising the Quad in any way. Prime Minister Modi said in 2018 that India sees the Indo-Pacific as a geographical concept, not a strategy or a club of limited members, and it would be important to know whether that formulation has changed. India is the only Quad member not already tied in a alliance system treaty alliance with the others, and Mr. Jaishankar statement that India would never be part of any alliance system would run counter to what the CDS suggests. Finally, India is the only country in the Quad that shares a land boundary with China, and it is unclear how the militarisation of the Quad in Indo-Pacific waters would alleviate the territorial threat it faces. If, however, New Delhi view of its Quad engagement has shifted, clarity and an expansion of Gen. Rawat statement are essential. This is the suggests that the Indian government, not for the first time in recent months, wants to make it amply clear that it will not shy away from leveraging its position as a massive market for technology in dealing with potentially dangerous geopolitical issues. Since June, when border tensions between India and China turned ugly, the government has till now stepped in thrice to block many Chinese.

Applications in one go. In the latest such decision, on Wednesday, it blocked 290 apps, including the widely popular gaming app, as well as We Chat Work and Baidu, owing to these being prejudicial to sovereignty and integrity of India, defence of India, security of State and public order. Over 298 Chinese apps, which were accessed by millions of Indian users, have been blocked in all till date. The decision has been taken based on several complaints, a press release said, of these apps stealing and surreptitiously transmitting users data in an unauthorized manner to servers which have locations outside India. It could be argued that loss of access to the Indian market will sharply affect the ambitions of the Internet giants emerging from China, but it remains to be seen if this tech-side intervention is effective as a counter in a geopolitical fight. Also, how far can India go to keep the Chinese players, who are well entrenched in the global tech supply chain, off the Indian market without prejudicing its own growth? It is difficult to argue against decisions that are taken on the plank of national security, especially one arrived at by invoking the government power under Section 69A of the Information Technology Act, a section upheld by the courts previously. But it would be well argued that the Indian approach should have followed due process, where the focus was on ensuring compliance with the law. Instead, the Indian response to complaints has been to straight away block these apps en masse. Meanwhile, millions of Indians who were engaging with these platforms, some gainfully, have to scramble for alternatives. To add to this, the data protection law, a dire need in this age, is not yet there. All this does not bode well for a country with aspirations of global leadership of tech, an industry which thrives on global networks and rules. Ironically, China, which for years has unleashed widespread censorship of information and kept apps from outside off its Internet what is known, however, does not inspire confidence. As a percentage of GDP has been abysmal at about 1%. As per the National Health confidence Profile, 2022, collated by the Central Bureau of Health Intelligence unit of the Directorate General of Health Services, there has been collated by no significant change in health-care expenditure since confidence A capita collated by public WHO bulletin of 2018 records that out-of-pocket payments remain common in India, was estimated at 62% of total health expenditure. While capita public questioning whether these incremental efforts are sufficient, one needs to factor in the substantial skew in different States in terms of 251 public sector health infrastructure and collated by wherewithal. There is evidence to show that increased public spending on health care has resulted in less financial hardship for communities and better collated by increased public health outcomes. Prime Minister Narendra Modi made a promise to increase public health spending to. His government would do well to treat this epidemic as an.

The story could unfold to show how, after the resounding success of Chandrayaan India plans to launch a mission to Neptune, the farthest planet in our solar system, a scientific fact which the Indian character learnt as a little boy by repeating the mnemonic, My Very Educated Mother Just Served Us Noodles, which stands for the planetary order of Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. Basing his calculations on this mathematical formula, which far surpasses the old hat Einsteinian E=mc², the Indian hero charts the interplanetary course of Mission Neptune. Meanwhile, the neighboring country hero, wanting to outdo India, plans to send his space vehicle to the largest heavenly body in the solar system, the Sun. However, he miscalculates and the spacecraft reaches the Sun during a solar eclipse when, as everyone knows, the Sun vanishes into a Black Hole, and into which the neighboring country spaceship disappears. After a night of Russian drone attacks in Kyiv, Ukrainians, together with Indians, woke up to salute the Indian flag and celebrate our Independence Day, through performances of Indian dance and music, showing their love for India and also India soft power. Indians reciprocated on August 24, Ukraine Independence Day. In contrast, as New Delhi gets ready for the G20 summit, a galaxy of leaders from far and near will arrive, but not from Ukraine. As part of G20 Russia will attend. This is because we are oblivious of the role of Ukrainians in Indo-Soviet friendship, something Russia has unapologetically usurped to cater to its national interests. The share and role of all 14 former Soviet republics are ignored. This notion of post-Soviet space is key to how India perceives the Russian invasion, Ukraine resistance and worldwide solidarity today cause a breach. 2023 is the Year of India, G20 chair, and a major global actor. Since the beginning of the 21st century, India has been transcending ideological differences and working with countries to draw a new roadmap for multilateralism, breathing in some air of change. Some principles of Indian foreign policy are rooted in history anti-colonialism, nonalignment and multilateralism and they remain unchanged, consistent, time tested over decades. These principles, coupled with economic power, have made India a voice of the Global South. Apart from traditional issues, like the UNSC reform, the North-South Divide and international financial system, India meets newer challenges by participating in western Quad, G-7 as well as non-Western. No doubt Indian policies are finely calibrated, but the same ambiguity and inconsistency are seen that characterised Indian diplomatic response to Soviet interventions in Hungary in 1956, Czechoslovakia in 1968 and Afghanistan in 1980. The way it responded to the Brezhnev doctrine, it responds today to Putin expansion. Not much has changed. There are knots to untie. India Russo-centric policy towards the post-Soviet space lies in stark contrast to the more pragmatic evolving policy towards the US and the West. Obsession of old school diplomats, both in Delhi and Kyiv, with the love-hate triangle play India-Russia-Ukraine as well as Ukraine-India-Pakistan should be forsaken as an infantile, obsolete baggage of distorted history. A lot of time, political will and diplomatic creativity are needed to change these. So far, India manages the Ukraine crisis by providing humanitarian aid to the people of Ukraine, renewing foreign office consult

To Russian President Putin at the SCO Samarkand meet in autumn 2022. But, India did not join the West in sanctioning Russia. Instead, it purchased crude oil and never publicly condemned Russian aggression. Although mentioning war, aggression, etc, none of its statements ever named Russia, the aggressor. Indian reaction to Russia Crimea annexation in 2014 and the war that followed is similar to how Nehru government reacted to Soviet intervention in Hungary in 1956. Ukrainians cannot match their expectations of India humanist traditions with these pragmatic ways. India approach is hailed by some as sitting on the fence, hypocritical and opportunistic. India buys cheap Russian oil, then refines and sells it to Western countries and even to Ukraine. Ukraine State Customs Services data shows India is the lead exporter of crude and oil products to Ukraine for 2022, followed by Lithuania and Bulgaria. But the issues of oil trade, sanctions against Russia, etc open a can of worms that exposes the West, East, North and South equally. Experts who better understand India neutrality welcome its role in negotiations on the 10 point Ukrainian Peace Formula in Copenhagen last June and in Jeddah in July, along with 42 states. The 10 points deal with global economic and energy issues; some focus on Ukraine. Global politics and economics are inseparable, conflicts lead to securitisation or viewing all issues through the prism of security in bilateral and multilateral diplomacy. In this context, the G20 summit puts international political responsibilities on India. The top issue is Ukraine. India foreign minister S Jaishankar on August 16 explained that Ukraine is not invited because G20 deals with economic issues, not conflict resolution, for which there is the UNSC. True, a post-pandemic world is affected by serious energy, food security and health problems. But China and Russia veto Ukraine-related resolutions in UNSC. How does that help? Presence of Russia in G20, no matter how correct the formal criteria are, without inviting Ukraine, is appeasement. India does not gain either, because in any trilateral alignment with Russia or China, India is always the third, never first or second power. Since the beginning of the war, Ukraine President Volodymyr Zelenskyy reached out to Indian PM Modi time and again. During a meeting on the sidelines of the G-7 Hiroshima summit, Modi assured to do whatever possible in his capacity to help Ukraine. Thus, G20 summit is a logical test of what India can do to help Ukraine. Last year, Indonesia invited Ukraine to G20 Bali summit, where Zelenskyy presented his 10 point Peace Formula, setting a milestone in history. The present G20 summit aims at generating mild, carefully worded statements, acceptable to all. Contrasting the glow of Bohemian crystals of the world largest chandelier in Bharata Mandapam, the main venue of G20, hopes are dimmed, how, without Ukraine, the G20 summit will be groundbreaking for the greatest post-World War civilisational crisis. But, with Ukraine, the summit would have the fine balance that India is regarded for, could have rekindled hopes and be crowned with more success, which it rightly deserves. The 15th BRICS Summit held in Johannesburg, South Africa from August 22-24 concluded with the group expansion. Six new members Argentina, Egypt, Ethiopia, Iran, Saudi Arabia and the UAE joined the existing five members Brazil, Russia, India, China and South Africa. As much as there is excitement, p

The members of this grouping to make it work smoothly. The composition of the BRICS is indicative of presence of members that have differences with one or more other members of this organization. Before expansion, the India-China dispute was the prominent friction point in the BRICS. After expansion, this phenomenon has exacerbated. The India-China disputes prevent the two sides for any meaningful engagement at either bilateral or multilateral level. Already the presence of China as a major power in the BRICS has curtailed India navigating capability within this organization. With Russia consigned to being China junior partner and ties with Brazil and South Africa being not so strong, India position is isolated. While the Modi-Jinping meet at the BRICS Summit raised some hopes of thaw between India and China, these were dashed as the two sides offered different views of this meeting. At present, there is hardly any possibility of New Delhi and Beijing cooperating on major issues. The expanded membership of the BRICS too comes with bilateral disputes. Among the new members, there is friction between Egypt and Ethiopia, Iran and the UAE, and Saudi Arabia and the UAE. The Grand Ethiopian Renaissance Dam GERD built by Ethiopia on Nile River has been a cause of conflict between Ethiopia and Egypt. Egypt, as also Sudan, both downstream countries, has been expressing concerns that this dam will reduce the water flow from Nile. Recently Ethiopia, Egypt and Sudan resumed the talks on the GERD project after a gap of two years. While the Ethiopian delegation maintained hopes of finding a mutually acceptable solution, Egypt expressed displeasure over Ethiopia unchanged position over the water sharing during these talks. The talks are expected to continue in future as well but any compromise between Egypt and Ethiopia seems unlikely at least at the moment. While Iran has been on a spree to improve its diplomatic ties with the Arab world, certain unresolved issues threaten this progress. Iran and the UAE are engaged in a territorial dispute since 1971. The UAE lays claim over three islands Abu Musa, Greater Tunb and Lesser Tunb which are under Iran control. The two West Asian neighbors did restore diplomatic relations in August 2022 and are working towards upgrading their ties. However, the territorial dispute remains an irritant. The UAE claim is backed by the Gulf Cooperation Council GCC. The matter further became complex with Russia and China, Iran closest partners, endorsed the GCC position that the dispute should be resolved diplomatically. Iran considers this as a violation of its claim over the three islands. Russia and China position may not seriously impact their relations with Iran. However, Iran may sit uncomfortably in the BRICS with Russia, China and the UAE. Being part of BRICS is also a compulsion for Iran as it has limited options at the global level to participate in multilateral gatherings. The Arab world itself is battling divisions within. Saudi Arabia and the UAE, the two Arab powerhouses and close allies, are at loggerheads with each other with cracks appearing in their ties. The two Gulf States have divergent interests in Yemen. Saudi Crown Prince Mohammed bin Salman is maintaining distance from the UAE President Mohamed bin Zayed Al Nahyan, once considered by the former as his mentor. Saudi Arabia has also reportedly threatened the UAE with economic blockade. Saudi Arabia and the UAE are also locked in rivalry in Sudan conflict.
